INTRODUCTION -NATURE OF ACTION

Click! Network (“Click!) was established in 1997, by Tacoma City Council, as a “*broad band telecommunications system that shall be owned, operated and controlled by the City of Tacoma Department of Public Utilities Light Division*”<sup>1</sup>.

The Click! system is clearly part of Tacoma Public Utilities.

The Click! system was established to “*provide telecommunications services for data transport, high speed internet access, full cable television service, and, among other things, to meet the expanding telecommunications requirements in an evolving competitive electric market, the most critical of which is real time, two-way interactive communications with individual energy consumers*”

The Click! Network telecommunication system continues to fulfill its original mandate, providing wholesale broadband Internet services to over 20,000 Tacoma Public Utilities customers, with a state-of-the-art cable modem and Gigabit Fiber To The Home (“FTTH”) system -while delivering television services to over 12,500 Tacoma Public Utilities customers over the system.

The Tacoma City Council recently approved a “term sheet” for disposal of Tacoma Public Utilities’ proprietary interests in the system. All control over the day-to-day ongoing operations of Click!, including oversight on rates, would be handed over to a private company.

Tacoma City Charter, Article IV § 4.6, clearly prohibits the disposal of a “utility system” without a majority vote of the electorate.

<sup>1</sup> The 1997 City Council Resolution No. 33668

Since Click!’s system is part of Tacoma Public Utility<sup>2</sup>, and no such vote of the people is planned or provided for, there is an imminent risk that the terms of City charter will be violated.

The purpose of this action is to make sure the clear language in the City charter is followed and the people are allowed to vote on any lease or disposal of the Click system by TPU; for, if charter provisions are ignored, the City would be exceeding its authority and acting ultra vires.

1. PARTIES

Plaintiff Mitchell Shook is a resident of Tacoma, a Tacoma Public Utilities rate payer and Click! customer; and, as such, has standing to seek the relief requested in this petition.

Defendant City of Tacoma (“the City”) is a Washington Municipal Corporation located in Pierce county, Washington. The Light Division, doing business as Tacoma Power, of the City’s Department of Public Utilities (“TPU”) operates and provides services to TPU customers (“ratepayers”). TPU operates a business unit, known as Click! Network, which provides retail television and wholesale Internet services.

2. JURISDICTION AND VENUE

2.1 This Court has subject matter jurisdiction over this issue, since the City is located in Pierce County and the events related to this petition have substantially occurred in Pierce County; additionally, the superior court has

subject matter jurisdiction over this action under RCW 2.08.010 because plaintiff seeks writs of mandamus and/or prohibition.

2.2 Given no other speedy or adequate remedy, RCW 7.16.040 provides the Court jurisdiction over this matter.<sup>3</sup>

3. FACTS

3.1 Tacoma City Charter Section 4.6 requires *"The City shall never sell, lease or dispose of any utility system"* without a *"majority vote of the electors"*.

3.1.1 Click is multi-service broadband telecommunications provider and operating section of Tacoma Power providing retail cable television and wholesale broadband internet services to Tacoma Power's residential and business customers.

3.2 Ordinance NO. 25930 was passed by Tacoma City Council in 1996 and entitled *"AN ORDINANCE of the City of Tacoma, Washington establishing a telecommunications system as part of the Light Division"*.

3.2.1 The 1996 CITY of Tacoma ORDINANCE NO. 25930 States *"WHEREAS, RCW 35.92.050 authorizes cities to construct and operate works and facilities for the purpose of furnishing any persons with electricity and other means of power and to regulate and*

<sup>3</sup> A writ of review shall be granted by any court, when an inferior tribunal, board or officer, exercising judicial functions, has exceeded the jurisdiction of such tribunal, board or officer, or one acting illegally, or to correct any erroneous or void proceeding, or a proceeding not according to the course of the common law, and there is no appeal, nor in the judgment of the court, any plain, speedy and adequate remedy at law.

*control the use thereof<sup>4</sup> or lease any equipment or accessories necessary and convenient for the use thereof; and*

3.2.2 CITY of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the Utility Board and the Council have determined that it is in the best interest of the City that it install a telecommunications system among all of its Electric System substations in order to improve communications for automatic substation control; and*

3.2.3 CITY of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the City has determined that it is prudent and economical to provide additional capacity on such telecommunications system to provide the Electric System with sufficient capacity to perform or enhance such functions as automated meter reading and billing, **appliance control**<sup>5</sup>, and load shaping; and*

3.2.4 City of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the Light Division may wish to connect such telecommunications system to individual residences and businesses in its service area or to other providers of telecommunications services; and*

3.2.5 The 1996 City of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the City has determined that it should create a*

---

<sup>4</sup> Emphasis added to remind the Court that this functionality is still relevant today. Smart homes, smart devices and the Internet-of-Things (with devices such as smart thermostats for example) allow users to control their electrical usage even when away from the premises.

<sup>5</sup> Emphasis added, for it should be recognized that “appliance control” is not possible without two way communication between an appliance and the user -as such “appliance control” is an energy related function.

*telecommunications system as part of the Electric System<sup>6</sup> in order to construct these telecommunications improvements”*

3.2.6 Exhibit A to 1996 City of Tacoma ORDINANCE NO. 25930<sup>7</sup> stated the telecommunications project would include “demand side management (DSM) functions<sup>8</sup>, CATV and Internet Access.

3.2.7 In 2006, Washington voters approved Initiative Measure 937, known as the Energy Independence Act. The measure, which was codified at RCW 19.285, requires electric utilities with more than 25,000 customers to take certain measures to conserve energy<sup>9</sup>

3.2.8 Demand-side management (DSM) or demand-side response (DSR) is the modification of consumer demand for energy through various methods -such as financial incentives. Demand-side management encourages the consumer to use less energy during peak hours, or to move the time of energy use to off-peak times such as nighttime and weekends.<sup>10</sup>

3.3 The Tacoma City Council approved construction of Click! Network on April 8,1997. The City Council delegated authority to the Public Utility Board and the Department of Public Utilities (“TPU”), Light Division (dba “Tacoma Power”), to implement, own and manage a broadband telecommunications

<sup>6</sup> Emphasis added to point out that the telecommunications system is a “part of the electric system”

<sup>7</sup> Passed on July 26, 1996 when the telecommunications system was approved

<sup>8</sup> the goal of demand-side management is to encourage the consumer to use less energy during peak hours, or to move the time of energy use to off-peak times such as nighttime and weekends

<sup>9</sup> Kelley, 120313 WAAGO, AGO 2013-6 2013

<sup>10</sup> Demand Side Management and Response can play a role in satisfying TPU’s requirement for complying with RCW 19.285.040 Energy conservation and renewable energy targets -which requires TPU to pursue all available conservation that is cost-effective, reliable, and feasible.

system ("Click! Network" or "Click!"), as authorized through City Council Substitute Resolution No. 33668, approved April 8, 1997, and Public Utility Board Amended Substitute Resolution U-9258, which was approved on April 9 1997

3.3.1 The 1997 Council Resolution No. 33668 states: "WHEREAS the City of Tacoma, Department of Public Utilities, Light Division desires to: (1) develop a state-of-the art fiber optic system to support enhanced electric system control, reliability and efficiency; (2) develop capability to meet the expanding telecommunications requirements in an evolving competitive electric market, the most critical of which is real time, two-way interactive communications with individual energy consumers, (3) create greater revenue diversification through new business lines (i.e. Internet transport, cable TV, etc.), (4) enhance traditional products and services, and (5) maximize return on Light Division assets,

3.3.2 The 1997 Council Resolution No. 33668 states "WHEREAS a broadband telecommunications system will have available capacity for future City Light Division needs and will also have the capacity to provide telecommunications services for data transport, high speed internet access, full cable television service, and other uses, and;"

3.3.3 The 1997 Resolution No. 33668 states "BE IT RESOLVED BY THE COUNCIL OF THE CITY OF TACOMA: That the Council hereby finds and determines that the City Light Division's broad band telecommunications proposal is in the best interests of the City, will serve a public purpose and that the said Business Plan is sufficient and adequate, therefore, the Council hereby approves the Light Division's proposal including the Business Plan and the Department of Public Utilities, Light

1 *Division is hereby authorized to proceed to implement said proposal for a*  
2 *broad band telecommunications system, and That the proposed broad*  
3 *band telecommunications system shall be owned, operated and*  
4 *controlled by the City of Tacoma Department of Public Utilities*  
5 *Light Division<sup>11</sup>*

6 3.3.4 Click! operates as part of TPU. Click is one Tacoma Power's 6  
7 business units -which units are generation; power management;  
8 transmission and distribution; rates, planning and analysis; Click  
9 Network; and utility technology services.

10  
11 3.3.2 Click! is not a separate business unit or enterprise fund. It is an  
12 organizational unit within the Power enterprise fund. The first line of  
13 Click! oversight is the Power Superintendent and the Power management  
14 team. From there, oversight is provided by, the TPU CEO, the Board, and  
15 the City Council.

16  
17 3.3.3 TPU Revenue Bonds were approved, by a declaratory judgement, to  
18 pay for construction of the Click! system; and, no general fund dollars  
19 have been committed to the project.

20  
21 3.4 Approximately 1,500 miles of fiber and coaxial cable have been  
22 constructed by Tacoma Power in the cities of Tacoma, University Place, Fircrest,  
23 Lakewood and Fife, and portions of unincorporated Pierce County, providing  
24 Tacoma Power with a state-of-the-art telecommunication system with which  
25 supports transmission and distribution operations, advanced metering, and  
26 retail and wholesale commercial services. The network currently covers  
27 approximately 66% of the households in Tacoma Power's service territory.

---

<sup>11</sup> Emphasis added to highlight fact that system is owned by TPU

3.5 The network consists of a hybrid fiber-optic coaxial (“HFC”) system, which delivers two-way signals for cable TV, cable modem,<sup>12</sup> Fiber To The Home (“FTTH”) Internet services, and advanced metering.

3.6 In addition, SONET (“Synchronous Optical Network”) and Gigabit Ethernet technologies are used to support communications across Tacoma Power’s transmission and distribution system and to carry out data transport services for commercial customers. The network was designed and constructed to meet high telecommunications standards, containing a redundant backbone and redundant service loops, which seek to ensure uninterrupted signal transport in the event of a network break.

3.7 Commercial telecommunication services were Launched in 1998 under the brand name Click! Network. Click! provides three commercial telecommunication services to TPU customers; retail cable television, wholesale broadband transport and wholesale high-speed Internet delivered over cable modem and FTTH.

3.8 In 2017 Click! Network’s annual operating revenues were approximately \$26,519,861<sup>13</sup>.

3.8.1 Click! ended 2018 with more than 12,500 cable TV customers, 20,000 wholesale high- speed Internet service customers, and more than 100 wholesale broadband transport circuits.

<sup>12</sup> Telecommunications Infrastructure Section, on Page 47, Bond Prospectus for CITY OF TACOMA, WASHINGTON \$70,575,000 Electric System Revenue Bonds, Series 2017  
<sup>13</sup> CLICK! NETWORK COMMERCIAL OPERATIONS OPERATIONAL SUMMARY - December 31, 2017

1 3.8.2 Click! has “significant goodwill”, According to Section 2.3 of the  
2 January 23, 2018 presentation by Joann Hovis, of CTC Technology, at the  
3 City Council-TPU Board Joint Study Session. Ms. Hovis’ report was titled  
4 Strategy Alternatives for Tacoma Click!:

5  
6 3.8.3 “Click! has thousands of customers and considerable goodwill”, as  
7 confirmed by Click! Network General Manager, Tenzin Gyaltzen, who  
8 stated so in his February 7<sup>th</sup>, 2018, Declaration In Support Of Defendants  
9 Opposition To Partial Summary Judgement -page 3 , Pierce County  
10 Superior Court Case No 17-2-08907-4

11 3.8.4 Click! is the nations second largest municipal CATV and Internet  
12 service -behind Chattanooga TN.

13  
14 3.9 TPU is governed by the City’s public utility board, whose five members  
15 are appointed by the mayor and confirmed by the city council. Utility budgets  
16 and rates are subject to approval by the city council. **Section 4.3 of the City**  
17 **charter** provides City council with oversight on rates and the authority *“to fix*  
18 *and from time to time, revise such rates and charges as it may deem advisable for*  
19 *supplying such utility services the City may provide”*.

20  
21 3.10 Title 12 “Utilities” of the Tacoma Municipal Code regulates utilities and  
22 rates.

23 3.10.1 Click! CATV and wholesale Internet rates are regulated under  
24 Title 12 of the Tacoma Municipal Code, in section 12.13

25 3.10.2 Click! TV and Wholesale Internet rates are approved by the Public  
26 Utility Board (Board) and City Council, the same as Power, Water, and  
27 Rail rates.

3.11 Over 10,000 TPU electric customers currently have Tacoma Power Gateway meters installed on their homes. These “gateway meters” operate over Click! Network’s HFC plant.

3.11.1 The Gateway meters feature “remote connect and disconnect” functionality allowing for services to be turned on or off for electric customers. The gateway meters also allow automated electric meter reading and provide information to customers relevant to their energy purchasing decisions.<sup>14</sup>

3.11.2 In connection with these Gateway Meters, some TPU customers participate in the “Pay-Go” prepayment system.

3.12 Click! currently holds telecommunications or video franchises from the City of Tacoma, City of Fircrest, City of Fife, City of Lakewood, City of University Place, and Pierce County to offer Cable TV, high speed Internet, digital phone, as well as fiber-delivered data solutions to area residents and businesses<sup>15</sup>.

3.13 AMENDED RESOLUTION NO. U-10879, states:” #20. *WHEREAS Tacoma Power has excess power generation capacity within its service territory. In the past, Tacoma Power has benefited greatly by selling this excess capacity in the wholesale power markets to the benefit of all retail electric customers. Over the past few years, wholesale power prices and sales have dropped substantially. In support of Tacoma Power's strategic business plan, Tacoma Power wants to make up this lost revenue by looking at ways to increase its retail power sales through*

*economic growth in the community. Communities across the nation have benefited economically from competitive access to internet services in their communities.”*

3.14 AMENDED RESOLUTION NO. U-10879 also states: *“Tacoma Power's continued operation and maintenance of the telecommunications system for internet access purposes assists in making the internet services competitive in Tacoma Power's service area, which increases economic growth that leads to greater retail power sales”*.<sup>16</sup>.

3.15 AMENDED RESOLUTION NO. U-10879 stated “WHEREAS The Internet-related uses of the Click! telecommunications system provide Tacoma Power customers benefits by giving them access to advanced customer services options such as: power use monitoring, outage reporting, scheduling of services, bill paying, and electrical appliance control.

3.16 AMENDED RESOLUTION NO. U-10879 stated that “WHEREAS In planning for an uncertain and unknown future<sup>17</sup>, there may be other potential functions related to the supplying of electricity to customers who might also make energy related usage of the telecommunications system infrastructure including: cyber security efforts, electric car charging and metering, enhanced “smart home” uses that allow customers to control power usage by time of day, participate in demand response programs, behavior-based saving programs, outage communications, energy audits, and participation in Evergreen Options”<sup>18</sup>

<sup>17</sup> AMENDED RESOLUTION NO. U-10879 -Page 4, This is Whereas #17

<sup>18</sup> <https://www.mytpu.org/community-environment/clean-renewable-energy/evergreen-options-program/>

1  
2 3.17 One purpose for creating Click! was to have a telecommunications system  
3 sophisticated enough to enable TPU to compete effectively in the rapidly  
4 evolving electric industry.

5  
6 3.18 Amended Resolution U-10828, adopted by the City's public utility board  
7 on December 3, 2015, states "*WHEREAS the broadband telecommunication  
8 system is critical infrastructure for Tacoma Power*

9  
10 3.18.1 Amended Resolution U-10828 cites Charter 4.6 as requiring a  
11 vote of the people to before the City may "*lease or dispose of any utility  
12 system*".<sup>19</sup>

13 3.19 City Council Resolution #39347 states: "*1997, the City of Tacoma, through  
14 its electrical utility, embarked on an effort to construct and operate a state-of-the-  
15 art telecommunication system for the benefit of its electric utility and its electric  
16 utility customers*"<sup>20</sup>

17 3.19.1 City Council Resolution #39347 states: "*WHEREAS the  
18 telecommunications system was constructed and has been in continuous  
19 operation since 1999, and has proven to provide benefits for the City  
20 electric utility and electric utility customers located both Inside and outside  
21 City limits*"<sup>21</sup>

22 3.19.2 City Council Resolution #39347 states: "*WHEREAS the  
23 telecommunication system is now a vital component of the City's electric  
24 utility and continued operation and maintenance of the system is an  
25 essential function of the electric utility*"

3.19.3 City Council Resolution #39347 states: “WHEREAS *some of the benefits the City's electric utility and electric utility customers have received from the system include (1) enhanced control, reliability and efficiency of the City's electrical system; (2) increased capability to meet the expanding telecommunication requirements in an evolving competitive electric market, including the ability to make real-time, two-way interactive communications with individual energy consumers; (3) improved traditional electric products provided to consumers; (3) diversified revenue streams through new business lines (i.e., Internet transport, cable TV, etc.); and (5) maximized return on the City's electric system assets, and enhancing communication between electric utility assets and electric utility consumer, and providing electric utility customers a means to instantly access electric utility accounts information for payment of bills, report outages, and obtain energy usage and conservation information*”<sup>22</sup>

3.19.2 City Council Resolution #39347 stated: “*WHEREAS some benefits of the City's electric utility telecommunication system include enhancing communication between electric utility assets and electric utility consumers, and providing electric utility customers a means to instantly access electric utility accounts information for payment of bills, report outages, and obtain energy usage and conservation information, and;*

3.20 That a water heater “demand response project” was recently conducted by Tacoma Power, in the Salishan housing development neighborhood, under an agreement with the Tacoma Housing Authority.

3.20.1 Data transport for the Salishan demand response hot water heater project utilized Click! Network’s cable modem system<sup>23</sup>.

3.20.2 Demand response technology requires two-way communications.

3.20.3 Demand response technology holds potential for load reduction and energy savings<sup>24</sup>.

3.20.4 RCW 35.92.360<sup>25</sup> -Energy conservation plan states "The legislature finds that energy conservation can take many useful and cost-effective forms, and that the types of conservation projects available to utilities and customers evolve with time as technologies are developed and market conditions change. In some cases, **electricity conservation projects are most cost-effective when they reduce the total amount of electricity consumed**<sup>26</sup> by an individual customer, and in other cases they can be cost-effective by reducing the amount of electricity a customer needs to purchase from an electric utility.

3.21 The Click! Engagement Committee (“the committee”) was formed in January 2016, per the direction of the Tacoma Public Utilities Board and the City Council.

3.21.1 The Committee was comprised of seven members as follows: Mayor Marilyn Strickland, City Council Member Marty Campbell, Public

1 Utility Board Member Mark Patterson, Public Utility Board Member  
2 Karen Larkin, industry experts Janine Terrano and Terry Dillon, and  
3 ratepayer advocate Andrea Cobb<sup>27</sup>.

4 3.21.2 The Committee met 16 times between January 22,2016 and  
5 August 1,2016.

6  
7 3.22 Studies by the Click! Engagement Committee and Tacoma Power's  
8 financial analysis demonstrate that continuing to provide CATV services in  
9 support of retail internet services makes the sale of such services a more  
10 competitive overall product and improves the financial sustainability of Click!<sup>28</sup>

11 3.23 In July 2018, the City Council and Public Utility Board ("Board") directed  
12 Joann Hovis, of CTC Technology & Energy ("CTC"), to negotiate with Rainier  
13 Connect and Wave Broadband, and to develop formal partnership proposals  
14 regarding the operation and use of the Click! Network.

15  
16 3.23.1 Two Public-Private Partnership Term Sheets ("term sheets") for  
17 operation and use of Click! Network, one from Rainier Connect and one  
18 from Wave Broadband, were presented to the Council and Board, at a  
19 Joint Study Session on March 5, 2019.<sup>29</sup>

20 3.23.2 Both of these term sheets proposed a 20-year IRU with two 10-  
21 year extensions.

22 3.23.3 The term sheets from Rainier Connect and from Wave Broadband  
23 were compared and evaluated by Joann Hovis of CTC, a consultant hired

by the City, who recommended to the TPU Board and City Council that they should proceed with the term sheet proposed by Rainier Connect.

3.24 The Rainier Connect term sheet<sup>30</sup> presented to City Council states that *“The IRU term will be 20 years (“IRU Term”). On the expiration of the IRU Term, the IRU can be renewed for two additional periods of 10 years (“Extension IRU Terms”) so long as Rainier Connect is in compliance with all the terms of its contractual relationships with the City of Tacoma and TPU.”*

3.25 The Rainier Connect term sheet (“the term sheet”) states: *“Rainier Connect will be granted use of other assets currently used by Click! in the provision of cable television and broadband data services, including equipment used to operate the Network and deliver services to customers, customer accounts, inventory of spare parts and equipment, prepaid items, and material contracts, in each case related to the operation of the Network and the provision of products and services (collectively, “Related Assets”). **The Related Assets will be conveyed to Rainier Connect subject thru the terms of an asset purchase agreement (“APA”)**<sup>31</sup> to be negotiated between the parties.”<sup>32</sup>*

3.26 Further negotiations with Rainier Connect were approved by City council on March 26<sup>th</sup>, 2019, with the passage of Resolution 40272, entitled: *“A resolution approving the execution of an agreement between the Department of Public Utilities, Light Division d.b.a. Tacoma Power, and Rainier Connect to negotiate in good faith formal partnership contracts related to the operation and use of the Click! Network”*

25  
26  
27

3.27 The term sheet states *“Rainier Connect will be granted an indefeasible right of use (“IRU”) for the hybrid fiber-coaxial network assets owned by Tacoma Public Utilities (TPU) and used by Tacoma Click! (“Click!)* to provide cable television and broadband data services to residents and businesses (*“Network”*) in the existing Click! service area (*“Click! Service Area”*). The Network includes the outside plant assets associated with the Click! network, including fiber optics, coaxial cable, cabinets, splitters, backup powering equipment, and other out-side plant physical assets including those discussed in 14(b) below”<sup>33</sup>

3.28 The term sheet states: *“The Tacoma Power Fiber on Critical Routes is collocated with the fiber optic strands that are used by Click! and are now planned to lease to Rainier Connect under the IRU.”*

3.29 The term sheet with Rainier Connect does not provide City council any control over TV or Internet rates.

3.30 The term “IRU” has frequently been described as a “Lease” by Tacoma City and TPU policy makers since the concept of a public-private partnership was first introduced in 2015.

3.30.1 In a May 6, 2015 Memo from TPU Director Gaines responding to “Council inquiries from the March 31, 2015 Joint Study Session” the “IRU” is described as a “Lease”.

3.31 On April 2, 2019 a Letter of Intenet (“LOI”) was signed by TPU Director Jackie Flowers with Rainier Connect. The LOI states “In the proposed transaction, Rainier Connect would obtain an exclusive indefeasible right to use (“IRU”) and operate the hybrid fiber coaxial (“HFC”) system that today the Department of Public Utilities, Light Division (“Tacoma Power”) d/b/a/ Click!

<sup>33</sup> Rainier Connect Public-Private Partnership Term Sheet Present to City Council on March 5, 2019

1  
2 Network ("Click") operates to provide wholesale and retail video and broadband  
3 products and services to residents and businesses in the City and in other  
4 jurisdictions in which Click! is franchised to operate".

5 3.31.1 The LOI contemplates the negotiation of an agreement that would  
6 grant Rainier Connect exclusive possession and control of HFC facilities  
7 and equipment essential in operating the CATV and wholesale Internet  
8 system.<sup>34</sup>

9  
10 3.32 The terms of the IRU, as described by the term sheet are a "lease".

11 3.32.1 FASB Statement of Financial Accounting Standards ("SFAS") No.  
12 13, *Accounting for Leases*, and the related interpretations of this standard,  
13 provide the relevant GAAP for lease accounting, including the definition of  
14 a lease. This accounting literature defines a lease as an agreement  
15 conveying the right to use property, plant or equipment for a period of  
16 time<sup>35</sup>

17 3.33 The term sheet represents significant material changes to the Click!  
18 Business model, including the removal of TPU as the primary operator of Click!,  
19 the sale or lease of telecommunications system equipment or capacity, the  
20 outsourcing of work and discontinuance of TPU products and services<sup>36</sup>.

IV. CLAIM FOR RELIEF

4.1 Plaintiff is without an adequate remedy at law to require City council to follow the requirements of City Charter 4.6 and is entitled to declaratory, injunctive and mandamus relief prohibiting any sale, lease or disposition of the Click! commercial telecommunication system unless and until such disposal is approved by a majority vote of the electors at a municipal election in the manner provided by the city charter and the laws of the state.

IV. PRAYER FOR RELIEF

WHEREFORE, plaintiffs pray for a declaratory judgement and writ of mandamus and/or prohibition against the defendant as follows:

- (1) Declaring Click! Network is a system owned and operated by TPU;
- (2) Affirming that Click! rates are set by the Utility Board and approved by City Council under the City’s Municipal and Utility Code;
- (3) Affirming the original mandate for creating Click! included demand side management (DSM) functions, CATV, two-way communication and Internet access.
- (4) Affirming Click! network consists of a hybrid fiber-optic coaxial (“HFC”) system, which delivers two-way signals for cable TV, cable modem,<sup>37</sup> Fiber To The Home (“FTTH”) Internet services, and advanced metering

<sup>37</sup> Telecommunications Infrastructure Section, on Page 47, Bond Prospectus for CITY OF TACOMA, WASHINGTON \$70,575,000 Electric System Revenue Bonds, Series 2017

- 1 (5) Declaring that a term sheet for negotiating an Indefeasible Right of  
2 Use (IRU) for Click! has been approved by City Council and formal  
3 contracts are being negotiated between Rainier Connect and the City  
4 for the future operation and transfer of control over Click! Network;
- 5
- 6 (6) Declaring that the term sheet states "*The Tacoma Power Fiber on*  
7 *Critical Routes is collocated with the fiber optic strands that are used by*  
8 *Click! and are now planned to lease to Rainier Connect under the*  
9 *IRU*<sup>38</sup>;
- 10 (7) Declaring that the IRU proposed in the term sheet with Rainier  
11 Connect is a "lease" of Click! system assets;
- 12 (8) Affirming that the term sheet specifically states "*Related Assets will*  
13 *be conveyed to Rainier Connect subject to the terms of an asset purchase*  
14 *agreement ("APA") to be negotiated between the parties*";
- 15
- 16 (9) Declaring that the term sheet with Rainier Connect includes an  
17 "asset sale";
- 18
- 19 (10) Affirming that City Charter 4.6, relating to the "Disposal of  
20 Utility Property" requires the "City shall never sell, lease or dispose of  
21 any utility system" without a "majority vote of the people";
- 22
- 23 (11) Affirming that City Charter 4.6 applies to Rainier Connect's  
24 proposal for the acquisition of Click!; since, it amounts to a lease  
25 and/or disposal of the Click! system, customer accounts, goodwill and  
26 ongoing interest in the telecommunications operations;
- 27

---

<sup>38</sup> Emphasis added to bring attention to the term "lease".

(12) Mandating and requiring that the City obtain approval from of a majority vote of the electors at a municipal election in the manner provided by the city charter prior to entering into a contract for an IRU, sale or lease of the Click! system to Rainier Connect;

(13) Prohibiting disposal or transfer of Click! business operations and customer account information to Rainier Connect.

(14) Public policy requires citizens have a right to expect the terms of their City Charter to be followed -especially when it affects an important resource such as public utility control and oversight on their municipal Internet service<sup>39</sup>.

(15) Awarding such other and further relief as the Court may deem just, equitable and proper under the circumstances.

IN THE SUPERIOR COURT OF THE STATE OF WASHINGTON  
IN AND FOR THE COUNTY OF PIERCE

Mitchell Shook,

Plaintiff Pro Se,

vs.

CITY OF TACOMA,

Defendant.

NO. 19-2-07135-0

ANSWER TO COMPLAINT

COMES NOW Defendant City of Tacoma, appearing by and through William C. Fosbre, Tacoma City Attorney, and M. Joseph Sloan, Deputy City Attorney, and in answer to the Plaintiff's Complaint for Declaratory, Injunctive, Prohibition and Mandamus Relief, hereinafter referred to as the "Complaint", not waiving objections based upon jurisdiction, improper, joinder and service, admits, denies and alleges as follows:

1. The Plaintiff's paragraphs entitled: "INTRODUCTION-NATURE OF ACTION" contain opinions and conclusions of law for which no response is required. However, because some of the allegations are inaccurate, Defendant denies the allegations contained therein.

- 1 2. In answer to Plaintiff's Complaint, paragraph 1 contains legal conclusions that  
2 require no response. To the extent a response could be required, Defendant  
3 admits that it is a municipal corporation located in Pierce County, Washington,  
4 operating as a first class charter city under the laws of the state of Washington.  
5 By way of further answer, Defendant lacks sufficient knowledge or information  
6 to form a belief as to the truth of the remainder of the allegations contained  
7 therein; however, Defendant specifically denies that Tacoma Power operates a  
8 business unit known as Click! Network ("Click!"). Rather, Click! is a trade name  
9 for an operating unit of Tacoma Power and a multi-service broadband  
10 telecommunications provider within Tacoma Power's service area. Defendant  
11 admits that Click! provides retail cable television and wholesale high-speed  
12 internet services to Tacoma Power customers, both residential and commercial.  
13
- 14 3. In answer to paragraph 2.1 of Plaintiff's Complaint, the allegations contained  
15 therein are legal conclusions, that the law speaks for itself, and to the extent  
16 that the same may be construed as containing an allegation to which a  
17 response is required, Defendant denies the allegations contained therein.
- 18 4. In answer to paragraph 2.2 of Plaintiff's Complaint, inclusive of footnote no. 3,  
19 the allegations contained therein are legal conclusions, that the law speaks for  
20 itself, and to the extent that the same may be construed as containing an  
21 allegation to which a response is required, Defendant denies the allegations  
22 contained therein.<sup>1</sup>  
23  
24  
25

---

<sup>1</sup> RCW 7.16.050 requires the submission of an affidavit by the Plaintiff in a statutory writ proceeding.  
ANSWER TO COMPLAINT- 2

- 1 5. In answer to paragraph 3.1 of Plaintiff's Complaint, Defendant denies the  
2 allegations contained therein. The quotation is incomplete<sup>2</sup>.
- 3 6. In answer to paragraph 3.1.1 of Plaintiff's Complaint, Defendant admits the  
4 allegations contained therein.
- 5 7. In answer to paragraphs 3.2, 3.2.1, 3.2.2, 3.2.3, 3.2.4 and 3.2.5 of Plaintiff's  
6 Complaint, Ordinance No. 25930 speaks for itself; therefore, no response is  
7 required. Furthermore, some provisions cited by the Plaintiff are incomplete,  
8 and the footnotes contain legal conclusions for which no response is required.
- 9 8. In answer to paragraph 3.2.6 of Plaintiff's Complaint, inclusive of footnote nos.  
10 7 and 8, Exhibit A to Ordinance No. 25930 speaks for itself; therefore, no  
11 response is required. However, the provision cited by the Plaintiff is incomplete  
12 and taken out of context; accordingly, Defendant lacks sufficient knowledge or  
13 information to form a belief as to the truth of the remainder of the allegations  
14 contained therein and therefore denies same.
- 15 9. In answer to paragraph 3.2.7 of Plaintiff's Complaint, inclusive of footnote no. 9,  
16 RCW 19.285, Initiative 937 and the Energy Independence Act speak for  
17 themselves, and paragraph 3.2.7 contains legal conclusions not requiring a  
18 response. To the extent a response is required, because the allegations are  
19 vague and ambiguous, Defendant lacks sufficient knowledge or information on  
20  
21  
22  
23

24 <sup>2</sup> Tacoma City Charter, Section 4.6: *The City shall never sell, lease, or dispose of any utility system,*  
25 *or parts thereof essential to continued effective utility service, unless and until such disposal is*  
*approved by a majority vote of the electors voting thereon at a municipal election in the manner*  
*provided in this charter and in the laws of this state.*

1 which to form a belief as to the truth of the allegations contained therein, and  
2 therefore denies same.

3 10. In answer to paragraph 3.2.8 of Plaintiff's Complaint, inclusive of footnote no.  
4 10, the allegations contained therein, together with Plaintiff's footnotes, contain  
5 legal conclusions and speculation regarding compliance with RCW 19.285.040  
6 for which no response is required. However, to the extent a response is  
7 required, Defendant lacks sufficient knowledge or information to form a belief as  
8 to the truth of the matters alleged therein and therefore denies same.

9 11. In answer to paragraph 3.3 of Plaintiff's Complaint, the allegations contain  
10 conclusions of law for which no response is required. However, if a response is  
11 required, Resolution No. 33668 and Resolution No. U-9258 speak for  
12 themselves. Furthermore, the Plaintiff has misquoted the language of  
13 Resolution No. 33668, and for this reason, the allegations contained therein are  
14 denied.  
15

16 12. In answer to paragraphs 3.3.1, 3.3.2, and 3.3.3 of Plaintiff's Complaint,  
17 Resolution No. 33668 speaks for itself; therefore, no further response is  
18 required. Should a response be required, the alleged quotations from  
19 Resolution No. 33688 contain errors in punctuation in paragraphs 3.3.1 and  
20 3.3.2, and 3.3.3 and is not an accurate or complete quotation from Resolution  
21 No. 33668; therefore, allegations as to their content are denied.

22 13. In answer to paragraph 3.3.4 of Plaintiff's Complaint, Defendant admits that  
23 Click! is a trade name for an integrated unit of Tacoma Power, a division of  
24  
25

1 Tacoma Public Utilities, a department of the City of Tacoma, however denies  
2 the remaining allegations contained therein.

3 14. In answer to paragraph 3.3.2 (incorrectly numbered and repeated on page 8 of  
4 Plaintiff's Complaint following paragraph 3.3.4). Defendant admits that Click! is  
5 the trade name for an integrated unit of Tacoma Power, a division of Tacoma  
6 Public Utilities, a department of the City of Tacoma. Defendant admits that the  
7 first level of oversight is Click! management; next, the Power Superintendent,  
8 next the Director of Utilities, then the Utility Board, and finally, the Tacoma City  
9 Council. Defendant denies the remaining allegations contained therein.

10 15. In answer to paragraph 3.3.3 (incorrectly numbered and repeated on page 8 of  
11 Plaintiff's Complaint, following incorrectly numbered paragraph 3.3.2),  
12 Defendant admits that in a declaratory judgment action brought by the City of  
13 Tacoma in Pierce County under Superior Court Cause No. 96-2099380, an  
14 order was issued on May 9, 1997, concluding that the City had authority to  
15 issue electric revenue bonds. Defendant, by way of further answer, responds  
16 that the allegations contain legal conclusions for which no response is required,  
17 and that to the extent a response is required, Defendant denies the remaining  
18 allegations contained therein.

19  
20 16. In answer to paragraph 3.4 of Plaintiff's Complaint, though Defendant admits  
21 that it has the technologies described therein; however, because the allegations  
22 are not completely accurate, Defendant denies the remaining allegations  
23 contained therein.  
24  
25

1 17. In answer to paragraph 3.5 of Plaintiff's Complaint, inclusive of footnote no. 12,  
2 though Defendant admits that it owns a network that includes the use of some  
3 of the technologies described, because the allegations are vague and  
4 incomplete, Defendant cannot ascertain the truth of the allegations contained  
5 therein and therefore, denies same.

6 18. In answer to paragraph 3.6 of Plaintiff's Complaint, Defendant admits that it has  
7 some of the technologies described therein; however, because the allegations  
8 are not completely accurate, Defendant denies the allegations contained  
9 therein.

10 19. In answer to paragraph 3.7 of Plaintiff's Complaint, Defendant admits the  
11 allegations contained therein.

12 20. In answer to paragraph 3.8 of Plaintiff's Complaint, Defendant admits the  
13 allegations contained therein.

14 21. In answer to paragraph 3.8.1 of Plaintiff's Complaint, Defendant admits the  
15 allegations contained therein.

16 22. In answer to paragraph 3.8.2 of Plaintiff's Complaint, Defendant admits the  
17 allegations contained therein.

18 23. In answer to paragraph 3.8.3 of Plaintiff's Complaint, Defendant admits the  
19 allegations contained therein.

20 24. In answer to paragraph 3.8.4 of Plaintiff's Complaint, Defendant lacks sufficient  
21 knowledge or information to form a belief as to the truth of the allegations  
22 contained therein and therefore denies same.  
23  
24  
25

1 25. In answer to paragraph 3.9 of Plaintiff's Complaint, Defendant admits that the  
2 Utility Board is comprised of five members, and that they are appointed by the  
3 Mayor and confirmed by the Tacoma City Council. As for Section 4.3 of the  
4 Tacoma City Charter, it speaks for itself. The remaining allegations contain  
5 conclusions of law for which no response is required.

6 26. In answer to paragraphs 3.10 and 3.10.1 of Plaintiff's Complaint, Title 12 of the  
7 Tacoma Municipal Code speaks for itself.

8 27. In answer to paragraph 3.10.2 of Plaintiff's Complaint, Defendant denies the  
9 allegations contained therein. Matters of all utility rates are subject to Utility  
10 Board and City Council review, and if deemed appropriate, are approved.

11 28. In answer to paragraph 3.11 of Plaintiff's Complaint, Defendant admits that the  
12 Gateway meters operate over Click!'s HFC network; however, because the  
13 allegations are not completely accurate, Defendant denies the remaining  
14 allegations contained therein.

15 29. In answer to paragraph 3.11.1 of Plaintiff's Complaint, inclusive of footnote  
16 no. 14, Defendant admits the allegations contained therein, except as to the  
17 reference to Amended Resolution No. U-10879, the document speaks for itself,  
18 and therefore no response is required.

19 30. In answer to paragraphs 3.11.2 and 3.12 of Plaintiff's Complaint, inclusive of  
20 footnote no. 15, because the allegations are not completely accurate,  
21 Defendant denies the allegations contained therein.

22 31. In answer to paragraph 3.13 of Plaintiff's Complaint, Amended Resolution No.  
23 U-10879 speaks for itself; therefore, no response is required.  
24  
25

1 32. In answer to paragraphs 3.14, 3.15 and 3.16 of Plaintiff's Complaint, inclusive  
2 of footnote nos. 16, 17, and 18, Amended Resolution No. U-10879 speaks for  
3 itself; therefore, no response is required; however, because the Plaintiff has  
4 misrepresented the language of the Resolution, Defendant denies the  
5 allegations contained therein.

6 33. In answer to paragraph 3.17 of Plaintiff's Complaint, the Defendant denies the  
7 allegations contained therein.

8 34. In answer to paragraphs 3.18, 3.18.1, 3.19, 3.19.1 and 3.19.2, inclusive of  
9 footnotes 19, 20 and 21, Resolution No. U-10828, the Tacoma City Charter and  
10 Resolution No. 39347 speak for themselves; therefore, no response is required.  
11 However, because the provisions quoted are misquoted, Defendant denies the  
12 allegations contained therein.

13 35. In answer to paragraphs 3.19.3 and 3.19.2 (3.19.2 incorrectly numbered and  
14 repeated on page 14 following correctly numbered paragraph 3.19.3) of  
15 Plaintiff's Complaint, inclusive of footnote no. 22, Resolution No. 39347 speaks  
16 for itself; therefore, no response is required. However, Defendant denies that  
17 paragraphs 3.19.3 and 3.19.2 of Plaintiff's Complaint accurately reflect the  
18 provisions from the Resolution as represented.

19 36. In answer to paragraphs 3.20, and 3.20.1 of Plaintiff's Complaint, Defendant  
20 admits the allegations contained therein.

21 37. In answer to paragraph 3.20.2, Defendant lacks sufficient knowledge or  
22 information to form a belief as to the truth of the matter asserted, and therefore,  
23 denies same.  
24  
25

1 38. In answer to paragraph 3.20.3 of Plaintiff's Complaint, Defendant admits the  
2 allegations contained therein.

3 39. In answer to paragraph 3.20.4 of Plaintiff's Complaint, RCW 35.92.360 speaks  
4 for itself; therefore, no response is needed. Furthermore, Defendant denies  
5 that what is stated is an accurate representation of the language of the statute  
6 or its title.

7 40. In answer to paragraphs 3.21, 3.21.1 and 3.21.2 of Plaintiff's Complaint,  
8 Defendant admits the allegations contained therein.

9 41. In answer to paragraph 3.22 of Plaintiff's Complaint, because this paragraph  
10 incorporates the Plaintiff's footnote that refers to a September 28, 2016,  
11 Amended Resolution, Defendant lacks sufficient information to form a belief as  
12 to the truth of the allegation contained therein, and therefore denies same.

13 42. In answer to paragraphs 3.23, 3.23.1, 3.23.2 and 3.23.3 of Plaintiff's Complaint,  
14 Defendant denies the accuracy of the events represented in paragraph 3.23;  
15 however, Defendant admits the remaining allegations contained therein.

16 43. In answer to paragraph 3.24 of Plaintiff's Complaint, the referenced "term  
17 sheet" speaks for itself; therefore, no response is required. Because the entire  
18 provision has not been stated, Defendant denies the allegations contained  
19 therein.

20 44. In answer to paragraph 3.25 of the Plaintiff's Complaint, the "term sheet"  
21 speaks for itself. Furthermore, because the relevant provisions of the term  
22 sheet have not been accurately stated, Defendant denies the allegation  
23 contained therein.  
24  
25

1 45. In answer to paragraph 3.26 of Plaintiff's Complaint, Resolution No. 40272

2 speaks for itself. However, because the provisions of the Resolution have not  
3 been accurately stated, Defendant denies the allegations contained therein.

4 46. In answer to paragraph 3.27 of Plaintiff's Complaint, the "term sheet" speaks for

5 itself; therefore, no response is required; however, because the allegation  
6 inaccurately states the alleged provision of the term sheet, Defendant denies  
7 the allegation contained therein.

8 47. In answer to paragraph 3.28 of Plaintiff's Complaint, the "term sheet" speaks for

9 itself; therefore, no response is required.

10 48. In answer to paragraph 3.29 of Plaintiff's Complaint, the allegation contains the

11 Plaintiff's legal opinion for which no response is required. Furthermore, the  
12 "term sheet" speaks for itself, and accordingly, the allegation requires no  
13 response.

14 49. In answer to paragraph 3.30 of Plaintiff's Complaint, the allegation is vague and

15 ambiguous; furthermore, the Defendant lacks sufficient knowledge or  
16 information in which to form a belief as to the truth of the allegation, and  
17 therefore denies same.

18 50. In answer to paragraph 3.30.1 of Plaintiff's Complaint, any memo from the TPU

19 Director to the Tacoma City Council would speak for itself; therefore, no  
20 response is required.

21 51. In answer to paragraph 3.31 of Plaintiff's Complaint, the April 2, 2019, letter

22 speaks for itself; therefore, no response is necessary. Furthermore, the actual  
23  
24  
25

1 language used in the letter is not accurately represented in the allegation;  
2 therefore, Defendant denies the allegation contained therein.

3 52. In answer to paragraph 3.31.1 of Plaintiff's Complaint, the allegation contains  
4 Plaintiff's legal opinion and speculation for which no response is required.  
5 Furthermore, the letter at issue speaks for itself; accordingly, no response is  
6 required.

7 53. In answer to paragraph 3.32 of Plaintiff's Complaint, the allegation contains the  
8 Plaintiff's legal opinion for which no response is required. Furthermore, the  
9 "term sheet" speaks for itself.

10 54. In answer to paragraph 3.32.1 of Plaintiff's Complaint, the allegation contains  
11 the Plaintiff's legal opinion and interpretation of the Statement of Financial  
12 Accounting Standards for which no response is required; furthermore, the  
13 purported standard speaks for itself.

14 55. In answer to paragraph 3.33 of Plaintiff's Complaint, the allegation contains the  
15 Plaintiff's legal opinion and speculation for which no response is required.  
16 Furthermore, the "term sheet" speaks for itself. Accordingly, no response is  
17 required.  
18

19 56. In answer to paragraph 4.1 of Plaintiff's Complaint, the Defendant, having fully  
20 answered Plaintiff's Complaint, denies that the Plaintiff does not have an  
21 adequate remedy at law, and denies that the Plaintiff is entitled to any of the  
22 remedies or relief of any type or nature.  
23  
24  
25

AFFIRMATIVE DEFENSES

1  
2 57. In further answer to Plaintiff's Complaint, and as Defendant's FIRST  
3 AFFIRMATIVE DEFENSE, Defendant alleges that the Plaintiff has failed to  
4 state a claim for which relief can be granted.

5 58. In further answer to Plaintiff's Complaint, and as Defendant's SECOND  
6 AFFIRMATIVE DEFENSE, Defendant alleges that the Plaintiff lacks legal  
7 standing to pursue his claim against the Defendant.

8 59. In further answer to Plaintiff's Complaint, and as Defendant's THIRD  
9 AFFIRMATIVE DEFENSE, the Plaintiff's claims are barred by operation of the  
10 legal doctrines of waiver, laches and estoppel. Since at least as early as 2006,  
11 Click! has contracted with multiple Internet Service Providers (ISPs), including,  
12 but not limited to, Advanced Stream for use of the Click! Network to provide  
13 retail internet services.

14  
15 60. In further answer to Plaintiff's Complaint, and as Defendant's FOURTH  
16 AFFIRMATIVE DEFENSE, the Plaintiff's claim for injunctive relief is barred by  
17 the fact that the Plaintiff has the option of pursuing remedies at law.

18 61. In further answer to the Plaintiff's Complaint, and as the Defendant's FIFTH  
19 AFFIRMATIVE DEFENSE, Plaintiff's damages, if any, were the proximate result  
20 of the Plaintiff's comparative or contributory fault.

21 62. In further answer to the Plaintiff's Complaint and as Defendant's SIXTH  
22 AFFIRMATIVE DEFENSE, to the extent the Plaintiff requests damages, the  
23 Plaintiff's damages, if any, were the sole and proximate result of the Plaintiff's  
24 failure to mitigate his damages.  
25

1 63. In further answer to Plaintiff's Complaint, and as Defendant's SEVENTH  
2 AFFIRMATIVE DEFENSE, the Plaintiff's claims are barred, in whole or in part,  
3 by operation of res judicata or collateral estoppel arising from issues litigated  
4 and orders issued by the Pierce County Superior Court in 1996<sup>3</sup> and 1997  
5 authorizing the System that is now Click! Network.

6 64. In further answer to Plaintiff's Complaint, and as Defendant's EIGHTH  
7 AFFIRMATIVE DEFENSE, the Plaintiff's claims are not ripe for adjudication.

8 65. In further answer to Plaintiff's Complaint, and as Defendant's NINTH  
9 AFFIRMATIVE DEFENSE, the Plaintiff's claim for relief is barred by the  
10 doctrine of unclean hands.

11 66. In further answer to Plaintiff's Complaint, and as Defendant's TENTH  
12 AFFIRMATIVE DEFENSE, the Plaintiff's Complaint for Mandamus Relief does  
13 not comply with the provisions of RCW 7.16.050 and RCW 7.16.170, and relief  
14 is therefore barred.

15 67. In further answer to Plaintiff's Complaint, and as Defendant's ELEVENTH  
16 AFFIRMATIVE DEFENSE, the Plaintiff has failed to join an indispensable party  
17 as a result of which relief cannot be granted.

18  
19 PRAYER FOR RELIEF

20 Having fully answered the allegations of Plaintiff's Complaint, Defendant prays  
21 for judgment as follows:

- 22 1. That the Plaintiff be denied declaratory relief;  
23 2. That the Plaintiff be denied injunctive relief;  
24

IN THE SUPERIOR COURT OF THE STATE OF WASHINGTON  
IN AND FOR THE COUNTY OF PIERCE

Mitchell Shook,  
Plaintiff Pro Se,  
vs.  
CITY OF TACOMA,  
Defendant.

NO. 19-2-07135-0

ORDER GRANTING  
DEFENDANT'S MOTION TO  
CONSOLIDATE

ORDER

This matter having come on before this Court, upon the Motion of Defendant City of Tacoma, and the Court having considered the Motion of Defendant City of Tacoma to Consolidate Pierce County Superior Court Cause No. 19-2-07873-7 with the above-referenced cause, the Declaration of M. Joseph Sloan in support thereof, and authorities stated therein, the arguments therein, and there being no opposition thereto, and having established that these two matters involve common questions of law and fact and that consolidation will serve the interests of judicial economy, that consolidation does not change the substantive rights of any of the parties and will not result in prejudice to any party; now therefore, it is hereby,

10 AMENDED COMPLAINT

11 **Plaintiff, Mitchell Shook, hereby amends his Complaint to add facts, causes of action and**  
12 **relief sought. Plaintiff can certainly prove these charges.**

13 **Additional facts are added starting at “Paragraph 3.34” on page 16, new causes of action**  
14 **are in Section IV beginning with paragraph 4.2 on page 21, and further relief sought is under**  
15 **“Section V” beginning at paragraph 16 on page 21..**

16 INTRODUCTION -NATURE OF ACTION

17 Click! Network (“Click!) was established in 1997, by Tacoma City Council, as a “*broad band*  
18 *telecommunications system that shall be owned, operated and controlled by the City of Tacoma*  
19 *Department of Public Utilities Light Division*”<sup>1</sup>.

20 The Click! system is clearly part of Tacoma Public Utilities.

21 The Click! system was established to “*provide telecommunications services for data transport,*  
22 *high speed internet access, full cable television service, and, among other things, to meet the*  
23 *expanding telecommunications requirements in an evolving competitive electric market, the most*  
24 *critical of which is real time, two-way interactive communications with individual energy consumers*”

25 The Click! Network telecommunication system continues to fulfill its original mandate, providing  
26 wholesale broadband Internet services to over 20,000 Tacoma Public Utilities customers, with a state-

27  

---

<sup>1</sup> The 1997 City Council Resolution No. 33668

1 of-the-art cable modem and Gigabit Fiber To The Home (“FTTH”) system -while delivering  
2 television services to over 12,500 Tacoma Public Utilities customers over the system.

3 The Tacoma City Council recently approved a “term sheet” for disposal of Tacoma Public  
4 Utilities’ proprietary interests in the system. All control over the day-to-day ongoing operations of  
5 Click!, including oversight on rates, would be handed over to a private company.

6 Tacoma City Charter, Article IV § 4.6, clearly prohibits the disposal of a “utility system” without  
7 a majority vote of the electorate. Similarly, RCW 35.94 requires a vote for any sale, lease or disposal  
8 of “any part” of a municipal utility system.

9 Since Click!’s system is part of Tacoma Public Utility<sup>2</sup>, and no such vote of the people is planned  
10 or provided for, there is an imminent risk that the terms of City charter will be violated.

11 The purpose of this action is to make sure the clear language in the City charter is followed and the  
12 people are allowed to vote on any lease or disposal of the Click system by TPU; for, if charter  
13 provisions are ignored, the City would be exceeding its authority and acting ultra vires.

#### 14 1. PARTIES

15 Plaintiff Mitchell Shook is a resident of Tacoma, a Tacoma Public Utilities rate payer, taxpayer to  
16 City of Tacoma’s general government and Click! customer; and, as such, has standing to seek the  
17 relief requested in this petition.

18 Defendant City of Tacoma (“the City”) is a Washington Municipal Corporation located in Pierce  
19 county, Washington. The Light Division, doing business as Tacoma Power, of the City’s Department  
20 of Public Utilities (“TPU”) operates and provides services to TPU customers (“ratepayers”). TPU  
21 operates a business unit, known as Click! Network, which provides retail television and wholesale  
22 Internet services.

#### 23 2. JURISDICTION AND VENUE

24 2.1 This Court has subject matter jurisdiction over this issue, since the City is located in Pierce  
25 County and the events related to this petition have substantially occurred in Pierce County;  
26

27 \_\_\_\_\_  
<sup>2</sup> City of Tacoma Resolution 40272

1 additionally, the superior court has subject matter jurisdiction over this action under RCW 2.08.010  
2 because plaintiff seeks writs of mandamus and/or prohibition.

3 2.2 Given no other speedy or adequate remedy, RCW 7.16.040 provides the Court  
4 jurisdiction over this matter.<sup>3</sup>

### 5 3. FACTS

6 3.1 Tacoma City Charter Section 4.6 requires “*The City shall never sell, lease or dispose of any*  
7 *utility system*” without a “*majority vote of the electors*”.

8 3.1.1 Click is multi-service broadband telecommunications provider and operating section of  
9 Tacoma Power providing retail cable television and wholesale broadband internet services to Tacoma  
10 Power’s residential and business customers.

11 3.2 Ordinance NO. 25930 was passed by Tacoma City Council in 1996 and entitled “*AN*  
12 *ORDINANCE of the City of Tacoma, Washington establishing a telecommunications system as*  
13 *part of the Light Division*”.

14 3.2.1 The 1996 CITY of Tacoma ORDINANCE NO. 25930 States “*WHEREAS, RCW 35.92.050*  
15 *authorizes cities to construct and operate works and facilities for the purpose of furnishing*  
16 *any persons with electricity and other means of power and to regulate and control the use*  
17 *thereof<sup>4</sup> or lease any equipment or accessories necessary and convenient for the use*  
18 *thereof; and*

19 3.2.2 CITY of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the Utility Board and the*  
20 *Council have determined that it is in the best interest of the City that it install a*  
21 *telecommunications system among all of its Electric System substations in order to improve*  
22 *communications for automatic substation control; and*

---

24 <sup>3</sup> A writ of review shall be granted by any court, when an inferior tribunal, board or officer, exercising judicial  
25 functions, has exceeded the jurisdiction of such tribunal, board or officer, or one acting illegally, or to correct  
26 any erroneous or void proceeding, or a proceeding not according to the course of the common law, and there  
27 is no appeal, nor in the judgment of the court, any plain, speedy and adequate remedy at law.

<sup>4</sup> Emphasis added to remind the Court that this functionality is still relevant today. Smart homes, smart  
devices and the Internet-of-Things (with devices such as smart thermostats for example) allow users to  
control their electrical usage even when away from the premises.

1 3.2.3 CITY of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the City has determined*  
2 *that it is prudent and economical to provide additional capacity on such*  
3 *telecommunications system to provide the Electric System with sufficient capacity to*  
4 *perform or enhance such functions as automated meter reading and billing, appliance*  
5 *control<sup>5</sup>, and load shaping; and*

6 3.2.4 City of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the Light Division may wish*  
7 *to connect such telecommunications system to individual residences and businesses in its*  
8 *service area or to other providers of telecommunications services; and*

9 3.2.5 The 1996 City of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the City has*  
10 *determined that it should create **a telecommunications system as part of the Electric***  
11 ***System**<sup>6</sup> in order to construct these telecommunications improvements”*

12 3.2.6 Exhibit A to 1996 City of Tacoma ORDINANCE NO. 25930<sup>7</sup> stated the  
13 telecommunications project would include “demand side management (DSM)  
14 functions<sup>8</sup>, CATV and Internet Access.

15 3.2.7 In 2006, Washington voters approved Initiative Measure 937, known as the Energy  
16 Independence Act. The measure, which was codified at RCW 19.285, requires electric  
17 utilities with more than 25,000 customers to take certain measures to conserve energy<sup>9</sup>

18 3.2.8 Demand-side management (DSM) or demand-side response (DSR) is the modification of  
19 consumer demand for energy through various methods -such as financial incentives.

20  
21  
22  
23 \_\_\_\_\_  
24 <sup>5</sup> Emphasis added, for it should be recognized that “appliance control” is not possible without two way  
25 communication between an appliance and the user -as such “appliance control” is an energy related  
26 function.

27 <sup>6</sup> Emphasis added to point out that the telecommunications system is a “part of the electric system”

<sup>7</sup> Passed on July 26, 1996 when the telecommunications system was approved

<sup>8</sup> the goal of demand-side management is to encourage the consumer to use less energy during peak hours,  
or to move the time of energy use to off-peak times such as nighttime and weekends

<sup>9</sup> Kelley, 120313 WAAGO, AGO 2013-6 2013

1 Demand-side management encourages the consumer to use less energy during peak hours,  
2 or to move the time of energy use to off-peak times such as nighttime and weekends.<sup>10</sup>

3 3.3 The Tacoma City Council approved construction of Click! Network on April 8,1997. The City  
4 Council delegated authority to the Public Utility Board and the Department of Public Utilities  
5 ("TPU"), Light Division (dba "Tacoma Power"), to implement, own and manage a broadband  
6 telecommunications system ("Click! Network" or "Click!"), as authorized through City Council  
7 Substitute Resolution No. 33668, approved April 8, 1997, and Public Utility Board Amended  
8 Substitute Resolution U-9258, which was approved on April 9 1997

9 3.3.1 The 1997 Council Resolution No. 33668 states: "WHEREAS the City of Tacoma,  
10 Department of Public Utilities, Light Division desires to: (1) develop a state-of-the art fiber optic  
11 system to support enhanced electric system control, reliability and efficiency; (2) develop  
12 capability to meet the expanding telecommunications requirements in an evolving competitive  
13 electric market, the most critical of which is real time, two-way interactive communications with  
14 individual energy consumers, (3) create greater revenue diversification through new business  
15 lines (i.e. Internet transport, cable TV, etc.), (4) enhance traditional products and services, and (5)  
16 maximize return on Light Division assets,

17 3.3.2 The 1997 Council Resolution No. 33668 states "*WHEREAS a broadband*  
18 *telecommunications system will have available capacity for future City Light Division needs and*  
19 *will also have the capacity to provide telecommunications services for data transport, high speed*  
20 *internet access, full cable television service, and other uses, and;*"

21 3.3.3 The 1997 Resolution No. 33668 states "*BE IT RESOLVED BY THE COUNCIL OF THE*  
22 *CITY OF TACOMA: That the Council hereby finds and determines that the City Light Division's*  
23 *broad band telecommunications proposal is in the best interests of the City, will serve a public*  
24 *purpose and that the said Business Plan is sufficient and adequate, therefore, the Council hereby*  
25 *approves the Light Division's proposal including the Business Plan and the Department of Public*  
26

---

27 <sup>10</sup> Demand Side Management and Response can play a role in satisfying TPU's requirement for complying with RCW 19.285.040 Energy conservation and renewable energy targets -which requires TPU to pursue all available conservation that is cost-effective, reliable, and feasible.

1 *Utilities, Light Division is hereby authorized to proceed to implement said proposal for a broad*  
2 *band telecommunications system, and That the proposed broad band telecommunications system*  
3 *shall be owned, operated and controlled by the City of Tacoma Department of Public Utilities*  
4 *Light Division*<sup>11</sup>"

5 3.3.4 Click! operates as part of TPU. Click is one Tacoma Power's 6 business units -which units are  
6 generation; power management; transmission and distribution; rates, planning and analysis; Click  
7 Network; and utility technology services.

8 3.3.2 Click! is not a separate business unit or enterprise fund. It is an organizational unit within the  
9 Power enterprise fund. The first line of Click! oversight is the Power Superintendent and the  
10 Power management team. From there, oversight is provided by, the TPU CEO, the Board, and the  
11 City Council.

12 3.3.3 TPU Revenue Bonds were approved, by a declaratory judgement, to pay for construction of the  
13 Click! system; and, no general fund dollars have been committed to the project.

14 3.4 Approximately 1,500 miles of fiber and coaxial cable have been constructed by Tacoma  
15 Power in the cities of Tacoma, University Place, Fircrest, Lakewood and Fife, and portions of  
16 unincorporated Pierce County, providing Tacoma Power with a state-of-the-art telecommunication  
17 system with which supports transmission and distribution operations, advanced metering, and retail  
18 and wholesale commercial services. The network currently covers approximately 66% of the  
19 households in Tacoma Power's service territory.

20 3.5 The network consists of a hybrid fiber-optic coaxial ("HFC") system, which delivers two-way  
21 signals for cable TV, cable modem,<sup>12</sup> Fiber To The Home ("FTTH") Internet services, and advanced  
22 metering.

23 3.6 In addition, SONET ("Synchronous Optical Network") and Gigabit Ethernet technologies  
24 are used to support communications across Tacoma Power's transmission and distribution system and  
25

26 \_\_\_\_\_  
27 <sup>11</sup> Emphasis added to highlight fact that system is owned by TPU

<sup>12</sup> Telecommunications Infrastructure Section, on Page 47, Bond Prospectus for CITY OF TACOMA,  
WASHINGTON \$70,575,000 Electric System Revenue Bonds, Series 2017

1 to carry out data transport services for commercial customers. The network was designed and  
2 constructed to meet high telecommunications standards, containing a redundant backbone and  
3 redundant service loops, which seek to ensure uninterrupted signal transport in the event of a network  
4 break.

5 3.7 Commercial telecommunication services were Launched in 1998 under the brand name Click!  
6 Network. Click! provides three commercial telecommunication services to TPU customers; retail  
7 cable television, wholesale broadband transport and wholesale high-speed Internet delivered over  
8 cable modem and FTTH.

9 3.8 In 2017 Click! Network's annual operating revenues were approximately \$26,519,861<sup>13</sup>.

10 3.8.1 Click! ended 2018 with more than 12,500 cable TV customers, 20,000 wholesale  
11 high- speed Internet service customers, and more than 100 wholesale broadband transport  
12 circuits.

13 3.8.2 Click! has "significant goodwill", According to Section 2.3 of the January 23, 2018  
14 presentation by Joann Hovis, of CTC Technology, at the City Council-TPU Board Joint Study  
15 Session. Ms. Hovis' report was titled Strategy Alternatives for Tacoma Click!:

16 3.8.3 "Click! has thousands of customers and considerable goodwill", as confirmed by Click!  
17 Network General Manager, Tenzin Gyaltzen, who stated so in his February 7<sup>th</sup>, 2018, Declaration  
18 In Support Of Defendants Opposition To Partial Summary Judgement -page 3 , Pierce County  
19 Superior Court Case No 17-2-08907-4

20 3.8.4 Click! is the nations second largest municipal CATV and Internet service -behind  
21 Chattanooga TN.

22 3.9 TPU is governed by the City's public utility board, whose five members are appointed by the  
23 mayor and confirmed by the city council. Utility budgets and rates are subject to approval by the city  
24 council. **Section 4.3 of the City charter** provides City council with oversight on rates and the  
25 authority *"to fix and from time to time, revise such rates and charges as it may deem advisable for*  
26 *supplying such utility services the City may provide"*.

27  

---

<sup>13</sup> CLICK! NETWORK COMMERCIAL OPERATIONS OPERATIONAL SUMMARY - December 31, 2017

1 3.10 Title 12 “Utilities” of the Tacoma Municipal Code regulates utilities and rates.

2 3.10.1 Click! CATV and wholesale Internet rates are regulated under Title 12 of the Tacoma  
3 Municipal Code, in section 12.13

4 3.10.2 Click! TV and Wholesale Internet rates are approved by the Public Utility Board  
5 (Board) and City Council, the same as Power, Water, and Rail rates.

6 3.11 Over 10,000 TPU electric customers currently have Tacoma Power Gateway meters  
7 installed on their homes. These “gateway meters” operate over Click! Network’s HFC plant.

8 3.11.1 The Gateway meters feature “remote connect and disconnect” functionality  
9 allowing for services to be turned on or off for electric customers. The gateway meters  
10 also allow automated electric meter reading and provide information to customers  
11 relevant to their energy purchasing decisions.<sup>14</sup>

12 3.11.2 In connection with these Gateway Meters, some TPU customers participate in  
13 the “Pay-Go” prepayment system.

14 3.12 Click! currently holds telecommunications or video franchises from the City of Tacoma,  
15 City of Fircrest, City of Fife, City of Lakewood, City of University Place, and Pierce County to  
16 offer Cable TV, high speed Internet, digital phone, as well as fiber-delivered data solutions to  
17 area residents and businesses<sup>15</sup>.

18 3.13 AMENDED RESOLUTION NO. U-10879, states:” #20. *WHEREAS Tacoma Power has*  
19 *excess power generation capacity within its service territory. In the past, Tacoma Power has*  
20 *benefited greatly by selling this excess capacity in the wholesale power markets to the benefit of all*  
21 *retail electric customers. Over the past few years, wholesale power prices and sales have dropped*  
22 *substantially. In support of Tacoma Power's strategic business plan, Tacoma Power wants to make*  
23 *up this lost revenue by looking at ways to increase its retail power sales through economic growth in*  
24 *the community. Communities across the nation have benefited economically from competitive access*  
25 *to internet services in their communities.*”

26 \_\_\_\_\_  
27 <sup>14</sup> From AMENDED RESOLUTION NO. U-10879 Adopted by TPU Board on 9-28-16

<sup>15</sup> CLICK! NETWORK Business Plan -by Click! General Manager Tenzin Gyaltzen. Revised 3-20-17 -Executive Summary Page 2

1 3.14 AMENDED RESOLUTION NO. U-10879 also states: “Tacoma Power’s continued operation  
2 and maintenance of the telecommunications system for internet access purposes assists in making the  
3 internet services competitive in Tacoma Power’s service area, which increases economic growth that  
4 leads to greater retail power sales”.<sup>16</sup>.

5 3.15 AMENDED RESOLUTION NO. U-10879 stated “WHEREAS The Internet-related uses of  
6 the Click! telecommunications system provide Tacoma Power customers benefits by giving them  
7 access to advanced customer services options such as: power use monitoring, outage reporting,  
8 scheduling of services, bill paying, and electrical appliance control.

9 3.16 AMENDED RESOLUTION NO. U-10879 stated that “WHEREAS In planning for an  
10 uncertain and unknown future<sup>17</sup>, there may be other potential functions related to the supplying of  
11 electricity to customers who might also make energy related usage of the telecommunications system  
12 infrastructure including: cyber security efforts, electric car charging and metering, enhanced “smart  
13 home” uses that allow customers to control power usage by time of day, participate in demand  
14 response programs, behavior-based saving programs, outage communications, energy audits, and  
15 participation in Evergreen Options”<sup>18</sup>

16 3.17 One purpose for creating Click! was to have a telecommunications system sophisticated  
17 enough to enable TPU to compete effectively in the rapidly evolving electric industry.

18 3.18 Amended Resolution U-10828, adopted by the City’s public utility board on December 3,  
19 2015, states “*WHEREAS the broadband telecommunication system is critical infrastructure for*  
20 *Tacoma Power*

21 3.18.1 Amended Resolution U-10828 cites Charter 4.6 as requiring a vote of the people to  
22 before the City may “*lease or dispose of any utility system*”.<sup>19</sup>

26 <sup>16</sup> AMENDED RESOLUTION NO. U-10879 -Page 4, This is Whereas #20

27 <sup>17</sup> AMENDED RESOLUTION NO. U-10879 -Page 4, This is Whereas #17

<sup>18</sup> <https://www.mytpu.org/community-environment/clean-renewable-energy/evergreen-options-program/>

<sup>19</sup> Page one of Amended Resolution U-10828

1 3.19 City Council Resolution #39347 states: “1997, the City of Tacoma, through its electrical  
2 utility, embarked on an effort to construct and operate a state-of-the-art telecommunication system  
3 for the benefit of its electric utility and its electric utility customers”<sup>20</sup>

4 3.19.1 City Council Resolution #39347 states: “WHEREAS the telecommunications  
5 system was constructed and has been in continuous operation since 1999, and has proven to  
6 provide benefits for the City electric utility and electric utility customers located both Inside  
7 and outside City limits”<sup>21</sup>

8 3.19.2 City Council Resolution #39347 states: “WHEREAS the telecommunication system  
9 is now a vital component of the City's electric utility and continued operation and  
10 maintenance of the system is an essential function of the electric utility”

11 3.19.3 City Council Resolution #39347 states: “WHEREAS some of the benefits the City's  
12 electric utility and electric utility customers have received from the system include (1)  
13 enhanced control, reliability and efficiency of the City's electrical system; (2) increased  
14 capability to meet the expanding telecommunication requirements in an evolving competitive  
15 electric market, including the ability to make real-time, two-way interactive communications  
16 with individual energy consumers; (3) improved traditional electric products provided to  
17 consumers; (3) diversified revenue streams through new business lines (i.e., Internet  
18 transport, cable TV, etc.); and (5) maximized return on the City's electric system assets, and  
19 enhancing communication between electric utility assets and electric utility consumer, and  
20 providing electric utility customers a means to instantly access electric utility accounts  
21 information for payment of bills, report outages, and obtain energy usage and conservation  
22 information”<sup>22</sup>

23 3.19.2 City Council Resolution #39347 stated: “WHEREAS some benefits of the City's  
24 electric utility telecommunication system include enhancing communication between electric  
25 utility assets and electric utility consumers, and providing electric utility customers a means  
26

27 <sup>20</sup> City Council Resolution #39347 -page 1

<sup>21</sup> City Council Resolution #39347 -page 1

<sup>22</sup> Passed by City Council on December 15 2015

1 *to instantly access electric utility accounts information for payment of bills, report outages,*  
2 *and obtain energy usage and conservation information, and;*

3 3.20 That a water heater “demand response project” was recently conducted by Tacoma Power, in  
4 the Salishan housing development neighborhood, under an agreement with the Tacoma Housing  
5 Authority.

6 3.20.1 Data transport for the Salishan demand response hot water heater project utilized Click!  
7 Network’s cable modem system<sup>23</sup>.

8 3.20.2 Demand response technology requires two-way communications.

9 3.20.3 Demand response technology holds potential for load reduction and energy savings<sup>24</sup>.

10 3.20.4 RCW 35.92.360<sup>25</sup> -Energy conservation plan states "The legislature finds that energy  
11 conservation can take many useful and cost-effective forms, and that the types of conservation  
12 projects available to utilities and customers evolve with time as technologies are developed and  
13 market conditions change. In some cases, **electricity conservation projects are most cost-**  
14 **effective when they reduce the total amount of electricity consumed**<sup>26</sup> by an individual  
15 customer, and in other cases they can be cost-effective by reducing the amount of electricity a  
16 customer needs to purchase from an electric utility.

17 3.21 The Click! Engagement Committee (“the committee”) was formed in January 2016, per the  
18 direction of the Tacoma Public Utilities Board and the City Council.

19 3.21.1 The Committee was comprised of seven members as follows: Mayor Marilyn Strickland,  
20 City Council Member Marty Campbell, Public Utility Board Member Mark Patterson, Public  
21 Utility Board Member Karen Larkin, industry experts Janine Terrano and Terry Dillon, and  
22 ratepayer advocate Andrea Cobb<sup>27</sup>.

23 3.21.2 The Committee met 16 times between January 22,2016 and August 1,2016.

24  
25 <sup>23</sup> Email from Click! General Manager Tenzin Gyaltzen

26 <sup>24</sup> BPA Salishan Demand Response Water Heater Final Report 2018

27 <sup>25</sup> Findings-Intent-2002 c 276

<sup>26</sup> Emphasis added to point out the Nexus between Internet access and the ability to conserve energy

<sup>27</sup> CLICK! NETWORK Business Plan -by Click! General Manager Tenzin Gyaltzen. Revised 3-20-17 -Executive Summary Page 2

1 3.22 Studies by the Click! Engagement Committee and Tacoma Power’s financial analysis  
2 demonstrate that continuing to provide CATV services in support of retail internet services makes the  
3 sale of such services a more competitive overall product and improves the financial sustainability of  
4 Click!<sup>28</sup>

5 3.23 In July 2018, the City Council and Public Utility Board (“Board”) directed Joann Hovis, of  
6 CTC Technology & Energy (“CTC”), to negotiate with Rainier Connect and Wave Broadband, and to  
7 develop formal partnership proposals regarding the operation and use of the Click! Network.

8 3.23.1 Two Public-Private Partnership Term Sheets (“term sheets”) for operation and use of  
9 Click! Network, one from Rainier Connect and one from Wave Broadband, were presented to  
10 the Council and Board, at a Joint Study Session on March 5, 2019.<sup>29</sup>

11 3.23.2 Both of these term sheets proposed a 20-year IRU with two 10-year extensions.

12 3.23.3 The term sheets from Rainier Connect and from Wave Broadband were compared and  
13 evaluated by Joann Hovis of CTC, a consultant hired by the City, who recommended to the  
14 TPU Board and City Council that they should proceed with the term sheet proposed by  
15 Rainier Connect.

16 3.24 The Rainier Connect term sheet<sup>30</sup> presented to City Council states that *“The IRU term will be*  
17 *20 years (“IRU Term”). On the expiration of the IRU Term, the IRU can be renewed for two*  
18 *additional periods of 10 years (“Extension IRU Terms”) so long as Rainier Connect is in compliance*  
19 *with all the terms of its contractual relationships with the City of Tacoma and TPU.”*

20 3.25 The Rainier Connect term sheet (“the term sheet”) states: *“Rainier Connect will be granted use*  
21 *of other assets currently used by Click! in the provision of cable television and broadband data*  
22 *services, including equipment used to operate the Network and deliver services to customers,*  
23 *customer accounts, inventory of spare parts and equipment, prepaid items, and material contracts, in*  
24 *each case related to the operation of the Network and the provision of products and services*

25 \_\_\_\_\_  
26 <sup>28</sup> AMENDED RESOLUTION NO. U-10879

27 <sup>29</sup> Update and Analysis: Alignment of Click! Policy Goals with Partner Proposals Presented by Joanne Hovis To  
the City of Tacoma City Council & Utility Board on March 5 2019

<sup>30</sup> 12. Tacoma Click! -Rainier Connect Public-Private Partnership Term Sheet Presented by JoAnn Hovis on  
March 5, 2019

1 (collectively, “Related Assets”). **The Related Assets will be conveyed to Rainier Connect subject**  
2 **thru the terms of an asset purchase agreement (“APA”)**<sup>31</sup> to be negotiated between the parties.”<sup>32</sup>

3 3.26 Further negotiations with Rainier Connect were approved by City council on March 26<sup>th</sup>,  
4 2019, with the passage of Resolution 40272, entitled: “A resolution approving the execution of an  
5 agreement between the Department of Public Utilities, Light Division d.b.a. Tacoma Power, and  
6 Rainier Connect to negotiate in good faith formal partnership contracts related to the operation and  
7 use of the Click! Network”

8 3.27 The term sheet states “Rainier Connect will be granted an indefeasible right of use (“IRU”)  
9 for the hybrid fiber-coaxial network assets owned by Tacoma Public Utilities (TPU) and used by  
10 Tacoma Click! (“Click!”) to provide cable television and broadband data services to residents and  
11 businesses (“Network”) in the existing Click! service area (“Click! Service Area”). The Network  
12 includes the outside plant assets associated with the Click! network, including fiber optics, coaxial  
13 cable, cabinets, splitters, backup powering equipment, and other out-side plant physical assets  
14 including those discussed in 14(b) below”<sup>33</sup>

15 3.28 The term sheet states: “The Tacoma Power Fiber on Critical Routes is collocated with the  
16 fiber optic strands that are used by Click! and are now planned to lease to Rainier Connect under  
17 the IRU.”

18 3.29 The term sheet with Rainier Connect does not provide City council any control over TV or  
19 Internet rates.

20 3.30 The term “IRU” has frequently been described as a “Lease” by Tacoma City and TPU policy  
21 makers since the concept of a public-private partnership was first introduced in 2015.

22 3.30.1 In a May 6, 2015 Memo from TPU Director Gaines responding to “Council inquiries  
23 from the March 31, 2015 Joint Study Session” the “IRU” is described as a “Lease”.

24 3.31 On April 2, 2019 a Letter of Intent (“LOI”) was signed by TPU Director Jackie Flowers with  
25 Rainier Connect. The LOI states “In the proposed transaction, Rainier Connect would obtain an

26 \_\_\_\_\_  
27 <sup>31</sup> emphasis added to point out the fact of the asset sale.

<sup>32</sup> 12. Section 1.c of Tacoma Click! -Rainier Connect Public-Private Partnership Term Sheet March 5, 2019

<sup>33</sup> Rainier Connect Public-Private Partnership Term Sheet Present to City Council on March 5, 2019

1 exclusive indefeasible right to use ("IRU") and operate the hybrid fiber coaxial ("HFC") system that  
2 today the Department of Public Utilities, Light Division ("Tacoma Power") d/b/a/ Click! Network  
3 ("Click") operates to provide wholesale and retail video and broadband products and services to  
4 residents and businesses in the City and in other jurisdictions in which Click! is franchised to  
5 operate".

6 3.31.1 The LOI contemplates the negotiation of an agreement that would grant Rainier  
7 Connect exclusive possession and control of HFC facilities and equipment essential in  
8 operating the CATV and wholesale Internet system.<sup>34</sup>

9 3.32 The terms of the IRU, as described by the term sheet are a "lease".

10 3.32.1 FASB Statement of Financial Accounting Standards ("SFAS") No. 13, *Accounting for*  
11 *Leases*, and the related interpretations of this standard, provide the relevant GAAP for lease  
12 accounting, including the definition of a lease. This accounting literature defines a lease as an  
13 agreement conveying the right to use property, plant or equipment for a period of time<sup>35</sup>

14 3.33 The term sheet represents significant material changes to the Click! Business model, including  
15 the removal of TPU as the primary operator of Click!, the sale or lease of telecommunications system  
16 equipment or capacity, the outsourcing of work and discontinuance of TPU products and services<sup>36</sup>.

17 3.34 Since its inception in 1996, *Click! has been a part of Tacoma Power* and was initially  
18 financed with Tacoma Power revenues and resources.<sup>37</sup>

19 3.35 Defendant defines TPU's "Communications Network" as "that network **owned, operated,**  
20 **and maintained by Click!**, consisting of redundant fiber optical backbones, redundant fiber optical  
21 service loops and coaxial cable distribution cables on which numerous applications are provided,  
22 which network includes, but is not limited to, Department of Public Utilities' two-way  
23

---

24 <sup>34</sup> Public-Private Partnership Term Sheet March 4, 2019

25 <sup>35</sup> Testimony Concerning Telecommunications Accounting Issues by John M. Morrissey Deputy Chief  
26 Accountant, U.S. Securities and Exchange Commission Before the Subcommittee on Oversight and  
Investigations Committee on Financial Services March 21, 2002

27 <sup>36</sup> Update and Analysis: Alignment of Click! Policy Goals with Partner Proposals Presented by Joanne Hovis To  
the City of Tacoma City Council & Utility Board on March 5 2019

<sup>37</sup> Confirmed by Tacoma City Council Resolution No. 39577

1 communications services, commercial retail cable television, wholesale Internet services, wholesale  
2 data transport services, and I-Net services”<sup>38</sup>.

3 3.36 **Click!’s customers**, thru their usage of the telecommunications system’s broadband Internet  
4 access, ethernet transport and cable television services, **have shared in paying for** and offsetting part  
5 of the **capital costs** of constructing *Tacoma Power’s telecommunications system*, as well as in the  
6 **operation and maintenance** (“O&M”) of this infrastructure. By sharing in these costs, Click!’s  
7 operation benefits all Tacoma Power electric customers who otherwise would pay 100% of the capital  
8 and O&M costs.<sup>39</sup>

9 3.37 At least \$100 million dollars has been spent in constructing the telecommunications system  
10 that allows delivery of Click!’s commercial telecommunication services.

11 3.38 On May 12, 2015 Defendant estimated that “approximately \$200 million in historical cost and  
12 approximately \$80 million in book value of the Fiber/Coax system” existed at that time, and “the  
13 initial capitalization date was around 1999.”

14 3.39 Tacoma Power's continued operation of the telecommunications system for provision of  
15 broadband services assists in making Internet services competitive in Tacoma Power's service area.  
16 This benefits Tacoma Power by stimulating and increasing economic growth, which leads to greater  
17 retail power sales. Other benefits include “allowing the utility to continue to efficiently and  
18 effectively meet the demands of new federal regulations relating to reliability of the electrical system,  
19 combating threats from possible cyberterrorism acts, participating in energy transactions and trades to  
20 balance the energy markets in less than 15-minute increments, enhancing communication between  
21 electric utility assets and electric utility consumers, and providing electric utility customers a means  
22 to *instantly access electric utility accounts* information for payment of bills, *report outages, and*  
23 *obtain energy usage and conservation information.*”<sup>40</sup>

24 3.40 No direct cost audit or “*product line profitability*” analysis for Click! has ever been done.  
25

26  
27 <sup>38</sup> Institutional Network Services Agreement between City of Tacoma and Click! Network, 12/21/2009-p. 3

<sup>39</sup> Confirmed in Resolution U-10879. passed by Tacoma Public Utility Board on 9-28-16

<sup>40</sup> Tacoma City Council Resolution 39347, passed on December 15, 2015

1 3.41 In violation of state law, Tacoma Public Utilities is paying 7.5% of Click! Network's  
2 broadband revenues to Defendant's general fund.

3 3.42 In a single month, October 2018, this 7.5% "tax" or B&O "fee" amounted to \$52,297.18.

4 3.43 In distributing shared capital and O&M expenses between Click!'s commercial operations and  
5 Tacoma Power's traditional electrical services, Defendant follows a cost "**allocation methodology**"  
6 with formulas guided by the "*Governmental Accounting Standards Board*" ("GASB").

7 3.44 Defendant's "fully distributed" allocation methodology is based on GASB rules designed to  
8 distribute shared "indirect costs", across City departments, not to determine "profits" in a commercial  
9 sense. Accordingly, many different types of "**general overhead costs**" appear as "expenses" under  
10 various sections of Click!'s Operational Summaries.

11 3.45 Many of these indirect "**overhead costs**" are expenses completely unrelated Click!'s  
12 commercial telecommunications activities whatsoever.

13 3.46 These indirect "**unrelated costs**" include such things, by way of example, as the Tacoma  
14 Mayor's salary and City Council member's salaries.

15 3.47 Given the many unrelated and indirect costs included under GASB rules in the preparation of  
16 Click!'s Operational Summaries, no true and accurate representation of Click!'s "**actual income**" or  
17 true profitability "**as an enterprise**" is provided by these statements. Defendant's governmental  
18 accounting methods are not designed to track "profits," as such.

19 3.48 In preparing Click!'s Operational Summaries, Defendant follows "**not-for-profit accounting**  
20 *and financial reporting principles by governmental entities,*" as outlined by GASB. Determining  
21 Click!'s true performance and profitably from business-type "proprietary activities," as an enterprise,  
22 is not the object of GASB rules.

23 3.49 The accounting methodology Defendant uses in preparation of Click! Operational Summaries  
24 artificially increase Click!'s expenses and do not reflect the System's actual "*operating profits or*  
25 *losses*" as an "enterprise."

26 3.50 In 2015 the "**cost allocation formulas**" were significantly updated by TPU management -  
27 resulting in "significant" changes to the allocation methodology. This "significant update" resulted in

1 *shifting costs*, from a previous ratio of approximately 75% to Click! and 25% to Tacoma Power, to a  
2 “**new ratio**” of 94% to Click! and only 6% to Tacoma Power.<sup>41</sup>

3 3.51 The change in the allocation formulas resulted in *\$5.7 million of additional expenses* being  
4 allocated onto Click!. These **additional costs** were retroactively reflected in Click!’s Operational  
5 Summaries beginning on January 1, 2015.

6 3.52 In 2016 Tacoma City Council passed a Resolution recognizing that the internal cost allocation  
7 formulas between Click! and Tacoma Power had changed significantly; and, that TPU management  
8 had “*substantially increased the share of cost allocations borne by Click! Network*”.

9 3.53 In this 2016 Resolution, City Council directed the City Manager to **hire an independent**  
10 **third-party consultant** to “*audit, analyze, and establish a reasonable methodology*” for cost  
11 allocation between Tacoma Power and Click! Network. **This audit was never done.**

12 3.54 This City Council Resolution specifically cited “**significant concerns**” over the “**veracity**  
13 **and appropriateness**” of the accounting assumptions and “cost allocation” methodology implemented  
14 by Tacoma Power. The Resolution determined that such concerns “**must be resolved.**”

15 3.55 This Council resolution authorized \$100,000 for an independent consultant to audit, analyze,  
16 and establish an *independent cost allocation methodology* between Tacoma Power and Click!.

17 3.56 A third-party consultant, NEWGEN STRATEGIES, LLC (“**NewGen**”) was hired and a  
18 contract issued in January 2017 to audit Click! pursuant to Council’s direction. The contract specified  
19 NewGen would “**evaluate the methodology used to allocate costs** between Tacoma Power’s electric  
20 and cable (Click!) operations and determine *the extent to which it is reasonable*”<sup>42</sup>.

21 3.57 In March 2017 the City Attorney issued a “Notice of Contract Suspension” to NewGen stating  
22 it is “*in the best interest of the City to suspend the professional services agreement with NewGen*  
23 *dated January 9, 2017.*” **The contract was thus terminated, and the audit never completed.**

24 3.57 The “*significant concerns*” identified by City Council in the 2016 Resolution requiring an  
25 audit **were never addressed** by NewGen, or in any subsequent audit. The “*veracity and*  
26

27 \_\_\_\_\_  
<sup>41</sup> Confirmed by Tacoma Public Utilities 2015 Annual Report

<sup>42</sup> Jan 9<sup>th</sup>, 2017 contract between City of Tacoma and NEWGEN Strategies.

1 *appropriateness*” of the accounting assumptions and “*cost allocation*” methodology remain  
2 *unanswered issues and genuine questions of material fact.*

3 3.58 The City Charter provides that the revenues of utilities owned and operated by the City shall  
4 never be used for any purposes other than the necessary operating expenses thereof, the making of  
5 additions and betterments thereto and extensions thereof, and the reduction of rates and charges for  
6 supplying utility services to consumers.

7 3.59 The City of Tacoma maintains an **Institutional Network** (I-Net) serving the City, schools,  
8 and government agencies. The I-Net system has an agreement with TPU to utilize a portion of TPU’s  
9 telecommunications plant. This agreement includes an “*incremental cost arrangement*,” where the  
10 City only pays for “*incremental costs*,” or those costs “*over and above* the costs that Tacoma Power  
11 would have incurred” for the system to serve Tacoma Power’s own non-I-Net purposes.<sup>43</sup>

12 3.60 Click! Network has no such “*incremental cost arrangement*” with TPU; rather, under the  
13 “*updated cost allocation formulas*,” put into place in 2015, Click! **bears 94% of the costs** associated  
14 with operations and maintenance of the shared telecommunications system.

15 3.61 Click!’s Operational Summaries are negatively impacted by Tacoma Power’s subsidization of  
16 I-Net’s expenses, such as capital costs, engineering, design, conversion work<sup>44</sup>, safety equipment,  
17 power usage, surveillance, monitoring, emergency readiness, O&M expenses, etc. The actual pro-rata  
18 share of these costs should rightfully be allocated to Defendant, as general government costs.

19 3.62 Defendant’s accounting policies shift unrelated I-Net costs, from general government, onto  
20 Click!’s Operational Summaries. This creates a distorted and misleading view of Click!’s financial  
21 performance and conceals the true financial performance of Click!’s operations as an enterprise.

22 3.63 Defendant routinely presents these erroneous Operational Summaries to the media and  
23 policymakers as accurate representations of Click!’s true financial performance as an enterprise.

24 3.64 Defendant has admitted, thru an authorized party-opponent, that these accounting practices  
25 produce a wrongful, inaccurate and disparaging perception of Click!’s performance.  
26

27 \_\_\_\_\_  
<sup>43</sup> Tacoma City Manager, Ray Corpuz, December 12, 1997 memorandum.

<sup>44</sup> Such as undergrounding of telecommunication plant assets

1 3.65 This **wrongful perception** of Click!, as a “*money losing venture*”, poisons the minds of  
2 policymakers and the public alike. This harmful “misconception” is a primary reason for  
3 policymaker’s considering privatization of Click!. More simply stated, if Click! were *properly seen*  
4 *as a successful and profitable venture*, all support for privatization of Click! would cease to exist.

5 3.65 TPU, as a non-profit, municipal public service enterprise, follows a “cost recovery” based  
6 pricing policy. Rates are set to recover costs of service and insure future funding for operations.  
7 Assigning unrelated costs to Click! results in higher rates being paid by customers for Click! services.

8 3.66 Tacoma Power will soon release a “customer service app” providing online customer support  
9 functions for utility customers. Among the features and benefits this “app” will bring are outage  
10 alerts, “leak detection,” real time billing, payment and usage information. The “app” *requires Internet*  
11 *access*. As such, *Internet access has a nexus* to provision of other utility services.

12 3.67 Click! faces competition from commercial, for profit, telecommunications service companies.  
13 These competitors have long opposed the competition created by municipal broadband systems such  
14 as Click!’s. They commonly employ lobbyists to carry out their agenda of destroying and preventing  
15 municipal competition. The lobbyists’ efforts and political contributions are no secret. Their activities  
16 are well organized, well documented and well known to Defendant’s staff and its policymakers.

17 3.68 Public concerns, suspicion and accusations over TPU management’s accounting for Click!’s  
18 costs have been widespread since 2015. On September 22, 2016, at a City Council meeting where the  
19 issue of reappointing TPU Director Bill Gaines was before the City Council, Council Member Ibsen  
20 cited the Director’s “*dishonest actions*,” likening them to “*someone who’s stealing from the cash*  
21 *register*.” The video of that meeting is on Defendant’s website. Director Gaines tenure at TPU was  
22 concluded in 2017 and a new TPU Director, Jackie Flowers took over in 2018.

23 3.69 That Defendant knowingly allowed a “fake bidder”, by the name of “Yomura” to participate  
24 in the final stages of an RFI process that was part of the proposed privatization plan.

25 3.70 That Defendant has not obtained current financial statements, including a balance sheet, for  
26 evaluating the financial qualifications of the proposed acquirer of Click! Network.

27 3.71 Defendant continues to widely portray Click! Network as a “*money losing*” venture

1 IV. CLAIM FOR RELIEF & CAUSES OF ACTION

2 WHEREFORE, Plaintiff hereby amends his complaint, is able to prove all of the additional facts  
3 cited and prays for judgment against Defendant based on the following:

4 4.1 Plaintiff is without an adequate remedy at law to require City council to follow the  
5 requirements of City Charter 4.6 and RCW 35.94 and is entitled to declaratory, injunctive and  
6 mandamus relief prohibiting any sale, lease or disposition of the Click! commercial  
7 telecommunication system unless and until such disposal is approved by a majority vote of the  
8 electors at a municipal election in the manner provided by the city charter and the laws of the state.

9 4.2 There is an actual, present, and existing dispute between the parties as to the legality of  
10 using Click! broadband revenue to subsidize and support general government functions thru  
11 wrongful payment of taxes on broadband services; and, over usage of Tacoma Power and Click!  
12 resources in subsidizing I-Net and general government’s pro-rata share of pole attachment fees,  
13 power usage, undergrounding or relocations of existing plant, ongoing capital funding,  
14 surveillance, monitoring, emergency readiness, repairs and maintenance costs. transport fees,  
15 O&M costs and capital expenses obligations. These “subsidy activities” are attributable to, and  
16 properly allocable to, general government. There is also a dispute over the total dollar value of  
17 these unlawful subsidies provided in covering such general government expenses.

18 4.3 Defendant has willfully violated state and federal prohibitions against taxation of Internet  
19 access, under RCW 35.21.717 and the federal Internet Tax Freedom Act, 47 USC 151 SEC. 1101.  
20 Defendant is unlawfully continuing to divert 7.5% of Click! Network’s gross revenue on broadband  
21 services to benefit the City of Tacoma’s general government account. These payments, which have  
22 exceeded \$2.5 million over the past four years, are in violation of RCW 43.09.210 and represent an  
23 unlawful subsidy, from Tacoma Power and Click! commercial telecommunication customers, to the  
24 City of Tacoma’s general fund.

25 4.4 The Mayor, City Council and Public Utility Board have acted and are acting knowingly and  
26 willfully in causing, authorizing, or allowing Tacoma Power and Click telecommunications  
27 customers to pay unlawful subsidies to general government in violation of RCW 43.09.210, which

1 requires “*all service rendered by . . . one department, public improvement, undertaking, institution,*  
2 *or public service industry to another, shall be paid for at its true and full value.*”.

3 4.5 Plaintiff has a legally cognizable interest in requiring Defendant to determine if Click!  
4 profitable by accounting for Click! activities as an “enterprise,” rather than as a “government entity”;  
5 and, in preserving and protecting communication and electric utility service funds from being  
6 unlawfully diverted to pay for expenses properly attributable and allocable to general government  
7 services, and in obtaining recovery of such unlawful subsidy of general government expenses.

8 4.6 Since the telecommunication system’s inception, over \$100 million has been spent in capital  
9 improvements to the System. Click! customers and Tacoma Power ratepayers have paid for a vast  
10 majority of that overall investment, while general government and I-NET users have paid only  
11 incremental costs and provided little relative financial support for their actual fair “pro-rata share” of  
12 the costs for data transport fees, pole attachment fees, power usage, undergrounding or relocations of  
13 existing plant, ongoing capital funding, surveillance, monitoring, emergency readiness, repairs and  
14 other O&M costs. Failure to pay a “*fair share*” of these costs represents an unlawful subsidy, from  
15 Click! customers and Tacoma Power ratepayers, benefiting general government in violation of RCW  
16 43.09.210, the State Accountancy Statute.

17 4.7 Such expenses and costs have exceeded \$20 million since the inception of the system and are  
18 projected to increase annually for the foreseeable future. Using Click! and Tacoma Power revenues  
19 and credit to subsidize expenses that benefit, or are properly allocable to, general government is a  
20 clear and willful violation of RCW 43.09.210.

21 4.8 TPU follows a “cost recovery” based pricing model, where rates are set in a way to recover  
22 costs of service. Click! Network’s rates were recently increased and are set to increase again in 2020  
23 to cover a “*perceived shortfall*” in revenues. The above-mentioned subsidization of general  
24 government expenses by Click! and Tacoma Power customers results in higher rates for Tacoma  
25 Power and Click! customers. This is a violation of RCW 19.86.020, which prohibits unfair practices.  
26  
27

1 4.9 By not paying its pro-rata share of overall capital expenses, repairs, monitoring, surveillance,  
2 emergency readiness or O&M costs associated with the underlying telecommunications plant that  
3 supports I-NET, Defendant is benefiting by diverting TPU ratepayers funds and willfully shifting  
4 general government's costs for such system onto Tacoma Power and Click! customers, who are  
5 thereby forced into paying higher rates as a result of subsidizing these general government operations.  
6 This subsidy is unlawful and in clear violation of RCW 43.09.210 (the Accountancy Statute).

7 4.10 Tacoma Power and Click! Network provides valuable "in-kind" contributions to general  
8 government. None of which are deducted from the 5% statutory cap placed on "franchise fees" paid  
9 on cable television services under federal law<sup>45</sup>. These "in-kind" contributions include both  
10 telecommunications and cable television services, along with waiving costs associate with a fair pro-  
11 rata share of I-Net's repairs, essential technical support and emergency readiness functions, network  
12 monitoring and O&M. Actual pro-rata costs for these services greatly exceed the token amounts  
13 currently paid by the defendant. Failure to deduct these valuable "in-kind" contributions violates  
14 RCW 43.09.210, making a recovery required.

15 4.11 These above cited subsidies are violations of RCW 43.09.210, the State Accountancy Statute,  
16 which negatively impacted the Operational Summaries of Click!, thereby creating inaccurate, and  
17 misleading performance results for Click! Network operations, all of which are harmful to Click!'s  
18 prospects and Plaintiff's right to continue enjoying municipally provided broadband services.

19 4.12 Defendant's willful cancellation and failure to complete City Council's mandated 2016  
20 "audit" allows continuation of this "considerable controversy." City Council's original "significant  
21 concerns," over the of the controversial accounting assumptions and "cost allocation" methodology,  
22 have not been addressed; and, therefore remain at issue. The "*veracity and appropriateness*" of the  
23 methods employed in producing the Click! Operational summaries have not been examined and may  
24 very well be producing the inaccurate, erroneous and misleading information about Click! Network's  
25 performance that Council feared in 2016 and sought to ferret out by its Resolution.  
26

27 \_\_\_\_\_  
<sup>45</sup> See FCC Order 19-08 -THIRD REPORT AND ORDER (2019), re: Implementation of Section 621(a)(1) of the Cable Communications Policy Act

1 4.13 As a “*sub-fund*” of Tacoma Power, traditional financial statements, such as a balance sheet or  
2 income statement, are not prepared for Click!; consequently, there are no statements available that  
3 represent the actual “*product-line profitability*” and performance of the System. Surprisingly, no  
4 actual “income statement” or “balance sheet” has ever been prepared for Click! Network. Despite City  
5 Council’s wishes and Resolution for an “*audit*,” no such verification of Click!’s performance as a  
6 standalone enterprise has ever been prepared by Defendant or its appointees.

7 4.14 Many of the costs appearing on the Click! Operational Summaries are *totally unrelated* to  
8 Click! commercial activities. These “*unrelated costs*” are allocated to Click! Operational Summaries  
9 under Defendant’s “*fully distributed*” allocation model. This allocation method, while not illegal  
10 under state accounting rules, negatively impacts the Operational Summaries of Click! and produces  
11 inaccurate and disparaging results with “*artificial losses*.” The results are not reflective of the  
12 System’s *actual performance or profitability*. These Operational Summaries are, therefore, actually  
13 “*misinformation*” with regard to Click!’s financial performance.

14 4.15 Given the erroneous and disparaging performance results indicated by the Click! Operational  
15 Summaries, combined with the lack of any balance sheet, income statement or other financial  
16 statements possessing the veracity to provide useful information related to Click!’s true financial  
17 performance, *policy makers lack suitable, accurate, reliable information* about the municipal  
18 telecommunications system’s financial performance.

19 4.16 Lacking any such real information and possessing only “misinformation,” City Council and  
20 TPU Board members *have no legitimate basis* by which to properly evaluate the municipal  
21 broadband system’s financial performance; therefore, policymakers are ill-equipped to make an  
22 educated, reasonable or rational decision related to the proposed privatization and disposal of the  
23 System and its related assets.

24 4.17 Despite such lack of information, Defendant has willfully entered into a privatization  
25 agreement for Click! Network *without first obtaining any accurate financial information* related to  
26 the performance or valuation of the System. The Court has the power to prevent additional injury that  
27 might result thru an unfortunate chain of events flowing from a failure to requiring a public vote be

1 held approving the privatization of Click!. If the privatization agreement is accomplished and vesting  
2 of the System occurs without a vote of the people, then all public ownership and control of the  
3 municipal broadband System, including oversight of pricing, would be lost. This result would be  
4 clearly harmful to the plaintiff, and the community. Such an unfortunate and wrongful transfer of the  
5 public’s assets would trigger an actionable negligence claim, given the existence of the four essential  
6 elements for such a claim: duty, breach, proximate cause, and resulting harm. This claim would  
7 burden the court system, with TPU Board members and City Council members facing personal  
8 liability for the breach of their required “*duty of reasonable care to refrain from causing foreseeable*  
9 *harm.*” A similar breach of duty would rest with certain City staff members, who have either willfully  
10 ignored or actively assisted in the wrongful actions leading to the potential privatization of Click!. In  
11 addition to Defendant’s other liability in this case, these individuals and policymakers would  
12 potentially bear personal liability for their wrongful actions under RCW 80.04.440 and under  
13 common law for tortuous and ultra vires conduct in violation of the Tacoma City Charter and  
14 Washington state law. The simplest solution is for the Court to affirm Plaintiff’s right to a public vote  
15 over any privatization, separation or vesting of Click! Network’s commercial operations.

16 4.18 Defendant has participated in a conspiracy to defraud the public of its municipal broadband  
17 system. There has been no appraisal or other estimate of the “value” of the Click! business or the assets  
18 being conveyed in the privatization process. Without any appraisal, or accurate financial statements for  
19 Click!, it is impossible for policymakers or the electorate, who may be called on to vote in approving  
20 the proposed privatization, to evaluate the suitability of any proposed contract. As such, Defendant’s  
21 proposed privatization is a gross violation of Washington State Constitution, Article VIII section 7.  
22 There is also evidence of a fraudulent “RFI process,” which included a “fake bidder,” which was known  
23 to members of city staff and reported to policymakers. Defendant knowingly allowed the fraudulent  
24 process to mislead the public and policymakers by the inclusion of this “fake bidder,” who was  
25 considered a “finalist” in the RFI process. This is a violation of RCW 19.86.030, which protects against  
26 “conspiracies in restraint of trade.” Defendant should be enjoined from carrying out the privatization  
27 goals of this fraudulent process.

1 4.19 Defendant’s proposed candidate (“acquiror”) for privatization of the Click! system has not been  
2 evaluated to determine suitability as an operator of Click! under privatization. Failure to conduct due  
3 diligence is a violation of Tacoma City Municipal Code 16B.02 which requires a financially qualified  
4 operator for such a franchise. No financial statements for the acquiror have been provided in  
5 connection with the transaction. Defendant must review financial statements, including a balance  
6 sheet, to determine the acquiror’s financial qualifications for assuming control over the System.

7 4.20 Plaintiff is without an adequate remedy at law to protect aforesaid interests in preserving,  
8 protecting and obtaining recovery for telecommunication and electric utility funds, and is entitled  
9 to declaratory, injunctive and mandamus relief (i) declaring that Click! telecommunication and  
10 Tacoma Power revenues and funds may not be used to pay for general government expenses or  
11 capital improvements that are attributable or properly allocable to general government services  
12 rather than Tacoma Power electric utility and Click! telecommunication services, (ii) prohibiting  
13 general government from using Click! telecommunication and Tacoma Power funds to subsidize  
14 or pay for general government expenses or capital improvements that are properly allocable and  
15 attributable to general government purposes; or (iii) prohibiting TPU and City Council from  
16 including expenses or capital investments that are properly allocable and attributable to general  
17 government activities in the calculation of Click! rates, and (iv) requiring the City's general fund  
18 to reimburse Tacoma Power and Click! for the wrongful payment of costs for capital  
19 improvements, operational expenses, taxes, franchise fees and other subsidies that have  
20 wrongfully benefited general government, together with prejudgment and post-judgment interest  
21 thereon at the rate of 5% per annum until fully paid; (v) requiring the City to obtain estimates of  
22 the valuation of Click! as an enterprise and evaluate the financial statements of the proposed  
23 acquiror of the municipal broadband system; finally, (vi) permit the people to vote on the  
24 privatization of their public broadband system. This statutorily protected right prevents fraud and  
25 abuse by government and acts as a final measure of protection against a wrongful transfer of  
26 public assets.

V. ~~IV~~ PRAYER FOR RELIEF

WHEREFORE, plaintiffs prays for judgment against the City as follows:

- (1) Declaring Click! Network is a system owned and operated by TPU;
- (2) Affirming that Click! rates are set by the Utility Board and approved by City Council under the City's Municipal and Utility Code;
- (3) Affirming the original mandate for creating Click! included demand side management (DSM) functions, CATV, two-way communication and Internet access.
- (4) Affirming Click! network consists of a hybrid fiber-optic coaxial ("HFC") system, which delivers two-way signals for cable TV, cable modem,<sup>46</sup> Fiber To The Home ("FTTH") Internet services, and advanced metering
- (5) Declaring that a term sheet for negotiating an Indefeasible Right of Use (IRU) for Click! has been approved by City Council and formal contracts are being negotiated between Rainier Connect and the City for the future operation and transfer of control over Click! Network;
- (6) Declaring that the term sheet states "*The Tacoma Power Fiber on Critical Routes is collocated with the fiber optic strands that are used by Click! and are now planned to lease to Rainier Connect under the IRU*<sup>47</sup>";
- (7) Declaring that the IRU proposed in the term sheet with Rainier Connect is a "lease" of Click! system assets;
- (8) Affirming that the term sheet specifically states "*Related Assets will be conveyed to Rainier Connect subject to the terms of an asset purchase agreement ("APA") to be negotiated between the parties*";
- (9) Declaring that the term sheet with Rainier Connect includes an "asset sale";
- (10) Affirming that City Charter 4.6, relating to the "Disposal of Utility Property" requires the "City shall never sell, lease or dispose of any utility system" without a "majority vote of the people";

---

<sup>46</sup> Telecommunications Infrastructure Section, on Page 47, Bond Prospectus for CITY OF TACOMA, WASHINGTON \$70,575,000 Electric System Revenue Bonds, Series 2017

<sup>47</sup> Emphasis added to bring attention to the term "lease".

- 1 (11) Affirming that City Charter 4.6 applies to Rainier Connect’s proposal for the  
2 acquisition of Click!; since, it amounts to a lease and/or disposal of the Click! system,  
3 customer accounts, goodwill and ongoing interest in the telecommunications operations;
- 4 (12) Mandating and requiring that the City obtain approval from of a majority vote of  
5 the electors at a municipal election in the manner provided by the city charter prior to  
6 entering into a contract for an IRU, sale or lease of the Click! system to Rainier Connect;
- 7 (13) Prohibiting disposal or transfer of Click! business operations and customer  
8 account information to Rainier Connect.
- 9 (14) Public policy requires citizens have a right to expect the terms of their City Charter to  
10 be followed -especially when it affects an important resource such as public utility control and  
11 oversight on their municipal Internet service<sup>48</sup>.

12 15. Ordering City of Tacoma’s general fund to reimburse Tacoma Power and Click!, for the  
13 wrongful overpayment of taxes, “franchise like” fees, costs for capital improvements,  
14 operational expenses, “*in-kind*” contributions and other subsidies that have wrongfully benefited  
15 general government in violation of RCW 43.09.210, RCW 35.21.717 and 47 U.S.C. § 542<sup>49</sup>

16 16. Declaring Defendant has not evaluated Click!’s financial performance under business  
17 accounting standards; but, instead only used governmental accounting standards. (a) That these  
18 “governmental accounting standards” do not reflect the System’s profitably as an enterprise; and  
19 that City Council must first determine Click!’s true financial “*profitability*”, prior to passage of  
20 any resolution causing Click! to be privatized; and, (b) That privatizing Click! without first  
21 obtaining financial underlying information regarding the System’s actual financial performance  
22 is, or would be, an *arbitrary, capricious, unreasonable and ultra vires* act, in excess of  
23 policymaker’s authority, and a violation of Tacoma City Charter and Washington state law.  
24

25  
26  
27 <sup>48</sup> Click is the second largest municipal Internet service provider in the nation.

<sup>49</sup> There is a violation of the five percent cap on franchise fees set forth in section 622 of the Act.

1 17. Enjoining and prohibiting Defendant from finalizing any agreement to privatize Click!  
2 Network without, (a) first obtaining a “direct cost” or “product line profitability” analysis, or  
3 other reasonable and accurate measurement of Click!’s financial performance “as an enterprise;”  
4 and, (b) Defendant first obtain an appraisal, from a third party, of the System’s market valuation.

5 18. Enjoining and prohibiting Defendant from finalizing any agreement to privatize Click!  
6 without first (a) publicly providing financial information showing the System’s true income as  
7 an enterprise, so policymakers and citizens can evaluate this information to make an informed  
8 decision in voting on any privatization of the System; and, (b) obtaining the financial statements  
9 of the acquiror, performing such due diligence as required in determining the present financial  
10 condition of the proposed acquiror, as required under Tacoma City Municipal Code 16B.02, and  
11 making that data and those findings available to the public.

12 19. Enjoining and prohibiting Defendant from diverting Click! telecommunication and  
13 Tacoma Power funds for subsidization of Defendant’s share of expenses related to operations,  
14 repairs, monitoring, facilities, maintenance and capital improvements of the telecommunications  
15 system provided by Click! and Tacoma Power, but which are properly allocable or attributable to  
16 general government; **or, in the alternative**, find: (a) That the “incremental accounting” methods  
17 used by Defendant for sharing I-Net related costs are appropriate; and, (b), That **Click! also**  
18 **provides similar public benefits to the community** and using “***incremental accounting***”  
19 allocations must also be required in the preparation of Click!’s financial statements.

20 20. Enjoining and prohibiting Defendant from issuing press releases or presentations  
21 portraying Click! as a “*financial failure*” until an audit or product line profitability analysis has  
22 been performed providing true and accurate information about the System’s profitability.

23 21. Ordering ***Defendant’s general fund to reimburse*** Tacoma Power for the ***overpayment of***  
24 ***taxes***, fees, and subsidies of general government expenses or capital improvements properly  
25 allocable or attributable to general government services rather than Tacoma Power or Click!  
26 services. That all amounts proven at trial, together with prejudgment and post-judgment costs,  
27 bear interest thereon at the rate of 5% per annum until fully paid.

1 22. Declaring Click! Network is a municipal broadband telecommunications system and  
2 public utility providing “vital” and “essential” “broadband Internet access” services to TPU  
3 ratepayers. That these services have a clear “nexus” and “utility purpose” for TPU by “*offsetting*  
4 *necessary communication costs*”, supporting “*demand-response efforts*”, creating “*revenue*  
5 *diversification*,” spurring “*economic growth*” and insuring for “*future communication needs*;”

6 23. Declaring that Click! is at least “any part thereof” in relation to Tacoma Public Utilities  
7 for purposes of RCW 35.94 and a **protective vote of the people** is necessary for final approval  
8 of privatization of the municipal broadband system.

9 24. Declaring that *Defendant’s asserted defense in this action is frivolous* under RCW  
10 4.84.185; and that, Defendant has *long demonstrated an understanding of its duty* to allow a  
11 public vote on privatization of Click! under RCW 35.94, as evidenced by City Council’s passage  
12 of its own resolution citing the “*public vote requirement*” related to vesting the System.

13 25. Awarding attorney fees and costs under RCW 80.04.440 and under the common fund  
14 theory and pursuant to RCW 7.16.260, RCW 7.24.100 and/or other applicable statutes.

15 26. Awarding such other and further relief as the Court may deem just, equitable and proper  
16 under the circumstances.

IN THE SUPERIOR COURT OF THE STATE OF WASHINGTON  
IN AND FOR THE COUNTY OF PIERCE

MITCHELL SHOOK,  
Plaintiff Pro Se,

vs.

CITY OF TACOMA,  
Defendant.

No. 19-2-07135-0

ANSWER TO AMENDED  
COMPLAINT

THOMAS MCCARTHY; and CHRISTOPHER  
T. ANDERSON,

Plaintiffs,

vs.

CITY OF TACOMA,  
Defendant.

COMES NOW Defendant City of Tacoma, appearing by and through William C. Fosbre, Tacoma City Attorney, and M. Joseph Sloan, Deputy City Attorney, and in answer to the Plaintiff's Amended Complaint for Declaratory, Injunctive, Prohibition and Mandamus Relief, hereinafter referred to as the "Complaint", admits, denies and alleges as follows:

ANSWER TO AMENDED COMPLAINT- 1

Office of the City Attorney  
Department of Public Utilities  
3628 South 35<sup>th</sup> Street  
P. O. Box 11007  
Tacoma, Washington 98411

1. The Plaintiff's paragraphs entitled: "INTRODUCTION-NATURE OF ACTION" contains opinions and conclusions of law for which no response is required. However, because some of the allegations are inaccurate, Defendant denies the allegations contained therein.
2. In answer to Plaintiff's Complaint, paragraph 1 contains legal conclusions that require no response. To the extent a response could be required, Defendant admits that it is a municipal corporation located in Pierce County, Washington, operating as a first class charter city under the laws of the state of Washington. By way of further answer, Defendant lacks sufficient knowledge or information to form a belief as to the truth of the remainder of the allegations contained therein; however, Defendant specifically denies that Tacoma Power operates a business unit known as Click! Network ("Click!"). Rather, Click! is a trade name for an operating unit of Tacoma Power and a multi-service broadband telecommunications provider within Tacoma Power's service area. Defendant admits that Click! provides retail cable television and wholesale high-speed internet services.
3. In answer to paragraph 2.1 of Plaintiff's Complaint, the allegations contained therein are legal conclusions for which no response is required.
4. In answer to paragraph 2.2 of Plaintiff's Complaint, the allegations contained therein are legal conclusions for which no response is required.
5. In answer to paragraph 3.1 of Plaintiff's Complaint, Defendant denies the allegations contained therein. The quotation is incomplete.

- 1 6. In answer to paragraph 3.1.1 of Plaintiff's Complaint, Defendant admits the  
2 allegations contained therein.
- 3 7. In answer to paragraphs 3.2, 3.2.1, 3.2.2, 3.2.3, 3.2.4, 3.2.5 and 3.2.6 of  
4 Plaintiff's Complaint, Ordinance No. 25930 speaks for itself; therefore, no  
5 response is required. Furthermore, some provisions cited by the Plaintiff are  
6 incomplete, and the footnotes contain legal conclusions for which no response  
7 is required.
- 8 8. In answer to paragraph 3.2.7 of Plaintiff's Complaint, Initiative Measure 937  
9 and RCW 19.285 each speaks for itself; therefore, no response is required, and  
10 further, the allegations contained therein are legal conclusions for which no  
11 response is required. To the extent that a response is required, Defendant  
12 lacks sufficient knowledge or information to form a belief as to the truth of the  
13 remainder of the allegations contained therein and therefore denies same.
- 14 9. In answer to paragraph 3.2.8 of Plaintiff's Complaint, the allegations contain  
15 legal and factual opinions for which no response is required. To the extent that  
16 a response is required, Defendant lacks sufficient knowledge or information to  
17 form a belief as to the truth of the remainder of the allegations contained therein  
18 and therefore denies same.
- 19 10. In answer to paragraph 3.3 of Plaintiff's Complaint, the allegations contain  
20 conclusions of law for which no response is required. However, if a response is  
21 required, Resolution No. 33668 and Resolution No. U-9258 speak for  
22 themselves. Furthermore, the Plaintiff has misquoted the language of  
23 Resolution No. 33668, and for this reason, the allegation is denied.  
24  
25

1 11. In answer to paragraphs 3.3.1, 3.3.2, and 3.3.3 of Plaintiff's Complaint,  
2 Resolution No. 33668 speaks for itself; therefore, no further response is  
3 required.

4 12. In answer to paragraph 3.3.4 of Plaintiff's Complaint, Defendant admits that  
5 Click! is a trade name for an operating unit of Tacoma Power, a division of  
6 Tacoma Public Utilities, a department of the City of Tacoma, however, denies  
7 the remaining allegations contained therein.

8 13. In answer to paragraph 3.3.2 (incorrectly numbered and repeated on page 8 of  
9 Plaintiff's Complaint following paragraph 3.3.4). Defendant admits that Click! is  
10 the trade name for an operating unit of Tacoma Power, a division of Tacoma  
11 Public Utilities, a department of the City of Tacoma. Defendant admits that the  
12 first level of oversight is Click! management; next, the Power Superintendent,  
13 next, the Director of Utilities, then the Utility Board, and finally, the Tacoma City  
14 Council. Defendant denies the remaining allegations contained therein.

15  
16 14. In answer to paragraph 3.3.3 (incorrectly numbered and repeated on page 8 of  
17 Plaintiff's Complaint, following incorrectly numbered paragraph 3.3.2),  
18 Defendant admits that in a declaratory judgment action brought by the City of  
19 Tacoma in Pierce County under Superior Court Cause No. 96-2099380, an  
20 order was issued on May 9, 1997, concluding that the City had authority to  
21 issue electric revenue bonds. Defendant, by way of further answer, responds  
22 that the allegations contain legal conclusions for which no response is required,  
23 and that to the extent a response is required, Defendant denies the remaining  
24 allegations contained therein.

20  
21  
22  
23  
24  
25

15. In answer to paragraph 3.4 of Plaintiff's Complaint, though Defendant admits that it has the technologies described therein; however, because the allegations are not completely accurate, Defendant denies the remaining allegations contained therein.

16. In answer to paragraph 3.5 of Plaintiff's Complaint, inclusive of footnote no. 12, though Defendant admits that it owns a network that includes the use of some of the technologies described, because the allegations are vague and incomplete, Defendant cannot ascertain the truth of the allegations contained therein and therefore, denies same.

17. In answer to paragraph 3.6 of Plaintiff's Complaint, Defendant admits that it has some of the technologies described therein; however, because the allegations are not completely accurate, Defendant denies the allegations contained therein.

18. In answer to paragraph 3.7 of Plaintiff's Complaint, Defendant admits the allegations contained therein.

19. In answer to paragraph 3.8 of Plaintiff's Complaint, Defendant admits the allegations contained therein.

20. In answer to paragraph 3.8.1 of Plaintiff's Complaint, Defendant admits the allegations contained therein.

21. In answer to paragraph 3.8.2 of Plaintiff's Complaint, Ms. Hovis' report speaks for itself, therefore, no response is required.

1 22. In answer to paragraph 3.8.3 of Plaintiff's Complaint, the Declaration In Support  
2 of Defendant's Opposition to Partial Summary Judgment speaks for itself  
3 therefore, no response is required.

4 23. In answer to paragraph 3.8.4 of Plaintiff's Complaint, Defendant lacks sufficient  
5 information to form a belief as to the truth of the matters asserted and therefore,  
6 denies same.

7 24. In answer to paragraph 3.9 of Plaintiff's Complaint, Defendant admits that the  
8 Utility Board is comprised of five members and that they are appointed by the  
9 Mayor and confirmed by the Tacoma City Council. As for Section 4.3 of the  
10 Tacoma City Charter, it speaks for itself. The remaining allegations contain  
11 conclusions of law for which no response is required.

12 25. In answer to paragraphs 3.10 and 3.10.1 of Plaintiff's Complaint, Title 12 of the  
13 Tacoma Municipal Code speaks for itself.

14 26. In answer to paragraph 3.10.2 of Plaintiff's Complaint, Defendant denies the  
15 allegations contained therein. Matters of all utility rates are subject to Utility  
16 Board and City Council review, and if deemed appropriate, are approved.

17 27. In answer to paragraph 3.11 of Plaintiff's Complaint, Defendant denies the  
18 allegations contained therein.

19 28. In answer to paragraphs 3.11.1 and 3.11.2 of Plaintiff's Complaint, Defendant  
20 denies the allegations contained therein, except as to the reference to  
21 Amended Resolution No. U-10879, the document speaks for itself.  
22  
23  
24  
25

1 29. In answer to paragraph 3.12 of Plaintiff's Complaint, inclusive of footnote no.  
2 15, because the allegations are not completely accurate, Defendant denies the  
3 allegations contained therein.

4 30. In answer to paragraph 3.13 of Plaintiff's Complaint, Amended Resolution No.  
5 U-10879 speaks for itself; therefore, no response is required.

6 31. In answer to paragraphs 3.14, 3.15 and 3.16 of Plaintiff's Complaint, inclusive  
7 of footnote nos. 16, 17, and 18, Amended Resolution No. U-10879 speaks for  
8 itself; therefore, no response is required; however, because the Plaintiff has  
9 misrepresented the language of the Resolution, Defendant denies the  
10 allegations contained therein.

11 32. In answer to paragraph 3.17 of Plaintiff's Complaint, the Defendant denies the  
12 allegations contained therein.

13 33. In answer to paragraphs 3.18, 3.18.1, inclusive of footnote 19, Resolution  
14 U- 10828 and the Tacoma City Charter speak for themselves; therefore, no  
15 response is required. However, because the provisions quoted are misquoted,  
16 Defendant denies the allegations contained therein.

17 34. In answer to paragraph 3.19, 3.19.1, 3.19.2, 3.19.3, and 3.19.2 (incorrectly  
18 numbered and repeated following correctly numbered paragraph 3.19.3) of  
19 Plaintiff's Complaint and Resolution No. 39347 each speak for itself; therefore,  
20 no response is required.

21 35. In answer to paragraphs 3.20, and 3.20.1 of Plaintiff's Complaint, Defendant  
22 admits the allegations contained therein.  
23  
24  
25

1 36. In answer to paragraph 3.20.2, Defendant lacks sufficient knowledge or  
2 information to form a belief as to the truth of the matter asserted, and therefore,  
3 denies same.

4 37. In answer to paragraph 3.20.3 of Plaintiff's Complaint, Defendant admits the  
5 allegations contained therein.

6 38. In answer to paragraph 3.20.4 of Plaintiff's Complaint, RCW 35.92.360 speaks  
7 for itself; therefore, no response is needed.

8 39. In answer to paragraphs 3.21, 3.21.1 and 3.21.2 of Plaintiff's Complaint,  
9 Defendant admits the allegations contained therein.

10 40. In answer to paragraph 3.22 of Plaintiff's Complaint, because this paragraph  
11 incorporates the Plaintiff's footnote that refers to a September 28, 2016,  
12 Amended Resolution, Defendant lacks sufficient information to form a belief as  
13 to the truth of the allegation contained therein, and therefore, denies same.

14 41. In answer to paragraphs 3.23, 3.23.1, 3.23.2 and 3.23.3 of Plaintiff's Complaint,  
15 Defendant denies the accuracy of the events represented in paragraph 3.23;  
16 however, Defendant admits the remaining allegations contained therein.

17 42. In answer to paragraph 3.24 of Plaintiff's Complaint, the referenced "term  
18 sheets" speak for themselves; therefore, no response is required. Because the  
19 entire provision has not been stated, Defendant denies the allegations  
20 contained therein.

21 43. In answer to paragraph 3.25 of the Plaintiff's Complaint, the "term sheet"  
22 speaks for itself.  
23  
24  
25

1 44. In answer to paragraph 3.26 of Plaintiff's Complaint, Resolution No. 40272

2 speaks for itself. However, because the provisions of the Resolution have not  
3 been accurately stated, Defendant denies the allegations contained therein.

4 45. In answer to paragraph 3.27 of Plaintiff's Complaint, the "term sheet" speaks for  
5 itself; therefore, no response is required.

6 46. In answer to paragraph 3.28 of Plaintiff's Complaint, the "term sheet" speaks for  
7 itself; therefore, no response is required.

8 47. In answer to paragraph 3.29 of Plaintiff's Complaint, the allegation contains the  
9 Plaintiff's legal opinion for which no response is required. Furthermore, the  
10 "term sheet" speaks for itself, and accordingly, the allegation requires no  
11 response.

12 48. In answer to paragraph 3.30 of Plaintiff's Complaint, the allegation is vague and  
13 ambiguous; furthermore, the Defendant lacks sufficient knowledge or  
14 information in which to form a belief as to the truth of the allegation, and  
15 therefore, denies same.

16 49. In answer to paragraph 3.30.1 of Plaintiff's Complaint, any memo from the TPU  
17 Director to the Tacoma City Council would speak for itself; therefore, no  
18 response is required.

19 50. In answer to paragraph 3.31 of Plaintiff's Complaint, the April 2, 2019, letter  
20 speaks for itself; therefore, no response is necessary.

21 51. In answer to paragraph 3.31.1 of Plaintiff's Complaint, the allegation contains  
22 Plaintiff's legal opinion, and speculation for which no response is required.  
23  
24

1 Furthermore, the letter at issue speaks for itself; accordingly, no response is  
2 required.

3 52. In answer to paragraph 3.32 of Plaintiff's Complaint, the allegation contains the  
4 Plaintiff's legal opinion for which no response is required. Furthermore, the  
5 "term sheet" speaks for itself.

6 53. In answer to paragraph 3.32.1 of Plaintiff's Complaint, the allegation contains  
7 the Plaintiff's legal opinion and interpretation of the Statement of Financial  
8 Accounting Standards for which no response is required; furthermore, the  
9 purported standard speaks for itself.

10 54. In answer to paragraph 3.33 of Plaintiff's Complaint, the allegation contains the  
11 Plaintiff's legal opinion and speculation for which no response is required.  
12 Furthermore, the "term sheet" speaks for itself. Accordingly, no response is  
13 required.

14 55. In answer to paragraph 3.34 of Plaintiff's Complaint, to the extent that  
15 paragraph 3.34 is based upon Resolution No. 39577 referenced in footnote 37,  
16 the resolution speaks for itself and no response is required. By way of further  
17 answer, paragraph 3.34 is vague and ambiguous, and accordingly, Defendant  
18 lacks sufficient knowledge or information to form a belief as to the truth of the  
19 allegations contained therein, and therefore, denies same.  
20

21 56. In answer to paragraph 3.35 of Plaintiff's Complaint, the "Institutional Network  
22 Services Agreement between City of Tacoma and Click! Network" speaks for  
23 itself, and therefore, no response is required.  
24

1 57. In answer to paragraph 3.36, 3.37 and 3.8 of Plaintiff's Complaint, the  
2 allegations contain legal opinions and conclusions for which no response is  
3 required. If a response is required, because the allegations are vague,  
4 speculative and ambiguous, Defendant lacks sufficient knowledge or  
5 information to form a belief as to the true of the allegations contained therein  
6 and therefore, denies same.

7 58. In answer to paragraph 3.39 of Plaintiff's Complaint, the allegations contain  
8 legal opinions and conclusions for which no response is required. To the extent  
9 the allegations refer to Tacoma City Council Resolution 39347, the Resolution  
10 speaks for itself. If a response is required, because the allegations are vague  
11 and ambiguous, Defendant lacks sufficient knowledge or information to form a  
12 belief as to the true of the allegations contained therein and therefore, denies  
13 same.  
14

15 59. In answer to paragraph 3.40 of Plaintiff's Complaint, the allegations contain a  
16 legal opinion and conclusion for which no response is required, furthermore, the  
17 allegations contained therein are vague and ambiguous, therefore Defendant  
18 lacks sufficient knowledge or information on which to form a belief as to the  
19 truth of the allegations contained therein and therefore, denies same.

20 60. In answer to paragraph 3.41 of Plaintiff's Complaint, Defendant denies the  
21 allegations contained therein.

22 61. In answer to paragraph 3.42 of Plaintiff's Complaint, the allegations are vague  
23 and ambiguous and accordingly, Defendant lacks sufficient knowledge or  
24

1 information with which to form a belief as to the truth of the allegations  
2 contained therein, and therefore denies same.

3 62. In answer to paragraphs 3.43, 3.44, 3.45, 3.46, 3.47, 3.48, and 3.49 of  
4 Plaintiff's Complaint, the allegations contain opinions and conclusions for which  
5 no response is required; however, to the extent a response is required, the  
6 allegations are vague and ambiguous and accordingly, Defendant lacks  
7 sufficient knowledge or information with which to form a belief as to the truth of  
8 the allegations contained therein, and therefore, denies same.

9 63. In answer to paragraph 3.50 of Plaintiff's Complaint, Defendant admits that  
10 2015 Tacoma Public Utilities Report included a statement that,  
11 "Telecommunications expense increased \$5.7 million primarily due to an  
12 updated cost allocation between Power and Click! Previously, allocated costs  
13 were approximately 75% Click! and 25% Power. The cost allocation has been  
14 updated to reflect shared costs of approximately 94% to Click! and 6% to  
15 Power. This change was effective January 1, 2015." By way of further answer  
16 the remaining allegations contain opinions and conclusions for which no  
17 response is required; however, to the extent a response is required, the  
18 allegations are speculative, vague and ambiguous and accordingly, Defendant  
19 lacks sufficient knowledge or information with which to form a belief as to the  
20 truth of the allegations contained therein, and therefore denies same.  
21

22 64. In answer to paragraph 3.51 of Plaintiff's Complaint, Defendant admits that  
23 2015 Tacoma Public Utilities Report included a statement that,  
24 "Telecommunications expense increased \$5.7 million primarily due to an  
25

1 updated cost allocation between Power and Click! Previously, allocated costs  
2 were approximately 75% Click! and 25% Power. The cost allocation has been  
3 updated to reflect shared costs of approximately 94% to Click! and 6% to  
4 Power. This change was effective January 1, 2015.” By way of further answer,  
5 the remaining allegations contain opinions and conclusions for which no  
6 response is required; however, to the extent a response is required, the  
7 allegations are speculative, vague and ambiguous and accordingly, Defendant  
8 lacks sufficient knowledge or information with which to form a belief as to the  
9 truth of the allegations contained therein, and therefore, denies same.

10 65. In answer to paragraphs 3.52, 3.53, 3.54, and 3.55 of Plaintiff’s Complaint, the  
11 allegations contain legal opinions and conclusions for which no response is  
12 required. To the extent a response is required, the referenced “Resolution,” if  
13 any, would speak for itself; furthermore, the allegations are vague, ambiguous,  
14 and accordingly, Defendant lacks sufficient knowledge or information on which  
15 to form a belief as to the truth of the allegations contained therein, and  
16 therefore, denies same.

17  
18 66. In answer to paragraph 3.56 of Plaintiff’s Complaint, Defendant denies that  
19 NEWGEN STRATEGIES, LLC was hired in January 2017 to audit Click!. By  
20 way of further answer, the “contract” speaks for itself therefore, no response is  
21 required.

22 67. In answer to paragraph 3.57 of Plaintiff’s Complaint, the allegations contained  
23 therein contain legal opinions and conclusion for which no response is required;  
24 however, to the extent a response is required, the alleged “Notice of Contract  
25

1 Suspension," if any, would speak for itself, therefore, no response is necessary.  
2 By way of further answer, the allegations are vague and ambiguous, and  
3 accordingly, Defendant lacks sufficient knowledge or information on which to  
4 form a belief as to the truth of the allegations contained therein, and therefore,  
5 denies same.

6 68. In answer to paragraph 3.57 (repeated) of Plaintiff's Complaint, the allegations  
7 contain legal opinions and conclusions for which no response is required,  
8 furthermore, the allegations are vague and ambiguous, and accordingly,  
9 Defendant lacks sufficient knowledge or information on which to form a belief as  
10 to the truth of the allegations contained therein, and therefore, denies same.  
11 Moreover, the City Charter speaks for itself.

12  
13 69. In answer to paragraph 3.58 of Plaintiff's Complaint, the allegations contain  
14 legal opinions and conclusions for which no response is required, furthermore,  
15 the City Charter speaks for itself and no response is required.

16 70. In answer to paragraphs 3.59 and 3.60 of Plaintiff's Complaint, the allegations  
17 therein contain legal opinions and conclusions for which no response is  
18 required, furthermore, the allegations are vague and ambiguous, and  
19 accordingly, Defendant lacks sufficient knowledge or information on which to  
20 form a belief as to the truth of the allegations contained therein, and therefore,  
21 denies same. To the extent a response is required, the allegations refer to a  
22 December 12, 1997 Ray Corpuz memorandum that speaks for itself.

23  
24 71. In answer to paragraphs 3.61 and 3.62 of Plaintiff's Complaint, the allegations  
25 contained therein contain legal opinions and conclusions for which no response

1 is required. To the extent a response is required, because the allegations are  
2 vague and ambiguous, Defendant lacks sufficient knowledge or information with  
3 which to form a belief as to the truth of the allegations therein, and therefore,  
4 denies same.

5 72. In answer to paragraphs 3.63, 3.64, and 3.65 of the Plaintiff's Complaint,  
6 Defendant denies the allegations contained therein.

7 73. In answer to paragraph 3.65 (repeated) of Plaintiff's Complaint, the allegations  
8 contained therein contain legal opinions and conclusions for which no response  
9 is required. To the extent a response is required, the allegations contain vague  
10 references and accordingly, Defendant lacks sufficient knowledge or  
11 information on which to form a belief as to the truth of the allegations contained  
12 therein and therefore, denies same.

13  
14 74. In answer to paragraph 3.66 of Plaintiff's Complaint, Defendant admits that it  
15 intends to deploy a mobile application for customer account management and  
16 self-service provided through the subscriber's cellular data service provider. By  
17 way of further answer, the remaining allegations contain opinions and  
18 conclusions for which no response is required, and to the extent a response is  
19 required, Defendant lacks sufficient knowledge or information on which to form  
20 a belief as to the truth of the allegations contained therein and therefore, denies  
21 same.

22 75. In answer to paragraph 3.67 of Plaintiff's Complaint, the allegations contained  
23 therein contain legal opinions and conclusions for which no response is  
24 required. To the extent a response is required, the allegations contain vague  
25

1 references and accordingly, Defendant lacks sufficient knowledge or  
2 information on which to form a belief as to the truth of the allegations contained  
3 therein and therefore, denies same.

4 76. In answer to paragraph 3.68 of Plaintiff's Complaint, Defendant admits that  
5 Director Gaines tenure at TPU was concluded in 2017 and a new TPU Director,  
6 Jackie Flowers took over in 2018. By way of further answer, the remaining  
7 allegations contained therein contain legal opinions and conclusions for which  
8 no response is required, and to the extent a response is required, the  
9 allegations contain vague references and accordingly, Defendant lacks  
10 sufficient knowledge or information on which to form a belief as to the truth of  
11 the allegations contained therein and therefore, denies same.  
12

13 77. In answer to paragraph 3.69 of Plaintiff's Complaint, Defendant denies the  
14 allegations contained therein.

15 78. In answer to paragraph 3.70 of Plaintiff's Complaint, the allegations contain  
16 legal opinions and conclusions for which no response is required. To the extent  
17 a response is required, the allegations contain vague references and  
18 accordingly, Defendant lacks sufficient knowledge or information which to form  
19 a belief as to the true of the allegations contained therein and therefore, denies  
20 same.

21 79. In answer to paragraph 3.71 of Plaintiff's Complaint, Defendant denies the  
22 allegation contained therein.  
23  
24  
25

1 80. In answer to paragraph 4.1, 4.2., 4.3, 4.4, 4.5, 4.6, 4.7, 4.8, 4.9, 4.10, 4.11,  
2 4.12, 4.13, 4.14, 4.15, 4.16, 4.17, 4.18, 4.19 and 4.20 of Plaintiff's Complaint,  
3 Defendant denies the allegations contained therein.

4 AFFIRMATIVE DEFENSES

5 81. In further answer to Plaintiff's Complaint, and as Defendant's FIRST  
6 AFFIRMATIVE DEFENSE, Defendant alleges that the Plaintiff has failed to  
7 state a claim for which relief can be granted.

8 82. In further answer to Plaintiff's Complaint, and as Defendant's SECOND  
9 AFFIRMATIVE DEFENSE, Defendant alleges that the Plaintiff lacks legal  
10 standing to pursue his claim against the Defendant.

11 83. In further answer to Plaintiff's Complaint, and as Defendant's THIRD  
12 AFFIRMATIVE DEFENSE, the Plaintiff's claims are barred by operation of the  
13 legal doctrines of waiver, laches and estoppel.

14 84. In further answer to Plaintiff's Complaint, and as Defendant's FOURTH  
15 AFFIRMATIVE DEFENSE, the Plaintiff's claim for injunctive relief is barred by  
16 the fact that the Plaintiff has the option of pursuing remedies at law.

17 85. In further answer to the Plaintiff's Complaint, and as the Defendant's FIFTH  
18 AFFIRMATIVE DEFENSE, Plaintiff's damages, if any, were the proximate result  
19 of the Plaintiff's comparative or contributory fault.

20 86. In further answer to Plaintiff's Complaint, and as Defendant's SIXTH  
21 AFFIRMATIVE DEFENSE, the Plaintiff's claims are barred, in whole or in part,  
22 by operation of res judicata or collateral estoppel arising from orders issued by  
23  
24  
25

1 the Pierce County Superior Court in the matter of *Edward E. Coates, et al. v.*  
2 *City of Tacoma*, Pierce County Cause No. 17-2-08907-4.

3 87. In further answer to Plaintiff's Complaint, and as Defendant's SEVENTH  
4 AFFIRMATIVE DEFENSE, the Plaintiff's claims are not ripe for adjudication.

5 88. In further answer to Plaintiff's Complaint, and as Defendant's EIGHTH  
6 AFFIRMATIVE DEFENSE, to the extent the Plaintiff's relief may include  
7 damages, if any, any such damages are subject to reduction by the Plaintiff's  
8 failure to mitigate such damages.

9 89. In further answer to Plaintiff's Complaint, and as the Defendant's NINTH  
10 AFFIRMATIVE DEFENSE, Section 4.6 of the City Charter, as applied, is  
11 preempted by the Cable Communications Policy Act of 1984 (Pub. L. No. 98-  
12 549, 98 Stat. 2779 (1984)) as amended by the Cable Television Consumer  
13 Protection and Competition Act of 1992 (Pub. L. No. 102-385, 106 Stat. 1460  
14 (1992)) and the Telecommunications Act of 1996 (Pub. L. No. 104-104, 110  
15 Stat. 56 (1996)).

16  
17 90. In further answer to Plaintiff's Complaint, and as Defendant's TENTH  
18 AFFIRMATIVE DEFENSE, RCW Chapter 35.92, as applied, is preempted by  
19 the Cable Communications Policy Act of 1984 (Pub. L. No. 98-549, 98 Stat.  
20 2779 (1984)) as amended by the Cable Television Consumer Protection and  
21 Competition Act of 1992 (Pub. L. No. 102-385, 106 Stat. 1460 (1992)) and the  
22 Telecommunications Act of 1996 (Pub. L. No. 104-104, 110 Stat. 56 (1996)).  
23  
24  
25

1 91. In further answer to Plaintiff's Complaint, and as Defendant's ELEVENTH  
2 AFFIRMATIVE DEFENSE, Plaintiff's claims under the Internet Tax Freedom  
3 Act are barred by 47 U.S.C. § 151, note 1106 (ITFA Accounting Rule).

4 92. Defendant reserves the right to amend its answer and assert additional  
5 affirmative defenses, cross-claims, counter claims and third-party claims as  
6 further information becomes known.

7  
8 PRAYER FOR RELIEF

9 Having fully answered the allegations of Plaintiff's Complaint, Defendant prays  
10 for judgment as follows:

- 11 1. That the Plaintiff be denied declaratory relief;
- 12 2. That the Plaintiff be denied injunctive relief;
- 13 3. That the Plaintiff be denied mandamus relief;
- 14 4. That the Plaintiff take nothing by his Complaint;
- 15 5. That judgment be entered for the Defendant;
- 16 6. That the Defendant be awarded attorney's fees and costs; and
- 17 7. For such other and further relief as the Court deems just and equitable.

18 Dated this 3<sup>rd</sup> day of September, 2019.

UNITED STATES DISTRICT COURT  
WESTERN DISTRICT OF WASHINGTON  
AT TACOMA

MITCHELL SHOOK,  
Plaintiff,

vs.

CITY OF TACOMA,  
Defendant.

NO. 3:19-CV-05829

(Superior Court of the State of  
Washington County of Pierce  
No. 19-2-07135-0)

NOTICE OF REMOVAL OF ACTION  
FROM STATE COURT

TO THE HONORABLE JUDGES OF THE UNITED STATES DISTRICT COURT FOR  
THE WESTERN DISTRICT OF WASHINGTON

PLEASE TAKE NOTICE THAT, pursuant to 28 U.S.C. § 1441(a), Defendant  
City of Tacoma hereby removes this action from the Superior Court of the State of  
Washington, County of Pierce, to the United States District Court for the Western  
District of Washington at Tacoma. Defendant appears solely for the purpose of  
removal and for no other purpose, reserving all other defenses available to Defendant  
and alleges on information and belief as follows:

1           1.     The Plaintiff filed the above-captioned action against Defendant City of  
2 Tacoma, in the Superior Court of the State of Washington, County of Pierce, on  
3 April 17, 2019. Subsequently, Defendant was served with a copy of Plaintiff's motion  
4 for leave to amend his complaint on August 6, 2019, which motion was granted by  
5 order of the Court on August 16, 2019, a copy of which is attached hereto as Exhibit  
6 A. Defendant was served with a copy of the amended complaint on August 26, 2019,  
7 a copy of which is attached hereto as Exhibit B.

8           2.     This Notice of Removal is being filed within 30 days after service on the  
9 Defendant, and thus is timely filed pursuant to 28 U.S.C. § 1446(b).

10          3.     Pursuant to 28 U.S.C. § 1446(b)(2)(A), Defendant consents to the  
11 removal of this action to the United States District Court.

12          4.     Removal to the United States District Court for the Western District of  
13 Washington at Tacoma is proper pursuant to 28 U.S.C. § 128(b) and LCR 3(d)  
14 because it is the judicial district embracing Pierce County, which is the place where  
15 this action is pending and Defendant's principal place of business and because the  
16 events alleged to have given rise to the claims occurred in Pierce County.

17          5.     Removal of this action is proper under 28 U.S.C. § 1441(a), which  
18 provides that, "Except as otherwise expressly provided by Act of Congress, any civil  
19 action brought in a State court of which the district courts of the United States have  
20 original jurisdiction, may be removed by the defendant or the defendants, to the  
21 district court of the United States for the district and division embracing the place  
22 where such action is pending." This Court has original jurisdiction pursuant to 28  
23 U.S.C. §§ 1331 and 1332 because this action includes claims arising under the laws  
24  
25

1 of the United States and because Plaintiff's right to relief necessarily depends on  
2 resolution of a substantial question of federal law regarding the preemptive effect of  
3 the Cable Communications Act of 1984 (Pub. L. No. 98-549, 98 Stat. 2779 (1984)), as  
4 amended.

5 6. Pursuant to 28 U.S.C. § 1331, this Court "shall have original jurisdiction  
6 of all civil actions arising under the Constitution, laws, or treaties of the United States."  
7 Plaintiffs amended complaint adds a claim alleging that the Plaintiff is entitled to relief  
8 because Defendant retained taxes collected in violation of the Internet Tax Freedom  
9 Act ("ITFA"), 47 U.S.C. § 151 (1998), as amended. Because this Court has original  
10 jurisdiction over such claims under 28 U.S.C. § 1331, this action is removable  
11 pursuant to 28 U.S.C. § 1441(a).

12 7. Plaintiff has also asserted state law actions implicating federal  
13 preemption under the Cable Communications Act of 1984 (Pub. L. No. 98-549, 98  
14 Stat. 2779 (1984)) as amended by the Cable Television Protection and Competition  
15 Act of 1992 (Pub. L. No. 02-385, 106 Stat. 1460 (1992)), and the Telecommunications  
16 Act of 1996 (Pub. L. No. 104-104, 110 Stat. 56 (1996)), codified at 47 U.S.C.  
17 Defendant requests that all claims be removed from the Superior Court of the State of  
18 Washington, County of Pierce, and that this Court exercise supplemental jurisdiction  
19 over these claims pursuant to 28 U.S.C. § 1367(a) and 28 U.S.C. §1441(c).

20 8. Pursuant to 28 U.S.C. § 1446(a) a copy of the order granting leave to  
21 amend the complaint and a copy of the amended complaint setting forth the claims for  
22 relief upon which such action is based, are attached hereto as Exhibits A and B.

AMENDED COMPLAINT

**Plaintiff, Mitchell Shook, hereby amends his Complaint to add facts, causes of action and relief sought. Plaintiff can certainly prove these charges.**

**Additional facts are added starting at “Paragraph 3.34” on page 16, new causes of action are in Section IV beginning with paragraph 4.2 on page 21, and further relief sought is under “Section V” beginning at paragraph 16 on page 21..**

INTRODUCTION -NATURE OF ACTION

Click! Network (“Click!”) was established in 1997, by Tacoma City Council, as a *“broad band telecommunications system that shall be owned, operated and controlled by the City of Tacoma Department of Public Utilities Light Division ”*<sup>1</sup>.

The Click! system is clearly part of Tacoma Public Utilities.

The Click! system was established to *“provide telecommunications services for data transport, high speed internet access, full cable television service, and, among other things, to meet the expanding telecommunications requirements in an evolving competitive electric market, the most critical of which is real time, two-way interactive communications with individual energy consumers”*

The Click! Network telecommunication system continues to fulfill its original mandate, providing wholesale broadband Internet services to over 20,000 Tacoma Public Utilities customers, with a state-

---

<sup>1</sup>The 1997 City Council Resolution No. 33668

1 of-the-art cable modem and Gigabit Fiber To The Home (“FTTH”) system -while delivering  
2 television services to over 12,500 Tacoma Public Utilities customers over the system.

3 The Tacoma City Council recently approved a “term sheet” for disposal of Tacoma Public  
4 Utilities’ proprietary interests in the system. All control over the day-to-day ongoing operations of  
5 Click!, including oversight on rates, would be handed over to a private company.

6 Tacoma City Charter, Article IV § 4.6, clearly prohibits the disposal of a “utility system” without  
7 a majority vote of the electorate. Similarly, RCW 35.94 requires a vote for any sale, lease or disposal  
8 of “any part” of a municipal utility system.

9 Since Click!’s system is part of Tacoma Public Utility<sup>2</sup>, and no such vote of the people is planned  
10 or provided for, there is an imminent risk that the terms of City charter will be violated.

11 The purpose of this action is to make sure the clear language in the City charter is followed and the  
12 people are allowed to vote on any lease or disposal of the Click system by TPU; for, if charter  
13 provisions are ignored, the City would be exceeding its authority and acting ultra vires.

#### 14 1. PARTIES

15 Plaintiff Mitchell Shook is a resident of Tacoma, a Tacoma Public Utilities rate payer, taxpayer to  
16 City of Tacoma’s general government and Click! customer; and, as such, has standing to seek the  
17 relief requested in this petition.

18 Defendant City of Tacoma (“the City”) is a Washington Municipal Corporation located in Pierce  
19 county, Washington. The Light Division, doing business as Tacoma Power, of the City’s Department  
20 of Public Utilities (“TPU”) operates and provides services to TPU customers (“ratepayers”). TPU  
21 operates a business unit, known as Click! Network, which provides retail television and wholesale  
22 Internet services.

#### 23 2. JURISDICTION AND VENUE

24 2.1 This Court has subject matter jurisdiction over this issue, since the City is located in Pierce  
25 County and the events related to this petition have substantially occurred in Pierce County;  
26

27 \_\_\_\_\_  
<sup>2</sup> City of Tacoma Resolution 40272

1 additionally, the superior court has subject matter jurisdiction over this action under RCW 2.08.010  
2 because plaintiff seeks writs of mandamus and/or prohibition.

3 2.2 Given no other speedy or adequate remedy, RCW 7.16.040 provides the Court  
4 jurisdiction over this matter.<sup>3</sup>

### 5 3. FACTS

6 3.1 Tacoma City Charter Section 4.6 requires "*The City shall never sell, lease or dispose of any*  
7 *utility system*" without a "*majority vote of the electors*".

8 3.1.1 Click is multi-service broadband telecommunications provider and operating section of  
9 Tacoma Power providing retail cable television and wholesale broadband internet services to Tacoma  
10 Power's residential and business customers.

11 3.2 Ordinance NO. 25930 was passed by Tacoma City Council in 1996 and entitled "*AN*  
12 *ORDINANCE of the City of Tacoma, Washington establishing a telecommunications system as*  
13 *part of the Light Division*".

14 3.2.1 The 1996 CITY of Tacoma ORDINANCE NO. 25930 States "*WHEREAS, RCW 35.92.050*  
15 *authorizes cities to construct and operate works and facilities for the purpose of furnishing*  
16 *any persons with electricity and other means of power and to regulate and control the use*  
17 *thereof<sup>4</sup> or lease any equipment or accessories necessary and convenient for the use*  
18 *thereof; and*

19 3.2.2 CITY of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the Utility Board and the*  
20 *Council have determined that it is in the best interest of the City that it install a*  
21 *telecommunications system among all of its Electric System substations in order to improve*  
22 *communications for automatic substation control; and*  
23

24  
25 <sup>3</sup> A writ of review shall be granted by any court, when an inferior tribunal, board or officer, exercising judicial  
26 functions, has exceeded the jurisdiction of such tribunal, board or officer, or one acting illegally, or to correct  
27 any erroneous or void proceeding, or a proceeding not according to the course of the common law, and there  
is no appeal, nor in the judgment of the court, any plain, speedy and adequate remedy at law.

<sup>4</sup> Emphasis added to remind the Court that this functionality is still relevant today. Smart homes, smart  
devices and the Internet-of-Things (with devices such as smart thermostats for example) allow users to  
control their electrical usage even when away from the premises.

1 3.2.3 CITY of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the City has determined*  
2 *that it is prudent and economical to provide additional capacity on such*  
3 *telecommunications system to provide the Electric System with sufficient capacity to*  
4 *perform or enhance such functions as automated meter reading and billing, appliance*  
5 *control<sup>5</sup>, and load shaping; and*

6 3.2.4 City of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the Light Division may wish*  
7 *to connect such telecommunications system to individual residences and businesses in its*  
8 *service area or to other providers of telecommunications services; and*

9 3.2.5 The 1996 City of Tacoma ORDINANCE NO. 25930 States *WHEREAS, the City has*  
10 *determined that it should create a telecommunications system as part of the Electric*  
11 *System<sup>6</sup> in order to construct these telecommunications improvements”*

12 3.2.6 Exhibit A to 1996 City of Tacoma ORDINANCE NO. 25930<sup>7</sup> stated the  
13 telecommunications project would include “demand side management (DSM)  
14 functions<sup>8</sup>, CATV and Internet Access.

15 3.2.7 In 2006, Washington voters approved Initiative Measure 937, known as the Energy  
16 Independence Act. The measure, which was codified at RCW 19.285, requires electric  
17 utilities with more than 25,000 customers to take certain measures to conserve energy<sup>9</sup>

18 3.2.8 Demand-side management (DSM) or demand-side response (DSR) is the modification of  
19 consumer demand for energy through various methods -such as financial incentives.

23 \_\_\_\_\_  
24 <sup>5</sup> Emphasis added, for it should be recognized that “appliance control” is not possible without two way  
25 communication between an appliance and the user -as such “appliance control” is an energy related  
26 function.

26 <sup>6</sup> Emphasis added to point out that the telecommunications system is a “part of the electric system”

27 <sup>7</sup> Passed on July 26, 1996 when the telecommunications system was approved

<sup>8</sup> the goal of demand-side management is to encourage the consumer to use less energy during peak hours,  
or to move the time of energy use to off-peak times such as nighttime and weekends

<sup>9</sup> Kelley, 120313 WAAGO, AGO 2013-6 2013

1 Demand-side management encourages the consumer to use less energy during peak hours,  
2 or to move the time of energy use to off-peak times such as nighttime and weekends.<sup>10</sup>

3 3.3 The Tacoma City Council approved construction of Click! Network on April 8,1997. The City  
4 Council delegated authority to the Public Utility Board and the Department of Public Utilities  
5 ("TPU"), Light Division (dba "Tacoma Power"), to implement, own and manage a broadband  
6 telecommunications system ("Click! Network" or "Click!"), as authorized through City Council  
7 Substitute Resolution No. 33668, approved April 8, 1997, and Public Utility Board Amended  
8 Substitute Resolution U-9258, which was approved on April 9 1997

9 3.3.1 The 1997 Council Resolution No. 33668 states: "WHEREAS the City of Tacoma,  
10 Department of Public Utilities, Light Division desires to: (1) develop a state-of-the art fiber optic  
11 system to support enhanced electric system control, reliability and efficiency; (2) develop  
12 capability to meet the expanding telecommunications requirements in an evolving competitive  
13 electric market, the most critical of which is real time, two-way interactive communications with  
14 individual energy consumers, (3) create greater revenue diversification through new business  
15 lines (i.e. Internet transport, cable TV, etc.), (4) enhance traditional products and services, and (5)  
16 maximize return on Light Division assets,

17 3.3.2 The 1997 Council Resolution No. 33668 states "*WHEREAS a broadband*  
18 *telecommunications system will have available capacity for future City Light Division needs and*  
19 *will also have the capacity to provide telecommunications services for data transport, high speed*  
20 *internet access, full cable television service, and other uses, and;*"

21 3.3.3 The 1997 Resolution No. 33668 states "*BE IT RESOLVED BY THE COUNCIL OF THE*  
22 *CITY OF TACOMA: That the Council hereby finds and determines that the City Light Division's*  
23 *broad band telecommunications proposal is in the best interests of the City, will serve a public*  
24 *purpose and that the said Business Plan is sufficient and adequate, therefore, the Council hereby*  
25 *approves the Light Division's proposal including the Business Plan and the Department of Public*  
26

27 <sup>10</sup> Demand Side Management and Response can play a role in satisfying TPU's requirement for complying with RCW 19.285.040 Energy conservation and renewable energy targets -which requires TPU to pursue all available conservation that is cost-effective, reliable, and feasible.

1 Utilities, Light Division is hereby authorized to proceed to implement said proposal for a broad  
2 band telecommunications system, and That the proposed broad band telecommunications system  
3 shall be owned, operated and controlled by the City of Tacoma Department of Public Utilities  
4 Light Division<sup>11</sup>

5 3.3.4 Click! operates as part of TPU. Click is one Tacoma Power's 6 business units -which units are  
6 generation; power management; transmission and distribution; rates, planning and analysis; Click  
7 Network; and utility technology services.

8 3.3.2 Click! is not a separate business unit or enterprise fund. It is an organizational unit within the  
9 Power enterprise fund. The first line of Click! oversight is the Power Superintendent and the  
10 Power management team. From there, oversight is provided by, the TPU CEO, the Board, and the  
11 City Council.

12 3.3.3 TPU Revenue Bonds were approved, by a declaratory judgement, to pay for construction of the  
13 Click! system; and, no general fund dollars have been committed to the project.

14 3.4 Approximately 1,500 miles of fiber and coaxial cable have been constructed by Tacoma  
15 Power in the cities of Tacoma, University Place, Fircrest, Lakewood and Fife, and portions of  
16 unincorporated Pierce County, providing Tacoma Power with a state-of-the-art telecommunication  
17 system with which supports transmission and distribution operations, advanced metering, and retail  
18 and wholesale commercial services. The network currently covers approximately 66% of the  
19 households in Tacoma Power's service territory.

20 3.5 The network consists of a hybrid fiber-optic coaxial ("HFC") system, which delivers two-way  
21 signals for cable TV, cable modem,<sup>12</sup> Fiber To The Home ("FTTH") Internet services, and advanced  
22 metering.

23 3.6 In addition, SONET ("Synchronous Optical Network") and Gigabit Ethernet technologies  
24 are used to support communications across Tacoma Power's transmission and distribution system and  
25

26  
27 <sup>11</sup> Emphasis added to highlight fact that system is owned by TPU

<sup>12</sup> Telecommunications Infrastructure Section, on Page 47, Bond Prospectus for CITY OF TACOMA,  
WASHINGTON \$70,575,000 Electric System Revenue Bonds, Series 2017

1 to carry out data transport services for commercial customers. The network was designed and  
2 constructed to meet high telecommunications standards, containing a redundant backbone and  
3 redundant service loops, which seek to ensure uninterrupted signal transport in the event of a network  
4 break.

5 3.7 Commercial telecommunication services were Launched in 1998 under the brand name Click!  
6 Network. Click! provides three commercial telecommunication services to TPU customers; retail  
7 cable television, wholesale broadband transport and wholesale high-speed Internet delivered over  
8 cable modem and FTTH.

9 3.8 In 2017 Click! Network's annual operating revenues were approximately \$26,519,861<sup>13</sup>.

10 3.8.1 Click! ended 2018 with more than 12,500 cable TV customers, 20,000 wholesale  
11 high- speed Internet service customers, and more than 100 wholesale broadband transport  
12 circuits.

13 3.8.2 Click! has "significant goodwill", According to Section 2.3 of the January 23, 2018  
14 presentation by Joann Hovis, of CTC Technology, at the City Council-TPU Board Joint Study  
15 Session. Ms. Hovis' report was titled Strategy Alternatives for Tacoma Click!:

16 3.8.3 "Click! has thousands of customers and considerable goodwill", as confirmed by Click!  
17 Network General Manager, Tenzin Gyaltzen, who stated so in his February 7<sup>th</sup>, 2018, Declaration  
18 In Support Of Defendants Opposition To Partial Summary Judgement -page 3 , Pierce County  
19 Superior Court Case No 17-2-08907-4

20 3.8.4 Click! is the nations second largest municipal CATV and Internet service -behind  
21 Chattanooga TN.

22 3.9 TPU is governed by the City's public utility board, whose five members are appointed by the  
23 mayor and confirmed by the city council. Utility budgets and rates are subject to approval by the city  
24 council. **Section 4.3 of the City charter** provides City council with oversight on rates and the  
25 authority "*to fix and from time to time, revise such rates and charges as it may deem advisable for*  
26 *supplying such utility services the City may provide*".  
27

---

<sup>13</sup> CLICK! NETWORK COMMERCIAL OPERATIONS OPERATIONAL SUMMARY - December 31, 2017

1 3.10 Title 12 “Utilities” of the Tacoma Municipal Code regulates utilities and rates.

2 3.10.1 Click! CATV and wholesale Internet rates are regulated under Title 12 of the Tacoma  
3 Municipal Code, in section 12.13

4 3.10.2 Click! TV and Wholesale Internet rates are approved by the Public Utility Board  
5 (Board) and City Council, the same as Power, Water, and Rail rates.

6 3.11 Over 10,000 TPU electric customers currently have Tacoma Power Gateway meters  
7 installed on their homes. These “gateway meters” operate over Click! Network’s HFC plant.

8 3.11.1 The Gateway meters feature “remote connect and disconnect” functionality  
9 allowing for services to be turned on or off for electric customers. The gateway meters  
10 also allow automated electric meter reading and provide information to customers  
11 relevant to their energy purchasing decisions.<sup>14</sup>

12 3.11.2 In connection with these Gateway Meters, some TPU customers participate in  
13 the “Pay-Go” prepayment system.

14 3.12 Click! currently holds telecommunications or video franchises from the City of Tacoma,  
15 City of Fircrest, City of Fife, City of Lakewood, City of University Place, and Pierce County to  
16 offer Cable TV, high speed Internet, digital phone, as well as fiber-delivered data solutions to  
17 area residents and businesses<sup>15</sup>.

18 3.13 AMENDED RESOLUTION NO. U-10879, states:” #20. *WHEREAS Tacoma Power has*  
19 *excess power generation capacity within its service territory. In the past, Tacoma Power has*  
20 *benefited greatly by selling this excess capacity in the wholesale power markets to the benefit of all*  
21 *retail electric customers. Over the past few years, wholesale power prices and sales have dropped*  
22 *substantially. In support of Tacoma Power's strategic business plan, Tacoma Power wants to make*  
23 *up this lost revenue by looking at ways to increase its retail power sales through economic growth in*  
24 *the community. Communities across the nation have benefited economically from competitive access*  
25 *to internet services in their communities.*”

26 \_\_\_\_\_  
27 <sup>14</sup> From AMENDED RESOLUTION NO. U-10879 Adopted by TPU Board on 9-28-16

<sup>15</sup> CLICK! NETWORK Business Plan -by Click! General Manager Tenzin Gyaltzen. Revised 3-20-17 -Executive Summary Page 2

1 3.14 AMENDED RESOLUTION NO. U-10879 also states: “*Tacoma Power's continued operation*  
2 *and maintenance of the telecommunications system for internet access purposes assists in making the*  
3 *internet services competitive in Tacoma Power's service area, which increases economic growth that*  
4 *leads to greater retail power sales*”.<sup>16</sup>.

5 3.15 AMENDED RESOLUTION NO. U-10879 stated “WHEREAS The Internet-related uses of  
6 the Click! telecommunications system provide Tacoma Power customers benefits by giving them  
7 access to advanced customer services options such as: power use monitoring, outage reporting,  
8 scheduling of services, bill paying, and electrical appliance control.

9 3.16 AMENDED RESOLUTION NO. U-10879 stated that “WHEREAS In planning for an  
10 uncertain and unknown future<sup>17</sup>, there may be other potential functions related to the supplying of  
11 electricity to customers who might also make energy related usage of the telecommunications system  
12 infrastructure including: cyber security efforts, electric car charging and metering, enhanced “smart  
13 home” uses that allow customers to control power usage by time of day, participate in demand  
14 response programs, behavior-based saving programs, outage communications, energy audits, and  
15 participation in Evergreen Options”<sup>18</sup>

16 3.17 One purpose for creating Click! was to have a telecommunications system sophisticated  
17 enough to enable TPU to compete effectively in the rapidly evolving electric industry.

18 3.18 Amended Resolution U-10828, adopted by the City’s public utility board on December 3,  
19 2015, states “*WHEREAS the broadband telecommunication system is critical infrastructure for*  
20 *Tacoma Power*

21 3.18.1 Amended Resolution U-10828 cites Charter 4.6 as requiring a vote of the people to  
22 before the City may “*lease or dispose of any utility system*”.<sup>19</sup>

26 <sup>16</sup> AMENDED RESOLUTION NO. U-10879 -Page 4, This is Whereas #20

27 <sup>17</sup> AMENDED RESOLUTION NO. U-10879 -Page 4, This is Whereas #17

<sup>18</sup> <https://www.mytpu.org/community-environment/clean-renewable-energy/evergreen-options-program/>

<sup>19</sup> Page one of Amended Resolution U-10828

1 3.19 City Council Resolution #39347 states: “1997, the City of Tacoma, through its electrical  
2 utility, embarked on an effort to construct and operate a state-of-the-art telecommunication system  
3 for the benefit of its electric utility and its electric utility customers”<sup>20</sup>

4 3.19.1 City Council Resolution #39347 states: “WHEREAS the telecommunications  
5 system was constructed and has been in continuous operation since 1999, and has proven to  
6 provide benefits for the City electric utility and electric utility customers located both Inside  
7 and outside City limits”<sup>21</sup>

8 3.19.2 City Council Resolution #39347 states: “WHEREAS the telecommunication system  
9 is now a vital component of the City's electric utility and continued operation and  
10 maintenance of the system is an essential function of the electric utility”

11 3.19.3 City Council Resolution #39347 states: “WHEREAS some of the benefits the City's  
12 electric utility and electric utility customers have received from the system include (1)  
13 enhanced control, reliability and efficiency of the City's electrical system; (2) increased  
14 capability to meet the expanding telecommunication requirements in an evolving competitive  
15 electric market, including the ability to make real-time, two-way interactive communications  
16 with individual energy consumers; (3) improved traditional electric products provided to  
17 consumers; (3) diversified revenue streams through new business lines (i.e., Internet  
18 transport, cable TV, etc.); and (5) maximized return on the City's electric system assets, and  
19 enhancing communication between electric utility assets and electric utility consumer, and  
20 providing electric utility customers a means to instantly access electric utility accounts  
21 information for payment of bills, report outages, and obtain energy usage and conservation  
22 information”<sup>22</sup>

23 3.19.2 City Council Resolution #39347 stated: “WHEREAS some benefits of the City's  
24 electric utility telecommunication system include enhancing communication between electric  
25 utility assets and electric utility consumers, and providing electric utility customers a means  
26

27 <sup>20</sup> City Council Resolution #39347 -page 1

<sup>21</sup> City Council Resolution #39347 -page 1

<sup>22</sup> Passed by City Council on December 15 2015

1       to instantly access electric utility accounts information for payment of bills, report outages,  
2       and obtain energy usage and conservation information, and;

3       3.20    That a water heater “demand response project” was recently conducted by Tacoma Power, in  
4       the Salishan housing development neighborhood, under an agreement with the Tacoma Housing  
5       Authority.

6       3.20.1   Data transport for the Salishan demand response hot water heater project utilized Click!  
7       Network’s cable modem system<sup>23</sup>.

8       3.20.2   Demand response technology requires two-way communications.

9       3.20.3   Demand response technology holds potential for load reduction and energy savings<sup>24</sup>.

10      3.20.4   RCW 35.92.360<sup>25</sup> -Energy conservation plan states "The legislature finds that energy  
11      conservation can take many useful and cost-effective forms, and that the types of conservation  
12      projects available to utilities and customers evolve with time as technologies are developed and  
13      market conditions change. In some cases, **electricity conservation projects are most cost-**  
14      **effective when they reduce the total amount of electricity consumed**<sup>26</sup> by an individual  
15      customer, and in other cases they can be cost-effective by reducing the amount of electricity a  
16      customer needs to purchase from an electric utility.

17      3.21    The Click! Engagement Committee (“the committee”) was formed in January 2016, per the  
18      direction of the Tacoma Public Utilities Board and the City Council.

19      3.21.1   The Committee was comprised of seven members as follows: Mayor Marilyn Strickland,  
20      City Council Member Marty Campbell, Public Utility Board Member Mark Patterson, Public  
21      Utility Board Member Karen Larkin, industry experts Janine Terrano and Terry Dillon, and  
22      ratepayer advocate Andrea Cobb<sup>27</sup>.

23      3.21.2   The Committee met 16 times between January 22,2016 and August 1,2016.

29      <sup>27</sup> CLICK! NETWORK Business Plan -by Click! General Manager Tenzin Gyaltsen. Revised 3-20-17 -Executive  
30      Summary Page 2

1 3.22 Studies by the Click! Engagement Committee and Tacoma Power’s financial analysis  
2 demonstrate that continuing to provide CATV services in support of retail internet services makes the  
3 sale of such services a more competitive overall product and improves the financial sustainability of  
4 Click!<sup>28</sup>

5 3.23 In July 2018, the City Council and Public Utility Board (“Board”) directed Joann Hovis, of  
6 CTC Technology & Energy (“CTC”), to negotiate with Rainier Connect and Wave Broadband, and to  
7 develop formal partnership proposals regarding the operation and use of the Click! Network.

8 3.23.1 Two Public-Private Partnership Term Sheets (“term sheets”) for operation and use of  
9 Click! Network, one from Rainier Connect and one from Wave Broadband, were presented to  
10 the Council and Board, at a Joint Study Session on March 5, 2019.<sup>29</sup>

11 3.23.2 Both of these term sheets proposed a 20-year IRU with two 10-year extensions.

12 3.23.3 The term sheets from Rainier Connect and from Wave Broadband were compared and  
13 evaluated by Joann Hovis of CTC, a consultant hired by the City, who recommended to the  
14 TPU Board and City Council that they should proceed with the term sheet proposed by  
15 Rainier Connect.

16 3.24 The Rainier Connect term sheet<sup>30</sup> presented to City Council states that *“The IRU term will be  
17 20 years (“IRU Term”). On the expiration of the IRU Term, the IRU can be renewed for two  
18 additional periods of 10 years (“Extension IRU Terms”) so long as Rainier Connect is in compliance  
19 with all the terms of its contractual relationships with the City of Tacoma and TPU.”*

20 3.25 The Rainier Connect term sheet (“the term sheet”) states: *“Rainier Connect will be granted use  
21 of other assets currently used by Click! in the provision of cable television and broadband data  
22 services, including equipment used to operate the Network and deliver services to customers,  
23 customer accounts, inventory of spare parts and equipment, prepaid items, and material contracts, in  
24 each case related to the operation of the Network and the provision of products and services*

25 \_\_\_\_\_  
26 <sup>28</sup> AMENDED RESOLUTION NO. U-10879

27 <sup>29</sup> Update and Analysis: Alignment of Click! Policy Goals with Partner Proposals Presented by Joanne Hovis To  
the City of Tacoma City Council & Utility Board on March 5 2019

<sup>30</sup> 12. Tacoma Click! -Rainier Connect Public-Private Partnership Term Sheet Presented by JoAnn Hovis on  
March 5, 2019

1 (collectively, "Related Assets"). **The Related Assets will be conveyed to Rainier Connect subject**  
2 **thru the terms of an asset purchase agreement ("APA")<sup>31</sup> to be negotiated between the parties.**"<sup>32</sup>

3 3.26 Further negotiations with Rainier Connect were approved by City council on March 26<sup>th</sup>,  
4 2019, with the passage of Resolution 40272, entitled: "A resolution approving the execution of an  
5 agreement between the Department of Public Utilities, Light Division d.b.a. Tacoma Power, and  
6 Rainier Connect to negotiate in good faith formal partnership contracts related to the operation and  
7 use of the Click! Network"

8 3.27 The term sheet states "Rainier Connect will be granted an indefeasible right of use ("IRU")  
9 for the hybrid fiber-coaxial network assets owned by Tacoma Public Utilities (TPU) and used by  
10 Tacoma Click! ("Click!") to provide cable television and broadband data services to residents and  
11 businesses ("Network") in the existing Click! service area ("Click! Service Area"). The Network  
12 includes the outside plant assets associated with the Click! network, including fiber optics, coaxial  
13 cable, cabinets, splitters, backup powering equipment, and other out-side plant physical assets  
14 including those discussed in 14(b) below"<sup>33</sup>

15 3.28 The term sheet states: "The Tacoma Power Fiber on Critical Routes is collocated with the  
16 fiber optic strands that are used by Click! and are now planned to lease to Rainier Connect under  
17 the IRU."

18 3.29 The term sheet with Rainier Connect does not provide City council any control over TV or  
19 Internet rates.

20 3.30 The term "IRU" has frequently been described as a "Lease" by Tacoma City and TPU policy  
21 makers since the concept of a public-private partnership was first introduced in 2015.

22 3.30.1 In a May 6, 2015 Memo from TPU Director Gaines responding to "Council inquiries  
23 from the March 31, 2015 Joint Study Session" the "IRU" is described as a "Lease".

24 3.31 On April 2, 2019 a Letter of Intent ("LOI") was signed by TPU Director Jackie Flowers with  
25 Rainier Connect. The LOI states "In the proposed transaction, Rainier Connect would obtain an

26  
27 <sup>31</sup> emphasis added to point out the fact of the asset sale.

<sup>32</sup> 12. Section 1.c of Tacoma Click! -Rainier Connect Public-Private Partnership Term Sheet March 5, 2019

<sup>33</sup> Rainier Connect Public-Private Partnership Term Sheet Present to City Council on March 5, 2019

1 exclusive indefeasible right to use ("IRU") and operate the hybrid fiber coaxial ("HFC") system that  
2 today the Department of Public Utilities, Light Division ("Tacoma Power") d/b/a/ Click! Network  
3 ("Click") operates to provide wholesale and retail video and broadband products and services to  
4 residents and businesses in the City and in other jurisdictions in which Click! is franchised to  
5 operate".

6 3.31.1 The LOI contemplates the negotiation of an agreement that would grant Rainier  
7 Connect exclusive possession and control of HFC facilities and equipment essential in  
8 operating the CATV and wholesale Internet system.<sup>34</sup>

9 3.32 The terms of the IRU, as described by the term sheet are a "lease".

10 3.32.1 FASB Statement of Financial Accounting Standards ("SFAS") No. 13, *Accounting for*  
11 *Leases*, and the related interpretations of this standard, provide the relevant GAAP for lease  
12 accounting, including the definition of a lease. This accounting literature defines a lease as an  
13 agreement conveying the right to use property, plant or equipment for a period of time<sup>35</sup>

14 3.33 The term sheet represents significant material changes to the Click! Business model, including  
15 the removal of TPU as the primary operator of Click!, the sale or lease of telecommunications system  
16 equipment or capacity, the outsourcing of work and discontinuance of TPU products and services<sup>36</sup>.

17 3.34 Since its inception in 1996, *Click! has been a part of Tacoma Power* and was initially  
18 financed with Tacoma Power revenues and resources.<sup>37</sup>

19 3.35 Defendant defines TPU's "Communications Network" as "that network **owned, operated,**  
20 **and maintained by Click!**, consisting of redundant fiber optical backbones, redundant fiber optical  
21 service loops and coaxial cable distribution cables on which numerous applications are provided,  
22 which network includes, but is not limited to, Department of Public Utilities' two-way  
23

---

24 <sup>34</sup> Public-Private Partnership Term Sheet March 4, 2019

25 <sup>35</sup> Testimony Concerning Telecommunications Accounting Issues by John M. Morrissey Deputy Chief  
26 Accountant, U.S. Securities and Exchange Commission Before the Subcommittee on Oversight and  
27 Investigations Committee on Financial Services March 21, 2002

<sup>36</sup> Update and Analysis: Alignment of Click! Policy Goals with Partner Proposals Presented by Joanne Hovis To  
the City of Tacoma City Council & Utility Board on March 5 2019

<sup>37</sup> Confirmed by Tacoma City Council Resolution No. 39577

1 communications services, commercial retail cable television, wholesale Internet services, wholesale  
2 data transport services, and I-Net services”<sup>38</sup>.

3 3.36 **Click!’s customers**, thru their usage of the telecommunications system’s broadband Internet  
4 access, ethernet transport and cable television services, **have shared in paying for** and offsetting part  
5 of the **capital costs** of constructing *Tacoma Power’s telecommunications system*, as well as in the  
6 **operation and maintenance** (“O&M”) of this infrastructure. By sharing in these costs, Click!’s  
7 operation benefits all Tacoma Power electric customers who otherwise would pay 100% of the capital  
8 and O&M costs.<sup>39</sup>

9 3.37 At least \$100 million dollars has been spent in constructing the telecommunications system  
10 that allows delivery of Click!’s commercial telecommunication services.

11 3.38 On May 12, 2015 Defendant estimated that “approximately \$200 million in historical cost and  
12 approximately \$80 million in book value of the Fiber/Coax system” existed at that time, and “the  
13 initial capitalization date was around 1999.”

14 3.39 Tacoma Power's continued operation of the telecommunications system for provision of  
15 broadband services assists in making Internet services competitive in Tacoma Power's service area.  
16 This benefits Tacoma Power by stimulating and increasing economic growth, which leads to greater  
17 retail power sales. Other benefits include “allowing the utility to continue to efficiently and  
18 effectively meet the demands of new federal regulations relating to reliability of the electrical system,  
19 combating threats from possible cyberterrorism acts, participating in energy transactions and trades to  
20 balance the energy markets in less than 15-minute increments, enhancing communication between  
21 electric utility assets and electric utility consumers, and providing electric utility customers a means  
22 to *instantly access electric utility accounts* information for payment of bills, *report outages*, and  
23 *obtain energy usage and conservation information*.”<sup>40</sup>

24 3.40 No direct cost audit or “*product line profitability*” analysis for Click! has ever been done.  
25  
26

27 <sup>38</sup> Institutional Network Services Agreement between City of Tacoma and Click! Network, 12/21/2009-p. 3

<sup>39</sup> Confirmed in Resolution U-10879. passed by Tacoma Public Utility Board on 9-28-16

<sup>40</sup> Tacoma City Council Resolution 39347, passed on December 15, 2015

1 3.41 In violation of state law, Tacoma Public Utilities is paying 7.5% of Click! Network's  
2 broadband revenues to Defendant's general fund.

3 3.42 In a single month, October 2018, this 7.5% "tax" or B&O "fee" amounted to \$52,297.18.

4 3.43 In distributing shared capital and O&M expenses between Click!'s commercial operations and  
5 Tacoma Power's traditional electrical services, Defendant follows a cost "**allocation methodology**"  
6 with formulas guided by the "*Governmental Accounting Standards Board*" ("GASB").

7 3.44 Defendant's "fully distributed" allocation methodology is based on GASB rules designed to  
8 distribute shared "indirect costs", across City departments, not to determine "profits" in a commercial  
9 sense. Accordingly, many different types of "**general overhead costs**" appear as "expenses" under  
10 various sections of Click!'s Operational Summaries.

11 3.45 Many of these indirect "**overhead costs**" are expenses completely unrelated Click!'s  
12 commercial telecommunications activities whatsoever.

13 3.46 These indirect "**unrelated costs**" include such things, by way of example, as the Tacoma  
14 Mayor's salary and City Council member's salaries.

15 3.47 Given the many unrelated and indirect costs included under GASB rules in the preparation of  
16 Click!'s Operational Summaries, no true and accurate representation of Click!'s "**actual income**" or  
17 true profitability "**as an enterprise**" is provided by these statements. Defendant's governmental  
18 accounting methods are not designed to track "profits," as such.

19 3.48 In preparing Click!'s Operational Summaries, Defendant follows "**not-for-profit accounting**  
20 **and financial reporting principles by governmental entities**," as outlined by GASB. Determining  
21 Click!'s true performance and profitably from business-type "proprietary activities," as an enterprise,  
22 is not the object of GASB rules.

23 3.49 The accounting methodology Defendant uses in preparation of Click! Operational Summaries  
24 artificially increase Click!'s expenses and do not reflect the System's actual "**operating profits or**  
25 **losses**" as an "enterprise."

26 3.50 In 2015 the "**cost allocation formulas**" were significantly updated by TPU management -  
27 resulting in "significant" changes to the allocation methodology. This "significant update" resulted in

1 *shifting costs*, from a previous ratio of approximately 75% to Click! and 25% to Tacoma Power, to a  
2 “**new ratio**” of 94% to Click! and only 6% to Tacoma Power.<sup>41</sup>

3 3.51 The change in the allocation formulas resulted in *\$5.7 million of additional expenses* being  
4 allocated onto Click!. These **additional costs** were retroactively reflected in Click!’s Operational  
5 Summaries beginning on January 1, 2015.

6 3.52 In 2016 Tacoma City Council passed a Resolution recognizing that the internal cost allocation  
7 formulas between Click! and Tacoma Power had changed significantly; and, that TPU management  
8 had “*substantially increased the share of cost allocations borne by Click! Network*”.

9 3.53 In this 2016 Resolution, City Council directed the City Manager to **hire an independent**  
10 **third-party consultant** to “*audit, analyze, and establish a reasonable methodology*” for cost  
11 allocation between Tacoma Power and Click! Network. This audit was never done.

12 3.54 This City Council Resolution specifically cited “*significant concerns*” over the “*veracity*  
13 *and appropriateness*” of the accounting assumptions and “cost allocation” methodology implemented  
14 by Tacoma Power. The Resolution determined that such concerns “*must be resolved.*”

15 3.55 This Council resolution authorized \$100,000 for an independent consultant to audit, analyze,  
16 and establish an *independent cost allocation methodology* between Tacoma Power and Click!.

17 3.56 A third-party consultant, NEWGEN STRATEGIES, LLC (“NewGen”) was hired and a  
18 contract issued in January 2017 to audit Click! pursuant to Council’s direction. The contract specified  
19 NewGen would “**evaluate the methodology used to allocate costs** between Tacoma Power’s electric  
20 and cable (Click!) operations and determine *the extent to which it is reasonable*”<sup>42</sup>.

21 3.57 In March 2017 the City Attorney issued a “Notice of Contract Suspension” to NewGen stating  
22 it is “*in the best interest of the City to suspend the professional services agreement with NewGen*  
23 *dated January 9, 2017.*” **The contract was thus terminated, and the audit never completed.**

24 3.57 The “*significant concerns*” identified by City Council in the 2016 Resolution requiring an  
25 audit were never addressed by NewGen, or in any subsequent audit. The “*veracity and*  
26

27  

---

<sup>41</sup> Confirmed by Tacoma Public Utilities 2015 Annual Report

<sup>42</sup> Jan 9<sup>th</sup>, 2017 contract between City of Tacoma and NEWGEN Strategies.

1 *appropriateness*” of the accounting assumptions and “*cost allocation*” methodology remain  
2 *unanswered issues and genuine questions of material fact.*

3 3.58 The City Charter provides that the revenues of utilities owned and operated by the City shall  
4 never be used for any purposes other than the necessary operating expenses thereof, the making of  
5 additions and betterments thereto and extensions thereof, and the reduction of rates and charges for  
6 supplying utility services to consumers.

7 3.59 The City of Tacoma maintains an **Institutional Network** (I-Net) serving the City, schools,  
8 and government agencies. The I-Net system has an agreement with TPU to utilize a portion of TPU’s  
9 telecommunications plant. This agreement includes an “*incremental cost arrangement*,” where the  
10 City only pays for “*incremental costs*,” or those costs “*over and above* the costs that Tacoma Power  
11 would have incurred” for the system to serve Tacoma Power’s own non-I-Net purposes.<sup>43</sup>

12 3.60 Click! Network has no such “*incremental cost arrangement*” with TPU; rather, under the  
13 “*updated cost allocation formulas*,” put into place in 2015, Click! *bears 94% of the costs* associated  
14 with operations and maintenance of the shared telecommunications system.

15 3.61 Click!’s Operational Summaries are negatively impacted by Tacoma Power’s subsidization of  
16 I-Net’s expenses, such as capital costs, engineering, design, conversion work<sup>44</sup>, safety equipment,  
17 power usage, surveillance, monitoring, emergency readiness, O&M expenses, etc. The actual pro-rata  
18 share of these costs should rightfully be allocated to Defendant, as general government costs.

19 3.62 Defendant’s accounting policies shift unrelated I-Net costs, from general government, onto  
20 Click!’s Operational Summaries. This creates a distorted and misleading view of Click!’s financial  
21 performance and conceals the true financial performance of Click!’s operations as an enterprise.

22 3.63 Defendant routinely presents these erroneous Operational Summaries to the media and  
23 policymakers as accurate representations of Click!’s true financial performance as an enterprise.

24 3.64 Defendant has admitted, thru an authorized party-opponent, that these accounting practices  
25 produce a wrongful, inaccurate and disparaging perception of Click!’s performance.  
26

27 \_\_\_\_\_  
<sup>43</sup> Tacoma City Manager, Ray Corpuz, December 12, 1997 memorandum.

<sup>44</sup> Such as undergrounding of telecommunication plant assets

1 3.65 This **wrongful perception** of Click!, as a “*money losing venture*”, poisons the minds of  
2 policymakers and the public alike. This harmful “misconception” is a primary reason for  
3 policymaker’s considering privatization of Click!. More simply stated, if Click! were *properly seen*  
4 *as a successful and profitable venture*, all support for privatization of Click! would cease to exist.

5 3.65 TPU, as a non-profit, municipal public service enterprise, follows a “cost recovery” based  
6 pricing policy. Rates are set to recover costs of service and insure future funding for operations.  
7 Assigning unrelated costs to Click! results in higher rates being paid by customers for Click! services.

8 3.66 Tacoma Power will soon release a “customer service app” providing online customer support  
9 functions for utility customers. Among the features and benefits this “app” will bring are outage  
10 alerts, “leak detection,” real time billing, payment and usage information. The “app” *requires Internet*  
11 *access*. As such, *Internet access has a nexus* to provision of other utility services.

12 3.67 Click! faces competition from commercial, for profit, telecommunications service companies.  
13 These competitors have long opposed the competition created by municipal broadband systems such  
14 as Click!’s. They commonly employ lobbyists to carry out their agenda of destroying and preventing  
15 municipal competition. The lobbyists’ efforts and political contributions are no secret. Their activities  
16 are well organized, well documented and well known to Defendant’s staff and its policymakers.

17 3.68 Public concerns, suspicion and accusations over TPU management’s accounting for Click!’s  
18 costs have been widespread since 2015. On September 22, 2016, at a City Council meeting where the  
19 issue of reappointing TPU Director Bill Gaines was before the City Council, Council Member Ibsen  
20 cited the Director’s “*dishonest actions*,” likening them to “*someone who’s stealing from the cash*  
21 *register*.” The video of that meeting is on Defendant’s website. Director Gaines tenure at TPU was  
22 concluded in 2017 and a new TPU Director, Jackie Flowers took over in 2018.

23 3.69 That Defendant knowingly allowed a “fake bidder”, by the name of “Yomura” to participate  
24 in the final stages of an RFI process that was part of the proposed privatization plan.

25 3.70 That Defendant has not obtained current financial statements, including a balance sheet, for  
26 evaluating the financial qualifications of the proposed acquirer of Click! Network.

27 3.71 Defendant continues to widely portray Click! Network as a “*money losing*” venture

1 IV. CLAIM FOR RELIEF & CAUSES OF ACTION

2 WHEREFORE, Plaintiff hereby amends his complaint, is able to prove all of the additional facts  
3 cited and prays for judgment against Defendant based on the following:

4 4.1 Plaintiff is without an adequate remedy at law to require City council to follow the  
5 requirements of City Charter 4.6 and RCW 35.94 and is entitled to declaratory, injunctive and  
6 mandamus relief prohibiting any sale, lease or disposition of the Click! commercial  
7 telecommunication system unless and until such disposal is approved by a majority vote of the  
8 electors at a municipal election in the manner provided by the city charter and the laws of the state.

9 4.2 There is an actual, present, and existing dispute between the parties as to the legality of  
10 using Click! broadband revenue to subsidize and support general government functions thru  
11 wrongful payment of taxes on broadband services; and, over usage of Tacoma Power and Click!  
12 resources in subsidizing I-Net and general government's pro-rata share of pole attachment fees,  
13 power usage, undergrounding or relocations of existing plant, ongoing capital funding,  
14 surveillance, monitoring, emergency readiness, repairs and maintenance costs. transport fees,  
15 O&M costs and capital expenses obligations. These "subsidy activities" are attributable to, and  
16 properly allocable to, general government. There is also a dispute over the total dollar value of  
17 these unlawful subsidies provided in covering such general government expenses.

18 4.3 Defendant has willfully violated state and federal prohibitions against taxation of Internet  
19 access, under RCW 35.21.717 and the federal Internet Tax Freedom Act, 47 USC 151 SEC. 1101.  
20 Defendant is unlawfully continuing to divert 7.5% of Click! Network's gross revenue on broadband  
21 services to benefit the City of Tacoma's general government account. These payments, which have  
22 exceeded \$2.5 million over the past four years, are in violation of RCW 43.09.210 and represent an  
23 unlawful subsidy, from Tacoma Power and Click! commercial telecommunication customers, to the  
24 City of Tacoma's general fund.

25 4.4 The Mayor, City Council and Public Utility Board have acted and are acting knowingly and  
26 willfully in causing, authorizing, or allowing Tacoma Power and Click telecommunications  
27 customers to pay unlawful subsidies to general government in violation of RCW 43.09.210, which

1 requires “*all service rendered by . . . one department, public improvement, undertaking, institution,*  
2 *or public service industry to another, shall be paid for at its true and full value.*”.

3 4.5 Plaintiff has a legally cognizable interest in requiring Defendant to determine if Click!  
4 profitable by accounting for Click! activities as an “enterprise,” rather than as a “government entity”;  
5 and, in preserving and protecting communication and electric utility service funds from being  
6 unlawfully diverted to pay for expenses properly attributable and allocable to general government  
7 services, and in obtaining recovery of such unlawful subsidy of general government expenses.

8 4.6 Since the telecommunication system’s inception, over \$100 million has been spent in capital  
9 improvements to the System. Click! customers and Tacoma Power ratepayers have paid for a vast  
10 majority of that overall investment, while general government and I-NET users have paid only  
11 incremental costs and provided little relative financial support for their actual fair “pro-rata share” of  
12 the costs for data transport fees, pole attachment fees, power usage, undergrounding or relocations of  
13 existing plant, ongoing capital funding, surveillance, monitoring, emergency readiness, repairs and  
14 other O&M costs. Failure to pay a “*fair share*” of these costs represents an unlawful subsidy, from  
15 Click! customers and Tacoma Power ratepayers, benefiting general government in violation of RCW  
16 43.09.210, the State Accountancy Statute.

17 4.7 Such expenses and costs have exceeded \$20 million since the inception of the system and are  
18 projected to increase annually for the foreseeable future. Using Click! and Tacoma Power revenues  
19 and credit to subsidize expenses that benefit, or are properly allocable to, general government is a  
20 clear and willful violation of RCW 43.09.210.

21 4.8 TPU follows a “cost recovery” based pricing model, where rates are set in a way to recover  
22 costs of service. Click! Network’s rates were recently increased and are set to increase again in 2020  
23 to cover a “*perceived shortfall*” in revenues. The above-mentioned subsidization of general  
24 government expenses by Click! and Tacoma Power customers results in higher rates for Tacoma  
25 Power and Click! customers. This is a violation of RCW 19.86.020, which prohibits unfair practices.  
26  
27

1 4.9 By not paying its pro-rata share of overall capital expenses, repairs, monitoring, surveillance,  
2 emergency readiness or O&M costs associated with the underlying telecommunications plant that  
3 supports I-NET, Defendant is benefiting by diverting TPU ratepayers funds and willfully shifting  
4 general government's costs for such system onto Tacoma Power and Click! customers, who are  
5 thereby forced into paying higher rates as a result of subsidizing these general government operations.  
6 This subsidy is unlawful and in clear violation of RCW 43.09.210 (the Accountancy Statute).

7 4.10 Tacoma Power and Click! Network provides valuable "in-kind" contributions to general  
8 government. None of which are deducted from the 5% statutory cap placed on "franchise fees" paid  
9 on cable television services under federal law<sup>45</sup>. These "in-kind" contributions include both  
10 telecommunications and cable television services, along with waiving costs associate with a fair pro-  
11 rata share of I-Net's repairs, essential technical support and emergency readiness functions, network  
12 monitoring and O&M. Actual pro-rata costs for these services greatly exceed the token amounts  
13 currently paid by the defendant. Failure to deduct these valuable "in-kind" contributions violates  
14 RCW 43.09.210, making a recovery required.

15 4.11 These above cited subsidies are violations of RCW 43.09.210, the State Accountancy Statute,  
16 which negatively impacted the Operational Summaries of Click!, thereby creating inaccurate, and  
17 misleading performance results for Click! Network operations, all of which are harmful to Click!'s  
18 prospects and Plaintiff's right to continue enjoying municipally provided broadband services.

19 4.12 Defendant's willful cancellation and failure to complete City Council's mandated 2016  
20 "audit" allows continuation of this "considerable controversy." City Council's original "significant  
21 concerns," over the of the controversial accounting assumptions and "cost allocation" methodology,  
22 have not been addressed; and, therefore remain at issue. The "*veracity and appropriateness*" of the  
23 methods employed in producing the Click! Operational summaries have not been examined and may  
24 very well be producing the inaccurate, erroneous and misleading information about Click! Network's  
25 performance that Council feared in 2016 and sought to ferret out by its Resolution.  
26

27 \_\_\_\_\_  
<sup>45</sup> See FCC Order 19-08 -THIRD REPORT AND ORDER (2019), re: Implementation of Section 621(a)(1) of the Cable Communications Policy Act

1 4.13 As a “*sub-fund*” of Tacoma Power, traditional financial statements, such as a balance sheet or  
2 income statement, are not prepared for Click!; consequently, there are no statements available that  
3 represent the actual “*product-line profitability*” and performance of the System. Surprisingly, no  
4 actual “income statement” or “balance sheet” has ever been prepared for Click! Network. Despite City  
5 Council’s wishes and Resolution for an “*audit*,” no such verification of Click!’s performance as a  
6 standalone enterprise has ever been prepared by Defendant or its appointees.

7 4.14 Many of the costs appearing on the Click! Operational Summaries are *totally unrelated* to  
8 Click! commercial activities. These “*unrelated costs*” are allocated to Click! Operational Summaries  
9 under Defendant’s “*fully distributed*” allocation model. This allocation method, while not illegal  
10 under state accounting rules, negatively impacts the Operational Summaries of Click! and produces  
11 inaccurate and disparaging results with “*artificial losses*.” The results are not reflective of the  
12 System’s *actual performance or profitability*. These Operational Summaries are, therefore, actually  
13 “*misinformation*” with regard to Click!’s financial performance.

14 4.15 Given the erroneous and disparaging performance results indicated by the Click! Operational  
15 Summaries, combined with the lack of any balance sheet, income statement or other financial  
16 statements possessing the veracity to provide useful information related to Click!’s true financial  
17 performance, *policy makers lack suitable, accurate, reliable information* about the municipal  
18 telecommunications system’s financial performance.

19 4.16 Lacking any such real information and possessing only “misinformation,” City Council and  
20 TPU Board members *have no legitimate basis* by which to properly evaluate the municipal  
21 broadband system’s financial performance; therefore, policymakers are ill-equipped to make an  
22 educated, reasonable or rational decision related to the proposed privatization and disposal of the  
23 System and its related assets.

24 4.17 Despite such lack of information, Defendant has willfully entered into a privatization  
25 agreement for Click! Network *without first obtaining any accurate financial information* related to  
26 the performance or valuation of the System. The Court has the power to prevent additional injury that  
27 might result thru an unfortunate chain of events flowing from a failure to requiring a public vote be

1 held approving the privatization of Click!. If the privatization agreement is accomplished and vesting  
2 of the System occurs without a vote of the people, then all public ownership and control of the  
3 municipal broadband System, including oversight of pricing, would be lost. This result would be  
4 clearly harmful to the plaintiff, and the community. Such an unfortunate and wrongful transfer of the  
5 public's assets would trigger an actionable negligence claim, given the existence of the four essential  
6 elements for such a claim: duty, breach, proximate cause, and resulting harm. This claim would  
7 burden the court system, with TPU Board members and City Council members facing personal  
8 liability for the breach of their required "*duty of reasonable care to refrain from causing foreseeable*  
9 *harm.*" A similar breach of duty would rest with certain City staff members, who have either willfully  
10 ignored or actively assisted in the wrongful actions leading to the potential privatization of Click!. In  
11 addition to Defendant's other liability in this case, these individuals and policymakers would  
12 potentially bear personal liability for their wrongful actions under RCW 80.04.440 and under  
13 common law for tortuous and ultra vires conduct in violation of the Tacoma City Charter and  
14 Washington state law. The simplest solution is for the Court to affirm Plaintiff's right to a public vote  
15 over any privatization, separation or vesting of Click! Network's commercial operations.

16 4.18 Defendant has participated in a conspiracy to defraud the public of its municipal broadband  
17 system. There has been no appraisal or other estimate of the "value" of the Click! business or the assets  
18 being conveyed in the privatization process. Without any appraisal, or accurate financial statements for  
19 Click!, it is impossible for policymakers or the electorate, who may be called on to vote in approving  
20 the proposed privatization, to evaluate the suitability of any proposed contract. As such, Defendant's  
21 proposed privatization is a gross violation of Washington State Constitution, Article VIII section 7.  
22 There is also evidence of a fraudulent "RFI process," which included a "fake bidder," which was known  
23 to members of city staff and reported to policymakers. Defendant knowingly allowed the fraudulent  
24 process to mislead the public and policymakers by the inclusion of this "fake bidder," who was  
25 considered a "finalist" in the RFI process. This is a violation of RCW 19.86.030, which protects against  
26 "conspiracies in restraint of trade." Defendant should be enjoined from carrying out the privatization  
27 goals of this fraudulent process.

1 4.19 Defendant's proposed candidate ("acquiror") for privatization of the Click! system has not been  
2 evaluated to determine suitability as an operator of Click! under privatization. Failure to conduct due  
3 diligence is a violation of Tacoma City Municipal Code 16B.02 which requires a financially qualified  
4 operator for such a franchise. No financial statements for the acquiror have been provided in  
5 connection with the transaction. Defendant must review financial statements, including a balance  
6 sheet, to determine the acquiror's financial qualifications for assuming control over the System.

7 4.20 Plaintiff is without an adequate remedy at law to protect aforesaid interests in preserving,  
8 protecting and obtaining recovery for telecommunication and electric utility funds, and is entitled  
9 to declaratory, injunctive and mandamus relief (i) declaring that Click! telecommunication and  
10 Tacoma Power revenues and funds may not be used to pay for general government expenses or  
11 capital improvements that are attributable or properly allocable to general government services  
12 rather than Tacoma Power electric utility and Click! telecommunication services, (ii) prohibiting  
13 general government from using Click! telecommunication and Tacoma Power funds to subsidize  
14 or pay for general government expenses or capital improvements that are properly allocable and  
15 attributable to general government purposes; or (iii) prohibiting TPU and City Council from  
16 including expenses or capital investments that are properly allocable and attributable to general  
17 government activities in the calculation of Click! rates, and (iv) requiring the City's general fund  
18 to reimburse Tacoma Power and Click! for the wrongful payment of costs for capital  
19 improvements, operational expenses, taxes, franchise fees and other subsidies that have  
20 wrongfully benefited general government, together with prejudgment and post-judgment interest  
21 thereon at the rate of 5% per annum until fully paid; (v) requiring the City to obtain estimates of  
22 the valuation of Click! as an enterprise and evaluate the financial statements of the proposed  
23 acquiror of the municipal broadband system; finally, (vi) permit the people to vote on the  
24 privatization of their public broadband system. This statutorily protected right prevents fraud and  
25 abuse by government and acts as a final measure of protection against a wrongful transfer of  
26 public assets.  
27

V. ~~IV~~ PRAYER FOR RELIEF

WHEREFORE, plaintiffs prays for judgment against the City as follows:

- (1) Declaring Click! Network is a system owned and operated by TPU;
- (2) Affirming that Click! rates are set by the Utility Board and approved by City Council under the City's Municipal and Utility Code;
- (3) Affirming the original mandate for creating Click! included demand side management (DSM) functions, CATV, two-way communication and Internet access.
- (4) Affirming Click! network consists of a hybrid fiber-optic coaxial ("HFC") system, which delivers two-way signals for cable TV, cable modem,<sup>46</sup> Fiber To The Home ("FTTH") Internet services, and advanced metering
- (5) Declaring that a term sheet for negotiating an Indefeasible Right of Use (IRU) for Click! has been approved by City Council and formal contracts are being negotiated between Rainier Connect and the City for the future operation and transfer of control over Click! Network;
- (6) Declaring that the term sheet states "*The Tacoma Power Fiber on Critical Routes is collocated with the fiber optic strands that are used by Click! and are now planned to lease to Rainier Connect under the IRU*<sup>47</sup>;
- (7) Declaring that the IRU proposed in the term sheet with Rainier Connect is a "lease" of Click! system assets;
- (8) Affirming that the term sheet specifically states "*Related Assets will be conveyed to Rainier Connect subject to the terms of an asset purchase agreement ("APA") to be negotiated between the parties*";
- (9) Declaring that the term sheet with Rainier Connect includes an "asset sale";
- (10) Affirming that City Charter 4.6, relating to the "Disposal of Utility Property" requires the "City shall never sell, lease or dispose of any utility system" without a "majority vote of the people";

<sup>46</sup> Telecommunications Infrastructure Section, on Page 47, Bond Prospectus for CITY OF TACOMA, WASHINGTON \$70,575,000 Electric System Revenue Bonds, Series 2017

<sup>47</sup> Emphasis added to bring attention to the term "lease".

1 (11) Affirming that City Charter 4.6 applies to Rainier Connect’s proposal for the  
2 acquisition of Click!; since, it amounts to a lease and/or disposal of the Click! system,  
3 customer accounts, goodwill and ongoing interest in the telecommunications operations;

4 (12) Mandating and requiring that the City obtain approval from of a majority vote of  
5 the electors at a municipal election in the manner provided by the city charter prior to  
6 entering into a contract for an IRU, sale or lease of the Click! system to Rainier Connect;

7 (13) Prohibiting disposal or transfer of Click! business operations and customer  
8 account information to Rainier Connect.

9 (14) Public policy requires citizens have a right to expect the terms of their City Charter to  
10 be followed -especially when it affects an important resource such as public utility control and  
11 oversight on their municipal Internet service<sup>48</sup>.

12 15. Ordering City of Tacoma’s general fund to reimburse Tacoma Power and Click!, for the  
13 wrongful overpayment of taxes, “franchise like” fees, costs for capital improvements,  
14 operational expenses, “*in-kind*” contributions and other subsidies that have wrongfully benefited  
15 general government in violation of RCW 43.09.210, RCW 35.21.717 and 47 U.S.C. § 542<sup>49</sup>

16 16. Declaring Defendant has not evaluated Click!’s financial performance under business  
17 accounting standards; but, instead only used governmental accounting standards. (a) That these  
18 “governmental accounting standards” do not reflect the System’s profitably as an enterprise; and  
19 that City Council must first determine Click!’s true financial “*profitability*”, prior to passage of  
20 any resolution causing Click! to be privatized; and, (b) That privatizing Click! without first  
21 obtaining financial underlying information regarding the System’s actual financial performance  
22 is, or would be, an *arbitrary, capricious, unreasonable and ultra vires* act, in excess of  
23 policymaker’s authority, and a violation of Tacoma City Charter and Washington state law.  
24

25  
26  
27 <sup>48</sup> Click is the second largest municipal Internet service provider in the nation.

<sup>49</sup> There is a violation of the five percent cap on franchise fees set forth in section 622 of the Act.

1 17. Enjoining and prohibiting Defendant from finalizing any agreement to privatize Click!  
2 Network without, (a) first obtaining a “direct cost” or “product line profitability” analysis, or  
3 other reasonable and accurate measurement of Click!’s financial performance “as an enterprise;”  
4 and, (b) Defendant first obtain an appraisal, from a third party, of the System’s market valuation.

5 18. Enjoining and prohibiting Defendant from finalizing any agreement to privatize Click!  
6 without first (a) publicly providing financial information showing the System’s true income as  
7 an enterprise, so policymakers and citizens can evaluate this information to make an informed  
8 decision in voting on any privatization of the System; and, (b) obtaining the financial statements  
9 of the acquiror, performing such due diligence as required in determining the present financial  
10 condition of the proposed acquiror, as required under Tacoma City Municipal Code 16B.02, and  
11 making that data and those findings available to the public.

12 19. Enjoining and prohibiting Defendant from diverting Click! telecommunication and  
13 Tacoma Power funds for subsidization of Defendant’s share of expenses related to operations,  
14 repairs, monitoring, facilities, maintenance and capital improvements of the telecommunications  
15 system provided by Click! and Tacoma Power, but which are properly allocable or attributable to  
16 general government; **or, in the alternative**, find: (a) That the “incremental accounting” methods  
17 used by Defendant for sharing I-Net related costs are appropriate; and, (b), That **Click! also**  
18 **provides similar public benefits to the community** and using “**incremental accounting**”  
19 allocations must also be required in the preparation of Click!’s financial statements.

20 20. Enjoining and prohibiting Defendant from issuing press releases or presentations  
21 portraying Click! as a “*financial failure*” until an audit or product line profitability analysis has  
22 been performed providing true and accurate information about the System’s profitability.

23 21. Ordering ***Defendant’s general fund to reimburse*** Tacoma Power for the ***overpayment of***  
24 ***taxes***, fees, and subsidies of general government expenses or capital improvements properly  
25 allocable or attributable to general government services rather than Tacoma Power or Click!  
26 services. That all amounts proven at trial, together with prejudgment and post-judgment costs,  
27 bear interest thereon at the rate of 5% per annum until fully paid.

1 22. Declaring Click! Network is a municipal broadband telecommunications system and  
2 public utility providing “vital” and “essential” “broadband Internet access” services to TPU  
3 ratepayers. That these services have a clear “nexus” and “utility purpose” for TPU by “*offsetting*  
4 *necessary communication costs*”, supporting “*demand-response efforts*”, creating “*revenue*  
5 *diversification*,” spurring “*economic growth*” and insuring for “*future communication needs*;”

6 23. Declaring that Click! is at least “*any part thereof*” in relation to Tacoma Public Utilities  
7 for purposes of RCW 35.94 and a **protective vote of the people** is necessary for final approval  
8 of privatization of the municipal broadband system.

9 24. Declaring that *Defendant’s asserted defense in this action is frivolous* under RCW  
10 4.84.185; and that, Defendant has *long demonstrated an understanding of its duty* to allow a  
11 public vote on privatization of Click! under RCW 35.94, as evidenced by City Council’s passage  
12 of its own resolution citing the “*public vote requirement*” related to vesting the System.

13 25. Awarding attorney fees and costs under RCW 80.04.440 and under the common fund  
14 theory and pursuant to RCW 7.16.260, RCW 7.24.100 and/or other applicable statutes.

15 26. Awarding such other and further relief as the Court may deem just, equitable and proper  
16 under the circumstances.

UNITED STATES DISTRICT COURT  
WESTERN DISTRICT OF WASHINGTON  
AT TACOMA

THOMAS MCCARTHY and CHRISTOPHER  
T. ANDERSON,

Plaintiffs,

v.

CITY OF TACOMA,

Defendant

NO. 3:19-cv-05829-BHS

ORDER OF REMAND

THIS MATTER comes before the Court on the parties' supplemental briefing. Dkts. 45,  
48.

After removal, "[i]f at any time before final judgment it appears that the district court lacks  
subject matter jurisdiction, the case shall be remanded." 28 USC § 1447(c).

Therefore, IT IS HEREBY ORDERED, ADJUDGED AND DECREED that this matter  
shall be remanded to Pierce County Superior Court for the State of Washington.

DATED this 27th day of April, 2020.

8 MITCHELL SHOOK,  
9 Plaintiff,

10 v.

11 CITY OF TACOMA,  
12 Defendant.

NO. 19-2-07135-0

**PLAINTIFF ANDERSON'S MOTION  
FOR PARTIAL SUMMARY  
JUDGMENT**

**[SET FOR CONSIDERATION  
WITHOUT ORAL ARGUMENT]**

13  
14 THOMAS McCARTHY and CHRISTOPHER  
T. ANDERSON,  
15 Plaintiffs,

16 v.

17 CITY OF TACOMA,  
18 Defendant.

19 **I. INTRODUCTION AND RELIEF REQUESTED**

20 This case presents the question of whether the City of Tacoma's state-of-the-art, carrier-grade,  
21 hybrid fiber coaxial telecommunications network offering gigabit-speed internet access, Fiber To The  
22 Home, and other services to the municipalities of Tacoma, University Place, Fircrest, Lakewood, Fife,  
23 and part of unincorporated Pierce County—commonly known as Click! Network (“Click!” or the  
24 “System”)—can be summarily declared surplus and handed over to a private company by the City of  
25 Tacoma without a vote of the people. As explained further herein, the City's surplus declaration is legally  
26

1 void, and under both the Tacoma City Charter and Chapter 35.94 RCW a vote of the people was required  
2 prior to the City's lease, sale, or disposal of Click!.

3 Plaintiff, CHRISTOPHER ANDERSON ("Anderson"), through his attorney, James P. Grifo of  
4 the Law Office of James P. Grifo, LLC, moves this Court for partial summary judgment and seeks the  
5 following relief:

6 1. A Declaratory Judgment that Click! Network ("Click!" or the "System") is a utility system  
7 and/or an essential part thereof under Tacoma City Charter § 4.6;

8 2. A Declaratory Judgment that Click! is a public utility system and/or a part thereof under  
9 Chapter 35.94 RCW;

10 3. Entry of a judgment voiding City Resolution No. 40467, which declared Click! surplus  
11 pursuant to RCW 35.94.040;

12 4. A Declaratory Judgment that the City should have held a municipal election under  
13 Tacoma City Charter § 4.6 prior to the lease, sale, or disposal of Click!;

14 5. A Declaratory Judgment that the City should have held a municipal election under RCW  
15 35.94.020 prior to the lease, sale, or disposal of Click!; and

16 6. Entry of an order directing further proceedings to determine the necessary and  
17 appropriate legal, equitable, and/or injunctive relief in this case.

18 This motion is made on the grounds that no genuine issues of material fact exist regarding the  
19 issues set forth above, and Anderson is entitled to judgment as a matter of law.

## 20 **II. STATEMENT OF FACTS**

21 In 1996, the Tacoma City Council ("Council") passed Ordinance No. 25930, which established  
22 Click! as part of Tacoma Public Utilities ("TPU"). Declaration of James P. Grifo ("Grifo Decl."), Ex.  
23 A, Ex. 11. In doing so, the City relied on its powers to create separate utility systems, stating that:

24 WHEREAS, the Ordinance provides that the City may create a separate  
25 system as part of the Electric System and pledge that that income of such a  
26 separate system be paid unto the Revenue Fund; and

1 WHEREAS RCW 35A.11.020 authorizes the City to operate and supply utility  
2 and municipal services commonly or conveniently rendered by cities or towns.

3 Id. (Emphasis supplied). The City determined it was “prudent and economical” to provide broadband  
4 Internet access and Ethernet transport services to residential and business customers. Id. The System  
5 was also created for “revenue diversification” for Tacoma Power “through new business lines (i.e.,  
6 internet transport, . . . .” Grifo Decl., Ex. A, Ex. 10. The ordinance also anticipated other benefits  
7 including “automated meter reading and billing, appliance control and load shaping”. Id., Ex. A, Ex.  
8 11. Click!, as one of four operating sections of Tacoma Power, continues to provide those functions  
9 today. Id., Ex. A, Ex. 1(a)-1(e).

10 Tacoma Public Utilities’ commercial telecommunications services were launched in 1998 under  
11 the brand name Click! Network, as a business unit of Tacoma Power. Click! is a state-of-the-art, carrier-  
12 grade, hybrid fiber coaxial telecommunications network offering Gigabit speed Internet access, Fiber To  
13 The Home (“FTTH”), and cable modem services in to the municipalities of Tacoma, University Place,  
14 Fircrest, Lakewood, and Fife, as well as part of unincorporated Pierce County. Id., Ex. A, Ex. 48. Click!  
15 consists of over 1,400 miles of fiber and cable plant constructed by TPU; the network covers  
16 approximately 66% of the homes in Tacoma Power’s service area. Id. Click! has more than 20,000  
17 wholesale high-speed Internet service of customers and 100 wholesale broadband transport circuits. Id.

18 Historically, Click!’s Internet access rates were approved by the Public Utility Board (“PUB”) and  
19 the Council, and were published in Title 12 of the Tacoma Municipal Code (“TMC”), which governs  
20 utilities. *See* Title 12 TMC.

21 On March 5, 2019, term sheets for the private operation and use of Click! were presented at a  
22 joint study session of the Council and PUB. Id., Ex. A, Ex. 39-39(a). One of the term sheets was  
23 submitted by Rainier Connect. Id. The Council and PUB directed the Public Utilities Director to execute  
24 a letter of agreement with Rainier Connect, which would allow the City to retain ownership of the HFC  
25 Network, shift the capital and operating expenses to Rainier Connect, and TPU would cease to provide  
26 wholesale internet access and data transport services (among others) to those in Click’s service area. Id.

1 On November 5, 2019, the Council passed Resolution Nos. 40467 and 40468. Id., Ex. A, Ex. 39-  
2 39(a). Resolution No. 40467 determined that Click! and its Related Assets are not required for continued  
3 public utility service, and formally declared Click! and its Related Assets surplus pursuant to RCW  
4 35.94.040. Id. Resolution No. 40468 authorized city officials to execute the IRU and APA—renamed the  
5 “Click! Business Transaction Agreement” (“BTA”)—once conditions precedent to transfer of  
6 operational control of Click! in the BTA have been met. Id., Ex. A, Ex. 39(a); Grifo Decl., Ex. B.  
7 Resolution No. 40468 does not provide for a municipal election prior to final execution of the BTA and  
8 IRU. Grifo Decl., Ex. A, Ex. 39(a). The City, through TPU, then signed and entered into the BTA with  
9 Rainier Connect. Grifo Decl., Ex. B.

10 Under the BTA, Rainier Connect is to acquire other assets currently used by the System in the  
11 provision of broadband data services referred to as “Related Surplus Assets,” including: equipment used  
12 to create and operate the System and deliver services to customers, customer accounts, inventory of spare  
13 parts and equipment, vehicles, prepaid items, and material contracts. Id. The BTA and IRU do not  
14 purport to provide the Council or PUB with any control over the System’s Internet rates. Id. On April  
15 1, 2020, the City transferred operational control of Click! Network over to Rainier Connect pursuant to  
16 the BTA. Id., Ex. C.

### 17 **III. STATEMENT OF THE ISSUES**

18 The following issues are presented for resolution by the Court:

- 19 1. Whether Anderson is entitled to summary judgment declaring that Click! is a utility system  
20 and/or an essential part thereof under the Tacoma City Charter § 4.6;
- 21 2. Whether Anderson is entitled to summary judgment declaring that Click! is a public utility  
22 system and/or a part thereof under Chapter 35.94 RCW;
- 23 3. Whether Anderson is entitled to summary judgment declaring City Resolution No. 40467,  
24 which declared Click! surplus pursuant to RCW 35.94.040, void;
- 25 4. Whether Anderson is entitled to summary judgment declaring that the City was required to  
26 hold a municipal election under Tacoma City Charter § 4.6 prior to the lease, sale, or disposal

1 of Click!; and

- 2 5. Whether Anderson is entitled to summary judgment declaring that the City was required to  
3 hold a municipal election under RCW 35.94.020 prior to the lease, sale, or disposal of Click!.

4 **IV. EVIDENCE RELIED UPON**

5 This motion is based on all the pleadings and papers filed in this consolidated action, including  
6 the declarations filed in support of this motion, and all attachments thereto, and all of which are  
7 incorporated herein by this reference.

8 **V. LEGAL AUTHORITY AND ARGUMENT**

9 **A. Standard of Review.**

10 This motion is made pursuant to CR 56(a) and (c), which provide in relevant part:

11 **RULE 56. SUMMARY JUDGMENT**

12 **(a) For Claimant.** A party seeking to recover upon a claim, counterclaim, or cross  
13 claim, or to obtain a declaratory judgment may, after the expiration of the period  
14 within which the defendant is required to appear, or after service of a motion for  
summary judgment by the adverse party, move with or without supporting affidavits  
for a summary judgment in the party's favor upon all or any part thereof.

15 **(c) Motion and Proceedings...** The judgment sought shall be rendered forthwith if  
16 the pleadings, depositions, answers to interrogatories, and admissions on file, together  
with the affidavits, if any, show that there is no genuine issue as to any material fact  
and that the moving party is entitled to a judgment as a matter of law.

17 CR 56(a), (c). Summary judgment can be used in the context of a claim for declaratory judgment. *See*  
18 CR 56(a); *see also Tran v. State Farm Fire and Cas. Co.*, 136 Wn.2d 214, 223, 961 P.2d 358 (1998) (summary  
19 judgment seeking or opposing a declaratory judgment is appropriate).

20 The moving party bears the burden of demonstrating both the absence of a genuine issue of  
21 material fact and entitlement to judgment as a matter of law. *Knox v. Microsoft Corp.*, 92 Wn. App. 204,  
22 207, 962 P.2d 839 (1998). A material fact is one upon which the outcome of a claim depends. *Tran v.*  
23 *State Farm Fire & Cas. Co.*, 136 Wn.2d 214, 961 P.2d 358 (1998). Summary judgment should be granted  
24 when the declarations and affidavits show that there are no genuine issues of material fact and the  
25 moving party is entitled to judgment as a matter of law. *See Knox*, 92 Wn. App. 204, 207 (1998).  
26

1           **B. Summary of Argument.**

2           The fundamental basis of Plaintiffs’ lawsuit is that under the Tacoma City Charter, in addition  
3 to Chapter 35.94 RCW, Sale or Lease of Municipal Utilities, the City was required to hold a municipal  
4 election before it disposed of Click! Network by transferring it to Rainier Connect under the BTA.  
5 The City did not, and never will, hold any such municipal election.

6           Section 4.6 of the City Charter provides:

7           **Disposal of Utility Properties**

8           Section 4.6 – The City shall never sell, lease, or dispose of any utility system, or parts  
9 thereof essential to continued effective utility service, unless and until such disposal is  
10 approved by a majority vote of the electors voting thereon at a municipal election in  
11 the manner provided in this charter and in the laws of this state.

12 Charter § 4.6 (emphasis added). As a result, under the City Charter, if the BTA with Rainier Connect,  
13 as it relates to Click! Network is a (1) sale, lease, or disposal of (2) a utility system or essential part  
14 thereof, then Anderson is entitled to summary judgment declaring that the City was required to hold  
15 a vote of the people pursuant to City Charter Section 4.6 prior to entering into the BTA.

16           Similarly, under Chapter 35.94 RCW, a city may “lease...or sell and convey any public utility  
17 works, plant, or system owned by it or any part thereof,” but only following the specific procedure set  
18 forth in RCW 35.94.020, which requires “submit[tal] to the voters of the city for their approval or  
19 rejection at the next general election...and a majority of the voters voting thereon...approv[ing] it.”

20 RCW 35.94.010, 020 (emphasis added). Unlike the vote requirement in the City Charter—which does  
21 not contain any mechanism for escaping the vote requirement in Section 4.6—the vote requirement  
22 contained in RCW 35.94.020 does not apply if a municipality legally and properly declares the property  
23 to be surplus under RCW 35.94.040. *See* RCW 35.94.040(2) (providing that the municipal vote  
24 requirement does not apply to dispositions authorized by the surplus provision). Thus, under state  
25 law, if the Click! Network BTA is a (1) lease or sale of (2) a utility system or any part thereof, and (3)  
26 the City has not legally declared Click! to be surplus, then Anderson is entitled to summary judgment  
declaring that the City was required to hold a municipal election pursuant to RCW 35.94.020 prior to  
entering into the BTA.

1 As explained in further detail in the following sections, the plain language of the City Charter  
2 and RCW 35.94.010, the history of RCW 35.94.010, the City’s Municipal Code, applicable case law  
3 and attorney general’s opinions, and current and historic treatment of Click! by the City clearly show  
4 that Click! is a public utility system and the BTA constitutes the unlawful sale, lease, and/or disposal  
5 of Click!. Further, proper consideration of the statutory scheme, the language of RCW 35.94.040, and  
6 the legislative history of the surplus provision demonstrates that the resolution declaring Click! surplus  
7 is ultra vires, contrary to law, and arbitrary and capricious. As a result, this Court should grant  
8 Anderson’s summary judgment motion in its entirety, and conclude that the BTA and the Resolutions  
9 preceding it were void *ab initio*.

10 **B. Click! Is a Utility System Under the Plain Language of the City Charter and Chapter**  
11 **35.94 RCW.**

12 Under the plain language of the City Charter and Chapter 35.94 RCW, Click! is a “utility  
13 system.” “Utility system” is not defined under either the City Charter or Chapter 35.94 RCW, so  
14 application of the rules of statutory construction is required. *Harmon v. Dept. of Social and Health Services*,  
15 134 Wn.2d 523, 530, 951 P.2d 770 (1998) (to determine meaning of a statute, courts apply general  
16 principles of statutory construction); *see also City of Seattle v. Auto Sheet Metal Workers Local 387*, 27 Wn.  
17 App. 669, 679, 620 P.2d 119 (1980) (the “[r]ules of statutory construction [are] used in determining [a  
18 city] charter’s meaning”). Under the rules of statutory construction, “Courts generally accord terms  
19 their most plain and ordinary meaning.” *Eyman v. McGehee*, 173 Wn. App. 684, 689, 294 P.3d 847  
20 (2013). To determine the ordinary meaning of an undefined term, “courts look to standard English  
21 language dictionaries.” *North Pacific Ins. Co. v. Christensen*, 143 Wn.2d 43, 48, 17 P.3d 596 (2001).

22 The relevant Merriam-Webster definitions for “utility” include (1) “fitness for some purpose  
23 or worth to some end” (2) “something useful or designed for use” or (3) “a public utility,” (a) “a  
24 service (such as light, power, or water) provided by a public utility” and (b) “equipment or a piece of  
25 equipment to provide such service or comparable service.” *“Utility” Definition*, MERRIAM-  
26 WEBSTER.COM, <https://www.merriam-webster.com/dictionary/utility> (last visited December 12,

1 2020). “Public utility” is further defined as “a business organization (such as an electric company)  
2 performing a public service and subject to special governmental regulation.” “*Public Utility*” Definition,  
3 MERRIAM-WEBSTER.COM, <https://www.merriam-webster.com/dictionary/public%20utility> (last  
4 visited December 12, 2020). “Public service” is further defined as “the business of supplying a  
5 commodity (such as electricity or gas) or service (such as transportation) to any or all members of a  
6 community.” *Public Service Definition*, MERRIAM-WEBSTER.COM, [https://www.merriam-](https://www.merriam-webster.com/dictionary/public%20service)  
7 [webster.com/dictionary/public%20service](https://www.merriam-webster.com/dictionary/public%20service) (last visited December 12, 2020).

8 Thus, read together, a public utility is defined as: a business organization performing the  
9 business of supplying a commodity or service to any or all members of a community and subject to  
10 special governmental regulation. Click! fits squarely within this definition. Click! was a TPU brand  
11 and business organization that supplied wholesale high-speed Internet and data transport services to  
12 any TPU ratepayer who purchased Click!’s services, and was subject to special governmental regulation  
13 both at the local and state levels. Grifo Decl., Ex. A, pp. 1-58, Ex 1-1(e) (detailing Click! cable TV  
14 and high-speed internet services); Chapter 12.13 TMC (listing Click! services and regulating rates of  
15 same); RCW 54.16.330, .340 (providing authorization for public utility districts to create separate utility  
16 systems, to provide telecommunications services like Click!, and containing provisions for petitions to  
17 challenge the rates, terms, and conditions of same); RCW 80.01.110 (authorizing utilities and  
18 transportation commission to oversee petitions challenging rates, terms, and conditions of wholesale  
19 telecommunications services). Thus, under the plain language of the City Charter and RCW 35.94,  
20 Click! is a public utility system.

21 **C. The History of RCW 35.94.010 Conclusively Demonstrates that Telecommunications**  
22 **Systems Such as Click! are Public Utilities Contemplated by the Statute.**

23 Beyond the plain language analysis above, a review of the history and origin of RCW 35.94.010  
24 further reveals that Click! is indeed a utility system as envisioned by Chapter 35.94 RCW. As fully  
25 explained below, the text of Remington’s Revised Statutes (“RRS”) §§ 9512–14, the historical precursor  
26 to the modern-day Chapter 35.94 RCW, informs and indeed controls the meaning and application of

1 RCW 35.94.010. As a result, under Chapter 35.94 RCW, as informed by RRS § 9512, Click! is clearly a  
2 utility system.

- 3 1. RCW 35.94.010 was Recodified into the Revised Code of Washington in 1951 from  
4 Remington’s Revised Statutes § 9512 as Part of the Process of Converting the Previously  
5 Existing Laws of the State of Washington into a Single, Revised, Consolidated, and Codified  
6 Form.

7 In 1917, The Washington Legislature enacted House Bill 337, entitled “Sale or Lease of Public  
8 Utilities Owned by Cities or Towns” (“1917 Law”). *See Grifo Decl., Ex. A, Ex. 81(b).* The 1917 Law was  
9 codified in Remington’s Revised Statutes (“RRS”) at §§ 9512–14. RRS §§ 9512, 9513, and 9514 are the  
10 predecessors to the modern-day RCW 35.94.010, .020, and .030.<sup>1</sup> *Id., Ex. A, Ex. 81(c).* RRS § 9512  
11 provided, in relevant part:

12 It is and shall be lawful for any city or town in this state now or hereafter owning any  
13 water works, gas works, electric light and power plant, steam plant, street railway line,  
14 street railway plant, telephone or telegraph plant and lines, or any system embracing all  
15 or any one or more of such works or plants *or any similar or dissimilar utility or system,*  
16 to lease for any term of years or to sell and convey the same or any part thereof, with the  
17 equipment and appurtenances, in the manner hereinafter prescribed.

18 RRS § 9512; *see Id.* Thus, the text of RRS § 9512 was similar to the current day RCW 35.94.010 – but  
19 even broader – as it contained a nonexclusive illustrative list of utilities, which included “telephone [and]  
20 telegraph plant[s] and lines” and even “any similar or dissimilar utility or system.” *Id.*

21 In the mid-1940’s, the Washington Legislature established and tasked the State Revision and  
22 Recompilation Committee (“Code Committee”) with proposing and submitting to the Legislature  
23 changes, revisions, and recodifications of the existing laws of the State for the purpose of creating the  
24 Revised Code of Washington. *See Id., Ex. A, Ex. 81(d).* As part of the Code Committee’s review and  
25 revision of the existing laws, in 1946 the Code Committee proposed that RRS § 9512 be codified at RCW  
26 80.12.01, with the following rewritten language:

---

<sup>1</sup> RCW 35.94.040 and .050 were adopted in 1973 and 1986, respectively.

1 A city may lease for any term of years or sell and convey any public utility works, plant,  
2 or system owned by it or any part thereof, together with all or any equipment and  
3 appurtenances thereof.

4 Id., Ex. A, Ex. 81(e)-81(f) (Proposed Revised Code of Washington, Volume 2, Title 46 to End (1946), at  
5 80–47). Proposed RCW 80.12.01 is identical to the current RCW 35.94.010.<sup>2</sup> As clearly indicated in the  
6 applicable reviser’s notes, the Code Committee’s change was “rewritten for brevity,” not a substantive  
7 change to the existing law. Id., Ex. A, Ex. 81(e) (Reviser’s Notes for Volume 2, Revised Code of  
8 Washington (1946), at 80–7 (stating that RRS § 9512 was “rewritten for brevity”) (emphasis added).

9 In 1951, the Legislature adopted the Code Committee’s proposed changes, revisions, and  
10 codifications of the existing laws of the State, and enacted for the first time the Revised Code of  
11 Washington. *See* RCW 1.04.010. RRS § 9512 was recodified as RCW 80.48.010, using the Code  
12 Committee’s proposed language for brevity. Id., Ex. A, Ex. 81(f). Subsequently, in 1965, RCW 80.48.010  
13 was recodified without amendment to its current location at RCW 35.94.010.

14 Thus, to summarize the history of modern-day RCW 35.94.010: it was adopted first in 1917,  
15 editorially rewritten for brevity and re-codified in its current form at RCW 80.48.010 in 1951, and then  
16 recodified again without change into RCW 35.94.010 in 1965.

17 2. The Recodification of RRS § 9512 into the RCW and Associated Revisions of the Provision  
18 were Solely for Brevity, and Explicitly Not Intended to Alter Its Meaning.

19 For two reasons, the history of current RCW 35.94.010, and specifically the text of the original  
20 RRS § 9512, are critical to correctly interpreting the term “public utility” used in RCW 35.94.010. First,  
21 the modification of RRS § 9512 to its current form was done purely to rewrite the statutory language for  
22 brevity; not to change its meaning. Id., Ex. A, Ex. 81(e) (Reviser’s Notes for Volume 2, Revised Code of  
23 Washington (1946), at 80–7 (stating that RRS § 9512 was “rewritten for brevity”) (emphasis added).  
24 Second, when the RCW was first adopted in 1951, the Legislature adopted RCW 1.04.020, which  
25 provides:

26 <sup>2</sup> Notably, proposed RCW 80.12.02 is identical to the current RCW 35.94.020.

1 1.04.020. Code as evidence of the law--Rule of construction--Effect of amendment  
2 The contents of the Revised Code of Washington...shall establish the laws of this state  
3 of a general and permanent nature in effect on January 1, 1951; except, that nothing  
4 herein shall be construed as changing the meaning of any such laws and, as a rule of  
5 construction, in case of any omissions or any inconsistency between any of the provisions  
6 of the revised code as so supplemented or modified and the laws existing immediately  
7 preceding this enactment, the previously existing laws shall control.

8 RCW 1.04.020. Thus, the Legislature explicitly provided that the editorial revision and recodification of  
9 previously existing laws, such as RRS § 9512, into the RCW would not “chang[e] the meaning of any such  
10 laws.” RCW 1.04.020. Further, the Legislature explicitly provided that for purposes of statutory  
11 construction, any inconsistency between the formerly existing laws and the amended laws would be  
12 resolved in favor of the previously existing laws. *Id.* As a result, RCW 35.94.010’s meaning explicitly did  
13 not change as a result of its editorial revisions and recodification from RRS § 9512, and this Court must  
14 analyze RRS § 9512 in order to properly determine the meaning of “public utility” under RCW 35.94.010.  
15 The Legislature itself has demanded as such.

16 3. The Inclusion of Telegraph and Telephone Services in RRS § 9512 Demonstrates that  
17 Telecommunications Services, Like Click!, are Public Utilities Under RCW 35.94.010.

18 As explained above, the text of RRS § 9512 (and particularly the illustrative examples of utilities  
19 that were included there), necessarily inform and control the meaning of RCW 35.94.010. Under the  
20 broad language of RRS § 9512, Click! and its provision of Broadband Internet service is clearly a “similar  
21 or dissimilar utility or system” to a “telephone or telegraph plant and lines.” RRS § 9512.

22 As an initial matter, Broadband Internet, telephone, and telegraph services are all  
23 telecommunications services that provide for two-way communication. *See* RCW 80.04.010(27) (defining  
24 telecommunications as the “transmission of information by wire... optical cable, electromagnetic, or other  
25 similar means.”). In many ways, Broadband Internet is just the modern-day telecommunications evolution  
26 of the telegraph and telephone systems that have existed in this country for more than a century. In fact,  
when the Washington legislature first adopted the Telecommunications Act in 1985, it removed all

1 previous references to “Telephone” and “Telegraph” in Title 80 RCW, and replaced them with  
2 “Telecommunications”—a term which clearly encompasses Broadband Internet. *See* 1985 Wash. Sess.  
3 Laws 1978–79; *see also infra* § V(E) (discussing Click!’s status as a telecommunications company providing  
4 telecommunications service). Thus, Broadband Internet service is undoubtedly “similar or dissimilar” to  
5 telegraph and telephone services.

6 Even more importantly, Click!’s status as a public utility under RCW 35.94.010, as informed by  
7 RRS § 9512, is further confirmed by the Washington Supreme Court’s decision in *Bremerton Municipal*  
8 *League v. Bremer*, 15 Wn.2d 231, 130 P.2d 367 (1942). In *Bremer*, the Supreme Court was faced with the  
9 question of whether municipally owned wharves were a public utility under RRS § 9512. *Bremer*, 15 Wn.2d  
10 at 237–39 (1942). Even though none of the illustrative examples of public utilities in RRS § 9512 are  
11 related to ports, docks, or wharves, the Supreme Court still determined that wharves were public utilities  
12 under RRS § 9512. Specifically, the Supreme Court stated:

13 The appellants point out that the statute specifically names a long list of utilities, but does  
14 not specifically mention wharves and docks. But the statute also says ‘or any similar or  
15 dissimilar utility or system.’ This, we think includes any kind of utility in whose operations  
the public has an interest, that is to say, any public utility.

16 *Bremer*, 15 Wn.2d at 237 (1942) (emphasis added). Click! easily meets the *Bremer* test for a public utility as  
17 the public certainly “has an interest” in Click!’s operations. Moreover, in contrast to the wharves in *Bremer*,  
18 which were not related to any of the specific examples in the illustrative statutory list, Click!’s provision  
19 of telecommunications service is directly related to the specifically enumerated examples of telegraph and  
20 telephone systems. Thus, if the *Bremer* court determined that wharves were public utilities under RRS §  
21 9512, there is no question that Click! is also a public utility under RRS § 9512 and RCW 35.94.010.

22 As a result, under RCW 35.94.010, as informed by RRS § 9512 and *Bremer*, Click! is clearly a public  
23 utility system.

24 **D. *City of Issaquah v. Teleprompter Corp.* is Not Controlling Precedent on the Question of**  
25 **Whether Click! is a Public Utility Under RCW 35.94 or the City Charter.**

1 As explained above, the plain language of the statute, the history of RCW 35.94.010, the text  
2 of RRS § 9512, and the *Bremer* decision collectively establish that Click! is a public utility for the  
3 purposes of RCW 35.94.010. The Washington Supreme Court’s decision in *Issaquah v. Teleprompter*  
4 *Corp.*, 93 Wn.2d 567, 611 P.2d 741 (1980), briefly addressed whether cable television was a public  
5 utility under different chapters of the RCW—RCW 35A.80 and RCW 35.92—and concluded that it  
6 was not. *See id.* But, the *Issaquah* decision does not control or inform whether Click! is a utility system  
7 under the statutory provision at issue in this case (RCW 35.94) or the City Charter for the following  
8 reasons:

9 In *Issaquah*, the Washington Supreme Court analyzed whether a city is authorized to acquire,  
10 own, and operate a cable television system within its municipal borders. *Id.*, at 569. The Supreme  
11 Court determined that a city was so authorized. *Id.* As part of the Supreme Court’s analysis, the  
12 Supreme Court analyzed whether cable television was a public utility under RCW 35A.80 and 35.92.  
13 *Id.*, at 573–75. Neither party to the case “provided [the Court] with a definition of utility, nor d[id] the  
14 parties advance any helpful discussion on the distinguishing characteristics of utilities.” *Id.*, at 573–74.  
15 Instead, the Supreme Court relied on the fact that counsel for Teleprompter Corp., the party arguing  
16 to the Supreme Court that cable television was a utility, had “frequent[ly] assert[ed] at trial that cable  
17 television is not a utility.” *Id.*, at 574. Based on the assertion of counsel, the Supreme Court determined  
18 that cable television was not a utility for the purposes of RCW 35.80 and 35.92. *Id.*, at 574–75; Wash.  
19 AGO 2003 NO. 11 (Wash. A.G.), at n. 6 (recognizing that the “*Issaquah* court found that the cable  
20 television system was not a utility (based on the representations of the parties before the court)”).  
21 Thus, the Supreme Court’s holding in *Issaquah* that cable television was not a utility was based virtually  
22 exclusively on the assertion of counsel, and therefore lacks precedential value outside the specific  
23 context of that case.

24 Additionally, the *Issaquah* decision specifically held that “cable television is not a public utility  
25 as contemplated by RCW 35A.80 and 35.92.” *Issaquah*, 93 Wn.2d at 574 (emphasis added). In so  
26 holding, the *Issaquah* court noted that the statutes at issue in the case—Chapters 35A.80 and 35.92

1 RCW—do not “provide a clear definition” of public utility. *Id.* Thus, the *Issaquah* “public utility”  
2 analysis was also predicated upon a lack of a definition or test within the relevant statutory scheme.  
3 *See id.* Here, unlike the statutes at issue in *Issaquah*, Chapter 35.94 RCW, as informed by RRS § 9512,  
4 does contain an illustrative list and test (as set forth by the Supreme Court in *Bremer*) for determining  
5 whether a system qualifies as a public utility. RCW 35.94.010; RRS § 9512. The reasoning contained  
6 in *Issaquah* is therefore inapposite because RCW 35.94.010, RRS § 9512, and the *Bremer* Court provide  
7 specific guidance as to the appropriate meaning of “public utility” in this case.

8 Moreover, the *Issaquah* decision does not explicitly hold anything with regard to the meaning  
9 of “public utility” for the purposes of Chapter 35.94 RCW. *Issaquah*, 93 Wn.2d at 574 (holding that  
10 “cable television is not a public utility *as contemplated by RCW 35A.80 and 35.92*” and never citing RCW  
11 35.94 nor RRS § 9512) (emphasis added). While the *Issaquah* court did not interpret the meaning of  
12 “utility” with respect to RCW 35.94 and RRS § 9512, the *Bremer* Court certainly did. *See Bremer*, 15  
13 Wn.2d at 237–39 (interpreting meaning of “public utility” under RRS §9512). Thus *Bremer*, not  
14 *Issaquah*, is the controlling Supreme Court precedent on the meaning of “public utility” for the  
15 purposes of Chapter 35.94 RCW, and, as explained above, Click! is a “public utility” under the *Bremer*  
16 test.

17 Even if the *Issaquah* decision applied to the definition of public utility in Chapter 35.94 RCW  
18 (which it does not) it would apply only to cable television. Cable television only provides for one-way  
19 transmission of information, in contrast to telegraph, telephone, and Broadband Internet, each of  
20 which provide for two-way communication. Thus, cable television is not as “similar” to the listed  
21 utilities under RRS § 9512 as is Broadband Internet service. As a result, even if *Issaquah* required a  
22 determination that cable television was not a public utility under RCW 35.94, the *Issaquah* decision  
23 does not dictate nor inform whether Broadband Internet and other two-way telecommunications  
24 services are “similar or dissimilar” to the listed public utilities under RRS §9512.

25 Finally, it goes without saying that *Issaquah* did not interpret the City Charter, and therefore  
26 any effect the decision might have on whether Click! is a public utility for purposes of state law would

1 not impact the question of whether Click! is a public utility under the plain language of the City  
2 Charter.

3 For all these reasons, the *Issaquah* decision does not preclude Click! from being considered a  
4 public utility under Chapter 35.94 RCW and RRS §9512, much less under the City Charter.

5 **E. Click!’s Status as a Telecommunications Business Under State Law Further**  
6 **Demonstrates Click! is a Utility System.**

7 Courts may also interpret terms in a statute by looking to “other statutes dealing with the same  
8 subject matter.” *Harmon v. Dept. of Social and Health Services*, 134 Wn.2d 523, 530, 951 P.2d 770 (1998);  
9 *see also Morpho Detection, Inc. v. State Dept. of Revenue*, 194 Wn. App. 17, 27, 371 P.3d 101 (2016)  
10 (interrelated statutes that relate to the same subject matter must be “read together and harmonized, if  
11 possible”). Here, an examination of Washington laws governing public utility districts (“PUD”) as well  
12 as the treatment of telecommunications businesses like Click! under other provisions of state law  
13 further reinforce the conclusion that Click! is a utility system.

14 Click! is a “telecommunications company” providing “telecommunications” services under  
15 Title 80 RCW, Public Utilities. *See* RCW 54.16.005 (stating that “Telecommunications” has the same  
16 meaning as contained in RCW 80.04.010). Under RCW 80.04.010, telecommunications companies are  
17 defined as “every...city or town owning, operating or managing any facilities used to provide  
18 telecommunications for hire, sale, or resale to the general public.” RCW 80.04.010(28).  
19 Telecommunications, in turn, are defined as the “transmission of information by wire...optical cable,  
20 electromagnetic, or other similar means.” RCW 80.04.010(27). Thus, any city or town that operates or  
21 manages any facilities used for transmission of information by wire, optical cable, or other similar  
22 means is a telecommunications company. RCW 80.04.010(27), (28). This is exactly what Click! is: a  
23 facility for transmission of information by optical cable or similar means that is sold to TPU ratepayers.  
24 *See Grifo Decl., Ex. A, Ex. 10(b); Ex. 27* (identifying the Click! system as a hybrid fiber coaxial network  
25 providing high-speed internet services to the public).  
26

1 Click!'s status as a telecommunications company providing telecommunications services is  
2 significant for two reasons: First, “[t]elecommunications businesses are public utilities and are  
3 regulated by the state to varying degrees.” Wash. AGO 2003 NO. 11 (Wash. A.G.) (emphasis added);  
4 *see also Five Corners Family Farmers v. State*, 173 Wn.2d 296, 308, 268 P.3d 892 (2011) (attorney general  
5 opinions “entitled to great weight”); Chapter 80.36 RCW (chapter regulating telecommunications laws,  
6 which is contained within Title 80 RCW, Public Utilities); RCW 80.01.110 (*utilities and transportation*  
7 *commission* hears petitions to review rates, terms, and conditions of telecommunications services).  
8 Second, PUDs are specifically authorized to “establish a separate utility system...[to] provid[e]  
9 wholesale or retail telecommunications services.” RCW 54.16.330(3). The City even relied upon this  
10 authorization when it first created Click! *See Grifo Decl., Ex. A, Ex. 11* (reciting that “WHEREAS,  
11 the Ordinance provides that the City may create a separate system” for the City to operate and supply  
12 “utility and municipal services”) (emphasis added).

13 Thus, related statutes: (1) provide authority for PUDs to create separate utility systems, like  
14 Click!, that provide wholesale or retail telecommunications services; and, (2) define  
15 telecommunications businesses providing telecommunications services, like Click!, as utilities.

16 **F. The City has Consistently Labelled and Treated Click! as a Utility System.**

17 Finally, the City has consistently and continuously labelled and treated Click! as a utility system.  
18 As mentioned above, the City relied specifically upon its statutory authorization to create separate  
19 systems to provide utility services in the recitals to the very ordinance that created Click!. *See Id.*  
20 (reciting that “WHEREAS, the Ordinance provides that the City may create a separate system as part  
21 of the Electric System and pledge that that income of such a separate system be paid unto the Revenue  
22 Fund; and WHEREAS RCW 35A.11.020 authorizes the City operate and supply utility and municipal  
23 services”) (emphasis added); *see also Id., Ex. A, Ex. 12(a); Ex. A, Ex. 10* (City repeatedly characterizing  
24 Click! as a “telecommunications system”) (emphasis added). In fact, the City litigated and confirmed  
25 its authority to establish Click! as a “telecommunications system” prior to commencing construction  
26

1 of the network—explicitly relying on the City’s statutory authority as a first-class city to “operat[e] and  
2 supply[]...utilities” under RCW 35A.11.020. *Id.*, Ex. A, Ex. 12(a), 12(b), 13(a). The Light Division of  
3 TPU issued and sold public bonds to finance the entire construction of Click!. *See id.*, Ex. A, Ex. 11.  
4 Moreover, City regulations regarding Click! are contained—to this day—within Title 12 TMC, which  
5 governs utilities within the City. The City also collected a 7.5% “utility tax” on Click! activities,  
6 including broadband revenue. *See id.*, Ex. A., Ex. 56-56(c) (detailing 7.5% utility tax on broadband  
7 revenue and City website explaining that “City Utility tax refers to a tax on public service businesses,  
8 including businesses that engage in telecommunications, supply of electricity and natural gas, and solid  
9 waste collection.”). Finally, until recently and in light of the unlawful BTA, the TPU website displayed  
10 Click! prominently under its services, directly next to its other utilities power, rail, and water. *See id.*,  
11 Ex. A, Ex. 1-1(e).

12 **G. Click! is Also a Part of a Utility System under RCW 35.94.040 and the City Charter.**

13 For all the preceding reasons Click! is a utility system under the City Charter and Chapter 35.94  
14 RCW, and thus a municipal election is required prior to sale, lease, or disposal of Click!. In addition,  
15 however, the procedural requirements to sell or lease a utility system under RCW 35.94.020 also apply  
16 to the sale or lease of “any part” of a utility system. RCW 35.94.020 (emphasis added); *see also* Charter  
17 § 4.6 (election requirement applies to sale, lease, or disposal of “essential part[s]” of utility system). If  
18 it is not a utility system in itself, then Click! is at least “part” of the City’s electric utility, Tacoma Power,  
19 and therefore its lease or sale required a municipal election.

20 **H. Plaintiff Anderson is Entitled to Summary Judgment Declaring Resolution No. 40467,**  
21 **which Declared Click! Surplus Pursuant to RCW 35.94.040, Void.**

22 In an attempt to circumvent the public vote requirement contained in RCW 35.94.020, on  
23 November 5, 2019, the City passed Resolution No. 40467 (“Surplus Resolution”) and formally declared  
24 the entirety of Click! and its Related Assets surplus pursuant to RCW 35.94.040. Grifo Decl., Ex. A, Ex.  
25 39 (resolution surplussing the heart of the Click! network, including the fiber supporting the broadband  
26

1 internet service, its core routers, servers, and other essential electronic equipment). The statutory surplus  
2 provision relied on by the City provides, in relevant part:

- 3 (1) Whenever a city shall determine, by resolution of its legislative authority, that any lands,  
4 property, or equipment originally acquired for public utility purposes is surplus to the  
5 city's needs and is not required for providing continued public utility service, then such  
6 legislative authority by resolution and after a public hearing may cause such lands,  
7 property, or equipment to be leased, sold, or conveyed.
- 8 (2) The provisions of RCW 35.94.020...shall not apply to dispositions authorized by this  
9 section.

10 RCW 35.94.040 (emphasis added). Thus, the municipal vote provision of RCW 35.94.020 applies unless  
11 the City properly and legally determines by resolution that Click! is surplus under RCW 35.94.040.<sup>3</sup> *Id.*

12 A municipality does not have limitless discretion to declare a utility surplus. *See Marino Property Co.*  
13 *v. Port Com'rs of Port of Seattle*, 97 Wn.2d 307, 317, 644 P.2d 1181 (1982) (court's properly review surplus  
14 declarations to determine whether they are "arbitrary or capricious or contrary to law"); *See also South*  
15 *Tacoma Way, LLC v. State*, 169 Wn.2d 118, 123, 233 P.3d 871 (2010) (governmental acts without authority  
16 are *ultra vires*). Rather, a municipality's surplus declaration is void if it is (1) *ultra vires*; (2) contrary to law;  
17 or (3) arbitrary and capricious. *Marino*, 97 Wn.2d at 317; *South Tacoma Way*, 169 Wn.2d at 123.

18 As explained in detail below, the City's surplus of Click! is *ultra vires* and contrary to law because  
19 RCW 35.94.040 does not provide cities authority to surplus entire operating utility systems like Click!. In  
20 addition, the City's determination that Click! is no longer needed for public utility service is arbitrary and  
21 capricious as Click! continues to provide the exact same public utility service despite having now been  
22 transferred to Rainier Connect (a private company). Thus, the City did not have authority to declare Click!  
23 surplus in Resolution No. 40467, and this Court should grant Plaintiff summary judgment and void the  
24 Surplus Resolution.

25  
26 1. The City Cannot Avoid the Public Vote Requirement in the City Charter Using the Surplus  
Provision of RCW 35.94.040.

As a preliminary matter, the surplus provision of RCW 35.94.040, even if legally exercised, only

---

<sup>3</sup> Significantly, as discussed further below, the municipal vote provision contained in the City Charter § 4.6 is not impacted by a surplus declaration under RCW 35.94.040, regardless of the legality of such a declaration.

1 prevents the need for a municipal election as otherwise required under RCW 35.94.020. *See* RCW  
2 35.94.040(2) (“The provisions of RCW 35.94.020...shall not apply to dispositions authorized by this  
3 section”) (emphasis added). A declaration of surplus under RCW 35.94.040, however, does not obviate  
4 the public vote requirement in the City Charter. Thus, because Click! is a “utility system” or “essential  
5 part thereof” for purposes of the City Charter, the City must hold a municipal election prior to sale, lease,  
6 or disposal of Click!—regardless of whether the City properly declares Click! surplus pursuant to RCW  
7 35.94.040. In other words, even if the Surplus Resolution were lawful and proper, which it was not, City  
8 Charter § 4.6 and its requirement for a vote of the people still applied.

9 2. The Surplus Resolution was Legally Void Because the Surplus Provisions of RCW 35.94.040  
10 Do Not Provide a City With Power to Declare an Entire Utility System Surplus.

11 When the Washington State Legislature adopted the surplus provision, the Legislature granted  
12 cities the power to dispose of property that had become inadequate, obsolete, and was no longer needed  
13 for provision of the utility service in the future without the necessity of a municipal election—consistent  
14 with the analogous surplus power already enjoyed by PUDs under Chapter 54.16 RCW. The Legislature  
15 did not intend to grant municipalities the power to surplus and divest themselves of entire utility systems  
16 without a municipal election, and thereby render the municipal vote requirement in RCW 35.94.020  
17 meaningless. Therefore, the City’s decision to declare Click! surplus is both ultra vires and contrary to law,  
18 and the Surplus Resolution should be declared void. *South Tacoma Way*, 169 Wn.2d at 123; *Marino*, 97  
19 Wn.2d at 317.

20 In order to properly interpret the surplus provision contained in RCW 35.94.040, it must be  
21 viewed in light of the statutory scheme of which it is a part. *See Dept. of Ecology v. Campbell & Gwinn, L.L.C.*,  
22 146 Wn.2d 1, 9–11, 43 P.3d 4 (2002). Prior to enactment of RCW 35.94.040 in 1973, cities could not, under  
23 any circumstances, lease or sell *any part* of a utility system without a municipal election under RCW  
24 35.94.020—language which required a municipal election to approve sale of even broken down and  
25 useless utility service trucks, outdated and no longer operational transformers, or parcels of land originally  
26 acquired for a utility that had never, and would never, be utilized for utility purposes. *See* RCW 35.94.020.

1 Thus, RCW 35.94.040 was enacted to allow cities to more easily dispose of property that was  
2 unserviceable, obsolete, and not required for the continued provision of utility service—*i.e.* surplus.  
3 Indeed, the City of Tacoma even admitted this fact during the consideration of the House and Senate  
4 bills that led to the adoption of RCW 35.94.040. See Grifo Decl., Ex. A, Ex. 33-33(x) (containing a 1973  
5 letter from the City of Tacoma Director of Public Utilities to the Legislature stating the same).

6 But the surplusage provision of RCW 35.94.040 was clearly not intended to empower cities to  
7 dispose of entire utility systems such as Click! without a municipal election—it was merely to allow  
8 disposition of property held by existing utilities that would no longer be necessary for the continued  
9 provision of a utility service. To hold otherwise would frustrate the entire purpose of the statutory scheme  
10 and render meaningless the public vote requirement in RCW 35.94.020, because a city could simply  
11 surplus any and all of its utility systems under RCW 35.94.040 by simply calling it “surplus,” and then  
12 never have to hold a municipal election under RCW 35.94.020 prior to leasing, selling, or disposing of  
13 the utility systems. *See State v. J.P.*, 149 Wn.2d 444, 450, 69 P.3d 318 (2003) (statutes must be interpreted  
14 and construed so that all the language used is given effect, with no portion rendered meaningless or  
15 superfluous). Put another way, if cities had the power to surplus an entire utility system under RCW  
16 35.94.040, then there is no set of circumstances where a city would ever have to hold a public vote prior  
17 to lease, sale, or disposal of a utility system or part thereof. Such an expansive reading of the surplus  
18 provision would swallow entirely the municipal vote requirement based upon the whims of those in  
19 power, and such an interpretation is wholly inconsistent with the foundational principles of statutory  
20 construction. *See id.*

21 Significantly, the legislative history surrounding the promulgation of RCW 35.94.040 strongly  
22 reinforces the interpretation that the surplus provision cannot be used to surplus an entire utility system.  
23 *See State v. Evans*, 177 Wn.2d 186, 199, 298 P.3d 724 (2013) (any ambiguity in meaning of statute may be  
24 resolved by resort to legislative history in order to determine legislative intent). The legislative history of  
25 the surplus provision almost exclusively consists of letters and statements offered by the bill’s principal  
26 proponent, the City of Tacoma (largely by Al Brenninger, of the City of Tacoma Public Utilities). *See*

1 Grifo Decl., Ex. A, Ex. 33(j)-33(k); *See also Lutheran Day Care v. Snohomish Cnty.*, 119 Wn.2d 91, 104–05,  
2 829 P.2d 746 (1992) (court will consider all materials that are sufficiently probative of legislative intent in  
3 determining the same). The City of Tacoma wrote the original letters in support of the bill to both the  
4 House of Representatives and the Senate, in March of 1973. Grifo Decl., Ex. A, Ex. 33(g), (m), (u). Mr.  
5 Brenninger of TPU also presented and explained the bill on the Senate floor, while Paul J. Nolan, Deputy  
6 City Attorney for Tacoma Public Utilities, presented and explained the bill on the floor of the House. Id.  
7 Ex. A, Ex. 33(j), (v). The bill was passed largely without amendment by the legislature that same session.  
8 See id., Ex. A, Ex. 33(x). TPU’s letter in support of the bill stated, in relevant part:

9 Sections 35.94.020 and .030 require a formalized procedure [for disposal of public utility  
10 property] with a confirming approval of the voters on a ballot proposition. Such  
11 procedure is, of course, desirable where in fact all or an integral part of an operating utility  
12 is to be so disposed of. However, the procedure is completely impractical for example in  
13 the disposition of property and equipment, land, substations, and other parts and  
14 segments of facilities no longer required for utility service...Chapter 35.94 RCW as now  
15 enacted unfortunately prevents this.

16 The proposed amendment would accomplish greater procedural flexibility in such  
17 transactions without repealing the formalized procedures in the proper situations... [t]he  
18 flexibility is reasonably consistent with that long enjoyed by Public Utility Districts under  
19 RCW 54.16.180, and investor-owned utilities.

20 Id., Ex. A, Ex. 33(g) (emphasis supplied). Thus, it is evident that the bill was not intended to allow the  
21 surplus provision to “repeal[] the formalized [public vote] procedures in the proper situations...where in  
22 fact all or an integral part of an operating utility” is to be disposed of, but instead to provide flexibility to  
23 cities in surplussing property “consistent with that long enjoyed by Public Utility Districts under RCW  
24 54.16.180.” Id.; see also id., Ex. A, Ex. 33(v) (Tacoma City Attorney stating to the House that bill would  
25 “allow municipal utility districts the same privileges...as other public and private utility districts.”). In  
26 1973, RCW 54.16.180 provided that a PUD:

27 May sell and convey, lease, or otherwise dispose of all or any part of its works, plants,  
28 systems, utilities and properties, after proceedings and approval by the voters of the  
29 district, as provided for the lease or disposition of like properties and facilities owned by  
30 cities and towns. *Provided...* That a district may sell, convey, lease or otherwise dispose of  
31 to any person or public body, any part, either within or without its boundaries, which has

1 become unserviceable, inadequate, obsolete, worn out or unfit to be used in the operation  
2 of the system and which is no longer necessary, material to, and useful in such operations,  
3 without the approval of the voters.

4 196 Wash. Sess. Laws 958 (emphasis supplied); *See also* RCW 54.16.180(1), (2)(a) (containing modern day  
5 language almost identical to provision existing in 1973). In other words, when the Legislature enacted the  
6 surplus provision, it granted cities the power to surplus portions and property of the utility that were  
7 unserviceable, obsolete, and no longer necessary and useful in the operation of the utility, consistent with  
8 the existing power of PUDs to do the same. *See* 196 Wash. Sess. Laws 958. The Legislature did not,  
9 however, grant cities the power to surplus all or an integral part of an operating utility like Click!. As a  
10 result, the Surplus Resolution is ultra vires and contrary to law, because it attempts to exercise a surplus  
11 power that the Legislature never granted the City.

12 The statutory scheme of Chapter 35.94 RCW—properly construed and supported by the  
13 legislative history of the surplus provision—demonstrates that municipalities cannot legally surplus entire  
14 utility systems. Therefore, the Surplus Resolution declaring the entirety of Click! surplus is *ultra vires* and  
15 contrary to law, and void as a matter of law. *South Tacoma Way*, 169 Wn.2d at 123; *Marino*, 97 Wn.2d at  
16 317.

17 3. Click! is Required for Continued Public Utility Service, Thus the Surplus Resolution to  
18 Surplus Click! is Arbitrary and Capricious.

19 Under RCW 35.94.040, a city must determine in its declaration of surplus both that the property  
20 to be surplussed is (1) “surplus to the city’s needs,” and (2) “not required for providing continued public  
21 utility service.” RCW 35.94.040 (emphasis added). The City’s determination in the Surplus Resolution  
22 that Click! is not required for providing continued public utility service is clearly arbitrary and capricious,  
23 because Click! is itself a utility system, and Click! and all the equipment associated with Click! continues  
24 to be a utility system, provides the same utility services to the public as it always has, and performs the  
25 same functions notwithstanding the transfer of operational control to Rainier Connect. As a result, the  
26 City’s determination to surplus Click! was arbitrary and capricious, and solely designed to avoid submitting  
to the voters the question of whether to hand Click! over to a private entity. *Marino*, 97 Wn.2d at 317.

1 An examination of typical surplus declarations in the public utility context is helpful for framing  
2 the purpose of RCW 35.94.040, and analyzing whether utility property is required for providing continued  
3 public utility service. Typically, municipalities surplus a used truck previously used in conjunction with  
4 the utility, or a weedwhacker previously used to maintain utility facilities, or an old transformer no longer  
5 to be used in conjunction with the utility. See, e.g., Grifo Decl., Ex. A, Ex. 82 (City of Duvall surplus  
6 declaration). Used trucks, weedwhackers, and an old transformer have two important characteristics in  
7 common: they are equipment and/or pieces of a utility system, and after surplus they will no longer be  
8 used in support of continued provision of a utility service.

9 In contrast, Click! is a standalone, separate utility system, that provides to the public the utility  
10 service of broadband internet access, cost over \$200 million in ratepayer resources to construct, and  
11 provides services to over 35,000 unique customer accounts. Click! still provided the same services to the  
12 public, the City, and TPU that it did when it was first created at the time it was declared to be “surplus.”  
13 See id., Ex. A, Ex. 10 (ordinance creating Click! noting that in addition to cable television and broadband  
14 internet services, the System was created for “revenue diversification” for Tacoma Power and to  
15 promote “economic development” and provide data transport). Unlike a truck that used to service  
16 electrical utility customers but now after surplus will be used for completely different purposes, all the  
17 property, equipment, and appurtenances of Click! continues to be used in support of Click!. A Click!  
18 utility truck, after surplus and sale to Rainier Connect, continues to be a Click! utility truck.

19 Indeed, Click! as a whole continues to be a utility system despite its lease to Rainier Connect,  
20 because Rainier Connect continues to use Click! assets to provide broadband services as a public utility.  
21 See Inland Empire Rural Electrification, Inc. v. Dept. of Public Service of Washington, 199 Wn. 527, 537–38, 92 P.2d  
22 258 (1939) (determination of whether a service is a public utility does not hinge on whether provider of  
23 that service is public or private, but rather on whether the service is designed for public use by the public  
24 as a class). Thus, not only is Click! “required for providing continued public utility service,” it actually  
25 does continue to provide the same public utility service.

26 Rather than surplussing property which will no longer provide utility functions in the future, or

1 will no longer provide support for public utility purposes as contemplated by RCW 35.94.040, Click! and  
2 its Related Assets continue to do both. As a result, the City's Surplus Resolution should be declared void,  
3 since the City's determination that Click! is not required for continuing public utility service is arbitrary  
4 and capricious.

5 **VI. CONCLUSION**

6 For all of the foregoing reasons, Plaintiff Anderson respectfully requests the Court grant  
7 Anderson's Motion for Partial Summary Judgment in its entirety.

8  
9 DATED this 14<sup>th</sup> day of May 2022.

**IN THE SUPERIOR COURT OF THE STATE OF WASHINGTON  
IN AND FOR THE COUNTY OF PIERCE**

MITCHELL SHOOK,  
Plaintiff,

v.

CITY OF TACOMA,  
Defendant.

**NO. 19-2-07135-0**

**DECLARATION OF JAMES P. GRIFO  
IN SUPPORT OF PLAINTIFF'  
ANDERSON'S MOTION FOR  
PARTIAL SUMMARY JUDGMENT**

THOMAS McCARTHY and CHRISTOPHER  
T. ANDERSON,  
Plaintiffs,

v.

CITY OF TACOMA,  
Defendant.

I, James P. Grifo, hereby declare as follows:

1. I am the attorney of record for Plaintiff Christopher Anderson in the above-captioned matter.
2. I am over the age of 18, and competent to testify to the following based upon my personal knowledge.
3. Attached hereto as **Exhibit A** is a true and correct copy of the Master Declaration of Mitchell Shook Prepared in Response to Court Order of January 7, 2020, to Organize Declarations as filed in Pierce County Superior Court Cause No. 19-2-11506-3, along with the exhibits and attachments thereto.

1 4. Attached hereto as **Exhibit B** is a true and correct copy of the signed Click! Business Transaction  
2 Agreement between the City of Tacoma and Mashell, Inc., d/b/a Rainier Connect, which I obtained  
3 from the Tacoma Public Utilities website at the following address: <https://www.mytpu.org/wp->  
4 [content/uploads/Approval-Version-CBTAIRU.pdf](https://www.mytpu.org/wp-content/uploads/Approval-Version-CBTAIRU.pdf), which I last visited on December 14, 2020.

5 5. Attached hereto as **Exhibit C** is a true and correct copy of a letter dated February 28, 2020, from  
6 the General Manager of Click! Network to Click! Network customers, which I obtained from the Tacoma  
7 Public Utilities website at the following address: <https://www.mytpu.org/wp->  
8 [content/uploads/Click\\_customer\\_letter\\_Feb\\_2020.pdf](https://www.mytpu.org/wp-content/uploads/Click_customer_letter_Feb_2020.pdf), which I last visited on December 14, 2020.

9 I certify and declare under penalty of perjury under the laws of the State of Washington that the  
10 foregoing is true and correct.

11 Signed this 14<sup>th</sup> day of May 2022, in Nantucket, Massachusetts.

MASTER DECLARATION  
OF MITCHELL SHOOK

- 1 -

MITCHELL SHOOK  
3624 6<sup>TH</sup> AVE SUITE C  
TACOMA, WA 98406

1 I, Mitchell Shook, declare as follows: I am a resident of Tacoma, ratepayer of Tacoma  
2 Public Utilities, taxpayer to City of Tacoma, and customer of Click!, the municipal broadband  
3 telecommunications system operated by Tacoma Public Utilities. I am an expert in matters  
4 related to Click! Network and the ISP industry, having 20 years of experience working with  
5 Click! and other open access systems, in my role as Founder and CEO of Advanced Stream, an  
6 Internet Service Provider operating on Click! Network. I have personal knowledge of the matters  
7 set forth below.

8 It is my understanding the Court, in its Order on January 7, 2020, required me to certify,  
9 authenticate and organize my Exhibits in my declarations in this case. I have done so in this  
10 "Master Declaration," which includes my original declarations Shook Decl. 10/30/19, Shook  
11 Decl. 11/1/19, Shook Decl. 12/12/19 (part 1 and 2) and Shook Decl. 12/30/19.

12 I have carefully organized each of the Exhibits attached to my original declarations, and  
13 separated them into identifiable instruments by adding letters to each of the original Exhibit  
14 numbers. This Master Declaration contains the original text from each of my declarations, along  
15 with some additional information, but all of which new language has all been underlined for the  
16 convenience of the Court and the parties.

17 In order to comply with the Court's Order of January 7, 2020, and in response to the City's  
18 Motion to Strike, I have obtained Certificates of Authenticity from various government officials  
19 to authenticate the public records and documents that were attached to my original declarations."

20 In the process of obtaining the Certificates, some of them returned large volumes of  
21 unrelated pages. For example, in Shook Decl. 12/12/19, Exhibit 50, where I cited two pages from  
22 the 1997 "Telecommunication Study," but the Certificate for the document containing the two  
23 pages, Resolution U-9258, contained 501 pages. The entire "Telecommunication Study" for  
24 creating Click! Network was an Exhibit to Resolution U-9258. In such cases, I have not enlarged  
25 the number of pages in my original Exhibit, by adding the full "Telecommunication Study," for  
26 example; rather, I preserved the original two pages and added the Certificate for Resolution U-

1 9258 to the title page of my Shook Decl. 12/12/19, Exhibit 50. I have also identified such  
2 exhibits as “pages from,” or “excerpts of.”

3 Complete copies of all certified documents are available for the Court and any other party to  
4 this lawsuit by contacting plaintiff at the email address on file in this case. In many cases I have  
5 provided direct links to sources of information provided, along with links to “*archived copies*”  
6 preserved on permalink, a service for storing online information. All citations to “archived”  
7 copies are also true and correct copies of the sites and materials they reference and are  
8 incorporated herein and therein by this reference.

9 **Shook Declaration 10-30-19**  
10 **Exhibits 1 to 28**

11 I, Mitchell Shook, declare as follows: I am a resident of Tacoma, ratepayer of Tacoma  
12 Public Utilities, taxpayer to City of Tacoma, and customer of Click!, the municipal broadband  
13 telecommunications system operated by Tacoma Public Utilities. I am an expert in matters  
14 related to Click! Network and the ISP industry, having 20 years of experience working with  
15 Click! and other open access systems, in my role as Founder and CEO of Advanced Stream, an  
16 Internet Service Provider operating on Click! Network. I have personal knowledge of the matters  
17 set forth below.

18 I am over the age of eighteen, competent to testify in this matter, and make this declaration  
19 on my own personal knowledge. All references in the following Declaration to “downloaded,” or  
20 “available at” or from a “website” or a “webpage” are meant to indicate that the Plaintiff in this  
21 cause, “Mr. Shook” is the one who did the downloading and screen captures. All references to  
22 Defendant or “The City” are meant to indicate City of Tacoma and “TPU” is Tacoma Public  
23 Utilities. All references to “I” “me,” and “mine” identify the author of this Declaration, yours  
24 truly, Mitchell Shook.

25 The Exhibits have **the same exhibit numbers**, from the original Shook Declarations  
26 submitted in this matter, with the **addition of letters**, to distinguish the exhibits.

1 1. Attached hereto as **Exhibit 1** and incorporated herein by this reference is a true and correct  
2 copy of a screenshot of the TPU website as visited on 10-29-19. This exhibit shows “About TPU  
3 - Tacoma Public Utilities,” as seen and captured by Mr. Shook’s on June 4, 2019,

4 <https://www.mytpu.org/about-tpu> , also archived and available at <https://perma.cc/76T2-G9EA>.

5 1 (a). Attached hereto as **Exhibit 1 (a)** and incorporated herein by this reference is a true and  
6 correct copy of a screenshot of the TPU website as visited on 10-29-19. 'Our services' Page  
7 listing Power, Water, Rail, and Click! Network as viewed and captured by Mr. Shook’s on June  
8 4, 2019, <https://www.mytpu.org/about-tpu/services>. An archived copy is *available at*  
9 <https://perma.cc/2SKD-F8WG> .

10 1 (b). Attached hereto as **Exhibit 1 (b)** and incorporated herein by this reference is a true and  
11 correct copy of a screenshot of Click!’s Landing Page, <http://click-network.com>, showing  
12 “Products,” as viewed and captured by Mr. Shook’s on June 4, 2019. An archived copy is also  
13 *available at* <https://perma.cc/RZH3-YTCE>

14 1 (c). Attached hereto as **Exhibit 1 (c)** and incorporated herein by this reference is a true and  
15 correct copy of a screenshot of Click!’s products Page -“Internet Service Providers,” as viewed  
16 and captured by Mr. Shook’s on June 4, 2019. An archived copy is also *available at*  
17 <https://perma.cc/2VHC-AD6R>

18 1 (d). Attached hereto as **Exhibit 1 (d)** and incorporated herein by this reference is a true and  
19 correct copy of a screenshot of Click!’s webpage -About Click <https://www.click->  
20 [network.com/about](https://www.click-network.com/about) as viewed and captured by Mr. Shook’s on June 4, 2019. An archived copy is  
21 also *available at:*<https://perma.cc/NP7T-8YXN>

22 1 (e). Attached hereto as **Exhibit 1 (e)** and incorporated herein by this reference is a true and  
23 correct copy of a screenshot of Click! Network’s webpage - “Products - High Speed Internet.”  
24 <https://www.click-network.com/products/internet/> as viewed and captured by Mr. Shook on June  
25 4, 2019. An archived copy is also *available at:* <https://perma.cc/H267-LKUY>  
26

1 2. Attached hereto as **Exhibit 2** and incorporated herein by this reference is a true and correct  
2 copies of the Declaration of Surplus Property, first and last pages of the surplus Resolution U-  
3 11116 and sample pages from the City’s agreement with Buyer to privatize Click!. Now attached  
4 as Exhibit 2 is a true and correct copy of the City of Tacoma’s Declaration of Surplus Property  
5 (DSP), as I downloaded it from the City’s website.

14 10. Attached hereto as **Exhibit 10** and incorporated herein by this reference is a true and  
15 correct copy of TPU 1997 Resolution U-33668, along with parts of the Telecommunication  
16 Study and Business Plan associated with the creation of Click!. Now Attached as **Exhibit 10** and  
17 incorporated herein by this reference is a true and correct copy of TPU 1997 Resolution U-  
18 33668. Resolution U-33668 is also in the record under Defendant’s Exhibit H, in the 11-4-19  
19 Supplemental Declaration of Joseph Sloan in Opposition to Plaintiff’s Motion for Temporary  
20 Restraining Order, in cause # 19-2-11760-1, which is this case, Shook v Tacoma, prior to the  
21 present consolidation with Bowman. See signed **Certificate** as a part of exhibit 10 (a), which the  
22 U-3368 was an attachment to. The entire Telecommunications Study also known as Business  
23 Plan, by Tacoma City Light dated February 18th 1997 which is 486 pages was also attached as  
24 an exhibit to U-9258.

25 10 (a). Attached hereto as **Exhibit 10 (a)** and incorporated herein by this reference is a true  
26 and correct Certified copy of TPU Substitute Resolution U-9258. Now included is a signed

1 Certificate of the custodian of these records that the attached exhibit is a true and correct copy  
2 of what it purports to be.

3 10 (b). Attached hereto as Exhibit 10 (b) and incorporated herein by this reference is a true  
4 and correct copy of parts of the Telecommunication Study and Business Plan created to support  
5 the creation of Click! Network. This Telecommunication Study and Business Plan was attached  
6 to Res. # 33668, which was passed by Tacoma City Council on April 8th 1997. A copy of  
7 Resolution #33668 is included in this case record by Defendant's own 11-4-19 Supplemental  
8 Declaration of Joseph Sloan in Opposition to Plaintiff's Motion for Temporary Restraining  
9 Order, in cause # 19-2-11760-1, which is this same case prior to the present consolidation with  
10 Bowman. See signed certification as a part of exhibit 10 (a),

11 10 (c). Attached hereto as Exhibit 10 (c) and incorporated herein by this reference is a true  
12 and correct copy of a portion of the Telecommunication Study and Business Plan created to  
13 support the creation of Click! Network. This Telecommunication Study and Business Plan  
14 attached to Res. # 33668, which was passed by Tacoma City Council on April 8th 1997. Current  
15 Business market research study - Dethman & Associates. See signed certification as a part of  
16 exhibit 10 (a),

17  
18 11. Attached hereto as **Exhibit 11** and incorporated herein by this reference is a true and  
19 correct copy of Ordinance 25930 for creation of telecommunication system. This document,  
20 Ordinance No. 25930, is also already in the record as Defendant's Exhibit G, in the December  
21 30th 2019 Declaration Of Christopher D. Bacha In Support Of Defendant's Response To  
22 Plaintiff's Partial Summary Judgment Motions. This Ordinance includes an attachment,  
23 Resolution U-9198, which contains the words "WHEREAS by the installation of *additional*  
24 *telecommunications capacity*, this system would have the capability of providing additional  
25 public benefits for the City, and Light Division ratepayers." Now included is a signed  
26 certification from the custodian of these records that the attached exhibit is a true and correct  
copy of what it purports to be.

1 12. Attached hereto as **Exhibit 12** and incorporated herein by this reference is a true and  
2 correct copy of a Court order and brief from 1996 Summary Judgement for creation of  
3 telecommunication system. Now Attached as **Exhibit 12** and incorporated herein by this  
4 reference is a true and correct copy of 1996 Court order Granting CITY OF TACOMA'S  
5 MOTION FOR SUMMARY JUDGMENT.

25 passed and State of Washington's public policy and legislative intent for promoting Broadband  
26

1 showing new legislation that just passed. It demonstrates the State of Washington's public policy  
2 and legislative intent for promoting Broadband (including by Public Utilities).

3  
4 25. Attached hereto as **Exhibit 18** and incorporated herein by this reference is a true and  
5 correct copy of screen shots I have recently taken of the City of Tacoma Municipal Code and  
6 Purchasing Policy Manual, along with the guidelines for disposing of surplus property as  
7 obtained from the MSRC website. This paragraph contained a mistake in numbering, and the  
8 intended Exhibit is now Attached as **Exhibit 25** and incorporated herein by this reference is a  
9 true and correct copy of City of Tacoma Municipal Code and Purchasing Policy Manual, Section  
10 XXIV. F. SURPLUS PROPERTY AND DISPOSAL

11 25. (a) Attached hereto as **Exhibit 25 (a)** and incorporated herein by this reference is a true  
12 and correct copy of "Practice Tips" for disposing of surplus property as obtained from the MSRC  
13 website. I downloaded this on October 23, 2019 available from: [http://mrsc.org/Home/Explore-](http://mrsc.org/Home/Explore-Topics/Legal/General-Government/Sale-of-Surplus-City-or-Town-Property.aspx)  
14 [Topics/Legal/General-Government/Sale-of-Surplus-City-or-Town-Property.aspx](http://mrsc.org/Home/Explore-Topics/Legal/General-Government/Sale-of-Surplus-City-or-Town-Property.aspx) ; and preserved  
15 an archive copy at: <https://perma.cc/X7QF-SBD7> .

16 26. Attached hereto as **Exhibit 26** and incorporated herein by this reference is a true and  
17 correct copy of Click! Networks Organizational chart as obtained by my public disclosure  
18 request in 2018.

19 27. Attached hereto as **Exhibit 27** and incorporated herein by this reference is a true and  
20 correct copy of pages from the City's slide presentation related to the Transaction as presented  
21 at the TPU Board meeting on October 23, 2019. Now Attached as **Exhibit 27** and incorporated  
22 herein by this reference is a true and correct copy of pages from the City's slide presentation  
23 titled Click! Surplus Declaration as presented at the TPU Board meeting on October 23, 2019.  
24 Public Hearing October 23, 2019. Item #1. This slide presentation is included by Defendant's  
25 own Declaration of Sorum, 12/12/19, In Support Of Defendant's MSJ, Pg. 199/394,  
26

1 28. Attached hereto as **Exhibit 28** and incorporated herein by this reference is a true and  
2 correct copy of the AGO Opinion I downloaded from the AGO office. Now Attached as Exhibit  
3 28 and incorporated herein by this reference is a true and correct copy of AGO Opinion, AGO  
4 2003 No. 11. December 15, 2003, as downloaded from the AGO office.

5 **End Of Shook Declaration 10-30-19**

6 **Shook Declaration 11-1-2019**

7 **Exhibit 29 is 2156 Pages Long and Not Included In This Master Declaration.**

8 I, Mitchell Shook, declare as follows: I am a resident of Tacoma, ratepayer of Tacoma  
9 Public Utilities, taxpayer to City of Tacoma, and customer of Click!, the municipal broadband  
10 telecommunications system operated by Tacoma Public Utilities. I am an expert in matters  
11 related to Click! Network and the ISP industry, with 20 years of experience working with Click!  
12 and other open access systems, in my role as Founder and CEO of Advanced Stream, an Internet  
13 Service Provider operating on Click! Network. I have personal knowledge of the matters set  
14 forth below.

15 1. Attached hereto as **Exhibit 29** and incorporated herein by this reference is a true and  
16 correct copy of the CLICK! BUSINESS TRANSACTION AGREEMENT, Click! Transition  
17 Plan (on page 26), INDEFEASIBLE RIGHT OF USE AGREEMENT (pages 38 – 162) with  
18 Exhibits, as I downloaded them from the TPU website on 10-29-19. This Exhibit 29 also  
19 contains assets identified in the “Execution Copy of the Click! Business Transaction Agreement  
20 (“CBTA”) and IRU, which is in Defendant's Declaration of Chris Bacha, 12/31/19, as Exhibit H.  
21 On page 77/208 of Mr. Bacha’s “Exhibit H,” node maps are cited as being contained on a “USB  
22 Drive” specifically. In Shook’s Decl. 11/1/2019, Exhibit 29, assets identified in the CBTA and  
23 IRU are shown, including Exhibit A2 System Assets, Exhibit A2.1 Fiber Schedule (Pg.  
24 165/2156), Exhibit A2.2 Node Maps (pg. 258/2156), Exhibit A2.3 Equipment Shown in Node  
25 Maps (BOM) (Pg. 406/2156), Exhibit A2.4 Routers and Equipment in Hub Sites (Pg. 916/2156),  
26 Exhibit A3.1 Hub Site Drawings (Pg. 926/2156), Exhibit A4 – Conduit Space License, is Exhibit

1 A2. Exhibit A6.1 Headend Site Drawing (pg 96/2156), Exhibit B1 Critical Routes, Exhibit B2  
2 Non-Critical Routes. Exhibit A6.2 - Head End Equipment, (Pg. 1119/2156)

3 Click!’s System contains “Ancillary Systems,” in Exhibit A3.2. (Shook Decl 11/1/19, (pg.  
4 949/2156), For example, there are Six Air Conditioning systems, 4ea 3-ton Mitsubishi Mr. slims  
5 with ceiling cassette indoor units, Six Fire Suppression Systems, Six backup Generator Sets +  
6 ATS, Cummins OSM11-G4 NR3, Engine ID # 35276711, Tank is 500-gallon model 45066, Six  
7 battery strings and inverter systems.

8 2. There was no Exhibit 30 in this Declaration. Everything was included in Exhibit 29. The  
9 Declaration is 2156 pages long and contains, node maps and essential assets and equipment of an  
10 entire municipal telecommunication system. Attached hereto as **Exhibit 30** and incorporated  
11 herein by this reference is a true and correct copy of the EXHIBITS “B” thru “P” for the Click!  
12 Business Transaction Agreement, as I downloaded them from the TPU website on 10-29-19.

13 **END OF SHOOK DECLARATION 11/1/2019**

14 **Shook Declaration 12-12-19**  
15 **Exhibits 30 To 66 (a)**

16 I, Mitchell Shook, declare as follows: I am a resident of Tacoma, ratepayer of Tacoma  
17 Public Utilities, taxpayer to City of Tacoma, and customer of Click!, the municipal broadband  
18 telecommunications system operated by Tacoma Public Utilities. I am an expert in matters  
19 related to Click! Network and the ISP industry, having over 20 years of experience working with  
20 Click! and other open access systems, in my role as Founder and CEO of Advanced Stream, an  
21 Internet Service Provider that operates on Click! Network. I am over the age of eighteen,  
22 competent to testify in this matter, and make this declaration on my own personal knowledge.

23 1 It is my experience that municipalities, when disposing of property acquired for utility  
24 purposes, to avoid the mandatory “vote” requirement under RCW 35.94.040 follow a process in  
25 Washington state that involves a bidding stage, which follows a surplus declaration and public  
26 hearing. In my experience, such surplus resolutions generally involves things that are no longer  
useful, like old trucks, computers, desks, file cabinets, weed-whackers, copy machines etc.

1 For example, the City of Duvall recently disposed of “Property originally purchased for utility  
2 purposes.” The notice of public hearing cites RCW 35.94.040.

3 Notice is hereby given that the City Council of the City of Duvall, Washington will hold  
4 Public Hearing at the Riverview Educational Service Center, 15510 1st Ave NE, Duvall,  
5 WA. at 7:00 p.m. or as soon as possible thereafter on October 1, 2019 regarding:

6 Property originally purchased for utility purposes that is either no longer needed for that  
7 use and / or past its useful life and the city desires to sell the property, pursuant to  
8 RCW35.94.040.

9 It is proposed that all items be disposed of to the general public by means of direct sales,  
10 sealed bid, trade-in, or auction, as determined to be in the best interests of the City by the  
11 Public Works Director and to the highest, responsible bidder.

12 I participated in that bidding process and found Duvall’s staff to be professional and  
13 courteous. Their actions represented the best practices for disposal of surplus utility property. I  
14 was successful with my winning bid for the hay rake! See my previous declaration in this case,  
15 under Shook Decl. 10/29/19 Ex. 19.

16 1.

17 2. Attached hereto as **Exhibit 30** and incorporated herein by this reference is a true and  
18 correct copy of the City’s April 14, 1997 Memorandum in the case approving establishment  
19 Click!. There were two Exhibit 30s in this record, by mistake. The other Exhibit 30 (was part of  
20 11-1-19 Shook Declaration, representing parts of the IRU agreement).

21 3. Attached hereto as **Exhibit 31** and incorporated herein by this reference is a true and  
22 correct copy of Click fiber plant slides, showing fiber, and tubes from City slide presentation.  
23 And plant totals Total Mileage, PLANT TOTALS from July 2014, as provided to me by the  
24 City. Now Attached as **Exhibit 31** and incorporated herein by this reference is a true and correct  
25 copy of Plant Totals that were provided to me as part of my public disclosure request.

26 3(a). Attached hereto as **Exhibit 31 (a)** and incorporated herein by this reference is a true and  
correct copy of Surplus Property Hearing from October 29th, 2019 Tacoma Council Meeting.

1 3.(b) Attached hereto as **Exhibit 31 (b)** and incorporated herein by this reference is a true and  
2 correct copy of Product Brochure from General Cable Titled: "Connecting the World" as  
3 downloaded from General Cable's website. ([www.generalcable.com](http://www.generalcable.com))

4 3.(c) Attached hereto as **Exhibit 31 (c)** and incorporated herein by this reference is a true and  
5 correct copy of IDC White Paper © 2017 IDC. [www.idc.com](http://www.idc.com) Titled: Digital Age 2025: The  
6 Evolution of Data to Life-Critical - Executive Summary and Conclusion

7  
8 3.(d) Attached hereto as **Exhibit 31 (d)** and incorporated herein by this reference is a true and  
9 correct copy of IDC White Paper Doc# US44413318 Titled The Digitization of the World –  
10 From Edge to Core: Executive Summary, "Mankind is on a quest to Digitize the world - From  
11 Edge to Core".

12 4. Attached hereto as **Exhibit 32** and incorporated herein by this reference is a true and correct  
13 Certified copy of a City of Tacoma of Resolution U-10828 of the Tacoma Public Utility Board  
14 confirming Charter 4.6 requirements for a vote of the people, with “Whereas” In Paragraph 4  
15 related to City Charter 4.6, which now includes a signed Certification of Authenticity stating that  
16 the attached exhibit is a true and correct copy of what it purports to be.

17 5. Attached hereto as **Exhibit 33** and incorporated herein by this reference is a true and correct  
18 copy of letters and legislative for RCW 35.94.040, with the 1972 legislative bill files for SB  
19 2835, including letters from City of Tacoma in support, as provided to me by the Washington  
20 State Archives. Now Attached as Exhibit 33 and incorporated herein by this reference is a true  
21 and correct copy of Certification Of Enrollment Substitute House Bill 2639 Chapter 198, Laws  
22 of 2008 : Amendment to Surplus Property Requirement., in Section (b) Within or without its  
23 boundaries, which has become unserviceable, inadequate, obsolete, worn out or unfit to be used  
24 in he operations of the system and which is no longer necessary, material to, and useful in such  
25 operations. : EFFECTIVE DATE: 06/12/08.

1 Now included and incorporated herein by this reference are true and correct copies of  
2 certificates of authenticity for Exhibits 33 (d) -(x), signed by Steve Excell, Custodian of Records  
3 for the Washington State Archives, and appearing in Exhibit 33 (d).

4 5. (a) Attached hereto as **Exhibit 33 (a)** and incorporated herein by this reference is a true and  
5 correct copy of the Washington State Session Laws, Chapter 390, 1955: Senate Bill 367 related  
6 to RCW 54.16.180 Public Utility Districts Sale, Lease, Conveyance of property.

7  
8 5. (b) Attached hereto as **Exhibit 33 (b)** and incorporated herein by this reference is a true and  
9 correct copy of the Washington State Session Laws, Chapter 143, 1945: House Bill 342 Page  
10 413 § 6 (M) related to Surplus of Municipal utility property Remington 9512-9514.

11 5. (c) Attached hereto as **Exhibit 33 (c)** and incorporated herein by this reference is a true  
12 and correct copy of the Washington State Session Laws, 1917, Chapter 137: House Bill 337 Page  
13 573 Titled: "Sale or Lease of Public Utilities Owned by Cities or Towns." - Approved by the  
14 Governor March 15th 1917.

15 5. (d) Attached hereto as **Exhibit 33 (d)** and incorporated herein by this reference is a true and  
16 correct copy of Report of Standing Committee, March 22nd, 1973. Washington State Senate Bill  
17 No 2835 authorizing an additional method for the disposition of certain property owned by  
18 municipal utilities. **Now included** and incorporated herein by this reference is a true and correct  
19 copy of the Certificate of Authenticity from the Custodian of Records for the Washington State  
20 Archives from Local Government Committee, (14 pages), 1973 Senate Bill No. 2835.

21  
22 5. (e) Attached hereto as **Exhibit 33 (e)** and incorporated herein by this reference is a true  
23 and correct copy of the Senate Bill No 2835 authorizing an additional method for the disposition  
24 of certain property owned by municipal utilities. See signed certificate for the Local Government  
25 Committee 1973 Senate Bill No. 2835, as a part of Exhibit 33 (d).

1 5. (f). Attached hereto as **Exhibit 33 (f)** and incorporated herein by this reference is a true and  
2 correct copy of the Washington State SENATE BILL NO. 2835 Read first time March 14, 1973,  
3 and referred to Committee. See signed Certificate as a part of Exhibit 33 (d)

4 5.(g). Attached hereto as **Exhibit 33 (g)** and incorporated herein by this reference is a true  
5 and correct copy of the Letter 3/20/1973 to: Washington ,State Legislature Re: Senate Bill 2835,  
6 from A. J. Benedetti Director of Tacoma Public Utilities on flexibility "consistent with that long  
7 enjoyed by Public Utility Districts under RCW 54.16.180," See signed Certificate as a part of  
8 Exhibit 33 (d).

9 5. (h) Attached hereto as **Exhibit 33 (h)** and incorporated herein by this reference is a true  
10 and correct copy of the Sign in sheet from March 22nd, 1973 for testifying on Washington State  
11 Senate Bill No. 2835 at the Local Government Committee. Short Title: Municipal Properties  
12 Disposal, See signed Certificate as a part of Exhibit 33 (d).

13 5. (i) Attached hereto as **Exhibit 33 (i)** and incorporated herein by this reference is a true and  
14 correct copy of the Amendment to Washington State Senate Bill 2835 By Senator Guess, See  
15 signed Certificate as a part of Exhibit 33 (d).

16 5.(j) Attached hereto as **Exhibit 33 (j)** and incorporated herein by this reference is a true and  
17 correct copy of the Minutes of the Washington State House Local Government Committee from  
18 April 7, 1973 hearing on ESB2835. *Now included* and incorporated herein by this reference is a  
19 true and correct copy of the Certificate of Authenticity from the Custodian of Records for the  
20 Washington State Archives from Local Government Committee, (20 pages), 1973 Senate Bill  
21 No. 2835.

22 5. (k). Attached hereto as **Exhibit 33 (k)** and incorporated herein by this reference is a true  
23 and correct copy of the REPORT TO Washington State SPEAKER'S OFFICE by Senators  
24 Rasmussen, Gardner, and T. Peterson Authorizing an additional method for the disposition of  
25 certain property owned by municipal utilities. Page2 "This is the same as HB 939 which was  
26

1 passed out of this committee on March 16. This bill offers cities a simpler way of disposing of  
2 property no longer needed for public utility purposes. The public interest is protected by the  
3 hearing process provided for." See signed Certificate as a part of Exhibit 33 (J).

4 5. (l). Attached hereto as **Exhibit 33 (l)** and incorporated herein by this reference is a true and  
5 correct copy of the Report by Washington State Committee on Local Government April 7th 1973  
6 Engrossed Senate Bill 2835 -with Memo re. ESB 2835 -by Steve Lundin. See signed Certificate  
7 as a part of Exhibit 33 (J).

8  
9 5. (m) Attached hereto as **Exhibit 33 (m)** and incorporated herein by this reference is a true  
10 and correct copy of the April 6th, 1973 Letter from James W. Guenther, Executive Secretary,  
11 Washington State Legislative Council, To Representative Joe D. Haussler, Chairman; regarding  
12 Senate Bill 2835. See signed Certificate as a part of Exhibit 33 (J).

13 5. (n). Attached hereto as **Exhibit 33 (n)** and incorporated herein by this reference is a true  
14 and correct copy of the Information regarding Washington State Senate Bill No. 2835 - related to  
15 Municipal utilities property, disposition. The bill will accomplish procedural flexibility in such  
16 transactions without repealing the formalized procedures required in the situations involving  
17 utility operating plant and properties. See signed Certificate as a part of Exhibit 33 (J).

5 **End Of Shook Declaration 12/12/19 Part 2**

6 **Shook Declaration 12-30-19**  
7 **Exhibits 68 to 90**

8 I, Mitchell Shook, declare as follows: I am a resident of Tacoma, ratepayer of Tacoma Public  
9 Utilities, taxpayer to City of Tacoma, and customer of Click!, the municipal broadband  
10 telecommunications system operated by Tacoma Public Utilities. I am an expert in matters  
11 related to Click! Network and the ISP industry, having over 20 years of experience working with  
12 Click!, and with other municipal open access systems, in my role as Founder and CEO of  
13 Advanced Stream, an Internet Service Provider that operates on Click! Network. Over these 20  
14 years I have obtained a tremendous amount of firsthand knowledge about Click! I am over the  
15 age of eighteen, competent to testify in this matter, and make this declaration on my own  
16 personal knowledge.

17 **1.** I consistently monitor Click!’s financial statements, on a monthly basis, and have done  
18 so since January 2012. From my careful consideration and detailed understanding of Click!’s  
19 financial information, which I have honed over these past 8 years in reviewing this information,  
20 it is my understanding and estimation that Click! is earning about \$4 million per year in profit  
21 from its operations, when viewed as an enterprise, without the burden of unrelated governmental  
22 “assessments.” My definition of “assessments are expenses unrelated to running the Click!  
23 enterprise. These profits from Click! operations offset costs for constructing and maintaining a  
24 network Tacoma Power requires for managing its power grid and substations. By sharing in  
25 these costs, Click! saves the electrical utility money. If called to testify, I can clearly show that  
26 Click! pays more than its fair share of such costs and taxes.

1 2. Click! has always been organized as separate entity, or Department, with its own General  
2 Manager and employee organization structure and Organization Chart. The City Finance  
3 Department prepares, and tracks Click!’s income and expenses separately, producing a monthly  
4 and annual “Operational Summary.” It never breaks out the financial numbers, tracking the  
5 performance of any other Tacoma Power divisions. I believe this is more evidence of the fact  
6 Click! provides a unique utility service and is a separate system. I have witnessed many  
7 examples of Click!’s telecommunications products being recognized, offered and operated as a  
8 separate utility within TPU. Click! has its own customer marketing and billing programs,  
9 separate from Tacoma Power and Tacoma Water. Click!’s customer service, customer care and  
10 payments center is provided separately from the TPU utility services, at a different counter,  
11 inside the lobby of TPU. Click! is even more separate than Tacoma Water and Tacoma Power,  
12 who share a common payment counter.

13 In addition to wholesale telecommunication service, TPU also provides wholesale water and  
14 power services. In 2018, TPU’s annual report showed wholesale power revenue of \$47 million  
15 and wholesale water revenue of \$3,253,029 in 2018. I have provided pages from the annual  
16 reports as in my Exhibit 75, below.

17 3. Through my many public records requests, related to Click!’s financial statements, I  
18 have uncovered documentation that shows, in the most recent biennium, Click! was burdened  
19 with an allocation of \$2.7 million in “assessments,” that appear as expenses on Click!’s operation  
20 summaries, but are not directly related to the provision of Click!’s telecommunications services.

21 4. In 2015, the cost allocation formulas, that distributes the direct operational, maintenance  
22 and capital costs for the network, between Tacoma Power and Click!, were revised. This resulted  
23 in shifting costs from Tacoma Power onto Click!. Previously there was an approximate 75% to  
24 25% split of costs, with Click! paying the 75% portions, but that changed in 2015, to a higher  
25 94% burden on Click!. The current ratio for sharing these costs remains at 94% for Click! and  
26 6% to Tacoma Power. The 2015 change in allocation formulas resulted in an additional \$5.7

1 million in annual expenses being shifted onto Click! beginning in 2015. That \$5.7 million  
2 number was reported in the TPU annual report for 2015.

3  
4 **5.** The need for Broadband is generally increasing, in Tacoma and worldwide. Click! users  
5 are transmitting more data, year over year. Click!’s revenue from broadband services is  
6 increasing. For example, in October 2017, Click! generated \$695,919 in Data Transport and  
7 Broadband revenues, increasing to \$768,573 in 2018. I have provided the Operations Summaries  
8 for Oct 17, and Oct. 18, below as Exhibit 76. Since 2015. Click! has returned to profitability,  
9 even with the unrelated interdepartmental “assessments” under governmental accounting  
10 methods, and even with the onerous 94% allocations from the 2015 allocation formulas  
11 adjustments. Additionally, it is my understanding that these formulas unfairly allocated general  
12 government’s costs onto Click!, since I-NET pays no share of the costs for maintaining TPU’s  
13 network, while I-NET uses 36 strands of backbone fiber, and Click!, only uses 12 strands. Yet,  
14 Click! suffers the burden of a 94% allocation.

15 **6.** It is also my understanding that these formulas and policies were put in place by Director  
16 Gaines in 2015 and had the result of disparaging Click!’s performance. I was at the meetings,  
17 where these were policies were implemented and also, later, when the financial results they  
18 produced were presented to City policy makers. The Director was later fired, after caught  
19 including unauthorized “inferred debt” expenses that concocted Click!’s “losses.” The Director  
20 used these losses to support his plan to negotiate a transfer of Click! to a private company, Wave  
21 Broadband, without City Council’s prior approval for such negotiations. Mr. Gaines presented  
22 those (“his”) “losses” to the media and to City Council, as if they were in fact real, and used  
23 them to support of his personal efforts to dispose of to Click!. The financial numbers were not  
24 accurate or real numbers. They were not produced by the City Finance Department. I was a  
25 firsthand witness to these presentations and the consequences.

26 **7.** After Director Gaines was fired, more information about his actions came out. In a 2019  
podcast interview, TPU Board Member Bryan Flint, described Director Gaines accounting

1 methods, and the Director's attempts to disparage Click!, by saying the Director had added in  
2 "everything and the kitchen sink" to make the numbers look bad. As a board member of TPU, I  
3 consider Mr. Flint's statements to be the admission of a party-opponent. I posted a video of  
4 Board Member Flint's comments on YouTube, *available* here: <https://youtu.be/8atnBaxl1Rk> .

5 **8.** Tacoma City Council Member Ibsen, in a public meeting, compared Director Gaines'  
6 actions to those of a "dishonest cashier" stealing from the register. As he is a City Council  
7 Member, I consider Mr. Ibsen's statements to be the admission of a party-opponent. I made a  
8 short video of that statement and posted it on YouTube, *available* here:  
9 [https://youtu.be/Vi7fA\\_dmqcU](https://youtu.be/Vi7fA_dmqcU).

10 **9.** It is my understanding and firm belief, based on a wide range of firsthand experiences  
11 and evidence I have obtained over many years, evidence much too extensive to list here, that a  
12 conspiracy indeed exists to destroy Click! Network and thereby eliminate municipal competition  
13 from the broadband market in Pierce County. That evidence is beyond the scope of this case, but  
14 worth noting, since it explains the reason why this case is here in the first place. If called on to  
15 explain this, I could easily testify for several days about the nature of the conspiracy, and provide  
16 my extensive firsthand evidence, which is in my possession, related to the scheme and the  
17 financial shenanigans to discredit Click!. This scheme, I should mention, extends to the  
18 backroom RFI process that has led to the privatization plan now before this Court. That process  
19 was particularly tainted by the inclusion of a sham bidder, Yomura Fiber, which my research and  
20 evidence reveals was not a real company with any capability or experience relevant to the RFI  
21 process; yet, City staff falsely represented to policymakers that Yomura as a bonified entity and  
22 viable finalist in the process.

23 **10.** I also know that influential, powerful, local political and private interests have conspired  
24 to destroy Click! for the benefit of their friends, who are in private competition with Click!'s  
25 municipal system, or similar systems now formed, and being formed, across our county. One  
26 example is Michael Crowley, a former mayor of Tacoma, who has opposed Click! for many

1 years. He has told me of his opposition. He is one of the Plaintiffs in the *Coates v City of Tacoma*  
2 case that attempted to shut Click! down. Mr. Crowley is friends with Leo Hindery, a powerful  
3 and influential cable industry pioneer. Mr. Hindery told me, in a personal phone call in 2015, of  
4 his opposition to Click! and public broadband generally. Mr. Hindery is well known to have  
5 opposed Click!, since before its creation. I spoke with Mayor Ebersol about the incident of Mr.  
6 Hindery coming to the Mayor's office and begging the Mayor to stop the creation of Click!  
7 Network. Mayor Ebersol confirmed the visit to his office, and Mr. Hindery's intense opposition  
8 to Click! at the time of its creation. Mr. Hindery was the president of TCI at the time, the  
9 incumbent cable company in Tacoma, which later became Comcast in Tacoma. Municipal  
10 competition represented a real threat to their business prospects. Mr. Steve Klein, who was  
11 Tacoma Power Superintendent during the planning, creation and construction of Click!, and is  
12 often referred to as the "Father of Click! Network" has confirmed my views and understanding  
13 these events on page 8 in his Sept. 26, 2017 deposition taken by David Jurca in connection with  
14 the Coates case. I have provided the pertinent pages of that deposition below, as **Exhibit 74**. In  
15 this deposition, Mr. Klein refers to the fact that he is sometimes considered the "Father of Click!  
16 Network."

17 **11.** In 2016, City Policy Makers declared they were unanimously committed to Click! and  
18 decided to go "All In", with TPU Board Resolution U-10879, passed on Sept 28, 2016.  
19 Subsequently, recognizing that Click! had never been properly audited, as an enterprise, and  
20 citing great uncertainty over the numbers, the City Council voted to conduct and audit, in  
21 Resolution 39577; but, that audit was never conducted or completed. At a City Council meeting  
22 in March 2019, Council Member Blocker asked City Attorney Fosbre why the audit had not been  
23 done. Mr. Fosbre responded by explaining that the audit could show losses greater than expected,  
24 which would be harmful to the City's defense in a lawsuit against the, *Coates v. Tacoma (2017)*,  
25 which was brought by Rate Payers seeking relief under the accountancy act. I consider this an  
26 admission of a party opponent and have posted those comments on YouTube. I also consider this  
another example of the fraud and bad faith surrounding City staff's efforts to disposing of the

1 system. Determining the proper value of the system, is an obvious step in disposing of any  
2 municipal asset. The exchange between Council Member Blocker and the City Attorney occurs  
3 at 47 seconds into this video: <https://youtu.be/s2zOqqLCT4M>

4 **12.** It is my understanding that the *Coates v. Tacoma*, lawsuit, was a primary reason for  
5 policymakers to initiate the RFI process, and seek information on alternative paths forward for  
6 Click!. City Council’s concerns over potential harm, represented by this lawsuit, was cited in the  
7 TPU Resolution U-10988 and Council Resolution No. 39930, which canceled the All In Plan. It  
8 is my understanding that the decision to pursue privatization of Click! Network was not based on  
9 any financial information, since no audit has ever been done to resolve the great concerns that  
10 were cited in the Audit Resolution 39577. No appraisal of the business has ever been completed,  
11 nor any evaluation of the market value of the Click! brand. The Click! brand was heavily  
12 promoted in the community for the past 20 years. In my estimations, the sponsorships, events  
13 and marketing budgets for these promotional efforts amounted to millions of dollars.

14 **13.** In the *Coates v Tacoma* Case, Pierce County Superior Court 17-2-08907-4, the City’s  
15 Attorney, Kari L. Vander Stoep, sought a Stay to prevent immediate enforcement of a partial  
16 summary judgment against the city in Superior Court. That Motion For Entry Of Cr 54(8)  
17 Findings And Final Judgment(S) And A Stay Of Litigation Or New Trial Date was filed on  
18 March 2, 2018. It asked the Court to stay enforcement of the court’s Order until the City's appeal  
19 has run its course. In the Proposed Findings attached to that motion, at Finding #8, there was this  
20 statement: “8). Given the magnitude of the issues in dispute and the ultimate outcome's effect on  
21 the City, Tacoma Power, and Click customers, the Court should also stay enforcement of the  
22 judgment on its Order until the City's appeal has run its course. If City were forced to promptly  
23 shut down Click, there would be an immediate negative impact on Click's customer base, which  
24 includes elderly, low-income, governmental, and student users who would suddenly be without  
25 service. In addition, Click would lose all of its customers, employees, and goodwill.” It is my  
26 understanding that the potential shutting down of Click!, described in this motion, compelled

1 Council to pursue the privatization of Click! Network. My understanding is that privatization  
2 represented a sort of “lifeline” for Click! and the customers, to avoid the dire outcome described  
3 in the City’s March 2, 2018 Motion.

4 **14.** It is my understanding that the City has never done a product line profitability analysis of  
5 Click! and has no idea if Click! is profitable or not. At the September 9<sup>th</sup>, 2019 oral argument in  
6 the Coates v. Tacoma case, Ken Masters, the attorney representing the City was asked by the  
7 Court if there were any disputed issues. Mr. Masters stated that losses were a disputed issue. The  
8 City won the appeal in the Coates case, so the issue of Click! profitability was never resolved by  
9 the case.

10 **15.** I participated in the RFI process and submitted the requested “information,” essential  
11 advising the City to “Stay the Course,” do an audit and collaborate with Pierce County to expand  
12 the network. There was no indication the City was looking for someone to completely take over  
13 the operation of Click! under a total privatization scheme. City officials, and their consultant,  
14 JoAnne Hovis, sought my advice on the best direction forward for Click!, and I provided my  
15 input into that process. The process was identified as an RFI/Q, there was no mention of a “P” or  
16 an “RFP.” The RFI/Q indicated that an RFP might be issued in the future. It was not apparent to  
17 me that City staff was seeking a proposal to take over the enterprise. I was not aware the City  
18 was selling Click!. Michael Lafreniere, who attended the meeting with me, where I presented  
19 my RFI response has signed a declaration saying that he also was unaware the City was  
20 attempting to sell Click! or soliciting offers for its acquisition. In my opinion there has was no  
21 bidding for Click! and the present privatization agreement cannot possibly represent fair value  
22 with a bidding process. There has certainly been no sealed bids or RFP since the surplus  
23 resolutions were passed declaring Click! as surplus. The process was particularly tainted by a  
24 fraudulent misrepresentations. Once example is Click!’s annual revenues in the RFI. The RFI  
25 indicated that Click! only had \$2.2 Million a year in annual revenue, when the actual amount is  
26 ten times that amount. This is more one example of City bad faith in pursuing a legitimate offer

1 or valuation of the System. Another example is that the RFI indicated, on page 5, under the  
2 Network Overview section, that Click! has been allocated 12 fiber strands in TPU's 180-count  
3 network backbone, using eight strands for the HFC network and four strands for commercial  
4 broadband services, yet the final IRU is set to convey 108 strands. Another example of the  
5 fraudulent process is the fact that the IRU waves all pole attachment charges, as I cited for the  
6 Court in my Shook Decl. 11/1/19, Ex. 29 Pg. 115/2156. This fact, that there were no pole  
7 attachment charges, was not disclosed to me. As a participant in this RFI process the fact all the  
8 strands of fiber were being considered for conveyance, and no pole attachment charges were  
9 expected, would have been important to know. This important information was not disclosed.

10 Further evidence of the conspiracy is the fact that I was never informed City would violate its  
11 own Resolution, which I included in my Declaration, Shook Decl. 12/12/19, Ex. 32. Pg. 1, Ln.  
12 20, confirming the City understood and resolved that a public vote over disposal of municipal  
13 utility assets was required under the City Charter. In responding to the RFI, I detrimentally relied  
14 on the City's assurance of a public vote. Knowing the popularity of the System, there is no  
15 chance such a vote would ever pass at the ballot. Click! is loved by the community, as shown by  
16 the City's own many surveys.

17 **16.** Attached hereto as **Exhibit 68** and incorporated herein by this reference is a true and  
18 correct copy of the American Public Power Association article, Multiservice utilities: A one-stop  
19 shop for communities. As downloaded by me, As seen 12/17/19, Available at:

5 a Request for Information for Click! and citing Resolution U-10988 related to the RFI for Click!  
6 Network

7 20 (a). Attached hereto as **Exhibit 72 (a)** and incorporated herein by this reference is a true  
8 and correct copy of City of Tacoma, Tacoma Public Utilities Request for Information and  
9 Qualifications for Partnership Arrangements for Tacoma Power's Click! Network

10 20 (b). Attached hereto as **Exhibit 72 (b)** and incorporated herein by this reference is a  
11 true and correct copy of Advanced Stream’s RFI response, “Stay The Course.”  
12

13 21. I have personally witnessed the Tacoma Public Utilities Board pass a resolution  
14 purchasing a router that cost approximately \$1 million dollars for Click! Network. Attached  
15 hereto as **Exhibit 73** and incorporated herein by this reference is a true and correct copy of the  
16 minutes from TPU Board meeting of Oct. 26, 2016, where such a router was purchased. Now  
17 included is a signed **Certificate** of the custodian of these records that the attached exhibit is a  
18 true and correct copy of what it purports to be..

19 **22.** Attached hereto as **Exhibit 74** and incorporated herein by this reference is a true and  
20 correct copies of pages from TPU Power Superintendent’s Steve Klein’s September 26, 2017  
21 Deposition, also, Mr. Klein’s Declaration from May 5, 1997, in support of City’s Reply Brief in  
22 Case 96-2-09938-0, that approved the funding of Click!. Now Attached as **Exhibit 74** and  
23 incorporated herein by this reference is a true and correct copy of the Declaration of Steven J.  
24 Klein in support of City's Reply, May 5, 1997, Case No 96-2-09938-0.

25 22. (a) Attached hereto as **Exhibit 74 (a)** and incorporated herein by this reference is a true  
26 and correct certified copy of excerpts from the Deposition of TPU Power Superintendent, Steve

1 Klein, from September 26, 2017, in the Pierce County Case No 17-2-08907-4, *Coates v Tacoma*;  
2 and, an email from Yom Litsup confirming this is “already certified”.

3 22. (b) Attached hereto as **Exhibit 74 (b)** and incorporated herein by this reference is a true  
4 and correct copies of Complaint for Declaratory, Injunctive, and Mandamus Relief – Title page  
5 showing Michael Crowley as plaintiff – *Coates v Tacoma*

6  
7 22. (c) Attached hereto as **Exhibit 74 (c)** and incorporated herein by this reference is a true  
8 and correct copies of Newspaper Article 2001 ATT: Don’t be like Tacoma by Joe Estrella, April  
9 1st, 2001 last seen: 12/18/2019 available at: [https://www.multichannel.com/news/att-dont-be-](https://www.multichannel.com/news/att-dont-be-tacoma-151797)  
10 [tacoma-151797](https://www.multichannel.com/news/att-dont-be-tacoma-151797) also *archived at*: <https://perma.cc/A63K-Z73K>

11 23. Attached hereto as **Exhibit 75** and incorporated herein by this reference are true and  
12 correct copies of: ( 1.) a page from Click! Network Asset Study from 2013, that I obtained from  
13 TPU through my public disclosure request. This page came from the Click! Asset and Expense  
14 Allocations, 3/18/13 and was produced by Rates, Planning & Analysis (RPA) along with staff  
15 members of Click! and Utility Technology Services (UTS) who performed a study of the assets  
16 and expense allocations shared between Tacoma Power and Click! and a true and correct copy of  
17 the System’s Capital Budget for the 2017-2018 biennium;.; also, ( 2.) a Click! Network  
18 Operations Update from February 2019, stating “FTTH trim out work installing 135 smart panel  
19 covers at the “Napoleon” were completed and building 5 at “Orchard Street Apartments” had  
20 micro ducts installed”; and also, ( 3.) Click! Network Operations Update from October 25, 2017,  
21 with a statement related to “The Grand” Apartment building on page 1, disclosing “We used  
22 41,000 feet of coax and 41,000 feet of CAT5-E to run 296 strikes into each unit along with  
23 running 1,064 outlets specific to the interior of the units;” also, ( 4.) and finally, is a true and  
24 correct copy, of a Click! Network Operations Update for March 27, 2018. Referring to “creating  
25 records for HFC Distribution optical equipment assets in SAP. An individual record will be  
26 created for each of the 814 optical devices from each of the four HFC hubs and the Headend.”  
These documents were provided to me by the defendant thru my public record request. It is my

1 understanding that a System of this size, if built today, would costs approximately \$900 million;  
2 also, over \$200 MM was spent to construct the System; and, there remained \$8,068,961 in  
3 “book value” of existing capital assets remaining to be depreciated as of 12/31/2018. That  
4 amount was provided to me by TPU in response to my public records request # T003054-  
5 080119; also, I have included the wholesale water and power figures as pages 19 and 20. Now  
6 Attached as **Exhibit 75** and incorporated herein by this reference is a true and correct copy of  
7 Attachment A to a May 12, 2015 Memorandum from Bill Berry, Rates, Planning and Analysis  
8 Manager to Chris Robinson, Tacoma Power Superintendent. Subject: Click! Network Cost  
9 Center Allocation Update. Click! Network Asset Study (2013) Page A-4 of Click Asset and  
10 Expense Allocations 3/18/13.

11 23. (a) Attached hereto as **Exhibit 75 (a)** and incorporated herein by this reference are true  
12 and correct copies of Click! Network Operations Update from February 2019

13 23. (b) Attached hereto as **Exhibit 75 (b)** and incorporated herein by this reference are true  
14 and correct copies of 2019/2020 Tacoma Power Capital Budget

15 23. (c) Attached hereto as **Exhibit 75 (c)** and incorporated herein by this reference are true  
16 and correct copies of Click! Network Operations Update from October 25, 2017

17 23. (d) Attached hereto as **Exhibit 75 (d)** and incorporated herein by this reference are true  
18 and correct copies of Click! Network Operations Update for March 27, 2018

19 23. (e) Attached hereto as **Exhibit 75 (e)** and incorporated herein by this reference are true  
20 and correct copies of 2018 Tacoma Power and Water Superintendent’s report – Wholesale

21 24. Attached hereto as **Exhibit 76** and incorporated herein by this reference are true and  
22 correct copies of the Click! monthly Operational Summary for August, Sept. and Oct. 2019.  
23 Also, Oct. 2018, for comparison. On the August summary, I have included the purple arrows and  
24 comments for emphasis and explanation to represent my understanding of these statements. I  
25 have carefully reviewed these monthly statements for many years and conducted hundreds of  
26 public record requests to obtain the underlying material that comprises these Operational

1 Summaries; also, a screen shot of the Purple Perks Program for Click! Customers. Now Attached  
2 as **Exhibit 76** and incorporated herein by this reference is a true and correct copy of Click!  
3 monthly Operational Summary for August 2019, as obtained from the City of Tacoma webpage,  
4 at [https://www.cityoftacoma.org/government/city\\_departments/finance/financial\\_reports](https://www.cityoftacoma.org/government/city_departments/finance/financial_reports) , also as  
5 a permalink, available at: <https://perma.cc/638F-57Q9>

6 24 (a). Attached hereto as **Exhibit 76 (a)** and incorporated herein by this reference is a true and  
7 correct copy of the Click! monthly Operational Summary for Sept., 2019. Last accessed  
8 [10/29/19, Available here:](https://www.cityoftacoma.org/UserFiles/Servers/Server_6/File/cms/Finance/Financial_Reports/Monthly/09_19Power.pdf)  
9 [https://www.cityoftacoma.org/UserFiles/Servers/Server\\_6/File/cms/Finance/Financial\\_Reports/](https://www.cityoftacoma.org/UserFiles/Servers/Server_6/File/cms/Finance/Financial_Reports/Monthly/09_19Power.pdf)  
10 [Monthly/09\\_19Power.pdf](https://www.cityoftacoma.org/UserFiles/Servers/Server_6/File/cms/Finance/Financial_Reports/Monthly/09_19Power.pdf) , also Available at archive version: <https://perma.cc/6G5D-3BZP> .

11 24 (b). Attached hereto as **Exhibit 76 (b)** and incorporated herein by this reference is a true  
12 and correct copy of the Click! monthly Operational Summary for Oct. 2019. Available at my  
13 archived version <https://perma.cc/2WLX-T9E6> ; Also, for a year over year comparison, I in this  
14 exhibit, I have also provided a true and correct copy of the Click! monthly Operational Summary  
15 for October, 2018.

16 24 (c). Attached hereto as **Exhibit 76 (c)** and incorporated herein by this reference is a true  
17 and correct copy of a screenshot I took of the Purple Perks Program for Click! Customers.  
18 Available at my archived version, <https://perma.cc/758H-BJ7U> .

19 25. Attached hereto as **Exhibit 77** and incorporated herein by this reference are true and  
20 correct copies of pages FCC’s Connecting America: The National Broadband Plan adopted Mar.  
21 15, 2010. As seen on my visit, on 12/18/2019, which was available then at:  
22 <https://transition.fcc.gov/national-broadband-plan/national-broadband-plan.pdf> ; and I preserved  
23 an archive copy, available at: <https://perma.cc/UY85-MVQX> .

24 26. Attached hereto as **Exhibit 78** and incorporated herein by this reference are true and  
25 correct copies of documents explaining the Herfindahl-Hirschman Index (“HHI”). This is a  
26

1 report by Adil Abdela and Marshall Steinbaum "The United States has a Market Concentration  
2 Problem." I have provided this to explain the Herfindahl-Hirschman Index ("HHI"). This is as I  
3 downloaded it on: 12/18/2019, as then available at: [content/uploads/2018/09/The-United-States-has-a-market-concentration-problem-brief-final.pdf](https://rooseveltinstitute.org/wp-</a></u><br/>4 <u><a href=),  
5 I saved an archive copy, available at: <https://perma.cc/4ZFY-J5RX> .

6 26. (a). Attached hereto as **Exhibit 78 (a)** and incorporated herein by this reference are true and  
7 correct copies of FTC and DoJ horizontal merger guidelines Issued: August 19, 2010; as I  
8 downloaded it on: 12/18/2019, as then available at:  
9 <https://www.justice.gov/sites/default/files/atr/legacy/2007/08/14/hmg.pdf> ; I saved an archive  
10 copy, available at: <https://perma.cc/4EBT-9HE8> .

11 **27.** Attached hereto as **Exhibit 79** and incorporated herein by this reference are true and  
12 correct copy of a Letter Agreement for the Salishan Demand Response Water Heater Project.  
13 The project operated over Click! Network's DOCSIS telecommunication plant.

14 **28.** Attached hereto as **Exhibit 80** and incorporated herein by this reference are true and  
15 correct copy of Honorable Homer T. Bone Letter on Power Struggles -as published in the  
16 Congressional Record. This was published in 1944. I have also provided enlargements of  
17 Exhibit 80, for ease of reading. Also, I have included addition papers related to Honorable Judge  
18 Bone, and these are individually identified in sub-parts of this paragraph under Exhibit 80 (a)  
19 through Exhibit 80 (c)

20 28 (a). Attached hereto as **Exhibit 80 (a)** and incorporated herein by this reference is a true  
21 and correct copy of a July 1, 1926 Honorable Homer T. Bone's letter from Judge Bone's  
22 personal papers. This is the "Thorne Interview" and was obtained by me during my personal visit  
23 to the Collins Library at the University of Puget Sound ,Archives & Special Collections room, in  
24 2019. . A description of the library's collection is available online, as last visited on December  
25

1 17, 2019 at: <https://blogs.pugetsound.edu/collinsunbound/from-the-archives-homer-t-bone/>,  
2 also, my archived copy of this webpage is available at: <https://perma.cc/QN5X-HJBP>.

3 28 (b). Attached hereto as **Exhibit 80** (b) and incorporated herein by this reference is a true  
4 and correct copy of Honorable Homer T. Bone’s personal papers, showing a July 13th 1926  
5 memo related to “Norwood Brockett, as obtained by Mitchell Shook's personal visit to the  
6 University of Puget Sound Collins Memorial Library, Archives & Special Collections room in  
7 2019.

8  
9 28 (c). Attached hereto as **Exhibit 80** (c) and incorporated herein by this reference is a true  
10 and correct copy of a memo from Hon. Homer T. Bone’s personal papers June 13th 1926, related  
11 to George Vanderveer’s visit, as obtained by Mitchell Shook's personal visit to the University of  
12 Puget Sound Collins Memorial Library, Archives & Special Collections room in 2019

13 **29.** . On July 5th, 2019 I visited the Washington State Law Library at the Temple of Justice  
14 Building in Olympia, Washington looking for information related to the history of Chapter 35.94  
15 RCW. On that day, with the expert assistance of Laura Edmonston, Deputy Law Librarian in the  
16 Reference Section, I found the origins of RCW 35.94 in the Session Laws of 1917, specifically,  
17 in House bill No. 337, entitled “Sale or Lease of Public Utilities Owned by Cities or Towns.”

18 The Bill was printed in Laws of Washington 1917, as Chapter 137, and became codified as  
19 Remington’s Revised Statutes (“RRS”) 1917 c 137 §§ 9512–14. Attached hereto and  
20 incorporated herein by this reference as **Exhibit 81**, are true and correct copy of photos I took  
21 that day of House bill No. 337, along with published version of RRS 1917 c 137 §§ 9512–14,  
22 and a photo of me at the table in the library with some of the many books associated with my  
23 research that day, also a copy (photo) of a letter dated December 1, 1946, from the Code  
24 Revision and Recompilation Committee, with the addition of a purple arrow and yellow  
25 highlight, which I have added to point out the relevant language. The letter cites authority  
26 granted to the Code Committee, under Chapter 252, Laws of 1943 and Chapter 233, Laws of  
1945, specifically to: “propose and submit to the legislature changes and revisions of the general

1 and permanent laws of the state.” Also, the Letter explains that the “revisors notes” associated  
2 with this effort would have “three columns”, with the first column being “the section number of  
3 the proposed code”, the second column being the “section or sections of Remington’s Revised  
4 Statutes from which each new code section is derived.

5 The third column contains the catch-line of each section as set forth in the revision itself,  
6 together with the revisor’s explanation in parenthesis of the “major changes made in the course  
7 of revision.” (emphasis added).

8 This December 1st letter, cites an “inability to get paper” and indicates the “revision work”  
9 would be published in two volumes, so part of it could be sent out and “give “maximum time,  
10 preceding the next legislative session, for examination of the work done”.

11 Also attached are correct copies (photos) of the Binder of “Volume 2” displaying the words:  
12 “Revised Code of Washington Titles 46-End; and, the cover of the Revisors Notes for Volume 2;  
13 and, page 80-1 from the Revisors Notes for Volume 2 showing the “three columns” as described  
14 in the above mentioned December 1, 1946 letter; and; page 80-7 from the Revisors Notes for  
15 Volume 2 with the columns related to Remington Revised Statutes (“RRS”) §§ 9512–14 “Sale  
16 Or Lease Of Municipal Utilities,” including “column three” adjacent to RRS §9512 with the  
17 “revisor’s explanation in parenthesis” containing the statement “Rewritten for brevity.”

18 Also attached are copies (photos) of the binder of the 1951 edition of the Revised Code of  
19 Washington Volume 6 Title 79-91, and, a page from that publication showing the final results of  
20 the recodification of Rem. Rev. Stat. 1917 c 137 § 1; §9512 into RCW 80.48.010.

21 Also, I have included, for the Court’s convenience, Chapters 149 Laws of 1941, Chapter 252  
22 Laws of 1943, Chapter 233 Laws of 1945, related to the establishment of the Code Committee.

23 Now Attached as **Exhibit 81** and incorporated herein by this reference . On July 5th, 2019 I  
24 visited the Washington State Law Library at the Temple of Justice Building in Olympia,  
25 Washington looking for information related to the history of Chapter 35.94 RCW. All of the  
26 following documents are individually identified in the sub-paragraphs 29 (a) through 29 (f)  
below, which contain Exhibits 81 (a) to 81 (f). On that day, with the expert assistance of Laura

1 Edmonston, Deputy Law Librarian in the Reference Section, I found the origins of RCW 35.94  
2 in the Session Laws of 1917, specifically, in House bill No. 337, entitled “Sale or Lease of  
3 Public Utilities Owned by Cities or Towns.”

4 The Bill was printed in Laws of Washington 1917, as Chapter 137, and became codified as  
5 Remington’s Revised Statutes (“RRS”) 1917 c 137 §§ 9512–14. Attached hereto and  
6 incorporated herein by this reference as **Exhibit 81**, are true and correct copy of an excerpt from  
7 the Laws of 1965 which I understand is related to the History of RCW 35.94.040 Surplus Statute  
8 -- these are the Session Laws History 1965 Ch 7, 1943 Ch 252, 1941 Ch 149 .

9 29 (a), Attached hereto as **Exhibit 81** (a) and incorporated herein by this reference is a true  
10 and correct copy of the State of Washington, Session Law 1945, Ch 233, pg 651.

11 29 (b), Attached hereto as **Exhibit 81** (b) and incorporated herein by this reference is a true  
12 and correct copy of photograph I took of the printed bills of the legislature 15th Session of the  
13 House. House bill No. 337.

14 29 (c), Attached hereto as **Exhibit 81** (c) and incorporated herein by this reference is a true  
15 and correct copy of photographs I took the published version of RRS 1917 c 137 §§ 9512–14.

16 29 (d), Attached hereto as **Exhibit 81** (d) and incorporated herein by this reference is a true  
17 and correct copy (photo) of a letter dated December 1, 1946 from the Code Revision and  
18 Recompilation Committee, with the addition of a purple arrow and yellow highlight, which I  
19 have added to point out the relevant language. It is my understanding that the letter cites  
20 authority granted to the Code Committee, under Chapter 252, Laws of 1943 and Chapter 233,  
21 Laws of 1945, specifically to: “propose and submit to the legislature changes and revisions of the  
22 general and permanent laws of the state.” Also, the Letter explains that the “revisors notes”  
23 associated with this effort would have “*three columns*”, with the first column being “the section  
24 number of the proposed code”, the second column being the “section or sections of Remington’s  
25 Revised Statutes from which each new code section is derived.

1 It is my understanding that The third column contains the catch-line of each section as set  
2 forth in the revision itself, together with the revisor’s explanation in parenthesis of the “*major*  
3 *changes made in the course of revision.*” (emphasis added).

4 It is my understanding that This December 1st letter, cites an “inability to get paper” and  
5 indicates the “revision work” would be published in two volumes, so part of it could be sent out  
6 and “give “maximum time, preceding the next legislative session, for examination of the work  
7 done”. Also attached is a correct copies (photos) of the Binder of “Volume 2” displaying the  
8 words: “Revised Code of Washington Titles 46-End;

9  
10 29 (e), Attached hereto as **Exhibit 81** (e) and incorporated herein by this reference is a true and  
11 correct copy of photographs of pages from the Revisors Notes for Volume 2, related to  
12 Remington Revised Statutes (“RRS”) §§ 9512–14 “Sale Or Lease Of Municipal Utilities,”  
13 including “column three” adjacent to RRS §9512 with the “reviser’s explanation in parenthesis”  
14 containing the statement “Rewritten for brevity” on Page 80-7; and, the cover of the Revisors  
15 Notes for Volume 2; and, page 80-1 from the Revisors Notes for Volume 2 showing the “three  
16 columns” as described in the above mentioned December 1, 1946 letter; and; page 80-7 from the  
17 Revisors Notes for Volume 2 with the columns related to Remington Revised Statutes (“RRS”)  
18 §§ 9512–14 “Sale Or Lease Of Municipal Utilities,” including “column three” adjacent to RRS  
19 §9512 with the “*revisor’s explanation in parenthesis*” containing the statement “Rewritten for  
20 brevity.”

21 29 (f), Attached hereto as **Exhibit 81** (f) and incorporated herein by this reference is a true and  
22 correct copy of photographs of the Revised Code of Washington Volume 6 1951 Edition  
23 Showing Chapter 80.48 RCW ; and, a photo of me at the table in the library with some of the  
24 many books associated with my research that day. Also attached are copies (photos) of the binder  
25 of the 1951 edition of the Revised Code of Washington Volume 6 Title 79-91, and, a page from  
26 that publication showing the final results of the recodification of Rem. Rev. Stat. 1917 c 137 § 1;  
§9512 into RCW 80.48.010.

1 It was also my intention to include, for the Court's convenience, Chapters 149 Laws of 1941,  
2 Chapter 252 Laws of 1943, Chapter 233 Laws of 1945, related to the establishment of the Code  
3 Committee. But those documents were inadvertently left out of my December 30 2019  
4 Declaration and are available online.

5 **30.** Attached hereto as **Exhibit 82** and incorporated herein by this reference is a true and  
6 correct copy of my Email to Council, informing them of failure to follow surplus process, along  
7 with the surplus information from Duvall's surplus of property under RCW 35.94.040.

8 **31.** Attached hereto as **Exhibit 83** and incorporated herein by this reference is a true and  
9 correct copy of Click!'s website as taken from the Wayback project. I personally saw these pages  
10 at the time they were live, and they are correct representations of Click!'s site at that time.

11 **32.** Attached hereto as **Exhibit 84** and incorporated herein by this reference is a true and  
12 correct copy of City of Tacoma's MOTION to STAY in *Coates* Mar. 2 18 Order -Shut It Down.  
13 Case No.17-2-08907-4

14 **33.** Attached hereto as **Exhibit 85** and incorporated herein by this reference is a true and  
15 correct copy of Tacoma City Council Ordinance 26141., to which I have attached a Certificate. It  
16 includes the attached Organization Chart.

17 **34.** The 12/12/19 Declaration of Tenzin Gyaltzen, Mr. Gyaltzen erroneously indicates, in ¶¶  
18 12 and 13, that there are three ISPs operating over Click! Network, when in fact there are  
19 currently only two independent ISPs, Advanced Stream and Rainier Connect, operating over  
20 Click! Network. Net Venture was an ISP, but their website was taken down when Rainier  
21 Connect acquired operational control of Net Venture in 2015. Click! is aware of this  
22 combination. Attached hereto as **Exhibit 86** and incorporated herein by this reference is a true  
23 and correct copies of screenshots from Rainier Connects website announcing the consolidation  
24 and a letter sent by Tenzin Gyaltzen to Net Venture in October 2015, regarding this issue.  
25  
26

1 **35.** Attached hereto as **Exhibit 87** and incorporated herein by this reference is a true and  
2 correct copies of page from King County’s Utility Franchise Application page.

3 **36.** Attached hereto as **Exhibit 88** and incorporated herein by this reference are true and  
4 correct copies of the Complaint and other briefs and declarations in the 1996 and 1997 Superior  
5 Court case that established Click! is a utility system. This is provided to support the estoppel  
6 claim and further support the fact that Click! is a communications utility and municipal utility  
7 property, not a service or asset of Tacoma’s general government. Now Attached as **Exhibit 88**  
8 and incorporated herein by this reference is a true and correct copy of Superior Court Pierce  
9 County Case No. 96-2-09938-0. City of Tacoma v The Taxpayers and Ratepayers of the City of  
10 Tacoma. Complaint for Declaratory Judgement

11 **36. (a)** Attached hereto as **Exhibit 88 (a)** and incorporated herein by this reference are true  
12 and correct copies of November 6th 1996. Memorandum in Support of City's MSJ Superior  
13 Court Pierce Co. No. 96-2-09938-0. City of Tacoma v The Taxpayers.

14 **36. (b)** Attached hereto as **Exhibit 88 (b)** and incorporated herein by this reference are true  
15 and correct copies of November 6th 1996. Declaration of Jon Athow in Support of MSJ Superior  
16 Court Pierce County Case No. 96-2-09938-0. City of Tacoma v The Taxpayers.

17 **36. (c)** Attached hereto as **Exhibit 88 (c)** and incorporated herein by this reference are true and  
18 correct copies of December 3rd, 1996. Defendants' Responsive Memorandum in Opposition to  
19 City of Tacoma's MSJ Superior Court Pierce County Case No. 96-2-09938-0. City of Tacoma v  
20 The Taxpayers and Ratepayers of the City of Tacoma.

21 **36. (d)** Attached hereto as **Exhibit 88 (d)** and incorporated herein by this reference are true  
22 and correct copies of December 13th, 1996. Order Granting City of Tacoma's MSJ Superior  
23 Court Pierce County Case No. 96-2-09938-0. City of Tacoma v The Taxpayers and Ratepayers  
24 of the City of Tacoma. This is Certified by the fact it is also included in Defendant’s Sloan  
25 Declaration of 11/22/19, Exhibit E, or Page 99/506.  
26

1 **36. (e)** Attached hereto as **Exhibit 88 (e)** and incorporated herein by this reference are true  
2 and correct copies of April 14th 1997. Memorandum in Support of City of Tacoma's MSJ  
3 Superior Court Pierce County Case No. 96-2-09938-0. *City of Tacoma v The Taxpayers.*

4 **36. (f)** Attached hereto as **Exhibit 88 (f)** and incorporated herein by this reference are true  
5 and correct copies of April 14th, 1997 Memorandum in Support of City of Tacoma's MSJ  
6 Superior Court Pierce County Case No. 96-2-09938-0. *City of Tacoma v The Taxpayers.*

7  
8 **36. (g)** Attached hereto as **Exhibit 88 (g)** and incorporated herein by this reference are true  
9 and correct copies of April 14th, 1997. Second Declaration of Jon Athow in Support of MSJ  
10 Superior Court Pierce County Case No. 96-2-09938-0. *City of Tacoma v The Taxpayers.*

11 **36. (h)** Attached hereto as **Exhibit 88 (h)** and incorporated herein by this reference are true  
12 and correct copies of May 9th, 1997. Defendant's Responsive Memorandum in Opposition to  
13 City of Tacoma's MSJ Superior Court Pierce County Case No. 96-2-09938-0. *City of Tacoma v*  
14 *The Taxpayers and Ratepayers of the City of Tacoma. Hearing Date:*

15 **36. (i)** Attached hereto as **Exhibit 88 (i)** and incorporated herein by this reference are true  
16 and correct copies of May 5th, 1997 City of Tacoma's Reply Brief Superior Court Pierce County  
17 Case No. 96-2-09938-0. *City of Tacoma v The Taxpayers and Ratepayers of the City of Tacoma.*  
18 This is also included in Defendant's Sloan Declaration of 11/22/19, Exhibit E, pg. 102/506.

19  
20 **36. (j)** Attached hereto as **Exhibit 88 (j)** and incorporated herein by this reference are true  
21 and correct copies of May 5th, 1997 Declaration of Steven J. Klein in Support of City's Reply  
22 Superior Court Pierce County Case No. 96-2-09938-0. *Tacoma v Taxpayers of Tacoma.*

23 **36. (k)** Attached hereto as **Exhibit 88 (k)** and incorporated herein by this reference are true  
24 and correct copies of May 9th, 1997 Order Granting City of Tacoma's MSJ-Superior Court  
25 Pierce County Case No. 96-2-09938-0. *City of Tacoma v The Taxpayers Tacoma. Also, this is*  
26 *included in twice in Def.'s Sloan Decl. of 11/22/19, Exhibit F, pg. 109/506.*

1 **36. (L)** Attached hereto as **Exhibit 88 (L)** and incorporated herein by this reference are true  
2 and correct copies of December 9th 1996 City of Tacoma's Reply Brief- Superior Court Pierce  
3 County Case No. 96-2-09938-0. City of Tacoma v The Taxpayers of the City of Tacoma.

12 *Defendant's Motion for Partial Summary Judgment on the Nature of Any Mandamus Relief*

13 **39.** If the proposed privatization of Click! Network is allowed to proceed; it is my  
14 understanding that my company, Advanced Stream will be forced out of business and my  
15 customers will be taken away by a direct competitor; also, that Advanced Stream's proprietary  
16 customer list would fall into the hands of Rainier Connect, the only other direct competitor on  
17 Click! Network; also, Rainier Connect would be operating the System and setting Advanced  
18 Stream's rates; also, that this scenario allows Rainier Connect, a direct competitor, to run  
19 Advanced Stream out of business and take Advanced Stream's customers, monopolizing the  
20 public's broadband system for up to 40 years; also, that my customers could lose their Email  
21 addresses and personal webspace, which we provide for them; and, their phone and other  
22 essential services could be disrupted. Some of our customers are on medical equipment, like  
23 heart monitoring devices. An interruption in services could be life threatening.

24 **END OF 12/30/19 DECLARATION OF MITCHELL SHOOK**

1 **CONCLUSION OF SHOOK'S MASTER DECLARAION**

2 In this Mater Declaration I have organized, documented, authenticated and provided  
3 certificates of authenticity for the essential Exhibits in my previous declarations, as cited herein.  
4

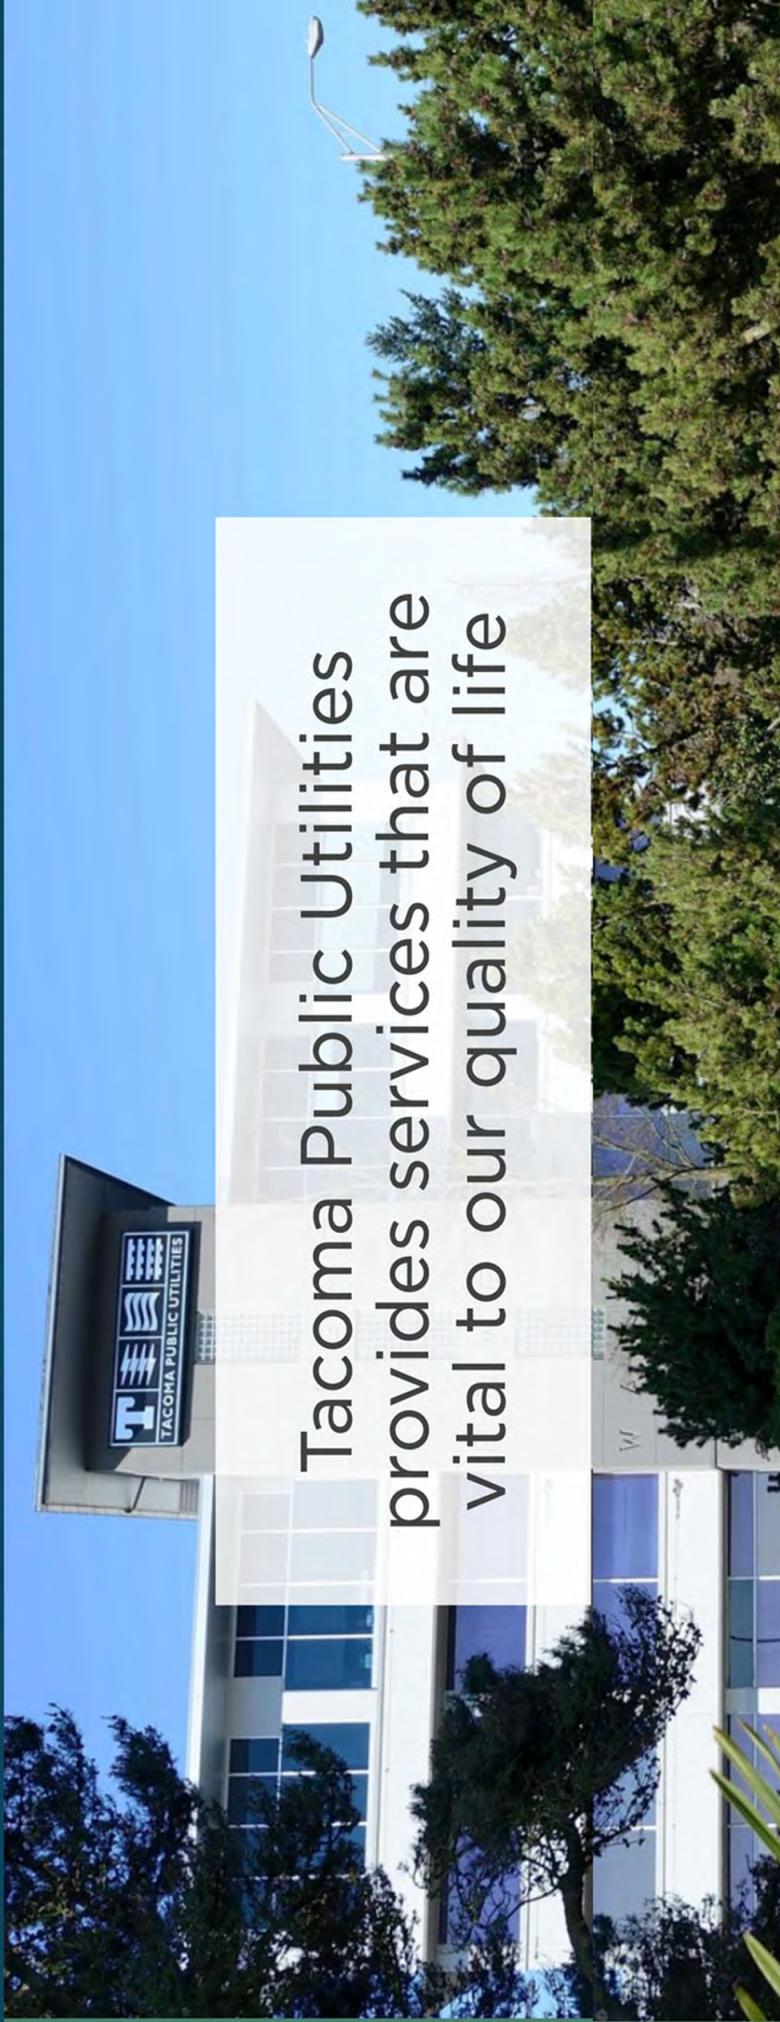

5 I declare under the penalty of perjury under the laws of the State of Washington that the  
6 foregoing is true and correct.

7 DATED this 22<sup>nd</sup> day of January 2020, at Tacoma, Washington.

# Our Services

## Power

Tacoma Power provides electric service to the city of Tacoma, Fircrest, University Place, Fife, parts of Steilacoom, Lakewood, Joint Base Lewis-McChord, and unincorporated Pierce County as far south as Roy.

## Water

Tacoma Water provides clean, reliable water to more than 300,000 people throughout Pierce and King counties and is one of the country's oldest municipally owned water systems.

## Rail

Tacoma Rail has provided rail transportation and key freight connections for customers in the greater Tacoma area since 1914. We currently serve 65 customers within three operating districts in Pierce, Thurston, and Lewis counties.

## Click! Cable Network

Click! Network is an operating section of Tacoma Power and a multi-service broadband telecommunications provider within the electric company's service area.

# About Click!

## Company

Click! Network is an operating section of Tacoma Power and a multi-service broadband telecommunications provider within the electric company's service area.

## Vision

**To be known for excellence in:**

- People – professionals committed to the highest level of customer service and satisfaction, who create and maintain a team environment in which trust, respect, honesty and dignity are valued.
- Products and services – specifically designed to meet and exceed our customer needs through innovative uses of technology.
- Performance – a technically superior network designed and maintained to serve both current and future telecommunications needs of Tacoma Power and of Click! Network customers.

## Mission

To develop and deliver to all Tacoma Power customers innovative products and services made possible by the convergence of telecommunications and electric technologies.

## Ownership

Click! Network is one of the largest municipally-owned telecommunications systems in the country and part of the City of Tacoma's Department of Public Utilities.

# EXHIBIT 1 (e)

# High Speed Internet, Powered By Click!

Click!'s Internet Service Provider partners provide fast and reliable internet throughout Tacoma and Pierce County. Connect all your devices in every room, with the fast speeds you need.

SELECT INTERNET PLAN

## The Choice is Yours

Click! partners with two local Internet Service Providers to connect your internet service.

**Advanced Stream** and **Rainier Connect** offer a variety of speed and pricing options to best fit your internet needs and the flexibility to select the right plan for you.

SELECT A PROVIDER

## Internet at the Speed of Life

The Click! Network enables speeds up to 100Mbps. With that kind of speed you can quickly and easily download large files and videos, watch movies, or play games, plus connect multiple devices simultaneously, without slowing down.

State of Washington, County of Pierce  
My commission expires 10-8-21

## RESOLUTION NO. U-11116

1 A RESOLUTION relating to Tacoma Power; declaring surplus utility-owned property  
2 including certain inventory, equipment and vehicles allocated to the Click!  
3 Network together with the Excess Capacity of the Tacoma Power HFC  
4 Network, part of which is used by what is commonly referred to as the Click!  
5 Agreement by and between Tacoma Power and Mashell, Inc., d/b/a Rainier  
6 Connect and Rainier Connect North LLC.

7 WHEREAS in the mid-1990s, the City of Tacoma, Department of Public  
8 Utilities, Light Division (d.b.a. "Tacoma Power") determined that the best option  
9 to address the shifting advance in telecommunications in the electric utility  
10 industry landscape was to construct a hybrid fiber coaxial ("HFC")  
11 telecommunications network ("HFC Network"), and

12 WHEREAS on July 23, 1996, the Tacoma City Council passed Ordinance  
13 No. 25930, approving Tacoma Power's proposal to establish and create the HFC  
14 Network as part of Tacoma Power's electric utility infrastructure, allowing  
15 Tacoma Power to, among other things, connect its generation, distribution, and  
16 transmission assets and support the eventual adoption of smart meters and  
17 further, to use the excess capacity of the HFC Network to: (1) sell retail cable  
18 television service to Tacoma Power's electric customers, and (2) sell data  
19 transport and wholesale internet access services to Internet Service Providers  
20 ("ISPs") and others, and

21 WHEREAS on March 26, 1997, the Board adopted Amended Substitute  
22 Resolution U-9258, approving Tacoma Power's proposed business plan to  
23 develop a state of the art HFC Network to support enhanced control, reliability,  
24  
25  
26

and efficiency for its electric system and to generate additional revenue through  
1 new business lines (i.e., wholesale internet, cable TV, etc.), and

2 WHEREAS the Board recommended that the City Council approve the  
3 business plan, which it did through Resolution No. 33668, on April 8, 1997,  
4 authorizing Tacoma Power to construct, control, and operate the HFC Network,  
5 with the Board providing oversight and approval, and the City Council remaining  
6 involved in major policy decisions, and  
7

8 WHEREAS since its construction in the late 1990s, the HFC Network has  
9 connected Tacoma Power's distribution and transmission assets and enabled  
10 automated meter reading and billing, distribution automation, and remote turn  
11 on/turn off for electric customers, and  
12

13 WHEREAS in 2004, Tacoma Power also established a pilot project  
14 deploying as many as 16,000 Gateway Meters (Tacoma Power's name for its  
15 initial smart meters) that relay information from its electric customers to Tacoma  
16 Power headquarters via the HFC Network over coaxial cable connected to the  
17 customer premises which interconnects with the fiber network, and  
18

19 WHEREAS within four years following deployment of the gateway meters  
20 Tacoma Power began experiencing substandard performance of the gateway  
21 meters including: meter failures wherein Tacoma Power is unable to  
22 communicate with the meter through the network, read failures wherein the  
23 controller in the meter is not able to read the meter, and remote disconnect  
24 failures, all resulting in: communications errors, failures to measure electrical  
25 consumption, a failure rate of up to 100 meters per month, and increased costs  
26

1 to replace defective meters, perform repairs, troubleshoot errors, and collect  
2 meter data, and

3 WHEREAS by the mid-to-late 2000s, the electric utility industry began to  
4 recognize that wireless technology would take the place of wired  
5 telecommunications systems with respect to smart meter applications, and

6 WHEREAS as a result of the advances in the reliability and efficiency of  
7 interconnecting meters wirelessly with the HFC Network and the substandard  
8 and unreliable performance of the Gateway Meters, Tacoma Power has  
9 terminated the Gateway Meter Program and ended service over the HFC  
10 Network for all Gateway Meters, and

11  
12 WHEREAS the Board has authorized agreements providing for the  
13 installation and operation of licensed spectrum advance meters that will  
14 interconnect wirelessly to that portion of the HFC Network allocated to Tacoma  
15 Power and known and referred to as the Power Control & Operations Network  
16 ("PCON"), and

17  
18 WHEREAS the "Excess Capacity of the HFC Network" is generally  
19 comprised of: (i) coaxial cable, conduit housing only coaxial cable, conduit  
20 installed for service drops (whether or not currently housing coaxial cable), and  
21 coaxial cable service drops installed in the Click! Network service area, (ii)  
22 specific strands of fiber in the Tacoma Power fiber network that are not reserved  
23 for current and future use by Tacoma Power for utility purposes, conduit housing  
24 such fiber along routes that do not include reserved utility fiber, and excess  
25 space in conduit housing such fiber and reserved utility fiber, (iii) electronic  
26

1 equipment and related hardware installed in the HUB sites and in rights-of-way;  
2 and is defined as the "Tacoma Power Commercial System", and is described in  
3 more detail, in the draft proposed Indefeasible Right of Use Agreement attached  
4 hereto as EXHIBIT "C", and

5 WHEREAS certain inventory, equipment and vehicles allocated to Click  
6 Network are described in EXHIBIT "A.1-3" attached hereto and are referred to as  
7 the "Click! Assets", and

8 WHEREAS Click! Network began providing cable television and wholesale  
9 internet access services over the excess capacity in the HFC Network in 1998,  
10 and since that time, technology and consumer demands have changed and  
11 operational costs have significantly increased, and in response to these  
12 challenges, the Board has studied different models for delivery of services, and

13 WHEREAS the Board retained CTC Technology & Energy, to develop an  
14 analysis of business models as an alternative to the legacy business plan under  
15 which Click! Network currently operates, which analysis was presented to the  
16 Board and City Council at the January 23, 2018 joint study session, and

17 WHEREAS the Board on January 24, 2018, adopted Resolution U-10988,  
18 pursuant to which the Board expressed its determination then, and re-affirms and  
19 expands upon now, that while the 1997 business plan achieved many of the  
20 functions envisioned for the HFC Network, the Excess Capacity of the HFC  
21 Network and the inventory, equipment and vehicles allocated to Click! Network  
22 are not needed now or in the future by Tacoma Power for utility purposes and  
23 thus will not be updated or improved or utilized for utility purposes, and are  
24  
25  
26

1 excess to the needs of Tacoma Power, and that the current Click! Network  
2 business plan and the proposed all-in retail service business model will not  
3 generate sufficient revenues to fully fund operational expenses and the costs of  
4 capital improvements needed to maintain the Excess Capacity of the HFC  
5 Network as a state of the art Network, and that it is prudent and necessary to  
6 revise the business plan, and

7 WHEREAS through Resolution U-10988, the Board further rescinded its  
8 approval of the all-in retail service business model, adopted 12 policy goals to be  
9 maximized through the use and preservation of the Excess Capacity of the HFC  
10 Network, directed the Public Utilities Director to work with the City Manager to  
11 develop a plan to seek information, proposals or qualifications from interested  
12 parties to determine whether the 12 policy goals could be achieved through a  
13 collaboration and/or restructuring of Click! Network, and

14  
15 WHEREAS the PUB and City Council, after review of multiple proposals  
16 from third parties, directed the Public Utilities Director to execute a letter  
17 agreement with Rainier Connect to enter into good faith, negotiation of  
18 agreements through which: (1) the City, through Tacoma Power, will retain  
19 ownership of all of the existing HFC Network, (2) the capital and operating costs  
20 of the Excess Capacity of the HFC Network will be borne by a third party,  
21 (3) Tacoma Power will no longer provide cable television or wholesale internet  
22 access or data transport services, and (4) Rainier Connect would use the Excess  
23 Capacity of the HFC Network to provide broadband information services  
24 consistent with the 12 policy goals adopted by the Board and City Council, and  
25  
26

1 WHEREAS Tacoma Power, under the supervision of the Director and  
2 Rainier Connect, have negotiated the draft proposed Click! Business Transaction  
3 Agreement, attached hereto as EXHIBIT "B", and the draft proposed Indefeasible  
4 Right of Use Agreement, attached hereto as EXHIBIT "C", that collectively  
5 provides for the conveyance of the Click! Assets to Rainier Connect and provides  
6 for Rainer Connect's use but not ownership of the Excess Capacity in the HFC  
7 Network for the term, and pursuant to the terms and conditions of the  
8 Indefeasible Right of Use Agreement, and

9  
10 WHEREAS the consideration proposed to be paid by Rainier Connect for  
11 conveyance of the inventory, equipment and vehicles described in EXHIBIT A.1  
12 is \$294,742.98, as set forth in EXHIBIT A.1, the consideration to be paid by  
13 Rainier Connect for the inventory and equipment described in EXHIBIT A.2 and  
14 A.3, are the contractual obligations of Rainier Connect as set forth in  
15 substantially the form of EXHIBIT "C" (Indefeasible Right of Use Agreement), and  
16 the use of the Excess Capacity in the HFC Network is proposed to be granted to  
17 Rainer Connect in consideration for the obligations of Rainier Connect as set  
18 forth in the EXHIBIT "C", including but not limited to, the annual payments of  
19 \$2,500,000 for year 1, \$2,625,000 for year 2, \$2,750,000 for year 3, \$2,875,000  
20 for year 4, \$3,000,000 for year 5, and for each year after year 5, the annual  
21 payment will increase to reflect the Consumer Price Index Increase as described  
22 in Exhibit "C", and

23  
24  
25 WHEREAS the proposed draft agreements include provisions ensuring,  
26 among other things, that the use and operation of the Excess Capacity in the

1 HFC Network by the new operator will not interfere with, or jeopardize the safety  
2 and security of Tacoma Power's continued use and operation of the Tacoma  
3 Power Control & Operations Network or the City's use and operation of the  
4 Institutional Network, and

5 WHEREAS pursuant to TMC 1.06.273, the Tacoma Public Utilities  
6 Director has recommended that the Board find that the disposal of the Click!  
7 Assets and the grant of the Indefeasible Right of Use of the Excess Capacity in  
8 the HFC Network through a negotiated process with Rainier Connect, pursuant to  
9 agreements in substantially the form of EXHIBITS "B" and "C", are in the best  
10 interests of Tacoma Power, and  
11

12 WHEREAS it is advised that, as a condition of this proposed transaction  
13 and in conformance with the provisions of RCW 35.94.040, the Board find and  
14 declare the Click! Assets and the Excess Capacity in the HFC Network surplus to  
15 the needs of Tacoma Power and the City, and  
16

17 WHEREAS the Tacoma Public Utilities Director has certified, and Tacoma  
18 Power recommends, that the Board find and declare that the Click! Assets and  
19 the Excess Capacity in the HFC Network are not required for, and are not  
20 essential to, continued public utility service or continued effective utility service,  
21 and are surplus to the needs of Tacoma Power and to Tacoma Public Utilities,  
22 and that the sale of the Click! Assets to Rainier Connect and the grant of a  
23 Indefeasible Right of Use of the Excess Capacity in the HFC Network to Rainier  
24 Connect through a negotiated disposition would be in the best interests of  
25 Tacoma Power and the City, and  
26

1 WHEREAS although a declaration that an asset is surplus often proceeds  
2 a decision to sell an asset, there is no requirement that a surplus asset be  
3 sold, and the Board does not intend to recommend or approve for sale the  
4 Excess Capacity in the HFC Network, but rather the City through Tacoma  
5 Power, will retain ownership of the entire HFC Network inclusive of the Excess  
6 Capacity in the HFC Network to ensure that it has control over how the HFC  
7 Network is used through the proposed agreements and to ensure that the entire  
8 HFC Network meets all security requirements and can continue to meet the  
9 needs of Tacoma Power, Tacoma Water, and Tacoma Rail, and  
10

11 WHEREAS the Board, in consideration of the foregoing, the public  
12 comments received during the public hearing of October 23, 2019, and prior  
13 public meetings of the Board, the records and information on file with the Board,  
14 and having been in all matters fully advised, finds that it is in the best interest of  
15 Tacoma Power and Tacoma Public Utilities, to make the following  
16 determinations and recommendation to the City Council; Now, Therefore,  
17

18 BE IT RESOLVED BY PUBLIC UTILITY BOARD OF THE CITY OF TACOMA:

19 Sec. 1. That the Click! Assets and Excess Capacity in the HFC Network, as  
20 described in the recitals above, are not required for, and are not essential to,  
21 continued public utility service or continued effective utility service, and pursuant to  
22 applicable law, are properly declared surplus property and excess to Tacoma  
23 Power's needs.  
24

25 Sec. 2 That the sale of the Click! Assets and the grant of an Indefeasible  
26 Right of Use of the Excess Capacity of the HFC Network to Rainier Connect,

through a negotiated disposition, is in the best interests of Tacoma Power, Tacoma Public Utilities, and the City; and all applicable competitive bidding requirements are hereby waived.

Sec. 3. Tacoma Power will seek City Council's approval of the Board's declaration herein that the Click! Assets and the Excess Capacity of the HFC Network as described herein are surplus to the needs of Tacoma Public Utilities and a declaration that the same are surplus to the needs of the City of Tacoma.

Sec. 4. The Board finds that disposal of the Click! Assets and the grant of the Indefeasible Right of Use of the Excess Capacity in the HFC Network through a negotiated process with Rainier Connect, pursuant to agreements in substantially the form of EXHIBITS "B" and "C", is in the best interests of Tacoma Power and approves such agreements, authorizes the Director of Tacoma Public Utilities to execute all documents necessary to implement such agreements contingent upon their approval by City Council and recommends that the City Council approve agreements that are substantially in the form of EXHIBITS "B" and "C".

(b) the terms defined in the singular have a comparable meaning when used in the plural, and vice versa;

(c) the terms “Dollars” and “\$” mean United States Dollars;

(d) unless the context otherwise requires, references herein to a specific Section, Subsection, Recital, Schedule or Exhibit shall refer, respectively, to Sections, Subsections, Recitals, Schedules or Exhibits of this Agreement;

(e) wherever the word “include,” “includes,” or “including” is used in this Agreement, it shall be deemed to be followed by the words “without limitation”;

(f) references herein to any gender include each other gender;

(g) references herein to any Person include such Person’s heirs, executors, personal representatives, administrators, successors and assigns; provided, however, that nothing contained in this clause (g) is intended to authorize any assignment or transfer not otherwise permitted by this Agreement;

(h) references herein to a Person in a particular capacity or capacities exclude such Person in any other capacity;

(i) references herein to any contract or agreement (including this Agreement) mean such contract or agreement as amended, supplemented or modified from time to time in accordance with the terms thereof;

(j) with respect to the determination of any period of time, the word “from” means “from and including” and the words “to” and “until” each means “to but excluding”;

(k) references herein to any Law or any license mean such Law or license as amended, modified, codified, reenacted, supplemented or superseded in whole or in part, and in effect from time to time; and

(l) references herein to any Law shall be deemed also to refer to all rules and regulations promulgated thereunder, unless the context requires otherwise.

## **ARTICLE II**

### **TRANSFER OF OPERATIONAL CONTROL OF TACOMA POWER COMMERCIAL SYSTEM AND PURCHASE AND SALE OF RELATED SURPLUS ASSETS**

Section 2.1 Transfer of Operational Control. The Transfer of Operational Control shall take place on the last Business Day of the calendar month in which the conditions set forth in Article VI (other than those conditions that by their nature are to be satisfied at the Transfer of Operational Control but subject to the fulfillment or waiver of those conditions) have been satisfied or waived, unless such conditions have not been so satisfied or waived by the fifth Business Day preceding the last Business Day of such calendar month, in which case the

Transfer of Operational Control shall take place on the last Business Day of the next calendar month or at such other time, date or place as the Parties hereto may mutually agree in writing.

Section 2.2 Purchase and Sale of Related Surplus Assets.

(a) On the terms and subject to the conditions set forth herein, at the Transfer of Operational Control Date, Tacoma Power shall sell, convey, transfer, assign and deliver to Rainier, and Rainier shall purchase from Tacoma Power, the Related Surplus Assets, free and clear of all Encumbrances. The “**Related Surplus Assets**” are comprised of:

(i) All spare customer equipment, and other tangible personal property and assets of Tacoma Power relating to the Click! Business, as set forth on Schedule 2.2(a)(i) (collectively, the “**Equipment**”);

(ii) All fiber optic cabling, coaxial cabling, supplies, tools and inventories of Tacoma Power relating to the Click! Business (the “**Inventory**”), as set forth on Schedule 2.2(a)(ii);

(iii) All vehicles of Tacoma Power relating to the Click! Business (the “**Vehicles**”), as set forth on Schedule 2.2(a)(iii);

(iv) All rights of Tacoma Power under those Contracts listed on Schedule 2.2(a)(iv) (collectively, the “**Transferred Contracts**”);

(v) All Governmental Authorizations listed on Schedule 2.2(a)(v) (the “**Transferred Authorizations**”);

(vi) Click! Business customer deposits and pro-rated customer advanced payments for services;

(vii) Copies of all customer account information and other Click! Business information (the “**Records**”) reasonably requested by Rainier; and

(viii) All defenses, claims, deposits, prepayments, refunds, causes of action, credits, warranties (including manufacturer’s warranties), rights of recovery, rights of set off and rights of recoupment relating to any right, property or asset included in the Related Surplus Assets, or against any party under the Transferred Contracts.

(b) Updated Asset Schedules. On the tenth (10th) Business Day prior to the Transfer of Operational Control, Tacoma Power shall deliver to Rainier revised Schedules 2.2(a)(i), 2.2(a)(iv) and 2.2(a)(v), which shall set forth lists of assets of the type required to be disclosed thereon and relating to the Click! Business that Tacoma Power owns or has the right to own as of such date, including any assets acquired by Tacoma Power after the date hereof (the “**Updated Asset Schedules**”) and a statement indicating the value of the Advanced Customer Payments as defined in Section 2.6(a). No later than five (5) Business Days prior to the Transfer of Operational Control Date, Rainier shall notify Tacoma Power whether it accepts or requires revisions to the Updated Asset Schedules or the statement of Advanced Customer Payments. If Rainier accepts the Updated Asset Schedules and Advanced Customer Payments as delivered by

**EXHIBIT P**  
**TRADEMARK LICENSE AGREEMENT**

THIS AGREEMENT, effective as of \_\_\_\_\_, \_\_\_ is by and between **City of Tacoma, Department of Public Utilities, Light Division**, a municipal corporation of the state of Washington, (“Licensor”) and Rainier Connect North, LLC, a Washington limited liability company (“Licensee”). The parties hereto are hereinafter collectively referred to as the “Parties.” Capitalized terms used herein and not defined shall have the meanings assigned to them in the IRU Agreement.

WHEREAS, Licensor is the owner of two (2) Washington state trademarks, one for “Click! Cable TV” and symbol (Washington trademark registration number 53233 under trademark classifications 35 and 38) and one for “Click! Cable TV” (Washington trademark registration number 54077 under trademark classification 41), shown in **Exhibit P1** hereto (collectively the “Marks”);

WHEREAS, Licensor has used the Marks in connection with the marketing and operation of its retail and wholesale communications business (“Click! Business”) but intends to cease operations and transfer control of the assets related to the Click! Business, including but not limited to the Tacoma Power Commercial System, to Licensee as of the Effective Date of this IRU Agreement;

WHEREAS, Licensee desires to use the Marks in connection with the use of the Tacoma Power Commercial System in the manner and subject to the terms and conditions set forth in this Agreement and the IRU Agreement; and

NOW, THEREFORE, In consideration of the premises and the mutual covenants and agreement of the Parties set forth herein and other good and valuable consideration, the sufficiency of which is hereby mutually acknowledged, the Parties agree as follows:

1. **GRANT OF LICENSE.** Licensor grants to Licensee an exclusive, royalty-free non-transferable license to use the Marks in connection with the Tacoma Power Commercial System, throughout the Tacoma Power Commercial Service Area depicted in IRU Agreement, Exhibit A1.

2. **USE OF THE MARKS.** Licensee shall comply with the following requirements when using the Marks:

2.1 The use must be accompanied by the following text:

All rights reserved. [Insert Mark] is a trademark of City of Tacoma.

2.2 The use must comply with the applicable provisions of the guidelines set forth in **Exhibit P2** attached hereto.

3. **NO ASSIGNMENT.** This license to use the Marks may not be assigned or otherwise transferred by Licensee, under any circumstances, without the prior, express, written

consent of Licensor. Licensor does not grant, and nothing in this Agreement shall be construed as granting, to Licensee the right to license, sublicense, or authorize others to use the Marks.

#### 4. OWNERSHIP.

4.1 Licensee acknowledges that the Marks are valid, are the exclusive property of Licensor, and can lawfully be used only with the express license or consent of Licensor. Licensee shall not at any time do, or cause to be done, any act or thing contesting or in any way impairing or intending to impair the validity of the Marks and/or Licensor's exclusive rights, title, and interest in and to the Marks.

4.2 Licensee shall not register or apply to register the Marks, either alone or in combination with any other word(s) and/or design(s), in any country, state, or jurisdiction. Licensee shall not in any manner represent that it owns the Marks, and Licensee hereby acknowledges that its use of the Marks shall not convey any rights, title, or interest in or to said Marks in Licensee's favor, but that all use of the Marks by Licensee shall inure to the benefit of Licensor.

4.3 Licensee shall be responsible for all costs associated with maintaining the registration of the Marks, including all fees charged by the Washington Secretary of State associated with renewing the Marks. Licensee shall provide copies of all filings and correspondence related to the Marks to Licensor.

#### 5. TERM AND TERMINATION.

5.1 Unless sooner terminated under the provisions of Section 5.2 below, or by mutual agreement of the Parties in writing, this Agreement shall continue so long as the IRU Agreement is in full force and effect. In the event that the IRU Agreement is terminated, by either Party and for any reason, this Agreement shall automatically terminate.

5.2 If Licensee fails to comply with any of the provisions of this Agreement, Licensor may terminate this Agreement by express written notice to Licensee; provided, however, that if Licensee, within 60 days after Licensor's notice, cures or otherwise corrects such violation or noncompliance to Licensor's reasonable satisfaction, said termination notice shall be of no further force or effect and this Agreement shall be reinstated under all the terms and conditions as existed before the notice of termination.

5.3 Upon termination of this Agreement, Licensee shall permanently discontinue all use of the Marks and refrain from using any other service mark, trademark, trade name, corporate name, or any other designation confusingly similar to any one or all of the Marks.

#### 6. INDEMNITY.

6.1 Licensee shall indemnify and defend Licensor against any loss or losses incurred through claims, actions, or lawsuits by third parties against Licensor involving or arising from the use of the Marks by Licensee, and shall hold Licensor harmless for

responsibilities with reference to the control of animals. Such contract(s) shall provide, among other things, that said society or agency (agencies) shall faithfully operate said pounds, shall pay all expenses in connection therewith, shall receive all licenses, fines, penalties and proceeds of every nature connected therewith, and such other sums as may be legally appropriate therefor, subject only to accounting as provided by law. The Council is further authorized, notwithstanding the provisions hereof, to determine that the City shall operate its own city pounds or detention facility and otherwise regulate and control animals within its corporate limits. Any contract entered into pursuant to the authority hereof shall be subject to cancellation by the City for good cause.

(Amendment approved by vote of the people September 18, 1973)

### **Administrative Organization<sup>12</sup>**

**Section 3.11** – Within the framework established by this charter, the administrative service of the City government shall be divided into such offices, departments, and divisions as provided by ordinance upon recommendation of the City Manager. Such ordinance shall be known as the “Administrative Code.”

**Section 3.12** – The City Council may remove any appointed member of any City board, commission, or board of trustees, for cause, after notice and public hearing, if that member is found to have knowingly violated the oath of office under this charter (Section 6.4) or has committed any acts specified in state law as grounds for the recall and discharge of an elective public officer. The City Council, in its discretion, may allow a hearings examiner to hear such a matter. Recommendation of a hearings examiner shall be subject to review by the City Council. The City Council’s final decision shall be based on the evidence in the record. A record of the proceedings shall be made.

(Amendments approved by vote of the people November 2, 2004, and November 4, 2014)

**Section 3.13** – There shall be a Landmarks Preservation Commission, composed of members with such powers and duties as are provided by ordinance. The members shall be residents of the City of Tacoma and be appointed and confirmed by the City Council.

(Amendment approved by vote of the people November 4, 2014)

## **Article IV**

### **PUBLIC UTILITIES<sup>13</sup>**

#### **General Powers Respecting Utilities**

**Section 4.1** – The City shall possess all the powers granted to cities by state law to construct, condemn and purchase, purchase, acquire, add to, maintain, and operate, either within or outside its corporate limits, including, but not by way of limitation, public utilities for supplying water, light, heat, power, transportation, and sewage and refuse collection, treatment, and disposal services or any of them, to the municipality and the inhabitants thereof; and also to sell and deliver any of the utility services above mentioned outside its corporate limits, to the extent permitted by state law.

#### **Power to Acquire and Finance**

**Section 4.2** – The City may purchase, acquire, or construct any public utility system, or part thereof, or make any additions and betterments thereto or extensions thereof, without submitting the proposition to the voters, provided no general indebtedness is incurred by the City. If such indebtedness is to be incurred, approval by the electors, in the manner provided by state law, shall be required.

---

<sup>12</sup> See TMC Chapter 1.06

<sup>13</sup> See TMC Title 12 - Utilities

## **Rates**

**Section 4.3** – The City shall have the power, subject to limitations imposed by state law and this charter, to fix and from time to time, revise such rates and charges as it may deem advisable for supplying such utility services the City may provide. The rates and charges for services to City departments and other public agencies shall not be less than the regular rates and charges fixed for similar services to consumers generally. The rates and charges for services to consumers outside the corporate limits of the city may be greater but shall not be less than the rates and charges for similar service to consumers within the corporate limits of the city.

## **Diversion of Utility Funds**

**Section 4.4** – The Council may by ordinance impose upon any of the City-operated utilities for the benefit of the general fund of the City, a reasonable gross earnings tax which shall not be disproportionate to the amount of taxes the utility or utilities would pay if privately owned and operated, and which shall not exceed eight percent; and shall charge to, and cause to be paid by, each such utility, a just and proper proportion of the cost and expenses of all other departments or offices of the City rendering services thereto or in behalf thereof.

**Section 4.5** – The revenue of utilities owned and operated by the City shall never be used for any purposes other than the necessary operating expenses thereof, including the aforesaid gross earnings tax, interest on and redemption of the outstanding debt thereof, the making of additions and betterments thereto and extensions thereof, and the reduction of rates and charges for supplying utility services to consumers. The funds of any utility shall not be used to make loans to or purchase the bonds of any other utility, department, or agency of the City.

## **Disposal of Utility Properties**

**Section 4.6** – The City shall never sell, lease, or dispose of any utility system, or parts thereof essential to continued effective utility service, unless and until such disposal is approved by a majority vote of the electors voting thereon at a municipal election in the manner provided in this charter and in the laws of this state.

## **Franchises for Water or Electric Utilities**

**Section 4.7** – The legislative power of the City is forever prohibited from granting any franchise, right or privilege to sell or supply water or electricity within the City of Tacoma to the City or to any of its inhabitants as long as the City owns a plant or plants for such purposes and is engaged in the public duty of supplying water or electricity; provided, however, this section shall not prohibit issuance of temporary permits authorized by the Council upon the recommendation of the Utility Board of the City of Tacoma for the furnishing of utility service to inhabitants of the City where it is shown that, because of peculiar physical circumstances or conditions, the City cannot reasonably serve said inhabitants.

(Amendment approved by vote of the people September 18, 1973)

## **The Public Utility Board**

**Section 4.8** – There is hereby created a Public Utility Board to be composed of five members, appointed by the Mayor and confirmed by the City Council, for five-year terms; provided, that in the appointment of the first Board, on the first day of the month next following the taking of office by the first Council under this charter, one member shall be appointed for a term of one year, one for a term of two years, one for a term of three years, one for a term of four years, and one for a term of five years, and at the expiration of each of the terms so provided for, a successor shall be appointed for a term of five years. Vacancies shall be filled for the unexpired term in the same manner as provided for regular appointments.

(Amendment approved by vote of the people November 2, 2004)

# EXHIBIT 6

## **Construction and Maintenance**

Tacoma Power has a number of established preventive and predictive maintenance programs and continues to develop more. For example, the substation predictive maintenance program can identify substation equipment requiring corrective action before a failure occurs through utilization of infrared, oil sample testing, and dissolved gas analysis. Tacoma Power owns and maintains approximately 49,000 power poles. The Pole Replacement program strategy is to test and treat 9% of the poles annually maintaining an 11-year cycle. Tacoma Power also performs tree trimming around its distribution and transmission lines, maintaining two and four year trimming cycles along with programs to replace dangerous trees with utility friendly trees.

## **Telecommunications Infrastructure**

Approximately 1,500 miles of fiber and coaxial cable have been constructed by Tacoma Power in the cities of Tacoma, University Place, Fircrest, Lakewood and Fife, and portions of unincorporated Pierce County, providing Tacoma Power with a state-of-the-art telecommunication system with which supports transmission and distribution operations, advanced metering, and retail and wholesale commercial services. The network currently covers approximately 66% of the households in Tacoma Power's service territory.

The network consists of a hybrid fiber-optic coaxial ("HFC") system, which delivers two-way signals for cable TV, cable modem Internet services, and advanced metering. In addition, SONET ("Synchronous Optical Network") and Gigabit Ethernet technologies are used to support communications across Tacoma Power's transmission and distribution system and to carry out data transport services for commercial customers. The network was designed and constructed to meet high telecommunications standards, containing a redundant backbone and redundant service loops, which seek to ensure uninterrupted signal transport in the event of a network break. A network surveillance system allows Tacoma Power to monitor the system at all times.

***Commercial Telecommunication Services.*** Launched in 1998 under the brand name Click! Network, Tacoma Power provides three commercial telecommunication services to customers of Tacoma Power: retail cable television, wholesale broadband transport and wholesale high-speed Internet over cable modem. Click! Network is one of several providers of telecommunications services in the Tacoma area.

Click! Network is accounted for as part of the Electric System. In 2016 Click! Network's annual revenues were approximately \$26.6 million, and annual operating expenses plus gross earnings taxes were approximately \$29.7 million.

Cable television is Click! Network's primary retail business. Click! currently has approximately a 15% share of a very competitive local cable television market. Cable TV products available to both residential and business customers include broadcast television, digital and high-definition channels, digital video recording capability, TiVo with access to over-the-top ("OTT") content such as Netflix, Hulu, YouTube and Pandora, TVEverywhere, and a wide variety of video-on-demand services. Video-on-demand services include local programming tied to schools, colleges, local governments and community organizations strengthening Click! Network's brand identity in the communities served.

Under wholesale Master Service Agreements, seven telecommunications carriers provide high capacity last mile data transport circuits to their customers utilizing Click! Network's telecommunications infrastructure. The seven telecommunications carriers provide SONET data services ranging from DS-1 lines to OC-48 lines and customized Metro Ethernet circuits to meet data transport and web access needs of large and small businesses in the Tacoma area.

Also under wholesale Master Service Agreements, two qualified locally based Internet Service Providers ("ISPs") provide high-speed Internet services via cable modems to their customers utilizing Click! Network's telecommunications infrastructure. The ISPs provide a variety of speed packages to meet the needs of the residential

and business consumers in the Tacoma area. As part of the contract, the two ISPs also provide customer service, cable modem installation, customer premise equipment and technical support services to their Internet customers.

Click! ended 2016 with 17,468 cable TV customers, 23,344 wholesale high-speed Internet service customers, and 173 wholesale broadband transport circuits.

Click! also continues to provide the City of Tacoma I-Net services to approximately 190 sites to keep the cost of telecommunications low for many governmental entities.

Click! Network implemented a 12.9% cable TV service rate increase effective March 1, 2017. An additional cable TV rate increase is planned for March 1, 2018. These cable TV rate increases are expected to generate approximately \$7.7 million in additional revenue. A major portion of additional revenue will be used to cover increases in programming costs.

### **CAPITAL IMPROVEMENT PROGRAM**

Tacoma Power has funded its past capital improvement programs from contributions in aid of construction, proceeds of Parity Bonds and subordinate lien revenue bonds, and Revenues of the Electric System. The actual amounts spent during the past five years, together with the sources of funds used, are displayed in the table below.

#### **Historical Sources of Capital Improvement Funds (\$000)**

Source of Funds	2012	2013	2014	2015	2016
Parity and Subordinate Lien Bond Proceeds	\$ 51,730	\$ 35,723	\$ 58,834	\$ 58,003	\$ 50,995
Contributions in Aid of Construction <sup>(1)</sup>	4,716	3,735	3,029	4,777	3,293
Cash Reserves	16,643	23,656	21,160	19,301	30,536
<b>Total</b>	<b>\$73,089</b>	<b>\$63,114</b>	<b>\$83,023</b>	<b>\$82,081</b>	<b>\$84,824</b>

(1) Customer contributions to fund capital projects.  
Source: Tacoma Power

Tacoma Power has a long-term goal to finance an average of 50% of its normal capital requirements from net operating revenues with the balance from contributions in aid of construction received from customers and borrowed funds. However, due to varying water conditions, the amount of the capital improvement program, and periodic cash defeasance of outstanding Parity Bonds, the amount actually financed from net operating revenues varies from year to year. From 2012 to 2016, Tacoma Power financed an average of 66% of its capital improvements from borrowed funds. Tacoma Power's policy is to fund major projects with borrowed funds.

the City Council. The Department's budget is presented to the Board for review and approval and then forwarded to the City Council for approval and inclusion in the City's budget. The Board meets twice monthly.

The Department consists of the Light Division ("Tacoma Power"), Water Division ("Tacoma Water"), and Belt Line Railroad Division ("Tacoma Rail"). The Board has supervision and control over most Department business. In the case of budgets, rates, bond issues, and additions and betterments to a utility system and system expansions, actions approved by the Board must also be approved by the City Council.

The Board appoints the Director of Utilities who is the chief executive officer of the Department. The Board must evaluate the performance of the Director annually and reappoint the Director every two years subject to reconfirmation by the City Council with the next reconfirmation scheduled for 2017. The reappointment of the Director has been approved by the Board and is currently pending before the City Council. William A. Gaines will retire from the position, effective December 2, 2017. The Director, with the concurrence of the Board, has the power to appoint division superintendents.

Utility rates and charges are initiated by the Board and adopted by the City Council, and are not subject to review or approval by any other governmental agency. See "ELECTRIC SYSTEM CUSTOMERS, ENERGY SALES, REVENUES AND RATES—Electric Rates."

The City Charter provides that the revenues of utilities owned and operated by the City shall never be used for any purposes other than the necessary operating expenses thereof, including a reasonable gross earnings tax imposed by the City Council for the benefit of the general fund of the City, interest on and redemption of the outstanding debt thereof, the making of additions and betterments thereto and extensions thereof, and the reduction of rates and charges for supplying utility service to consumers. The funds of any utility may not be used to make loans to or purchase the bonds of any other utility, department, or agency of the City. See "FINANCIAL INFORMATION—Taxes Imposed on Tacoma Power."

### **Tacoma Power - General**

Tacoma Power is organized into six business units:

- **Generation** operates and maintains Tacoma Power's four hydroelectric generating projects (Cowlitz, Cushman, Nisqually and Wynoochee) and the associated recreational facilities, fish hatcheries and other project lands.
- **Power Management** manages, schedules and directs the power supply portfolio which includes Tacoma Power-owned generation and power supply contracts. Power Management markets bulk and ancillary power supply services, performs power trading activities, plans for and acquires conservation resources, and is responsible for compliance with various state, regional and federal regulatory mandates.
- **Transmission and Distribution** plans, constructs, operates and maintains the transmission and distribution systems including substations, the underground network system, revenue metering facilities and all overhead transmission and distribution systems.
- **Rates, Planning and Analysis** plans for and manages the retail rate process, financial planning activities, operations and capital budget development and monitoring, strategic asset management, construction project management, strategy management, and energy risk management analysis and modeling.
- **Click! Network** plans, constructs, operates and maintains a hybrid fiber coaxial ("HFC") telecommunications network that supports the operation of Tacoma Power's electrical transmission and distribution system, provides retail cable TV, and wholesale high-speed Internet and data transport services to resellers.
- **Utility Technology Services** ("UTS") addresses existing and emerging technology requirements essential to managing Tacoma Power's computing systems. This includes supporting and enhancing utility system operations, communications, metering, cyber security, relevant smart grid applications, and the information technology strategic planning. UTS unifies the planning, design, deployment and maintenance of operational

# EXHIBIT 6 (a)

## **2016 SUPERINTENDENT'S REPORT TACOMA POWER**

### **CLICK!**

#### Financial Status

Click! Network commercial revenues declined from \$27.3 million in 2015 to \$26.7 million in 2016. The retail cable TV customer base dropped 4.6 percent ending the year with 17,468 active customers, and the Internet cable modem customers served by the three wholesale Internet Service Providers (ISPs) - Advanced Stream, Net-Venture, Inc., and Rainier Connect, grew by .4 percent ending the year with 23,344 active customers. Click! provided 173 broadband transport circuits to Click!'s wholesale service providers allowing them to provide an array of telecommunication services to many businesses in the service area. Additionally, Click! continued to provide the City of Tacoma I-Net services to approximately 190 sites, keeping the cost of telecommunications low for many government entities, and also provided support for just over 15,000 gateway power meter connections.

#### Cable TV Rate Adjustments

Because a final policymaker decision regarding Click! Network's long term business plan remained outstanding in 2016, no cable television rate increases were implemented. Although Cable television prices continue to remain under market, the postponement of rate adjustments contributed to the decline in revenues.

#### Channel Additions

During 2016, Click! Network migrated 10 networks from optional service levels to its Broadcast package and migrated Big Ten Network and Sprout from its Sports & Family package to its Click! ON Digital package. Three networks discontinued operations in 2016, Pivot, UWTV, and MundoMax, but TV Tacoma HD was added, bringing the total to 376 video and 65 audio channels. Click! also added a variety of national and local video on demand content for a total offering of over 12,000 hours of content to make the product more competitive. Additionally, Click! added new networks to its Watch TV Everywhere service. Click!'s cable TV customers can now enjoy watching Click! video content from 84 networks on any of their mobile devices with an internet connection.

#### Website Improvements

Click! Network launched a new website in June 2016. Improvements included streamlined navigation, responsiveness to mobile device screen sizes, enhanced TV listings, and an online shopping cart. Click! cable television products, along with ISP internet packages, are now prominently displayed, enabling the potential customer to select services and submit a self-service order online.

### Customer Satisfaction Survey

Customer Satisfaction survey cards were mailed to all new cable TV customers and to all customers who had a service related issue. Click! customer service and technicians representatives received ratings averaging 3.7 and 3.8 respectively on a scale of 1 – 4. In addition, a Customer Satisfaction Survey conducted on Click! Network's behalf by Washington State University's Social & Economic Sciences Research Center (SESRC) showed a mean average overall customer satisfaction score of 8.08 on a 1-10 scale. The results revealed that customers are very satisfied with the services provided by Click! and in particular, recognized the quality of service provided by our Sales and Service Representatives and Service Technicians.

### New Tools

Click! purchased the CPAT Flex Digital Leakage Monitoring System to address concerns about interference from cable leakage in the aeronautical and LTE bands. The CPAT Flex Digital Leakage Monitoring System automates the signal leakage detection process freeing up technicians for other tasks. Since the tool is continuously monitoring the network, signal leakage is quickly detected and repaired.

Click! also purchased the CheetahXD software to replace the former Cheetah Lite version. The CheetahXD software helps Click! network technicians manage the HFC network by providing end-to-end visibility across the HFC operations environment, and enables NOC personnel to proactively isolate network problems, trace root causes, assess potential impacts, and prioritize truck rolls by pinpointing fault and performance issues in real-time. With CheetahXD software, HFC network assurance is simplified, operational costs are reduced, and network performance is improved resulting in enhanced customer satisfaction.

### Spectrum Reclamation

In 2015, Click! fully converted its system from analog to digital and freed up nineteen (19) 6 MHz channel slots. Since then, 6 of those freed up channels have been added to the bank of downstream Internet channels to meet the growth in customers and Internet usage. Therefore leaving 13 channels available for use.

### Network Bandwidth

During 2016, Click! added NETFLIX cache servers to the local network. The addition of these cache servers has reduced bandwidth utilization by as much as 30%. Click! added an additional 10 Gig connection at Downtown South and Downtown North for a total of 30 Gig potential capacity at each location. The Core routers are being upgraded from the Cisco 7600 platform to the Cisco ASR 9912 platform. This will provide the necessary 10 gig ports and throughput to support current and future network growth. The Cable Modem Termination Systems (CMTS) are also being upgraded. The existing Cisco uBR 10000 series CMTSs are going to be replaced with new Cisco cBR-8 CMTSs. The first set of Cisco cBR-8 CMTSs were purchased during 2016. These will support DOCSIS 3.1 Gigabit services and provide higher port and bandwidth capacity for meeting bandwidth demands and subscriber growth.

## MEMORANDUM

**TO:** Jeff Lueders  
**FROM:** Pam Burgess  
**DATE:** 2/28/2019  
**SUBJECT:** Click! Network 2018 Cable TV Annual Report

The following information constitutes Click! Network's 2018 Annual Cable TV Report, as required in Section 9.2 of Ordinance No. 27846. The data is accurate as of yearend 2018.

### **A. Gross Revenue Report (attached)**

### **B. Summary of activities within the Tacoma city limits:**

- Total customers for each general category of service:
  - Broadcast: 11,774
  - Standard: 9,522
  - Digital: 3,233
  - Premium: 2,095
- Number of homes passed: 84,554
- Total miles of cable plant: 912.88
- Miles of overhead plant: approximately 71% = 648.55
- Miles of underground cable plant: approximately 29% = 264.34
- Other system facilities and equipment constructed:

During 2018, 4,962 radio frequency leaks were detected and resolved, resulting in reduced interference and improved service performance. An annual fly-over test to assess the system's signal leakage in the aeronautical band was performed in March, resulting in a finding that 99.87% of points passed were within the required tolerance of signal egress.

In 2018, Click! deployed fiber-to-the-premises (FTTP) technology for new plant extension as it is the state of the art technology for modern network architecture and enables reliable and cost efficient delivery of Gigabit internet services. FTTP is currently deployed in The Knolls, a 165 lot subdivision located in University Place. Two multiple dwelling units in Tacoma are currently under construction and being wired for FTTP exclusively. It is anticipated these complexes will be occupant-ready in the 1<sup>st</sup> quarter of 2019. Internet services delivered over FTTP will be symmetrical with same download and upload speeds ranging from 250 Mbps to 1000 Mbps.

Several multiple dwelling unit complexes of under 100 units each were wired for Click! service delivery in 2018. One complex of note was Stadium Apartments, a 147-unit complex that is providing internet access directly through a commercial Ethernet connection over the Click! network.

**CITY OF TACOMA, WASHINGTON  
DEPARTMENT OF PUBLIC UTILITIES  
TACOMA POWER**

**NOTES TO FINANCIAL STATEMENTS  
YEARS ENDED DECEMBER 31, 2018 AND 2017**

**NOTE 1 OPERATIONS**

**OPERATIONS OF TACOMA POWER** - The Light Division, doing business as Tacoma Power (Tacoma Power or the Division), is a division of the City of Tacoma, Washington (the City), Department of Public Utilities (the Department) and is included as an enterprise fund in the Comprehensive Annual Financial Report (CAFR) of the City. The Department consists of Tacoma Power, Tacoma Water and Tacoma Rail and is governed by a five-member Public Utility Board (the Board) appointed by the City Council. Certain matters relating to utility operations, such as system expansion, issuance of bonds and setting of utility rates and charges, are initiated and executed by the Board, but also require formal City Council approval. Tacoma Power owns and operates the City's electrical generation and distribution facilities and telecommunication infrastructure. Tacoma Power serves approximately 178,000 of retail customers and has 813 employees. Tacoma Power is organized into six business units: Generation, Power Management, Transmission and Distribution, Rates, Planning and Analysis, Click! Network, and Utility Technology Services.

**GENERATION** operates four hydroelectric generating projects (Cowlitz, Cushman, Nisqually and Wynoochee) and the associated recreational facilities, fish hatcheries and other project lands.

**POWER MANAGEMENT** manages the power supply portfolio, markets bulk and ancillary power supply services, schedules and dispatches division-owned generation and contract power supplies and performs power trading and risk management activities. Revenues and the cost of electric power purchases vary from year to year depending on the electric wholesale power market, which is affected by several factors including the availability of water for hydroelectric generation, marginal fuel prices and the demand for power in other areas of the country.

**TRANSMISSION AND DISTRIBUTION** plans, constructs, operates and maintains the transmission and distribution systems including substations, the underground network system, supervisory control and data acquisition (SCADA) systems, revenue metering facilities and all overhead transmission and distribution systems. Electricity use by retail customers varies from year to year primarily because of weather conditions, customer growth, the economy in Tacoma Power's service area, conservation efforts, appliance efficiency and other technology.

**RATES, PLANNING AND ANALYSIS** plans for and manages the retail rate process, financial planning, analysis and modeling, budget strategies, the capital program and risk management.

**CLICK! NETWORK** plans, constructs, operates and maintains a hybrid fiber coaxial (HFC) telecommunications network that supports the operation of Tacoma Power's electrical transmission and distribution system, provides retail cable TV and wholesale high-speed Internet services to residential and business customers, and data transport services to retail customers.

**UTILITY TECHNOLOGY SERVICES (UTS)** maintains communication networks, operational and informational technology systems, and related equipment and infrastructure to optimize utility operations and improve reliability and service quality. This includes a Project Management Office that establishes and leads Tacoma Public Utilities Information Systems project governance process and implements project portfolio management tools. UTS is responsible for all matters related to Tacoma Power's compliance with North American Electric Reliability Corporation (NERC) Reliability Standards, maintains overall responsibility for the NERC Reliability Standards and manages Tacoma Power's Internal Reliability and Compliance Project.

WHEREAS the City Council and Public Utility Board will continue to be involved in the future decision-making on this proposal including construction contracts and debt financing approvals, quarterly reviews on-the project direction during the startup period, approval of agreements for use of City rights-of-way for telecommunications purposes which agreements will (to the extent required by law or City Council) treat the Light Division substantially similar to other franchises that the City grants for similar businesses, and

WHEREAS the City Council hereby finds and determines that the Light Division's proposal for a broad band telecommunications system is in the best interests of the City, will serve a public purpose, and should be approved and implemented; Now, therefore,

**BE IT RESOLVED BY THE COUNCIL OF THE CITY OF TACOMA:**

That the Council hereby finds and determines that the City Light Division's broad band telecommunications proposal is in the best interests of the City, will serve a public purpose and that the said Business Plan is sufficient and adequate, therefore, the Council hereby approves the Light Division's proposal including the Business Plan and the Department of Public Utilities, Light Division is hereby authorized to proceed to implement said proposal for a broad band telecommunications system, and

That the proposed broad band telecommunications system shall be owned, operated and controlled by the City of Tacoma Department of Public Utilities Light Division with the Public Utility Board providing oversight and approval of business and third party agreements, as appropriate under the City Charter, Tacoma Municipal Code and other applicable laws, and the City Council shall continue to be involved in the major policy decisions including

CITY CLERK USE

Request #:  
Ordinance #:  
Resolution #:

Request #:	6366
Ordinance #:	
Resolution #:	33668

1. Date: **March 20, 1997**

Requesting Department/Division/Program	Sponsored By	Phone/Extension
2. <b>Tacoma Public Utilities/Light Division</b>		
Contact Person (for questions):		Phone/Extension
3. <b>Steven J. Klein</b>		502-8203

4. Preparation of Resolution is requested for the City Council meeting of Tuesday April 8, 1997

5. Summary Title/Recommendation: (A concise sentence, as it will appear on the Council Agenda)

Authorize the development of a broad band telecommunications network to improve electric utility service and improve the telecommunications infrastructure available to the community. This would include the business plan for a broad band telecommunications system and the implementation of the telecommunications system.

6. Background Information/General Discussion: (Why is this request necessary? Are there legal requirements? What are the viable alternatives? Who has been involved in the process?)

The Light Division has undertaken an extensive telecommunications study that includes market research, telecommunications industry analysis, an examination of the regulatory environment and research on similar activities in other municipalities. It is projected that the cost for the construction and installation of this system will be approximately \$55 million to construct, plus more than \$10 million for startup operations. However, the Light Division believes that the overall benefits to the City, the Light Division and its customers will exceed the projected costs.

In addition to the benefits to the Light Division that the system would deliver through improved communication abilities, the system will also have the ability to transport data, provide high speed Internet access and deliver full cable television service.

7. Financial Impact: (Future impact on the budget.)

8. List all material available as backup information for the request and indicate where filed:

WHEREAS the City of Tacoma, Department of Public Utilities, Light Division desires to: (1) develop a state-of-the-art fiber optic technology to support enhanced electric system control, reliability and efficiency; (2) develop capability to meet the expanding telecommunications requirements in an evolving competitive electric market, the most critical of which is real-time, two-way interactive communications with individual energy consumers, (3) create greater revenue diversification through new business lines (i.e. internet transport, cable TV, etc.), (4) enhance traditional products and service, and (5) maximize return on Light Division assets, and

WHEREAS these desired capabilities can be provided with a broad band telecommunications system for all of the Light Division's service area, and

WHEREAS a broad band telecommunications system will have available capacity for future Light Division needs and will also have the capacity to provide Telecommunications services for data transport, high speed internet access, full cable television service, and other uses, and

WHEREAS the Light Division has retained consultants to review and analyze the feasibility of a broad band telecommunications systems for the Light Division's service area, and a business plan has been prepared for this purpose (copies are on file with the Clerk), and

WHEREAS the cost of constructing, installing and commencing to operate a broad band telecommunications system will be approximately \$65 million dollars, but the benefits to the Light Division, the City and the Light Division customers are projected to exceed and justify the initial cost, and

1 WHEREAS the City Council and Public Utility Board will continue  
 2 to be involved in the future decision-making on this proposal including  
 3 construction contracts, and debt financing approvals, quarterly reviews on  
 4 the project direction during the startup period, approval of agreements for  
 5 use of City rights-of-way for telecommunications purposes which  
 6 agreements will (to the extent required by law) treat the Light Division  
 7 substantially similar to other franchises that the City grants for similar  
 8 businesses, and

9 WHEREAS the Public Utility Board hereby finds and determines  
 10 that the Light Division's proposal for a broad band telecommunications  
 11 system is in the best interests of the City, will serve as a public purpose,  
 12 and should be approved and implemented; Now, therefore,

13 BE IT RESOLVED BY THE PUBLIC UTILITY BOARD OF THE CITY OF TACOMA:

14 That the Board hereby approves the Light Division's proposal  
 15 including the Business Plan for a broad band telecommunications system,  
 16 and the Board recommends that the City Council approve a resolution to  
 17 authorize the Light Division to proceed to implement said proposal for a  
 18 broad band telecommunications system, and the Board recommends that  
 19 the City Council continue to be involved in the major policy decisions  
 20 including construction contracts, debt financings, the public rights-of-way  
 21 use agreements for telecommunications and quarterly reviews.

Adopted 3/26/97

of March 26, 1997

REQUEST FOR RESOLUTION

Date: March 19, 1997

INSTRUCTIONS: File request in the Office of the Director of Utilities as soon as possible but not later than nine working days prior to Board meeting at which it is to be introduced. Completion instructions are contained in Administrative Policy POL-104.

1. Summary title for Utility Board agenda: (not to exceed twenty-five words)  
Authorize the development of a broad band telecommunications network to improve electric utility service and improve the telecommunications infrastructure available to the community.

2. A resolution is requested to: (brief description of action to be taken, by whom, where, cost, etc.)  
Approve the Light Division's proposal including the business plan for a broad band telecommunications system and authorize the Light Division to proceed to implement the telecommunications system.

The Light Division projects that the cost for the construction and installation of this telecommunications system will be approximately \$55 million dollars to construct, plus more than \$10 million dollars for startup operations. However, the Light Division believes that the overall benefits to the City, the Light Division, and its customers will exceed the projected costs.

3. Summarized reason for resolution:  
The Light Division has undertaken an extensive telecommunications study that includes market research, telecommunications industry analysis, an examination of the regulatory environment, and research on similar activities in other municipalities. Presentations have been made to neighborhood councils, chambers of commerce, local economic development groups, and the Tacoma Public School Board. A public hearing on the proposed telecommunications system was held by the Public Utility Board on March 12, 1997, and another public hearing was held by the City Council on March 18, 1997. Information summarizing the Telecommunications study and our recommendations was made available at the presentations and public hearings.

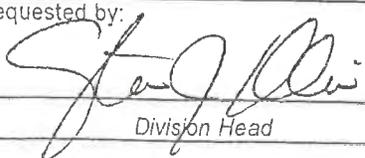

In addition to the benefits to the Light Division that the system would deliver through improved communications abilities, the system will also have the ability to transport data, provide high speed Internet access, and deliver full cable television service.

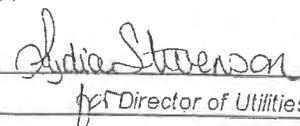

4. Attachments:

To the Chairman and Members of the Public Utility Board and  
To the Mayor and Members of the City Council

### RESOLUTION NO. U-

#### RECOMMENDATION

The Light Division requests approval by the Public Utility Board and the City Council to develop a broad band telecommunications network as described in the Light Division Telecommunication Study. This action authorizes project implementation and the initiation of design and contract specifications. The Light Division will bring subsequent requests for construction contract and debt issuance approval to the Public Utility Board and City Council as the project progresses. Both policy bodies will also be periodically advised of project status during the development process.

#### BACKGROUND

In preparation for this request, the Light Division has undertaken an extensive telecommunications study that includes market research, telecommunications industry analysis, an examination of the regulatory environment, and research on similar activities in other municipalities. Staff has made presentations to neighborhood councils, chambers of commerce, local economic development groups, the Tacoma Port Commission, and the Tacoma Public School Board. Two joint Public Utility Board/City Council study sessions were held. A public hearing on the proposed telecommunications system was held by the Public Utility Board on March 12, 1997, and another public hearing was held by the City Council on March 18, 1997. Information summarizing the Telecommunications study and our recommendations was made available at the presentations and public hearings.

The Light Division estimates the cost of this telecommunications system will be approximately \$55 million dollars for construction and installation, plus more than \$10 million dollars for startup operations. The business plan indicates excellent financial potential even under conservative revenue and market penetration assumptions. We recognize the plan's projections are no guarantee of success, but we think the project risks are manageable and justified given the project benefits. These benefits include:

- Improves electric service by enabling distribution system automation, market access, and real-time, interactive communication with customers
- Provides better telecommunications and cable television service sooner and cheaper than other providers will deliver
- Significantly enhances regional economic development and quality of life by creating state-of-the-art telecommunications infrastructure and providing it to all businesses and residences throughout the community
- Creates opportunities for public private partnerships in the wholesale leasing of system capacity to retail telecommunications service providers
- Provides additional revenue to the Light Division and General Government through expansion of the market for telecommunications services

**SUMMARY**

The proposed telecommunications system will strengthen the Light Division's competitive position in the electric power industry through the provision of enhanced electric and telecommunication services to *all* Light Division customers. This system will serve a public purpose and is in the best interests of the City.

Very truly yours,

Mark Crisson  
Director of Utilities

# REQUEST FOR ORDINANCE OR RESOLUTION

CITY CLERK USE

Request #:  
Ordinance #:  
Resolution #:

1. Date: *March 20, 1997*

Requesting Department/Division/Program	Sponsored By	Phone/Extension
2. <i>Tacoma Public Utilities/Light Division</i>		
Contact Person (for questions):		Phone/Extension
3. <i>Steven J. Klein</i>		<i>502-8203</i>

4. Preparation of Resolution is requested for the City Council meeting of Tuesday April 8, 1997

5. Summary Title/Recommendation: (A concise sentence, as it will appear on the Council Agenda)

Authorize the development of a broad band telecommunications network to improve electric utility service and improve the telecommunications infrastructure available to the community. This would include the business plan for a broad band telecommunications system and the implementation of the telecommunications system.

6. Background Information/General Discussion: (Why is this request necessary? Are there legal requirements? What are the viable alternatives? Who has been involved in the process?)

The Light Division has undertaken an extensive telecommunications study that includes market research, telecommunications industry analysis, an examination of the regulatory environment and research on similar activities in other municipalities. It is projected that the cost for the construction and installation of this system will be approximately \$55 million to construct, plus more than \$10 million for startup operations. However, the Light Division believes that the overall benefits to the City, the Light Division and its customers will exceed the projected costs.

In addition to the benefits to the Light Division that the system would deliver through improved communication abilities, the system will also have the ability to transport data, provide high speed Internet access and deliver full cable television service.

7. Financial Impact: (Future impact on the budget.)

8. List all material available as backup information for the request and indicate where filed:

### **RESOLUTION NO. U- 9258**

#### **RECOMMENDATION**

The Light Division requests approval by the Public Utility Board and the City Council to develop a broad band telecommunications network as described in the Light Division Telecommunication Study. This action authorizes project implementation and the initiation of design and contract specifications. The Light Division will bring subsequent requests for construction contract and debt issuance approval to the Public Utility Board and City Council as the project progresses. Both policy bodies will also be periodically advised of project status during the development process.

#### **BACKGROUND**

In preparation for this request, the Light Division has undertaken an extensive telecommunications study that includes market research, telecommunications industry analysis, an examination of the regulatory environment, and research on similar activities in other municipalities. Staff has made presentations to neighborhood councils, chambers of commerce, local economic development groups, the Tacoma Port Commission, and the Tacoma Public School Board. Two joint Public Utility Board/City Council study sessions were held. A public hearing on the proposed telecommunications system was held by the Public Utility Board on March 12, 1997, and another public hearing was held by the City Council on March 18, 1997. Information summarizing the Telecommunications study and our recommendations was made available at the presentations and public hearings.

The Light Division estimates the cost of this telecommunications system will be approximately \$55 million dollars for construction and installation, plus more than \$10 million dollars for startup operations. The business plan indicates excellent financial potential even under conservative revenue and market penetration assumptions. We recognize the plan's projections are no guarantee of success, but we think the project risks are manageable and justified given the project benefits. These benefits include:

47

- Improves electric service by enabling distribution system automation, market access, and real-time, interactive communication with customers
- Provides better telecommunications and cable television service sooner and cheaper than other providers will deliver
- Significantly enhances regional economic development and quality of life by creating state-of-the-art telecommunications infrastructure and providing it to all businesses and residences throughout the community
- Creates opportunities for public private partnerships in the wholesale leasing of system capacity to retail telecommunications service providers
- Provides additional revenue to the Light Division and General Government through expansion of the market for telecommunications services

**SUMMARY**

The proposed telecommunications system will strengthen the Light Division's competitive position in the electric power industry through the provision of enhanced electric and telecommunication services to *all* Light Division customers. This system will serve a public purpose and is in the best interests of the City.

Very truly yours,

Mark Crisson  
Director of Utilities

# Telecommunications Study

by Tacoma City Light

Tacoma City Council  
Public Utility Board  
Joint Study Session  
February 18, 1997

## Why should a Publicly Owned Electric Utility be involved in Telecommunications?

- Board initiated RFP process in 1995
- Enhanced Telecommunication capability vital to the Utility in order to continue to improve service and provide choice to customers in rapidly changing environment.
- Investment in the community that provides a pathway to choice and competition.
- Over 100 years ago, Tacoma took steps to improve vital infrastructure to better serve our citizens.

# Key Operational Advantages to Tacoma City Light

- Electric system control and outage reporting
  - Savings to Tacoma City Light
  - Savings to customers
- Electric system performance monitoring and preventive maintenance
- Providing interactive communication link to customers

## Telecommunications Study Team

- Bruce Campbell, Metro Utility Communications Group
- F. Paul Carlson, Ph.D., Metropolitan Communications Consultants
- Linda Dethman, Dethman & Associates
- Stuart Hauser, Metro Utility Communications Group
- Peggy sue Heath, A.B.D., APEX Business Solutions
- Sandy Hunt, Ph.D., APEX Business Solutions
- Richard C. T. Li, P.E., Metropolitan Communications Consultants
- Bruce Mann, Ph.D., University of Puget Sound
- Catherine Rudolph, APEX Business Solutions
- Susan V. Marr, Metro Utility Communications Group
- Gene Starr and the research team at Market Data Research
- Staff team: Chandra Enos, Lisa Steadmon, and Steve Roberts, P.E.

# Telecommunications Study

## Brief Review of Part One

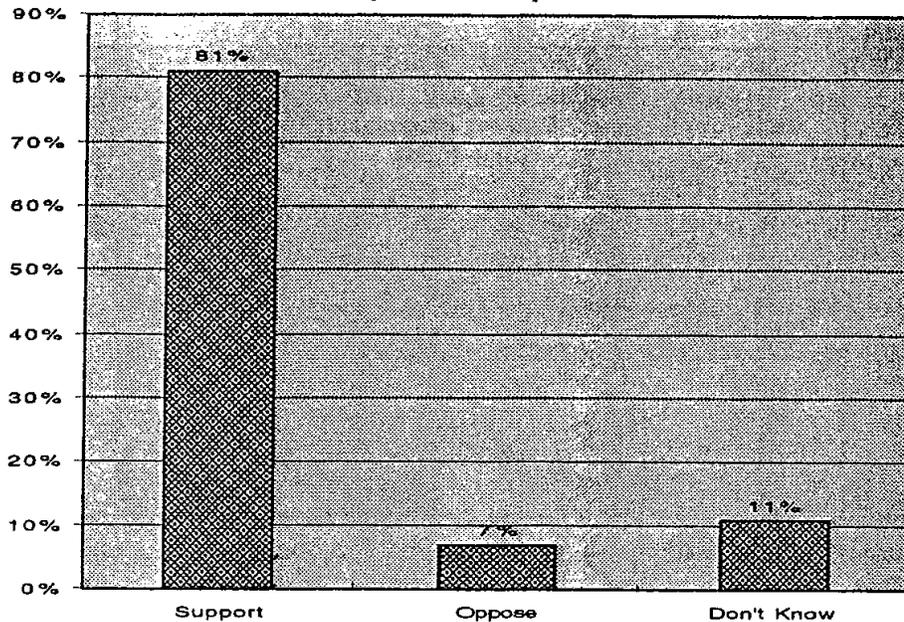

- Telecommunications technology
- Telecommunication companies
- Regulation: Federal, State, and Local
- Other cities and communities
- Local telecommunications history
- Existing telecommunications options in our local communities

## Business Market Research

- Survey of 200 businesses:
  - representing \$5 billion in revenue & 25,000 jobs
  - average of three locations in greater Tacoma area
- Importance of telecommunications links
  - 74% say links are extremely important to their success
  - 62% reported that a link being out one day would cause serious harm to their business; 20% said that it would shut them down
- 61% of businesses use Internet (but with limited access)
- 14% of employees telecommute (increasing to 18% in 2yr)
- Limited Experience with High Speed Lines
  - Two-thirds were not familiar with ISDN lines or T-1 lines

# Support for Tacoma City Light Telecommunications System

To what degree do you support Tacoma City Light building this new communications system to improve service to customers?

## Economic Development Impacts

- Market trends
  - Change in economic base
  - Downtown development activities
- Business Environment
- Telecommunications needs
  - Development activities at military bases
  - The expanding health services industry
  - Professional & financial services
  - Port of Tacoma

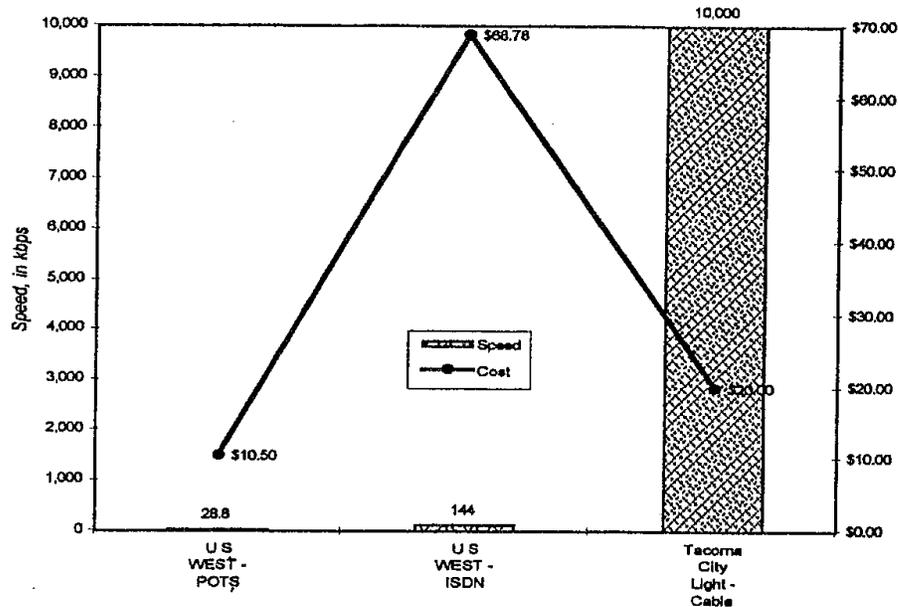

# The Telecommunications System

- Multiple fiber optic rings running throughout Tacoma City Light's service area
  - Secure and redundant fiber optic system
  - SONET electronics
- Fiber rings support two-way 750MHz Hybrid Fiber Coax system in residential areas reaching all homes

## Public-Private Telecommunications Services

- Wholesale data and telephony transport on the fiber optic SONET system
  - Available on a non-discriminatory basis to
    - other carriers (both local and long distance companies)
      - for switched services and dial tone
    - local value added service providers
      - who would customize these high speed lines for businesses that do not maintain a telecommunications staff
    - local businesses that have the technical expertise to use the lines themselves
- High speed Internet data transport for homes and small businesses in partnership with Internet Service Providers (ISPs)
  - Light Division transports the data, the ISPs do all the rest
- Full cable television service direct to local homes by Tacoma City Light

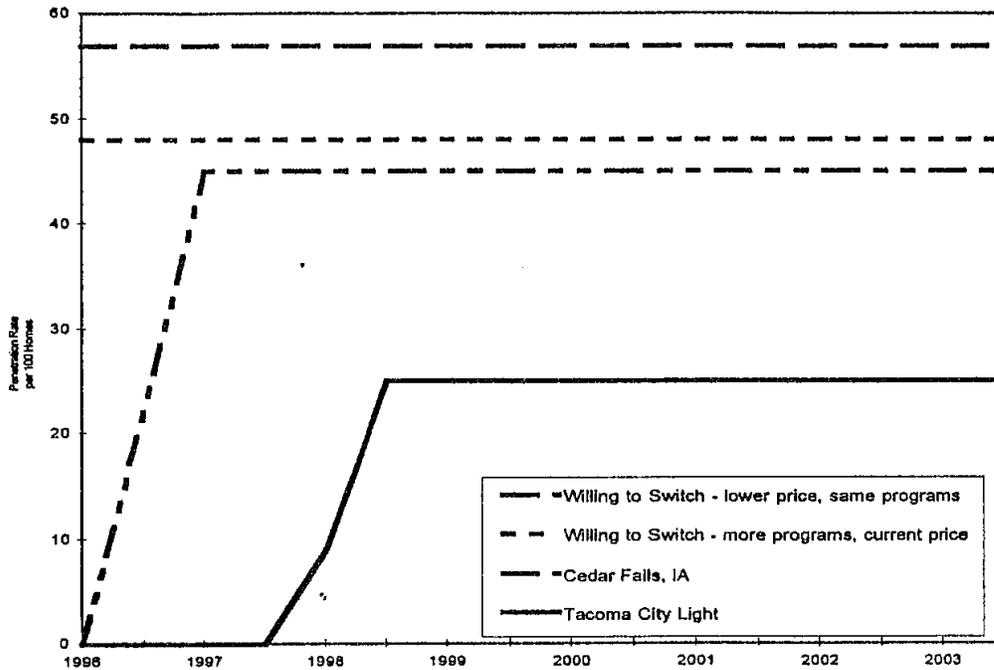

# Data Transport for Internet Access

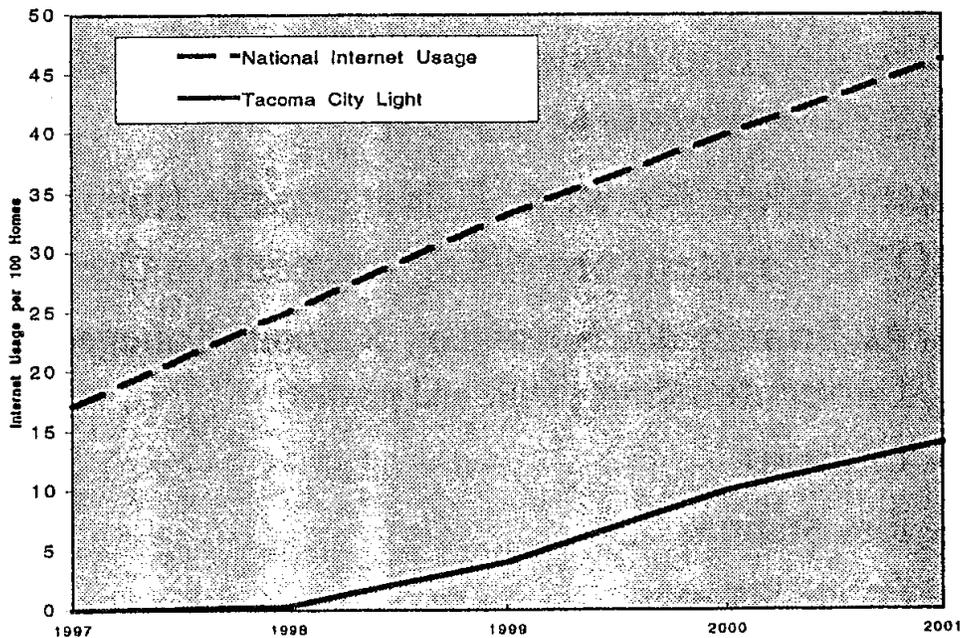

## Contacts with Private Service Providers

- Discussions with a number of private service providers about system options
- Video Providers
  - Talks were not particularly productive, the closest was:
    - Private would provide programming, advertising & billing but would not assume any system financial risk
    - Tacoma City Light would provide everything else including maintenance, cable installation, money, and name
- Other providers do want to make use of transport services to facilitate delivering other services
  - Sprint Spectrum

# Revenue Projections Comparison of Cable TV Penetration

# Revenue Projection Comparison of Internet Usage & Transport

# Taxes and Fees

## Inside Each Franchise Jurisdiction

- Franchise fee (5%) or Institutional Network
- Video gross earnings tax (8.32% in Tacoma)
- Telephone & data transport gross earnings tax (6% in Tacoma)

## Outside the City of Tacoma

- Gross Earning Tax of 6% to City of Tacoma on revenues earned outside the Tacoma City Limits

Note: Pricing in financials is inclusive of all taxes and fees

# Benefits

- Improves Tacoma City Light's competitive position by providing its utility customers with additional services not available from competitors
- Provides a platform for implementing electric system distribution automation, market access, and real-time communication with customers
- Provides better telecommunications and cable television service sooner and cheaper than other providers will deliver
- Provides high speed, low cost transport between Internet Service Providers and homes & small businesses that can't afford dedicated digital lines
- Significant tool for regional economic development by creating a high-tech telecommunications infrastructure
- Additional revenue to Tacoma City Light and subsequently to the General Fund through expansion of the market for telecommunications services and the 6% gross earnings tax on Light activities outside the City of Tacoma (40% of projected telecommunications revenue)

# A Short Window of Opportunity

- Current conditions are uniquely supportive of the creation of a modern telecommunications infrastructure in the Tacoma area
  - US WEST continues to stall on resale leaving the long distance carriers looking for a way to provide local service (they can not afford to build these local systems quickly themselves)
  - US WEST is pushing Internet Service Providers of access fees for existing system
  - DBS has not yet had time to significantly penetrate the local video market despite TCI's limited local offerings
  - TCI has not yet implemented it digital set top box one-way "quick fix"
- Delay will shrink the residential video market which supports this build
  - Once someone invests in a DBS system they are lost as a significant revenue producer (not only for video sales purposes but also for tax purposes)
- Delay may limit the business market as a small number of large users:
  - Invest in their own single user systems, or
  - Are targeted by CAPs that serve limited geographic areas

## RISK FACTORS

- Fail to provide excellent service at a competitive price.
- Fail to operate as a competitive business
- Fail to gain market share
- Fail to move quickly and aggressively
- Incumbent providers competitive response
- Community support disintegrates
- Construction and O&M costs substantially exceed estimates
- Worst Case Scenario

## TELECOMMUNICATIONS PROJECT PRINCIPLES

- The primary purposes for the Light Division financing, constructing and operating a broadband telecommunications system shall be as follows:
  - Provide a state-of-the-art fiber optic technology to support enhanced electric system control, reliability and efficiency.
  - Provide capability to meet the expanding telecommunications requirements in an evolving competitive electric market, the most critical of which is real-time, two-way interactive communications with individual energy consumers.
  - Provide greater revenue diversification through new business lines (i.e., Internet transport, cable TV, etc.), enhance traditional products and services and maximize return on Light Division assets.

## TELECOMMUNICATIONS PROJECT PRINCIPLES

- Important additional community benefits derived from this project are as follows:
  - Promote economic development and business retention.
  - Insure broad community accessibility to high quality, state-of-the-art telecommunication technology.
- The Telecommunications Project, including all infrastructure, and proposed business lines, shall be an integral Light Division operating responsibility and function.
- The Telecommunications Project business lines shall be operated in a business-like manner similar to electric services which are subject to market forces and are not tax supported.

## TELECOMMUNICATIONS PROJECT PRINCIPLES

- In order to avoid and perception of government control of the content of the cable television business line, programming will be determined on the basis of local consumer demand and input.
- The Telecommunications Project construction will reflect the current overhead to underground configuration of the Light Division's electric system. Any significant divergence from this will greatly increase the project costs and jeopardize the viability of the project.
- The Light Division's Telecommunications Project will not proceed unless there is broad and strong policy and community support.

## Public Involvement & Decision Making Process

- February 18:
  - Presentation of plan to joint Tacoma City Council & Public Utility Board study session
- February 19 through March 20:
  - Public meetings and presentations including neighborhood councils, business groups, and anyone else who will take their time to talk about the idea
- March 24
  - Resolution to the City Clerk
- March 26
  - Tacoma Public Utility Board Vote
- April 1
  - Tacoma City Council Vote

---

# THE TELECOMMUNICATIONS INDUSTRY

## SUMMARY

The world of telecommunications is complex. Technology, companies, regulations, and communities are all involved. Some would say that telecommunications is too complex for most people to understand, much less make decisions about. Upon closer examination, this appears to be a false premise. Telecommunications is complex, not because any of the pieces is impossible to understand but because there are so many pieces. Fortunately, just like any childhood puzzle, this puzzle can be put together by anyone willing to take the time to examine the pieces and explore how they fit together. This document is designed to bring the pieces together in one place to allow them to be more easily examined and explored.

The first section begins with an exploration of the technologies that are shaping the world of telecommunications today and the latest technological developments that may affect the future of telecommunications.

The telecommunications companies section examines some of the key players in telecommunications, the business models they have historically operated under, the technologies that they are employing, and both their announced and demonstrated strategies. Perhaps more than the latest technology, the companies that provide telecommunications products will influence the services that our communities are likely to see.

The next section discusses the evolving regulatory construct that telecommunications companies operate under. International, Federal, State, and local regulations all affect the provision of telecommunications services and it is in this area, perhaps even more so than in technology, that the greatest changes are taking place.

The overview of the broader telecommunications environment concludes with a review of what is taking place in selected cities around the United States of America with regards to telecommunications and the local forces in each of those communities that are influencing the direction that each community takes.

---

## TECHNOLOGY OVERVIEW

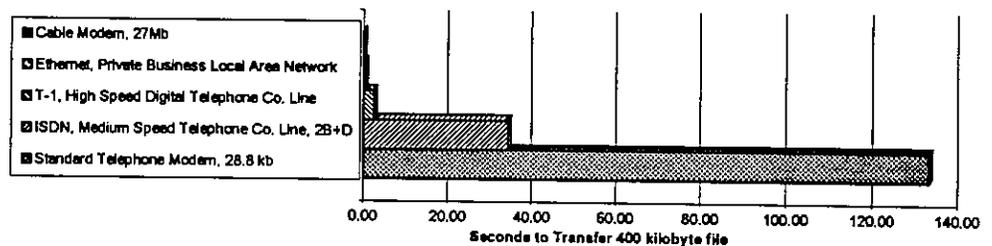

The five keys for evaluating telecommunications technologies are:

**Speed**  
**Bandwidth**  
**Direction**  
**Security**  
**Integrity**

### Speed

The speed of a communications path is measured in bits per second. A bit is a 1 or 0, the basic form of digital data. Speed is the measurement of the flow rate of data. The speed of a communications path or circuit must match the needs of the application, or patience of the users. A voice conversation can be carried on a 64,000 bits per second (64 kbps) line. Businesses lease circuits between buildings or cities to tie their computer Local Area Networks together using 1.5 million bits per second (1.5 Mbps) lines. Within businesses, Local Area Networks connect desktop computers using 10 Mbps lines. Businesses build private networks exclusively for their computers carrying 100 Mbps. Long distance companies operate major ties between cities carrying thousands of voice conversations at 2.4 billion bits per second (2.4 Gbps).

Comparison of Data Speeds

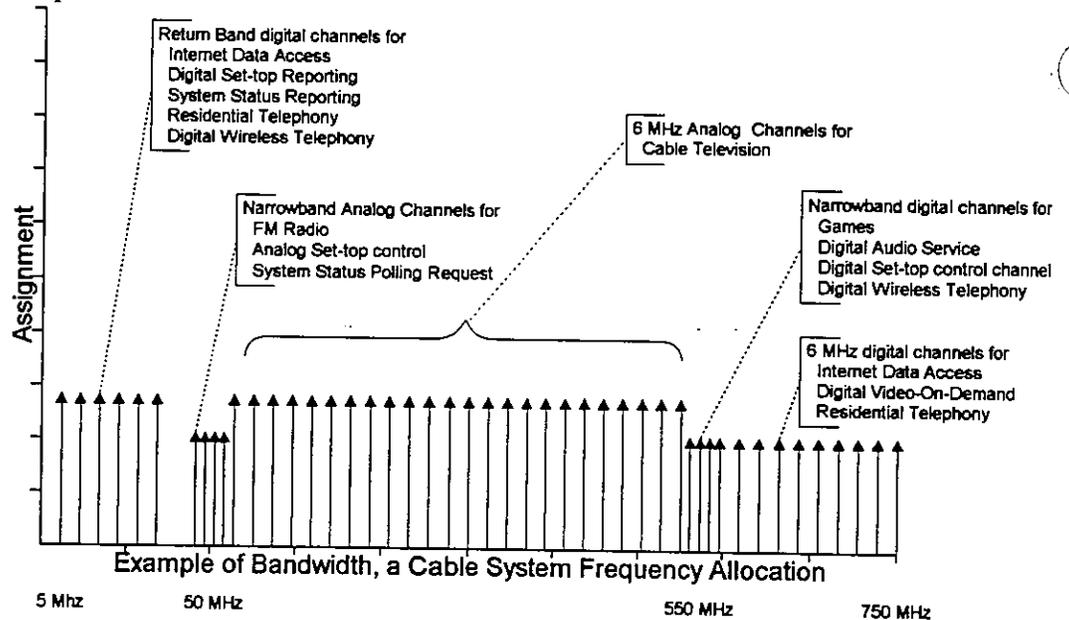

## Bandwidth

Bandwidth measures the radio spectrum available to transmit information. It is measured in Hertz (Hz), or cycles per second. A communications path is often referred to as either a circuit or a channel depending on its use. Each individual channel uses some of the available bandwidth. The total bandwidth of the transmission circuit cannot be exceeded. In the design of a typical broadband hybrid fiber optic coaxial (HFC) system, there is 750 MHz of bandwidth available and channels are assigned in 6 MHz increments. Users of each 6 MHz channel can pack as much information into that channel and operate at as high a speed as they can afford. They can not carry any information outside of their assigned channel's bandwidth since that information would interfere with the use of adjacent channels.

New products have developed to make effective use of bandwidth for transmitting digital information. The speed of signals in a bandwidth has been improved to as high as 8 bits per hertz, from 1 bit per hertz in 1970. Data compression removes unnecessary data without affecting meaning, with ratios now as high as 100 to 1.

### Example of Bandwidth

## Direction — Single or Bi ?

The direction of the flow of information must match the application that the information supports. Television signals are broadcast one-way to all users. Telephone conversations are two-way, carrying the same amount of information in each direction all the time. Because the same amount of information flows in each direction, telephone conversations are said to be symmetrical. Data network connections to homes are expected to be two-way. However, many people in the computer data networking industry believe that the majority of the information will be flowing to homes with relatively little information returning. The ratio of downstream to upstream information is perhaps 10 to 1, decreasing as symmetrical applications such as telephone and videoconferencing grow on the Internet.

Connections that send different amounts of information depending on direction are referred to as asymmetrical. Business communications are typically symmetrical since they are primarily made up of telephone conversations, which are symmetrical, and the peer-to-peer transmission of data between offices, which are also symmetrical. Two-way telecommunications systems capable of transmitting and receiving information at the same time are known as "full duplex systems."

---

## Security

Loss of security from eavesdropping on voice or data communications can pose risks for businesses and individuals. As a result, systems offering voice and data privacy have been developed. Some business applications require high security communications to protect the value of their information. Security can be enhanced by:

- Encryption: scrambling the information to make it unintelligible.
- Physical Control: keeping circuits within a controlled area
- Security Monitoring: checking circuits for evidence of security breaches
- Access Control: requiring users to provide passwords when signing onto networks

**Radio signals** are easy to monitor. Communication that takes place over the public radio spectrum can be monitored. Scrambling, digital encoding and encryption can be used to build in security, but they add cost and complexity to systems and slow the transmission of information.

**Copper cables** can be penetrated, allowing circuits to be mechanically tapped. This type of intrusion is difficult to detect automatically.

**Coaxial systems** send the same signal to many customers and create multiple unauthorized monitoring opportunities. The best security measures are the same as for the public radio spectrum — scrambling, digital encoding, and encryption.

**Optical fibers** can be monitored for intrusion. Signal levels can be checked to detect escaped light resulting from an intrusion. Even so, signals can be made more secure with scrambling or encryption.

---

## **Integrity**

Errors can occur when transmitting information. A person can often separate the voice of a single speaker from a noisy background but noise makes it difficult to understand all of the words spoken. Similarly, noise can cause errors in computers conducting data transactions. Noise-free communication circuits encourage efficient communications and eliminate time and effort spent correcting errors. Errors in digital communications are measured in Bit Error Rates (BER). Most computer networks require circuits providing a BER of better than 1 errored bit in 1 million bits.

---

**The following sections briefly describe telecommunications systems in use:**

**Wireless Systems**

**Wired systems**

**Cable TV**

**Basic Telephone Systems**

**Business Office Communications**

**Internet and**

**Power System Communications**

## **Wireless Systems**

Wireless communications are carried by radio waves through the atmosphere. The radio spectrum is divided, managed and allocated by the Federal Communications Commission (FCC). Many industries, including television broadcasters, AM and FM radio broadcasters, mobile radio users, satellite up links and downlinks, and the military use the public radio spectrum. Industries are allocated specific frequencies for use. Frequencies are re-used in different geographic areas by limiting transmitter power and range. The higher the frequency of a signal, the more it tends to lose signal strength as it travels through the atmosphere. Higher frequency radio signals also tend to follow line of sight paths and can often be blocked by hills and other similar obstructions. New allocations of frequencies tend to be in bandwidths of 30 MHz or less and use higher frequencies that were previously unallocated. For two-way transmission, two frequency bands are used.

Several new wireless systems are planned or under construction. Personal Communications Services (PCS) are described later in this section. The Ricochet Network, under construction by Metricom, is a wireless data network of small data packet transmitters mounted on streetlights and utility poles. Using six radios per square mile, the service obtains a speed roughly the same as a standard modem on a telephone line, but allows users to be mobile. Ricochet is marketed at users of computers, laptops, and pagers. Satellite services used for data transmission to homes are described later in this section.

Wireless networks are the easiest and least expensive networks to construct for services requiring low bandwidths. Many developing countries are building their first telephone networks using wireless cellular technology because copper telephone cable is more expensive to install and maintain.

Wireless systems usually rely on wired infrastructure to complete circuits. Wireless transmitters and receivers are linked to regional controlling switches with high-speed digital lines. Microwave connections are occasionally used for these point-to-point links. Most data and telephone traffic eventually is carried on high-speed land cables.

---

## **Wired Systems**

Wired systems use cable to carry the signals that provide most telephone, data and cable television services. Information is carried only in the cable, so no radio spectrum licenses are required. Cable is shielded to prevent interference from wireless systems. Different cable types have different capacities or bandwidth and are capable of carrying varying speeds and amounts of information. Wired systems reduce costs by re-using cables and common central electronics for as many services as possible. Systems can be designed so that signals can travel both downstream and upstream on the same wire. While telephone cables typically have a pair of thin copper wires for each phone serviced, cable television uses a single coaxial cable (one center conductor inside one tubular metallic shield), which carries multiple frequencies to many homes. This allows a single service to use only one frequency band and only one wire yet still be received by many customers.

**Fiber Optics** Optical fibers carry photons of light; metallic wires carry electrons. Light can travel much farther in an optical fiber than electrons can travel in metal wire before a signal is lost. Light is also immune to interference from electromagnetic waves, common from many sources, including radio transmitters. Since optical fibers cannot carry electrons, highly reliable communications in high voltage areas are possible. Light in optical fibers is a superior medium for communications in cases where long distance, high speed and/or high bandwidth are necessary.

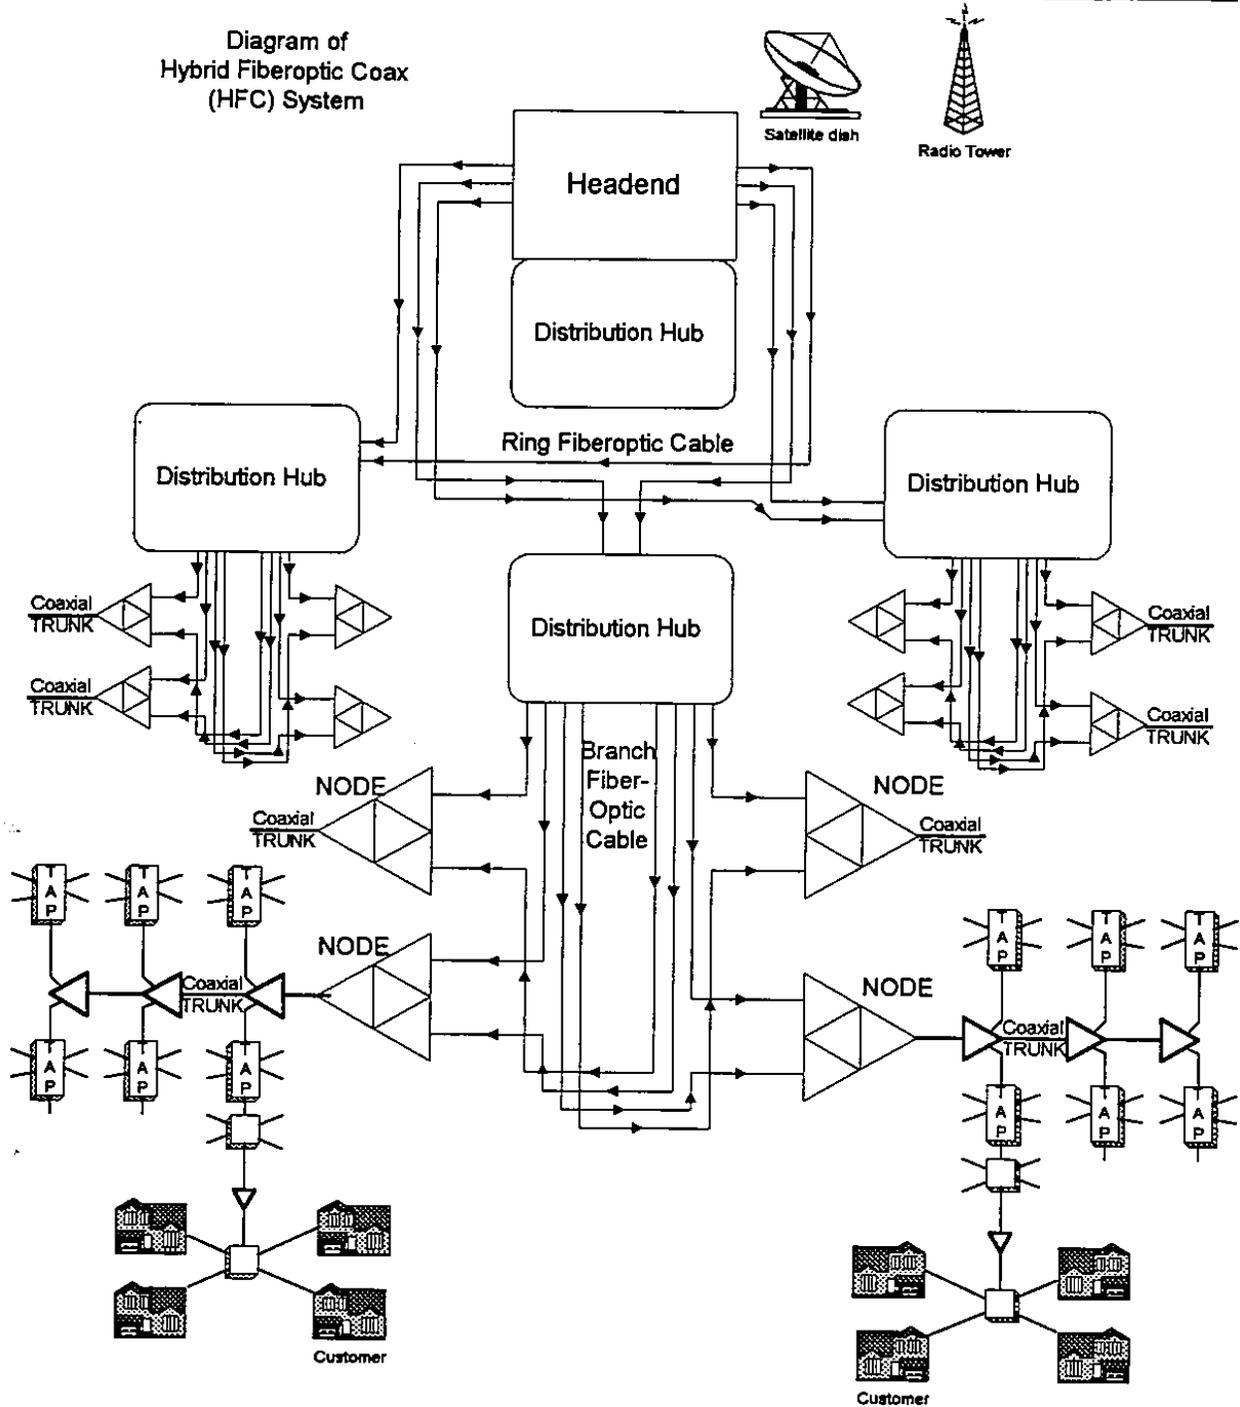

**Fiber optics in cable TV** Cable television companies began widespread installation of fiber technology into the trunk of the cable architecture about four years ago. This immediately improved signal quality and lowered maintenance costs. Since then, the cable industry has installed "fiber trunk and feeder" architecture in many markets. Fiber is now installed all the way to the feeder in most new construction. This allows system operators to re-use frequencies (or channels) by segmenting an existing system into individual serving areas composed of 500 to 2,000 homes. The resulting hybrid fiber coaxial cable networks are capable of delivering a variety of high-bandwidth, interactive services.

**HFC vs. FTTH** If replacing copper coaxial cable trunks with optical fiber improves the signal quality and reduces maintenance, why not replace all coaxial cable with fiber optics to each customer? Some people are expecting that communications services will be delivered all the way to the home on an optical fiber pair, or fiber-to-the-home (FTTH).

Unfortunately, fiber optics to each customer would be prohibitively expensive. This is not because the fiber optic cable is much more expensive than coaxial cable. It is because the optical electronics required to convert the light carried by the fiber onto electrical signals understood by televisions, computers and phones are fairly expensive. These residential devices all currently connect directly to copper cable, but not optical fibers. A single coaxial cable has the capacity to meet the telecommunications needs of 500 or more homes.

While it can be cost-effective to have a single optical to coaxial node serving 500 homes, it has not yet been shown to be cost effective to equip each of the 500 homes with new optical-electronic nodes and optical cable drops. Maintenance and operation alone of the fiber optic cable to each home would be expensive and would be a wider-bandwidth duplication of the existing telephone infrastructure, which is twisted-pair copper wire dedicated from the central office (CO) to each home. It has proven to be very costly to maintain and operate even telephone dedicated paths to each home.

Communications technology is applying fiber optics where appropriate, such as long cable lengths of ultra-high quality signaling or in electrically noisy environments.

**Digital Television**

Most new TV sets are cable-ready, meaning their channel selectors are able to tune in standard frequencies for 80 to 120 analog channels. When TV programs are transmitted digitally, existing television sets will not be able to receive them without additional electronics. A set-top converter, with its own channel selector will be necessary.

**Going digital** The telephone network is gradually becoming digital because digital transmission is high-quality, low-cost and fast. Phones in customers' home are among the last analog devices in the network. Integrated Services Digital Network (ISDN) was invented to bring digital service to homes. As home services become digital, the quality and variety of services the telephone network can deliver increases. ISDN enables many new services, including enhanced displays on your phone, two conversations on the same line, and data speeds two to four times faster than possible with a common analog 28.8 kbps computer modem.

---

## **Business Office Communications**

Businesses that have 20 or more telephone lines in use at one time, or that link computer centers to other computers and to Local Area Networks (LANs) in other buildings or cities, use digital circuits. Digital circuits allow businesses to reduce costs by consolidating voice traffic and to create high speed computer links that are impossible to create using "standard" phone lines. Businesses lease digital circuits to the central office, which can carry either switched telephone traffic or dedicated computer traffic. The basic unit of high speed digital circuits is T-1 service, which is a 1.5 megabits per second, two-way circuit, equal in bandwidth to 24 simultaneous voice conversations. The T-1 circuit can be connected to a business telephone switch for grouping telephone conversations at lower cost and higher quality than individual telephone lines. The T-1 circuit can also be connected to a computer "bridge" or "router." For this use the traffic is no longer switched and the T-1 circuit must be dedicated through the central offices to another business in a point-to-point assignment. This is referred to as a "nailed up" circuit. "Frame relay" is a data service that transfers computer data packets among nailed-up circuits that have been assigned exclusively to frame relay.

---

## **Internet**

The Internet has emerged as an essential tool for consumers and businesses, providing a variety of entertainment, research, and commercial services. While the Internet remains primarily an informational and entertainment resource, it is also a forum for electronic commerce with orders for goods and services taken on-line and paid for via credit cards or new Internet currencies. As security techniques become more sophisticated and accepted by the public, the Internet may surpass all public markets ever conceived.

The core of the Internet are the Internet Service Providers (ISPs) that own or lease long distance data circuits and manage interconnected data networks on them. Users connect to ISPs using their computer and local telephone circuits. A point-and-click graphical user interface makes access to the services on the WorldWide Web very easy.

**Web sites** are computers accessible from the Internet containing interesting information or providing services for users. There are now many thousands of Web sites and several million Internet users. Applications on the Internet defy description, as they are rapidly growing and changing to meet the needs of users and business. The Internet, and more specifically the Web, has the potential to be an alternative delivery mechanism for most media today, including music, video, games, news, mail, telephone, advertising, catalog sales, shopping, library, encyclopedia, and software delivery. New applications send ever larger quantities of data between users and depend on high-speed data connections between the users.

---

## **Cellular Phone Systems**

Cellular phones operate in a licensed radio band at 800 MHz. Radio towers serving these phones are called cell sites. There can be many cell sites per 5-mile radius. Frequencies are re-used among cell sites. A cellular phone notifies the closest cell site that it is there and can take calls. Even though a cellular phone moves from cell to cell, calls can continue by being "handed-off" or passed from cell-to-cell.

**Standards** Two carriers serve each region. Cellular carriers received radio licenses in a lottery, with one assigned to the local telephone system company in each region. At first, the simplest form of radio transmission, analog frequency modulation (FM), was used. As cellular service gained in popularity, many cell sites became saturated with traffic. More cell sites were added to allow re-use of the cellular frequencies more often. Recently, most carriers have adopted digital transmission standards that allow many callers to use the same frequencies in the same cell at the same time — up to 64 callers per frequency and cell. There are two main standards of digital modulation: Time Division Multiple Access (TDMA) and Code Division Multiple Access (CDMA). These standards are mutually exclusive and new digital cellular phones are built to carry one of the digital standards and the old analog standard.

In addition to mobile voice telephone service, cellular carriers are able to carry computer traffic to mobile computer users. By using modems on the analog system, or by leasing continuous access by the megabyte of use, mobile computer users can keep in contact with company computers for dispatch, customer information, e-mail, etc. The speed of service is about the same as on analog telephone or ISDN lines.

## Overview

### TELECOMMUNICATIONS COMPANIES

In the years following the breakup of AT&T in 1984, telecommunications companies were essentially divided into local telephone service providers , long distance service providers, and cable companies. Regional Bell Operating Companies such as US WEST and Ameritech were limited to providing only local telephone services. Firms like AT&T, Sprint, and MCI were restricted to supplying long distance services while cable companies largely focused on delivery of cable television. The Telecommunications Act of 1996 has done much to hasten the elimination of this separation by permitting these different companies to participate in each others' traditional markets. Many who watch the industry believe this removal of barriers will result in competition while others point to increasing company consolidation.

In order to make informed business decisions regarding telecommunications it is vital to identify the key players and review their reactions to changing environments. The section that follows is an overview of each of the major telecommunications industries, including a quick analysis of a few key companies that have the potential to affect the greater Tacoma area.

## Tele-Communications, Inc. (TCI)

Tele-Communications, Inc. (TCI) is the largest cable TV provider in the United States. TCI has nearly \$2 billion in revenues, an operating cash flow of \$533 million, 14 million subscribers in the United States and approximately 32,000 employees.

TCI's size and great influence in the cable TV industry was achieved through its push for growth, acquiring more and more cable systems, and increasing its subscriber base and revenues. In 1996 alone, the cable operator added more than 2.4 million subscribers<sup>34</sup>. However, this acquisition strategy has left the company in a relatively poor financial position. TCI has more than \$14 billion in debt — roughly \$1,000 of debt per subscriber. TCI faces elevated expenses due to its entry into new services, and is attempting to resolve its money crunch by raising rates, cutting capital expenditures, and eliminating 2,500 jobs.

These cutbacks reveal a change in TCI's telecommunications strategy. The company's properties consist mainly of one-way, coaxial cable systems operating at 350 MHz using 20-year-old technology. The company has announced that upgrades to these systems will be deferred, and the focus instead will shift to the deployment of digital set-top boxes. These boxes will deliver more channels using a new compression technology, but will not allow deployment of advanced telecommunications services such as high speed, two-way Internet access or telephony.

Before refocusing on cable TV, TCI was attempting to gain a foothold in other markets besides traditional cable TV service. A commercial telephone network was launched in Hartford, Connecticut, with two other cities scheduled for the service in Illinois and California under the name PeopleLink. The company also has a large stake in the Digital Broadcast Satellite market. In 1994, TCI joined five other cable operators to form Primestar Partners. This DBS service now reaches more than 1.1 million subscribers, and contributed \$200 million to TCI in 1995, with revenues expected to double in 1996. Personal Communications Services are another market TCI has entered. Sprint Spectrum was created by a partnership between Sprint, TCI, Comcast, and Cox Cable. The partnership has licenses to provide Personal Communications Service in 33 Major Trading Areas with a total population of 190 million.

Following the explosive growth of the Internet, TCI set up an on-line service with the help of Microsoft called @Home. The @Home Network provides Internet service to a customer's personal computer through cable lines. Customers receive 24-hour unlimited access to the Internet, a high-speed cable modem, e-mail, Netscape Web browser and community content for \$39.95 a month. This service is currently available in limited areas of California, Connecticut, Florida, Illinois, and Maryland.

## Overview

### REGULATORY ENVIRONMENT

Federal regulation has been streamlined under the 1996 Telecommunications Act. State laws that in the past could have limited access to certain markets have been federally pre-empted or limited. The regulatory environment has greatly improved the ability to enter the telecommunications market. However, some regulatory hurdles remain.

Many provisions of the Telecommunications Act of 1996 direct the Federal Communications Commission (FCC) to come up with regulations that will open local telecommunications markets to competition and remove barriers to entry. These provisions were written in broad strokes, leaving the FCC to fill in the details. In 1997, the FCC must implement the Act's crucial universal service sections, which will determine how telecommunications companies guarantee phone service to poor and rural areas. In addition, the Act requires all telecommunications carriers to interconnect directly or indirectly with the facilities and equipment of other carriers.

The Regional Bell Operating Companies (RBOCs) and local exchange carriers contend that the FCC has already gone too far, providing discounts for competitors that would undermine their entrenched businesses<sup>1</sup>.

Given the enormous financial interests at stake, many industry interests are not willing to wait for all the details before taking action. As a result, deals are being negotiated that in some cases, are between former competitors.

One thing is clear, municipally owned electric utilities, electric cooperatives and other utilities may enter the communications business *without* obtaining FCC certification or any other prior FCC approval. State requirements vary, but cannot limit utility participation in telecommunications ventures<sup>2</sup>.

This section provides an overview of pertinent Federal laws and regulations related to telecommunications as well as a summary of state legal and regulatory issues that must be considered before entering the telecommunications market.

---

## REGULATORY ENVIRONMENT

---

### The Communications Act of 1934, The 1992 Cable Act and The Telecommunications Act of 1996

---

#### The Communications Act of 1934

Though Congress has amended the Communications Act of 1934 several times since its enactment, today's high-tech communications companies are regulated to some extent by statutory language from the 19<sup>th</sup> century. When the Act of 1934 was adopted, the telegraph was the principle means of electrical communication, mass media meant AM radio, and telephones were considered luxuries. Considering the many new communications technologies that have emerged, the Communications Act has proven a versatile, evolving statute.

The Communications Act of 1934 was first amended in 1992 to reform the monopolistic practices of the cable industry. The Act was again amended when the Telecommunications Act of 1996 was signed into law. This Act of 1996 is regarded as landmark legislation and its implications will be discussed later in this section.

The Act of 1934 and its amendments are divided into three major regulatory subdivisions: **common carrier**, **radio**, and **cable television**. From a regulatory perspective, every form of electronic communication must fit into one of these statutory subdivisions or fall completely outside the scope of the Act. How a new form of communication is regulated depends in part on how it works and how its purveyors choose to have it regulated.<sup>3</sup> From a regulatory view, a communications service usually fits into two basic categories:

1. Who is offering the service?
2. How is the service being transmitted?

Who is offering the service? The answer starts with a definition of "common carrier" as one who serves all potential users without favoring one over another. The customers of a common carrier transmit information of their own design and choosing<sup>4</sup>. On the other hand, private carriers do not allow customers to transmit information of their own design and choosing.

How is the service being transmitted? Does it move through a wire or through the air (wireless)?<sup>5</sup> From a regulatory point of view, the result is a two-by-two matrix:<sup>6</sup>

	<b>Common Carrier (Telecommunications Service Provider)</b>	<b>Non-Common Carrier</b>
<b>Wired</b>	Telephone (land line)	Cable TV
<b>Wireless</b>	Cellular Telephone	Utility Radio Dispatch System

When a new service approaches the market, it must fit into one of the four boxes. Because the rules in one box may be more advantageous to a particular firm, an operator in one box may try to relocate to another box.

Though the fundamentals remain basically the same, the regulatory aspects of each box can, and do change. For example, the two amendments to the Communications Act of 1934 have had a profound affect on various communications industries.

---

### **Cable Television Consumer Protection and Competition Act of 1992**

By 1984, Congress had basically deregulated the cable television industry. The 1984 amendments prompted expansion of cable television service throughout the country. Though millions gained access to cable access, customer complaints about escalating rates and poor quality of service attracted Congressional attention. Television stations argued that cable operators must carry their broadcast channels and then argued that operators "stole" their signals by re-transmitting them without paying for them. The Courts resolved this issue by ruling that cable systems were not obligated to carry local TV signals, but if they did, they must pay for the right.

Over time, the cable industry became increasingly concentrated: a relatively small group of executives controlled programming, production and distribution. In effect, cable had become a monopoly and exercised monopolistic power<sup>7</sup>. After several unsuccessful attempts to enact reform, Congress passed the Cable Television Consumer Protection and Competition Act of 1992, commonly referred to as the 1992 Cable Act.

The 1992 Cable Act empowered the FCC to regulate cable rates and service. The FCC responded with thousands of pages of rules, forms, and interpretive decisions that addressed the cable business in minute detail. These rules were adopted in 1993, and are still being fine-tuned in 1997<sup>8</sup>.

In summary, the 1992 Cable Act sought to re-regulate an industry that had begun as an adjunct of broadcast TV and had evolved into an independent, distinct and powerful medium of communications<sup>9</sup>.

---

### Telecommunications Act of 1996

On February 8, 1996, President Clinton signed into law the Telecommunications Act of 1996 (P.L. 1040104) the most significant and far-reaching amendment to the 1934 Communications Act.

Unlike the 1992 Cable Act, the basic thrust of the 1996 Act is **deregulatory**. Its intent was to eliminate barriers to entry and spur competition. A number of provisions to the 1996 Act will also have a great effect on companies deciding to enter the telecommunications business. For example, if a company decided to provide a "telecommunications service" it would be subject to certain **common carrier** regulations including:

- **Interconnection** The Act of 1996 requires all telecommunications carriers to interconnect directly or indirectly with the facilities and equipment of other carriers.
- **Universal Service** The Act of 1996 requires that all interstate telecommunications service providers contribute, on an equitable and non-discriminatory basis, to a universal service fund. The 1996 Act codifies, for the first time in the history of the regulation of communications, the concept of "universal service." Universal service is generally understood to mean basic telephone service for all Americans at affordable prices.

Some of the major **deregulatory** aspects Act 1996 include:

- The FCC is empowered to refrain from applying or enforcing any communications statute or rule against any telecommunications carrier or service, or class of telecommunications carriers or services. For this to happen, the FCC must first determine that enforcement is unnecessary to ensure that charges or practices are just and reasonable or to protect consumer interest, and is consistent with the public interest.
- The FCC's tariff filing and review process are streamlined.
- The FCC is authorized to exempt individual carriers from complying with the requirements of Section 214. Under Section 214 of the 1996 Communications Act all carriers are required to seek and obtain FCC approval before building or extending a telecommunications linehead.

The 1996 Act defines "telecommunications service" as:

*The offering of telecommunications for a fee directly to the public, or to such classes of users as to be effectively available to the public, regardless of the facilities used*

#### **Interstate Access Charges**

In January of 1997, the FCC adopted a Notice of Proposed Rulemaking to reform its system of interstate access charges to make that system compatible with the pro-competitive deregulatory framework established by the 1996 Act. Two possible approaches have been outlined for addressing reform. The first approach is a market-based approach under which the FCC would rely on potential and actual competition from new facilities-based providers and entrants purchasing unbundled network elements to drive down prices. The second approach is a prescriptive one under which the FCC would specify the nature and timing of changes to the existing rate levels. In addition, the Commission tentatively concluded that information service providers should not be subject to interstate access charges as currently constituted.

#### **Local Exchange Telephone Service**

The 1996 Act eliminates the consent decree that governed the breakup of AT&T. The 1996 Act opens up the local telephone market to new competitors, including long-distance carriers, cable operators and electric utilities. Local exchange telephone service is regulated by state public service commissions and long distance is the FCC's domain.

#### **Long Distance Telephone Service**

The 1996 Act allows Regional Bell Operating Companies (RBOCs) to provide long distance service to customers in their local exchange service areas once they have opened the local exchange market to competitors. They may immediately enter the long distance telephone market outside their local exchange service areas. The RBOC's may also provide telecommunications equipment and manufacture customer equipment.

#### **Video Programming Services by Telephone Companies**

The 1996 Act repeals the statutory ban against telephone companies becoming cable television operators. (Several courts had already ruled this ban unconstitutional.) However, the new law prohibits telephone companies from buying existing cable systems in their home areas - and vice versa, except in certain rural markets and in other limited circumstances<sup>10</sup>. Telephone companies now have four video entry options, each of which has different regulatory consequence and structure, and each of which is treated differently for payment of cable television franchise fees.

The four video options are:

1. Over a radio based system in which case it is regulated under Title III of the Communications Act and not as a cable operator. (A radio based system cannot be charged a cable television franchise fee.)
2. As a common carrier subject to Title II. (A common carrier cannot be charged a franchise fee.)
3. As a cable television operator. (A cable television system can be charged a cable television franchise fee.)
4. As an "open video system" operator subject to limited regulation. An open video system operator must make channel capacity available to unaffiliated programmers without discrimination. Though an open video system operator cannot be charged a cable television franchise fee, it may be required to pay fees based on gross revenues in lieu of franchise fees; it may also have to pay other state and local fees.

Though designed to promote video competition by telephone companies, these video entry options are not limited to telephony companies. Open video systems are of particular interest to companies that are experiencing difficulty obtaining franchises as a result of the long relationship between franchise authorities and incumbent cable television operators. A number of electric utilities are considering becoming open video system operators.

## Overview of Players

---

### Congress

Congress passes laws, such as the Communications Act, and exercises oversight of executive agencies that carry out those laws. Congress does this by gathering information, holding hearings, conducting investigations, passing resolutions, and expressing opinions about a wide variety of matters.

The House Commerce Committee and Senate Commerce Committee are the primary committees that investigate and recommend communications policy.

### The Federal Communications Commission (FCC)

The Federal Communications Commission (FCC) is charged with implementing the Telecommunications Act of 1996. The FCC is a board of commissioners appointed by the President of the United States under the authority of the Communications Act of 1934, having the power to

regulate radio, telephone, cable television and all other interstate communication systems.

The FCC exercises its jurisdiction over communications matters through regulations that fall into two broad categories:

1. Regulations Congress expressly directed the FCC to adopt to carry out specific provisions of the Communications Act.
2. Regulations the FCC generated to further its actions in pursuit of the public interest.

Before adopting a rule, the FCC, like most Federal agencies, must initiate a formal rule-making procedure that entails publishing the proposed regulations and soliciting public comments. The FCC fleshes out the particulars of a Congressional enactment through its rule-making process. Interested parties try to alter or temper statutory provisions while the agency is drafting and revising its proposed regulations. If resulting regulations are not to their liking, they may challenge them in court.

The FCC cannot arbitrarily waive any provision of the law. However, the agency may initiate, or consider a request for, waiving rules and regulations based on just cause. By arbitrating individual cases, the FCC establishes precedents for dealing with similar issues. The FCC can also adopt policy statements to deal with situations that are likely to recur. Though less formal rule-making, this method still requires the FCC to explain any variation or deviation from the policy.

On August 8, 1996, the FCC issued its First Report and Order implementing the local competition provisions of the 1996 Act. The Order sets forth the basic regulatory framework for competition in telecommunications. Disputes over various provisions have resulted in court challenges and delayed its implementation. The FCC has also commenced additional rule making to address issues related to state and local authority, pole attachments and access to public rights-of-way.

## **Courts**

The role of the courts is to determine the legality, particularly the constitutionality, of provisions of the Communications Act and actions by the FCC. When telecommunications issues come before the courts, it is usually because a party appeals an FCC decision or policy. The United States District Court of Appeals for the District of Columbia hears the majority of FCC cases.

## **State Public Utility Commissions**

Public utility commissions regulate investor owned electric, gas, water and telephone utilities. They regulate telephone rates as well as terms and conditions of service of local exchange carriers. State commissions often coordinate their activities with the FCC by participating in joint activities, such as the federal-state board currently reviewing the concept of universal service (covered earlier in this section).

### **Washington Utilities and Transportation Commission (WUTC) Requirements**

To do business as a telecommunications company in Washington state, a company must register with the Washington State Utilities and Transportation Commission (WUTC). An applicant must demonstrate its financial and technical competency and provide its proposed tariff package. An attorney usually prepares the necessary documents, with the approval process generally taking 30 days. If a company shows that it is subject to effective competition, it can avoid many of the regulations on rates and services that apply to monopoly providers. According to Tony Cooke, spokesperson for the WUTC, a municipally owned utility is not subject to state rate regulation for the provision of voice and data service, nor is it subject to regulation if it acts as a transport provider or "carrier's carrier" per chapter 80.04.500 of the RCW (Application to Municipal Utilities). This same non-regulation applies to both voice and data transmission. Whether a municipal utility builds a competing network or re-sells another company's service, rate issues are handled at the local level.

## **City Councils and Municipal Legislative Bodies**

State and local authorities have some jurisdiction over telecommunications, but it varies depending on the industry and issues involved. The federal government exercises little jurisdiction over fiber-optic cables. However, if the system meets the definition of a "cable television system," then it will be regulated as a cable television system. If the system operates as a common carrier, it is subject to regulation as a common carrier.

Cities have traditionally exercised jurisdiction over public rights-of-way, most prominently in franchising cable television operators. The 1996 Act grants local authorities primary jurisdiction over basic cable television rates in the absence of effective competition. In addition, the 1996 Act specifically affirmed local jurisdiction over wireless mobile services such as cellular telephones. However, the 1996 Act also limited local jurisdiction over satellite Earth stations and receiving antennas for TV and Multichannel Multipoint Distribution Service, sometimes referred to as "wireless cable."

The 1996 Act also reaffirmed the FCC's authority to preempt any state or local law, regulation or policy that constitutes a barrier to entry into the telecommunications market. This power is apt to be tested "repeatedly and aggressively."<sup>11</sup>

---

## **Federal - State Joint Board Recommendations**

### **Universal Service**

In November of 1996, the Federal-State Joint Board on Universal Service released a 422-page Recommended Decision on new universal service support mechanisms required by the 1996 Act. The FCC has until June 1997 to adopt universal service rules based on the Joint Board recommendations and public comments<sup>12</sup>.

### **Private Internal Networks**

Applying this definition, the Federal-State Joint Board recognized that private networks dedicated exclusively to internal communications are not telecommunications providers and are not subject to the 1996 Act's mandatory universal service contribution requirement.

### **Carrier's Carrier Networks**

The Joint Board has not made a recommendation with regard to treatment of fiber that is provided to a third-party telecommunications carrier. There is a strong argument that the provision of fiber alone does not constitute the offering of telecommunications. As unpowered glass, dark fiber would appear to fall outside of the Act's definition of telecommunications as the transmission of information.

### **Information Services**

The Joint Board concluded that information service providers and enhanced service providers are not telecommunications services and are not subject to universal service obligations. Under this interpretation utility automatic meter reading and other energy management systems using telecommunications networks would not be subject to federal universal service requirements. In addition, the provision of Internet services would also appear to be outside of universal service obligations.

## Overview

### TELECOMMUNICATIONS ACTIVITY IN OTHER CITIES

A number of cities across the country have made efforts to create modern telecommunications infrastructures. Some have succeeded, some have recently begun to investigate their options, and others have withdrawn. None appear to be outright failures. Five themes have emerged from an examination of these cities:

1. *Smaller communities with experience in operating municipal utilities appear to be more likely to enter the telecommunications field than other communities.* The desire to facilitate new economic growth, keep money in local circulation, and provide alternative services at lower costs are common threads in Glasgow, Kentucky; Paragould, Arkansas; and Morganton, North Carolina. The strong influence of universities in Cedar Falls, Iowa and Blacksburg, Virginia was a significant force as well.
2. *A relative lack of local competition amongst telecommunications providers often prompts community telecommunications efforts.* With no one willing to voluntarily make the significant investment to serve them, many of these cities have taken on the task of soliciting infrastructure builders or creating infrastructure themselves. Harlan, Iowa, and Glasgow, Kentucky, are two small communities willing to take the risks and make the investment in a telecommunications infrastructure with the goal of attracting new business and enhancing the existing community.
3. *Determination and tenacity is a requirement.* Some of these communities have had to face large incumbent telecommunications corporations in protracted legal battles. Perhaps smaller communities have fewer distractions, allowing them to focus on telecommunications and there by compensate for their somewhat limited resources. Morganton, North Carolina had to fight a long court battle with a local cable provider before it could build its own system. On the other hand, fear of court battles caused Jefferson City, Missouri, to abandon its plans for a system.
4. *Public dissatisfaction with local incumbent telecommunications providers often prods communities to actively consider owning and operating their own system.* In both Morganton, Paragould, and Cedar Falls, strong citizen voter support for cities to own and operate their own telecommunications systems prevailed despite aggressive advertising campaigns by incumbents. Even when a community dropped out of the race with a competitor, customers still appeared to have often benefited through reduced rates, improved customer service, and additional cable channels from the incumbent operator.
5. *"First tier" cities are seeing some telecommunications competition.* First tier cities are likely to already be experiencing competition for services targeted at major business users, i.e., those taking service at T-1 levels or higher with a minimum monthly telecommunications expenditure of approximately \$5,000. Even first tier cities are not yet experiencing significant competition targeted at small business or residential users located outside of the business core. Tacoma is viewed as a second tier city by telecommunications providers.

## TELECOMMUNICATIONS IN THE GREATER TACOMA/PIERCE COUNTY AREA

### SUMMARY

Building on background information about the broader telecommunications industry, this study turns its focus upon the local telecommunications environment. To put today's events in perspective, the first section provides a quick review of the history of telecommunications and utilities in this area.

The study then reviews in more detail the existing telecommunications providers that serve our communities, the telecommunications infrastructures that they employ, and their latest announcements of future plans for this area.

The next section provides a quick overview of the changing local regulatory picture and some of the difficult problems faced by local jurisdictions as they participate in the evolving telecommunications environment.

A review of telecommunications in our local communities analyzes both the residential and business markets for telecommunications services as they stand today. A discussion of how different economic futures are impacted by telecommunications concludes the section.

The role of telecommunications infrastructure and services in economic development is a topic of considerable interest. In order to put the local situation in perspective, the following pages discuss some of the economic development ramifications of telecommunications. This piece was authored by Professor Bruce Mann, Ph.D. with the Department of Economics at the University of Puget Sound; and Peggy sue Heath, A.B.D., with APEX Business Solutions. They conduct an interesting examination of the key role that telecommunications has begun to play in economic development, and what the future might hold for communities that create a communications infrastructure.

### **The Railroad of the 21<sup>st</sup> Century**

There was a time when the simple act of drawing a line on a map could either create a community or force a town into obsolescence. Those were the days of railroad planning. To have access to the rail line meant a chance at prosperity as a "railroad town." Without access, a town would have an uphill battle to be involved in the growing network of trade. Many businesses needed the railway to send their products off to other buyers; other local businesses needed the people traffic the railroad brought to create demand for their products or services. Economic development was synonymous with rail development, and the decisions made on those planning maps fundamentally shaped the face of the entire nation.

Since the first rail tracks were laid, people have continued to improve the transport of physical goods. The last century has seen incredible developments in aeronautics with design and material breakthroughs leading to planes that can take people and products around the world overnight. Even more dramatic, however, have been the developments that allow people to overcome vast geographic differences without needing to leave the room. As we draw near the close of the 20<sup>th</sup> century, many signs indicate that the new railroad towns are "Tele-Communities", communities with a strong communications infrastructure supported by both information technology and telecommunications systems.

---

### **Why Does Telecommunications Play a Role in Economic Development?**

Urban planning experts have long emphasized the role of infrastructure to support economic development and an increasing standard of living. As time goes on, telecommunications is key to creating a foundation for economic growth and health. But if telephone has been in existence since Bell's fateful afternoon in 1876, why has it become such a focus now? The answer lies in the changing nature of industry and competition.

The 21<sup>st</sup> century is being characterized as the time of bytes, rather than atoms. While historically trade has been focused on buying, selling, and transferring atoms — physical things — from one geographic area to another, many emerging and changing industries are being driven by the need to transfer “bytes” of information. Some of those industries, such as financial services and medical administration, represent the growing service-based sector in the United States. In most industries competition is driving companies to utilize information technology and telecommunications to compete more effectively.

Ironically, even industries whose focus is on transporting physical goods have begun to incorporate information management as part of their value-added services. For example, some transport companies offer services that track goods with Global Positioning Satellite (GPS) technology. Others use the Internet to provide services that identify the least costly route or shipping method. So even “atom” companies are using “bytes.”

Investments in infrastructure ensure that local communities attract and retain businesses that keep residents in jobs, homes, and with a healthy standard of living. As the industrial base in communities undergoes change, the infrastructure necessary to support that base must change. Telecommunications investments can serve the needs of companies and can also provide tools for local government and the community. Some of the ways telecommunications are already being used are reviewed below.

#### **For companies**

Companies use telecommunications in several ways. For many organizations, telecommunication is used as a link to their markets. One example of this is a 1-800 number used for sales or customer service. Telecommunications can also serve as part of core production process, as when a financial service organization transfers money or transaction information from one location to another. Another key use for telecommunications is as an internal communication device to coordinate work across a number of locations.

#### **For local governments**

Local governments benefit from increased telecommunications by keeping their communities better informed about government activities and issues that affect community members. Improvements in telecommunications can increase economic development by allowing local governments to provide the kind of information necessary for companies and developers to decide to invest in a community. Improvements also meet the needs of current residents through enhanced services, including better fire and police protection.

#### **For local communities**

In the last decade in particular, communities have climbed on the bandwagon through public access networks, community-based web pages, wired libraries and schools, both public and private. Schools in particular

benefit from enhanced telecommunications, through access to remote sources of information. Telecommunications has served as a conduit for courses offered to those who are far from a major university. It has also been used to provide health care between facilities, in particular to those who don't have full access. Local business and economic development groups in California, Illinois, and elsewhere have taken the initiative to use telecommunications to provide communities with information helpful to retain or attract businesses. This information has included local land use and availability, numbers about local markets for certain goods and services, and information on local support services for siting businesses.

---

### **What Happens If Communities Aren't *Wired*?**

The emphasis on getting wired has been punctuated by stories of successful telecommunications investments. In Dublin, Ireland, early investment in telecommunication supported a growth plan that brought in advanced technology industries and reduced Ireland's reliance on low-skilled labor industries they were likely to lose to nations with lower labor costs. When it comes to preemptive telecommunications investments, Singapore's plan to place "fiber in every home" is pointed to as one of the more progressive moves a country has made in this decade. Singapore's plan is predicted to have a positive long-term impact on their ability to compete for business, even though they have higher costs compared to some of their Southeast Asian rivals. Successes like these have begun to slowly raise awareness of the role of telecommunications in sustaining economic health.

A weak telecommunications infrastructure will first impact a community's ability to retain and attract commerce, including technology intensive businesses and those companies that co-locate to sell to them. These include primarily financial services, transportation and distribution, and medical administration and provision. Also affected are businesses whose success or failure lies primarily in beating the competitor to the market. These companies often use collaborative work arrangements with individuals all over the world to increase the chances of beating the competitor to market — examples include software development, biotechnology, and other advanced research companies. Additionally, each of these businesses mentioned find themselves a part of a growing group of firms who must compete aggressively for talented people to fill key positions. As more employees focus on the quality of life issues that a career choice represents, information access in their homes and their children's schools may play a larger role in their decisions to locate in one community or another.

In addition to the fundamental inability to sustain an economic base for technology companies, the lack of a modern telecommunications infrastructure can also impact a community on a more social level. Access to information has often been lauded as one equalizer in the disparity between poor and rich. Whereas some communities will have access to a wealth of knowledge with wired libraries, public access networks, and technology support for individual Internet access, those communities without such a base may be left behind in a widening cultural evolution toward the information age.

---

### **What Is The Future World Of Tele-Communities?**

Whether or not it chooses to be actively involved in the revolution, a community is impacted by developments in telecommunications. How the revolution will impact each community is part of the mystique surrounding the future of Tele-Communities. Two forces surround telecommunication advances, dispersion and relocation. On one hand, experts have predicted more dispersion or spread in communities as people move away from urban centers, since telecommunications allows individuals to overcome geographic distance without the need for physical proximity. The forces of relocation, however, are more complex. As people relocate to other areas, there are two opposing arguments as to whether this physical distance will be accompanied by social distance as interaction changes. At the heart of matter is whether the forces of telecommunications advances will drive society farther apart or closer together. Further, what role can Tele-Communities play in this revolution?

#### **Dispersion**

First, let us explore some of the basic economic premises to understand why physical dispersion may occur. One of the main reasons for the economic vitality of cities is that highly concentrated, dense, proximate locations reduce the costs of transportation for businesses and households. Lower costs of travel led to more profitable operations and higher real standards of living. Firms locate near suppliers and/or their consumers. Households locate near work, shopping, and/or recreational activities. This packing together of economic activity produces the traditional patterns seen in the urban landscape. However, as the costs of overcoming the "friction" of distance fall, the economic need for individuals or businesses to be in a city declines. One of the most important impacts of the telecommunications revolution will be the change in the urban landscape.

By and large, the ability to conduct business, shop for goods, and visit with other people is significantly enhanced with modern telecommunications. The cost of meeting clients has declined as the

telephone, pager, fax, and Internet have emerged as viable communication media. Many find that shopping takes less time with the telephone, fax, and Internet in comparison to the traditional automobile trip. Getting information, reaching the market, and putting the deal together can be done without the physical act of travel in many cases — just use the modem, surf the net, or fax the document. All of these newer technologies lower the cost of doing business, for the buyer and the seller, the client and the service provider, and the employer and employee.

**Households** Household activities have also been the beneficiary of the modern telecommunications revolution. Television is easier to access and provides more choices. The assumed advantages of traveling to the museum, the theater, or the opera hall have diminished, as improvements in voice and picture have brought these experiences dramatically into the home. Even the activity of just visiting can be done in chat rooms, with a computer e-mail system, or using teleconferencing systems. Accessibility is increased while the need to travel with its attendant costs is reduced.

**Structure Of Cities** The result of reduced travel costs will have profound impacts on the structure of cities. The need to reduce distance is diminished. Telecommuting, long distance meetings, and shopping from home all have implications which suggest the decline of the traditional city landscape. One can live far from the job and still work in the city. One can live far from the shopping center and still buy goods from the city. One can reside miles away from the city and still enjoy urban entertainment. Thus, the economic value of face to face contact and actual presence in physical space is considerably less than it was ten or twenty years ago. Most importantly, these changes are not merely *predicted* to happen. These new methods of interacting have been adopted and embraced by the critical mass of consumers, businesses, and agencies necessary to make a real difference in accepted social norms.

### **Relocation**

If it is true that the need for physical proximity has declined and people can live and work at a considerable distance from each other, the next question is whether we will draw farther apart socially as well. Will there be any relocation of “community”? There are two arguments about how relocation will occur.

The first argument rests on the assumption that the traditional economic reasons for urban life are becoming less and less important. As more people, both as workers and consumers, become comfortable and adopt new telecommunications systems they will move out of the cities of today. The result will not be just suburbanization, but a new urban structure — the city-village, edge cities, or even complete dispersion to non-urban areas. Subsequently, the need for face-to-face contact and more traditional social interaction may lessen as well.

A second argument is more optimistic for cities. This argument has the same basic set of changes. The telecommunications revolution will and does lower the costs of transactions by reducing the need for and expense of travel. By itself, as the first argument has it, this will lead to geographic dispersion. However, a *second effect* also arises due to the lower cost for communications. As the costs of communications fall, people will undertake more communications and this will lead to more total activity. The lower cost of reaching interested consumers over the Internet means that sellers will make more use of the Internet and reach more consumers. Reduced commuting and travel time means that more business can be done during the work day. Lower cost entertainment in the home means more entertainment programs will be consumed. Just as the telephone increased voice contacts and reduced mail volume, just as the railroad expanded land-based shipping and reduced shipments via wagons and barges, and just as the jet plane led to more individual contacts, so the new telecommunications technology will lead to more activity, more network contacts, and quicker delivery of information, some shifting from current forms and some being new to this technology.

This second argument says the social and economic need that cities traditionally fulfilled will continue to exist, but the way in which these needs are fulfilled will change. True, physical activity does not disappear as a place bound reality — only the communications activities “disappear.” The need for location, buildings, face to face contact, and human interaction will still exist. Some of this economic activity will disappear from cities, as the concept of dispersion suggests. But, the second relocation argument recognizes that the need to be somewhere physically will change as overall activity levels increase. The importance of this second argument is that it suggests how economic relocation will occur. Survival and success will ultimately go to those areas which have adapted to the new environment by incorporating successfully the new forms of telecommunications. Successful locations will be where businesses can serve their markets cost effectively using the new forms of telecommunications. Still, labor costs will matter, proximity to natural resources will matter, land based transportation will matter, traditional infrastructure will matter, but now the accessibility and quality of modern telecommunications will also matter. Those places which adopt new approaches to telecommunications and media will be able to capture the expanded activity and benefit from the shifting patterns of behavior.

The forces of dispersion and relocation suggest a pattern of urban change. On the one hand, dispersion implies the existence of fewer densely settled cities. More of the urban landscape will be made up of scattered, fragmented, edge cities. Each of these will be smaller replicas of cities -- predominantly residential and personal service oriented with telecommuting workers. On the other hand, the relocation implies the need for some highly technological urban centers where there is some value in proximity. In the most optimistic case, these urban centers will be catalysts in the new telecommunications revolution. They will be cost

competitive for telecommunications as well as the traditional needs of businesses and households. They will also offer a complete set of urban amenities, both technological and traditional. They will move away from the historical emphasis on being near raw materials or markets and more sensitive to the quality of the overall infrastructure base — telecommunications, education, water, sewer, and electricity. While business services and information processing will be the growth sectors in these new centers, the centers could still capture much of the manufacturing and regional service functions which exist in cities today.

---

### Conclusion

John Mayo, the President of AT & T Bell Laboratories, spoke on the technology changes that are driving our evolution:

When I reflect on the future of information technology, I am reminded of the story about the test run of Robert Fulton's strange-looking steamboat, the Clermont. For a few hours the craft kept making a terrible racket, belching smoke and sparks as the engineers tried to get it started. Skeptics in the crowd kept yelling, "She'll never start! She'll never start!" Finally, after a lot of huffing and puffing, the boat began moving up the river. The scoffers were astonished and remained silent for a few moments, and then they started yelling again: "She'll never stop! She'll never stop!"<sup>1</sup>

Like the skeptics reacting to the steamboat that represented a drastic change, we face our own seemingly unstoppable force: the need for advanced telecommunications. In responding to the railroad and other technology shifts, communities have always had the opportunity to be part of the revolution, or to be dragged into the evolution that will naturally follow. The difference may be a choice between mastering one's own destiny or waiting for the train to arrive.

## HISTORICAL OVERVIEW

---

### Electricity and Water Supplies

Tacoma City Light was founded on the entrepreneurial spirit of individuals such as Charles B. Wright, the “father of Tacoma.” Wright arrived in Tacoma in July 1883 as one of seven men responsible for choosing the terminus of the Northern Pacific Railroad. Tacoma had a population of 4,000, was ideally situated on a deep-water bay, and was surrounded by abundant timber and other natural resources. The arrival of the first railroad terminus in the Northwest seemed to assure Tacoma’s importance in the commerce of the region and the nation.

At that time, the town’s main drawback was the lack of a dependable water supply. It was obvious that the spring-fed, gravity-flow water system would be inadequate to meet the needs of the rapidly growing community. This came to Wright’s attention soon after his arrival. Within two weeks he had outmaneuvered the existing water supply companies and persuaded the City Council to pass an ordinance granting him the “privilege to supply the city of New Tacoma and its inhabitants with pure and fresh water.”

By June 10, 1884, Charles Wright and General John W. Sprague had incorporated the Tacoma Light & Water Company. By November 1886, the Tacoma Light & Water Company was about ready to enter the streetlighting business. Poles had been placed, wire was being strung and “electric dynamos” were nearly ready for operation. The company generated electricity from a small powerhouse in Galliher’s Gulch, near South 26<sup>th</sup> Street and Pacific Avenue. Service extended three-quarters of a mile along Pacific Avenue by January 1887. Rates were high and generating capacity inadequate.

By 1889, Tacoma needed more than just streetlighting. People were asking for electricity in their homes. Complaints against the company were growing, and even with a new powerhouse completed in 1889 and equipped with a “modern” generator capable of lighting 1,500 lamps, the tide of criticism could not be stemmed.

The lights weren’t bright enough, there weren’t enough of them, and the company was poor in responding to outages and other service issues, customers complained. Support for a municipally owned system was increasing.

By 1892, the idea of a municipally owned light and water system had become *the* political issue of the day. The following year, after extensive study, the City decided the quickest way to own a light and power plant was to purchase Tacoma Light & Water. Wright, tiring of his investment, was interested in selling — for a sum of \$2.1 million. The City Council, however, had calculated the value at \$1.52 million. This fostered a fierce debate over whether or not to buy the company. Finally, a small committee traveled to Philadelphia to bargain with Wright face-to-face. This meeting led to an agreement for the City of Tacoma to purchase the Tacoma Light & Water Company for \$1.75 million.<sup>1</sup>

In March 1893, the Council passed “an ordinance to provide for the purchase of the water works and electric light plant, and all such water supplies, riparian rights, rights of way, lands, lots, personal property and franchises as are now owned and operated by the Tacoma Light & Water Company.” The issue passed the public election, and in July 1893 the the City of Tacoma became the proud owner of a municipal utility.<sup>2</sup>

---

## Telephone Services

The first telephone on the West Coast was installed in Tacoma in April 1878, connecting the Telegraph Operator’s Wharf on Second Street and Lighter’s Foundry on Pacific Avenue and 17<sup>th</sup> Street. Tacoma’s first permanent telephone, installed in 1880, connected the Tacoma Mill in Old Tacoma and the Western Union office. The next line linked Dr. Harvey’s home with Bonney’s Drug Store. Tacoma’s first exchange, the second in the Washington Territory, was established in Rebard’s Cigar Store by E.W. Melse and the Sunset Telephone and Telegraph Company in 1884.

By the turn of the century, Tacoma and its telephone service were expanding at a rapid rate. Sunset, however, began to experience competition from its rival, the Telephone Company of Puget Sound. During the next few years, the two firms struggled for customers. Customers wrestled with two separate telephones if they wanted to connect with the rival company’s instruments. Finally, in 1916 the two operations were reassigned to the Pacific Telephone and Telegraph Company.<sup>3</sup>

Telephone service expanded over the next 50 years until it reached virtually every home in the city. Service under Pacific Telephone & Telegraph continued until 1964, when a split in its parent company led to the formation of Pacific Northwest Bell Telephone Company.

With the approval of the State Public Service Commission, Pacific Telephone & Telegraph holdings in Washington, Oregon, and parts of northern Idaho were turned over to Pacific Northwest Bell and more than 30 million shares of common stock in Pacific Northwest Bell were given to Pacific Telephone & Telegraph shareholders. At that time, 90 percent of Pacific Telephone & Telegraph shares were controlled by AT&T.<sup>4</sup> In addition, Pacific Northwest Bell agreed to not pass on the expenses accrued by its formation to their customers, but would maintain current rates for a period of 10 years.<sup>5</sup>

---

### Cable Television Services

The year 1965 was important for both the local and national cable movement. The FCC assumed jurisdiction over Community Antenna Television (CATV) systems and began to impose its own regulations. The State Utilities and Transportation Commission called for a legislative investigation to determine whether the monopolistic nature of the industry required the state to regulate rates and services.<sup>6</sup> In addition, Pierce County commissioners began considering franchise applications for providing CATV to the University Place and Lakewood areas where 2,500 potential customers were anxious for the "fix" that would eliminate the "snow" that existed on their screens when using an antenna.<sup>7</sup>

The following year, the county approved the first franchise, but deliberations continued in Tacoma. By the spring of 1966, seven companies had filed requests for franchises within the city limits. Criteria for selection included the company's financial resources, intended scope of service, proposed rates and franchise payments, and the number of free channels provided for public use.<sup>8</sup> Representatives of the only two locally owned companies among the seven applicants urged the awards be made to Tacoma firms. The council also believed that the city "should do business with local people so that you can talk to the local ownership and not rely on information from attorneys representing outside companies," and felt the earnings made by Tacoma companies would remain to support the local economy. City Manager David Rowlands, however, said it was the Finance Department's opinion that two outside companies proposed franchise tax payments that offered the greatest return to the city.<sup>9</sup>

Arguments for local ownership eventually prevailed, and the City Council named Tacoma Cable Company and Cable TV Puget Sound in the initial franchise ordinance of September 1969.<sup>10</sup>

Subsequently, City Manager David Rowlands raised the possibility of the city forming its own utility for CATV. He recommended that "all previous proposals be rejected and that the city manager and his staff be directed to explore the possibility of either accepting new franchise

proposals or investigating in depth the desirability of establishing a city-owned and operated cable television antenna system.”

In response to concerns expressed by officials in the cable industry, he stated: “If the state law is somewhat obscure on the right of a city to engage in a CATV utility, then I am sure that revisions could be passed by the legislature. With Tacoma ... facing a financial crisis in the years ahead, it appears that this could be another source of revenue ... while at the same time keeping the rates for the subscribers to a minimum.”<sup>11</sup>

In January 1970 the two franchises were awarded as initially granted, although the Cable TV Puget Sound franchise was rescinded after only one week. As a result, Tacoma Cable Company was the sole cable television franchise to begin operations in Tacoma, with the second franchise once again open for discussion.<sup>12</sup> A few months later, TelePrompTer Corp. was granted the second franchise, with a third franchise subsequently given to Community Tele-Communication, Inc.<sup>13</sup> Excited about its new opportunity, TelePrompTer Corp. said work on its cable television system would begin soon. The president of the company painted a bright picture of the following five years, which included a two-way cable system which would allow every home on the system to have what amounted to a computer in its living room. He said that “bills will be sent — and perhaps paid — by cable; doctors, lawyers and businessmen can arrange conferences; housewives can browse through a market and shop by television; and school officials can arrange vast changes in curricula by using the systems.”<sup>14</sup> By May 1971, Tacoma Cable Company was taking over the area to the north and west of South 35<sup>th</sup> Street while TelePrompTer took over the south and east. Community Tele-Communications, having only recently received its franchise, had not yet begun hanging cable.<sup>15</sup>

Within two years, the only remaining cable company provider in Tacoma was TelePrompTer. With 480 miles of cable and 7,300 subscribers representing 22,000 viewers, TelePrompTer offered cable service to almost every section of the city. At that time, its \$4 million investment included a system with a 30-channel capacity.

---

## Internet Services

The Advanced Research Projects Agency (ARPA)’s Information Processing Technology Office was the initial funding source for computer facilities at 17 sites across the country. Key researchers needed to access these computer resources directly from their offices. The ARPA commissioned construction of an experimental computer network based on a packet-switching technology. This was installed at UCLA in September 1969. After being hooked up to phone lines, the packet switches at four

university sites began to exchange information packets long distance. This was the beginning of the ARPANET.

Growth of the APRANET, particularly for military-related traffic, led the Defense Department to take it over in 1975. Connections were made available only to organizations doing work that fell within Defense Department guidelines. Although many universities, government agencies, and even some computer vendors were qualified, others were not. These outside sources decided to form computer networks of their own. The two most notable were CSNET and BITNET, which were formed by education and research sites.

The growth of the networks outside of the ARPANET created new challenges, in particular they had difficulty connecting to each other because of incompatible communication protocols. As a result, Transmission Control Protocol/Internet Protocol (TCP/IP) was developed to allow the different networks to interconnect and “communicate.” On January 1, 1983, ARPANET and the Defense Department began using TCP/IP and this “network of networks” soon began to be referred to as the “Internet.”

The Internet remained virtually unknown outside research and defense circles until the late 1980s when the growth of personal computers fueled consumer interest. By 1990, many metropolitan area residents owned a computer, modem, and telephone and were using Internet Service Providers to get online. Companies like Software Tool and Die, Panix, Digital Express, and NetCom offered individuals affordable “Internet accounts.” As the number of sites and users grew, the Internet came to resemble an overgrown information jungle — one without signposts or maps. In the late 1980s and early 1990s, bewildered users created tools to locate and index resources. These guideposts helped others in the Internet community find their way, and transformed the Internet into a more user-friendly network.

“archie” was the first to cut through the information undergrowth. Created in 1990, archie enabled users to scan a lists of the Internet’s holdings with a single query. archie was followed by Gopher in 1991 as the first widely-popular “Internet navigator.” It let “information owners” organize data into hierarchical menus. Users could then view, scroll through, and make selections from these menus. But the question was now how to find something in “gopherspace,” since the original Gopher plan did not include a general index.

The answer was called VERONICA. This database held over one million entries from Gopher menus by 1993. VERONICA servers were kept busy performing searches for Internet users around the world. Meanwhile in 1992, in Switzerland, a physicist devised a way to organize the Internet-based information and resources he needed for his physics research. He dubbed his system the World Wide Web. To connect individual pieces of information, he made use of “hypertext,” which allows document owners

to include names and pointers — addresses — to other relevant items. By clicking on a hypertext link, users tell their computers to “get the address associated with this link, and go there.”

An Internet browser called Mosaic, developed in 1993, made the Web and the Internet more user-friendly and accessible. Mosaic let users retrieve and display graphics, images, and sounds with a single mouse click. The combination of the Web and Mosaic — and similar programs such as Netscape Navigator — transformed the look and feel of the Internet. Formerly a world of largely text-based, hard-to-find resources, the Internet became an inviting multimedia information system.

During the past three years, the Internet has become increasingly accessible. Most visibly, the Internet has become a new venue for business. Companies are trying to determine just how this online, “cyberworld” will shape the business products and players of tomorrow. The Internet has become more than an wildly new information exchange; it’s an overwhelming cultural phenomenon.<sup>16</sup>

Access costs, however, are still prohibitive for some segments of society. The issue of universal access has been one of the most controversial issues surrounding the Internet. For communities such as Tacoma, how to make lines, equipment, and services equally available to residential users in all neighborhoods — including homes, schools, and libraries — is an issue that has not been resolved.

## Overview

### EXISTING TELECOMMUNICATIONS OPTIONS IN TACOMA

Is the greater Tacoma area prepared for growth in the area of communications? Do we have the telecommunications resources necessary for businesses that may want to locate in this area? What about growth in telecommuting? How will the explosion of the Internet be accommodated?

US WEST and Tele-Communications, Inc. (TCI) control the only existing wired systems currently available for the telecommunications infrastructure needs of the greater Tacoma area. By examining these companies, the infrastructures they control, and some of the emerging wireless providers, an understanding of the existing options available to meet the needs of an economically vibrant greater Tacoma area can be achieved.

#### US WEST

US WEST is the incumbent provider of local telephone service in the greater Tacoma area. Currently, all requests for new services, installation of advanced or large capacity equipment, and additional phone lines must be completed through US WEST. While the central offices in Tacoma are interconnected with fiber optic cable, the majority of Tacoma's telephone system consists of twisted copper pairs. A limited amount of fiber optic cable has been placed to businesses with large telecommunications budgets. Local businesses have experienced waits of four to five months for digital lines, and some have considered completing the installation of necessary fiber links themselves.

US WEST's residential customers have experienced similar frustrations. A service request for the installation of a second phone line may take more than a month to complete. US WEST's service reputation was a leading factor in Washington regulators' decision to deny US WEST's request to more than double its monthly residential phone rate. Regulators instead ordered the company to *lower* its rates. US WEST officials have responded that without the rate increase, investment in upgrading the local telephone network will not continue and customers may continue to struggle with service.

US WEST is also facing a growing demand placed on its system from increasing numbers made through modems for Internet connections. An average Internet connection lasts approximately 14 times longer than the average voice call that the system is designed for, leading to potential disruption of vital functions such as emergency 911 services.

## TCI

A second candidate to develop an advanced communications infrastructure is the existing cable television operator, Tele-Communications, Inc. TCI maintains a cable plant serving all of Tacoma and a large portion of Pierce County. This cable operator provides residences of the City of Tacoma with 36 channels at 350 MHz, and serves portions of Pierce County with 60 channels through the recent purchase of Viacom's local cable properties. TCI customers are often unhappy with the customer service they receive from TCI, and express frustration about the limited selection of channels and programming. However, the main complaint has been rising cable rates.

The company's increasing rates point to TCI's poor financial position and a need to raise revenue while curbing expenses. In November 1996, TCI announced that it would be "deferring the rebuilding of the balance of the company's cable systems" in most areas and instead would install digital set-top boxes. These boxes deliver more channels and an improved picture quality, but do *not* usually require upgrading the network from coaxial to fiber optic cable. Without an upgrade, the network will not have the capability for two-way communication and will not be able to provide telephony, two-way Internet access, or other advanced telecommunications features. Additionally, set-top boxes require an additional phone line for any pay-per-view ordering, only adding to the demand pressure on the telephone network.

The City of Tacoma is currently undergoing franchise renewal negotiations with TCI. During these negotiations, the City has looked for a commitment from TCI that the upgrades performed on the system will be with fiber optic technology, and not a "quick-fix" solution using the existing coaxial cable network. Before TCI announced a halt to system rebuilds, it had estimated that rebuilding its Tacoma System would take an estimated three to four years.

## EXISTING TELECOMMUNICATIONS OPTIONS IN TACOMA

### US WEST

#### Summary

US WEST's subsidiary, US WEST Communications, is the main provider of local telephone service in the Tacoma area. Although a major player in the telecommunications industry with \$11.7 billion in annual revenues, US WEST Communications has a poor service reputation. This was a key factor behind Washington regulators' decision to deny the company's request for a large rate increase. Further, regulators required the company to reduce its rates. In response, US WEST declared that the company will no longer be able to invest as much money into improving its Washington network, causing service and the important state-wide network to be in danger.

While US WEST's main business suffers, the company has been rapidly diversifying and developing new markets. US WEST has a major stake in the cellular market, recently joining with AirTouch Communications to form the nation's third largest wireless phone company. Another alliance with Bell Atlantic and NYNEX could provide cellular service to as many as 100 million customers. In 1993 it launched a high-profile digital video trial in Omaha, with plans to expand to other major cities. After a year-long market trial, the promised digital television never was introduced, and the project was ended due to technical and financial difficulties. US WEST has also entered into the video market through its recent purchase of Continental Cablevision. It also owns 25 percent of Time Warner Entertainment, controlling the majority of Time Warner Cable, HBO, and Warner Bros.

US WEST's central offices in Tacoma are interconnected with fiber optic cable, but the rest of Tacoma's distribution plant is *not* state-of-the art. A limited number of fiber optic cables have been placed to a few select businesses and waits of four to five months for a high-capacity line are not uncommon. Growing Internet use, which keeps lines in use longer than planned, is making carriers like US WEST nervous. They claim it could lead to the disruption of vital public safety services like 911. This suggests a need for an upgraded public data network.

#### Background

US WEST is the incumbent Local Exchange Carrier (LEC) providing local telephone service in the metropolitan areas of Puget Sound. The company has had a near-monopoly with 25 million customers in 14 western and midwestern states since the establishment of the Regional Bell Operating Companies (RBOCs) at the breakup of AT&T in 1984. Today

US WEST has \$23 billion in assets, \$11.7 billion in annual revenues, 61,500 employees and more than a million shareholders. The company is headquartered in Englewood, Colorado, a Denver suburb.

No RBOC has ventured farther from its basic regulated telephone business than US WEST. This diversification was meant to provide a brighter future for US WEST as deregulation and competition slashed its monopoly telephone profits. However, this diversification is clouding its future and may have been a factor leading to deteriorating phone service.

### **Service Reputation**

US WEST's service reputation has suffered due to the company's record of poor telephone service. US WEST struggles with the largest service territory of all RBOCs, responsible for a 14-state western region. However, customers have little patience with a company incapable of installing a new line within week or sometimes even months — no matter how impressed they might be with how many states US WEST serves.

Federal and state regulators have been requiring US WEST to improve service, especially regarding the installation of new or second phone lines. Emergency rules have been proposed in at least five states in US WEST's territory, establishing voucher systems of \$150 a month for customers waiting for new phone lines. The reason for the ruling in Colorado, according to that state's public utilities director, was that "little, if any, apparent progress is being made toward resolving this problem."<sup>1</sup> The costs of the vouchers are small for US WEST, but they are symptomatic of a growing ill will in state legislatures. In Washington, Governor Mike Lowry vetoed a 1995 US WEST-backed bill that would have maintained a ban on competition from the likes of AT&T and MCI on in-state long distance calls.

### **Rate Reductions**

Poor service was the leading factor behind a rate reduction ordered by Washington regulators in 1996. US WEST had asked for permission to raise average monthly residential phone rates from \$10.75 a month up to \$26.35. Instead, the regulators ordered US WEST to *lower* its rates on residential, business, and long distance service. Further, regulators criticized the company for taking profits outside the state and paying too much in employee bonuses — all at the expense of customer service. After the company requested the rate increase in February 1995, the commission received overwhelming response from US WEST customers opposing the increase. The commissioners said that ordering US WEST to reduce its revenues by about \$91.5 million "gives the company what it needs — fair rates based on the company's actual costs, greatly increased flexibility to lower prices to meet market requirements and meaningful incentives to improve service quality."<sup>2</sup>

### **Investment Jeopardized?**

US WEST's vice president for Washington, Dennis Okamoto, warned that because of the decision the company no longer could invest as much money in the state and that service quality may be jeopardized. Okamoto said US WEST had been investing about a million dollars a day in its local telephone network and, without better earnings, work would not continue. While the commission's order was made in response to poor service and long waits for phone installations, company manager Kathi Willis said the order "could cause service delays to be even greater."<sup>3</sup> US WEST argues the commission has erred in its ruling in three areas: direct costs, laying spare capacity, and calculating depreciation.<sup>4</sup>

### **Cellular**

US WEST is attempting to enter new markets other than local service within its territory. It is building a significant cellular presence, making a number of strategic moves in the last few years toward that goal. In July 1994, US WEST and AirTouch Communications announced a joint venture that combined their domestic cellular operations to create the nation's third largest wireless phone company. Together, US WEST and AirTouch serve more than 1.7 million cellular customers in coverage areas reaching 53 million people

US WEST's 30 percent commitment to this venture was likely sparked by two events. The first was AT&T's \$12.6 billion acquisition of Bellevue, Washington-based McCaw Cellular Communications Inc., the nation's largest cellular company. The second was the auction in December 1994 by the FCC of wireless phone licenses for "personal communications services" which was meant, in part, to bring significant competition to the wireless services industry.

Wanting more clout in the auction, US WEST/AirTouch entered another alliance in October 1994 with Bell Atlantic Corp., and NYNEX Corp. This alliance could provide wireless service to nearly 4 million cellular users and the possibility of up to 100 million customers.<sup>5</sup> Under the name PCS Primeco L.P., the four companies won licenses for communications services in 11 major cities<sup>6</sup>, including Chicago, Dallas, Miami, New Orleans, and Honolulu.

### **Video Trials**

Another of US WEST's new ventures was in the interactive market. In 1993, US WEST announced plans to build combined voice, data, and video networks both outside and within its 14-state territory. In a highly publicized move, US WEST received FCC permission to launch a "video dial-tone" trial in Omaha consisting of a six-month technical trial, followed by a 12-month market trial.<sup>7</sup> One month into construction, US WEST said it would pursue a multi-market rollout of the video dial tone service in Denver, Minneapolis-St. Paul, Portland, and Boise when FCC approval was obtained.<sup>8</sup>

The company launched its 12-month market test in Omaha on August 31, 1995. Marketed as TeleChoice, the service passed nearly 50,000 homes using a hybrid fiber coaxial network.<sup>9</sup> Contrary to its initial announcements, the system began with only analog services and customers had to purchase set-top boxes unless they already owned cable-ready TVs and VCRs. Digital services, such as movies-on-demand and interactive shopping were promised.<sup>10</sup> The basic rate was \$5.95 a month, which included many popular cable channels. Additional packages for sports, family, and news were also to be offered.<sup>11</sup>

By January 1996, US WEST was still "moving closer" to its near-video-on-demand model. The package of analog channels now had more than 8,000 subscribers and testing was "well ahead of schedule." The prospect of a digital system was delayed to a vague "later this year" when the system was working to US WEST's satisfaction.<sup>12</sup>

Less than two months later, US WEST dropped its plans for a digital rollout in Omaha. Essentially the trial was too expensive and did not work.<sup>13</sup> The market trial was officially ended on August 31, 1996. The company says it will continue to offer the analog cable services in Omaha. US WEST's remaining video dial tone market rollouts never moved beyond the planning stage.

### **Cable TV**

Following the conclusion of the digital video market trial in Omaha, US WEST decided to enter the video market by purchasing cable systems in other regions. US WEST's newly formed subsidiary, the US WEST Media Group, was to manage these properties.

In February 1996, US WEST announced the purchase of Continental Cablevision with its 4.2 million cable subscribers for \$11.8 billion. US WEST purchased Continental's stock for \$5.3 billion and assumed its debt, valued at \$6.5 billion.<sup>14</sup>

This deal made US WEST the nation's third largest cable operator. With its Time Warner properties, US WEST Media Group's domestic cable market potential is about 16.2 million homes.<sup>15</sup>

US WEST also owns 25 percent of Time Warner Entertainment, a partnership controlling most of Time Warner's 12 million cable subscribers, HBO and Warner Brothers film studio. Time Warner is seeking to regain control of Warner Brothers and HBO in exchange for shifting much of its capital-intensive cable business to US WEST, along with a significant portion of Time Warner's \$17.5 billion debt load. Talks were expected to accelerate after the completion of the US WEST - Continental merger.<sup>17</sup>

### **Investment Profile**

US WEST Media Group's third-quarter 1996 profits fell 38% from the previous year's quarter to \$18 million — which the company tied to heavy investments in cable and wireless operations.<sup>18</sup> Fitch Investors Service put US WEST Media Group on the ratings agency's credit watch.<sup>19</sup>

### **US WEST in Tacoma**

US WEST operates the switched telephone network in the Tacoma area. This network is based around central offices, each serving 10,000 to 50,000 customers. The central office is the wire center from which all telephone services are provided. It houses the switching center where telephone dialing information is registered and calls are switched to trunks leading to other central offices or long distance providers. All the switches and traffic between offices are digital — to maintain the quality, speed of switching and efficiency of the common network.

Seven central offices serve the Tacoma area. The central office in downtown Tacoma is the largest and most important. It has interconnecting cable to all other central offices in the area and interconnections to other large offices and long distance carriers in the region.

Central offices are interconnected with fiber optic cables. Each cable contains about 144 fibers. High speed digital communications are maintained on the cable, providing DS0, and higher capacity DS1 and DS3 circuits.

While much of the common electronics are dedicated to switched telephone traffic, other equipment is used for leased, point-to-point digital circuits for private telephone and data use. When a circuit is "nailed-up" through the central offices, it is assigned for point-to-point use. Many of the "nailed-up" circuits in Tacoma are routed through the downtown central office, because this office has the tools to provision circuits.

### **Basically Copper**

Each phone customer has at least one pair of copper wires running from his or her telephone to a central office. These wires are wrapped around one another and are referred to as a "twisted pair." The wires start as large bundled cables that branch out from the central offices. Most of this cable in Tacoma is copper for basic telephone service. The typical maximum distance for a telephone circuit is 12,000 to 18,000 feet, depending on the gauge of wire in the cable. For services greater than this distance, Carrier Service Areas (CSAs) are defined. Within these CSAs, compact electronics cabinets are placed to serve cable plant up to another 12,000 cable feet away from the central office. DS1 circuits carry the telephone traffic back to the central office for switching. Business DS1 leased circuits can be nailed-up through the CSAs as well as the central offices. In recent construction, fiber optic cable has been used in cables from the CSAs to the central office.

A limited amount of fiber optic cable has been placed to business buildings in Tacoma. New buildings expected to have three or more DS1 leased circuits, or existing large buildings showing significant growth of high-speed digital communications, have been provided with service on fiber optic cable. However, most business service is delivered on copper telephone cable and little upgrading has been performed to replace copper telephone cable with fiber optics. The business community reports that waits of four to five months for DS1 circuits are not uncommon as US WEST attempts to recondition copper telephone cable to provide the service.

**MONTHLY**

**RATES:<sup>†</sup>**

	<u>Residential</u>	<u>Business</u>
DS0	\$10.50	\$25.00
DS1	\$200.00*	\$200.00*
ISDN	\$68.58	\$68.58 <sup>20</sup>

\*plus a \$616.50 installation charge

<sup>†</sup>not inclusive of all required fees

**Internet Use and the Public Switched Network**

Internet data traffic has exploded and is projected to continue growing at exponential rates. Households with Internet access are expected to grow from 3.1 million today to 27.4 million by the year 2000.<sup>21</sup> Internet business transactions are predicted to grow to \$250 billion in 2000.<sup>22</sup> The public switched telephone network is experiencing traffic growth from data users accessing the Internet. The switched telephone network includes common equipment shared and re-used among all users. The common equipment is expected to be available for re-use based on the average length of a telephone call.

Residential users typically have had two typical methods of connecting to the Internet — standard analog telephone lines and digital ISDN lines, both leased from US WEST. NYNEX, an East Coast RBOC, is reporting 10 percent growth per month (300 percent per year) in Internet access lines. The RBOC provides the circuit from the user to the Internet Service Provider (ISP). The ISP similarly leases business lines to receive those Internet access calls.

**Longer connect times a threat?**

While selling more lines may seem like good news to the RBOCs, they say the new traffic generates calls that last, on an average of 14 times longer than an average business call.<sup>23</sup> During the Internet session, a circuit is tied-up from the user to an ISP. The RBOCs have built the switched network so circuits are re-used among all telephone users, including voice

conversations, faxes, and emergency telephone calls. The average connect time of a call is a key design parameter used to equip the switched telephone network with the proper number of re-usable circuits. Now, with longer connect times, congestion is occurring in the switched network and more common equipment is needed to serve the traffic. A study done by Pacific Telesis in Central California's Silicon Valley found that 16 percent of local calls did not connect, mainly because of high Internet use in that region. Normally, the RBOCs claim that fewer than 1 percent of calls do not connect. The growth in Internet use, with its implications for requiring a re-engineering of the network has the local switched network and the local exchange carriers concerned.

The RBOCs have told state commissions and the FCC that the rapid expansion of Internet traffic threatens network access and could lead to the potential disruption of vital public safety services such as 911 emergency call service.

The RBOCs ask questions such as:

- How about dismantling the existing flat rate phone charge structure?
- Who will fund the expansion?
- Should all telephone users pay more for each telephone line they lease?
- Should the Internet access provider pay a large access fee to receive calls from the local switched network, since the traffic results from a service they are providing?
- Is the local switched network obsolete for growing public *data* traffic? Even though the RBOCs have been extremely vocal about the dangers of overloading the switched telephone network with heavy Internet use, and the potential threat to emergency 911 services, the RBOCs have actively teamed up with others to provide dial-up access. A local example is in the alliance formed between US WEST and the Tacoma News Tribune to provide Internet to consumers and businesses in the South Puget Sound. This service offers access speeds up to 28.8 Kbps, at a price of \$19.95 per month for unlimited access, or \$8.95 for 10 hours of access time.<sup>24</sup>

FCC Chairman Reed Hundt has said that his agency should not regulate Internet telephone or subject it to access charges — at least for now. "We shouldn't be looking for ways to subject new technologies to old rules," he said. "Instead, we should be trying to fix old rules so that if those new technologies really are better, they will flourish in the marketplace." The FCC may resolve the issue through access charge reform which the agency expects to complete in 1997.

RBOCs can upgrade their transmission systems in many ways. The circuits can be monitored for clues that each is carrying data traffic and switched to special facilities for data. Or, the data traffic can be "compressed" to free the circuit while there is silence or idle data between bursts of use.

## Tele-Communications, Inc. (TCI)

### Summary

TCI is the largest cable TV provider in the United States with 14 million subscribers, it also has a reputation for poor service. Customers complain about the company's continuing rate increases — including a 13 percent jump in 1996. The increases fuel TCI's acquisition strategy, a near-frenzy of purchasing designed to keep TCI larger than others in the cable industry. TCI added 2.4 million subscribers in 1996 alone. John Malone heads TCI and is also widely considered the best and brightest mind in the cable industry.

TCI's Tacoma system carries 36 TV channels at 350 MHz; while the recently acquired Pierce County system carries 60 channels. TCI had announced plans to upgrade its networks to hybrid fiber-coax systems, but has instead decided to deploy digital set-top boxes which could make it possible to offer digital TV without upgrading to fiber. This decision stems from TCI's struggling financial position and its huge debt load. The company has halted many equipment deliveries, and is in the midst of trimming expenses, eliminating jobs, and initiating another round of rate increases. TCI's financial troubles have not stopped the company from entering a number of alliances, which have vaulted it into the telephone, digital satellite and on-line businesses.

TCI has nearly \$2 billion in revenues, an operating cash flow of \$533 million, 14 million subscribers in the United States, and 32,000 employees in 49 states.

### Customer Service

TCI has a reputation for poor customer service. TCI's own research has concluded that "subscribers are generally pleased with the technical quality and programming offered and the price they pay for it, but they are unhappy in dealing with the cable system when a problem arises — getting through on the telephone and finding a sympathetic customer service representative."

John Malone, TCI's chairman, acknowledges that TCI has a long way to go and he keeps one particular incident as a reminder: In 1994, when a Connecticut local phone company began offering cable service to TCI subscribers, as many as 20 percent defected at one time.<sup>25</sup> Malone does not want to see that happen again, especially on a nationwide scale.

### Rate Hikes

All the programs in the world do not change the main customer complaint — cable rates. The company has a history of steady rate increases -- including a 13 percent across-the-board increase in 1996. TCI is planning

another round of rate increases for January, 1997 and July, 1997.<sup>26</sup> These planned increases will average 6 percent on the basic tiers, and “modest” increases in the cost of premium services and equipment.<sup>27</sup> Malone attempted to quell analyst reaction by saying the impact of the increases would be softened by adding new networks. In many of TCI’s systems, however, TCI cannot add a new network without removing an existing one from the system. A TCI spokesman could not explain how the company will add services in systems with no extra capacity.<sup>28</sup> The chief reason behind previous rate hikes has been TCI’s drive to acquire other systems. “Our mission in our first 25 years of existence was to become big enough to survive in the marketplace that [TCI founder Magness], Malone and others saw clearly on the horizon,” said one management official.

### Real Estate

TCI’s focus has historically been clear — prime for more growth. Its acquisitions have ranged from mid-sized cable operators serving 740,000 customers<sup>29</sup>, to the relatively small operators serving 31,000 customers.<sup>30</sup>

TCI’s purchasing has left it composed of a patchwork of companies and cable systems that have only recently been woven into a corporate whole. Clustering has become a central strategy for large multiple system operators such as TCI as they prepare to compete with telephone companies, direct broadcast satellite providers and wireless cable operators.

Financial gymnastics are TCI’s trademark. A basic strategy seems to be to use stock — even if the price is depressed — to continue acquiring more systems and to use leverage creatively to do everything else. When asked in a *Business Week* interview how big Malone intended to grow TCI, he responded in part by saying, “The object is not to be the biggest, it’s to be the richest. The biggest is the one that gets investigated by the federal government.”

TCI, already the nation’s largest cable system operator, added more than 2.4 million subscribers to its existing subscribers<sup>31</sup> in 1996, including systems owned by TeleCable, Chronicle, Columbia, and Viacom.<sup>32</sup>

### TCI’s Chief Executive Officer

While TCI has grown to be a very large company, it remains very tightly controlled by its Chief Executive Office, John Malone. TCI’s corporate culture, approach to problems, and activities are so intimately linked with John Malone that attempting to understand TCI without learning something about its CEO becomes a meaningless exercise. Even Vice-president Al Gore has called him a number of imaginative names.<sup>33</sup> But, the 55-year old man who has built the nation’s largest cable TV network has been characterized as either “unemotional, cold or motivated by pure logic”. Others in the cable industry have labeled him as a ruthless monopolist.<sup>34</sup>

Malone is widely considered the best and brightest mind in the cable industry and perhaps the telecommunications industry as a whole.

Malone earned a Ph.D. in Operations Research from Johns Hopkins University in 1967. He began at TCI in 1972 and one year later became president and chief executive officer. By 1982, TCI had grown into the nation's largest cable company due to his aggressive acquisition drive. His empire controls video services to one in four households in America.

Malone seems to have a knack for tough negotiations. For example, he turned off cable service in Vail, Colorado during a franchise dispute with city officials. He also removed HBO from some Texas systems during a renegotiation process with the network. Another Malone ploy used to deny competition in "his" markets involved the Learning Channel in 1990. Lifetime Television Network had offered to buy the Learning Channel. After the sale was negotiated, Malone told Lifetime he planned to drop the Learning Channel from most of TCI's cable systems. Lifetime then withdrew its bid. Four months later, the Discovery Channel, partly owned by TCI, bought the Learning Channel.

When asked, TCI says that it guarantees equal opportunities for all programmers. However, some programmers appear to be more equal than others. In October 1995, TCI raised the leased access rates for The 90's Channel, a progressive network, forcing it off the air. Meanwhile, NET, a conservative network, has maintained easy access and low rates from TCI.

An unusually low profile during 1996 fed rumors that Malone had grown disinterested in the cable business and was distancing himself from TCI. However, in the fall of 1996, Malone resumed his 14-hour workday schedule and active involvement in TCI's operations. "Contrary to rumors, I am not dead, terminally ill, or disinterested in my core business," Malone said.

### **Current Architecture**

For the Tacoma service area, TCI operates a cableTV system carrying 36 television channels at 350 MHz. The headend is in a building on Martin Luther King Ave, near 12<sup>th</sup> Sreet. in the Hilltop area of Tacoma. The majority of television signals are distributed on coaxial cable from this headend. Amplifiers are operated on a trunk and branch architecture with many amplifiers in cascade. TCI has approximately 45,000 subscribers in the City of Tacoma, and passes roughly 78,000 homes.

In Pierce County, TCI operates the former Viacom cable TV system carrying 60 channels. There is capacity on the system to carry 80 channels. Two-way traffic cannot be carried without a major system upgrade. The headend for this system is on 19<sup>th</sup> Sreet near Sprague Avenue in Tacoma. The distribution of television signals from the headend to regions of the Pierce County service territory is most likely by point-to-point microwave radio. Coaxial cable delivers the signals from

regional facilities to the customers in a trunk and branch coaxial architecture.

### **Build-Up Plans**

In the Tacoma - Pierce County area, negotiations for a new franchise between the City of Tacoma and TCI Cable of Tacoma are currently under way. TCI's Tacoma franchise expired in April 1995 but has been extended multiple times during the negotiations. In Tacoma, TCI had announced that it was in the process of shaping its networks into 300-home nodes that eventually would be served by hybrid fiber coax networking at 750 MHz.<sup>35</sup> If undertaken, TCI said the rebuild would be completed in approximately four years.

However, John Malone stated that TCI has suspended equipment shipments from suppliers and will be "deferring upgrading the balance of the company's cable systems." It will focus instead on deploying digital set-top boxes "opportunistically".<sup>36</sup> TCI feels set-top boxes can deliver improved pictures and more channels using compression technology that make it possible to offer digital television service without changing the company's older systems from coaxial wire to fiber.<sup>37</sup> This digital cable service will be deployed once General Instruments Corporation can build enough set-top boxes and digital deployment integration issues are settled.<sup>38</sup>

There are a number of potential problems deploying set-top boxes, as well as a number of benefits for TCI.

#### Potential problems:

- Each TV that receives premium services needs a new set-top box.
- TCI's cost per set-top box would be roughly \$400.
- Any premium ordering by a customer requires an additional phone line or ties up an existing phone line.
- No improvement in existing analog picture quality is provided.
- The trunk and branch architecture remains susceptible to outages.
- No two-way communication, such as Internet access is available.

#### Benefits for TCI:

- It could be priced at an additional \$20 per month, as an-add on to basic cable service.<sup>39</sup>
- Using eight current channels at a 24:1 ratio would allow up to 192 new digital channels in a system.<sup>40</sup>
- New set-top boxes would be needed for premium subscribers only.
- Set-top box could be funded by the subscribers as a lease charge. (The current box rental averages \$2 to \$3 dollars per month, where the new set-top boxes would be rented for approximately \$6 per month).

In addition, the Telecommunications Act of 1996 allows a company like TCI to include expenditures on new set-top boxes in its rate calculations for its lowest tier of service even if subscribers paying for that service do not get the set-top boxes. Essentially, TCI can get paid twice for the new set-top boxes: once through rates and again through lease payments.

The City of Tacoma is trying to get a commitment from TCI that the cable company will perform upgrades using high-quality fiber optics instead of maintaining the current coaxial cable.<sup>41</sup>

The TCI (former Viacom) properties in Pierce County are currently operating as a 450 MHz system. The architecture is somewhat more advanced than the Tacoma properties. The electronics are operated at a 450 MHz capacity, though the amplifiers are spaced at 550 Mhz operation. Upgrading the Pierce County properties would generally involve only the replacement of the electronics to make the system capable of two-way communication.

TCI is also implementing a DBS strategy with Primestar. This strategy would allow TCI to offer a 140-channel, mid-power service and a separate high-power, 80-channel sports and pay-per-view offering compatible with existing cable offerings. This package (named TSAT) will act as a "wireless digital" upgrade and will be marketed as a complement to cable service, giving TCI systems which can not afford digital upgrades a chance to compete with the other DBS providers for subscribers. Another attractive feature of this service, scheduled to begin in February, 1997, will be its 13-inch dishes, which will be the smallest on the market.<sup>42</sup>

### **Investment Profile**

TCI's credit status has been in a downward spiral and its stock price has fallen. Rating agencies such as Moody's and Standard & Poor's have been considering lowering TCI's debt ratings to junk-bond status — currently just one notch above it. TCI has approximately \$14 billion in debt and interest alone, which more than wipes out its operating income<sup>43</sup>, so a further downgrade would be enormously expensive for TCI.

This pressure on TCI has made it tougher for the company to raise money — either through new equity or debt placements — for continued growth. With competition looming from telephone companies, electric utilities, and direct broadcast satellite services, restraints on TCI's ability to grow come at an inopportune time.

TCI agreed that its expenses were "temporarily elevated" in the third quarter of 1996, citing costs from the company's venture into the cable modem and digital television business. John Malone said that in 1997, TCI's capital cable expenditures would be "substantially lower than in the past three or four years." In order to resolve its money crunch, TCI has decided to raise rates and reduce programming costs, capital expenditures, and its debt-to-cash-flow ratio next year. TCI said it is looking at every

expense item to trim costs<sup>44</sup>, which was the driving force behind the company's early December 1996 elimination of 2,500 jobs and freezing salaries.<sup>45</sup> TCI also said that its key subscriber count fell by 70,000 during the third quarter of 1996, raising more questions about the company's ability to survive in a more competitive market.

Having watched TCI miss a number of financial goals, some media analysts say they are going to wait until TCI's plans bear fruit before investing in the company. One investment firm executive said, "They haven't met any targets. It's like the emperor has no clothes." In typical John Malone fashion, the reply from the chief executive was: "If shareholders are really discouraged, I'd be happy to put together a few friends and buy (TCI shares) back from them."<sup>46</sup>

### Other Services Offered

TCI Telephony launched its first commercial network in Hartford, Connecticut. Telephony projects in Arlington Heights, Illinois, and Fremont, California, were scheduled to be launched by the end of 1996.<sup>47</sup> The company probably will not move beyond these three markets for some time, and then will consider other locations on a case-by-case basis. These telephony services can be offered by systems running at 450 MHz, but the systems must have two-way capability.

TCI also plans to offer advertising space on its network. TCI is experimenting with a plan to develop home pages on the World Wide Web for local advertisers. The advertisers would then promote the home pages on a TV commercial bought from the local TCI cable system. Local advertising looks promising to TCI. It foresees a shift in the way local advertisers think about advertising — perhaps re-evaluating newspaper and radio advertising.<sup>48</sup> Some of the more popular segments are aimed at real estate sales, automotive sales, classified listings, personal classifieds and even info-mercial programming.<sup>49</sup>

### Monthly Rates<sup>+</sup>

	<u>Basic</u>	<u>Enhanced</u>	<u>Editor's Choice</u>	<u>Premium</u>
TCI (Tacoma)	\$9.97	\$23.12	\$40.07	\$57.07
TCI (Pierce County)	\$11.56	\$32.33	\$44.50	\$56.28
<i>(approximate - depends on area)</i>				

<sup>+</sup>additional fees including equipment, taxes, etc. apply. (Addressable converters cost \$3.10 per month for example).

### Alliances

In 1994, TCI and five other cable operators (Time Warner, Continental Cablevision, Cox, Comcast and GE Americom) entered the digital satellite business with Primestar Partners. Primestar has grown since 1994 to 1.1 million subscribers, half of whom get bills from TCI, the other half from

the other partners. Primestar contributed \$200 million to TCI's revenues last year which could easily double that this year.<sup>50</sup>

TCI joined with Comcast, Cox Cable and Sprint to create a venture to package long distance, local telephone, wireless and cable services. This venture (named Sprint Spectrum L.P.) includes an all-new, all-digital, nationwide network for Personal Communications Services (PCS).<sup>51</sup>

Microsoft, TCI, and venture capitalists Kleiner Perkins Caufield & Byers have set up a high-speed multimedia on-line service called @Home. @Home would function as the "Internet channel," offering its programming to users over TCI's two-way coaxial cable systems for roughly \$35 a month. The @Home service entered testing in March 1996 in Fremont, California.<sup>52</sup>

### Other Plans

TCI had planned to merge with Bell Atlantic in 1994 to get into the telephony market.<sup>53</sup> However, the \$33 billion merger was called off in March, 1994 due to FCC cable rate rollbacks, TCI's weakening cash flow position, Bell Atlantic's declining stock price and the unwillingness of either company to budge on the pricing issues.<sup>54</sup>

TCI and Microsoft are currently engaged in a cable-based, interactive, utility services trial program in Northern California with Pacific Gas & Electric. This trial started in 1994, is testing application software, hardware, and network components of a system that can read water, gas, and electric meters and provide homeowners with hourly energy consumption reports by device.<sup>55</sup>

TCI owns 49 percent of Teleport, a competitive access provider that links private business networks to long distance carriers.

TCI is experimenting with McCaw Cellular on personal cellular networks in Ashland, Oregon.

## Overview

### THE LOCAL TELECOMMUNICATIONS MARKET

Understanding the local telecommunications market is critical to gaining an understanding of the environment in which telecommunications decisions must be made. This review of the telecommunications market in our local community analyzes both the residential and business markets for telecommunications services as they stand today. A discussion of how different economic futures are impacted by telecommunications concludes the section.

Market research and analysis is a proven method for taking the pulse of the marketplace. The following documents, Current Residential Market, Current Business Market, and Future Markets, faithfully capture the pulse of the telecommunications market in this region, and also relate how a new telecommunications business would impact the economic future of the community.

The future market analysis relates the a telecommunications infrastructure to the regional evolution of economies, in this case from the industrial age to the information age. Being at such a juncture offers communities an opportunity to step back and ask questions such as: What direction is our economic engine heading? What direction do we want it to head? Are we building a base so tracks can be laid in that direction? Based on the answers to those types of questions, communities like ours will make decisions that influence the direction the economic engine heads.

**Summary**

**The Current Market**

To help assess current market support for advanced telecommunications services in the greater Tacoma area, Tacoma City Light pursued two avenues of customer research:

- A random sample survey of 606 residential households (+/- 4% error at 95% confidence), and
- A survey of [+/- 200] businesses with over 25 employees selected from the Tacoma-Pierce County Chamber of Commerce membership and other sources.

Each piece of research addressed two major questions about Tacoma City Light's potential plan to build a broadband communications system to serve its customers:

- How strong is the market demand for services which could be offered through this system?
- How strong is customer support for Tacoma City Light building such a system?

**Market and Policy Support - Residential Market**

**How Strong Is Market Demand?**

Tacoma area households have characteristics which suggest they would be receptive to Tacoma City Light offering them cable TV and other telecommunications services.

Demographics such as a strong base of technical and professional people (29%), as well as retirees (25%), higher educational levels (68% with at least some college), and adequate income are consonant with both types of services.

Over three-quarters of households (78%) already have cable TV, and over half say they need cable to get television reception at all. In addition, many households have all or part of the experience and technology (e.g., 46% with computers, 32% with a modem, 18% using the Internet) to take advantage of other capabilities of an advanced communications system (e.g., data transmission, Internet access).

If a new cable TV provider were to offer lower prices and/or improved programming, three-quarters (73%) of customers say they would be extremely or very likely to switch to that new company. Customers are looking for the best *value, both in terms of cost and programming*, and would welcome the benefits of competition.

Customers also value Tacoma City Light: when asked which of four companies they would choose for cable TV, even if all offered similar services and prices, Tacoma City Light was the leader by far (44%), with the current provider a distant second (15%).

#### **How Strong is Customer Support?**

Most customers have not heard of Tacoma City Light's potential plan to build a new communications infrastructure. Still, when told the basics about the system — including how it would improve electrical service and how it would be financed — the large majority, 81%, supported the venture. Customers cited the benefits of competition, but a notable number also specifically mentioned that Tacoma City Light is a good company and would provide better service, perhaps at a lower cost.

## **Overview and Methods**

### **Residential Customer Survey**

The goals of the residential customer survey on telecommunications were to:

- Assess the demand for an alternative cable television (cable TV) provider in the greater Tacoma area
- Assess market readiness for other telecommunications products and services
- Assess support for Tacoma City Light constructing a broadband communications system

## **Survey Methods**

**Questionnaire Development.** A draft survey was developed and then reviewed during a focus group discussion with 11 residential customers. Results of this focus group revealed that residential customers, while quite sophisticated about cable TV needs and concerns, were less able to discuss other telecommunications services (i.e., the need for Internet access.) Thus, the survey was revised to focus on cable TV issues and support for building the system, and to gather baseline information about household technologies which might signal readiness for other telecommunications services.

**Sample Size and Reliability.** From all indications, the results from this survey provide very reliable data for Tacoma City Light. This sample of 606 randomly selected households reflects Tacoma City Light's entire residential customer base within a + or - 4% margin of error, with 95% confidence.

**Data Gathering.** Survey data were collected through telephone interviews conducted at Market Data Research in Tacoma, Washington, during October and November 1996. Each interview lasted about 15 minutes.

**Data Notes.** Due to rounding, percentages may not total 100%.

**Caveat.** While the greatest care has been taken in all stages of this study, the survey data reflect Tacoma City Light customers at one point in time. Decision-makers should bear in mind that people can and do change their minds and may act differently than survey results indicate.

## Key Findings

### Residential Market

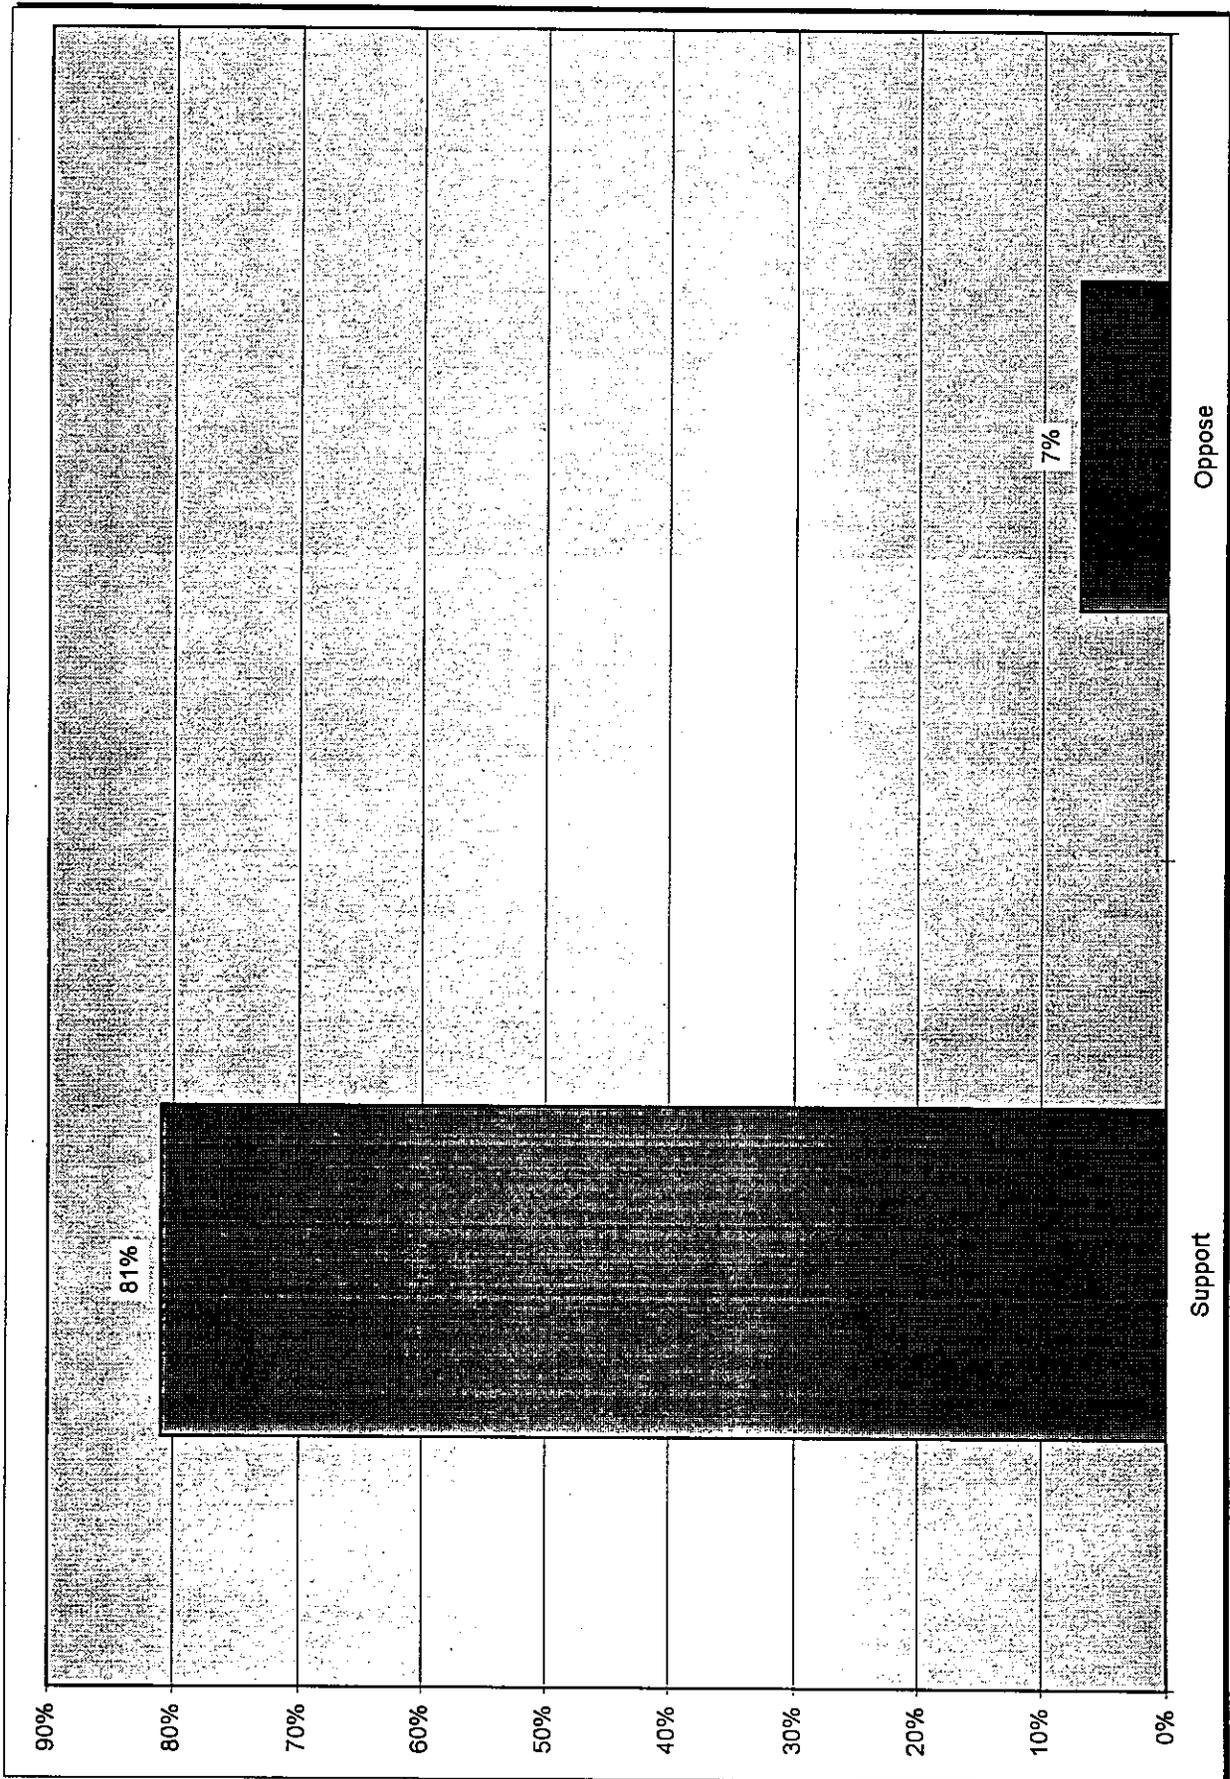

**Household Demographics.** Demographically, Tacoma area households have characteristics which suggest receptivity to cable TV and other telecommunications services, including:

- Substantial percentages of households with professional and technical workers (29%) or retirees (25%);
- Many households with higher educational levels (68% with at least some college); and
- A third of households with incomes of \$40,000 per year or more.

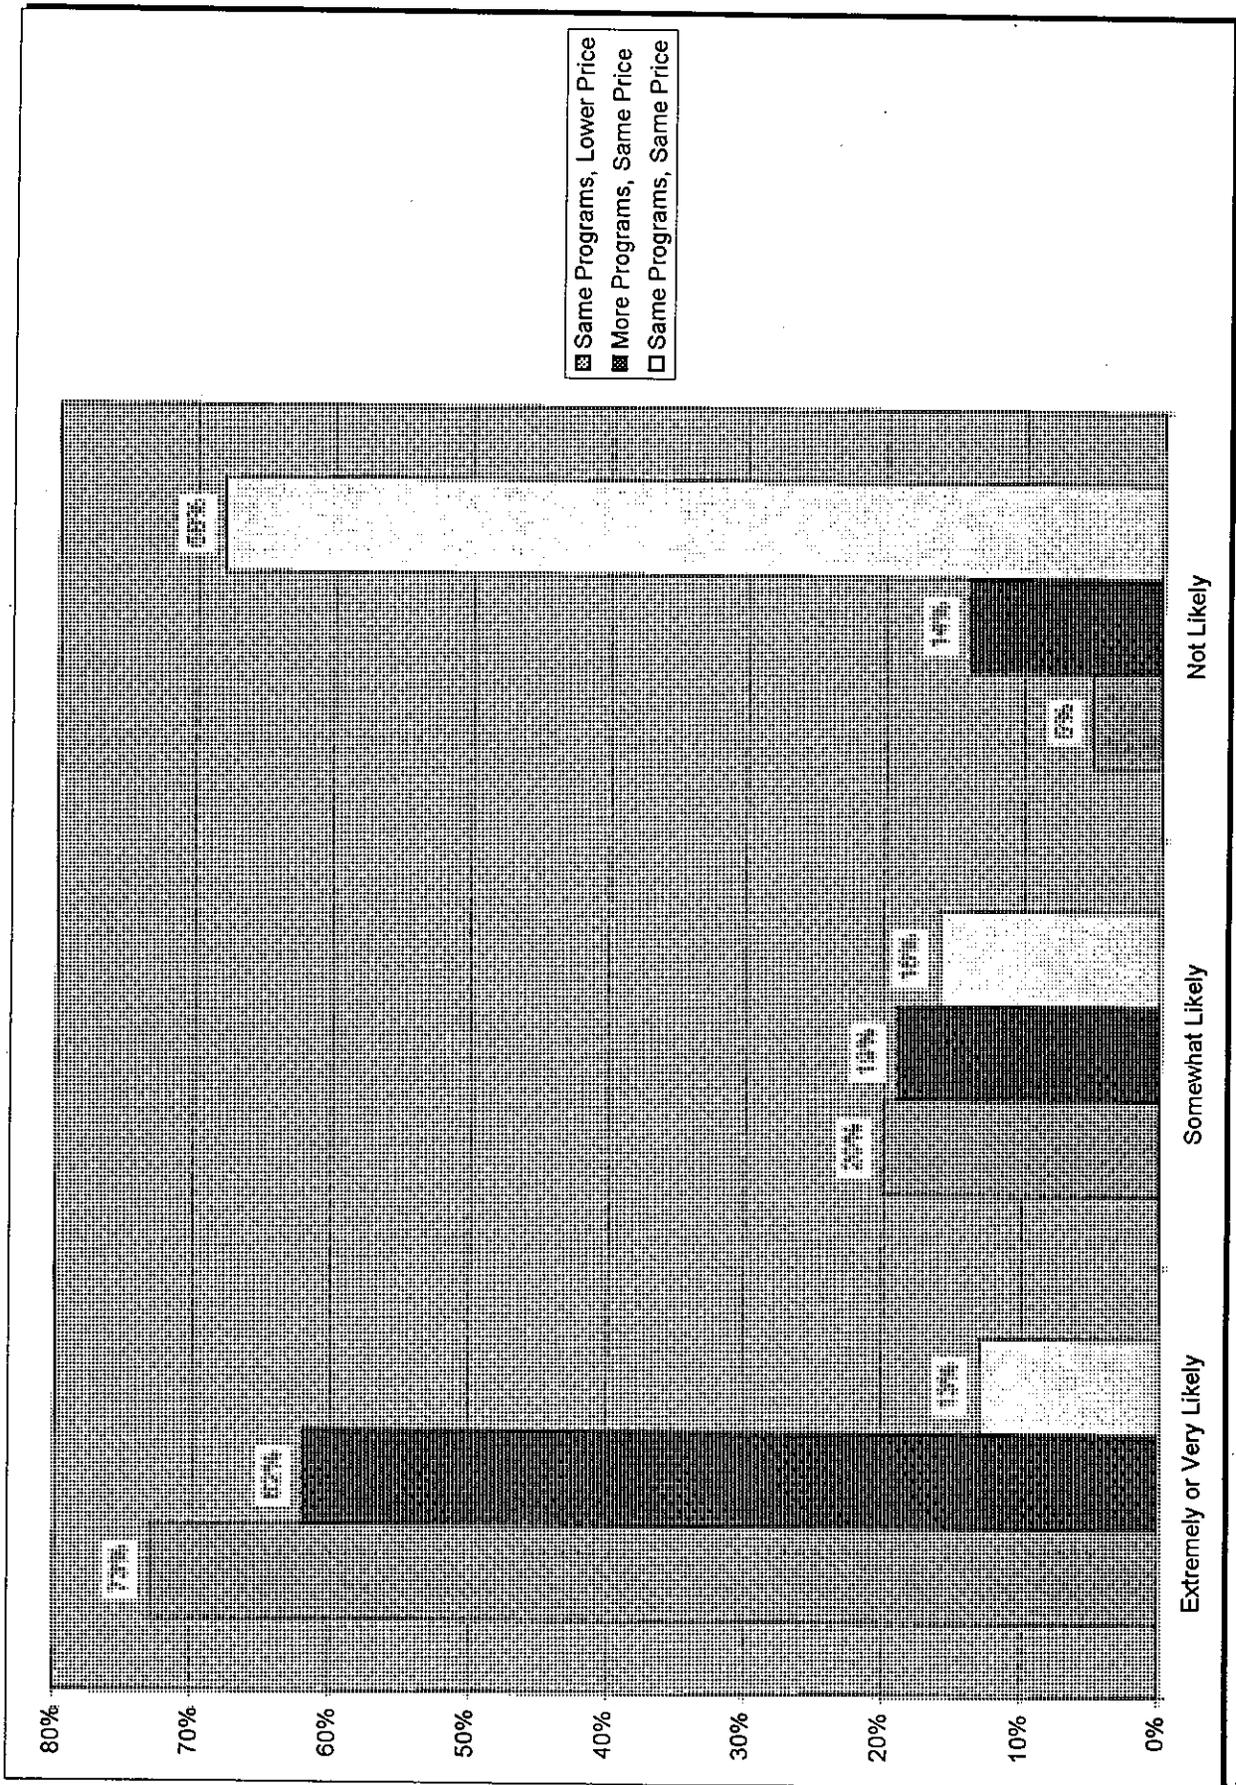

**Cable TV Penetration and Stability.** Most Tacoma area households have cable TV and demand appears to be quite stable. Findings which support these conclusions include:

- 78% of households subscribe to cable TV.
- Over half of cable subscribers (52%) say they need cable to get adequate reception.
- Over half of subscribers (53%) report they like the better and wider program choices that comes with cable, and another 27% say they want to receive specific types of programming or channels.
- Small percentages of respondents currently have mini (2%) or large (1%) satellite dishes .
- A fairly small percentage (6%) say they *intend* to buy a mini dish in the next 12 months.
- Further market penetration (6-12%) might be gained if various changes were made to existing cable services, including lower cost, installing lines to currently unserved areas, and improving programming and customer service.

### Summary

#### The Current Business Market

To help assess current business market support for advanced telecommunications services in the greater Tacoma area, Tacoma City Light pursued two avenues of consumer research:

1. An in-depth survey, personalized mail survey of 40 businesses, hand picked as "*Key Customers*" for City Light's telecommunications services. The results of this survey are not discussed in this report.
2. A telephone survey of 200 businesses, with 25 or more employees, selected from the Tacoma-Pierce County Chamber of Commerce membership. This group represents a pool of "*Potential Customers*." The results of this survey are summarized in this report.

Each piece of research addressed this question about Tacoma City Light's potential plan to build a broadband communications system to serve its customers:

**How strong is the market demand for services which could be offered through this system?**

#### Market Demand Summary - *Potential Customer Business Market*

Based upon the results of 200 telephone interviews with medium to large Tacoma area businesses, the Potential Customer business market is on the brink of being ready for advanced telecommunications technologies. The money is there, the needs are forming and increasing, but the familiarity with choices of more advanced telecommunications technologies (i.e., ISDN) and the use of such technologies are fairly low.

On the bright side of the horizon, key findings show these customers account for more than \$5 billion dollars in annual revenues and 25,000 jobs. What's more, they currently spend over \$10 million dollars annually on telecommunications services. They perceive telecommunications links are extremely important to the success of their businesses, and many

believe their telecommunications needs will increase rapidly, particularly for Internet access and local data networks. They are more concerned about reliability than price for their local phone service, and this concern, while not at the top of the list for telecommunications services, is certainly important. They are also very concerned about getting quick response from any telecommunications vendor.

On the more hazy side, however, most are not familiar with, nor do they use, more advanced telecommunications linkages such as ISDN and T-1 lines. They don't necessarily appear to have a wealth of employees with computers or Internet access. They spend the good portion of their communications dollars on local phone service and long distance, not data communications.

Thus, it appears the market will need considerable preparation to make it more receptive to the type of telecommunications services Tacoma City Light is considering for development. Preparing the market means working with customers to accurately inform them about the technologies available and how they can reliably and cost-effectively work for their business applications. Preparing the market also implies significant up-front costs in marketing to increase awareness, interest in, and acceptance of new providers, products, and services.

## Overview and Methods

### Business Market Surveys

The goals of the business market surveys on telecommunications were to:

- Assess market use of, and readiness for, business telecommunications products and services;
- Assess market need and receptivity to a new telecommunications provider; and
- Assess support for Tacoma City Light constructing a broadband communications system.

### Survey Methods

Two survey approaches were used to assess the business telecommunications market, as follows:

*Key Customer Survey.* An in-depth survey was developed for about 40 key companies in the Tacoma area with a strong potential to become telecommunications customers if Tacoma City Light were to install its broadband communications system. These businesses either had substantial telecommunications needs and sophistication and/or were large employers. The instrument was pre-tested in-house at Tacoma City Light, and hand-delivered to respondents during December 1996 with a personal request that they complete the survey and return it by mail to Tacoma City Light. (At the time of this writing, these surveys were still being completed, returned, and analyzed; thus, these results are not discussed below.)

*Potential Customer Survey.* The same in-depth survey used for Key Customers was then reviewed during a focus group discussion with eight businesses which had 25 or more employees and which used telecommunications, but were not among the Key Customer group. Results of this focus group revealed that businesses of this size, while quite dependent on advanced telecommunications for business success, would probably not be able or willing to complete the in-depth survey. Thus, the survey was simplified and rewritten as a telephone survey.

The Tacoma-Pierce County Chamber of Commerce supplied a list of about 400 businesses which were Chamber members and which had 25 or more employees. Survey data were collected from 200 businesses through telephone interviews conducted at Market Data Research in Tacoma, Washington, during January 1996. Each interview lasted 10 to 15 minutes.

## Key Findings

### Potential Customer Market

**Business Characteristics.** While businesses in this sample of 200 companies in the greater Tacoma area vary considerably in both type and size, their annual revenues and number of employees suggest that many are likely to have significant telecommunications needs, either now or in the near future. Taken together, these businesses represent, at a minimum, \$5 billion dollars in annual revenues and 25,000 jobs. In addition, over half serve a statewide or a wider geographic market and, on average, have more than one location in the Tacoma area. Notable characteristics are:

One-third (31%) of businesses surveyed are fairly small in terms of gross annual revenues (less than \$5 million); however, 12% are in the 5-10 million dollar range, 17% in the 10 to 50 million dollar range, and 9% in the over 50 million dollar range. (Note: 31% of business respondents did not give their company's gross revenues.)

On average, each these Tacoma area businesses employ 129 people. A minority of these businesses have fewer than 25 employees (11%), while 37% have 25 to 50 employees, 26% have 51 to 100 employees, and 26% have more than 100 employees.

While just over one-quarter of businesses (28%) defined their primary geographic market area as the Pierce County area, the remainder had wider market horizons. Twenty-one percent defined their market area as western Washington; 22% as Washington or the Pacific Northwest, 8% as the West Coast, 13% as national; and 10% as international.

On average, the businesses surveyed each had just over 3 locations (3.45) in the greater Tacoma area. While two-thirds (69%) have only one business location in the greater Tacoma area, 12% have two locations, 5% have three, and 11% have 4 or more. Only 3% of businesses surveyed did not have a location in the greater Tacoma area.

Based upon length of time in operation, Tacoma area businesses appear to be quite stable: on average, they've each been in business 41 years.

Almost all the businesses interviewed (86%) already are customers of Tacoma City Light.

#### **Importance of Telecommunications Products and Services.**

Qualitative perceptions of the importance of telecommunications services, and the amount of money these companies already spend each year on such services, indicate telecommunications are a mainstay of most of these businesses. Results show that among the 118 businesses which could supply a figure, \$50,000 on average was spent in 1996 on telecommunications. If this average is used for all 200 businesses, these companies spent about \$10 million dollars on telecommunications services last year. Key results include:

Almost three-quarters (74%) say that telecommunications links are *extremely important* to the success of their business, with another 17% saying that such links are *very important*.

When asked "If your telecommunications services were out for one day, how would this impact your business?" 62% replied *it would cause serious harm to business operations*, and another 20% said *it would shut down business operations*.

Of the 118 businesses estimating 1996 telecommunications costs, 29% reported the bill was in excess of \$30,000, 31% said the bill was between \$10,000 and \$30,000, and 40% said the bill was between \$500 and \$10,000 per year. The average yearly bill was about \$50,000.

**Current Telecommunications Characteristics and Decisions.** While the 200 businesses surveyed appear to spend quite a lot on telecommunications, it is probably not being spent on data communications, nor do they tend to rely on advanced telecommunications links such as ISDN and T-1 lines. However, many are encountering new telecommunications needs and review those needs on at least a yearly basis; many are making use of the Internet; and a sizable group say are considering more sophisticated telecommunications links. The following data support these conclusions:

Every business surveyed has at least one computer. However, about half of businesses had less than 25 computers, even though only 11% had 25 or fewer employees. Thus, many businesses do not have computers for every employee.

The majority of businesses have at least one employee with access to the Internet (61%), but usually the proportion of employees with Internet access is small.

Although most companies spend money on each of four types of telecommunications services — local voice telephone lines, long distance lines, cellular phones, and data communication — most telecommunications dollars go toward local telephone service. Long distance services are second, followed by cellular phone and data communications services.

The most frequently used Internet service is e-mail (68% of companies), followed by dial-up access (41%), Web Page hosting (41%), dedicated access (28%), electronic product and service delivery (21%), and electronic customer service (19%).

Two-thirds of business respondents were not familiar with ISDN lines or T-1 lines. Only a handful have an ISDN line (13%), with somewhat more having T-1 lines (23%). However, about 10% of all customers without these lines say they have considered installing them.

Only 11% of these businesses are currently served by fiber optics from U.S. West, although 41% didn't know if their company had this service.

Businesses report that several factors are important when they decide to acquire new telecommunications services, with price (35%), reliability (20%), and customer service (15%) heading the list.

Response time is very important to these businesses when choosing a telecommunications provider: 48% defined "good customer service" as quick response.

**Choosing a Local Phone Company.** Businesses report that reliability is by far the most important consideration among price, reliability, and customer service, if they were choosing between their current local phone company and a new company. No doubt this point of view is influenced by that fact that almost half (48%) report their phone service has been out at least once during the past year. Notably, only 41% would choose their current company (U.S. West) if they had a choice, but few were willing to choose Tacoma City Light as their local phone service provider. Specific findings show:

Almost two-thirds (63%) chose reliability as the most important factor in their choice, compared to 32% choosing price, and 6% choosing customer service.

94% chose reliability as one of their top two deciding factors, compared to 70% choosing price, and 38% choosing customer service.

Less than half (41%) would choose U.S. West as their local phone service provider, 26% would choose AT&T, 5% would choose Tacoma City Light, and 4% would choose Sprint. Notably, however, one-quarter said they didn't know who they would choose.

Almost one-third of businesses report "fair, poor, or terrible" response time from U.S. West in solving problems with their phone lines.

**Future Trends.** Across a series of questions, these 200 companies reported that telecommunications needs were likely to change quite dramatically over the next 2 to 5 years. Telecommuting will increase, and many identify cellular phones, local data network interconnections, and Internet access as essential, fast growing telecommunications needs for the future. In particular:

These businesses report that, on average, 14% of their employees telecommute on a regular basis; they expect this average to increase to 18% of employees over the next 2 years.

The large majority of companies think that cellular phones (71%), local data networks (68%), and Internet access (63%) will be very or somewhat essential to their companies communications needs in the future.

49% of businesses think their company's use of the Internet will double (32%) or more than double (17%) over the next five years.

Almost all of these businesses (85%) think that the amount of time employees spend on the Internet will increase some (45%) or a lot (40%) in the next two years. They also believe the number of employees with Internet access will increase (43% somewhat, 22% a lot).

36% of businesses think their company's use of local data networks will double (27%) or more than double (9%) over the next 5 years.

26% of businesses think their company's use of cellular phones will double (21%) or more than double (5%) over the next five years.

1% or less of these businesses think their use of the Internet, local data networks, and cellular phones will decrease over the next five years.

## Future Market to Serve

Produced by  
APEX Business Solutions

### Purpose

Tacoma, like other communities, has evolved in response to changing economic, social, political, and technical dynamics at work not only in the local area, but in the region, the country, and even the world.

Understanding this change process for a given community is critical due to the reciprocal relationship between these dynamics and the community's economic base.

Over time, existing businesses contract, expand, or change focus in response to these dynamics—for example, the depletion of an area's natural resources, the building of a rail line, or the encroachment of competitors can each lead to change in the community's economic base. In other cases, certain conditions may lead new businesses or whole new industries to relocate in an area—for example, aluminum smelters' need for cheap power. The entrance of these new industries and fundamental changes in existing ones, in turn, contribute to and alter the original dynamics. As a result, reciprocal effects of the choices these businesses make are felt in a community's job mix, education system, infrastructure investments, and more. Based on this evolution, an area's economic base is built with tracks laid for its economic engine to take one route rather than another.

These periods of steady evolution, however, are occasionally punctuated by intervals of rapid revolution, where societies undergo more fundamental changes. We are in one such period now as we move from the industrial age to the information age. Being at such a juncture offers communities an opportunity to step back and ask questions such as: What direction is our economic engine heading? What direction do we want it to head? Are we building a base so tracks can be laid in that direction? Based on the answers to those questions, communities like Tacoma can make changes to influence the direction their economic engine heads.

One of the most significant ways a community and its economic base are intertwined is through an area's infrastructure. As a result, the evolution of a community's economy often depends upon the investments it makes in its transportation system, power system, and—given the shift to the information age—its telecommunication system. To plan for infrastructure needs to support an evolving community requires attention to its possible future states. This study was therefore commissioned to investigate Tacoma's potential economic futures and the inter-relationship between its economic development and telecommunication system investment decisions.

To help ensure Tacoma's telecommunication needs were assessed comprehensively, scenarios are based on information about the current context as well as potential future developments. Information was gathered from a variety of sources. Interviews with key business and civic leaders focused on the goals and efforts of various development activities. Data from published and unpublished sources were examined for insight into economic trends in each of the major sectors.

**Economic engine.** We identified the local economic engine, describing the relationships between sectors that drive economic health, growth and changes in a region. It is not unusual for a community's economic engine to evolve over time. Understanding how and why the engine is changing provides important insights into opportunities and threats that could affect the economic health of a region. Exploring this economic engine requires a historical understanding of a community's development, along with comprehensive review of how each industry sector is evolving in response to local and national pressures.

**Economic interventions.** Most communities have examples of economic development interventions, or deliberate action taken to change or impact economic activity. These interventions can take the form of programs, projects, and initiatives. Interventions often involve the forming of specific groups whose purpose is to design or implement these programs. These groups typically dissolve after the program is implemented. In other cases, long-standing groups have an ongoing purpose of economic intervention and may develop and manage multiple programs.

Interventions can focus on education or training, taxation/regulatory relief, business retention/expansion/recruitment; small business startup/jobs, international trade, government/military, transportation, telecommunications, energy, public safety, housing, culture, tourism/entertainment, investment confidence/image, and various industry sectors.

Each intervention represents a potential change in the economic engine. They either support or enhance the current trajectory, or represent attempts to alter the track a community is on. Each intervention has its own set of assumptions that influence the design of the program, implementation plans, and desired outcomes. The actual outcomes of the program interventions, however, depend on how the program characteristics interact with the local context. Analyzing the intervention requires understanding the local participation in the program, the program's overall purpose, and the validity of the program's assumptions. In this way, we can assess the potential outcomes of the intervention on the economic base in a community.

---

**Scenario building.** Not all economic interventions have the same impact. Not all evolution in industries will affect each community the same. Scenario generation involves analyzing each possible trajectory in a community and combining these individual plans into combinations of possible future states in the community. Through scenario analysis, inconsistencies or conflict between economic development activities can be identified. Competing projects or industries can be assessed to determine the more likely candidate for success and survival. Changes in the base of export jobs are assessed against other support industries to ensure that each is evolving in a way that will increase chances of mutual survival. Infrastructure issues around housing, education, transportation, etc. are all analyzed to determine the support for various future states. This complex analysis, when successful, usually yields scenarios that are relatively simple and elegant. In this study, we were fortunate enough to find little direct competition for resources among industries or projects. As such, we were able to filter our analysis down to three key scenarios that we discuss.

**Implications of scenarios.** Each scenario has an implication for the volume and type of growth in the community. Using the Puget Sound Governmental Council and State Office of Financial Management reports as a baseline, adjusted for recent changes in the local economy, growth rates for each scenario were generated from economic modeling. The scenarios also represent a potentially different set of telecommunication needs and may have implications for system architecture design. The study provides a brief overview of telecommunication needs.

In this section we provide an overview of the key outcomes of this study. You will find a more detailed, comprehensive review in Appendix D.

---

## Changes in the Economy

### Tacoma's Current Economic Base

The basic economic structure of the Tacoma/Pierce County economy is relatively well defined and easy to characterize. The most important economic sector of the economy is related to *government and military activity*. The major military installations in the county (McChord, Fort Lewis, and Madigan) support almost one half of the basic economic structure. Added to this are significant amounts of employment from state, county, and city as well as federal agencies and offices. Indeed, thirteen of the twenty largest employers in the county are governmental agencies. In addition to this governmental activity, employment related to *health care* and *professional business services* is also important to the local economy. These businesses reflect Pierce County's role as a regional service center for the southwestern portion of the state. Included in this set of activities are hospital

and medical facilities, regional financial services, and the supporting commercial businesses. The third important sector of the local economy revolves around the *Port of Tacoma* and its related activities. This sector includes businesses directly related to the movement of ships and cargo through the port, as well as warehousing, materials handling, and transshipment activities.

#### **Tacoma's Historic Economic Base**

Tacoma's current economic environment emerged as a result of the substantial changes that have occurred over the last 25 years. A quarter of a century ago the Tacoma/Pierce County economy was much more dependent on manufacturing activities than it is today. Such businesses were tied to the natural resources base of agriculture, lumber, and fishing. Declines in those industries have been due to a combination of factors including: cost issues, environmental changes, and shifting patterns of world production. As these historically important economic activities decreased, the area could have suffered severe economic problems. Instead, the local economy was resilient enough that these changes caused only moderate problems and adjustments. This suggests the local economy is flexible and adaptable.

#### **In Support of Development**

The flexibility and adaptability demonstrated through this 25-year restructuring was the result of a number of forces. Two of the most important factors were the *physical environment* and the *business environment*. Over time, the natural beauty of the area's mountains, water, and open spaces as well as the moderate climate have become more important to businesses and individuals for "lifestyle" reasons. In a recent survey on business climate, the overall quality of life and opportunities for cultural experiences are considered to be two of the strongest factors that encourage businesses to locate or remain in Tacoma<sup>1</sup>. Second, the community's business environment has also been a positive draw. Again, the recent survey revealed that half of the businesses (50%) think the City of Tacoma regulations and codes are being fairly enforced<sup>2</sup>. Public-private cooperative initiatives, a healthy labor-management working relationship, attractive infrastructure, and available sites for development all have contributed to a positive atmosphere that was attractive to many firms. A growing population in a large metropolitan region has created a productive and adequate labor force that reduced location costs. Finally, relatively non-restrictive land-use regulations have provided an incentive for development in the Pierce County area. Significantly, some of these forces remain in place today.

Growth prospects for the areas, therefore, continue to remain strong. Tacoma has been recognized nationally as one of the best places for small business start-ups, based on cost structures in the area. The new University of Washington Tacoma campus has enhanced the educational offerings for local residents.

Cooperation among local colleges, technical schools, and employers is strong. Recent initiatives in the urban core have improved the art, cultural, and entertainment offerings in the county. To a large extent these types of activities and advantages were important in the decision of Intel to move into the area, for Boeing to establish a new production facility at Fredrickson, and for Frank Russell to expand downtown operations.

#### **Barriers to Development**

In a recent survey of business climate in Tacoma, half (51%) of the businesses believed the current business environment in Tacoma causes companies to be reluctant to locate or remain in Tacoma<sup>3</sup>. The survey identified the most frequently mentioned 'significant factors contributing to this situation' were all taxes (29%), specifically the B & O tax (21%), regulations (13%), taxes too high for small business (10%), poor image of Tacoma (8%), and crime (8%). Factors that clearly discourage businesses to locate or remain in Tacoma are the crime rate, business and occupation tax rate, and the permitting and land use regulations.

Although amenities and infrastructure are adequate, transportation infrastructure is a problem. Additional road and rail capacity is the most problematic issue. Rail links and road access from the Port will likely be a short term issue that will be resolved with route suggestions posed in a study completed recently by the Port. Longer term solutions are under study for handling freight movement out of the area. Expansion of SeaTac airport is also of concern. Without a third runway, it may be difficult for the airport to compete with Vancouver and San Francisco in securing more international flights. The lack of such flights may impact the Northwest region's ability to attract global businesses.

## DESCRIPTION OF SCENARIOS

During our analysis two key trends were identified that shaped the scenarios we developed:

- As discussed in the last few pages, Tacoma has been and is still experiencing *change in its economic base* as a consequence of industrial changes throughout the United States and globally; and
- The outcome of *downtown Tacoma development* activities will have a significant impact on Tacoma's future economic mix as a whole.

As a result of these two key trends, we used comprehensive analysis to construct three possible scenarios for Tacoma's economic future.

- The first scenario is what will likely occur under the *current economic trajectory*, with few or none of the planned development activities succeeding.
- The second scenario describes a world that enjoys not only the benefits from the first scenario, but also *accelerated growth* from the successful implementation of the International Services Zone.
- The third scenario experiences the benefits of the previous two, along with an *expanded, diversified base* from enhancements in tourism, culture, and entertainment from a "culture cluster."

These scenarios will be briefly reviewed below, including some of the economic development projects and growth impacts linked to each scenario. This is followed by a brief assessment of telecommunication needs.

---

### Scenario One: Current Trajectory

Each of the specific economic development activities currently underway in Tacoma face barriers to be successfully implemented. Our first scenario examines the prospect that the current activities to enhance economic development (like the International Services Development Zone effort discussed later in this report) are not implemented, and the financial service sector

evolves along its current trajectory without aid of tax benefits and other direct interventions.

The three drivers of the economy, Government Services, Transportation and Distribution (the Port) and Medical Services would play a major role in this scenario's development. The Port of Tacoma and military bases at Fort Lewis and McChord Air Force Base would remain the drivers of the economy. The military bases presently contribute to roughly 50% of the economic activity in the Pierce County, employing over 32,000 military and civilian workers without taking Washington State National Guard employees at Camp Murray and elsewhere into consideration.

Services to Tacoma's growing medical services industry, including back office support for physician provider groups and insurance operations, are also expected to grow as a result of the criteria described above. Back offices allow service organizations such as hospitals, banks, and brokerage houses to outsource the administrative and record-keeping tasks of doing business. Such services are typically cheaper for companies than doing them in-house, and they allow firms to concentrate on those aspects of the business that make them money. Back offices may be attracted to Tacoma due to lower real estate costs and salary scales.

It is anticipated that intra-state, regional and national transportation services will remain an important component of the local economy, fueled by population growth, increased trade with the Far East, and the trend to consolidate cargo handling at large mega-ports. With its modern port facilities, rail links, proximity to a major interstate and an international airport, Tacoma is an important hub in the state's transportation system. As a result, the transportation sector will continue to provide Tacoma with a source of competitive advantage, if congestion can be controlled. In addition to distribution centers and major shipping lines, Port of Tacoma officials expect light industrial companies to locate more facilities in its service area due to the commercial zoning available.

At the same time, a modest number of computer-related manufacturing units as well as research and development units could arrive in the wake of successful operations at Intel and Matsushita. Some of these would likely provide support to the established computer companies in a technology corridor from Bellevue to Bothell in King County. Quebecor Integrated Media, a major Microsoft supplier, is an example of such a firm. Large tracts of relatively inexpensive land where custom facilities can be built, easy access to most modes of transportation, and an available work force make this prospect likely.

### **Implications for Growth**

The three scenarios must be compared to a basis. For this report the basis is the Puget Sound Governmental Council and State Office of Financial Management reports, adjusted for recent changes in the local economy. Their forecast for population growth in Pierce County is 1.8% per year from 1995 through 2005 and then declines slightly to an annual rate of 1.5% for the subsequent fifteen years. For Tacoma, population growth is predicted to average 1.25% per year through 2005, and then slow to 1.0% annually through 2020. These growth forecasts assume that the current state of the economy remains unchanged. Housing unit growth will increase by the same percentage amounts as per the population. In Pierce County, over the long term, housing units tend to increase at about the same rate as population.

It is reasonable (but not certain) to assume that the basic economic structure will remain unchanged over the medium term horizon (through the year 2020). However, at least two forces will impact the nature of the local area economy. One is the effect of the Growth Management Act requirements. The other is the provision of adequate infrastructure, including telecommunication support. Each of these will be addressed following the scenario descriptions.

---

### **Scenario Two: Accelerated Growth**

In addition to the growth occurring naturally from the evolution of different industrial sectors, a second scenario portrays Tacoma/Pierce County as a center for professional services including financial services aimed at an export market. The redevelopment of Tacoma's downtown is a second major trend influencing the economic future of the city. There are several economic development groups with specific projects underway designed to enhance downtown Tacoma. Major projects are reviewed below. Downtown development could take one of several directions, depending on the outcome of these projects.

This scenario would also include a higher rise in advanced technology companies to follow the upgrade in the downtown corridor that would accompany a financial service center. This prospect could result in the greatest change in the nature of the employment base in the Tacoma/Pierce Country area. This vision of the area's economic future rests on the passage of the International Services Development Zone, which would provide tax advantages at the federal and state level to attract international services companies (especially financial services firms) to Tacoma. In addition to financial services firms, the types of businesses attracted under this scenario include professional services such as law and accounting, architecture and engineering, and environmental consulting firms.

### Support for Professional Business Services

*The "Zone"*. In 1994, Tacoma was awarded a \$ 3 million federal Enterprise Community grant, and was designated a state Empowerment Zone. In addition to the funding, the EZ/EC designation carries a number of tax and regulatory advantages. The primary purpose of the EZ/EC programs are to create jobs in distressed urban areas. The TEC has underway a number of significant programs to achieve this goal, including an employment initiative, the Tacoma Business Assistance Center, the Micro Loan program, and the International Services Development Zone (ISDZ). The ISDZ has the potential to significantly change the face of downtown Tacoma.

The strategic mission for the establishment of an *International Services Development Zone* is to contribute to the economic prosperity of Tacoma by bringing financial service and related firms into a state designated empowerment zone within the city. The International Services Development Zone Committee is modeling its ideas on the successful International Financial Services Centre in Dublin, Ireland. The Irish venture has created training opportunities, jobs, and community redevelopment. The ISDZ Committee has the active help of the Irish government in obtaining information on how its program and its technological, educational, and administrative support are structured. The ISDZ initiative hope to achieve similar success in Tacoma, through a three-pronged program: (a) tax relief at the federal, state, and local level, (b) appropriate investment in technology (especially telecommunications) infrastructure, and (c ) coordination of education resources to provide adequately trained employees for sophisticated international service businesses. The primary focus at present is the promotion of tax incentive legislation at the federal, state, and local level.

The organizing committee, consisting of local business leaders, city officials, and other concerned parties, has already contributed toward drafting federal and state legislation. If successfully passed, the legislation will create multiple tax benefits designed to attract businesses. The group has also created committees to ensure completion of plans for facilities, infrastructure, and education to support companies locating to the zone. It is anticipated that state and federal legislation will be passed during the 1997 session. The ISDZ is part of a larger effort by the Tacoma Empowerment Consortium (TEC) designed to provide training and jobs to zone residents and improve the overall economic health of the area within the zone. Other efforts by TEC include a one-stop-shop for capital investments in cooperation with the Small Business Association, a micro-loan program, and a technical assistance center.

### Support for an Urban Retail Core

*City Beautification* If there is to be significant change in the base of professional service businesses, additional retail support will be required. As such, the *Thea Foss Waterway Redevelopment* could be a fundamental part of any downtown renaissance. The City of Tacoma purchased the waterway with the intent to clean-up and revitalize the area. Recently, the City created a Public Development Authority which will issue bonds to underwrite the creation of an Esplanade, walkways, and public parks that should help move the project forward.

The Foss Waterway development could add by the year 2020 between 125,000 and 400,000 sq.ft. of new office space and 100 to 500 new residential units in the redevelopment area. New employment in the area would range from 1,100 to 3,500 over this time period. In addition, the visual appearance of the downtown core will be dramatically enhanced by such a project. This would provide an added attraction both to organizations working on Tacoma's economic development as well as to private developers. Other proposed mixed-used buildings in the redevelopment area could support the growth of professional business services. Possibilities include: class "A" office for ISDZ companies and other firms; government office space; retail and condominium space; as well as a museum complex, public park, and marina.

Enterprises that locate in the ISDZ would blend well with existing financial services firms in the area. They would also provide employment for a highly educated, well-compensated work force. In doing so, they create an upward employment path for workers in existing businesses such as the medical insurance industry, the banking industry, as well as for retiring military personnel who typically have extensive management and/or technical training.

In addition to the growth of computer-related technology companies envisioned under Scenario One, the migration of biosciences firms to the area is also possible. Several factors make this likely. The greater Seattle area is already the sixth largest life sciences center in the country, with growth fed by research at the Fred Hutchinson Cancer Research Center and the University of Washington. Many of these biosciences companies are reaching the end of their research and development cycle and are moving on to the manufacturing and marketing phase. In doing so, they will be in search of custom built laboratory and manufacturing space. Again, available land at a relatively low cost and the prospect of retrofitting existing office or warehouse space make Tacoma/Pierce County a contender. Research institutions and those potential headquarters operations that remain in the Seattle area are located under an hour away by car. The existing medical centers in Tacoma could provide controlled patient testing opportunities. In addition, the new research facility at Madigan Army Medical Center could provide a stream of trained employees as military personnel leave the service. Under this scenario, universities would need to work with new employers to ensure

they graduate an appropriately prepared work force. For example, the University of Washington's nursing program plans to expand its public health management program at the downtown campus would support this scenario.

The impact of one large advanced technology company or a few international professional services firms could have a significant impact on the economic growth of the area. The arrival of such firms would encourage more high and middle income housing to locate in or near the Central Business District, followed by the development of additional retail opportunities. Smaller business districts such as Proctor, Lincoln, Stadium and Sixth Avenue would provide retail support for the newly arrived professionals as they visit restaurants, use local services, and shop for goods. In addition, executive housing in North Tacoma, University Place, Lakewood, Puyallup and the Key Peninsula would also be in greater demand, with concurrent impact on the retail core in those communities.

#### Implications for Growth

The location of another large technology company (following the Intel example) or the successful development of the ISDZ would produce a major employment gain. In this case, growth within Tacoma would increase by 0.75% annually in the early time frame (1995-2005) and by 0.25% in the later frame (2005-2020). A slow down in the acceleration of growth would be due to more attractive non-Tacoma locations. This type of scenario would initially increase annual growth in Pierce County by 0.5% annually, and then slow to 0.75% over the longer time frame. Again, this would reflect better siting opportunities outside of Tacoma.

A recently produced consultant report<sup>4</sup> indicates that if as fully developed as the Dublin project, this could produce about 10,000 jobs in the city — 3,500 for the ISDZ and 7,000 for indirect jobs. The earnings would be \$130 million for the 3,500 direct and \$200 million for the indirect, or total new earnings of \$330 million. The jobs would also provide a large number of entry level, high school education positions with, of course, a mix of higher level professional service type jobs. The site would include about 27 acres, 8 on the water. This would produce about 1,565,000 square feet of new office and commercial space — 20,000 for retail, 1,500,000 for class A office, and 45,000 other.

### **Scenario Three: Accelerated Growth with Culture Cluster**

Adding to the conditions that built scenarios one and two, a third scenario considers the enhancement of tourism, entertainment, and culture industries in Tacoma. If Tacoma makes some significant facilities improvements it would become eligible to bid on larger national and international conventions. Minimally, these include the construction of a second "Business Class" hotel and the expansion of the existing Convention Center. Benefits would reach private convention facilities, such as the Landmark Convention Center and the Sheraton, public facilities like the Tacoma Dome and Cheney Stadium, and retail businesses. For example, the proximity of several large performing stages to one another in the Broadway Theater District creates the opportunity for Tacoma to become an important center for performing arts conferences such as the recent "World Harp Congress."

#### **Support for Increased Tourism and Convention Trade**

In further attempts to bring business into downtown Tacoma, opportunities and venues for new entertainment and cultural locales are being pursued by several interested parties. Such projects could increase visits by tourists and/or conventioners.

*Conventions* The Sheraton Hotel currently provides business accommodations downtown. Tacoma cannot be considered, however, for a specific "class" of convention because it lacks enough space to qualify. To host such conventions requires larger convention center space and more business hotel rooms. Plans to rectify this situation are underway. The Planning and Development Department has already proposed an expansion of the Convention Center and the construction of a second business class hotel within walking distance of the Convention Center

*Museum Complex* Plans are also underway to create a Museum Complex within a larger "culture cluster." This complex will center on a portion of the Thea Foss Waterway and an adjacent portion of Pacific Avenue between 15<sup>th</sup> and 21<sup>st</sup> Avenues. The Washington State Historical Museum on Pacific Avenue anchors this complex and is already open for business. The University of Washington-Tacoma campus, which includes several renovated historical buildings, is located across from the museum and has allocated the Pacific Avenue level for commercial use. The International Museum of Modern Glass is scheduled to open in the year 2000. Other possible tenants in such a "culture cluster" include a relocated Maritime Museum, a Puyallup Tribal Culture Museum, and the Tacoma Art Museum. The recently formed Public Development Authority for the Thea Foss Waterway will undertake long term planning for this area.

*Movie Theaters* To encourage more traffic into the downtown area, the City of Tacoma recently rewrote its theater ordinance to encourage the development of a large, *multiplex movie theater* in downtown Tacoma. Such cineplexes typically include eating and drinking establishments as well as video games complexes and would attract people downtown during evening hours. This would have the added benefit of improving the perception of safety, in that people walking to their transportation say they feel safer when others are around.

*Casino* The Puyallup Tribe of Indians recently opened a *gambling casino*, eventually to be relocated on a riverboat docked on the Blair Waterway. The success of such development efforts should increase the number of evening visitors to the downtown area and have a positive impact on existing retail establishments.

*Rail Connections* The *Train to the Mountain - Park Junction Resort* project is designed to create passenger train service between downtown Tacoma and the entrance to Mount Rainier National Park. Organizers expect the project to eventually include a second spur down to Morton, Washington. The City of Tacoma already owns the tracks from Tacoma to Morton. Park Junction Resort, a private convention and hotel center to be located near the park entrance, will serve as the track's mountain terminus. Tourists will be able to board a train in downtown Tacoma and a short time later step outside to enjoy recreational opportunities in and around the mountain. Transportation plans include shuttle bus service from the terminus to Paradise Lodge and other significant sites inside the park. Board members are proposing to provide service by 1999. The *Three Mountain Tourism Council* has also secured assistance from Microsoft to provide interactive historical and geological information at several sites in the area. This assistance may be coordinated with the Train to the Mountain project as it becomes more developed.

Second, if a "culture cluster" was created in Tacoma's Central Business District, Tacoma could become a tourist destination in its own right. It is anticipated that as tourists explore traditional attractions in the area, such as Point Defiance Park and Mount Rainier National Park, they will learn of the community's cultural attractions located downtown. The Washington State Historical Museum, Tacoma Art Museum, the Broadway Theater District and a possible multiplex movie theater in combination with the International Museum of Modern Glass and other prospective developments on the Thea Foss Waterway would create a downtown destination of interest. Increased tourist traffic would then support the development of additional attractions, for example a maritime museum developed from the existing Maritime Center on Dock Street, an aquarium, a Puyallup Indian Tribal Museum, and additional public parks.

Linkage between these tourist attractions and existing business districts which have developed their own personalities, such as Proctor, Lincoln, Old Town, Stadium and Sixth Avenue, could provide a significant

business boost for these neighborhoods. In addition, increased tourism would lead to opportunities for new and existing Bed & Breakfast and other lodgings.

At minimum, however, a modest expansion of employment in the professional services sector as described under Scenario One would be required for this scenario. Local people with disposable income are needed to support these facilities during the low point in the tourist season. That fact also makes facilities in this scenario more likely to thrive if Scenario Two comes to pass. In addition, Scenario Three would be helped by a well-orchestrated approach to cross-promotional marketing by the various tourist locales.

#### **Implications for Growth**

This scenario would have a significant impact on the moderate term growth outlook for the area would come from the development of an expanded art/cultural and tourist industry. This could happen if the "culture cluster" generates the critical mass of activity needed to attract travelers and put the area on the "map" of destination stops. The effect will be to raise Tacoma's annual growth by 0.1% and Pierce County by 0.2% in the 1995-2005 time frame. Greater growth will occur during the 2005-2020 time frame as infrastructure is developed and earlier impacts are felt, with increases by 0.25% for Tacoma and 0.3% for the county.

---

#### **Impact of the Growth Management Act**

An issue that will influence where and how population growth will occur, is the impact of the Growth Management Act based on its Under new regulations, the emphasis is on concentrating growth in the existing urban areas, curbing growth in the unincorporated areas, and avoiding growth in rural areas. As a result, more growth will be channeled into the Tacoma and Puyallup vicinity than in the past. Areas with clear development plans and the ability to provide traditional infrastructure will also see steeper growth. This factor favors areas such as Browns Point, Dash Point, DuPont, and Thun Field.

New housing types will change. Within urban areas, including the central business district, there will be a growth in multi-family housing. The density in the main existing residential areas (e.g., Proctor and Stadium, Lincoln, University Place, Steilacoom) will increase — with a strong possibility of more high rise (two to six story) units. In the county, the expansion will be primarily accommodated through single-family, detached units. Even in the county, however, the pressure will be to consolidate growth into those areas that already have traditional infrastructure.

Growth on the Key Peninsula will be more problematic. Transportation is obviously a problem, and this will favor location there by non-commuters, generating more demand for local retail goods in Gig Harbor. Infrastructure in that area, such as water and sewer will be more expensive and will push up housing prices.

To the extent that the employment growth occurs closer to DuPont than to the current Tacoma boundaries, some housing growth (and population) will occur in Thurston rather than Pierce County. One estimate, by the Thurston County Economic Development Board, expects that almost 70% of the non-DuPont residences of Northwest Landing employees to be in Thurston and only 30% in Pierce. As Thurston grows, however, people will travel to Pierce County for shopping and entertainment. Although a second spill over area could be Auburn in south King County, residential neighborhoods located there are not as attractive as in Thurston County nor is the economic base as diverse.

## TELECOMMUNICATION NEEDS

Our findings suggest that with appropriate investments in infrastructure and a supportive business climate, growth patterns should continue into the future. As a result, Pierce County will continue to be an attractive location for new forms of economic activity. In this section we briefly describe the relationship between each scenario and its telecommunication needs.

### Impact of Telecommunications Infrastructure

Patterns of growth in the major sectors of the local economy are, and will be more so in the future, dependent on the community's telecommunications infrastructure. Many established sectors will also require continued technology investments to remain competitive.

*Government activity* at military installations will continue to be the a significant sector in the local area economy. However, as the size of the public sector in the national economy continues to get smaller (moving toward the promised balanced budget), reductions in the defense budget will become increasingly important. The existing facilities in Pierce County have survived two rounds of base closures, due in part to the fact that they were technologically sound. The future is always uncertain, however. Access to the most modern telecommunications technology will help assure their survival in the local area.

Up-to-date communication and information services are essential to the survival of *health services*. Commercial data management in support of medical services also require a substantial and increasing telecommunications infrastructure. The health care industry is a primary industry in Tacoma Pierce-County and a rich source of potential applications and associated technology drivers. Not only are there a variety of applications driving both applied and fundamental research, but the spectrum of actual operating modes in health care provision systems span a wide range. Provision ranges from elective, non-emergency, monitoring where the patient and provider are together in a well equipped office, to emergency diagnostic and treatment situations where the diagnostic expertise is geographically remote from the patient and the treatment expertise. Remote diagnosis requires high bandwidth, real time connection oriented services which support multiple video and data streams as well as voice communication. The precise telecommunications capability required to support this activity is application specific, but can be analyzed within a distributed communication framework since in general health care providers may be geographically dispersed in multiple locations.

The increasing telecommunications need is also true of other *professional services*, especially in the area of *financial services*.

The financial services are not communications limited in the same sense as remote medical diagnostic services, or shipment status monitoring. While financial service providers at both the institutional level and the consumer level are sophisticated users of information, the financial services industry does not place heavy demand on the design of the telecommunications technology. This somewhat curious situation results from several factors:

1. Most financial information is coded in alphanumeric formats. These formats are very efficient to transmit using a variety of existing telecommunications technology.
2. Humans utilize financial information and services in alphanumeric or rudimentary graphical formats (trend charts).
3. Financial information is semantically "dense", the simple statement "DOW off %5" contains a wealth of information, but is amazingly compact (eight bytes).

So it is clear that need for increased bandwidth is usually not instigated by their need to support more volume. However, the financial services sector in the Tacoma area does have unmet telecommunications needs, as evidenced by the Frank Russell Company, one example of a professional services firm experiencing increased telecommunication needs in order to link its headquarters with its international offices and clients. For these kinds of clients overall bandwidth may not be an issue, but security of the line, speed and direction, and responsiveness of the vendor may be. This is an industry sector where telecommunications is part of the production process — a breakdown in the system can cause the organization itself to cease to function until the system is back on-line. Failure to invest in new technologies, especially communications technologies, would therefore

limit the growth potential of the area. Companies like Frank Russell would be forced to continue to privately construct work around solutions or utilize a remote service center that could supply desired access and services. Other areas looking to attract these types of companies would need to provide access to a sound telecommunication infrastructure. The success of the international services district and the ability to attract new businesses to the redeveloped Foss will depend, to a great degree, on access to low cost, full service telecommunications technologies.

More uncertain, and equally important, will be the information and communication needs of shipping and support activities in the *Port of Tacoma* area. Increase in direct competition to Tacoma's container trade, competition for new shipping lines, just-in-time inventory requirements, and lower labor costs all suggest the provision of telecommunications technologies will be important for this sector of the economy as well. Distribution centers in the Port of Tacoma, with SuperValu as another example, are becoming increasingly dependent on telecommunications for the transfer of data between regional distribution centers, vendors, and the parent company. Customers frequently desire to know the status of shipments which they have sent or are waiting to receive. These shipment status services are often effective differentiators for shipment service providers. In the small package shipment service business competitive pressure drove both FedEx and UPS to offer shipment status services. With the small package shippers, status generally provides pickup time, expected or actual delivery time and other information. With integrated shipment services providers such as the typical port authority, the cargo may be at sea, in the air or with some common carrier trucking firm which makes an accurate and reliable determination of shipment location problems. A possible solution entail utilizing global positioning systems (GPS) and wireless telecommunications technology to update port authority databases on the location and condition of shipments in transit.

In the *retail sector*, increased reliance on computer usage in stores is likely, as inventory costs can more effectively be controlled with timely ordering and control, use of fax and modem transactions is increasing, and the use of things like fingerprint recognition for credit cards or check writing. Successful merchants will need to adapt to these new demands -- a potential large increase in data transmission needs from many small and scattered sites.

The *advanced technology* businesses also can have telecommunication needs. A research based organization will often desire high-speed access to other researchers or their works. In fact, it is the ability to telecommute and connect regionally-located Universities that has fueled some of the dispersion in advanced technology companies to smaller communities.

Culture-based organizations in this scenario are not as technology-dependent as professional and health services, but telecommunications does play an increasing useful role in the tourist/convention category. The Visitor and Convention Bureau anticipates the use of smart cards to allow tourists access to a variety of services from transportation to tickets to shows. That idea would require a well developed communications network in the city and adjacent points of interest. For the conventioneer, satellite conferencing and digital information transfers are of growing importance. In addition, many business travelers expect a computer modem in their hotel rooms to connect with their home office. Museums increasingly use interactive media as an educational tool.

It is not merely the business applications themselves that require infrastructure access. Sophisticated, technology oriented employees of many of these types of firms would expect to have access to their workplace computer system from their home, access to the Internet, high quality cable systems, and eventually new technologies which are only on the drawing board at this time. A failure to invest in the appropriate infrastructure may leave Tacoma out of the running as a location for these types of firms and the employees who work for them.

## Overview

### A LOCAL TELECOMMUNICATIONS BUSINESS PLAN

This study has reviewed the telecommunications industry both nationally and locally. In reviewing the local situation it is clear that the local market has a growing need for better telecommunications access. Something significant is clearly underway when 18% of the homes in the greater Tacoma area report that they are using the Internet and that use is projected to grow to 24% by the end of 1997. Despite this growth in demand, the incumbent wire line service providers have stated that their investments in the local infrastructure will either slow without significant rate increases or be halted all together. One could hope that other companies would step forward and create a modern telecommunications system through out our community but the prospects for that occurring anytime soon appear dim. While Competitive Access Providers will eventually enter the local market, their focus is almost exclusively on large business users. Other potential systems are either of low capacity or not scheduled to be fully deployed until the next century.

Could Tacoma City Light create an advanced telecommunications system to meet the telecommunications needs of the communities it serves in addition to its own internal communication needs? And, if Tacoma City Light were to create such a system and operate it in a business like manner, would the system generate sufficient revenues to make the system self sustaining? As this section demonstrates, the answer to both questions is yes.

A viable business would be created by:

1. offering products and services that meet customer needs directly and by providing a pathway through which the private sector can meet additional needs,
2. pricing those products and services competitively, and
3. delivering them over a modern, high-speed, high-reliability telecommunications system, a business is created that is viable using conservative revenue projections.

The following subsections outline how such a business could look by providing a review of the Products and Services, the Technology Architecture, the Operating Plan, the Organization, and the pro forma Financials of such a business.

## PRODUCTS AND SERVICES

Three types of telecommunications services would be offered by Tacoma City Light — wholesale high-speed telephony and data transport, Internet data transport, and cable television. Each of these services meet the growing telecommunications needs in the greater Tacoma area and are explored in the following sections.

---

### High-Speed Telephony and Data Transport

High-speed telephony and data transport on a fiber optic SONET system would be offered by Tacoma City Light on a wholesale basis to the business community. These high-speed digital lines would be offered from point-to-point in standard DS1, DS3, and higher capacity connections, at an estimated cost of less than half the existing comparable high-speed copper lines. The lines would be open on a non-discriminatory basis to local and long distance carriers, local value-added service providers, and local businesses. The availability of these lines would bring choice and price competition to the greater Tacoma business community.

The network of fiber optic cables would be constructed throughout the area Tacoma City Light serves. The system would interconnect with the offices of major telecommunications providers in the region. The diverse routing of cables in a multi-ring architecture would be used to enhance reliability.

### Business Applications

Lines between offices would be used for teleconferencing, data networking, image transfer, or telephones. New leased lines would be quickly provided to customers. Customers would have low-cost access to new telephone service providers. Competition would exist for transport of telephone and data applications. Individual businesses would benefit from competitive prices and prompt service. Redundant fiber optic paths would be utilized to provide the transport service.

**Private Data Networks** Data network applications are likely to be the most common application on the system, meeting the performance and growth expectations driven by business computer use. The system would meet the reliability and security needs of this critical business application. These lines would support private data networks, which could include Intranet and Extranet links. An Intranet link improves the features of network service among buildings within one company; an Extranet link extends the ease of private information exchange among a few businesses.

**Telephone Access** Access to new telephone service providers is likely to be the second most common application. Lines would be extended directly to inter exchange carriers allowing them to competitively reach customers without using the local exchange carrier. Long distance carriers would have the ability to offer local telephone service directly to customers by providing dial-tone and switching service over the fiber SONET system. These interconnections with regional communications companies would provide more choices to customers. Access to alternate central offices, alternate POPs and other issues of reliability that are of importance to businesses who rely heavily on their phone lines would be met by this system's design.

**Value - Added Services** A provider of a value-added service would be able to obtain transport on high-speed lines and provide custom telecommunications applications. For example, a value-added service provider can design, install and configure a business wide area network, composed of several local area networks linked with routers, which convert local area network signals for transmission on the SONET system.

### **High-Speed Transport Service for Local Schools and Public Safety**

The high speed telephony and data transport network would be constructed to meet the transport needs of schools, public safety offices, and libraries, if franchise authorities so desire. These offices could use the transport facilities to substantially improve their internal communications and their services to the community. Also, the needs of the electrical transmission and distribution sections of Tacoma City Light would also be addressed with transport services to all substations.

---

### **Internet Data Transport**

Internet data transport would be offered on the hybrid fiber coax system. Cable modems would be used to provide high-speed Internet access for homes and small businesses, in partnership with Internet service providers. Transport service for cable modems would be provided by Tacoma City Light between customers and Internet service providers.

Customers would use Internet services for entertainment, education, and shopping for other products and services. The delivery of information would be in the form of multimedia text, images, animation, sound and video. Use of this service would reduce reliance on traditional telephone lines for access to the Internet.

### Cable Modems vs. Standard Telephone Lines

Cable modems deliver data up to 1000 times the speed of standard telephone lines. Customers would be able to quickly search and retrieve information such as stock quotes, weather reports, and headline news. Providing high-speed capability removes restrictions of telephone lines on size and complexity of Internet features. Sound, images and better full-motion video can easily be delivered from the Internet on cable modems.

The use of the cable modem frees the telephone line and network for telephone calls. Internet service providers transfer *data packets* which can be individually switched and routed, without the inefficiencies of using switched *circuits*. Increased Internet traffic will eventually force telephone system operators to upgrade their local switched telephone systems in order to maintain its availability for emergency and other telephone use. Cable modems, a new HFC cable plant, and direct transmission to Internet service providers would relieve telephone system operators of this burden. Home computers could be continuously connected to the Internet, performing work without impacting telephone use. Returning the household telephone for traditional use would also preserve the current flat-rate local telephone billing system.

### Cable Modems vs. ISDN

Integrated Services Digital Network (ISDN) was invented to make digital service available in the telephone network to homes. As home services become digital, the quality and variety of services the telephone network can deliver increases. ISDN enables many new telephone services, as well as data speeds of 144 kbps, two to four times the speed of standard telephone modems. As with common telephone lines, ISDN lines are switched circuits, tying-up capacity while the line is in use. ISDN lines have the same inherent impacts that standard telephone lines have on telephone network availability when used for Internet access.

Cable modems provide a data connection directly to an Internet Service Provider, bypassing the telephone network. Cable modems provide approximately 100 times the speed of an ISDN line used for data. Cable modems provide the speeds that should allow new forms of service to prosper on the Internet.

The following graph illustrates the comparable services and costs between a standard telephone line, an ISDN line, and a cable modem.

### **One - Way Cable Systems**

Competing products which deliver high speed data, such as Direct Broadcast Satellite or Cable Data on one-way cable systems, continue to use telephone lines for the return path. Use of such products only exacerbates the already overloaded telephone system.

---

### **Cable Television**

Offering full service cable television directly to local homes would bring price, programming, picture quality, and service-level competition to the greater Tacoma area.

The system that delivers Internet data transport service also provides cable television. The use of fiber optics optimizes system operation and performance. Tacoma City Light would offer a wide range of programming, including local broadcast, news and information, sports, arts and entertainment, movies, family, as well as public access, education, and government (PEG channels).

Initially, digital television would not be offered, since the system would offer a multitude of clean and sharp analog channels. Since the channels would be viewable on a cable-ready television without a set-top box, problems that set-top boxes cause with television features like picture-in-picture and VCR functions would be avoided. An 80 channel lineup of television programs provides significant value to the large majority of customers. The digital television business is not yet mature. The risk of offering digital television right now is great, as the digital set-top boxes are not generally available and are expensive, and most program content is available in forms which are expensive to convert for compressed digital transmission to homes. As digital television on cable systems matures, then simple revisions can be made to offer many digital programs.

## TECHNOLOGY ARCHITECTURE

The following key areas are considered in telecommunications architecture decisions:

- Adaptability to easily serve future needs
- Efficiency in serving telecommunications requirements
- Compatibility with other systems
- Future capacity for growth
- Integration of electronic components
- Maintenance and Operations standards and procedures

### Telecommunications System Design

#### Hybrid Fiber Optic Coaxial (HFC)

The basis of many modern, cost effective telecommunications architectures is the hybrid fiber optic coaxial (HFC) structure carrying many radio frequency (RF) channels. Fiber optic cable is used to carry signals from the communication system facilities to the vicinity of subscriber homes, with final delivery on coaxial cable.

HFC systems are the most economical way of transporting vast amounts of information to homes for the following reasons:

- HFC systems make use of commercially proven electronic transmitters and amplifiers in both the optical and coaxial cable transmission of information.
- HFC systems are compatible with communication devices already present in customer homes.
- HFC systems allow new customers to tap into the same main cable used by other customers on the same street, minimizing the cost of providing each customer service.

#### SONET

Wholesale telephony and data transport services differ from residential services. Businesses often require large volumes of transport, which is mostly two-way and concentrated. The fiber optic cables in the HFC infrastructure can be used to transport business telecommunications traffic independently on dedicated optical fibers in the same cables with optical fibers for two-way cable television and Internet data transport. The key to serving business telecommunications is providing high-speed digital transport based on common transmission and connection standards. SONET is a highly standardized system of providing transmission of digital telephone and data circuits. SONET systems are in broad use

today by local exchange carriers, long distance companies, and competitive access providers.

## System Basics

The headend, distribution hubs, and serving area nodes are the three major categories of communications system facilities. Each of these categories correlates to system equipment and geographic areas served.

### Headend

The headend is the control center where incoming television, radio, and satellite signals are amplified, converted, processed and combined for transmission to customers. In advanced systems, the content from other service providers such as video on demand, telephone, and data are also received and inserted into the HFC system. Program content that is broadcast to all subscribers is inserted into the HFC system at the headend. Program content unique to each hub service area can also be inserted into the HFC system at the headend.

SONET digital transmission can be used to bring the advanced services from other facilities, such as telephone switching centers and Internet access centers to the headend for insertion into the HFC cable system.

### Distribution Hubs

Distribution hubs are necessary to provide an insertion point for subscriber specific or narrowcast program content. Without a hub, fibers to neighborhood nodes would have to be cabled directly from the headend. By using as few fibers as possible to transmit common or "broadcast" channels from the headend to the hub, other fibers can be loaded with narrowcast channels. Most growth would likely take place in narrowcast channels which would determine the assignment of the fibers and new hub equipment.

Hubs are also necessary for high-speed telephone and data transport for businesses. The transported signals from customers premises are concentrated at the hubs onto higher speed SONET transport systems for transmission to service providers.

### Nodes

Nodes are terminals in the HFC communication network where signals are combined or re-transmitted. Nodes are also the transition point from optical fibers to coaxial cable. Coaxial cable is the final distribution link to subscriber homes. From nodes, coaxial cable trunks branch out to distribute signals and trunk amplifiers are used to boost signals as distance increases. Node size is chosen to match the number of

narrowcast channels used by subscribers — node serving areas would be divided into smaller areas as customer demand grows.

Within the node serving area are the power supplies with battery backup, trunk amplifiers, branch amplifiers, service taps and coaxial service drops to subscriber homes. All services to subscribers are provisioned from passive electrical devices (taps) to the coaxial cable. The largest portion of overall system cost is in the outside coaxial plant from the node to the customer.

The diagram labeled “Combined Hybrid Fiberoptic Coax and SONET System” outlines the relationship between headend, distribution hubs, and nodes.

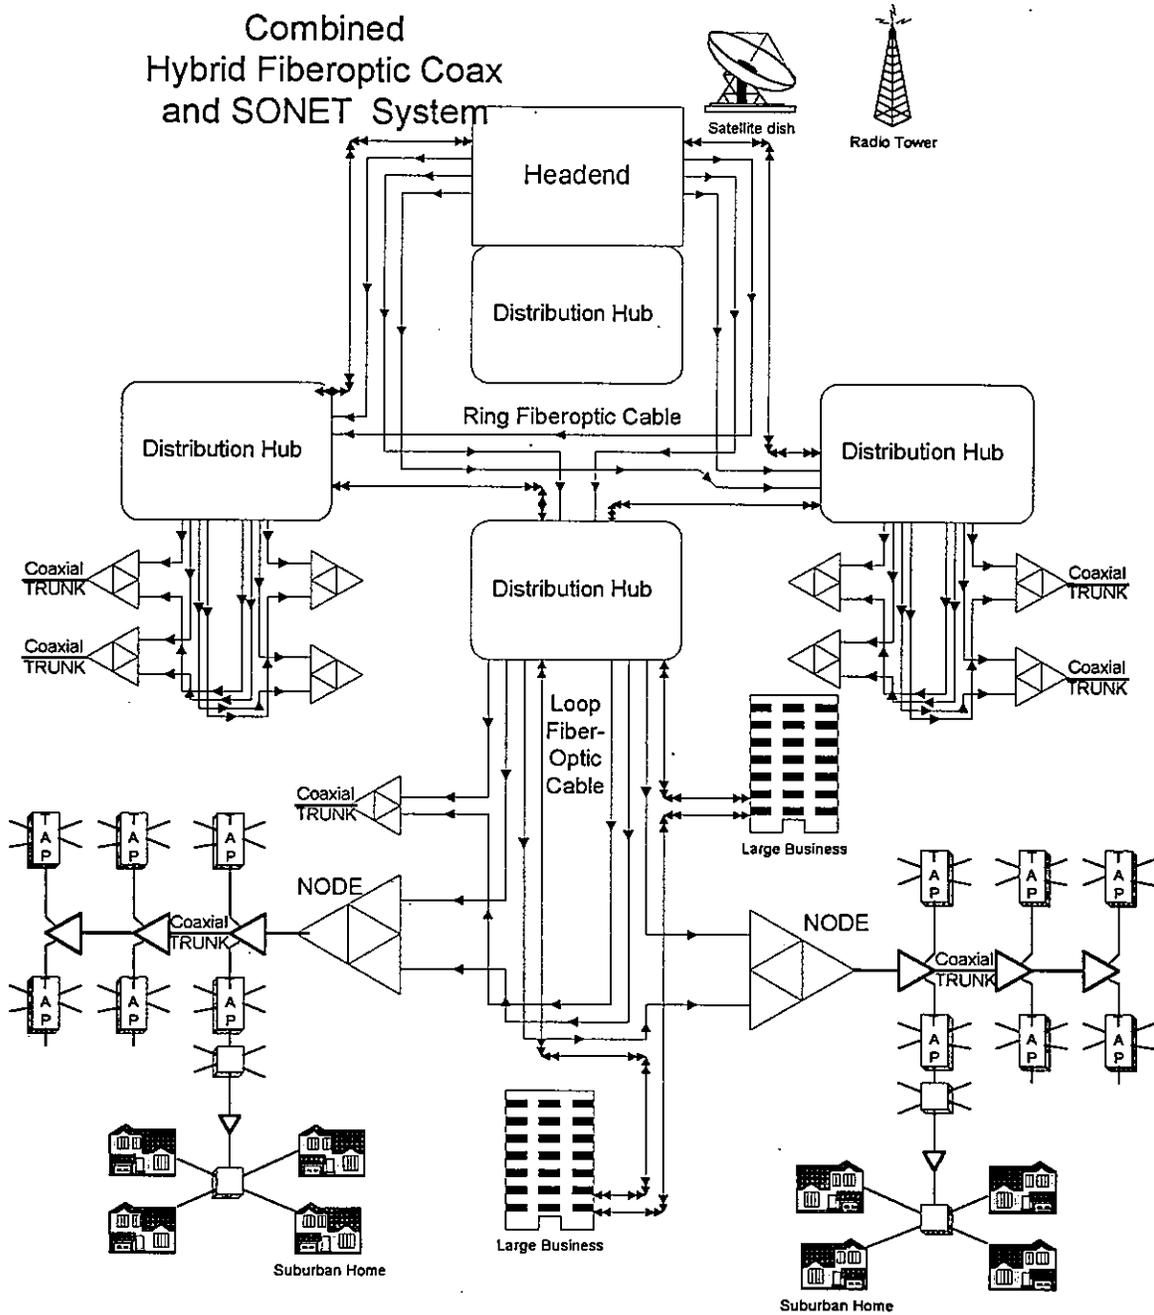

High-speed data and telephone transport for businesses are delivered directly on fiber to the business premises. Cables are shared from the distribution hub, using separate fibers for SONET and for HFC nodes. Nodes are not needed for high-speed data and telephone transport, as the services are carried on fiber optics to the customer. Electronics for the conversion of signals from SONET optical transmission to standard electrical signals are installed for each customer.

### Redundancy

Redundancy ensures that services are not interrupted due to preventative maintenance or component failures. This is particularly important in regard to telephone and data services. Telephone customers have grown accustomed to high reliability, and telephony has earned the distinction of being a “lifeline” service, especially in case of emergency. Redundancy also benefits residential customers of entertainment video. While not as threatened with hardship, loss of video service is annoying. Traditionally, cable television systems have not used redundancy in their services.

Hybrid fiber optic coax (HFC) systems can be constructed with considerable redundancy. The benefits and risks of operating a “bulletproof” telecommunications transmission system must be compared to prevent spending too much on the infrastructure, charging too much for transport on the infrastructure, and to meet the requirements regarding system integrity of each of the services transported.

### Combined Hybrid Fiberoptic Coax and SONET System

## Matching Channels to Service Territory

HFC systems carry radio frequency (RF) signals. All applications are carried within one or more 6 MHz bandwidth RF channels. The allocation of these channels both in frequency assignment and physical coverage area must be managed carefully, because the ability to carry new applications depends on the availability of channels. The capacity of an HFC system to carry unique content to each customer depends on the re-use of frequencies among nodes.

Some channels are identical and are broadcast to all customers, such as basic and enhanced basic cable television. Some channels are broadcast to a smaller geographic area, like the hub serving area. Examples of these channels are public access, education and government (PEG) television channels, or television channels with localized advertising. The remaining channels are those unique to one node, serving 500 to 2,000 customers each.

Each time a channel is assigned to a limited area, the channel frequency assigned can be re-used in other areas. This re-use of frequencies is very important in the conservation of capacity of the HFC system. Advanced digital services are narrowcast. Examples include telephony, cable data networks or Internet access, and video on demand. Advanced services contain two-way information unique for each customer, and must be available on demand.

## The Return Path

New applications for cable television systems are often two-way and therefore use the return communications path. The return path enables billing management, telephone transport, and data network connections. Possible electric utility applications are: remote meter reading, outage notifications, interactive customer communication, and active energy conservation measures.

## A Final System Design

The final system architecture is a tradeoff of technical and economic choices. One architecture is described here, with reasons for recommendation, limitations, and estimated costs. Some alternatives are described, with their benefits, limitations and costs.

Several assumptions were made in order to be able to select a system architecture. First, the system must initially be able to support 50 percent of the cable television subscribers market. Second, the population and residential density in 2010 was the basis for planning the common infrastructure. The initial number of optical nodes is based on 2,000 homes per node, resulting in 82 nodes. Using 1996 residential figures, this results in approximately 1,500 homes per node.

### Headend Program Reception

Six satellite dishes are needed to receive enhanced basic, premium and pay-per-view programs, covering all the satellites serving the west coast of the United States. The headend and satellite dishes work best if co-located at the same facility. The initial recommendation for headend location is Southwest Substation, with alternates at the Tacoma City Light Administrative complex or Cowlitz Substation.

There are ten broadcast television stations, requiring antennas and receiving equipment. This equipment must be located in a prime receiving spot and can be placed in a location remote from the headend facility. Broadcast studios can provide direct feeds to the headend of higher quality than off-air antennas, but unfortunately, most studios are located in Seattle.

Franchise obligations include carrying public access, education and government access (PEG) channels. Content for PEG broadcasts can be delivered to the headend in tape format, or transmitted to the headend on optical fibers from production studios.

Commercial advertising is inserted at the headend. A storage and playback device holds all the commercials to be used in one week, and they are played automatically on queue. Schedules are set and signals are sent within regularly scheduled programs to queue the insertion of commercials.

A major system alternative that could have significant impact on system capacity is the development of digital television. Programming could be delivered as digital channels. Some of the six headend satellite dishes could then be re-used for reception of digital channels, greatly increasing their channel capacity.

Some channels are identical for all customers, such as basic and enhanced basic cable television. Level 1 channels originate at the headend and are broadcast to all hubs, nodes and customers. They will be assigned from 50 to 550 MHz. There are a maximum of 80 channels to allocate to Level 1.

Level 2 channels are targeted to a smaller geographic area, the hub serving area. Each of the five distribution hubs serves an area of 30,000 to 45,000 homes. Examples of Level 2 channels are Public Access, Education and Government (PEG) television channels, or television channels with localized advertising. Each Level 2 channel can re-use the frequency assigned in other hubs. This re-use of frequencies is very important in the conservation of capacity of the HFC system. There are no channels currently allocated to Level 2.

### **Hub Quantity and Locations**

There will be one hub co-located with headend. This headend and hub location is recommended to be Southwest Substation, due to optical performance, service to a major electrical substation, and property availability.

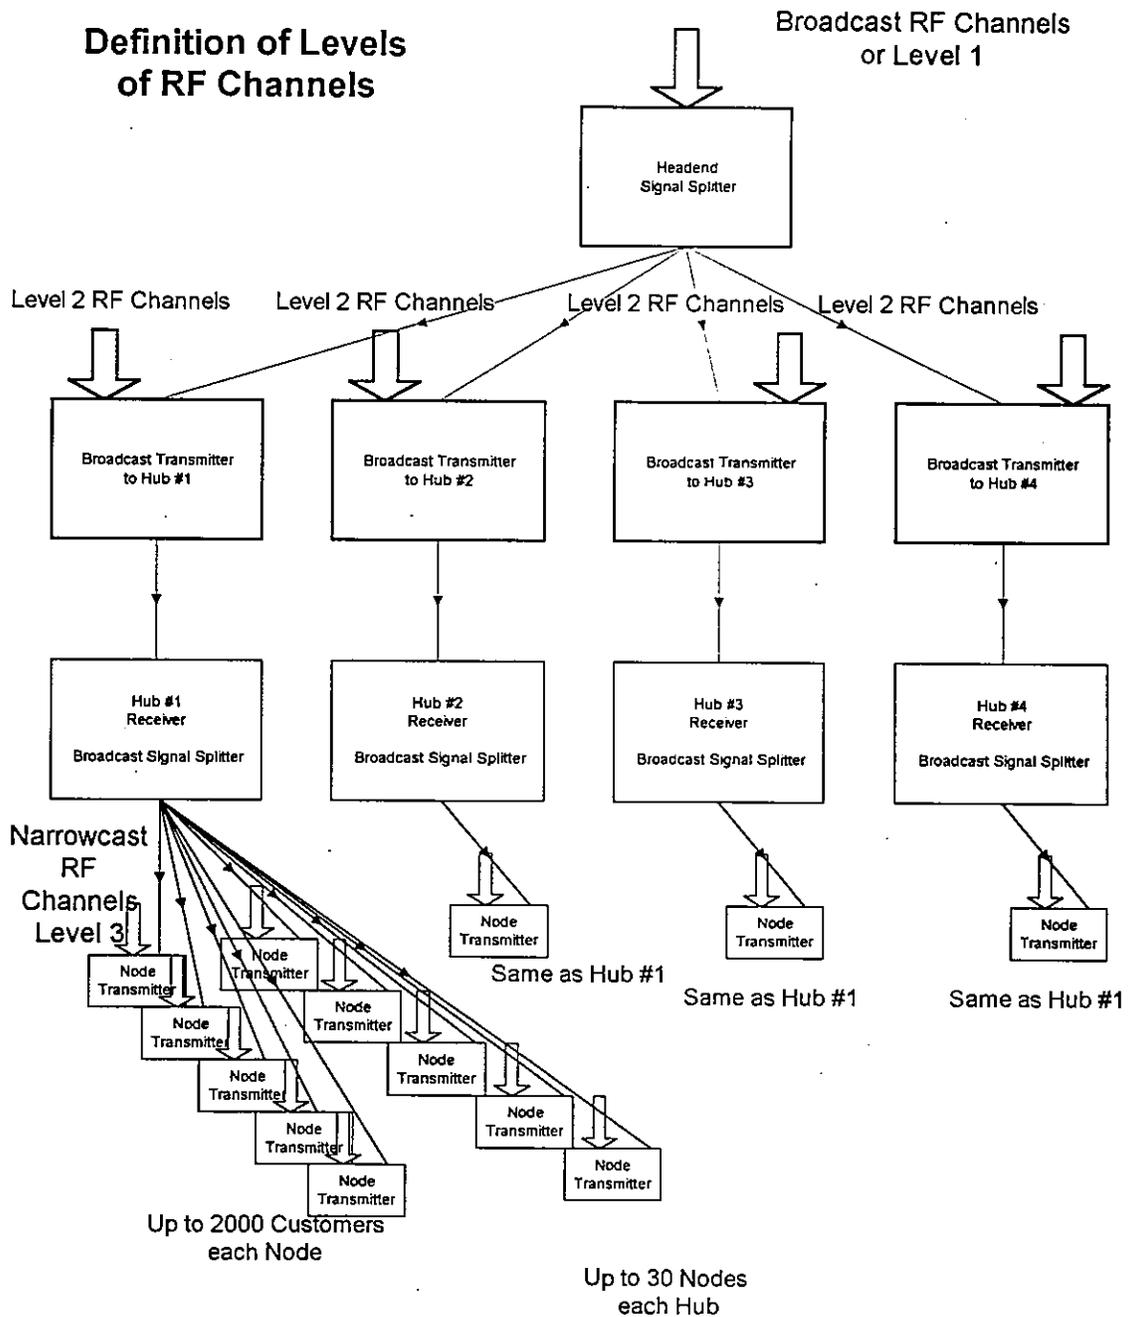

Four remote hubs will each serve within physical boundaries, growing to seven remote hubs if needed. The hubs are initially recommended to be Pearl Substation (with Adams as alternate), Northeast Substation (with Tideflats as alternate), Cowlitz Substation (with Roosevelt as alternate) and Elk Plain Substation. Buildings for hubs must be sized and powered to house future electronics, even if underutilized in the early years of operation.

### **Transmission From Headend to Hubs**

Transmission to distribution hubs will be through optical fibers. Initially concentrating electronics at the headend in order to minimize electronics at the hubs is desirable. Growth in advanced services, such as residential telephony and Internet data transport will eventually increase the electronics at each hub.

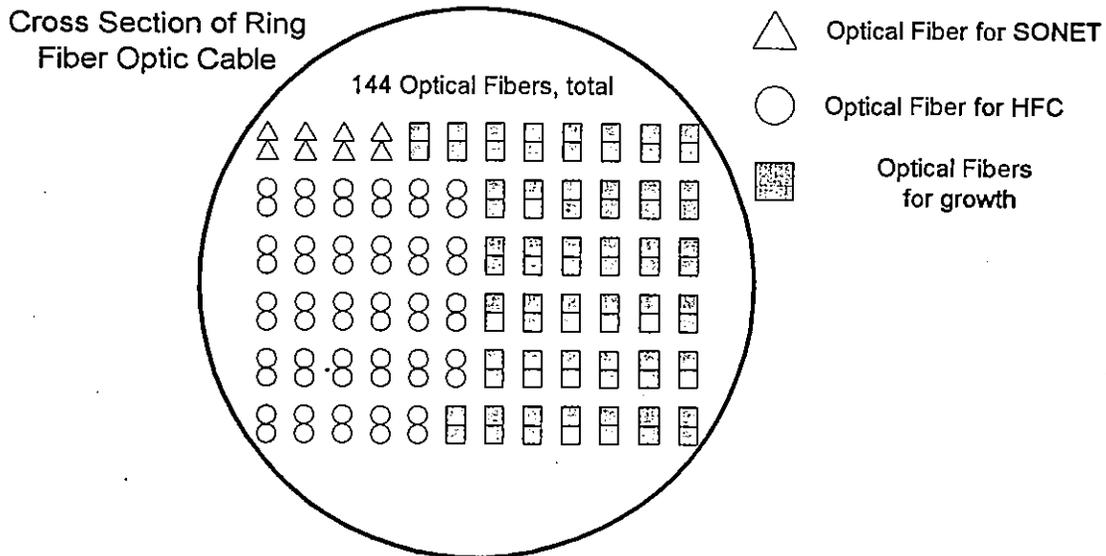

The number of fibers in the ring cable between remote hubs must be large enough to accommodate growth. All optical transmitters chosen for transmission from the headend to the hubs must be of the highest quality (54 dBc carrier to noise ratio) to make up for any signal degradation in the transmission from the hub to node and node to customer.

Transmitters and optical fibers are associated with broadcast and narrowcast of channels. From the headend to the hubs, transmission of RF channels takes place on optical transmitters and optical fibers. Redundant optical transmitters would be used and redundant optical fibers would be routed in diverse paths ensuring continuation of service in the event of fiber cable cuts. See diagram labeled "Ring and Loop Optical Cable" for an example of route redundancy.

## Hub Fiber Optic Ring Cable Plan

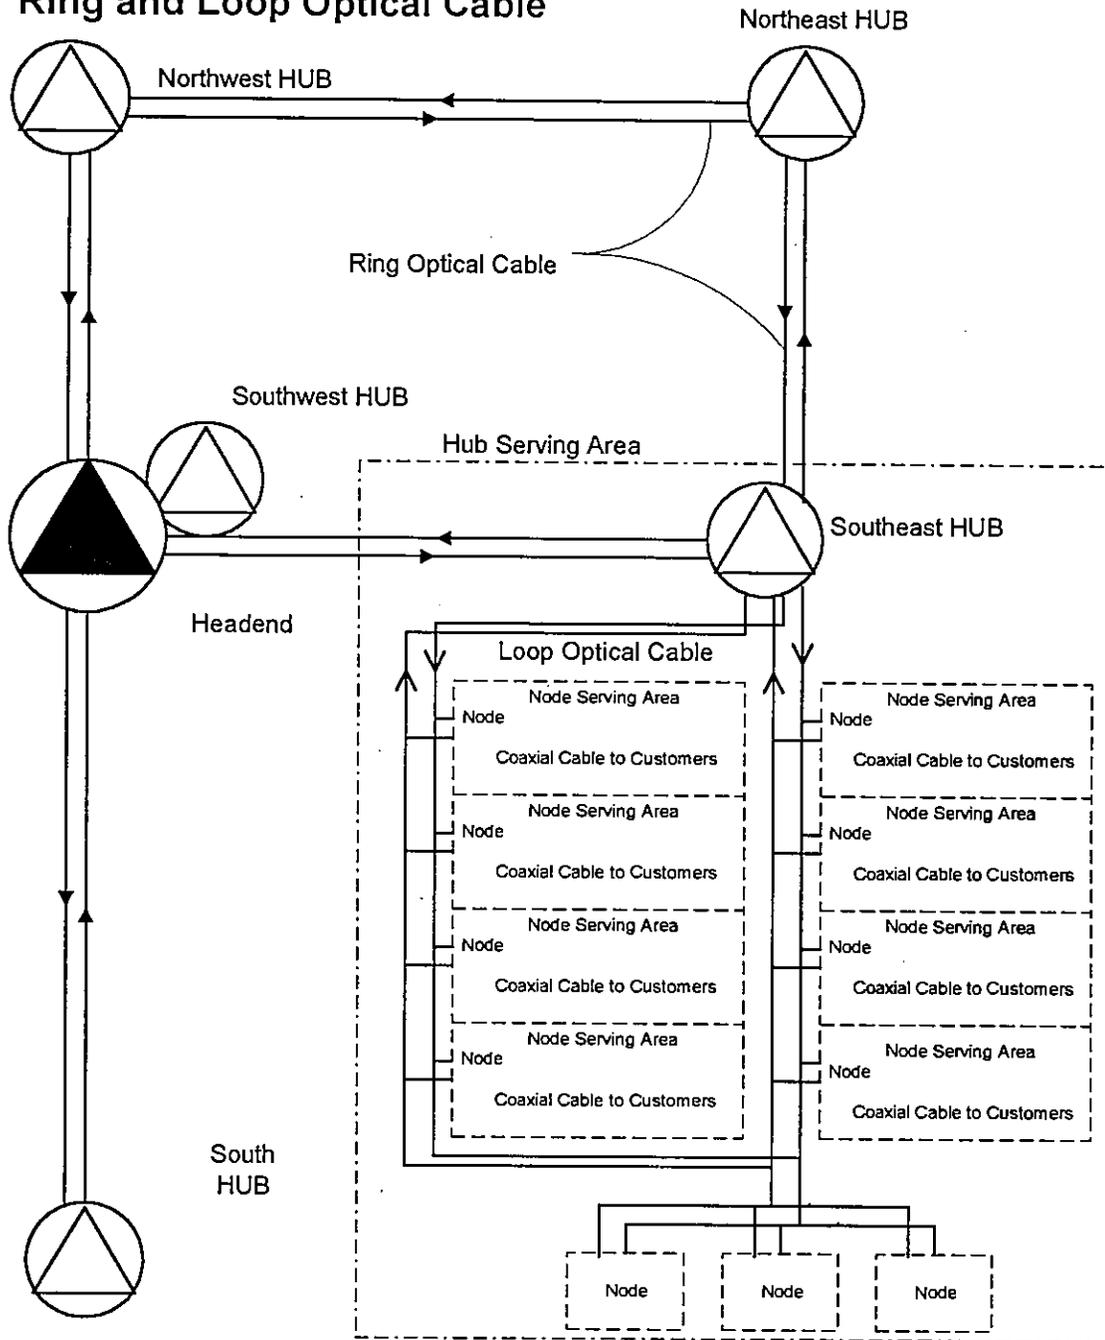

In summary, there are ten optical fibers needed in the ring for Level 1 and Level 2 RF channels, eight for SONET, 28 for Level 3 RF channels, and 20 for return RF channels. The minimum quantity to operate the initial system is 66. Tacoma City Light would build a ring cable plant supporting transmission among hubs for a lifetime of 30 years, which is beyond the traffic predictions trusted today. Optical cables are built in loose tubes of twelve fibers each, with twelve tubes, therefore, the fiber count to be installed would be 144 fibers.

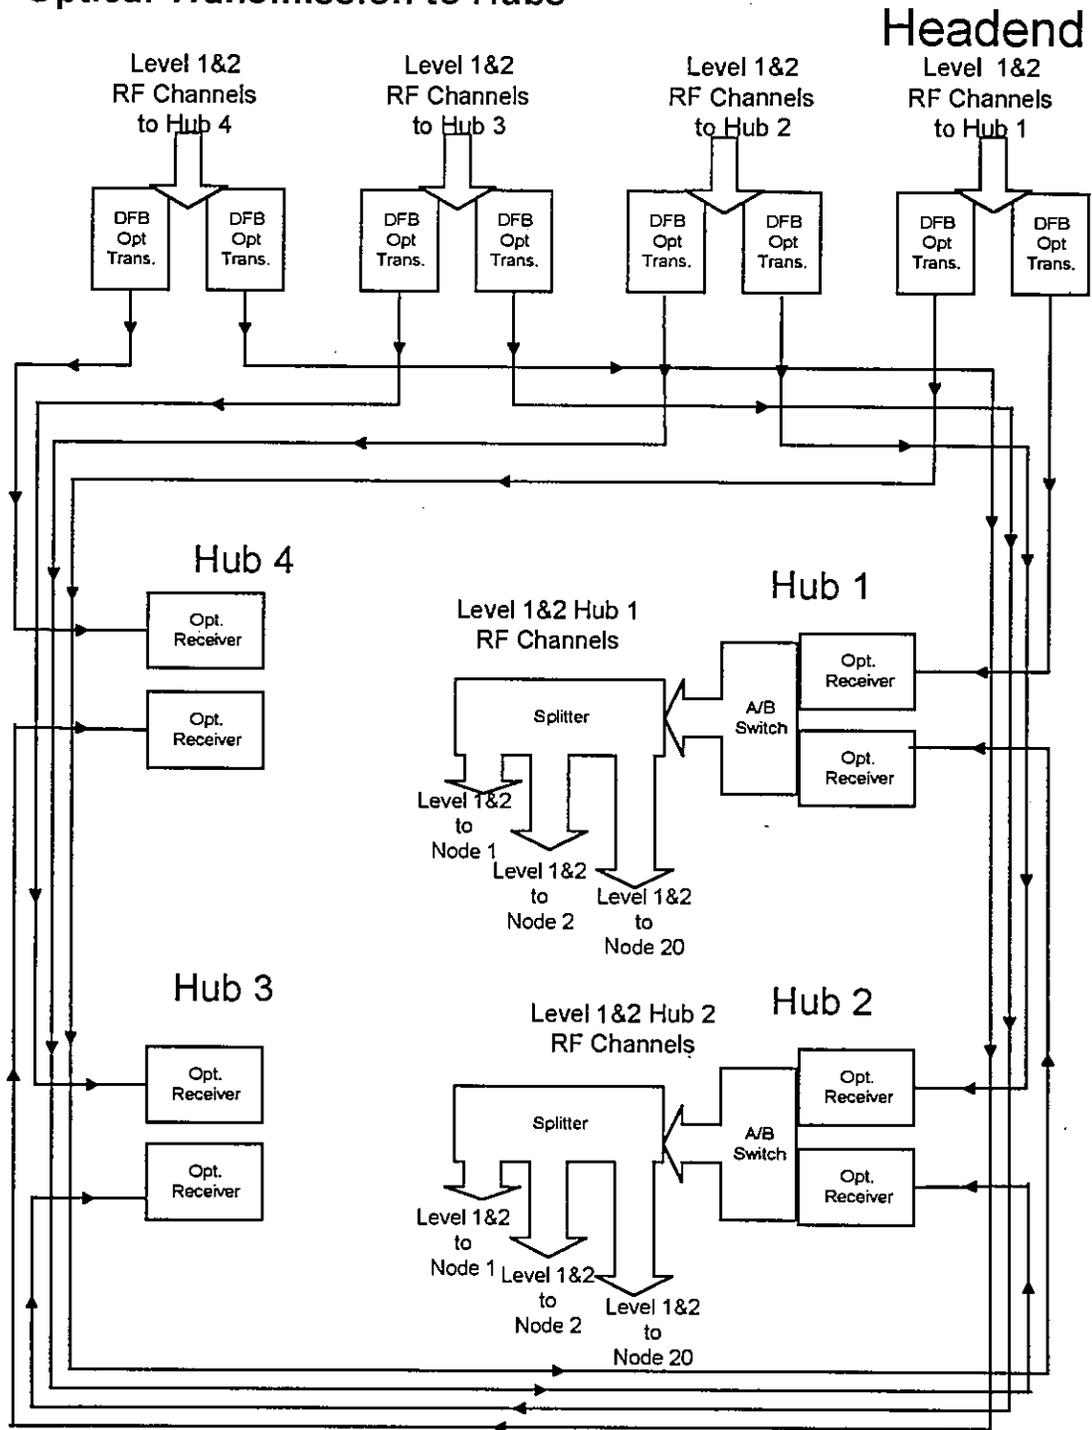

The optical fibers in the ring would support the following design:

- All Level 1 (those reaching all customers), Level 2 (those reaching all customers in a hub only), and Level 3 (those reaching individual nodes only) RF channel modulators are concentrated at the headend.
- Level 1 and Level 2 RF channels can be transported redundantly to each of the four initial hubs using four fibers in the ring and eight each Distributed Feedback lasers at the headend.
- The minimum ring optical fibers reserved to carry Level 1 and Level 2 RF channels to four initial and seven maximum remote hubs is seven fibers. See diagram labeled "Broadcast Optical Transmission to Hubs."

# Ring and Loop Optical Cable

### Broadcast Optical Transmission to Hubs

Level 3 channels are those unique to one node, serving 500 to 2,000 customers each. Level 3 is commonly referred to as narrowcast. Advanced digital services such as telephony, cable data, Internet access, and video-on-demand are assigned to Level 3. These advanced services use RF channels to serve the customers in an area of 500 to 2,000 homes. The channels assigned to Level 3 in one node can be re-assigned in all other nodes. The capacity of an HFC system to carry unique content to each customer depends on the re-use of frequencies among nodes.

Even with re-use of frequencies, HFC systems cannot meet all applications. Business communication systems are concentrated geographically and are high-volume. Such systems cannot share coaxial cable with residences. One solution is to assign extra optical fibers in the cable plant exclusively to business data and telephony transport, and use digital SONET transmission standards.

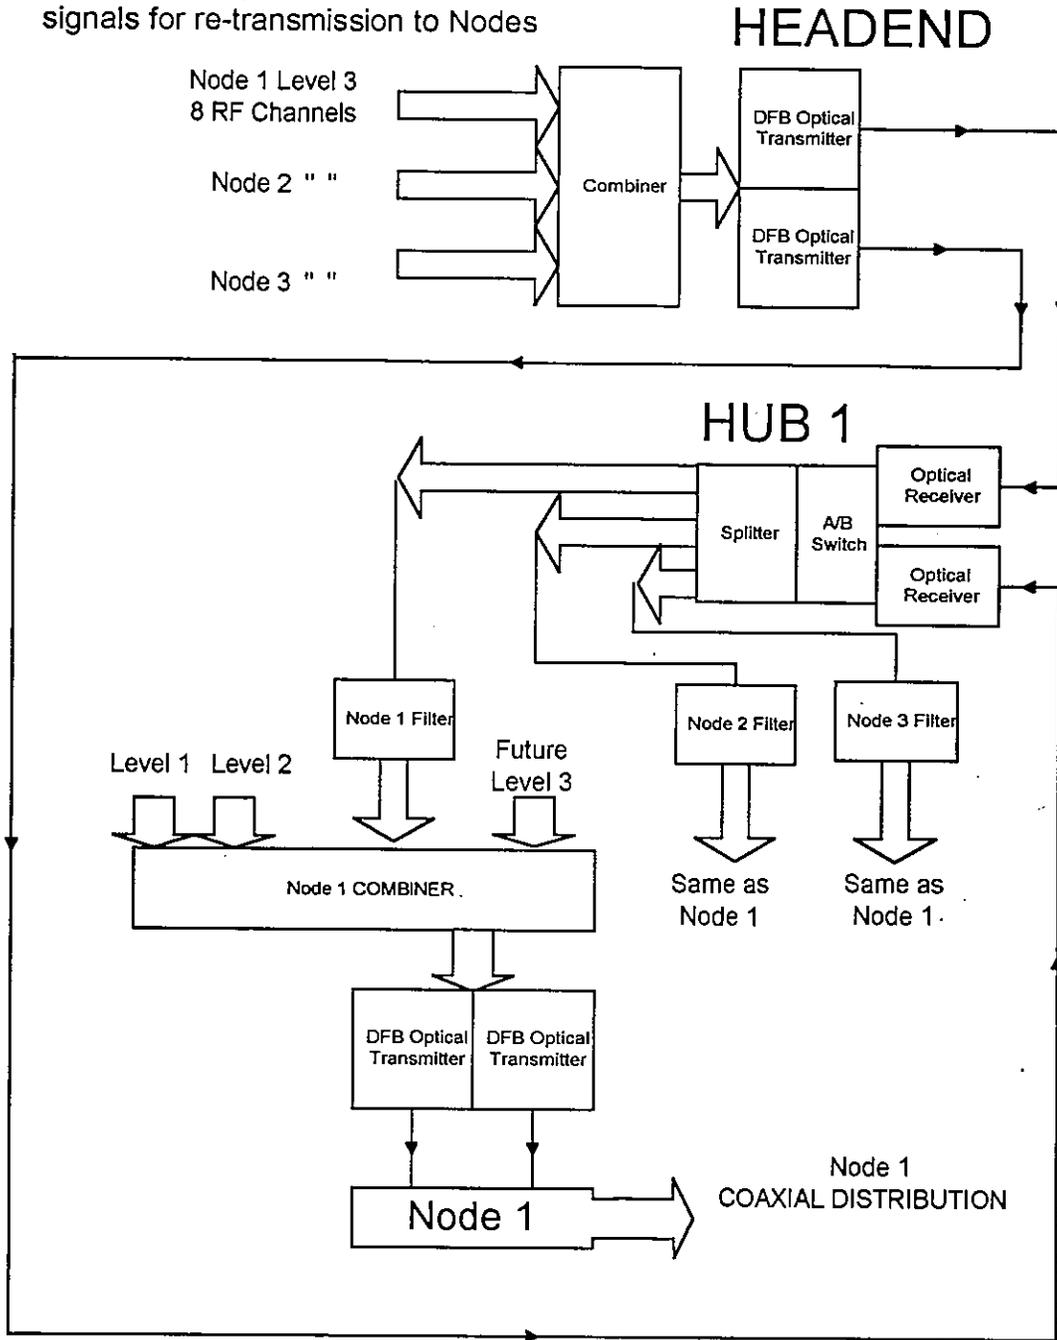

The maximum HFC allocation is for 34 narrowcast Level 3 RF channels to each node. They will be assigned from 550 to 754 MHz. The initial allocation is eight RF channels to Level 3.

- To minimize electronics at the hubs the Level 3 RF channels can originate at the headend. This significantly increases the optical fibers in the ring and optical transmitters/receivers between the hubs. Maintenance and diagnostics of the electronics and transmission system is simplified, however the cost of installation and restoration of fiber optical cable in the ring increases. With a ring of 35 miles circumference and optical fiber expense of \$500 per mile, extra fiber costs \$17,500 each.
- To establish the optimum fiber count, it is assumed that, at start-up, 8 each Level 3 RF channels are transmitted from the headend to the HUB for each node.
- RF channels for multiple nodes can be combined at the headend, transmitted on one optical fiber, and separated at the hub. See the diagram labeled "Narrowcast Optical Transmission to Hubs." The direct savings are \$7,500 for each transmitter and \$17,500 for each fiber, for a total savings of \$25,000. A balancing expense of \$3,000 is for filters to separate the signals, for a net savings of \$22,000 for each fiber saved.

Using this approach, Level 3 RF channels can be transmitted to the hubs using 28 fibers added to the ring.

## Narrowcast Optical Transmission to the Hubs,

Also, combining of broadcast and narrowcast signals for re-transmission to Nodes

Return optical fibers complete the two-way path for services like telephone, data, near video-on-demand, video-on-demand, and utility applications. Each node transmits to the hub on six RF return channels. These can be frequency block converted at least five to one at the hub for retransmission to the headend. Return Level 3 and Level 2 information can be transported redundantly on 20 optical fibers in the ring.

### Limitations

This option cannot effectively carry the full capacity of Level 3 traffic of 34 RF channels each to more than 320 nodes of 500 customers each. It is an economical method of entering into the business, but cannot grow to meet full utilization of HFC capabilities.

Alternative approaches to Level 3 transmission expected to be available to meet growth in advanced services are to use block frequency conversion, optical wavelength division multiplexing, or digital transmission.

SONET will transport digital information for business telephone and data traffic to the hubs efficiently. The final delivery to businesses will share the same cable but remain on separate optical fibers from those used for residential services. Two optical fibers are needed in the ring for each SONET system. Once two or three systems are in operation, if a fourth is needed, all four systems can be combined to operate on a single optical fiber pair. A minimum of four optical pairs, or eight optical fibers are needed for high-speed SONET traffic.

### Optional System Architectures

- Dedicating optical fibers for use in transmitting Level 3 signals from the headend for each node will result in 82 optical fibers used in the ring for Level 3. The direct cost is \$1.4M to add these fibers and optical transmitters. As the system changes from 2,000 homes passed per node to 500 homes passed, the optical fibers needed would grow by four to one, to over 320 fibers from hubs to the headend.
- Additional Level 3 RF channels can be combined onto each fiber and block frequency conversion can re-position each channel to correctly place it in the channel line-up. This adds electronics at the hub and the quality of frequency conversion is not high. This option is not yet priced, but does not meet criteria for simple hub electronics and known high quality.
- Wavelength Division Multiplexing places several light signals on the same optical fiber. While this is applied today for digital transmission networks of high-speed data and telephone, the optical sources for direct application to HFC AM lightwave transmission are not yet available.

- A final Level 3 transmission alternative is to use digital transmission such as SONET to the hubs, and move all Level 3 RF channel modulators to the hubs. This takes advantage of the point that the most Level 3 RF channels carry digital information. Modern high-speed digital transmission schemes can move the data efficiently to and from the hubs. SONET carries standard digital traffic in the same formats businesses predominantly use today. Telephone and data service provider equipment would be installed at the hub, converting the digital traffic from the SONET formats to the cable television format. To allow final combination with Level 2 and Level 1 RF channels at the hubs requires RF channel modulators. This strategy distributes the electronics from the headend to the hubs and does not serve digital television signals well. This approach could be necessary to accommodate growth as nodes are split four to one to reach 500 homes per node, and as Level 3 RF channels increase beyond eight per node.
- Remote hubs could be located following substation service area boundaries. The initial selection of these hubs could be the distribution substations of Union, Adams, Pearl, University, Bridgeport, Custer, Clement, Roosevelt, Polk, Portland, and Tideflats. The site of the headend could be the Administration complex. The beneficial impact is to reduce the branch optical cable length and expense. However, it complicates delivery of Level 2 programming when the hub service area boundaries are not close to the political, school district, library, or city boundaries.

---

### Node Cable Plan

Each node is planned to require four optical fibers each. Two fibers downstream and two fibers upstream provide redundancy for television, telephone and data services. The number of nodes would grow from 82 to more than 320 as the nodes are split from 2,000 homes per node into four each, 500 homes per node. Node optical cables are planned in loops to allow redundant paths to hubs. To allow digital data and telephone traffic to be transported independently from the hub on SONET branches to businesses, schools, libraries or substations requires many extra fibers.

From hub to node, redundancy is expensive due to the quantities of optical transmitters, fibers and receivers. Whether the predominant failure mode is electronic failure or optical cable cut has not been resolved. Either type will take significant numbers of customers from service and require emergency restoration.

The redundant optical fibers to the nodes, as well as reserves for growth and business communications services, must be planned for and installed in the initial plan — costs associated with adding redundant fibers later are extremely high.

Future services to be offered on HFC systems are telephony and Internet transport services. Data and Internet residential applications have become integral especially to home-based businesses. The economic impact of service interruptions to home-based and other businesses will grow as the data applications on the HFC systems grow.

Finally, the HFC system will carry several applications simultaneously. The need for reliability is compounded when thousands of customers are receiving all of their telecommunications services on one common system.

Given the importance of redundancy, redundant fiber paths to nodes and fibers for growth have been included in the preliminary system design and supporting financials.

---

### **Business Telecommunications**

The telephony and data services typically provided to large businesses differ from residential services. Business traffic predominantly travels on high-speed digital lines, the most common of which are T-1 circuits. T-1 circuits carry 1.5 megabits per second (1.5 Mbps) two-way, symmetrically. They are used for efficient transport of business telephone traffic and corporate data traffic. Some large corporate offices use *many* T-1 circuits for telephone access to the Public Switched Telephone Network (PSTN), or for point-to-point data transport.

The fiber optic cables in the HFC infrastructure can be used to carry business telecommunications traffic independently, with the business traffic on dedicated optical fibers in the same cables with optical fibers for two-way residential services. Optical fibers in the ring between hubs can provide high-speed transport of digital business traffic to the telephone and data switching centers found in the greater Tacoma area, such as national or regional Internet access providers, the long distance carriers, and the local exchange carriers. Optical fibers in the same branch cables from the hubs to the nodes can be extended to businesses. Laying the branch cable out in rings enhances the reliability of the SONET system through the use of redundant optical fibers.

The key to serving business telecommunications is providing high-speed digital transport based on common transmission and connection standards, and doing so in a reliable and efficient manner. SONET is a highly standardized system for providing transport of digital telephone and data circuits. Many manufacturers provide compatible SONET electronics in high volumes, which may be upgraded in speed and capacity. The majority of long distance telecommunications transmission capacity today is provided on SONET systems. SONET multiplexing shelves would be placed in the hubs and at end-user premises. Small SONET shelves at the customer site deliver standardized high-speed digital lines which can be connected to their digital telephone and data network systems.

---

### **Planned Changes in System Operation**

Changes are to be expected in system operation during the first ten to fifteen years of operation. The changes would be driven by marketing success, penetration of services, new services added, and population growth and may include the following:

- Migrate Level 3 telephony and data RF channels to SONET transmission and hub video modulation.
  - Migrate to 500 home nodes as needed.
  - Offer PCS carriage using strand-mounted transmitters and receivers.
  - Install SONET electronics and optical cables to business as needed
  - Build additional hubs as optical cables to nodes become filled, or as expansion into neighboring communities is requested by franchise authorities.
- 

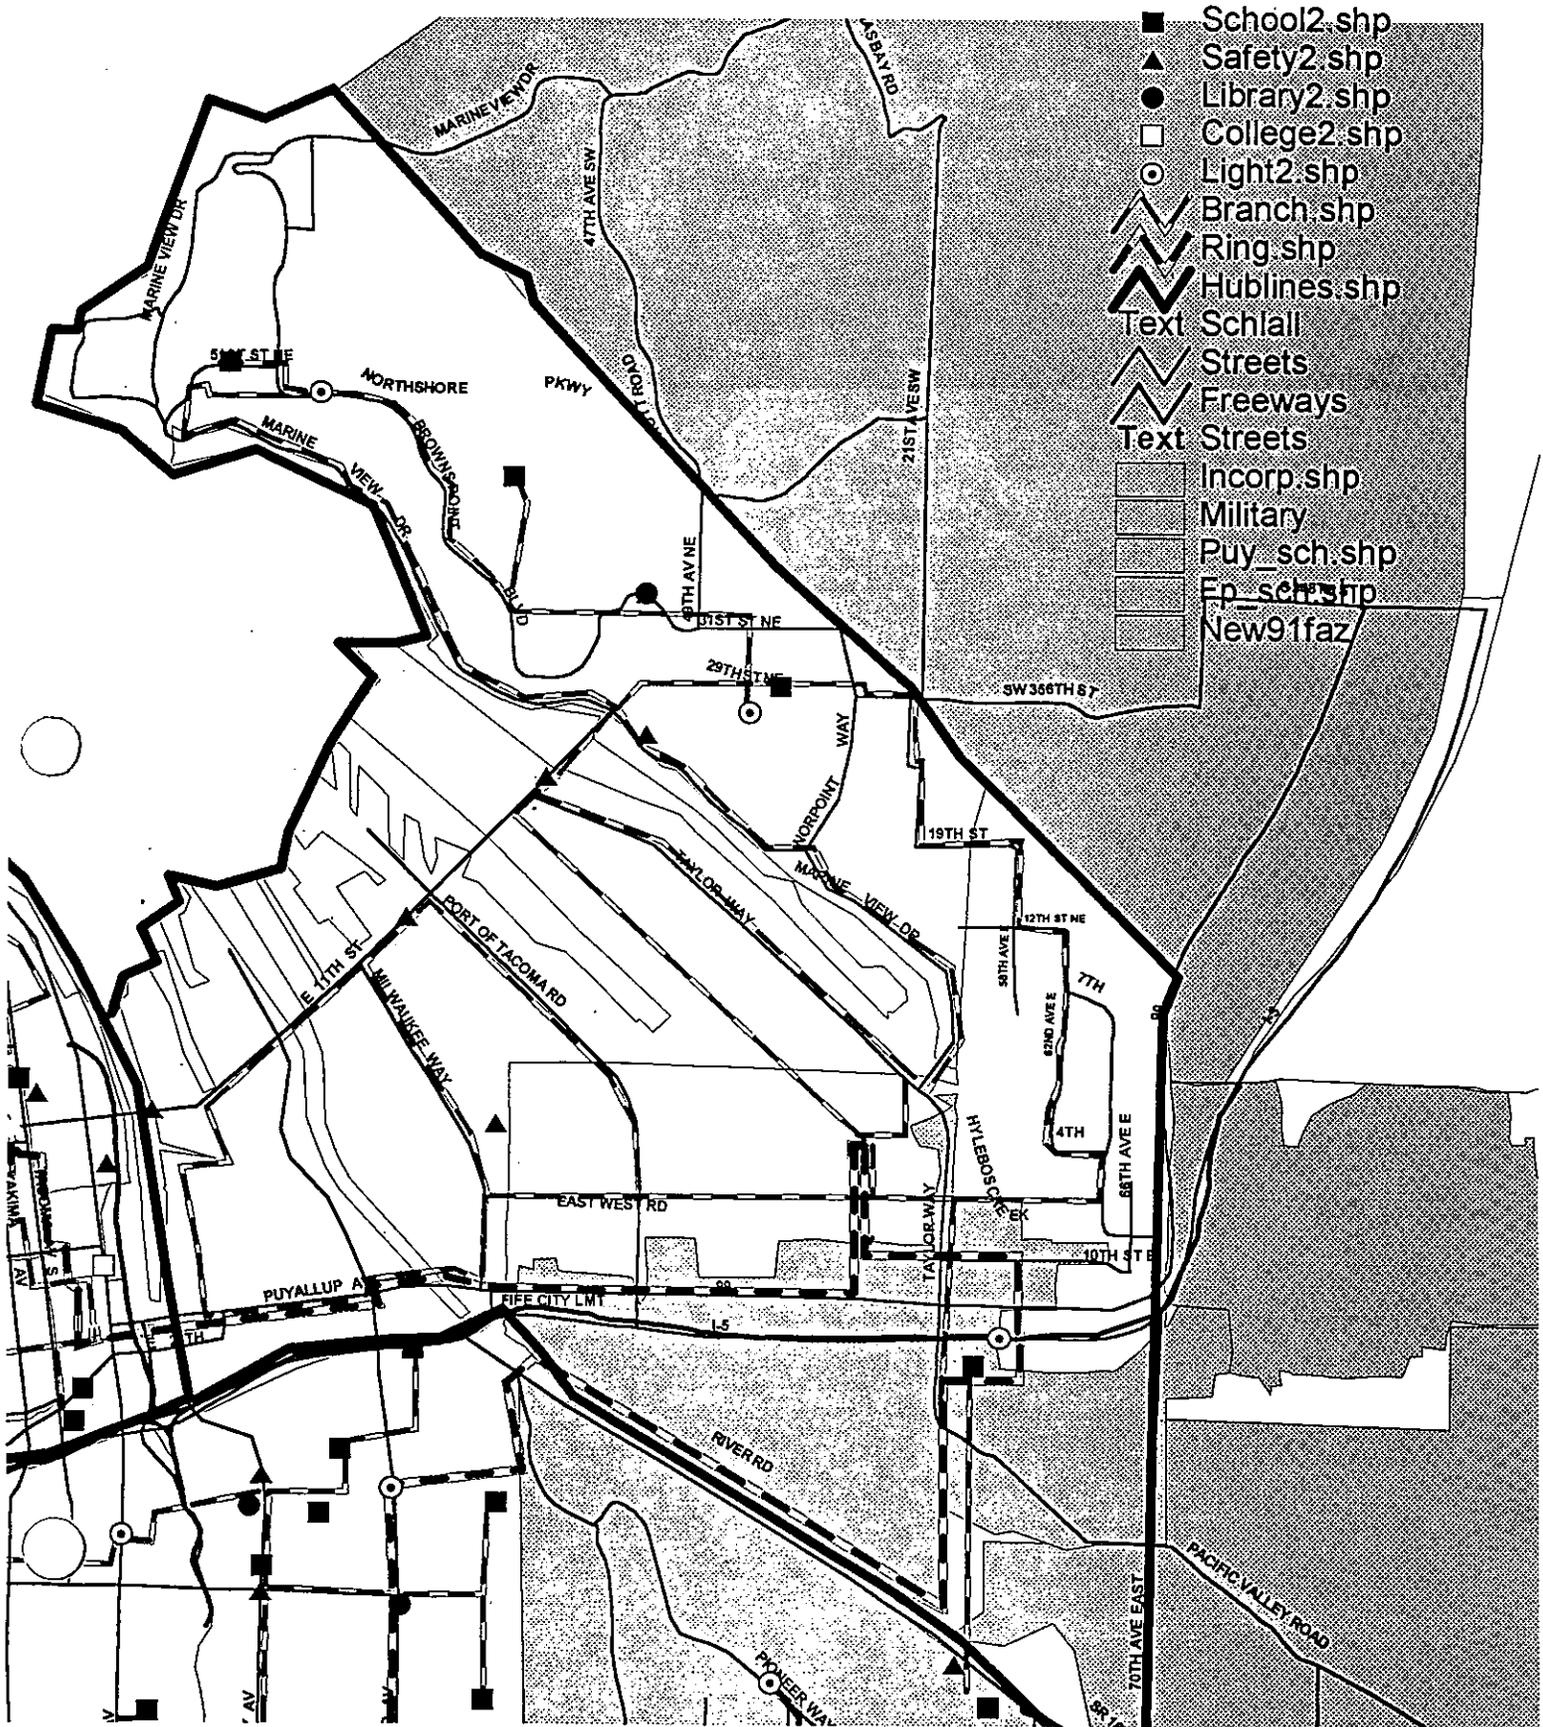

The following maps provide an overview of the fiber optic design of the proposed Hybrid Fiber Coax plant. These maps are divided to display the service areas of four hubs.

## Hybrid Fiber Coax vs. Fiber to the Home (FTTH)

There are expectations that some day communications services will be delivered to the home on a fiber optic pair, or fiber to the home (FTTH.)

FTTH is a wider-bandwidth duplication of the local exchange carrier's existing infrastructure, which is twisted-pair copper wire dedicated from the central office to each home. It has proven to be very costly to maintain and operate dedicated paths to each home.

Delivery of services via coaxial cable is relatively inexpensive for several reasons:

- Costs are shared when many customers are served by common coaxial cables.
- Coaxial cable capacity is very high, allowing service to several customers over the short distance from a single node.
- Physical connections are simple, using standard electrician's tools, hardware, and methods.
- Connections within the home are familiar to most customers who have purchased installation of cable television service.
- Radio frequency amplifiers are common designs, perfected over 40 years of radio and television transmission experience.
- Inexpensive, simple radio-type return transmitters will be used verses relatively expensive and sensitive optical transmitters.
- Intelligent devices are moving into the customer homes, such as MPEG2 digital television compression, cable modems, and customer-premise network interface units (NIU), which allows higher efficiency of the available RF bandwidth in the coaxial cable plant.

Communications technology applies fiber optics where appropriate, such as long cable runs in electrically noisy environments. Optimum communications design today uses a mix of fiber optic and coaxial cables.

---

## Interdiction

Interdiction is commonly known as scrambling or blocking, where a specific television signal is rendered unusable. There are two common, current forms of interdicting specific services at the home; traps or filters, and analog set-top boxes.

### Market Penetration Questions:

Will customers have a choice between digital and analog premium channels? Will digital television be marketed as providing more choice, as well as a high quality version of analog programs, and co-exist with the analog equivalents? Or, if any subscriber wants any premium channel, will they be carried only by the digital video provider?

### Conclusion:

Given that digital television is rapidly maturing, install traps and filters initially, and migrate to digital television for premium tiers when feasible. (See Implications of Digital Television, below.)

---

### The Return Path

New applications for cable television systems are often two-way, and use the return communications path. The return path enables system monitoring, billing management, telephone transport, and data network connections.

Operating the return path on coaxial cable is a great challenge. Noise can penetrate the system at every customer and tap, it is amplified and combined along the return path, and could mask the actual signals desired. The term used to summarize the problem is "ingress." The return path funnels all returning signals to the node. One noise source, whether a babbling transmitter in a home or a failing coaxial amplifier, can interfere with many customers.

In the 5 to 42 MHz return frequency range, the ingress is higher from 5 to 15 MHz than above, because of noise from electric appliances, motor controls and amateur radio operators. The techniques to minimize ingress are simple and effective, but must be performed throughout the coaxial system. The best materials must be used and installed properly to minimize ingress. The skill of construction technicians must be high to install the cable and tune the amplifiers properly. Each outlet must be filtered to eliminate unwanted return path noise. In-home filtering techniques cannot be expected to be performed by the customer. The cable television technician can install filters to block unwanted return path noise outside the home, either at the pole mounted "tap" or the "demarcation" where the signal splits to each of the outlets.

---

### **Implications of Digital Television for HFC Business**

All of the subscribers to basic cable television programs would be served with standard analog channels. Analog delivery of expanded basic and premium channels will require some form of interdiction, or scrambling. This business is mature and the electronic devices are standardized.

Compressed digital television technology allows a much higher utilization of the cable television system. A single analog television channel can be re-used for ten or more compressed digital television programs, with the same or better picture quality. The programs are digitized at the source, and compressed for transmission. The HFC system transports the signals as if they were a standard television signal. The programs are not decompressed and converted from digital back to analog until the viewer selects the program, maintaining high quality throughout the transmission media. The compression technique is standardized, allowing the decompression capability to be placed into many electronic devices.

Near video-on demand and true video-on-demand will offer many choices to customers and will be a valuable service.

The digital set-top is a computerized electronic device. It is addressable, in order to receive a unique setup from a centralized controller. It allows the customer to change what they want to pay for, without expensive visits by cable television technicians.

### **Other Applications of Digital Television Transmission**

Amplitude Modulated (AM) lightwave transmission on fiber optics has performance limits, where the quality of signal is difficult to maintain, especially over long distances combined with wide bandwidths. In particular, when AM lightwave transmission is cascaded, one transmitter and receiver after another, then higher cost laser optical transmitters are used to maintain performance quality of each RF channel within acceptable limits. Since the design for this system does not require long cascades, this is the recommended method for the Tacoma City Light system.

Digital lightwave fiber optic transmission products were considered. At the headend, the RF channels can be converted into digital form and transmitted to the hubs, with or without compression. The transmission via digital lightwave is very high quality, and could be applied for transmission from the headend to the distribution hubs to achieve performance goals. Simplicity and flexibility is sacrificed to gain this quality, however.

These digital lightwave systems for television are typically expensive. The competing digital systems are based on SONET, Fibre Channel, or are proprietary. Only 16 to 32 channels of video can be carried on one digital transmission system, requiring more electronics to carry the same signal as AM lightwave. Only single vendor systems are available for digital transport, reducing competition for upgrades and component replacements (unless SONET broadcast transmission is used). Video modulation of broadcast channels is duplicated in each distribution hub, instead of concentrated at the headend.

---

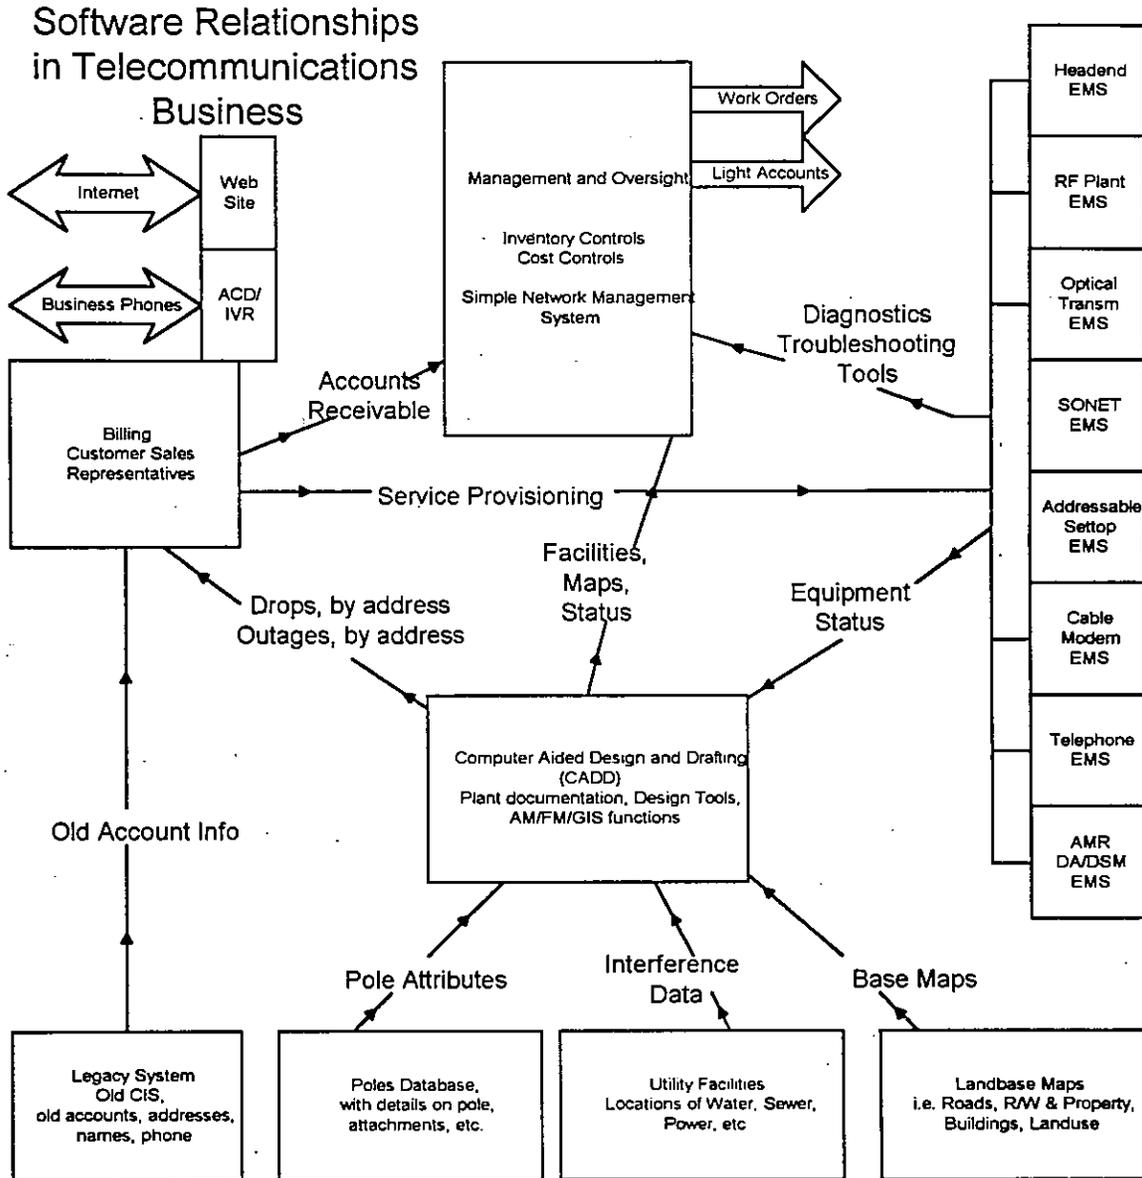

### Network Management

With the construction of a new system, the opportunity will never be better to install high quality tools, diagnostics, equipment and software. Computers and network control systems are necessary to meet these goals. The diagram "Software Relationships in Telecommunications Business" shows their interactivity.

Cable television has not required the sophisticated system monitoring and customer accounting systems that have been necessary in the electrical or telephone business. Telephone companies use sophisticated monitoring and automation systems in providing basic telephone service, and in their operation and maintenance functions. As cable televisions systems begin to deliver advanced telecommunications services, the necessity grows for system monitoring, automation, and sophisticated customer-supporting software systems.

Fortunately, other industries have forced the development of many standardized tools that can be directly applied to a new business operation and infrastructure. Element Management Systems are computers that gather data from a specific group of field devices, and provide information and controls to the operating staff. Several Element Management Systems computers are diagrammed on the right of the following sketch. Higher level software and computers can use this information for their own purposes, and pass commands to field devices through the Element Management System. The higher level software can perform mapping, assist customer sales representatives, or generate operational reports using real and accurate information from the field devices. All of these are based on "Open Systems" which allow them to exchange information through relational databases and standard physical interconnections.

Tacoma City Light has developed a "data model" that defines the relationships among many data files, necessary to create data warehouses. The existence of accurate computerized maps and pole locations will be helpful in the design and construction of all the outside facilities. The new Automated Mapping/Facilities Management/Geographic Information System (AM/FM/GIS) will provide many more tools for efficient operation and management of a telecommunications system.

## OPERATING PLAN

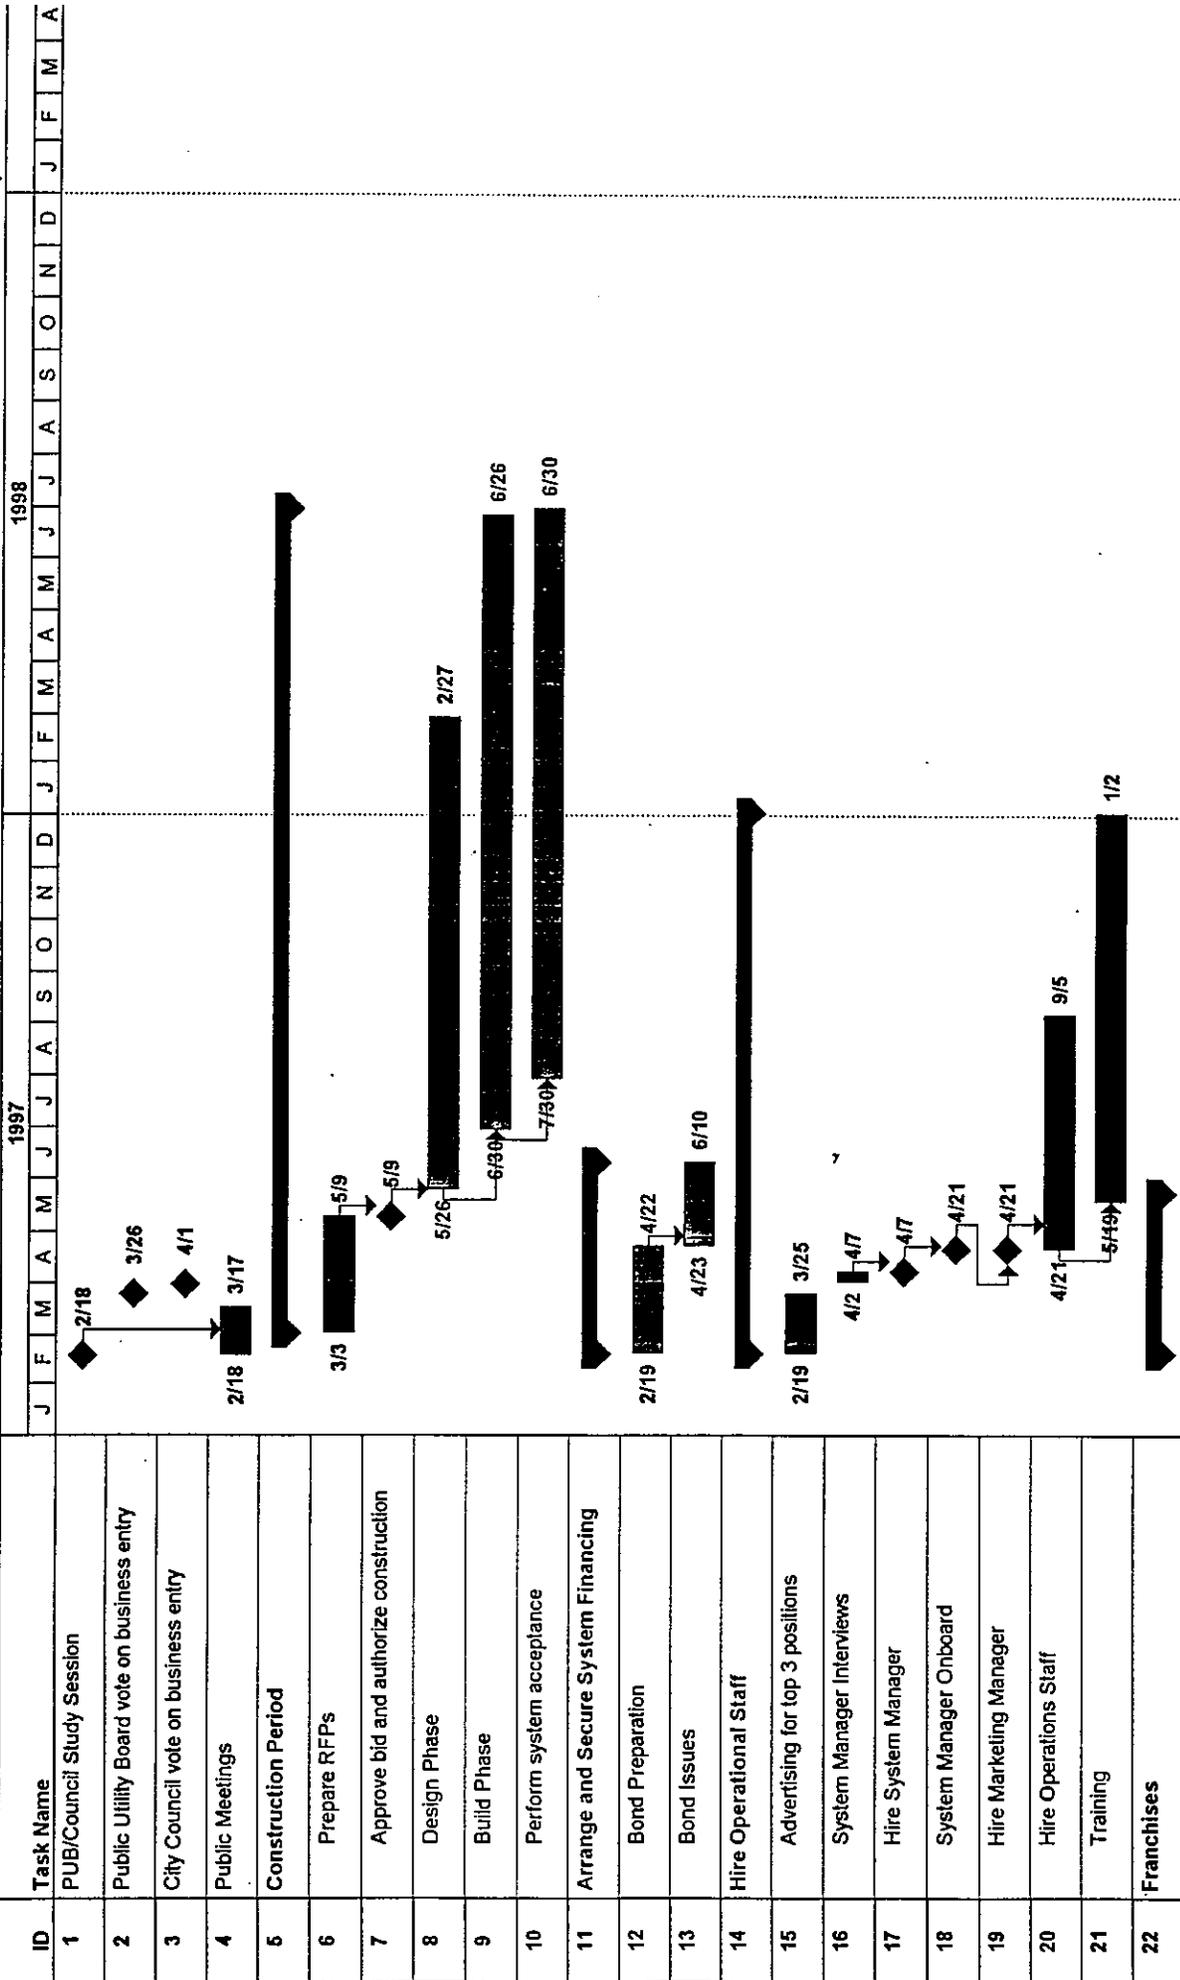

In the provision of telecommunications services, Tacoma City Light would interact with many parties to ensure the cost effective delivery of advanced telecommunication services to the local business and residential market. Some parties will be familiar, such as the electric system operating sections of Tacoma City Light. Others will be new to Tacoma City Light but mature in their own markets, such as the video production and telephone industries. Finally, there will be interaction with companies that are relatively new and growing such as Internet service providers and competitive access providers.

Diagrams have been developed to represent the possible relationships and responsibilities between the parties. There are diagrams representing the businesses of wholesale high-speed digital transport, Internet data transport, and the cable television businesses.

There are many milestones to pass before there is an operational system, before the first customer can be satisfied. Only then does the daily operational plan takes effect to sustain and grow the business.

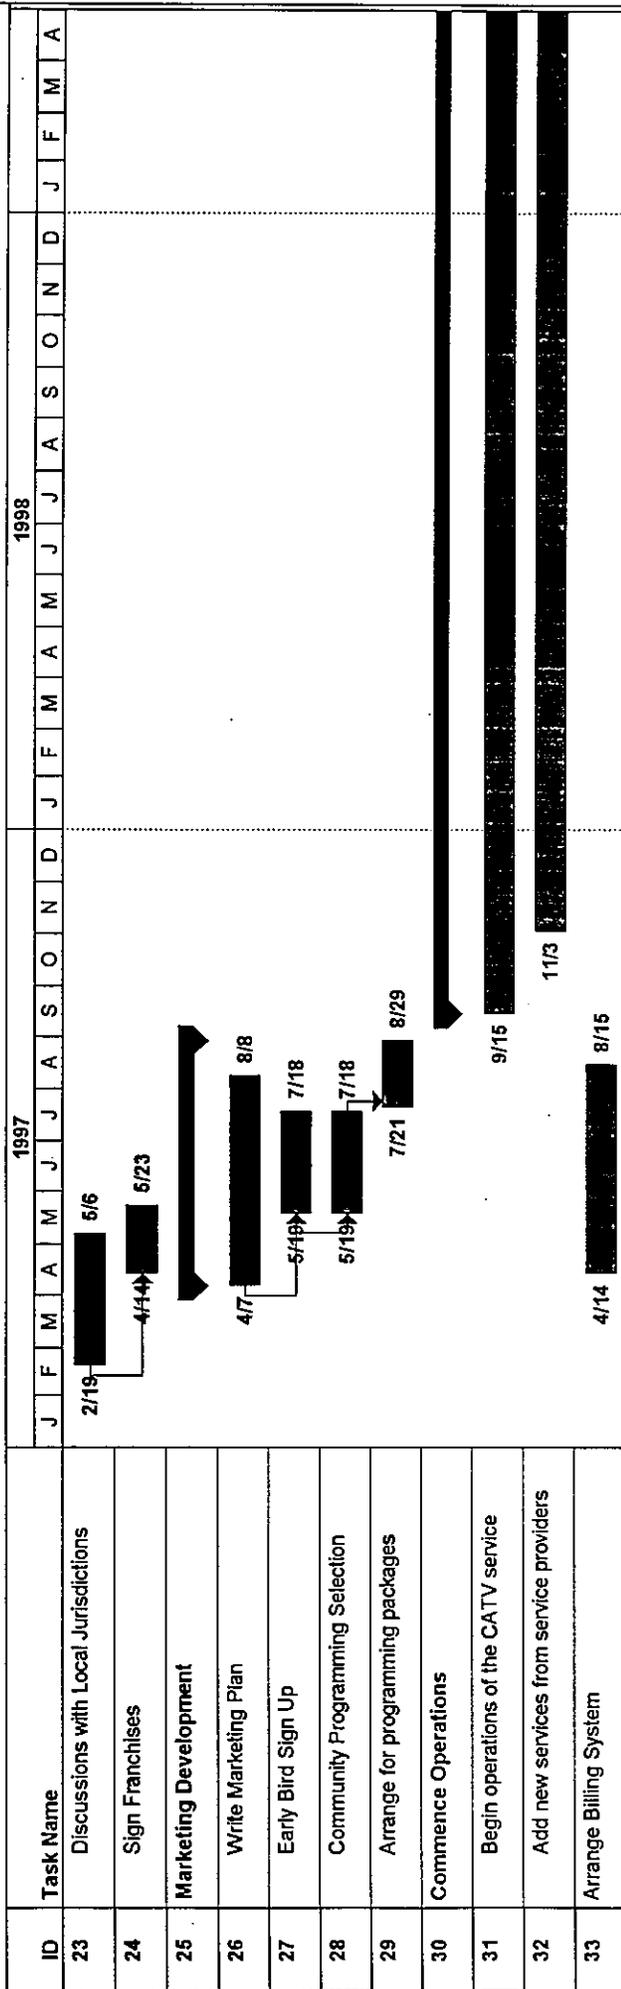

- The final team of experienced employees must be on the job and in control of the process of creating and developing this business.
  - Contracts must be negotiated and signed, to provide the content, design, procurement, and installation that becomes the "system". All contracts must be closely managed and performance of those contracts must be under constant scrutiny.
  - The permanent staff of marketing, technicians, sales and engineering must become familiar with the new system, trained on specialized equipment operation, and be trained in the ways they will need to perform in the highly competitive environment of telecommunications.
  - Installation must proceed in an economical but swift manner, culminating in high performance two-way connections to residences, small businesses, and large telecommunications users and suppliers.

## General Operations

A common telecommunications infrastructure will be used for all three of the major lines of business: high speed telephone and data transport, Internet data transport, and cable television. The cost of common operation and maintenance of the plant will be shared.

There are key interactions with telecommunications service providers, directly supporting this business, which must be managed with special contracts, physical standards, and technical relationships. Tacoma City Light would transport content which originates in a few points on the network, supporting all three lines of business. Satellites dishes would receive cable television programs from orbiting satellites. Internet traffic would flow to and from the electronic facilities of Internet Service Providers. Long distance telephone traffic would flow to and from POP facilities.

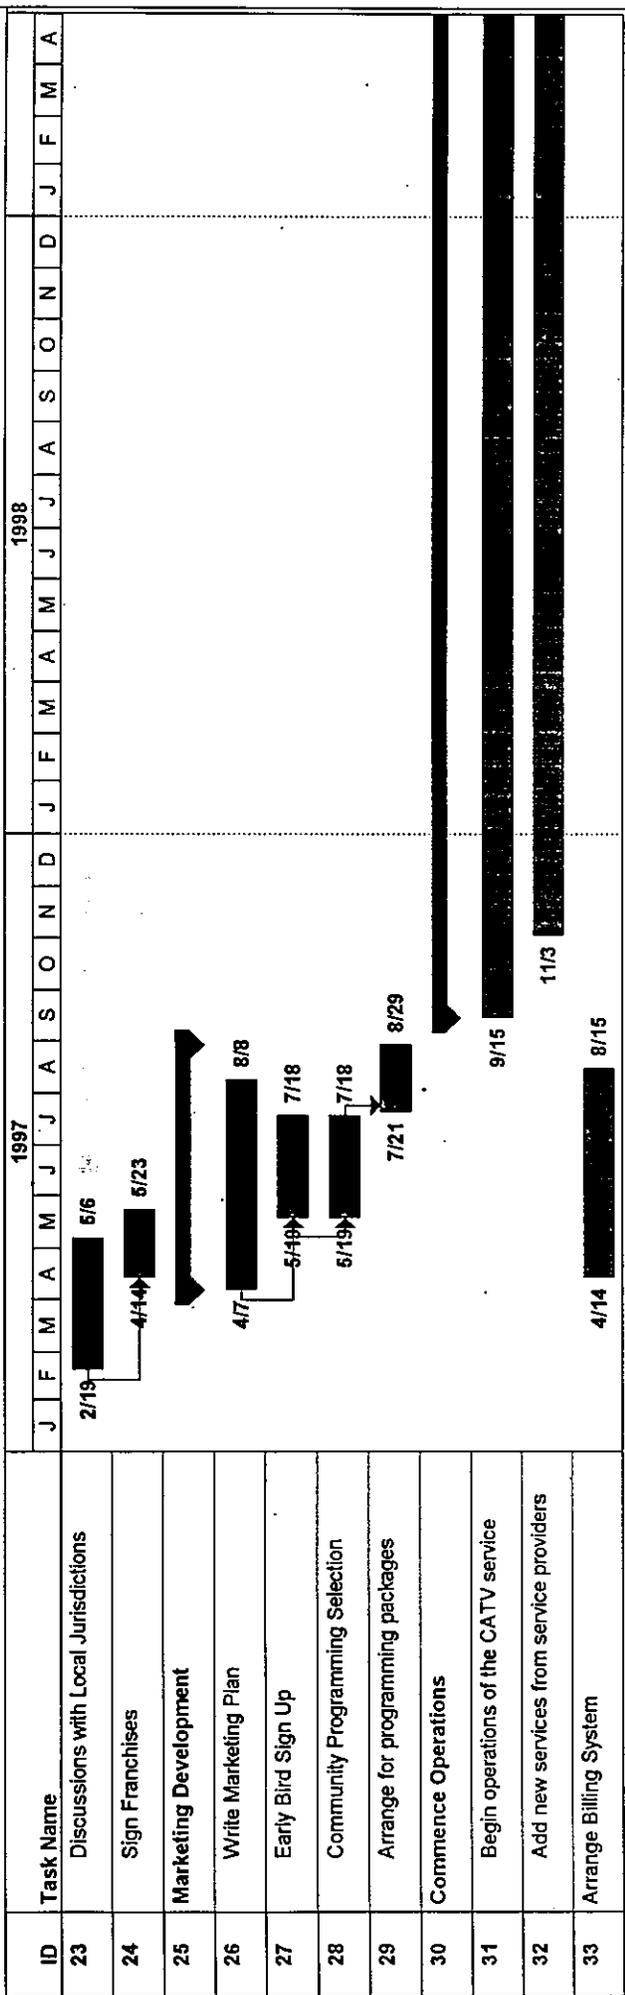

That content, which originates in a few points, would be distributed throughout the Tacoma City Light service territory to wholesale and end-use customers. These customers would to some degree associate all the delivered products with Tacoma City Light, whether or not all the responsibilities of service are Tacoma City Light's. In admitting that, then there would be a role for Tacoma City Light staff in ensuring new systems are installed correctly, and service is prompt and extraordinary.

The aggressive marketing of services and products will determine the success of this new telecommunications system more than any other single factor. Staff would be assigned directly to this activity. Advertising and promotional programs would be the norm and would be performed by ensuring that current information about products and services is always available to the customer/owner.

Operational Support Systems would be in place, providing the tools and information needed by staff to perform their duties efficiently and promptly. As services delivered by the telecommunications system are based on electronics, the facilities themselves would provide information about their own health and status. Computer systems today allow the system support staff to have information and responsibilities that were diversified only a few years ago. Continuous performance monitoring of the communications facilities allows crews to respond quickly to trouble, even before the trouble affects service.

Continuous attention must be paid to developments in communications technology, to continue to serve a changing market. Management and engineering staff will seek to introduce devices on the fiber-optic transmission network that meet the developing needs of new applications for sound, data, images, and television.

---

## Regular Operations

The Regular Operations must be discussed in the context of each business line: high-speed digital transport, Internet data transport and cable television.

---

### High Speed Telephone and Data Transport

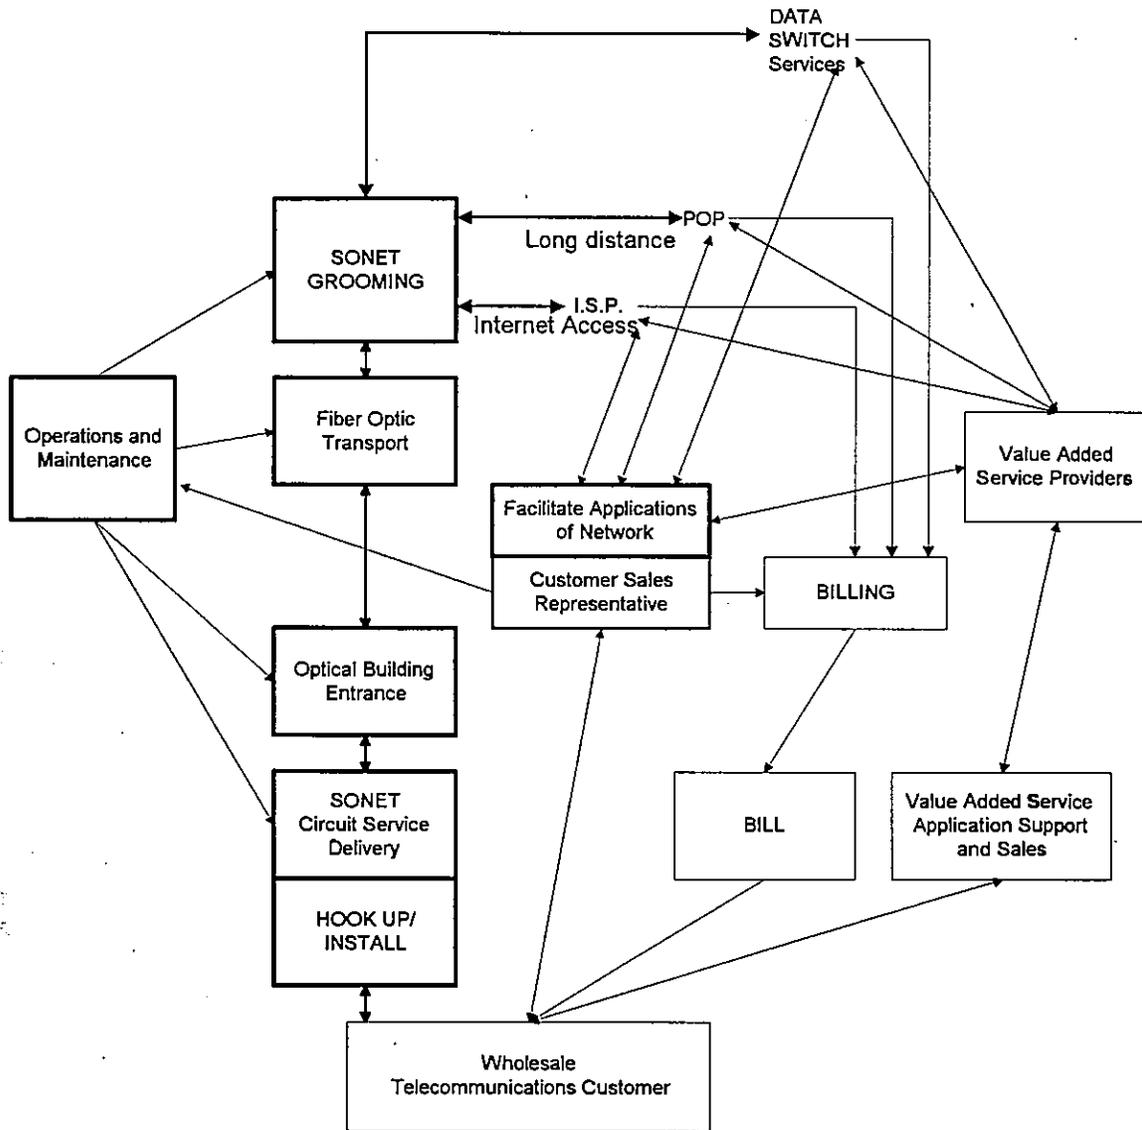

Tacoma City Light would own and operate a communications transmission system, capable of providing wholesale high-speed digital transport circuits for telephone and data transport from point to point throughout its service area. This service would be offered on a non-discriminatory basis for the use by others. This service would be limited to transport only: Staff would not be dedicated to application-specific customer support. That duty would be filled by the private sector value added service providers or individual customers.

Tacoma City Light would sponsor and participate in user groups and forums, in which users can exchange experiences in applying the high-speed data transport, and can be introduced to value-added service providers. Market research indicated that most customers expect a high level of specialization in applying high-speed digital transport for use in the customer's business. Local service providers would craft solutions for the users and would utilize Tacoma City Light's wholesale transport. Forums would likely be held on a bi-monthly schedule. Tacoma City Light would host the forums by arranging for convenient meeting space, publishing meeting notices and agendas, and participating in the discussions as a transport provider and end-user.

Tacoma City Light would install electronics in the users buildings, to create the high-speed pathways. By distributing the electronics, redundancy and reliability of the entire network is increased compared to a centralized office structure. Fiber optic cable would enter buildings, with redundant cable routes available if requested by the customer. Tacoma City Light would operate and maintain all the fiber optic cables and transport electronics.

The high-speed transport circuits would terminate either in the customers buildings, or at the facilities of one of the following: long distance providers, local telephone service providers, or data network service providers. Developing strong and effective business relationships with these providers would be a critical factor in the success of the telecommunications system.

### High Speed Telephone and Data Transport

**BOLD = Tacoma City Light functions and facilities**

---

### High-Speed Internet Data Transport

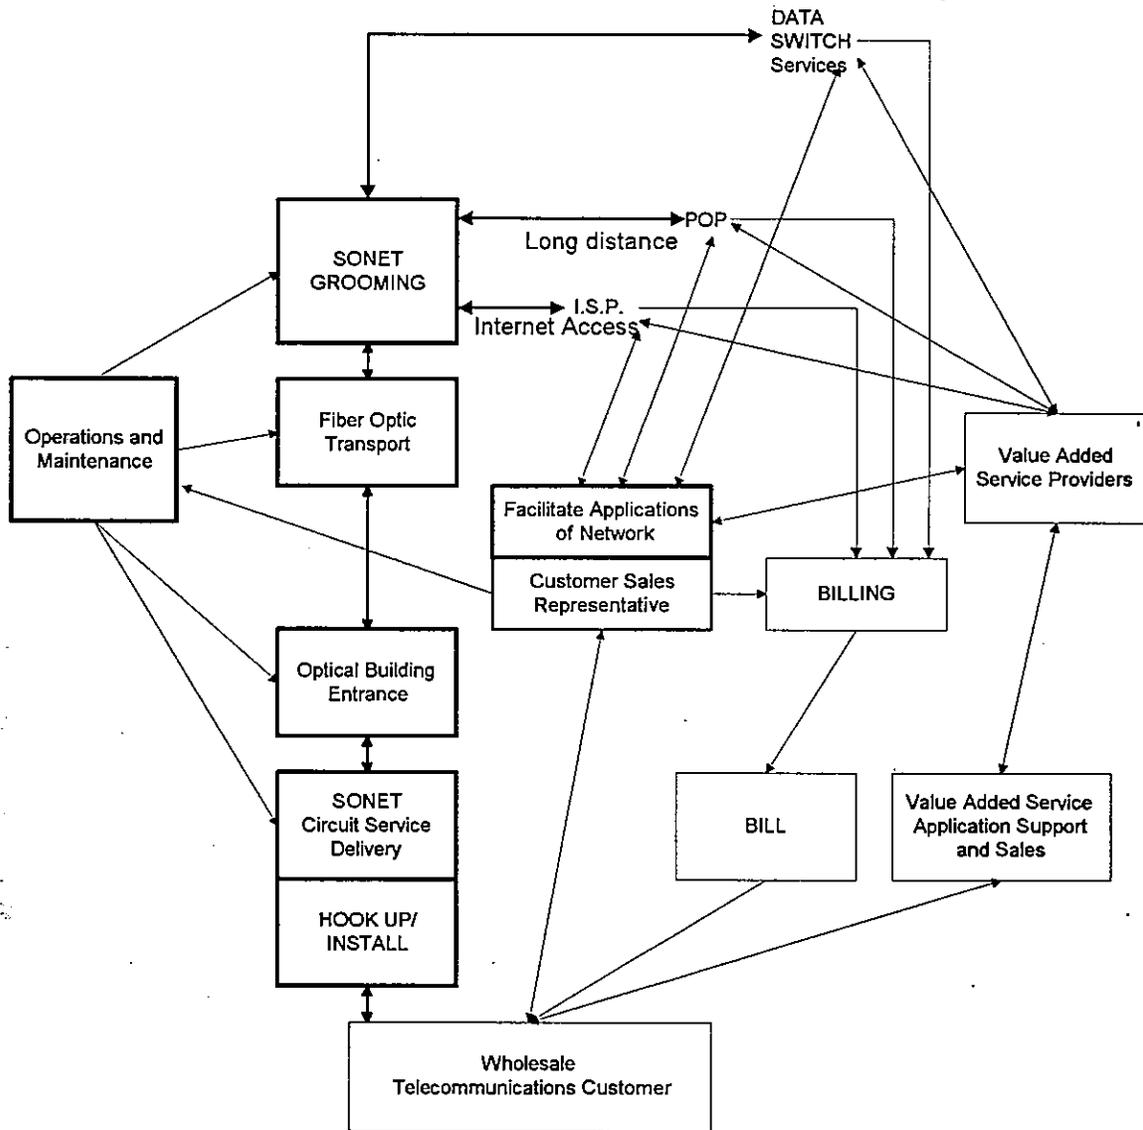

Tacoma City Light would own and operate a hybrid fiber optic - coaxial cable telecommunications system, distributing connectivity throughout the Tacoma City Light service territory. Tacoma City Light would provide transport service for use by Internet Service Providers to provide cable modem - based Internet access to all residents and small businesses.

Internet Service Providers would use Tacoma City Light's digital, fiber optic transport from their centralized facility to the data network routers which convert digital signals into RF channels. Internet Service Providers would be provided transport using Tacoma City Light's RF channels to deliver cable modem signals to and from end-use customers, including both residential and small business users.

Internet Service Providers would partner with Tacoma City Light to ensure the delivery of the highest quality products and services to end-users. Key issues to consider in partnering with Internet Service Providers to deliver the growing Internet traffic are: Internet Service Provider investment in caching computers to serve the common Internet information requests locally; leasing of highest speed interconnections to the national Internet infrastructure; choice of cable modems for efficient use of RF channels in data networking; and the history of responsiveness to customers service and trouble calls.

High-speed Internet data transport is a relatively new application of the Hybrid Fiber Coax cable television infrastructure, providing two-way service on the cable to the home. Extreme care would be placed on the installation of the cable serving end-users. All cable in the home used for two-way services must be of top-quality materials. Electrical noise infiltrating into the return path could affect the service of others and would be eliminated with careful installation and material choices.

### High Speed Telephone and Data Transport

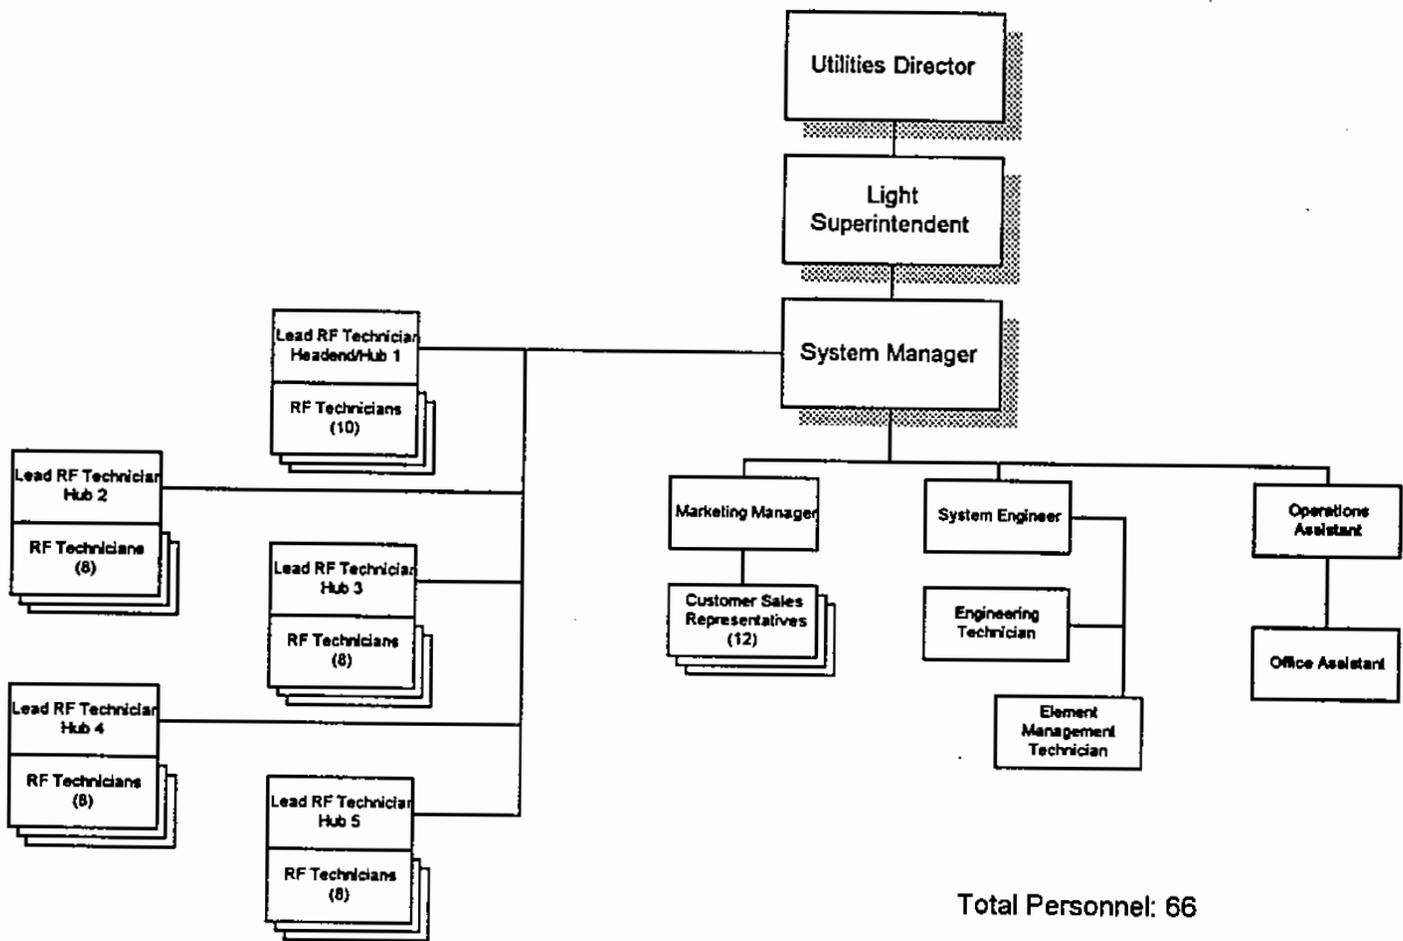

**BOLD = Tacoma City Light functions and facilities**

## ORGANIZATION

Staffing for the Communications Section would include both reallocation of existing personnel and the recruitment of new employees with communications, technical and marketing experience. The Section will also rely on the support of other departments within Tacoma City Light and the City of Tacoma, such as Legal, Fleet, and Accounting.

Telecommunications  
Organization Chart

### NOTES TO FINANCIAL STATEMENTS

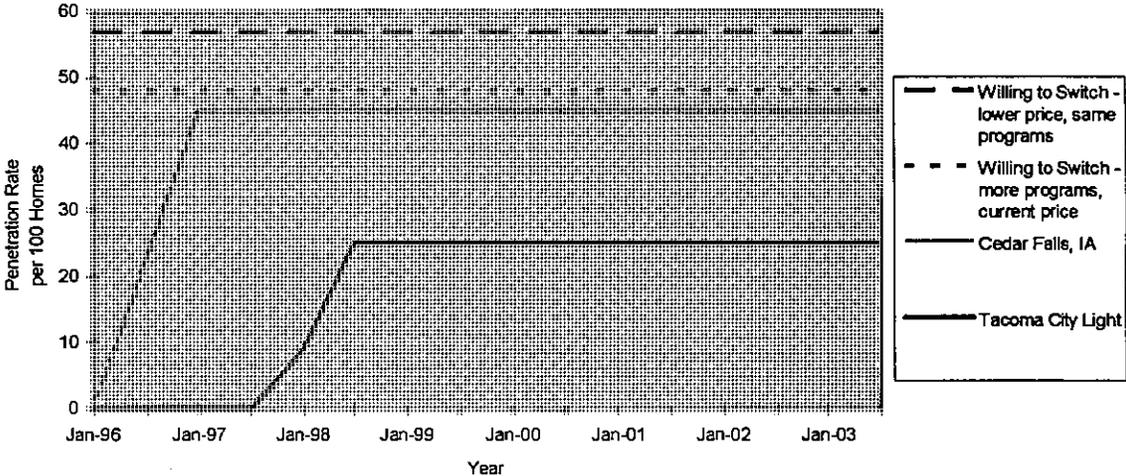

The Light Division (Tacoma City Light) is a division of the City of Tacoma, Department of Public Utilities, which also operates the Water and Belt Line Railroad Divisions. The Telecommunications Project would be a section of the Light Division.

The following is a summary of significant financial notes and is intended to assist the reader in understanding and interpreting the financial statements and other data in this report.

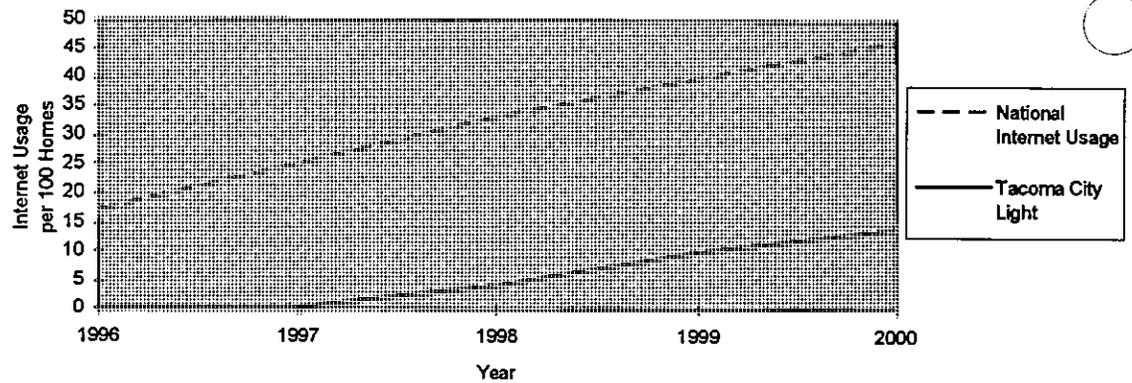

#### NOTE 1 Financial Analyses

Tacoma City Light's financial analyses for the Telecommunications Project are summarized in the Income Statement and Cash Budget. The analysis deliberately understates revenues to give a conservative view. The analyses show that the proposal to build the system is economically feasible if pursued in a business like manner. All amounts are shown in constant 1997 dollars.

*Comparison of Cable TV Penetration* As seen in the graph below, cable television penetration rates have been conservatively estimated at 25 subscribers per 100 homes.

*Comparison of Internet Usage* Compared with the forecasted growth in the national Internet usage rate, Tacoma City Light's projected Internet transport rates are also conservative.

## NOTE 2

### Cost Estimates

Cost estimates are based on unit costs collected in the telecommunications study and from existing telecommunications companies reports and operating statements. The estimates are given in unadjusted Year 1 dollars and should be used only for determining the feasibility of this proposal. Certain costs, including programming and payroll & benefits, have been inflated to account for historic increases above the rate of inflation.

## NOTE 3

### Services Offered To City and Terms

The franchise jurisdictions have goals, interests and needs related to the proposed Telecommunications Project. Tacoma City Light's development plan makes provisions for these goals and interests. These needs are proposed to be addressed through the provision of Public, Educational, and Governmental (PEG) video channels, taxes and fees, and through the construction of an Institutional Network which will provide fiber links to all primary and secondary schools, colleges, universities (both public and private), fire stations and police stations, including SONET electronics to enable the links to be used as soon as possible.

## NOTE 4

### Infrastructure

The infrastructure would be built with a regional headend, 5 hubs, and 82 nodes. Also included are SONET electronics supporting an initial 176 business sites, 8 central offices, and 3 Points of Presence. The system

supports optical coupling, switches and amplifiers. SONET shelves are also included for Tacoma City Light substations and the Institutional Network. The construction total incorporates hardware discounts off list offered on large quantity orders:

**NOTE 5**  
**Financing**

---

This project would be funded through the use of insured taxable municipal bonds with interest rates based on U.S. Treasury yields plus a spread of between 35 and 70 basis points depending on term, and capital available from the Light Division. The total financing amount includes operating capital and incurred start-up costs. The bonds would be issued with a range of terms, the maximum of which is calculated at 10 years for the purpose of this analysis.

**NOTE 6**  
**Revenues Generated**

---

Tacoma City Light would be the service provider of cable television services. Subscriptions would be offered in a multi-tier selection. Tacoma City Light would charge an installation fee, however, for purposes of this analysis, that charge has been waived until 1999. These financial statements are based on conservation penetration rates in the cable television market.

The telecommunications system would make transport available to service providers of other services including telephony, data transport, and video on demand. These features would be available through partnerships between Tacoma City Light and other service providers. Since Tacoma City Light would only be the transport provider, it would not be involved in rate schedules set by providers for these services. Tacoma City Light would, however, receive revenues from the service provider for carriage on the telecommunications network.

The telecommunications system would also service the needs of the Tacoma City Light. Functions such as distribution automation, substation monitoring, real-time pricing, and customer billing information would be available to the Light Division through the use of this system.

**NOTE 7**  
**Operating Expenses**

---

## Conclusions

The study team set out to answer a number of questions at the outset of this project:

- What is happening on the technological front?
- Who are the major telecommunications players, what have they done in the past, and what are they doing now?
- What is happening in the regulatory environment?
- What have other communities done with regard to telecommunications?
- What has happened historically in our community?
- What do the existing telecommunications options look like?
- What kind of market demand for telecommunications exists in our community?
- What are the economic development implications for our community if an advanced telecommunications system is built or fails to be built?
- And finally, could Tacoma City Light build and operate such a system and how would it look?

This study of telecommunications has answered those questions. But there is a final question that must be asked. Should Tacoma City Light create a modern telecommunications infrastructure to serve the local community? The answers to the previous questions are critical to understanding and answering this question.

This study has reviewed telecommunications both nationally and locally. In reviewing the local situation it is clear that the local market has a growing need for better telecommunications access. Despite growing local demand, the incumbent wire line service providers have stated that their investments in the local infrastructure will either slow without significant rate increases or be halted all together. One could hope that other companies would step forward and create a modern telecommunications system through out our community but the prospects for that occurring appear dim. While Competitive Access Providers will eventually enter the local market, their focus is almost exclusively on large business users. Other potential systems are either of low capacity or not scheduled to be fully deployed until the next century.

Tacoma City Light could create an advanced telecommunications system to meet the telecommunications needs of the communities it serves in addition to its own internal communication needs. If Tacoma City Light were to create such a system and operate it in a business like manner, the system would generate sufficient revenues to make the system self sustaining. By offering products and services that either meet customer needs directly and providing a pathway through which the private sector can meet additional needs, pricing those products and services competitively, and delivering them over a modern, high-speed, high-reliability telecommunications system, a

business is created that is viable using conservative revenue projections.

The following principles provide a framework for considering whether Tacoma City Light should enter the telecommunications arena in our community.

1. The primary purposes for Tacoma City Light financing, constructing and operating a broadband telecommunications system shall be as follows:
  - Provide a state-of-the-art fiber optic technology to support enhanced electric system control, reliability and efficiency.
  - Provide capability to meet the expanding telecommunications requirements in an evolving competitive electric market, the most critical of which is real-time, two-way interactive communications with individual energy consumers.
  - Provide greater revenue diversification through new business lines (i.e., Internet transport, cable TV, etc.), enhance traditional products and services and maximize return on Tacoma City Light assets.
2. Important additional community benefits derived from this project are as follows:
  - Promote economic development and business retention.
  - Insure broad community accessibility to high quality, state-of-the-art telecommunication technology.
3. The Telecommunication Project, including all infrastructure, and proposed business lines, shall be an integral Tacoma City Light operating responsibility and function.
4. The Telecommunication Project business lines shall be operated in a business-like manner similar to electric services which are subject to market forces and are not tax supported.
5. In order to avoid the perception of government control of the content of the cable television business line, programming will be determined on the basis of local consumer demand and input.
6. The Telecommunication Project construction will reflect the current overhead to underground configuration of Tacoma City Light's electric system. Any significant divergence from this will greatly increase the project costs and jeopardize the viability of the project.
7. Tacoma City Light's Telecommunication Project will not proceed unless there is broad and strong policy and community support.

Ultimately, the question of whether Tacoma City Light should create a modern telecommunications infrastructure is one that policy makers must answer with the informed input of the community they represent. It is our sincere hope that the communities that Tacoma City Light serves will find the background information contained in this study useful.

## Acknowledgments

The Telecommunications Study Team was a multidisciplinary group made up of both Tacoma City Light staff and outside consultants. There is always a concern when approaching a study of this magnitude, that a single view of the industry and market in question will prevail without rigorously examining alternative viewpoints. In the case of telecommunications, many industry experts have a tendency to view the world with either a telephone or cable perspective. Rather than hire a single consultant under a large contract to work with staff in the development of this report, the decision was made early in the project to hire multiple consultants with diverse perspectives and areas of expertise under small individual contracts. This allowed the team to examine and weigh a wide variety of ideas and perspectives and thereby ensure that the final study incorporated the best ideas and knowledge possible. This approach is not the easiest way of conducting a study of this sort since the discussions that ensue can become quite lively and challenging. Staff would like to thank the following consultants that willingly and vigorously participated in those discussions and the work of preparing this report.

Bruce Campbell, Metro Utility Communications Group  
F. Paul Carlson, Ph.D., Metropolitan Communications Consultants  
Linda Dethman, Dethman & Associates  
Stuart Hauser, Metro Utility Communications Group  
Peggy sue Heath, A.B.D., APEX Business Solutions  
Sandy Hunt, Ph.D., APEX Business Solutions  
Richard C. T. Li, P.E., Metropolitan Communications Consultants  
Bruce Mann, Ph.D., University of Puget Sound  
Mel Oyler, APEX Business Solutions  
Catherine Rudolph, APEX Business Solutions  
Susan V. Marr, Metro Utility Communications Group  
Laura Rosenwald, Preston Gates & Ellis  
Gene Starr and the research team at Market Data Research  
Elizabeth Thomas, Preston Gates & Ellis

Many staff members at Tacoma Public Utilities willingly put in extra time to help the team with this study. In particular, the team would like to thank the following people: Mark Bubenik, Linda Carlton, Julie Dahlen, Alex Gebhard, Deborah Hall and the Graphics Services group, David Lerman, James Mack, Glenna Malanca, Peter Richardson, and Sue Veseth.

We would also like to thank the many members of the community that have voluntarily spoken with us about their ideas, desires, and concerns regarding telecommunications. Finally, I would like to thank the staff members on the Telecommunications Study Team:

Chandra Enos  
Steve Roberts, P.E.  
Lisa Steadmon

Their dedication, hard work, willingness to dig beyond the easy answer, and ability to present complex material in a clear and understandable form was the key to this study.

Jon Athow  
Telecommunications Project Manager

Growth on the Key Peninsula will be more problematic. Transportation is obviously a problem, and this will favor location there by non-commuters, generating more demand for local retail goods in Gig Harbor. Infrastructure in that area, such as water and sewer will be more expensive and will push up housing prices.

To the extent that the employment growth occurs closer to DuPont than to the current Tacoma boundaries, some housing growth (and population) will occur in Thurston rather than Pierce County. One estimate, by the Thurston County Economic Development Board, expects that almost 70% of the non-DuPont residences of Northwest Landing employees to be in Thurston and only 30% in Pierce. As Thurston grows, however, people will travel to Pierce County for shopping and entertainment. Although a second spill over area could be Auburn in south King County, residential neighborhoods located there are not as attractive as in Thurston County nor is the economic base as diverse.

#### **Growth Impact of Scenarios**

*Scenario Two* The location of another large technology company (following the Intel example) or the successful development of the ISDZ would produce a major employment gain. In this case, growth within Tacoma would increase by 0.75% annually in the early time frame (1995-2005) and by 0.25% in the later frame (2005-2020). A slow down in the acceleration of growth would be due to more attractive non-Tacoma locations. This type of scenario would initially increase annual growth in Pierce County by 0.5% annually, and then slow to 0.75% over the longer time frame. Again, this would reflect better siting opportunities outside of Tacoma.

*Scenario Three* Another change that would have a significant impact on the moderate term growth outlook for the area would come from the development of an expanded art/cultural and tourist industry. This could happen if the "culture cluster" generates the critical mass of activity needed to attract travelers and put the area on the "map" of destination stops. The effect will be to raise Tacoma's annual growth by 0.1% and Pierce County by 0.2% in the 1995-2005 time frame. Greater growth will occur during the 2005-2020 time frame as infrastructure is developed and earlier impacts are felt, with increases by 0.25% for Tacoma and 0.3% for the county.

---

## **IMPACT OF TELECOMMUNICATIONS INFRASTRUCTURE**

Patterns of growth in the major sectors of the local economy are, and will be more so in the future, dependent on the community's telecommunications infrastructure. Many established sectors will also require continued technology investments to remain competitive.

*Government activity* at military installations will continue to be the a significant sector in the local area economy. However, as the size of the public sector in the national economy continues to get smaller (moving toward the promised balanced budget), reductions in the defense budget will become increasingly important. The existing facilities in Pierce County have survived two rounds of base closures, due in part to the fact that they were technologically sound. The future is always uncertain, however. Access to the most modern telecommunications technology will help assure their survival in the local area.

Up-to-date communication and information services are essential to the survival of *health services*. Commercial data management in support of medical services also require a substantial and increasing telecommunications infrastructure. The health care industry is a primary industry in Tacoma Pierce-County and a rich source of potential applications and associated technology drivers. Not only are there a variety of applications driving both applied and fundamental research, but the spectrum of actual operating modes in health care provision systems span a wide range. Provision ranges from elective, non-emergency, monitoring where the patient and provider are together in a well equipped office, to emergency diagnostic and treatment situations where the diagnostic expertise is geographically remote from the patient and the treatment expertise. Remote diagnosis requires high bandwidth, real time connection oriented services which support multiple video and data streams as well as voice communication. The precise telecommunications capability required to support this activity is application specific, but can be analyzed within a distributed communication framework since in general health care providers may be geographically dispersed in multiple locations.

The increasing telecommunications need is also true of other *professional services*, especially in the area of *financial services*. The financial services are not communications limited in the same sense as remote medical diagnostic services, or shipment status monitoring. While financial service providers at both the institutional level and the consumer level are sophisticated users of information, the financial services industry does not place heavy demand on the design of the telecommunications

technology. This somewhat curious situation results from several factors:

1. Most financial information is coded in alphanumeric formats. These formats are very efficient to transmit using a variety of existing telecommunications technology.
2. Humans utilize financial information and services in alphanumeric or rudimentary graphical formats (trend charts).
3. Financial information is semantically "dense", the simple statement "DOW off %5" contains a wealth of information, but is amazingly compact (eight bytes).

So it is clear that need for increased bandwidth is usually not instigated by their need to support more volume. However, the financial services sector in the Tacoma area does have unmet telecommunications needs, as evidenced by the Frank Russell Company, one example of a professional services firm experiencing increased telecommunication needs in order to link its headquarters with its international offices and clients. For these kinds of clients overall bandwidth may not be an issue, but security of the line, speed and direction, and responsiveness of the vendor may be. This is an industry sector where telecommunications is part of the production process — a breakdown in the system can cause the organization itself to cease to function until the system is back on-line. Failure to invest in new technologies, especially communications technologies, would therefore limit the growth potential of the area. Companies like Frank Russell would be forced to continue to privately construct work around solutions or utilize a remote service center that could supply desired access and services. Other areas looking to attract these types of companies would need to provide access to a sound telecommunication infrastructure. The success of the international services district and the ability to attract new businesses to the redeveloped Foss will depend, to a great degree, on access to low cost, full service telecommunications technologies.

More uncertain, and equally important, will be the information and communication needs of shipping and support activities in the *Port of Tacoma* area. Increase in direct competition to Tacoma's container trade, competition for new shipping lines, just-in-time inventory requirements, and lower labor costs all suggest the provision of telecommunications technologies will be important for this sector of the economy as well. Distribution centers in the Port of Tacoma, with SuperValu as another example, are becoming increasingly dependent on telecommunications for the transfer of data between regional distribution centers, vendors, and the parent company. Customers frequently desire to know the status of shipments which they have sent or are waiting to

receive. These shipment status services are often effective differentiators for shipment service providers. In the small package shipment service business competitive pressure drove both FedEx and UPS to offer shipment status services. With the small package shippers, status generally provides pickup time, expected or actual delivery time and other information. With integrated shipment services providers such as the typical port authority, the cargo may be at sea, in the air or with some common carrier trucking firm which makes an accurate and reliable determination of shipment location problems. A possible solution entail utilizing global positioning systems (GPS) and wireless telecommunications technology to update port authority databases on the location and condition of shipments in transit.

In the *retail sector*, increased reliance on computer usage in stores is likely, as inventory costs can more effectively be controlled with timely ordering and control, use of fax and modem transactions is increasing, and the use of things like fingerprint recognition for credit cards or check writing. Successful merchants will need to adapt to these new demands -- a potential large increase in data transmission needs from many small and scattered sites.

The *advanced technology* businesses also can have telecommunication needs. A research based organization will often desire high-speed access to other researchers or their works. In fact, it is the ability to telecommute and connect regionally-located Universities that has fueled some of the dispersion in advanced technology companies to smaller communities.

Culture-based organizations in this scenario are not as technology-dependent as professional and health services, but telecommunications does play an increasing useful role in the tourist/convention category. The Visitor and Convention Bureau anticipates the use of smart cards to allow tourists access to a variety of services from transportation to tickets to shows. That idea would require a well developed communications network in the city and adjacent points of interest. For the conventioneer, satellite conferencing and digital information transfers are of growing importance. In addition, many business travelers expect a computer modem in their hotel rooms to connect with their home office. Museums increasingly use interactive media as an educational tool.

It is not merely the business applications themselves that require infrastructure access. Sophisticated, technology oriented employees of many of these types of firms would expect to have access to their workplace computer system from their home, access to the Internet, high quality cable systems, and eventually new technologies which are only on the drawing board at this

time. A failure to invest in the appropriate infrastructure may leave Tacoma out of the running as a location for these types of firms and the employees who work for them.

---

## Thank You

We would like to extend our thanks to those in the community who were generous in sharing their time and judicious in sharing their opinions about the future economic prospects of Greater Tacoma.

## ORDINANCE NO. 25930

AN ORDINANCE of the City of Tacoma, Washington establishing a telecommunications system as part of the Light Division, supplementing Ordinance No. 23514 and providing for the issuance and sale of the City's Electric System Revenue Bonds in the aggregate principal amount of not to exceed \$1,000,000 to provide part of the funds necessary for the acquisition, construction and installation of additions and improvements to the telecommunications system.

WHEREAS, the City of Tacoma (the "City") owns and operates an electric utility system (the "Electric System"); and

WHEREAS, the Ordinance provides that the City may create a separate system as part of the Electric System and pledge that the income of such separate system be paid into the Revenue Fund; and

WHEREAS, RCW 35A.11.020 authorizes the City to operate and supply utility and municipal services commonly or conveniently rendered by cities or towns; and

WHEREAS, RCW 35.92.050 authorizes cities to construct and operate works and facilities for the purpose of furnishing any persons with electricity and other means of power and to regulate and control the use thereof or lease any equipment or accessories necessary and convenient for the use thereof; and

WHEREAS, the Utility Board and the Council have determined that it is in the best interest of the City that it install a telecommunications system among all of its Electric System substations in order to improve communications for automatic substation control; and

WHEREAS, the City has determined that it is prudent and economical to provide additional capacity on such telecommunications system to provide the Electric System with sufficient capacity to perform or enhance such functions as automated meter reading and billing, appliance control, and load shaping; and

32

1           WHEREAS, the Light Division may wish to connect such telecommunications system  
2 to individual residences and businesses in its service area or to other providers of  
3 telecommunications services; and

4           WHEREAS, the City has determined that it should create a telecommunications system  
5 as part of the Electric System in order to construct these telecommunications improvements;  
6 and

7           WHEREAS, the City by Ordinance No. 23514 passed November 20, 1985 (as  
8 amended and supplemented, the "Ordinance"), authorized Electric System Revenue Bonds (the  
9 "Bonds") of the City to be issued in series, made covenants and agreements in connection with  
10 the issuance of such Bonds and authorized the sale and issuance of the first series of such  
11 Bonds in the aggregate principal amount of \$125,505,000 (the "1985 Bonds") for the purpose  
12 of refunding all of the City's then outstanding light and power revenue bonds; and

13           WHEREAS, the 1985 Bonds were issued under date of December 1, 1985 and are now  
14 outstanding; and

15           WHEREAS, the City has heretofore issued ten additional series of Bonds on a parity  
16 with the 1985 Bonds, which bonds were issued and are now outstanding:

18	Authorizing Ordinance	Bonds Dated	Principal Amount Issued
19	23663	July 1, 1986	\$ 30,000,000
20	24073	May 1, 1988	60,400,000
21	24296	May 1, 1989	48,500,000
22	25004	December 1, 1991	13,800,000
22	25004	December 5, 1991	42,400,000
23	25004	December 5, 1991	42,400,000
23	25089	May 1, 1992	31,295,000
24	25165	September 1, 1992	131,675,000
24	25333	August 1, 1993	3,318,500
25	25489	May 10, 1994	135,665,000

26  
33

1 Section 1.1 of the Ordinance, as amended and supplemented by the First, Second, Third,  
2 Fourth, Fifth, Sixth, and Seventh Supplemental Ordinances.

3 B. In this Eighth Supplemental Ordinance:

4 "Arbitrage and Tax Certification" means the certificate executed by the Director of  
5 Finance of the City pertaining to the calculation and payment of any Rebate Amount with  
6 respect to the Bonds.

7 "Bond Sale Resolution" means the resolution to be adopted by the City Council setting  
8 forth the final terms of the Bonds.

9 "Bonds" means the Electric System Revenue Bonds, 199\_\_, of the City issued pursuant  
10 to the Ordinance and this Eighth Supplemental Ordinance.

11 "Code" means the Internal Revenue Code of 1986, as amended, together with  
12 corresponding and applicable final, temporary or proposed regulations and revenue rulings  
13 issued or amended with respect thereto by the United States Treasury or the Internal Revenue  
14 Service, to the extent applicable to the Bonds.

15 "Eighth Supplemental Ordinance" means this Ordinance No. 25930.

16 "Rebate Amount" means the amount, if any, determined to be payable with respect to  
17 the Bonds by the City to the United States of America in accordance with Section 148(f) of the  
18 Code.

19 Section 1.3. Authority for this Eighth Supplemental Ordinance. This Eighth  
20 Supplemental Ordinance is adopted pursuant to the provisions of the laws of the State of  
21 Washington, the Tacoma City Charter and the Ordinance.

ARTICLE II

FINDINGS; ESTABLISHMENT OF THE TELECOMMUNICATIONS PROJECT AS A  
SEPARATE SYSTEM; AND ADOPTION OF PLAN AND SYSTEM

Section 2.1. Establishment of Telecommunication System. The City hereby creates a separate system of the City's Light Division to be known as the telecommunications system (the "Telecommunications System"). The public interest, welfare, convenience and necessity require the creation of the Telecommunications System, contemplated by the plan adopted by Section 2.2 hereof, for the purposes set forth in Exhibit A. The City hereby covenants that all revenues received from the Telecommunications System shall be deposited into the Revenue Fund.

Section 2.2. Adoption of Plan; Estimated Cost. The City hereby specifies and adopts the plan set forth in Exhibit A for the acquisition, construction and implementation of the Telecommunications System (the "Telecommunications Project"). The City may modify details of the foregoing plan when deemed necessary or desirable in the judgment of the City. The estimated cost of the Telecommunications Project, including funds necessary for the payment of all costs of issuing the Bonds, is expected to be approximately \$40,000,000.

Section 2.3. Findings of Parity. The Council hereby finds and determines as required by Section 5.2 of the Ordinance as follows:

A. The Bonds will be issued for financing capital improvements to the Electric System.

B. At the time of issuance and delivery of the Bonds, there will be no deficiency in the Bond Fund and no Event of Default shall have occurred.

C. At the time of issuance and delivery of the Bonds, there will be on file with the City Clerk the certificate of the Director of Finance required by Section 5.2(B)(1) or Section 5.2(C) of the Ordinance.

36

1            Section 3.3. Date, Maturities and Interest. The Bonds shall be issued in the aggregate  
2 principal amount of not to exceed \$1,000,000 and shall be dated as of the date provided in the  
3 Bond Sale Resolution and shall bear interest from their dated date to their stated dates of  
4 maturity or prior redemption. The exact principal amount of the Bonds shall be established by  
5 the Bond Sale Resolution. The Bonds shall mature on the dates of the years and in the  
6 principal amounts and shall bear interest payable semiannually on the dates and at the rates per  
7 annum set forth in the Bond Sale Resolution.

8            Section 3.4. Denomination and Numbers. The Bonds shall be issued in fully registered  
9 form in the denominations of \$5,000 or any integral multiple of \$5,000 within a maturity. The  
10 Bonds shall be numbered separately in such manner and with any additional designation as the  
11 Registrar deems necessary for purposes of identification. The Bond Sale Resolution may  
12 provide for the Bonds to be held in book-entry only form.

13            Section 3.5. Redemption Terms. By the Bond Sale Resolution, the City Council may  
14 determine that all or a portion of the Bonds shall be subject to redemption prior to maturity at  
15 the option of the City, in whole or in part, on any date and at the respective redemption prices  
16 specified in the resolution. The City Council may designate certain Bonds as Term Bonds that  
17 will be subject to redemption by operation of the Bond Retirement Account through Sinking  
18 Fund Requirements in the years and amounts set forth in the resolution.

19            Section 3.6. Reservation of Right to Purchase. The City reserves the right to use  
20 money in the Revenue Fund or any other legally available funds at any time to purchase any of  
21 the Bonds in the open market provided there is no deficiency in the accounts within the Bond  
22 Fund. Any purchases of Bonds may be made with or without tenders of Bonds and at either  
23 public or private sale.

24            Section 3.7. Tax Exemption. The City shall comply with the provisions of this section  
25 unless, in the written opinion of nationally-recognized Bond Counsel to the City, such  
26

38

1 compliance is not required in order to maintain the exemption of the interest on the Bonds  
2 from federal income taxation.

3 The City hereby covenants that it will not make any use of the proceeds from the sale  
4 of the Bonds or any other funds of the City which may be deemed to be proceeds of such  
5 Bonds pursuant to Section 148 of the Code and the applicable regulations thereunder which  
6 will cause the Bonds to be "arbitrage bonds" within the meaning of said Section and said  
7 regulations. The City will comply with the applicable requirements of Section 148 of the Code  
8 (or any successor provision thereof applicable to the Bonds) and the applicable regulations  
9 thereunder throughout the term of the Bonds.

10 The City further covenants that it will not take any action or permit any action to be  
11 taken that would cause the Bonds to constitute "private activity bonds" under Section 141 of  
12 the Code.

13 Section 3.8. Arbitrage Rebate. The City will pay the Rebate Amount, if any, to the  
14 United States of America at the times and in the amounts necessary to meet the requirements  
15 of the Code to maintain the federal income tax exemption for interest payments on the Bonds,  
16 in accordance with the Arbitrage and Tax Certification.

#### 17 ARTICLE IV

#### 18 REGISTRATION, FORM AND GENERAL TERMS

19 Section 4.1. Registrar and Paying Agent. The initial Registrar and Paying Agent shall  
20 be the fiscal agencies for the state of Washington in Seattle, Washington, and New York, New  
21 York.

22 Section 4.2. Transfer and Exchange. So long as the Bonds are not in book-entry form,  
23 any Bond may be transferred pursuant to its provisions at the Registrar's principal office for  
24 such purpose by surrender of such Bond for cancellation, accompanied by a written instrument  
25 of transfer, in form satisfactory to the Registrar, duly executed by the registered owner in  
26

person or by the registered owner's duly authorized attorney. Upon payment of any applicable tax or governmental charge, the City will execute and the Registrar will authenticate and deliver at the principal office of the Registrar (or send by registered mail to the owner thereof at the owner's expense), in the name of the transferee or transferees, a new Bond or Bonds in authorized denominations of the same interest rate, aggregate principal amount and maturity, dated as of the last interest payment date to which interest has been paid so that there shall result no gain or loss of interest as a result of such transfer. To the extent of authorized denominations, one Bond may be exchanged for several bonds of the same interest rate and maturity, and for a like aggregate principal amount, and several Bonds of the same interest rate and maturity may be exchanged for one or several Bonds, respectively, of the same interest rate and maturity and for a like aggregate principal amount.

In every case of a transfer or exchange of any Bonds, the surrendered Bonds shall be canceled by the Registrar and a certificate evidencing such cancellation shall be promptly transmitted by the Registrar to the City. As a condition of any such transfer or exchange, the City at its option may require the payment of a sum sufficient to reimburse it for any tax or other governmental charge that may be imposed thereon. All Bonds executed, authenticated and delivered in exchange for or upon transfer of Bonds so surrendered shall be valid obligations of the City evidencing the same debt as the Bonds surrendered, and shall be entitled to all the benefits and protection of the Ordinance to the same extent as the surrendered Bonds.

Section 4.3. Limitation on Transfer or Exchange of Bonds. The City shall not be required to (a) issue, transfer, or exchange Bonds after the 15th day of the month prior to any interest payment date therefor, or (b) to register, discharge from registration, transfer or exchange any Bonds which have been designated for redemption within a period of 30 days next preceding the date fixed for redemption.

Section 4.4. Effect of Payment. All payments of or on account of interest to any registered owner of any Bond, and all payments of or on account of principal to any registered owner of any Bond (or to his or her assigns), shall be valid and effectual and shall be a discharge of the City, the Paying Agent and the Registrar in respect of the liability upon the Bonds or claims for interest, as the case may be, to the extent of the sum or sums paid.

All Bonds upon the payment or redemption thereof shall be canceled and destroyed by the Paying Agent, and a certificate evidencing such payment, cancellation and destruction shall be promptly transferred by the Paying Agent to the City.

Section 4.5. Mutilated, Lost, Stolen or Destroyed Bonds. In case any Bond shall at any time become mutilated or be lost, stolen or destroyed, the City in the case of such mutilated Bond shall, and in the case of such lost, stolen or destroyed Bond in its discretion may, execute and direct the Registrar to authenticate and deliver a new Bond of the same interest rate and maturity and of like tenor and effect in exchange or substitution for and upon surrender and cancellation of such mutilated Bond, or in lieu of or in substitution for such destroyed, stolen or lost Bond. If such stolen, destroyed or lost Bond shall have matured or have been called for redemption, instead of issuing a substitute therefor, the City may without the surrender of such Bond at its option pay the same (in which case the City shall promptly file a certificate to that effect with the Paying Agent and Registrar) or cause the same to be paid by the Paying Agent by a certificate of the City directing such payment filed with the Paying Agent. Except in the case where a mutilated Bond is surrendered, the applicant for the issuance of a substitute Bond shall furnish to the City and the Registrar evidence satisfactory to them of the theft, destruction or loss of the original Bond, and also such security and indemnity as may be required by the City or the Registrar, and no such substitute Bond shall be issued unless the applicant for the issuance thereof shall reimburse the City and the Registrar for the expenses incurred in connection with the preparation, execution, authentication, issuance and

delivery of the substitute Bond. Any such substitute Bond shall be equally and proportionately entitled to the security of the Ordinance with all other Bonds issued hereunder, whether or not the Bond alleged to have been lost, stolen or destroyed shall be found at any time. The Registrar shall cancel all mutilated Bonds surrendered to it.

Section 4.6. Execution and Authentication of Bonds. The Bonds shall be executed on behalf of the City with the manual or facsimile signature of the Mayor and attested with the manual or facsimile signature of the City Clerk and the seal of the City shall be imprinted or impressed on each of the Bonds. The Bonds shall bear thereon a certificate of authentication, in the form set forth in Section 4.7 of this Eighth Supplemental Ordinance, executed manually by the Registrar. Only such Bonds as shall bear thereon such certificate of authentication shall be entitled to any right or benefit under the Ordinance and no Bond shall be valid or obligatory for any purpose until such certificate of authentication shall have been duly executed by the Registrar. Such certificate of the Registrar upon any Bond executed on behalf of the City shall be conclusive evidence that the Bond so authenticated has been duly authenticated and delivered under the Ordinance and that the owner thereof is entitled to the benefits of the Ordinance.

In case any of the officers who shall have signed or attested any of the Bonds shall cease to be such officers before the Bonds so signed or attested shall have been actually delivered, such Bonds shall be valid nevertheless and may be issued by the City with the same effect as though the persons who had signed or attested such Bonds had not ceased to be such officers.

Section 4.7. Form of Bonds.

(a) The Bonds shall be in substantially the following form:

UNITED STATES OF AMERICA  
STATE OF WASHINGTON  
CITY OF TACOMA  
ELECTRIC SYSTEM REVENUE BOND, 199\_

No. \_\_\_\_\_ \$ \_\_\_\_\_  
Interest Rate: \_\_\_\_\_ Maturity Date: \_\_\_\_\_ CUSIP No: \_\_\_\_\_  
\_\_\_\_\_% \_\_\_\_\_  
Registered Owner: \_\_\_\_\_  
Principal Amount: \_\_\_\_\_ DOLLARS

The City of Tacoma, a municipal corporation of the State of Washington (hereinafter called the "City"), for value received, hereby promises to pay to the Registered Owner identified above, or registered assigns, on the Maturity Date identified above, the Principal Amount indicated above and to pay interest on such principal amount from the date hereof or the most recent date to which interest has been paid or duly provided for, at the Interest Rate set forth above per annum, payable \_\_\_\_\_, 199\_, and semiannually thereafter on the first day of each \_\_\_\_\_ and \_\_\_\_\_ until payment shall have been made or provided for.

Principal of and interest on this bond are payable solely out of the special fund of the City known as the "Electric System Revenue Bond Fund" created and established by Ordinance No. 23514 of the City (the "Bond Fund"). Both principal of and interest on this bond are payable in lawful money of the United States of America. Interest shall be paid by mailing a check or draft or by wire transfer as provided in the Bond Ordinance (as hereinafter defined) to the registered owner or assigns at the address shown on the bond register as of the 15th day of the month prior to the interest payment date. Principal shall be paid to the registered owner or assigns upon presentation and surrender of this bond at the principal office of the Paying Agent or Agents which initially are the fiscal agencies of the State of Washington in Seattle, Washington, and New York, New York. (Such fiscal agencies also act, and are hereinafter referred to collectively, as the "Bond Registrar").

This bond shall not be valid or become obligatory for any purpose or be entitled to any security or benefit under the Bond Ordinance until the Certificate of Authentication hereon shall have been manually signed by the Bond Registrar.

1 This bond is one of a duly authorized series of bonds aggregating \$ \_\_\_\_\_  
2 in principal amount and designated as "Electric System Revenue Bonds, 199\_." This bond and  
3 the bonds of this series (the "Bonds") are issued under and pursuant to Ordinance No. 23514  
4 as amended and supplemented by Ordinance No. 23663, Ordinance No. 24073, Ordinance No.  
5 24296, Ordinance No. 25004, Ordinance No. 25089, Ordinance No. 25165, Ordinance  
6 No. 25489 and Ordinance No. 25930 of the City (together the "Bond Ordinance"), and under  
7 the authority of and in full compliance with the Constitution and laws of the State of  
8 Washington.

9 The Bonds are issued for the purpose of providing part of the funds necessary for  
10 financing capital improvements to the Electric System. The Bond Ordinance permits the  
11 issuance of Future Parity Bonds payable from the Bond Fund ranking on a parity with the 1985  
12 Bonds, the 1986 Bonds, the 1988 Bonds, the 1989 Bonds, the 1991 Bonds, the 1992 Bonds,  
13 the 1992B Bonds, the 1993 Bonds, the 1994 Bonds and the Bonds and secured by an equal  
14 charge and lien on the Net Revenues and permits the costs associated with certain Contract  
15 Resource Obligations to be included in the Electric System's Operating Expenses (as such  
16 terms are defined in the Bond Ordinance). The 1985 Bonds, the 1986 Bonds, the 1988 Bonds,  
17 the 1989 Bonds, the 1991 Bonds, the 1992 Bonds, the 1992B Bonds, the 1993 Bonds, the  
18 1994 Bonds, the Bonds and any Future Parity Bonds are hereinafter collectively referred to as  
19 the "Parity Bonds."

20 Copies of the Bond Ordinance are on file at the office of the City Clerk and at the  
21 principal office of each Paying Agent for this bond. Reference is hereby made to the Bond  
22 Ordinance and to any and all modifications and amendments thereof for a more complete  
23 description of the Revenues available for the payment of the principal of and interest on the  
24 Bonds and the rights and remedies of the owners of the Bonds with respect thereto, the terms  
25 and conditions upon which the Bonds have been issued, and the terms and conditions upon  
26 which this bond shall no longer be secured by the Bond Ordinance or deemed to be  
outstanding thereunder if money or certain specified securities sufficient for the payment of this  
bond shall have been set aside in a special account and held in trust for the payment thereof.  
Capitalized terms used herein and not otherwise defined shall have the meanings set forth in the  
Bond Ordinance.

Under the Bond Ordinance, the City is obligated to set aside and pay into the Bond  
Fund out of the Revenues of said Electric System certain fixed amounts sufficient to pay the  
principal of and interest and premium, if any, on all Parity Bonds at any time outstanding as the  
same become due and payable, all as is more fully provided in the Bond Ordinance. The Bonds  
and the interest thereon constitute the only charge against the Bond Fund and the amount of  
the Net Revenues pledged to said Bond Fund, as provided in the Bond Ordinance.

In and by the Bond Ordinance, the City covenants to establish, maintain and collect  
rates and charges for electric energy sold through the ownership or operation of the Electric

System and all other services, facilities and commodities sold, furnished or supplied by the City in connection with the ownership or operation of the Electric System which shall be fair and adequate to provide Revenues sufficient for the payment of the Parity Bonds and all payments which the City is obligated to set aside in the Bond Fund and for the proper operation and maintenance of the Electric System, including payment of certain Contract Resource Obligations, all necessary repairs, replacements and renewals thereof and other costs thereof, as provided in the Bond Ordinance.

The Bonds maturing on and after \_\_\_\_\_ 1, \_\_\_\_\_ are subject to redemption prior to maturity at the option of the City on any date on and after \_\_\_\_\_ 1, 20\_\_ in whole or in part, upon written notice as provided hereinafter, at the redemption prices with respect to each Bond (expressed as a percentage of the principal amount of the Bonds to be redeemed) set forth below, together with the interest, if any, accrued thereon to the date fixed for redemption:

Redemption Period	Redemption Price
-------------------	------------------

If less than all of the Bonds subject to optional redemption are to be called for redemption, the City shall choose the maturities to be redeemed. In the event that less than all of the Bonds of any maturity are called for redemption, the particular Bonds of such maturity to be redeemed shall be selected by lot by the Bond Registrar, or, so long as the Bonds are held in book-entry form, by the Securities Depository.

The Bonds maturing on \_\_\_\_\_ 1, \_\_\_\_\_ (hereinafter referred to as the "Term Bonds") shall be redeemed prior to maturity by lot, not later than \_\_\_\_\_ 1 in the years \_\_\_\_\_ through \_\_\_\_\_, inclusive, from amounts credited to the Bond Retirement Account in the Bond Fund as sinking fund installments therefor (to the extent such amounts have not been used to redeem or purchase such Bonds as provided below) and in the principal amounts as set forth below, upon written notice as provided hereinafter by payment of the principal amount thereof, together with the interest, if any, accrued thereon to the date fixed for redemption.

Year	Amount
------	--------

The City may purchase or redeem the Term Bonds through the application of part or all of the respective sinking fund installments therefor at any time prior to any \_\_\_\_\_ 1 due date.

21  
22  
23  
24  
25  
26

Any money not so used to redeem or to purchase such Term Bonds shall be substantially exhausted by application to the redemption of such bonds on such succeeding \_\_\_\_\_ 1. If, as of any \_\_\_\_\_ 1, the principal amount of Term Bonds retired by purchase or redemption from any source exceeds the cumulative requirement for sinking fund installments through such date, such excess may be credited against the sinking fund installment for the next fiscal year.

Written notice of redemption shall be given by first class mail, postage prepaid, not less than 30 days nor more than 60 days before the redemption date to the registered owners of the Bonds to be redeemed in whole or in part at their last addresses, if any, appearing on the Bond Register, but any defect with respect to the redemption of any bond shall not invalidate the redemption of any other bond. Notice of redemption having been given by mailing, as aforesaid, the Bonds so called for redemption shall on the date specified in such notice become due and payable at the applicable redemption price herein provided, and from and after the date so fixed for redemption (except as to any bond, or portion of any bond, not so redeemed in accordance with such call for redemption) interest on said Bonds so called for redemption shall cease to accrue.

A portion of the principal sum of this bond in the amount of \$5,000, or any integral multiple thereof, may be redeemed, and if less than all of the principal sum hereof is to be redeemed, in such case upon the surrender of this bond at the principal office of the Bond Registrar, there shall be issued to the registered owner, without charge therefor, for the then unredeemed balance of the principal sum hereof, fully registered bonds of like series, maturity and interest rate in any of the denominations authorized by the Bond Ordinance.

This bond shall be transferable by the registered owner at the principal offices of the Bond Registrar upon surrender and cancellation of this bond, and thereupon a new registered bond or bonds of the same principal amount and interest rate and maturity will be issued to the transferee as provided in the Bond Ordinance. The City, the Bond Registrar, the Paying Agents and any other person may treat the person in whose name this bond is registered as the absolute owner hereof for the purpose of receiving payment hereof and for all purposes and shall not be affected by any notice to the contrary, whether this bond be overdue or not.

It is hereby certified, recited and declared that all acts, conditions and things required by the Constitution and statutes of the State of Washington to exist, to have happened and to have been performed precedent to and in the issuance of this bond do exist, have happened and

Sections 7.1 through 7.3 of the Ordinance relating to the Revenue Fund and the accounts therein, the Bond Fund and the accounts therein, the Cumulative Reserve Fund, and the investment of money held for the credit of such Funds shall apply to the Bonds.

Section 5.4. Covenants to Secure Bonds. The provisions of Article IX of the Ordinance setting forth the covenants to secure Bonds, as amended by Article VII of the First Supplemental Ordinance, shall apply to the Bonds.

Section 5.5. Supplemental and Amendatory Ordinances. The provisions of Article X of the Ordinance relating to supplemental and amendatory ordinances shall apply to the Bonds.

Section 5.6. Defaults and Remedies. The provisions of Article XI of the Ordinance relating to defaults and remedies shall apply to the Bonds.

Section 5.7. Amendments and Bondowners' Meetings. The provisions of Article XII of the Ordinance relating to amendments and bondowners' meetings shall apply to the Bonds.

Section 5.8. Miscellaneous. The provisions of Article XIII of the Ordinance relating to the City's contract with the owners of Bonds, money held by the Paying Agent one year after the due date, the benefits of the Ordinance and severability shall apply to the Bonds.

Section 5.9. Rights of AMBAC. The provisions of Article X of the Second Supplemental Ordinance and Article VII of the Fifth Supplemental Ordinance and Article VIII of the Sixth Supplemental Ordinance relating to the rights of AMBAC Indemnity Corporation are incorporated herein by reference and shall be in force and effect so long as any 1988 Bond, 1992 Bond or 1992B Bond, respectively, is Outstanding and insured by the municipal bond guaranty insurance policy therein authorized.

Section 5.10. Reserve Subaccount. There is hereby established within the Reserve Account a special subaccount entitled the "199\_\_ Reserve Subaccount." Funds in such Reserve Subaccount shall be treated in all respects as other funds in the Reserve Account. The City shall make transfers into the Reserve Subaccount from money and investments in the

49

1 Reserve Account, from proceeds of the Bonds, or from other available money in amounts  
2 sufficient to satisfy the Reserve Account Requirement with respect to the Bonds.

3 The City is authorized to satisfy the requirements of Section 7.2 of the Ordinance with  
4 respect to the Reserve Account as to the Bonds through the use of Qualified Insurance, or a  
5 Qualified Letter of Credit, which may be purchased on the date of closing of the Bonds or after  
6 the issuance of the Bonds and substituted for amounts in the Reserve Subaccount pursuant to  
7 the provisions of Section 7.2 of the Ordinance.

#### 8 ARTICLE VI

#### 9 DISPOSITION OF BOND PROCEEDS

10 Section 6.1. Construction Account. A special fund of the City has heretofore been  
11 created and designated the "City of Tacoma Electric System Construction Fund" (the  
12 "Construction Fund"). There is hereby created within the Construction Fund a special account  
13 to be known as the "199\_\_ Bonds Construction Account" into which shall be deposited from  
14 the proceeds of sale of the Bonds. Money in the Construction Account shall be used for  
15 paying part of the costs of the acquisition, construction and installation of the additions and  
16 improvements described in Exhibit A, and for paying all expenses incidental thereto (including  
17 but not limited to costs of issuance of the Bonds, engineering, financing, legal or any other  
18 incidental costs) and for repaying any advances heretofore or hereafter made on account of  
19 such costs, and such money or so much thereof as may be necessary be and hereby is  
20 appropriated for such purpose.

21 All proceeds of the Bonds so deposited in the Construction Account shall be  
22 continuously and fully invested to the extent practicable in Permitted Investments. Interest  
23 earned and income or profits derived by virtue of such investments shall remain in the account  
24 and be used for the purposes for which the Bonds are issued or other lawful purposes. Money  
25 in the Construction Account may be transferred to the Bond Fund in such amounts as shall be

necessary to pay principal of and interest on Bonds, and may be used to pay any Rebate Amount.

Section 6.2. Disposition of Proceeds. The proceeds of the Bonds are hereby appropriated for the following purposes and shall be deposited as follows:

1. The amount equal to the interest accruing on the Bonds from their dated date to the date of their delivery shall be deposited in the Interest Account in the Bond Fund and invested in Permitted Investments.

2. To the extent permitted by the Code, the amount that when added to other money in the Reserve Account will ensure that the total amount in the Reserve Account equals the Reserve Account Requirement shall be deposited in the Reserve Account in the Bond Fund.

3. The balance of the Bond proceeds shall be deposited in the Construction Account and used for the purposes specified in Sections 6.1, including payment of costs of issuance of the Bonds.

ARTICLE VII

SALE OF BONDS

Section 7.1. Sale of Bonds. The Bonds may be sold by competitive or negotiated sale, which sale shall be approved by the Bond Sale Resolution.

Section 7.2. Official Statement; Insurance. The Director and/or Deputy Director of Utilities are authorized to prepare a preliminary official statement for the marketing of the Bonds and to solicit bids for bond insurance. The Bond Sale Resolution shall approve the preliminary and final official statements and any bond insurance.

ARTICLE VIII  
MISCELLANEOUS

Section 8.1. Defeasance. In the event that the City, in order to effect the payment, retirement or redemption of any Bond, sets aside in the Bond Fund or in another special account, advance refunding bond proceeds or other money lawfully available or direct obligations of the Department of the Treasury of the United States of America ("Government Obligations"), or any combination of such proceeds, money and/or Government Obligations, in amounts which, together with known earned income from the investment thereof are sufficient to redeem, retire or pay such Bond in accordance with its terms and to pay when due the interest and redemption premium, if any, thereon, and such proceeds, money and/or Government Obligations are irrevocably set aside and pledged for such purpose, then no further payments need be made into the Bond Fund for the payment of the principal of and interest on such Bond, and the owner of such Bond shall cease to be entitled to any lien, benefit or security of the Ordinance except the right to receive payment of principal, premium, if any, and interest from such special account, and such Bond shall be deemed not to be outstanding hereunder.

Section 8.2. Undertaking to Provide Ongoing Disclosure. In the Bond Sale Resolution the City shall undertake to provide certain ongoing disclosure for the benefit of the owners of the Bonds as required by Section (b)(5) of the Securities and Exchange Commission's Rule 15c2-12 under the Securities and Exchange Act of 1934.

Section 8.3. Severability. If any one or more of the provisions of this Eighth Supplemental Ordinance is or are held by any court of competent jurisdiction to be contrary to law, then such provision or provisions shall be null and void and shall be deemed separable from the remaining provisions and shall in no way affect the validity of the other provisions of this Eighth Supplemental Ordinance or the Bonds.

CLERK'S CERTIFICATE

I, the undersigned, the duly chosen, qualified and ~~acting~~ City Clerk of the City of Tacoma, Washington, and keeper of the records of the City Council (herein called the "Council"), DO HEREBY CERTIFY:

1. That the attached Ordinance No. 25930 (herein called the "Ordinance") is a true and correct copy of an Ordinance of the Council, as finally passed at a regular meeting of the Council held on the 23<sup>rd</sup> day of July, 1996 and duly recorded in my office.

2. That said meeting was duly convened and held in all respects in accordance with law, and to the extent required by law, due and proper notice of such meeting was given; that a legal quorum was present throughout the meeting and a legally sufficient number of members of the Council voted in the proper manner for the passage of said Ordinance; that all other requirements and proceedings incident to the proper adoption of said Ordinance have been duly fulfilled, carried out and otherwise observed, and that I am authorized to execute this certificate.

IN WITNESS WHEREOF, I have hereunto set my hand and affixed the official seal of the City as of this 24<sup>th</sup> day of July, 1996.

EXHIBIT A

TELECOMMUNICATIONS PROJECT

The Telecommunications Project will include some or all of the following elements:

Infrastructure improvements

Construct a hybrid fiber coax ("HFC") telecommunications infrastructure consisting of fiber optic rings and branches connecting nodes throughout the Light Division service area. This telecommunications system will be asymmetrically two-way capable. It will interconnect all Light Division substations. Connections may also be made with Light Division customers and with other providers of telecommunications infrastructure and services. This telecommunications system will have 500 channels. It will utilize existing Light Division rights-of-way.

Functions to be performed by infrastructure improvements

Through construction of the HFC telecommunications system, the Light Division's Telecommunications System will be capable of performing some or all of the following functions:

- conventional substation communications functions
- automated meter reading (electric and water)
- automated billing (electric and water)
- automated bill payment (electric and water)
- demand side management (DSM) functions, such as automated load (e.g. water heater) control
- provision of information to customers that is relevant to their energy and water purchasing decisions (e.g. information on time-of-use or "green" power rates)
- distribution automation
- remote turn on/turn off for electric and water customers
- city government communications functions
- CATV service
- transport of signals for service providers offering telecommunications services (e.g. Personal Communications Service (PCS), video on demand, high speed data, as well as conventional wired and wireless telecommunications services)
- Internet access service

4. Preparation of is requested for the City Council meeting of Tuesday July 16, 1996.

5. Summary Title/Recommendation: (A concise sentence, as it will appear on the Council Agenda)

Authorize a Bond Ordinance for City of Tacoma, Washington, Department of Public Utilities, Light Division to clarify its legal authority to develop telecommunication capacity for cable television outside the City limits, certain telecommunications services, and other uses.

6. Background Information/General Discussion: (Why is this request necessary? Are there legal requirements? What are the viable alternatives? Who has been involved in the process?)

Approval of this Bond Ordinance is necessary to confirm Light Division authority to engage in certain telecommunications activities. This determination will facilitate the decision-making process at the conclusion of the feasibility studies currently underway.

7. Financial Impact: (Future impact on the budget.)

8. List all material available as backup information for the request and indicate where filed:

RE: Proposed Bond Ordinance Approval and Authorization to Proceed  
With a Declaratory Judgment Legal Action to Confirm Authority to  
Construct and Operate a Fiber Optics System With Cable Television  
and Telecommunications Capabilities/Board Resolution U-9198

As we previously discussed with you, the Light Division is proceeding to move forward with a further in-depth analysis of the feasibility of a fiber optics system. We will not move forward with this project until we have reviewed this future analysis with you and obtained your further appropriate approval.

This enabling legislation ordinance is specifically necessary at this time, however, in order to seek and obtain a declaratory judgment by the appropriate Washington State court to clarify the legal authority for certain aspects of the project. Chief Assistant City Attorney Mark Bubenik's confidential memorandum dated June 21, 1996 which has been furnished to each of you delineates the legal issues and procedures involved.

Very truly yours,

A handwritten signature in cursive script, appearing to read 'Mark Crisson'.

ORDER GRANTING CITY OF  
TACOMA'S MOTION FOR  
SUMMARY JUDGMENT

This matter came on this day for hearing before the undersigned upon the City of Tacoma's ("City's") Motion for Summary Judgment. Plaintiff City of Tacoma appeared through its counsel, Elizabeth Thomas. Defendants Taxpayers and Ratepayers of the City of Tacoma appeared through their counsel, Ronald E. Thompson.

Counsel for the parties have drawn the Court's attention to the following documents: Summons, Complaint for Declaratory Judgment; Acceptance of Service; City of Tacoma's Motion for Summary Judgment; Memorandum in Support of Motion for Summary Judgment; Declaration of Jon Athow in Support of Motion for Summary Judgment; Defendants' Responsive Memorandum in Opposition to City of Tacoma's Motion for Summary Judgment; and City of Tacoma's Reply Brief.

Based on these documents, the Court finds that there is no genuine issue as to any material fact and that the facts set forth in the Declaration of Jon Athow are true.

ORDER GRANTING CITY OF TACOMA'S  
MOTION FOR SUMMARY JUDGMENT - 1

1 Having considered the documents identified by the parties, the arguments of counsel and the  
2 record herein, the Court concludes that the following order should be entered.

- 3 1. The Court has jurisdiction over the subject matter and parties in this action.
- 4 2. Tacoma City Ordinance No. 25930 (the "Bond Ordinance") was properly enacted.
- 5 3. The City has authority under the laws of the State of Washington and the United  
6 States to provide cable television service in the Light Division service area.

7 4. The City has authority under the laws of the State of Washington and the United  
8 States to lease telecommunications facilities and capacity to telecommunications providers.

9 ~~5. The City has authority under the laws of the State of Washington and the United  
10 States to issue the Bonds for the purposes set for in paragraphs (3) and (4) above and in the manner  
11 set forth in the Bond Ordinance.~~

12 DONE IN OPEN COURT this 13 day of December, 1996.

No. 96 2 09938 0

CITY OF TACOMA'S MOTION FOR  
SUMMARY JUDGMENT

Plaintiff City of Tacoma ("City") requests that this Court enter a judgment declaring that:

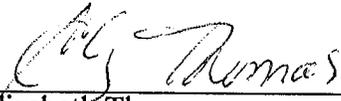

1. The Court has jurisdiction over the subject matter and parties in this action.
2. Tacoma City Ordinance No. 25930 (the "Bond Ordinance") was properly enacted.
3. The City has authority under the laws of the State of Washington and the United States to provide cable television service in the Light Division service area.
4. The City has authority under the laws of the State of Washington and the United States to lease telecommunications facilities and capacity to telecommunications providers.
5. The City has authority under the laws of the State of Washington and the United States to issue the Bonds for the purposes set for in paragraphs (3) and (4) above and in the manner set forth in the Bond Ordinance.

1 Grounds for this motion are set forth in the record in this matter, the accompanying  
2 memorandum in support of motion for summary judgment, and the declaration of Jon Athow.

## I. INTRODUCTION

The City of Tacoma (the "City") brought this declaratory judgment class action under RCW 7.24 and 7.25 and CR 23(B)(2) to confirm its authority to issue bonds for the purpose of constructing and operating a telecommunications system consisting of a hybrid fiber coaxial network (the "Telecommunications System"). On July 23, 1996, the Tacoma City Council adopted Ordinance No. 25930, which authorized the sale of Electric System revenue bonds (the "Revenue Bonds") in order to finance the first phase of constructing and operating the Telecommunications System. The City will utilize the Telecommunications System to enhance electric service to customers of its Light Division. The City may also utilize a portion of the Telecommunications System to provide cable television service to customers in the Light Division service area, and lease Telecommunications System facilities or capacity to providers of telecommunications services.

## II. RELIEF REQUESTED

The City requests that the Court enter judgment declaring that:

1. The Court has jurisdiction over the subject matter and parties in this action.
2. Tacoma City Ordinance No. 25930 (the "Bond Ordinance") was properly enacted.
3. The City has authority under the laws of the State of Washington and the United States to provide cable television service in the Light Division service area.
4. The City has authority under the laws of the State of Washington and the United States to lease telecommunications facilities and capacity to telecommunications providers.
5. The City has authority under the laws of the State of Washington and the United States to issue the Bonds for the purposes set for in paragraphs (3) and (4) above and in the manner set forth in the Bond Ordinance.

**III. STATEMENT OF ISSUES**

1. Whether the City has authority under state law to provide cable television service.
2. Whether the City has authority under federal and state law to lease telecommunications facilities and capacity to telecommunications providers.

**IV. EVIDENCE RELIED UPON**

The City believes that the following facts are undisputed in every material respect. These facts are contained in the Declaration of Jon Athow in Support of the City's Motion for Summary Judgment ("Athow Decl. ").

Plaintiff, the City of Tacoma, is a municipal corporation and a city of the first class of the State of Washington. The Defendants herein are taxpayers of the City of Tacoma and ratepayers of its electrical utility, which is known as the Light Division of the Department of Public Utilities (the "Light Division"). Harold E. Nielsen, Jr., the taxpayer and ratepayer representative, is a resident and taxpayer of the City and a customer of the Light Division. The City currently owns and operates, through its Light Division, an electric utility (the "Electric System") for the purpose of providing electricity and other energy services throughout the City and other portions of Pierce County.

The Telecommunications System will be used to improve the speed and capability of the existing real-time communications among certain Electric System substations, and to extend such real-time communications to the remaining substations. In addition, the Telecommunications System may be used to enhance such existing energy services as demand management, identification of outages, meter reading, billing and payment, and resource dispatch. The Telecommunications System may be used to perform similar functions for the City's provision of water service. The City's authority to issue the Revenue Bonds to finance the purposes discussed in this paragraph is not at issue.

1 The City may also utilize a portion of the Telecommunications System to provide cable  
2 television service to customers within the Light Division service area, and to lease facilities or  
3 capacity to providers of video-on-demand, data transport, telephony, and other telecommunications  
4 services. By providing cable television service and/or leasing facilities or capacity to  
5 telecommunications providers, the City can ensure a range of choices for consumers, provide public  
6 interest television programming, and improve the availability of competitively priced  
7 telecommunications services.

8 The City also estimates that by providing cable television service and/or leasing facilities or  
9 capacity, it could generate substantial revenue to help offset the costs of constructing and operating  
10 the Telecommunications System. Because the infrastructure for the telemetry improvements designed  
11 to meet Electric System needs represents a substantial portion of the costs of the Telecommunications  
12 System, the relative cost of these additional revenue-producing capabilities is low.<sup>1</sup>

13 The Tacoma City Council enacted Ordinance No. 25930 (the "Bond Ordinance") on July 23,  
14 1996, at a regular meeting.<sup>2</sup> The Bond Ordinance provides for the construction and operation of a  
15 Telecommunications System within the Light Division and for the issuance and sale of Electric  
16 System revenue bonds in the aggregate principal amount of \$1,000,000.

## 17 V. ARGUMENT

### 18 A. Summary Judgment Standard

19 Summary judgment is appropriate to dispose of actions or parts thereof when no genuine  
20 issues of material fact exist or when only a question of law exists. CR 56(c). "The burden is on the  
21 moving party to demonstrate that there is no issue as to a material fact." *Scott v. Pacific West*  
22 *Mountain Resort*, 119 Wn. 2d 484, 502-03 (1992). If the party seeking summary judgment  
23 successfully carries its initial burden, the burden shifts to the non-moving party to establish the

24 <sup>1</sup> Declaration of Jon Athow in Support of Motion for Summary Judgment ("Athow Decl."), ¶ 10.

25 <sup>2</sup> A true and correct copy of the Bond Ordinance is attached as Exhibit C to Mr. Athow's Declaration.  
26

1 existence of the facts on which it has the burden of proof at trial. *Young v. Key Pharmaceuticals,*  
2 *Inc.*, 112 Wn. 2d 216, 225 (1989). The non-moving party must respond with specific facts and  
3 cannot rely on bare allegations contained in his or her pleadings. *Baldwin v. Sisters of Providence,*  
4 112 Wn. 2d 127, 132 (1989). Conclusory statements or argumentative assertions raised in affidavits  
5 are insufficient to raise an issue of fact and do not preclude summary judgment. *Grimwood v.*  
6 *University of Puget Sound, Inc.*, 110 Wn. 2d 355, 359-60 (1988).

7 In the instant case, there are no issues of material fact. The facts bearing on the City's  
8 authority to provide cable television service and to lease telecommunications facilities and capacity to  
9 telecommunications providers are undisputed. Only questions of law remain. The case should  
10 therefore be resolved on summary judgment.

11 **B. The City Has Authority Under Washington Statutes To Construct and Operate the**  
12 **Entire Telecommunications System and To Lease Portions of the System's Capacity or**  
13 **Facilities.**

14 1. **A Charter City Has Broad Powers.**

15 The Washington Constitution grants broad powers to first-class charter cities such as Tacoma.  
16 It states, "Any city containing a population of ten thousand inhabitants, or more, shall be permitted to  
17 frame a charter for its own government, consistent with and subject to the Constitution and laws of  
18 this state . . . ." Wash. Const. art XI, § 10. Under Chapter 35 RCW, a charter city has "all the  
19 powers which are conferred upon incorporated cities and towns by this title or other laws of the state,  
20 and all such powers as are usually exercised by municipal corporations of like character and degree."  
21 RCW 35.22.570. In addition to this "omnibus" grant of power, RCW 35.22.900 provides that grants  
22 of power to first-class cities must be liberally construed to carry out the objectives of chapter 35.22  
23 RCW. *See also Citizens for Financially Responsible Government v. City of Spokane*, 99 Wn. 339,  
24 343 (1983).

25 In light of these constitutional and statutory provisions, the Washington Supreme Court has  
26 held that "the only limitation on the power of cities of the first class is that their action cannot

1 contravene any constitutional provision or any legislative enactment. . . . [A] city of the first class has  
2 as broad legislative powers as the state, except when restricted by enactments of the state legislature."  
3 *Winkenwerder v. City of Yakima*, 52 Wn. 2d 617, 622 (1958).

4 2. A City Has Even Broader Powers When It Is Operating a Utility.

5 The powers of a city under Washington law are especially broad when the city is performing a  
6 proprietary, as distinguished from a governmental, function. In *Tacoma v. Taxpayers*, 108 Wn.2d  
7 679 (1987), the Washington Supreme Court stated that while municipal authority must be narrowly  
8 construed when the function is governmental, "when the Legislature authorizes a municipality to  
9 engage in a business, it may exercise its business powers much in the same way as a private individual.  
10 . . . We have viewed the Legislature as implicitly authorizing a municipality to make all contracts, and  
11 to engage in any undertaking necessary to make its municipal electric utility system efficient and  
12 beneficial to the public." *Id.* at 694-95. See also *Hite v. Public Utility Dist. No. 2*, 112 Wn.2d 456,  
13 459 (1989) ("It is clear that in the production and sale of electricity, a municipal corporation acts in  
14 its proprietary capacity. . . . In that capacity, a municipal corporation acts as the proprietor of a  
15 business enterprise for the private advantage of the city and may exercise its business powers in much  
16 the same way as a private individual or corporation." ).<sup>3</sup>

17 In addition, the courts have recognized many instances in which public utility districts, which  
18 are municipal corporations with more limited powers than cities, may engage in activities that are  
19 incidental to their expressly authorized functions of providing electric or other utility service. See,  
20 e.g., *Puget Power and Light Co. v. Public Utility District No. 1 of Chelan County*, 17 Wn. App. 861  
21 (1977) (involving public utility district's provision of recreational facilities); *Snohomish County*  
22 *Public Utility District No. 1 v. Broadview Television Co.*, 91 Wn.2d 3, 8 (1978) (upholding district's  
23  
24

25 <sup>3</sup> *Hite* and *Taxpayers* made clear that the holding in *Chemical Bank v. Washington Public Power Supply*  
26 *System*, 99 Wn.2d 772 (1983), does not detract from the broad authority that cities enjoy when acting in a proprietary  
capacity.

1 authority to lease pole attachments even though activity is "only incidental to the accomplishment of  
2 the district's primary purpose, the distribution and sale of electricity").

3 3. The City Has Authority Under Washington Statutes To Provide Telecommunications  
4 Services.

5 The City's statutory powers include the authority to provide telecommunications services.  
6 First, the City, as a first class charter city having code city powers as well, has all powers not denied  
7 by law, "including operating and supplying of utilities and municipal services commonly or  
8 conveniently rendered by cities or towns." RCW 35A.11.020. Tacoma may conveniently render  
9 telecommunications services because the Light Division has an existing citywide electric system of  
10 connections to customers' homes, because it has existing billing relationships with customers, and  
11 because it can provide services economically. Second, there is no express statutory prohibition  
12 against city provision of municipal telecommunications services. *Winkenwerder, supra*. To the  
13 contrary, the Legislature has acknowledged that cities provide communications services through  
14 enacting a statute providing for the burying of city-owned communications facilities. RCW  
15 35.96.030. Finally, the Legislature has determined that competitive markets for telecommunications  
16 services serve the public interest. RCW 80.36.300; *In re Electric Lightwave, Inc.*, 123 Wn.2d 530,  
17 538-39 (1994) (noting that "it is the state's policy to promote diversity in the supply of  
18 telecommunications services and products in telecommunications markets throughout the state").  
19 The City's provision of telecommunications services will make the market more competitive, thus  
20 furthering the public interest recognized by the Legislature.

21 4. Washington Case Law Recognizes the City's Authority To Provide  
22 Telecommunications Services.

23 The Washington Supreme Court in *Issaquah v. Teleprompter Corp.*, 93 Wn. 2d 567 (1980),  
24 recognized the power of a code city under RCW 35A.11.020 to utilize its telecommunications system  
25 to provide telecommunications services, including cable television service. The Court held in  
26 *Teleprompter* that a city was authorized by statute to operate a cable television system under the

1 broad authority of RCW 35A.11.020 because there was "no general law which conflicts with the  
2 city's authority under the optional municipal code to operate such a system." *Id.* At 575. First class  
3 charter cities such as Tacoma have all the powers granted to code cities. RCW 35.22.570. Thus,  
4 under *Teleprompter* the City is clearly authorized to use its Telecommunications System to offer  
5 cable television service.

6 Tacoma's authority is not limited to the provision of cable television service.  
7 *Teleprompter* provides no basis for distinguishing cable television from other telecommunications  
8 services. The Washington Legislature views cable television as a telecommunications service. *See,*  
9 *e.g.*, RCW 80.04.010 (defining "telecommunications" as "the transmission of information by wire,  
10 radio, *optical cable*, electromagnetic, or other similar means) (emphasis added); RCW 80.36.370  
11 (exempting cable television from the Washington Utilities and Transportation Commission's  
12 regulation of telecommunications services). Thus, *Teleprompter* clarifies the authority for Tacoma to  
13 provide telecommunications services.

14 5. The City Has Authority To Lease City-Owned Telecommunications Facilities

15 The City has authority under its charter and under state law to lease excess capacity and  
16 facilities of its Telecommunications System to other telecommunications providers. Tacoma's Charter  
17 expressly permits the City to lease City property. Tacoma, Wash., Code § 9.1. Under state law, a  
18 first class city has the power to:

19 control the finances and property of the corporation, and to acquire, by purchase and  
20 otherwise, such lands and other property as may be necessary for any part of the  
21 corporate uses provided for by its charter, and to dispose of any such property as the  
interests of the corporation may, from time to time, require.

22 RCW 22.280(3). The Washington Supreme Court has upheld the authority of cities to lease  
23 municipal property to private parties as long as the lease does not interfere with public use.  
24 *Winkenwerder, supra* at 624. Cities are specifically authorized to lease surplus utility property and  
25 equipment. Ch. 35.94 RCW.

1 C. Federal Law Requires that the City Be Allowed To Provide Telecommunications  
2 Service.

3 The City's authority to provide telecommunications services must be recognized under the  
4 Telecommunications Act of 1996, Pub. L. No. 104-104, § 253, 110 Stat. 70 (1996) (the "Act"), as a  
5 consequence of the Act's prohibition against barriers to the entry of any entity into the  
6 telecommunications market. Federal law can preempt state utility regulation. *Public Utility District*  
7 *No. 1 of Pend Oreille County v. Federal Power Commission*, 308 F.2d 318 (D.C. Cir. 1962) (holding  
8 that the Federal Power Act preempted Washington statute purporting to limit city's ability to  
9 condemn property for power plant). The *Pend Oreille* court found that preemption was required  
10 merely by implication of a federal law. Here, the case for preemption is far stronger because the Act  
11 expressly preempts state interference in the telecommunications market. Section 253 of the Act  
12 states, "No state or local statute or regulation, or other state or local legal requirement, may prohibit  
13 or have the effect of prohibiting the ability of *any entity* to provide *any* interstate or intrastate  
14 telecommunications service." Telecommunications Act of 1996, Pub. L. No. 104-104, § 253, 110  
15 Stat. 70 (1996) (emphasis added). There is no language in either the statute or its legislative history  
16 exempting cities from the law's application. To the contrary, a House Committee Report states that  
17 Section 253 "is intended to remove all barriers to entry in the provision of telecommunications  
18 services." House Rep. No. 104-458. A state law precluding telecommunications services constitutes  
19 a legal requirement. Thus, any Washington law that would prohibit Tacoma from providing  
20 telecommunications service is expressly preempted by the Act.

21 In addition, the thrust of the Telecommunications Act is to encourage the availability and  
22 affordability of telecommunications services. *See, e.g.*, Section 254, requiring various mechanisms to  
23 promote universal service. Tacoma is well positioned to make telecommunications services available  
24 to the public at a competitive price, thereby furthering this federal policy.  
25  
26

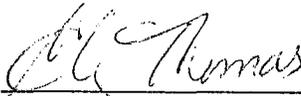

1  
2 **VI. CONCLUSION**

3 Under its broad powers as a first-class charter city, the City has authority to use a portion of  
4 its Telecommunications System to provide cable television service and to lease a portion of its  
5 Telecommunications System facilities or capacity to other telecommunications service providers.  
6 Federal law expressly bars any requirement that would undercut this authority. Because there is no  
7 dispute over the material facts underlying its authority, the City is therefore entitled to judgment as a  
8 matter of law.

9 DATED this 5<sup>th</sup> day of November, 1996.

No. 96 2 09938 0

(PROPOSED)  
ORDER GRANTING CITY OF  
TACOMA'S MOTION FOR  
SUMMARY JUDGMENT

This matter came on this day for hearing before the undersigned upon the City of Tacoma's ("City's") Motion for Summary Judgment. Plaintiff City of Tacoma appeared through its counsel, Elizabeth Thomas. Defendants Taxpayers and Ratepayers of the City of Tacoma appeared through their counsel, Ronald E. Thompson.

Counsel for the parties have drawn the Court's attention to the following documents: Summons, Complaint for Declaratory Judgment; Acceptance of Service; City of Tacoma's Motion for Summary Judgment; Memorandum in Support of Motion for Summary Judgment; Second Declaration of Jon Athow in Support of Motion for Summary Judgment; Defendants' Responsive Memorandum in Opposition to City of Tacoma's Motion for Summary Judgment; Declarations of Heidi Imhoff, Thomas Pagano, and Cary Deaton; City of Tacoma's Reply Brief; and Declaration of Steven J. Klein.

ORDER GRANTING CITY OF TACOMA'S  
MOTION FOR SUMMARY JUDGMENT - 1

CITY OF TACOMA'S REPLY BRIEF

I. INTRODUCTION

The City of Tacoma (the "City") has moved for summary judgment on the fifth of five issues brought in this action:<sup>1</sup> Whether the City has authority to issue revenue bonds to finance the first phase of construction and operation of a telecommunications system consisting of a hybrid fiber coaxial network (the "Telecommunications System"). In its Motion on this final issue, the City

<sup>1</sup> On December 13, 1996, this Court ruled on four of the City's five requested declarations. The Court held that (1) the Court has jurisdiction over the subject matter and parties in this action; (2) Tacoma Ordinance No. 25930 (the "Bond Ordinance"), which provides for the issuance and sale of Electric System revenue bonds in the aggregate principal amount of \$1,000,000 (the "Bonds") in order to finance the first phase of constructing and operating the Telecommunications System, was properly enacted; (3) the City has authority under the laws of the State of Washington and the United States to provide cable television service in the service area of the Light Division of the City's Department of Public Utilities (the "Light Division"); and (4) the City has authority under the laws of the State of Washington and the United States to lease telecommunications facilities and capacity to telecommunications providers. See Order Granting City of Tacoma's Motion for Summary Judgment dated December 13, 1996 (the "Order").

1 explained how issuing the bonds is a legislative act subject to review only for such deficiencies as  
2 fraud, bad faith, or ultra vires actions. The City noted that no facts relating to fraud, bad faith, etc.,  
3 have been alleged and that through the Order, the Court has already determined that construction and  
4 operation of the Telecommunications System is not ultra vires.

5 Defendants' responsive brief did not take issue with any of these points. Nor did their brief  
6 attempt to show facts sufficient to satisfy the stringent legal standard for review of legislative acts.  
7 Defendants' sole legal argument is that the Tacoma City Charter (the "Charter") requires a public  
8 vote authorizing issuance of the Bonds. However, the Charter does not require a vote of the people  
9 under the facts of this case because no such vote is required for the issuance of *revenue* bonds.

10 Defendants' brief also argues extensively that revenues from the Telecommunications System  
11 may be inadequate to cover debt service on the Bonds. This factual argument is simply not material  
12 to the question of the City's authority to issue the Bonds, and therefore cannot raise a "genuine issue  
13 as to any *material* fact[.]" CR 56 (emphasis supplied). Moreover, the issue is outside of the scope of  
14 the Court's review.

## 15 II. STATEMENT OF ISSUES

16 1. Whether a Tacoma City Charter provision that requires a vote of the people to  
17 authorize certain general obligation bonds should be read to require such a vote for the issuance of  
18 Electric System revenue bonds for the first phase of the Telecommunications Project.

19 2. Whether the adequacy of revenues from the Telecommunications System is material to  
20 whether the Tacoma City Council acted within its legislative discretion in approving the Bond  
21 Ordinance and determining to proceed with the Telecommunications Project.

## 22 III. STATEMENT OF FACTS

23 For purposes of this Motion for Summary Judgment, the City accepts Defendants' truly  
24 factual statements. However, the Court should not consider Defendants' unsupported conclusions or  
25  
26

1 the statements of their experts that are beyond the scope of their expertise.<sup>2</sup> Many of Defendants'  
2 unsupported conclusions are belied by admissible evidence. For example, the brief makes an  
3 inflammatory and irrelevant reference to the Washington Public Power Supply System,<sup>3</sup> claiming that  
4 the Tacoma general fund and City taxpayers will be burdened with debt if Light Division revenues fail  
5 to cover debt service on the Bonds.

6 Defendants' have alleged no specific facts in support of their conclusion that the  
7 Telecommunications Project could become an obligation of the general fund. The Bond Ordinance  
8 expressly states that it provides "for the issuance and sale of the City's Electric System Revenue  
9 Bonds[.]" Complaint, Ex. 1, title page; *see also* id. at sections 1.2.B ("Bonds" defined to mean  
10 revenue bonds); 2.3 (Bonds' only lien is upon net revenues of electric system); 2.4 (finding that  
11 sufficient revenues over and above operation and maintenance will be available to pay debt service on  
12 Bonds); 3.1 and 4.7(a) (reiterating that the type of bond involved is a revenue bond).

13 The difference between revenue bonds and general obligation bonds is highly significant. The  
14 City's obligation under a revenue bond is limited to funds available from the Electric System (which  
15 includes the Telecommunications Project). Bond holders will buy a bond that says, "Principal of and  
16 interest on this bond are payable solely out of the special fund of the City known as the Electric  
17 System Revenue Bond Fund[.]" Bond Ordinance section 4.7(a). The bond will also make clear that  
18 the City is obligated to set aside only "Revenues of said Electric System" to pay off the bonds. *Id.*  
19 Thus, no general fund dollars are committed and no general obligation is incurred under the Bond  
20 Ordinance. By the same token, revenues from electric customers are retained by the Light Division  
21  
22

---

23 <sup>2</sup> Defendants' submission of a declaration from Mr. Pagano fails to comply with the rules for disclosure of  
24 experts. Defendants have not identified Mr. Pagano as a witness, despite the fact that the cutoff for disclosure of  
25 witnesses was in November 1996. The City was not aware that he had been retained prior to receiving Defendants  
26 response on this motion, and have had no opportunity to conduct discovery. Yet in order to put this matter before the  
Court expeditiously, the City is not seeking discovery at this time.

<sup>3</sup> *See* Defendants' Responsive Memorandum in Opposition to City of Tacoma's Motion for Summary Judgment  
("Defendants' Response") at 4.

1 and are not available to the General Fund. In sum, there is no exposure to the City general fund or  
2 City taxpayers.

3 In a similarly unsupported and unsupportable allegation, Defendants claim that the City has  
4 failed to fully consider the legality of the issuance of the Bonds. *See* Defendants' Response at 4.  
5 However, the whole purpose of this action is to ensure full consideration of whether the Bonds are  
6 legal prior to proceeding with the Telecommunications System.<sup>4</sup>

7 Defendants also assert that the City's financial projections ignore current trends with regard to  
8 technology, regulations and competition. *See* Defendants' Response at 5. This argument is  
9 immaterial for reasons detailed below. Moreover, the Telecommunications Study was prepared by a  
10 team of experts who devoted considerable attention to trends in the telecommunications industry.  
11 *See* Klein Decl. at Paragraphs 7-11. Defendants allege without benefit of supporting authority that  
12 the Tacoma City Council ("City Council") had reservations about financing the Telecommunications  
13 System. *See* Defendants' Response at 5. However, it is an undisputed fact that the City Council  
14 unanimously adopted the Resolution authorizing the City to proceed with the Telecommunications  
15 System.<sup>5</sup>

#### 16 IV. ARGUMENT

##### 17 A. To Defeat a Motion for Summary Judgment, Defendants Must Present Admissible 18 Evidence To Establish the Existence of an Issue of Material Fact.

19 Summary judgment is appropriate to resolve actions or parts thereof when no genuine issues  
20 of material fact exist or when only a question of law exists. CR 56(c). "The burden is on the moving  
21 party to demonstrate that there is no issue as to a material fact." *Scott v. Pacific West Mountain*  
22 *Resort*, 119 Wn. 2d 484, 502-03 (1992). If the party seeking summary judgment successfully carries  
23 its initial burden, the burden shifts to the non-moving party to establish the existence of the facts on

24 <sup>4</sup> The City's approach to this Telecommunications Project, seeking confirmation of its authority from this Court  
25 before proceeding, is markedly different from the course of events involving WPPSS. There, no declaration of  
26 authority was sought before construction began.

<sup>5</sup> Second Declaratoin of Jon Athow in Support of Motion for Summary Judgment dated April 11, 1997,  
("Second Athow Decl."), paragraph 6.

1 asserted failure to comply with the Charter provision. Therefore, they have implicitly admitted that  
2 the City has authority to issue the Bonds if their Charter argument fails.

3  
4 **C. Charter Section 4.2 Is Irrelevant Because the Question of Whether the City May**  
5 **Finance the Telecommunications System with General Obligation Bonds Is Not Before**  
6 **the Court.**

7 Defendants claim that under the Tacoma City Charter, a vote of the people is required in order  
8 to incur general indebtedness for the Telecommunications Project. This may be true, but the  
9 argument is wholly misplaced. Under the Charter, no vote of the people is required for utility system  
10 acquisitions unless “general indebtedness is incurred by the city.”<sup>7</sup> The Bonds are revenue bonds.  
11 Under Washington law, the principal and interest on revenue bonds is payable only from specified  
12 municipal revenues, and such bonds “shall **not** constitute . . . a general obligation” of the municipal  
13 corporation. RCW 39.46.150. Therefore, no amount of argument over the assumptions and  
14 conclusions of the financial plan can convert the bonds at issue in this case from revenue bonds into  
15 general obligation bonds. No matter how poorly the Telecommunications Project might perform,  
16 holders of the Bonds would have no claim upon the general fund. Poor performance could not  
17 convert the Bonds from revenue bonds into general obligation bonds. Accordingly, no vote of the  
18 people is required for issuance of the Bonds.

19 The City could have chosen to issue general obligation bonds for the Telecommunications  
20 System. However, at this time, it has elected to issue only revenue bonds. If the City in the future  
21 wished to issue general obligations bonds as a funding source for the Telecommunications System,  
22 the Charter provision might apply. However, concerns about general obligation bonds at this point  
23 are purely speculative.

24 <sup>7</sup> The Charter provision upon which Defendants rely is Section 4.2 It provides:

25 The city may purchase, acquire, or construct any public utility system, or part thereof, or make any  
26 additions and betterments thereto or extensions thereof, without submitting the proposition to the voters,  
provided no general indebtedness is incurred by the city. If such indebtedness is to be incurred, approval by  
the electors, in the manner provided by state law, shall be required.

IV. CONCLUSION

This Court has already ruled that the City has authority to construct and operate a telecommunications system for purposes of enhancing electrical service and for providing telecommunications services and leasing telecommunications facilities and capacity. This Court's role is not to second-guess the City Council's and Public Utility Board's carefully considered decisions about whether and how the Telecommunications System should be developed. The only question before the Court is whether the City can issue revenue bonds to finance activities that, according to the Court, it is authorized to carry on. Defendants' sole legal argument, that the City must obtain a vote of the people for such bonds, fails because revenue bonds are not a "general obligation." Defendants' remaining factual arguments are either unsupported by admissible evidence or do not address the standard under which the Court must review legislative acts. Therefore, the Court should grant the City's Motion for Summary Judgment.

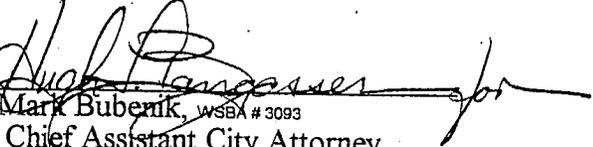

DATED this 5th day of May, 1997.

No. 96-2-09938-0

DECLARATION OF STEVEN J. KLEIN  
IN SUPPORT OF CITY'S REPLY

1. My name is Steve Klein. I am the Superintendent of the Light Division of Tacoma Public Utilities. The purpose of this declaration is to support the City of Tacoma's reply brief on its motion for summary judgment. I am over the age of eighteen, competent to testify in this matter, and make this declaration based upon my own personal knowledge.

2. The City of Tacoma, through its Light Division, plans to construct and operate telecommunications facilities and services to enhance the Light Division's ability to provide highly reliable, cost-effective and convenient electric service to its customers (the "Telecommunications Project"). Such a system would also be capable of carrying other telecommunications services, including cable television service.

DECLARATION OF STEVEN J. KLEIN  
IN SUPPORT OF CITY'S REPLY BRIEF- 1

J:\ET\24624-00.015\2FP33Z.DOC

COPY  
526

1           3.       As my staff has described previously, the City adopted the Bond Ordinance  
2 (Complaint, Ex. 1) in July 1996 for the purpose of partially funding the Telecommunications Project.<sup>1</sup>  
3 The City's purpose in bringing this litigation is to test the validity of the Bond Ordinance, which  
4 provides for the issuance of revenue bonds only. The City is not asking the Court to determine  
5 whether the City could issue any other type of bonds.

6           4.       The Bond Ordinance unequivocally provides for the issuance of revenue bonds rather  
7 than general obligation bonds. The Bond Ordinance expressly states that it provides "for the issuance  
8 and sale of the City's Electric System Revenue Bonds[.]" Complaint, Ex. 1, title page; *see also id.* at  
9 sections 1.2.B ("Bonds" defined to mean revenue bonds); 2.3 (Bonds' only lien is upon net revenues  
10 of electric system); 2.4 (finding that sufficient revenues over and above operation and maintenance  
11 will be available to pay debt service on Bonds); 3.1 and 4.7(a) (reiterating that the type of bond  
12 involved is a revenue bond).

13           5.       The difference between revenue bonds and general obligation bonds is highly  
14 significant. The City's obligation under a revenue bond is limited to funds available from the Electric  
15 System (which includes the Telecommunications Project). Bond holders will buy a bond that says,  
16 "Principal of and interest on this bond are payable solely out of the special fund of the City known as  
17 the Electric System Revenue Bond Fund[.]" Bond Ordinance section 4.7(a). The bond will also  
18 make clear that the City is obligated to set aside only "Revenues of said Electric System" to pay off  
19 the bonds. *Id.* Thus, no general fund dollars are committed and no general obligation is incurred  
20 under the Bond Ordinance. By the same token, revenues from electric customers are retained by the  
21 Light Division and are not available to the General Fund.

22           6.       The only other funding source that is currently contemplated for the  
23 Telecommunications Project is a surplus of approximately \$40 million in the Light Division current  
24

25 \_\_\_\_\_  
26 <sup>1</sup> Declaration of Jon Athow in Support of Motion or Summary Judgment (Nov. 5, 1996),  
paragraph 15.

1 fund. This is the money that I mentioned at a City Council meeting on April 8, 1997.<sup>2</sup> This money is  
2 generated exclusively by Light Division activities, primarily sales of electric power. As I stated, that  
3 \$40 million might otherwise be used to buy down debt. But contrary to the unsupported implication  
4 of Defendants' Response, the money would only be used to buy down Light Division debt, not  
5 general fund or other City debt. Because the Telecommunications Project is an element of the  
6 Electric System, it will enhance the capability and value of the Electric System, and will be owned and  
7 operated by the Light Division, it is an appropriate investment for Light Division surplus.

8 7. The Light Division produced a Telecommunications Study<sup>3</sup> that includes a Business  
9 Plan. The Business Plan was *unanimously* approved by both the Tacoma Public Utility Board and the  
10 Tacoma City Council in April 1997.

11 8. The Business Plan is based upon assumptions that are fully substantiated in light of  
12 current trends in the telecommunications industry. It involved a review of the industry both nationally  
13 and locally. *Id.* at page 1. It was based on input from a wide range of experts. The  
14 Telecommunications Study, including the Business Plan, was prepared by a multidisciplinary group  
15 called the Telecommunications Study Team. This team of approximately twenty people included Jon  
16 Athow, other Light Division staff and outside consultants practicing in the areas of  
17 telecommunications, finance, business planning, marketing and the law.

18 9. The Telecommunications Study also included an economic development study  
19 produced expressly for purposes of analyzing whether the City should proceed with the  
20 Telecommunications Project. *See* Appendix D. Two of the five authors of this economic  
21 development study hold doctorate degrees, and the authors consulted with about 20 other  
22 professionals in the community.

23  
24  
25 <sup>2</sup> My comments are excerpted in the Declaration of Heidi Imhoff dated April 28, 1997.  
26 <sup>3</sup> This study, which is contained in a three-ring binder, was submitted as Exhibit D to Jon Athow's declaration dated April 11, 1997.

1           10. Through the Telecommunications Study, the City carefully considered issues similar to  
2 those raised by Defendants' witnesses. *See, e.g.*, chapter on options (fifth section of Study). This  
3 section of the Study analyzes in detail the various options for telecommunications services from  
4 various private providers, considering such factors as types of service offered, current and potential  
5 technology utilized by different providers, projections for future growth and financial risk, investment  
6 profile, etc. This options analysis is thoroughly documented through 73 endnotes. *See also*  
7 Appendix B (Light Division response to TCI letter regarding municipal ownership of  
8 telecommunication and cable systems).

9           11. The members of the Utility Board and the members of the City Council participated  
10 actively in analysis of financial plan issues. After the Telecommunications Study was complete, they  
11 held a three-hour work session on the Telecommunications Project and entertained about two hours  
12 of public testimony and discussion before unanimously voting to proceed with the Project as set forth  
13 in the Study. Discussion was vigorous both at the work session and at the public hearing.

14           12. As Light Division staff explained to the Board and Council, and as the Council itself  
15 found in the Resolution approving the Project,<sup>4</sup> a key purpose of the Telecommunications Project is  
16 to protect and enhance the value of the Light Division's existing electric utility assets by having a  
17 telecommunications system that is sophisticated enough to enable the Light Division to compete  
18 effectively in the rapidly evolving electric industry. To fulfill this important purpose of protecting the  
19 value of existing Light Division *electric* assets, it is not at all necessary that the revenues from the  
20 provision of telecommunications and cable television services cover the entire cost of the  
21 Telecommunications Project.

22           13. The Council and Board were aware when they voted to proceed that revenues from  
23 the provision of telecommunications and cable services might fall short of projections. As Light  
24 Division staff informed the Board and Council, under a "worst case" shortfall, electric rates might

25 \_\_\_\_\_  
26 <sup>4</sup> This resolution as adopted is attached as Exhibit B to Jon Athow's declaration dated April 11,  
1997.

1 have to be increased by as much as 2.5%. This scenario assumed that we incurred all the cost of  
2 building the system but obtained no revenues from provision of cable television service or from  
3 provision of telecommunications service to third parties. This "worst case" scenario is significantly  
4 worse than the scenario that Defendants' experts present.

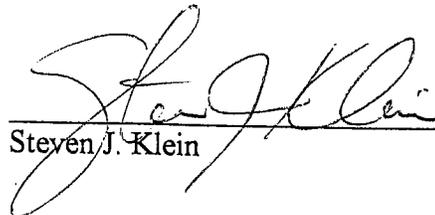

5 14. Light Division staff explained to the City Council our view that even if the  
6 Telecommunications Project's revenues fell short of projections, even to the point of a worst case  
7 scenario (resulting in a 2.5% rate increase), still the City should proceed with the Project in order to  
8 secure the value of the City's electric system assets. I believe that in voting to proceed with the  
9 Project, the Council fully understood and accepted the risk of an electric rate increase.

10 15. Thus, it is not terribly important whether the Telecommunications Project's own  
11 revenues will be sufficient to cover its costs. Similarly, although I believe our Financial Plan is very  
12 sound, including our assumptions regarding interest rates and other factors, whether we used  
13 precisely correct assumptions is not significant.

14 16. The important question is whether Light Division revenues will be sufficient to cover  
15 Telecommunications Project costs, since we are issuing electric system revenue bonds for the Project  
16 and other Project costs will be funded by accumulated Light Division revenues. Obviously, Light  
17 Division revenues are sufficient. Indeed, Light Division revenues are 40 times greater than worst-  
18 case Project costs. Thus there is zero possibility that the Telecommunications Project could  
19 somehow affect the City's ~~general~~ fund and its taxpayers.

20 I swear under the penalty of perjury of the laws of the State of Washington that the foregoing  
21 is true and correct.

22 Dated: May 5, 1997 at Tacoma, Washington.

Mr. Ray E. Corpuz, Jr.  
City Manager  
Tacoma, Washington

Dear Ray:

I am forwarding for distribution to the Mayor and City Council copies of a recent article from the Internet. MSNBC has written a very informative piece about Tacoma Power's Click!Network. It was written complete with slides of our work in progress. I know the City Council, as well as the Board, will be proud of this national coverage.

Thank you for your assistance in this matter.

Very truly yours,

A handwritten signature in cursive script that reads 'Lydia Stevenson'.

## Tacoma Power to give TCI a jolt

### Municipal utility prepares to jump into cable

By David Bowermaster  
MSNBC

June 28 — While AT&T officials congratulate themselves on their \$48 billion purchase of Tele-Communications Inc., they might want to keep an eye on the Northwest corner of TCI's sprawling cable empire. Tacoma Power, the city-owned utility of Tacoma, Wash., will soon turn on a \$100 million broadband communications network that will enable it to sell cable TV and Internet access as well as water and electricity — making it a direct competitor to TCI.

IF THE PROJECT is successful, it is sure to encourage more municipal utilities to take on TCI and other cable monopolies across the country.

The effort is already getting attention from local governments weary of residents' complaints about high prices and poor service from their incumbent cable provider. Tired of waiting for new competitors to shake things up, many cities and towns are thinking about either constructing their own cable network, or encouraging their local utility to do it for them. Tacoma Power's ClickNetwork is the largest such effort to date.

Concerned cable industry officials are launching a public relations counter-offensive, citing studies that question the viability of such projects and complaining that access to public funds give government-backed systems an unfair competitive edge.

"Financially, they just don't work," says Steven Effros, president of the Cable Telecommunications Association in Washington, D.C.

TCI considered ClickNetwork enough of a threat that Leo Hindery, president of the \$7.6 billion cable powerhouse and a Tacoma native, traveled to his old hometown last October to lobby against it.

The visit did not go well. Hindery's first meeting deteriorated into an ugly shouting match when Tacoma City Council members ripped TCI for what they considered its history of abysmal service. And Hindery's offer to work with Tacoma Power (then called Tacoma City Light) and upgrade TCI's cable system to meet the needs of both the city and the utility was disregarded as too little, too late.

"Leo looked us in the eye and said, 'I understand there have been broken promises. I understand there have been a lot of tears. I'm here to make things right,'" recalls city council member Bill Baarsma. "But to have that discussion on the day of the vote created really an impossible situation for us."

By a

Operator-foreman Craig Moore, of Westland Inc., a

Moore, of Westland Inc., a general contractor from Gig Harbor, Wash., uses the "hole hog" to bore a trench in northwest Tacoma prior to placing conduit for ClickNetwork. The neighborhood will be one of the first to receive the new cable service.

Terr Harris / Special to MSNBC

unanimous 9-0 margin, the City Council authorized Tacoma Power to spend \$67 million to get the project under way. The utility will have to go back to the council for approval to spend the additional \$22.4 million needed to finish the job. The funds will come from a cash reserve of more than \$100 million that the

utility has accumulated by aggressively buying and selling power on the open market.

Deb Stewart, a 20-year cable industry veteran recruited to run the show, has pushed an aggressive build-out schedule. An official launch date is not set, but Stewart says cable service will be available to selected Tacoma neighborhoods in a few weeks, and all 200,000 residents will have access to both cable and high-speed Internet access from ClickNetwork by the end of 1999.

From the outset the network will offer somewhere between 75 and 85 channels of video programming. Until recently TCI's 50,000 customers in Tacoma have received just 40 channels, but TCI spokesman Steven Kipp says the company is spending "tens of millions of dollars" on upgrades in Tacoma that are boosting capacity to around 70 channels. The upgrades have reached about 20,000 customers so far and should hit the rest by the end of the year.

TCI is also beta-testing the At Home high-speed Internet access service in Tacoma and should start rolling it out in the fall. Stewart says ClickNetwork will begin offering high-speed Web surfing capabilities at roughly the same time.

Stewart refused to disclose pricing for either service, but says they will be "extremely competitive" with TCI.

### **FRINGE BENEFITS**

Tacoma Power did not have cable on its mind when it first considered building a fiber-optic network three years ago. Rather, the initial plan was to build an internal network that would improve communications between the company's far flung electric, water and railway operations. Deregulation of the power business was looming, and Tacoma Power knew it needed to operate more efficiently in a competitive world.

'The system is not being built as a cable system. We have got a multilayered business model.'

— **DEB STEWART**  
ClickNetwork

Consultants from Stanford Research Institute brought in to review the project told Tacoma Power officials that the utility could vastly improve the economics of the planned network by extending it throughout the city and selling a mix of cable TV, high-speed Internet access and telephone service.

"The system is not being built as a cable system," insists Stewart, general manager of ClickNetwork. "We have got a multilayered business model."

The distinction is an important one, intended to counter arguments that the financial returns of a cable "overbuild" — a new network infrastructure built over the same area as an existing one — can not cover the costs.

A recent study by telecommunications consulting firm The Strategis Group examined the prospects for utility-built cable networks in cities with 5,000 homes, 50,000 homes and 150,000 homes. Even if the municipal utility secured a 50 percent market share and also sold high-speed Internet access services, The Strategis Group concluded that in all cases "an overbuilder would not generate sufficient cash flow from operations of the cable system to pay back its debt."

Carol Mann, one of the study's authors, says the review did not account for potential revenues from telephone service — which ClickNetwork plans to offer eventually — or cost savings from the utility's internal operations. Stewart says those added benefits will enable Click to pay off with just a 25 percent cable market share.

"I would not recommend that any cable operator, or a municipality, do an overbuild just to get a 50 percent market share of cable customers," Stewart says.

#### **WILL EFFORT SPREAD?**

Projects like ClickNetwork are also extremely important to the core business of utilities like Tacoma Power, says Brian Tournier, a municipal bond analyst with A.G. Edwards & Sons, since new communications services will help discourage customers from fleeing to new competitors.

"In almost every case the interest in telecommunications and cable is being driven by the desire to keep their electric services competitive with other electricity providers," Tournier says. Utilities are looking at "whatever they can provide to give them more stability in their customer base," he says.

So far most of the new municipal utility cable projects have been built in small, often remote towns. But if the Tacoma project does well, big cities are likely to jump into the fray as well. If that happens, conflicts with the cable industry are sure to grow in intensity.

"If you're a small municipality, it's likely you can do this and not incite the wrath of the cable industry,"

Utilities are looking at 'whatever they can provide to give them more stability in their customer base.'

— **BRIAN TOURNIER**  
A.G. Edwards & Sons

Tournier says, "but you will see very bitter fights in any large cities where a municipal systems tries to introduce cable service. The existing companies will fight them tooth and nail."

**Transparency Disclosures**  
**City of Tacoma, Dept. of Public Utilities, Light Division dba Click! Network**  
**FRN 0007466642**

Type of ISP Service: Click! Network provides wired broadband Internet access service using the Data Over Cable System Interface Specification (DOCSIS) platform, on a wholesale basis for resale by qualified Internet Service Providers

Effective date: June 11, 2018

Submission type: Initial Disclosure

Version History: Original 6/11/2018

Revision 1 - speeds 2/1/2019

Click! Network, a section of Tacoma Power, strives to provide information to customers and end users about all of its services in a transparent manner. Additionally, the Federal Communications Commission (FCC) requires that Click! Network and other providers of broadband Internet access services disclose certain information about those Internet services. The purpose of this document, in addition to the disclosures, terms and conditions posted at [www.clickcabletv.com](http://www.clickcabletv.com), is to assist consumers in finding the information needed to make an informed decision about which services best meet their needs.

Click! Network operates a network consisting of a fiber optic backbone, fiber optic rings, and a hybrid fiber-coaxial (HFC) distribution system throughout Tacoma, University Place, Fircrest, Fife, and portions of Lakewood and unincorporated Pierce County that fall with the service territory of Tacoma Power, a division of Tacoma Public Utilities owned by the City of Tacoma, Washington. These disclosures will be updated as necessary. Questions can be directed to 253-502-8900 or [customercare@click-network.com](mailto:customercare@click-network.com).

Use of broadband Internet access services on the Click! network is governed by:

[Internet Acceptable Use Policy](#)

[Bandwidth and Network Management Policy](#)

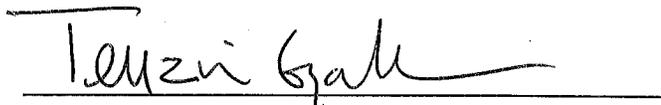

[Open Internet Policy](#)

These policies can be accessed at [www.clickcabletv.com/legal-notices](http://www.clickcabletv.com/legal-notices). In addition, there may be governing policies published by the Internet Service Provider with whom the end user establishes a service account. Please refer to the ISP's disclosure statements and/or website for those details.

Certification of Filing Accuracy

I, Tenzin Gyaltzen, General Manager of Click! Network, hereby certify that I have examined the information contained in the disclosure and that all information contained in the submission is true and correct to the best of my knowledge, information and belief.

Date:

  
Tenzin Gyaltzen, General Manager

## Network Management Practices

### General Summary

Click! Network maintains a system on which the Internet is offered to customers, through authorized and trusted third parties, as an open platform providing customer choice with full access to all lawful content, services, sites, platforms, network compatible types of equipment, and applications. The Click! network is designed for usage by typical residential and commercial users of broadband Internet access services. Bandwidth on the network is a limited, shared resource among Click! Network's customers (including commercial customers, carriers and Click! Network Authorized ISPs/resellers and their customers and end-users) and other users of Click! Network's broadband Internet access service. Click! Network actively manages its network to ensure that activity resulting in excessive or sustained bandwidth consumption, which may burden the network and affect other users, is limited. Accordingly, such usage may be restricted.

Click! Network strives to provide users the best experience when using the network and may use tools and techniques to manage its network, deliver the service, and ensure compliance with its policies. These tools and techniques are dynamic, like the network and its usage, and can and do change frequently. For example, these network management activities may include (i) identifying spam and preventing its delivery to user e-mail accounts, (ii) detecting malicious Internet traffic and preventing the distribution of viruses or other harmful code or content, (iii) limiting speeds during periods of extended congestion, (iv) requiring an upgrade or purchase of a different Internet service and (v) using other tools or techniques that Click! Network may be required to implement in order to meet its goal of delivering the best broadband Internet experience to all users.

Click! Network does not:

- Discriminate among specific uses, or class of uses, on its network
- Impair, degrade or delay VoIP applications or services that compete with its video services or services of its affiliates
- Impair, degrade, delay or otherwise inhibit access by customers to lawful content, applications, services or non-harmful devices, subject to reasonable network management
- Impair free expression by slowing traffic from certain web sites
- Demand pay-for-priority or similar arrangements that directly or indirectly favor certain traffic over other traffic
- Prioritize its own applications, services or devices or those of its affiliates
- Block lawful content, applications, services, or non-harmful devices, subject to reasonable network management

With regard to specific disclosures required by the Federal Communications Commission, Click! Network's practices and policies are as follows:

### Blocking

Click! Network does not block any lawful content or application, subject to reasonable network management practices and Click! Network's Internet Acceptable Use Policy, Bandwidth and Network Policy, and Open Internet Policy.

### Throttling

Click! Network does not discriminate among specific uses, or class of uses, on its network, throttle traffic from certain web sites, or otherwise impair, degrade, delay or otherwise inhibit access by customers to lawful content, applications, services or non-harmful devices, subject to reasonable network management.

### Affiliated Prioritization

Click! Network does not prioritize its own applications, services or devices or those of its affiliates.

### Paid Prioritization

Click! Network does not prioritize any traffic over its network in exchange for consideration.

### Congestion Management

Congestion management on the network is approached from an agnostic perspective and with the objective of ensuring an optimum experience for all users of the network. Click! Network uses industry standard tools and generally accepted best practices to protect its network and customers' experience. Specifically, Click! Network actively monitors activity on its network and takes action as needed to augment capacity, balance usage across network service groups and mitigate excessive use. It is difficult to forecast congestion, so Click! Network cannot describe its frequency; however, Click! Network endeavors to minimize the frequency and extent of congestion to the greatest extent practicable.

The network management tools and techniques employed by Click! Network do not and will not target specific usages or applications (such as peer-to-peer) and instead focus in a content-neutral manner on bandwidth usage in real time, with the goal of providing reasonable and

equitable access to the network for all similarly situated customers. In other words, to the extent that the use of network management practices may affect the performance or other characteristics of Internet service, they are designed to affect all similarly situated customers equally.

Excessive use means bandwidth or data usage that is significantly higher than typical usage for which our network is designed, and will be determined in the sole judgment of Click! Network. Excessive users consume so much data that their usage could negatively impact the service provided to other customers. In order to ensure an optimized Internet experience for all users, data guidelines have been assigned to all Internet services, and are subject to change. Current data usage guidelines are always available at <https://www.clickcabletv.com/about/legal-notice/bandwidth-and-network-policy/>.

If Click! Network in its sole but reasonable discretion determines that a user has exceeded the Excessive Use threshold or is using the service in a manner significantly uncharacteristic of a typical user of the service to which they have subscribed, Click! Network may (a) adjust, suspend, limit or terminate service at any time and without notice; or (b) require the user to upgrade their service level or pay additional fees in accordance with the ISP's then-current, applicable rates and charges for such service; or (c) use any technology to be chosen by Click! Network at its sole discretion to limit the user's service for purposes of conserving bandwidth.

Residential Package	Package Description	Data Guideline per Billing Cycle
10 Mbps	10 Mbps down/1 Mbps up	300 GB
25 Mbps	25 Mbps down/2 Mbps up	300 GB
50 Mbps	50 Mbps down/5 Mbps up	350 GB
75 Mbps	75 Mbps down/8 Mbps up	400 GB
100 Mbps	100 Mbps down/10 Mbps up	500 GB

Commercial Package	Package Description	Data Guideline per Billing Cycle
10 Mbps	10 Mbps down/2 Mbps up	300 GB
25 Mbps	25 Mbps down/5 Mbps up	400 GB
50 Mbps	50 Mbps down/8 Mbps up	500 GB
75 Mbps	75 Mbps down/10 Mbps up	600 GB
100 Mbps	100 Mbps down/10 Mbps up	800 GB

## Application-Specific Behavior

Click! Network does not block or rate control any specific protocols, or modify any protocol field in ways not prescribed by the protocol standard. Certain ports may be blocked in residential packages for the purpose of spam prevention and network security. No functions of the network are designed to inhibit or favor certain applications or classes of applications.

Prioritization is employed in certain Internet package configurations that are designed for voice traffic. The configuration assigns a higher processing priority (QoS) to voice traffic and the cable modem termination system processes that traffic before lesser priority data packets when it detects network congestion. The purpose of this QoS assignment is to maintain voice quality.

Users are expected at all times to comply with Click! Network's Internet Acceptable Use Policy, Bandwidth and Network Policy, and Open Internet Policy, which do prohibit certain activities which the network is not designed to support. For instance, users may not run a server in connection with Click! Network's residential services, nor provide network services to others via Click! Network's residential services. Examples of prohibited uses include, but are not limited to, running servers for mail (pop3 & smtp), http, https, FTP, IRC, DHCP and multi-user interactive forums.

## Device Attachment Rules

Click! Network allows devices to be attached to the network that are CableLabs certified DOCSIS 3.0 or higher, that are fully supported for firmware upgrades by the manufacturer, and that do not harm the network.

## Security

Click! Network manages its network in an effort to provide an optimum experience for its customers by using industry standard tools and generally accepted best practices and policies to protect its network and customer information. Click! Network reserves the right to utilize network tools and practices to prevent harmful or illegal activity, denial of service attacks, viruses or other malicious code, or transfer of unlawful content including copyright infringing files. Click! Network notifies its Internet Service Provider partners when allegations of such activities are received specific to individual end users, and reserves the right to terminate service to end users without notice for repeated allegations of violations. Click! Network cannot guarantee the prevention of spam, viruses, security attacks, or other actions which can affect service. End users are required to take all necessary steps to secure and manage the use of the services received over the Click! network. To prevent such events, Click! Network monitors its

network and will take active measures to minimize the effects of spam, viruses, security attacks, and other actions which could impact an optimum experience for customers.

### Performance Characteristics

#### Service Description and Performance

Click! Network consists of a system of fiber optic and coaxial cabling and associated equipment that enables provision of broadband Internet access service using the DOCSIS 3.0 specification through a cable modem. Click! operates an Open Access Network, whereby service is delivered to end use customers by qualified third party Internet Service Providers, not by Click! Network. Retail pricing of services is set by the Internet Service Providers and therefore cannot be included in these disclosures. Retail pricing information is available directly from each third-party reseller.

Currently authorized third party resellers include:

Advanced Stream

253-627-8000

[www.advancedstream.com](http://www.advancedstream.com)

[info@advancedstream.com](mailto:info@advancedstream.com)

Rainier Connect

253-683-4100

[www.rainierconnect.com](http://www.rainierconnect.com)

[customerservice@rainierconnect.com](mailto:customerservice@rainierconnect.com)

As of the effective date of this Disclosure Notice, the following residential services are made available for resale:

Package	Advertised Download	Advertised Upload	Actual Download	Actual Upload	Latency
Ultimate	100 Mbps	10 Mbps	101.9 Mbps	10.6 Mbps	9 ms
Extreme	75 Mbps	8 Mbps	75.2 Mbps	8.5 Mbps	9 ms
Turbo	50 Mbps	5 Mbps	50.6 Mbps	4.9 Mbps	9 ms
Fast	25 Mbps	2 Mbps	25.6 Mbps	1.94 Mbps	10 ms
Standard	10 Mbps	1 Mbps	10.4 Mbps	1.02 Mbps	9 ms

Actual performance measurements were initially collected in July 2018 and again collected in January 2019. These tests were run using a standard laptop with a 1 Gbps interface. The cable modem used for testing was an Arris CM3200 with 32x8 channel bonding capabilities. The tests were performed from an edge point on the network to an external speed test server located in a city about 35 miles from the network.

## Impact of Non-Broadband Internet Access Service Data Services

Wholesale commercial Ethernet Data Services up to 10 Gbps are delivered over a separate fiber network for resale by data carriers. Interoperability of the Carrier Ethernet grade of products is certified by the Metro Ethernet Forum (MEF). Other services on the network include transmission of data from certain Internet-connected power meters. These power meters transmit data only within the network, never acquire a public IP address, and transmit data on a frequency separate from the commercial broadband Internet access service traffic. The operation of the power meters and carrier Ethernet product have no impact on the performance of the commercial Internet access products.

## Commercial Terms

### General Description

Certain Internet services are configured to provide additional features for use by commercial enterprises. The advertised and actual speed performance of the commercial services are the same as the above residential services. Commercial package configurations allow for running mail servers (pop3 and smtp), http and https, FTP, IRC and DHCP. Static IP addresses are included with commercial packages. Retail services are governed by the policies described above and available at [www.clickcabletv.com/legal-notices](http://www.clickcabletv.com/legal-notices). End users are also bound by the terms of service of the third-party reseller of Click! Network services to which they subscribe.

### Prices

As detailed previously, Click! Network offers retail services exclusively through unaffiliated third-party resellers. Pricing information, including monthly prices, usage-based fees, early termination fees, or other costs for additional services, are not within Click! Network's control and therefore are not included in this disclosure.

### Privacy Policies

Personally identifiable information of Internet service end users is collected as supplied by the Internet Service Providers for use in providing Services to those end users. This information is not used for any non-network management purposes and is not shared with third parties by Click! Network. As a municipal corporation of the state of Washington, Click! Network is subject to the Washington State Public Records Act (Chapter 42.56, R.C.W.). We may disclose personally identifiable information pursuant to a valid request made under the Public Records Act if and as required to do so by the Act and/or pursuant to a court order, subpoena, civil investigative demand or other legal process.

Click! Network does not inspect or store network traffic, except to the extent network tools associate IP address assignments to individual end users as identified by the Internet Service Provider.

#### Redress Options

Informal complaints or questions may be directed to 253-502-8900 or [customercare@click-network.com](mailto:customercare@click-network.com). Informal complaints will be investigated and the results will be communicated to the complainant. Formal complaints may be made in writing, including all pertinent information and the complainant's name, address, telephone number and email address (if applicable) and sent to 3628 S. 35<sup>th</sup> St., Tacoma, WA 98409, or delivered in person to that address during business hours as listed on our website at [www.clickcabletv.com](http://www.clickcabletv.com). Responses to formal, written complaints will be delivered in writing.

**Click! Network**  
**Telecommunications Installation and Services Agreement**

**(For Multiple Dwelling Units)**

This AGREEMENT made effective this 1 day of February 2018 ("Effective Date") by and between The City of Tacoma, Dept. of Public Utilities, Light Division, dba Click! Network (hereinafter referred to as "Click!") and Napoleon Group LLC the title owner of record of, or said owner's duly authorized property manager for, the following described residential real property ("Owner") located at 1515 Tacoma Avenue South, Tacoma, Pierce County, Washington, consisting of 135 Units in One separate building(s), and commonly known as The Napoleon (the "Premises");

**WHEREAS,**

A. Click! is the owner and operator of a telecommunications system for provision of cable television and other communications and data transmission services and desires to provide such services to the Premises subject to the terms and conditions of this Agreement; and

B. Owner desires to make available to the residents of the Premises telecommunications services such as that provided by Click! and is prepared to grant Click! access to the Premises to install Facilities (defined below) and a license for on-going operation of such Facilities subject to the terms and conditions of this Agreement

**NOW, THEREFORE,** in consideration of the foregoing Recitals, the mutual promises herein contained, and for other good and valuable consideration, the receipt and sufficiency of which is hereby expressly acknowledged, the Parties hereby agree to the following covenants, terms and conditions:

**1. Rights Granted:**

A. Access to the Premises to Construct and Install Telecommunications Facilities: Owner grants to Click!, the right to enter and access the Premises for the purpose of installing telecommunications facilities in, at, and upon the Premises including, but not limited to, all wiring, cables, conduits, electronic and other equipment, antennae, switches, amplifiers, filters, traps, signal receiving/scrambling/decoding equipment, key lock box(es) and key(s), and any additional equipment that may be requested or required during the Term of this Agreement for provision of cable television and/or telecommunications services at the Premises ("Facilities" and collectively "Telecommunications System").

B. Access to Operate, Maintain, Repair, Inspect and/or Remove Telecommunications Facilities: Owner further grants to Click! the right, license and privilege, during the Initial Term and any Renewal Term(s), to enter and reasonably access the Premises for the purpose of operating, repairing, maintaining, inspecting and/or removing any and all

Facilities comprising the Telecommunications System installed by Click! at the Premises. Without limiting the foregoing, it is understood that Click! shall be permitted to:

- (1) Make reasonable periodic inspections of the Facilities and the condition of the Premises where those Facilities are located;
- (2) Reasonably advertise and promote telecommunications products and services offerings to residents at the Premises. Such promotion may include the distribution of advertising material, market research surveys, and/or sales of telecommunication services to residents at the Premises. Owner understands that Click! will sell directly to individual residents and contract the same for additional and/or premium telecommunications services; and
- (3) Enter and access the Premises for up to sixty (60) days following expiration or termination of the Term of this Agreement to allow Click! to remove its Facilities from the Premises.

C. Related Rights and Limitations: With respect to the rights granted under this Section 1, it is mutually understood and agreed that Click!'s entry and access rights shall:

- (1) Include any entry and/or access rights held by the Owner pursuant to easement, right-of-way, right-of-entry or license as reasonably needed by Click!.
- (2) Be subject to the prior and continuing right of Owner to access and otherwise use any and all parts of the Premises, rights-of-way, and/or easements concurrently with Click! and/or any other person or persons.
- (3) Be subject to any conditions, covenants, restrictions, or encumbrances affecting the Premises pursuant to deed, easement, or other recorded instrument and/or which Owner has provided written notice of to Click! at the time of Click!'s installation of Facilities.
- (4) Be deemed material obligations of Owner in performance under this Agreement.

## **2. Work to be Performed**

A. Scope of Work. Owner authorizes Click! to install a Telecommunications System in, at and upon the Premises, including all appropriate Facilities for Click!'s use and operation thereof, per the specifications and assumptions stated in the Scope of Work attached hereto as Exhibit A and by this reference incorporated into this Agreement.

B. Work Standards, Coordination of Installations, and Repairs.

- (1) In installing, maintaining, repairing, modifying, upgrading, replacing and removing any of Click!'s Facilities, Click! shall strictly adhere to all current and subsequently adopted building and zoning codes applicable to construction and/or installation of Facilities at the Premises. Click! shall obtain all required permits from the applicable governmental authorities before commencing any work requiring a permit. Click! shall, at its expense, promptly return the buildings, improvements and landscape that have been altered or affected by virtue of any installation, maintenance, repair, modification, upgrade, replacement or removal of Click!'s

facilities to substantially the same state and condition that existed prior to the work, ordinary wear and tear excepted.

- (2) Click! and the Owner, or Owner's authorized agent, will cooperatively coordinate installation work for each Unit on the Premises.
- (3) During the Term of this Agreement, Click! will make all repairs, replacements and improvements to its Facilities as reasonably necessary to maintain such Facilities in good repair and operating condition. In the event of damage to or destruction of Facilities due to and arising from the intentional willful misconduct or gross negligence of the Owner and/or Owner's employees, agents or tenants, the Owner agrees to reimburse Click! for all reasonable expenses of labor and materials incurred by Click! to repair or replace such Facilities.
- (4) All duties specified in this Section are deemed material obligations in performance under this Agreement.

### **3. Ownership and Use of Click! Telecommunications System and related Equipment**

- A. The Telecommunications System serving the Premises, including all Facilities installed and/or subsequently modified by Click!, shall be and will remain the personal property of Click!. No equipment or part of the Facilities comprising the Telecommunications System shall be considered a fixture of the Premises; except that all cables permanently affixed to the Premises by Click! will become part of the realty and will not be removed upon termination. Owner shall not make, or allow any third party to make, any alterations or additions to the Telecommunications System.
- B. Click! shall have the exclusive right to access, use, control, and operate the Click! installed Telecommunications System and all of the Facilities comprising such System. Owner shall not use any Click! owned Facilities to provide telecommunications or other services to or at the Premises via any other system, technology, vendor or distributor.
- C. All rights and duties specified in this Section are deemed material to performance under this Agreement.

### **4. Term of Agreement**

- A. The Initial Term of this Agreement shall commence on the Effective Date first written above and shall continue for five (5) years unless terminated earlier in accordance with the terms of this Agreement.
- B. The Term of this Agreement will be automatically renewed at the end of the Initial Term for an additional one (1) year term ("Renewal Term") and thereafter for additional one (1) year successive Renewal Terms, unless or until a written notice of termination is provided by either Party to the other no earlier than 180 days and no later than 90 days prior to the expiration of the then current Renewal Term.

## **Exhibit A**

### **Scope of Work**

#### **Installation Work**

*Click! and Owner, pursuant to the Telecommunications Installation and Services Agreement to which this Scope of Work is attached, hereby acknowledge and mutually agree to the following specifications and assumptions for Facilities installation work:*

1. Click! Network will pull fiber optic service feeds into and upon the Premises for the purpose of installing telecommunications Facilities for service to multiple dwelling units (MDUs) located at the Premises.
2. Click! Network will pull fiber into building through placed conduit and place conduit from meter room to main demarcation/distribution room. Click! will place an enclosure in building's main demarcation/communications room to house electronics.
3. Click! Network will place fiber services to each floor in owner provided riser duct and place distribution equipment on each/every other floor per building plans. Owner will place backboard for Click! where distribution equipment will be mounted.
4. Click! will install one microduct to each unit and one fiber home run to each unit from demark to each unit outlet hub. Microduct will be installed according to bend radius requirements of manufacturer and coordination of placement will be with project manager.
5. Access into property for installation of system will be coordinated through Owner/project manager.
6. All work is to be completed for reasonable approval by the Owner/Manager.
7. An on-site meeting prior to construction is available upon request for scheduling and coordination of MDU installation work.

Owner will provide access to all areas of the Premises for the installation, maintenance, service and operation of Click! Facilities pursuant to the Agreement.

# EXHIBIT 18

## A Sampling of Municipal Broadband Utilities in the USA

Compiled by Mitchell Shook, June 22, 2019

Below is a sampling of municipal utilities that, in addition to their traditional services of water and power, also provide Broadband as an additional utility function. These are only a few of many such publicly-owned utility systems now offering Broadband in the USA. The descriptions are direct quotes taken from the utility's own websites about their services.

1. Lafayette Utilities System has a long and proud history of serving the people of Lafayette. LUS offers quality electric, water, wastewater and telecommunications services, and because we are customer owned and operated, our customers have the power to control our standard of service. Lafayette enjoys the lowest residential electric utility rates in the state. LUS helps to keep Lafayette taxes low. Approximately \$22 million of in-lieu-of-tax (ILOT) is transferred to the Consolidated Government General Fund each year. This ILOT contribution supports services like police and fire protection, parks and recreation, and community development. Lafayette, LA <https://lus.org/about-lus/history-and-service>

2. Reedsburg Utility Commission, is one of this country's 2,200 public power systems — a utility owned by the people and the community it serves. Reedsburg Utility began its roots in 1894 by providing electric and water to its public-spirited citizens. Today, Reedsburg's public-spirited citizens can also receive Light Speed Internet, TV, and Telephone services from their own hometown team! We are one Utility and one Community, and it's all about service! We live in this community with you. We provide competent, reliable, high quality, courteous, honest, and responsive service. We treat you like a neighbor, because we are your neighbors. Public power systems like Reedsburg Utility Commission are non-profit and have one main purpose — to provide customers with the best services at the lowest possible cost. Reedsburg, Wisconsin. <http://reedsburgutility.com/about-us>

3. Clarksville Department of Electricity (CDE), offers Electricity, Internet, Digital TV and Telephone services., Our world-class Fiber Optic Network keeps electric costs low and allows us to deliver exceptional products and constant innovation. The network provides savings of over \$1 million annually in operating costs and provides over \$5 million annually in income for electrical grid improvements. Additionally, access to our network increases home values by 3% or an average of over \$5,000, according to the Fiber to the Home Council. Based in large part on access to the superior digital products provided by CDE Lightband, Clarksville has been designated a first 50 "Next Century City." Clarksville, Tennessee. <https://cdelightband.com/about-us/>

4. Jackson Energy Authority We provide reliable electric, gas, propane, water, wastewater, and broadband services. Our fiber optic network, owned by our community, provides cable tv, high speed internet, and telephone service to our customers. We serve about 40,000 residences, businesses and industry in Jackson, TN and parts of Madison County. Jackson, Tennessee. <https://www.jaxenergy.com/about/>

5. Since 1942 Spencer Municipal Utilities has provided electric and water services. In 1997, SMU added municipal communications to the utility, for cable, internet, and telephone service, to be owned and operated on behalf of the citizens. <https://smunet.net/about-us/history/>
6. Dalton Utilities has operated as a public utility since 1889. Dalton Utilities provides potable water, electrical, natural gas and wastewater treatment services to the City of Dalton and portions of Whitfield, Murray, Gordon, Catoosa and Floyd counties. Beginning in 1999, Dalton Utilities branched into telecommunications with broadband services to large industrial/commercial customers. In 2003, Dalton Utilities launched its OptiLink family of services and now provides broadband, cable tv, telephone and internet services to area residents and businesses. Dalton Utilities serves approximately 50,000 customers and employs over 300 area residents. <https://www.dutil.com/about/>
7. Longmont Power & Communications (LPC) is the City's not-for-profit electric and internet services utility. Our goal is to deliver outstanding electric and internet service experiences to our customer-owners while providing exceptional value and benefit to our community. For more than 100 years, we have provided innovative service that has kept electric rates low while improving reliability and convenience for Longmont businesses and citizens. <https://www.longmontcolorado.gov/departments/departments-e-m/longmont-power-communications>
8. Vernon's municipal Light & Power Department provides businesses reliable and low-cost utility services. Vernon Light & Power has operated for more than 70 years. Today, it provides electricity, gas, and fiber optic service. <http://www.cityofvernon.org/business/201-powering-business-competitiveness>
9. Coon Rapids Municipal Utilities is a locally owned and locally controlled utility company. We provide electric, natural gas, water, wastewater, and communication products and services. CRMU was created by the community....to serve the community. While many companies exist to turn a profit and earn money for their stockholders, at CRMU, we exist to provide exceptional customer service for our customers and value for the community. CRMU was established in 1937 because the people of Coon Rapids were tired of receiving poor service and paying high prices for electricity. <http://www.crmu.net/>
10. Cedar Falls Utilities. When you live in Cedar Falls, CFU is your utility. The Electric, Water, Gas and Communications Utilities are owned by the community. That means our only focus is providing dependable service at the best possible value to Cedar Falls homes and businesses. Learn more about your Utilities on these pages and through our monthly newsletter. <https://www.cfu.net/utilities/>

11. Welcome to Marshall Municipal Utilities. As a citizen of Marshall and a customer of MMU, you are part owner of a utility company. MMU is municipally owned, so you have a direct and personal interest in our business. As a municipal utility, we have several distinct advantages. Stockholders do not own our electric, water, wastewater, internet, and natural gas transportation utilities - the community does. Not paying dividends or making money for out-of-town investors helps us keep your rates low. Also, local control and management means we make decisions with your best interest in mind.

Marshall, Missouri. <http://www.mmumo.net/about.php>

12. Harlan Municipal Utilities is Harlan's premier provider of Electric, Gas, Water and Telecommunications products and services. Proudly serving Harlan for over 128 years.

<http://www.harlanet.com/>

13. Lenox Municipal Utilities & Communications is a municipally owned entity providing electric and water. In addition, our communication system is state of the art. We provide television, internet, and telephone services to the residents of Lenox, IA.

<https://sites.google.com/lenoxschools.org/lenox-municipal-utilities/home?authuser=0>

14. Waverly Utilities is an award-winning national leader in electric reliability, safety and renewable energy. In 2016, Waverly Utilities became a telecommunications utility offering gigabit speed internet, enhanced cable and digital telephone services. We are committed to serving Waverly with the same neighborly customer service we've been providing since 1904.

<http://www.waverlyutilities.com/>

15. The Russellville Electric Plant Board is a municipal electric power distributor that serves the electrical needs of customers in the vicinity of Russellville, KY with 103.7 miles of line with approximately 39 customers per mile. It began providing wireless Internet service to the greater Russellville area in 2006 and expanded its broadband services to video, telephone and high-speed data service in 2011. It currently serves approximately 4,300 electric customers and more than 2,600 broadband customers. <http://www.epbnet.com/index.php/about/history/>

16. Concord Municipal Light Plant (CMLP) is a municipal-owned, public power utility offering electric and broadband Internet service under the direction of the Town Manager. CMLP offers Concord Light Broadband Internet service delivered through a dedicated fiber line right to homes or businesses. Broadband service is currently available to 95% of Concord residents and many businesses. CMLP offers consistent, guaranteed speeds throughout the day. <https://concordma.gov/464/Municipal-Light-Plant>

17. Welcome to Sebawaing Light and Water – Your Low Cost Dependable Electric Services since 1911. We are proud to be a Public Power organization - owned by the Residents of Sebawaing Village. We provide safe, reliable and environmentally responsible Electric, Water and Internet Utilities to our customers. By operating all three utilities, we are able to provide these services at some of the lowest costs in the area. Sebawaing, Michigan

<http://www.slandw.com>

18. Tullahoma Utilities Board The Tullahoma Utilities Authority (TUA) is located at 901 South Jackson Street in Tullahoma, Tennessee. The contact phone number is (931) 455-4515. TUA is the Tullahoma provider of Electric, Water, and Wastewater as well as Television, Internet, and Telephone <https://www.tub.net/about-us>

19. Pulaski Electric System, Established in 1891, is Tennessee's oldest municipal electric system and the first in the state to receive power from the Tennessee Valley Authority. PES currently provides electric power to nearly 15,000 customers in the City of Pulaski and the communities of Ardmore, Elkton, Goodspring, Lynnville, Minor Hill and Prospect. Operating and maintaining over 1,200 miles of electric line throughout Giles County to deliver 99.98% reliability is our top priority. PES Energize is the only 100% fiber to the home network in Giles County providing high-speed internet, television, and telephone service to residents and businesses in the City of Pulaski, and to educational institutions in Giles County. Pulaski, Tennessee. <https://pesenergize.com/>

20. Bristol Tennessee Essential Services (BTES) is a municipally-owned electric utility that also provides high-speed Internet, telephone, and cable television services over a fiber optic network, as well as water heating services. BTES is in the business of providing reliable, safe and cost-effective electric service to more than 33,000 customers in a 280-square-mile service area in the City of Bristol and Sullivan County, Tennessee. Sixty years after our inception as an electric company, BTES began providing Internet and cable television services in 2005. One year later, the BTES' telephone services were fully operational. BTES now provides some of the fastest Internet speeds available in the United States with speeds of ten Gigabits per second available to every business and home in our service area! Bristol, Tennessee. <http://www.btes.net/>

21. Benton County Public Utility District was organized by a local vote of the people in 1934. Washington's first initiative, passed by voters in 1930, gave citizens of each county the right to form a public utility district (PUD). Benton PUD was organized by a local vote of the people in 1934. PUDs were created to provide electricity, water and sewer services for the benefit of the people of Washington State. Since their conception, the role of public utility districts has expanded to include wholesale broadband telecommunication services. Benton PUD's wholesale broadband network and business structure is based on an "open access" model. This means that any entity may use the system even if they do not own physical infrastructure themselves. The open access model along with a transparent and non-discriminatory rate structure has made Benton PUD's broadband network a key contributor to business recruitment, retention and expansion in our community. Benton County, WA <https://www.bentonpud.org>

22. Chelan Public Utility District. Chelan County is home to world-class, ultra-fast fiber optic internet. Chelan County PUD has laid this high-tech infrastructure throughout most

communities, allowing you to enjoy life at the speed of fiber — which means a more reliable connection and faster connections to entertainment and work. We can help direct you to several Internet Service Providers to choose from who can help you get connected to fiber.

Chelan County, WA

<https://www.chelanpud.org/my-pud-services/residential-services/fiber-optics>

23. Franklin County Public Utility District was founded in 1934 and is headquartered in Pasco, Washington. We are a customer-owned utility, offering electric power and broadband telecommunications services. Franklin PUD is owned and governed by the people and communities we serve. We have an obligation to provide you ownership and control of your utility and to do so reliably, efficiently, and at the lowest reasonable cost. We have been providing Franklin County the benefits of fast, reliable, and secure broadband services since 2001. As a wholesale provider, we work together with local Retail Service Providers (RSP) to bring state of the art communications to businesses and homes in our community by using fiber optics and wireless technologies.

<https://www.franklinpud.com/broadband/retail-service-providers/residential-service/>

24. Grant County Public Utility District, Serving Grant County, WA since 1938. We are a public electric utility serving more than 40,000 customers in Grant County. From Electric City to Royal City and everywhere in between, our affordable, reliable power and fiber continue to drive our county's rapidly expanding economy.

<https://www.grantpud.org/high-speed-network>

25. Mason County PUD 3, Mason County, WA In 1929, the Washington State Grange sent the very first initiative to the Legislature, to allow rural communities to form their own publicly owned utilities. This is our story. In the 1930 election, the measure passed in a landslide. Mason PUD 3 supporters jumped on board in 1934 calling for a countywide PUD. Mason PUD 1 backers had been working on their own district since 1932. On November 6, 1934, local voters approved the formation of both districts. Mason PUD 3's wholesale fiber optic network is a nondiscriminatory, open-access, net neutral service. PUD 3's partners, internet service providers, sell gigabit speed internet, HDTV, special digital circuits, and phone services. The network provides for improved educational opportunities, telehealth services, economic development, and increased property values

<http://www.pud3.org/service/about-us/what-is-a-pud>

26. Electric Power Board of Chattanooga, Powering Chattanooga, EPB is one of America's largest publicly owned electric power providers. We're also the pioneering communications company that surprised the nation with the first Gigabit Internet speeds, crystal clear television and telephone service utilizing a community-wide fiber optic network. But most of all, we're here to serve Chattanooga with the neighbor-to-neighbor local service you've come to expect from us. *Chattanooga, Tennessee* <https://epb.com/>

**CITY OF DUVALL  
WASHINGTON**

**RESOLUTION NO. 19-17**

---

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY  
OF DUVALL, WASHINGTON, DECLARING CERTAIN  
CITY PROPERTY SURPLUS**

WHEREAS, the City from time to time has assets that become surplus to its needs; and

WHEREAS, the City has utility related items requiring disposal and per RCW 35.94.040 the City shall host a public hearing prior to disposal of the utility items; and

WHEREAS, the City Council has the authority to dispose of surplus property pursuant to RCW 35A.11.010;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF DUVALL,  
WASHINGTON, DO RESOLVE AS FOLLOWS:

Section 1. Surplus of Certain City Property. The City Council hereby declares that this property, listed in the attached Exhibit "A", is surplus to the needs of the City and disposal thereof will be for the common benefit.

Section 2. Disposal Method. The property listed in the attached Exhibit "A" may be disposed of to the general public by means of direct sales, sealed bid, trade-in, or auction, as determined to be in the best interests of the City by the Public Works Director. Property that is deemed of no value will be recycled or disposed of responsibly.

1<sup>st</sup> PASSED BY THE CITY COUNCIL AT A REGULAR MEETING THEREOF ON THE  
DAY OF October, 2019.

CITY OF DUVALL

  
Mayor Amy Ockerlander

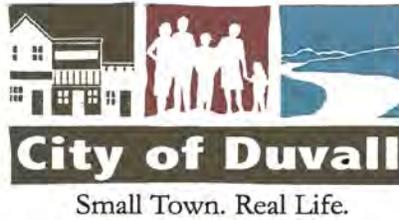

Approved as to form:

  
Rachel Turpin, City Attorney

ATTEST/AUTHENTICATED:

  
Jodi Wycoff, City Clerk

## Exhibit "A"

**Date:** September 9, 2019  
**Re:** Itemized Surplus List for City Council Approval

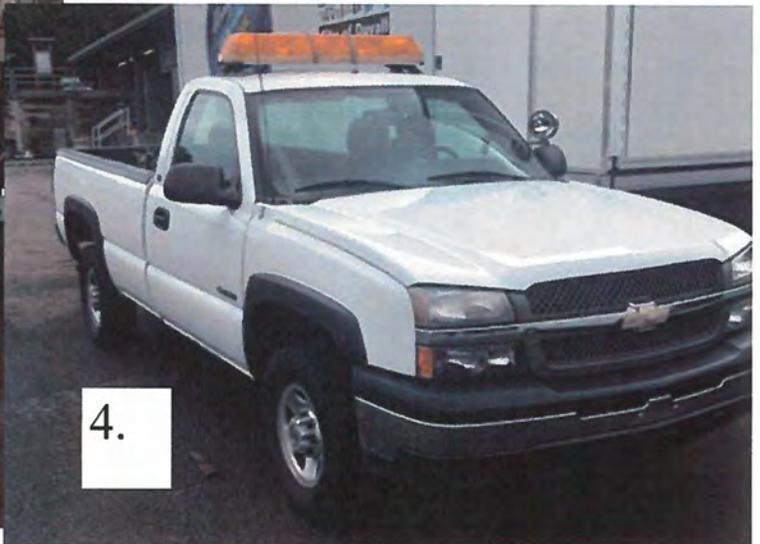

---

1. 2011, Dodge Charger, VIN#2B3CL1CT0BH554297.
  - o Miles: 103,414
2. 2012, Dodge Charger, VIN#2C3CDXAT0CH240334.
  - o Miles: 107,848
3. 1996 Chevy Pickup, VIN#1GCEC14WXTZ129848.
  - o Miles: 70,898
4. 2004 Chevy Pickup, VIN#1GCGC24U24Z199486.
  - o Miles: 111,659
5. One (1) wood laminate bookcase with doors.
6. One (1) 30" x 40" and one (1) 18" x 24" White Board.
7. Keyboard drawer, desk pencil drawer.
8. Three (3) Plantronics wireless headset with misc. parts and pieces.
9. One (1) ViewSonic projector with case.
10. A set of Logitech computer speakers.
11. One (1) Toshiba 32" television.
12. One (1) Coby DVD player.
13. Miscellaneous electrical cords.
14. One (1) metal key box.
15. Eleven (11) hard drives wiped clean.
16. Two (2) Compaq ProLiant ML370 Computers.

## Exhibit "A"

### Itemized Surplus List for City Council Approval, continued.

17. One (1) Foundry Networks Fast Iron 800 Computer.
18. Three (3) Computer desk monitors.
19. One (1) BB Battery pack HR9-12.
20. One (1) Desktop tower.
21. One (1) drafting table.
22. One (1) six-foot-long wood grain office desk with drawers.
23. One (1) HP printer.
24. One (1) Stihl weed eater, gas powered. Needs repairs.
25. One (1) MAT Compressor 1.5 125.
26. One (1) Eight-foot metal bike rack.
27. One (1) antique hay rake stored at the WWTP since 2001.
28. Two (2) 24' aluminum stadium bench seats with footings.
29. One (1) Fellowes Power Shredder.

## AMENDED RESOLUTION NO. U-10828

1 A RESOLUTION relating to Click! Network; authorizing Click! to prepare a  
2 business plan to provide, in addition to retail cable television, retail  
3 internet services including voice over data internet ("VoIP") protocol,  
4 commercial broadband and Gigabit service ("Retail Services").

4 WHEREAS the City Council of Tacoma authorized the Department of  
5 Public Utilities ("TPU"), Light Division (dba "Tacoma Power"), to implement and  
6 manage a broadband telecommunication system ("Click! Network" or "Click!" as  
7 authorized through City Council Substitute Resolution No. 33668, approved  
8 April 8, 1997, and Public Utility Board Amended Substitute Resolution U-9258  
9 approved April 9, 1997), and

10  
11 WHEREAS Tacoma Power provided retail cable TV services to  
12 customers, wholesale internet to independent Internet Service Providers  
13 ("ISPs") who served retail customers and wholesale broadband service to  
14 business customers, and

15  
16 WHEREAS the broadband telecommunication system is critical  
17 infrastructure for Tacoma Power, including the connection of substations,  
18 support of approximately 18,000 Gateway smart meters, as well as providing  
19 support for the City's I-net system, and

20  
21 WHEREAS the City Charter Section 4.6 requires a vote of the people  
22 before the City may sell, lease, or dispose of any utility system, or parts thereof  
23 essential to continued effective utility service, and

24  
25 WHEREAS the presence of Click! Cable TV in the marketplace provided  
26 savings for all cable TV customers, regardless of provider, in the Click! Market

scheduled basis established by the Committee and Click!. The Public Utility Board and the City Council may consider delegating specific authority in the governance of Click! to the Click! Engagement Committee in the future as the Business Plan is further developed and implemented.

Sec. 4. Prior to implementing the Business Plan contemplated in this resolution, TPU and the City's Legal Department, shall seek a legal opinion or declaratory judgment in Pierce County Superior Court, to confirm that Tacoma Power may operate the City of Tacoma's telecommunications system in accordance with the business plan. The City's Legal Department shall include in its request for a legal opinion or declaratory judgment, those specific components of the business plan necessary to provide the Utility Board and the City Council comfort that they may fully implement the business plan reasonably without threat of disruption by legal challenge. TPU and the City's Legal Department are authorized to utilize the services of third-party legal advisors in connection with this activity.

Sec. 5. Click! shall review and resubmit rate adjustments budgeted and proposed by Click! and approved by the Public Utility Board (previously approved by Board Resolution U-10773 on April 22, 2015), that support the Business Plan and the City Council is requested to approve an ordinance amending Tacoma Municipal Code Chapter 12.13, to authorize said rate adjustments.

Sec. 6. A fiscal note is attached to and incorporated in this Resolution U-10828. The fiscal note estimates the Capital and O&M budget requirements and impacts in addition to the financial gains and losses anticipated over the next five (5) years, in connection with the Click! business plan contemplated herein.

Approved as to form and legality:

William C. Foster  
Chief Deputy City Attorney

Charmaine Jacobs  
Clerk

## Executive Summary

Affordable, reliable access to high speed broadband is critical to U.S. economic growth and competitiveness. Upgrading to higher-speed broadband lets consumers use the Internet in new ways, increases the productivity of American individuals and businesses, and drives innovation throughout the digital ecosystem. As this report describes, while the private sector has made investments to dramatically expand broadband access in the U.S., challenges still remain. Many markets remain unserved or underserved. Others do not benefit from the kind of competition that drives down costs and improves quality. To help fill the void, hundreds of towns and cities around the country have developed their own locally-owned networks. This report describes the benefits of higher-speed broadband access, the current challenges facing the market, and the benefits of competition – including competition from community broadband networks.

~

Since President Obama took office, the United States has significantly expanded its broadband network and increased access. Investments from the federal government have helped deploy or upgrade more than 78,000 miles of network infrastructure since 2009, and more than 45 million Americans have adopted broadband Internet during the President's time in office. Today, more than 90 percent of Americans can access the Internet on a wired line and 98% by either wired or wireless connection.

Competitive markets have helped drive expansion in telecommunications services as strong infrastructure investments and falling prices have opened up a wide range of new communications products and services. Where there is strong competition in broadband markets today, it drives similar improvements. Unfortunately, competition does not extend into every market and its benefits are not evenly distributed. While the U.S. has an extensive network “backbone” of middle-mile connections (long, intra- or interstate physical fiber or cable network connections) with the capacity to offer high-speed Internet to a large majority of Americans, many consumers lack access to the critical “last-mile” (the last legs of the physical network that connect homes and businesses to the broader system), especially in rural areas. It is these last-mile connections that make higher speeds possible. For example, 94 percent of Americans in urban areas can purchase a 25 Mbps (megabit per second) connection, but only 51 percent of the rural population has access to Internet at that speed.

Competition has also been slow to emerge at higher speeds. Nearly forty percent of American households either cannot purchase a fixed 10 Mbps connection (i.e. a wired, land-based connection), or they must buy it from a single provider. And three out of four Americans do not have a choice between providers for Internet at 25 Mbps, the speed increasingly recognized as a baseline to get the full benefits of Internet access.

Without strong competition, providers can (and do) raise prices, delay investments, and provide sub-par quality of service. When faced with limited or nonexistent alternatives, consumers lack negotiating power and are forced to rely on whatever options are

available. In these situations, the role of good public policy can and should be to foster competition and increase consumer choice.

At the federal level, the government has already taken active steps to support broadband, committing billions of dollars to deploy middle-mile and last-mile infrastructure, and to ensure that our public schools and libraries have high speed broadband connections.

But local governments also have an important role to play. As this report details, communities around the country like Chattanooga, TN and Wilson, NC have developed a variety of strategies for building locally-owned broadband networks and promoting higher-speed Internet access. Over the past few years, these municipal networks have emerged as a critical tool for increasing access, encouraging competition, fostering consumer choice, and driving local and regional economic development. Local investments have also spurred the private sector to compete for customers, improving services, increasing broadband adoption, and providing more choice for consumers.

Not all communities, however, have the choice to pursue a local broadband network. 19 states currently have barriers in place limiting community broadband and protecting incumbent providers from competition. President Obama believes that there should be a level playing field for community-based solutions and is announcing today a series of steps that the Administration will be taking to foster consumer and community choice.

## Economic Benefits of Broadband

In technical terms, broadband refers to a method of transmitting information using many different frequencies, or bandwidths, allowing a network to carry more data. For most Americans, however, the term broadband simply refers to a fast Internet connection—whether fixed or wireless.

Over time, our perceptions of what constitutes a “fast” Internet connection have changed. As consumer and business uses of the Internet evolve, and new applications become more deeply embedded into everyday life, higher speeds frequently shift from being a luxury to a requirement for many users. For example, beginning in 2000 the Federal government defined “broadband” as any service with a download speed of 200 kilobits per second (kbps) or faster.<sup>1</sup> In 2010, the Federal Communications Commission redefined “basic” broadband service as a connection with speeds of at least 4 megabits per second (Mbps) downstream – 20 times faster than the 2000 definition – and at least 1 Mbps upstream.<sup>2</sup>

Today, as everyday experiences for tens of millions of Americans suggest, even these speeds are insufficient for some applications, particularly when a connection is shared by several users. In recognition of the growing need for increased bandwidth, the FCC is considering further revisions to the definition of broadband, and has expressed interest in raising the threshold to 10 or even 25 Mbps downstream and from 1 Mbps to 3 Mbps upstream.<sup>3</sup> The following chart provides a sense of what these definitions mean by showing how long it would take a single user to upload or download different types of content at various connection speeds.

**Time Required for Selected Internet-Based Activities at Different Speeds**

	3 Minute Song <i>5 MB (Download)</i>	2 Hour Movie <i>5 GB (Download)</i>	20 Photographs <i>40 MB (Upload)</i>	5 Minute Video <i>200 MB (Upload)</i>
<b>256 Kbps, 256 Kbps</b> <i>2000 Broadband</i>	2m36s	43h24m	20m50s	1h44m
<b>4 Mbps, 1 Mbps</b> <i>2010 Broadband</i>	10s	2h46m	5m20s	26m40
<b>25 Mbps, 3 Mbps</b> <i>Advanced Broadband</i>	1.6s	26m40s	1m46s	8m53s

Source: CEA Calculations>Note: These numbers assume that the ISP is meeting its advertised speed. Download times may be greater during periods of peak traffic.

Demand for Internet access is growing quickly. Total wired and wireless Internet access revenues in 2013 were \$140 billion, and have increased by about 15 percent per year in real terms since 2005.<sup>4</sup> The rapidly growing demand for bandwidth is driven by new applications of the Internet that effectively require a broadband connection. These applications, which are increasingly central to everyday life for many Americans, include video streaming, which is used for education, entertainment, and communication; teleworking; cloud storage that allows users to store their files on the Internet, share them, and access them from any device; and online games that allow users to interact with one another in a virtual environment.

Economic studies confirm that broadband Internet creates significant value for consumers and makes an important and rapidly growing contribution to GDP. For example, one study of expenditures for Internet access estimates that as of 2006 – before the widespread availability of streaming audio and video – broadband Internet accounted for \$28 billion in U.S. GDP. That study also found that broadband created an additional \$5 to \$7 billion in consumer surplus in 2006, meaning that consumers would have been willing to pay that much more for the service.<sup>5</sup> Another industry-sponsored study from 2009 estimates that broadband creates \$32 billion in annual consumer surplus.<sup>6</sup> While these studies estimate consumer surplus by examining price sensitivity, another approach is to examine the amount of time users spend online, leading to estimates of \$2,500 to \$3,800 in value per-user per-year, which imply total consumer surplus in the hundreds of billions of dollars.

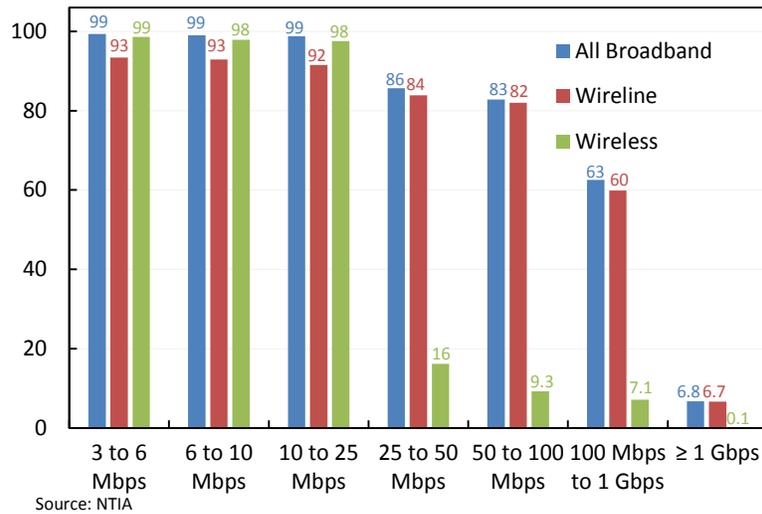

Over the longer term, broadband adoption also fuels a virtuous cycle of Internet innovation. This cycle begins when new applications of the Internet create demand for more bandwidth, resulting in a wave of network-level innovation and infrastructure investment. As more bandwidth becomes available, application-sector innovators find new ways to use that capacity, creating additional demand, leading to another round of network investment, and so on. While it is impossible to know what the next bandwidth-hungry killer application will be – perhaps it will be the “Internet of Things” or immersive virtual reality – both history and economic theory show that this virtuous cycle is a powerful driver of innovation and economic growth.<sup>7</sup>

The recent history of wireless broadband provides a good example of the virtuous cycle of innovation and investment. Industry studies suggest that between 2007 and 2011 mobile applications development grew from almost nothing into a \$20 billion industry, creating 311,000 U.S. jobs in the process.<sup>8</sup> This led to increased demand for wireless broadband, so that by 2013 private investment in new wireless infrastructure was \$34 billion, more than the investments of the big three auto companies combined.<sup>9</sup>

## **Challenges in Broadband Access and Adoption**

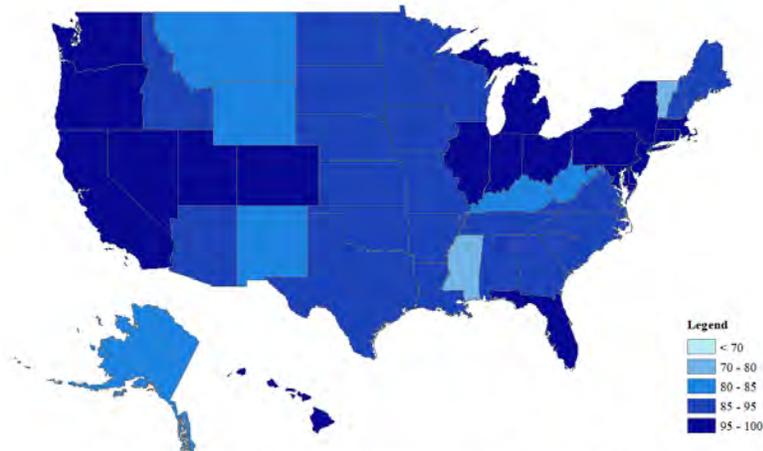

Since the President took office, national broadband availability has increased at all advertised speed levels.<sup>10</sup> Today, about 93 percent of Americans have access to wired broadband speeds of at least 3 Mbps downstream (i.e. broadband that allows a user to download 3 megabits per second), and 99 percent of Americans have access to similarly fast mobile wireless broadband. This increased availability reflects both private and public investment, including the \$4 billion invested through the National Telecommunications and Information Administration’s (NTIA) Broadband Technology Opportunities Program (BTOP) and \$3.5 billion invested through the U.S. Department of Agriculture’s (USDA) Rural Utilities Service Broadband Initiative Program (BIP), both part of the American Recovery and Reinvestment Act of 2009, as well as \$66 million through USDA’s ongoing Community Connect grant program.

**Share of US With Access to Various Download Speeds, 2013**  
Percent of US Population

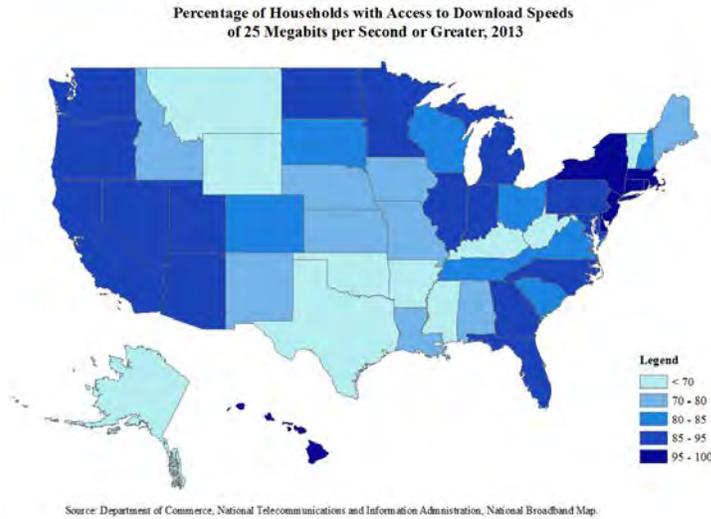

Nevertheless, nearly 51 million Americans cannot purchase a wired broadband connection with download speeds of at least 25 Mbps, and only 63 percent have access to speeds of 100 Mbps or more.<sup>11</sup> Moreover, the costs, benefits, and availability of broadband Internet are not evenly distributed. For example, the following two maps show the state-level availability of broadband with download speeds of at least 3 Mbps, and at least 25 Mbps respectively as of June 2013. The first map shows that most Americans have access to “basic” broadband, though some work remains to fully connect the most rural states. However, there is considerable variation in the availability of 25 Mbps connections between states, with some reaching 95 percent penetration and others offering this high-quality service to less than 70 percent of households.

Percentage of Households with Access to Download Speeds of 3 Megabits per Second or Greater, 2013

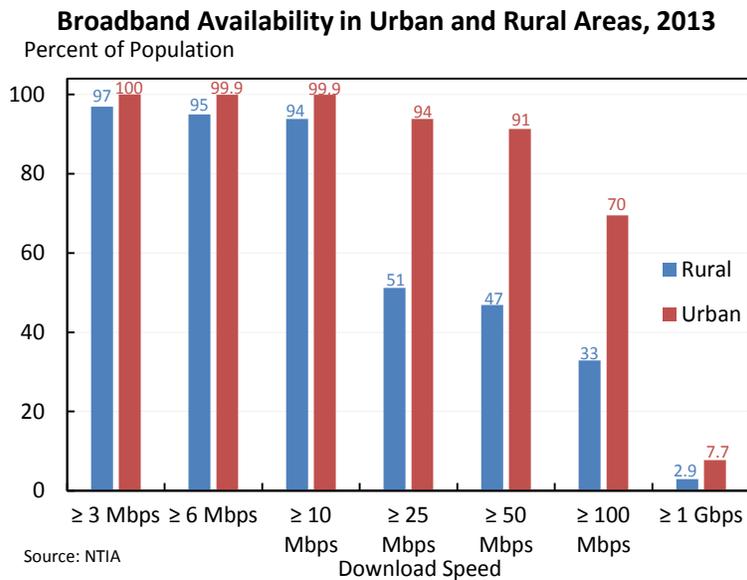

Source: Department of Commerce, National Telecommunications and Information Administration, National Broadband Map.

## ***Urban and Rural Communities***

One factor that creates disparities in broadband access and adoption is the divide between urban and rural communities. While the gap for the most basic broadband speeds has almost closed (nearly 100 percent of urban residents have access to speeds of 6 Mbps or greater compared to 95 percent of rural residents), rural communities still enjoy far less access to higher speeds. The following figure illustrates this point:

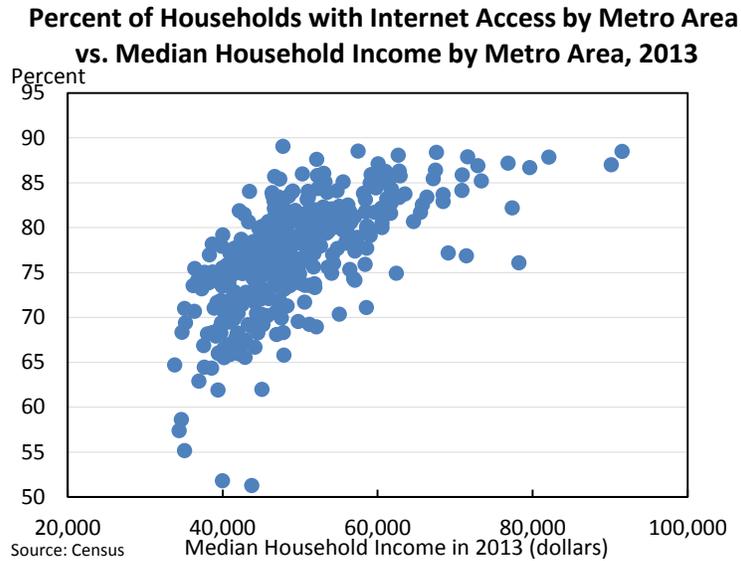

The gap in broadband availability between urban and rural communities is linked to the economics of network investment. The costs of providing a connection increase with distance, and the expected profits increase with the number of customers served. This makes it more economical to serve densely populated urban locations, where shorter wires can serve a larger number of potential customers. While satellite and terrestrial wireless technologies continue to deliver promising improvements, more work is needed to close the urban rural gap in broadband availability.

To address this gap, the USDA, BTOP, and the FCC's Connect America Fund program have all invested in creating the middle-mile infrastructure that provides high-speed access to "anchor institutions" such as schools and libraries in many rural communities. With middle-mile and community infrastructure in place, the remaining challenge is to provide last-mile connections so millions of Americans have access to high-speed broadband. As we describe below, the availability of middle-mile connections creates a significant opportunity for municipalities to increase such access.

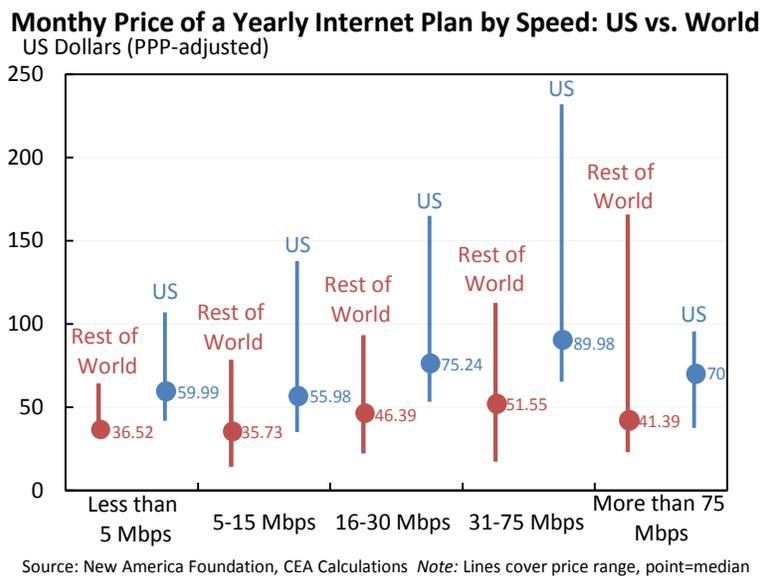

### ***Affordability***

In total, almost 30 percent of American households did not have a home broadband connection as of 2013. One of the main challenges facing increased broadband adoption is price. In a 2010 survey conducted by the FCC, 36 percent of households without a home broadband connection pointed to expense as the major barrier.<sup>12</sup>

Not surprisingly, the cost of broadband represents a greater obstacle for lower-income Americans than middle- and high-income Americans. The NTIA reports that in 2012, 32 percent of families not online with incomes below \$25,000 indicated that the high cost of Internet service prevents them from using broadband at home, compared to less than 22 percent of households not online with annual incomes above \$50,000.<sup>13</sup> Overall Internet use is strongly correlated with household income, as illustrated in the figure below, which plots median income against Internet adoption for a sample of 368 Metropolitan Statistical Areas.

U.S. broadband is also relatively expensive when compared internationally. The next chart uses data from a recent report on broadband prices in 24 U.S. and international cities.<sup>14</sup> While the 24 cities in this study may not be representative of all urban locations in the U.S. or abroad, it is notable that the median monthly price at each speed level is higher in the U.S., often by 50 percent or more. And while it appears that the U.S. has less price variability at speeds above 75 Mbps, this observation actually reflects the fact that fewer U.S. cities even offer a consumer plan at that level.

## Broadband Competition

One proven mechanism for increasing Internet access, quality and affordability is to promote competitive markets. Over the past 30 years, telecommunications policy has consistently attempted to encourage market competition in local, long-distance and Internet access markets. For example, the threat of satellite services pushed cable companies to expand their network capacity, positioning them to challenge phone companies in the market for home Internet access. And the ongoing competition between phone and cable companies has created a positive cycle of investment, as providers in many communities continuously upgrade their networks and improve their offerings.<sup>15</sup>

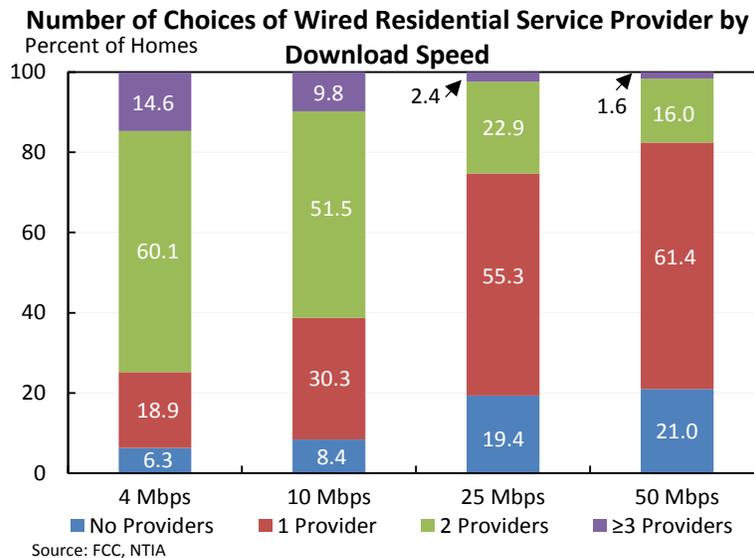

However, the overall national investment picture obscures regional variation. Many local and regional markets today do not have the kind of competition required to continue to ensure affordable access to the higher-speed broadband connections that Americans increasingly require. For example, the following table illustrates the number of choices available to American consumers in fixed and mobile broadband markets. When it comes to wired Internet, which can reliably deliver the highest speeds, the majority of Americans have three choices or less. The situation is somewhat better in wireless markets, although focusing on the number of choices obscures the large share of the market served by a handful of the largest providers. And while competition appears reasonably robust if one focuses on combined choices, it is important to recognize that fixed and wireless Internet are not necessarily substitutes, particularly at speeds of 25 Mbps or higher where there is typically no wireless service available.

**Broadband Choice for American Consumers**

Number of Choices	Share of U.S. Population (%)		
	<i>Fixed</i>	<i>Mobile</i>	<i>Combined</i>
1	9	0	0
2	33	3	1
3	37	5	2
4	13	22	4
5	3	26	10
6	1	22	18
7	0	11	19
8+	0	12	46

Source: NTIA, CEA Calculations

To illustrate the declining level of competition at higher speeds, the following chart shows the number of wired broadband service providers serving American consumers at different speeds. At speeds of 4 Mbps or less, 75 percent of consumers have a choice between two or more fixed providers, and 15 percent can select among three or more ISPs. However, in the market for Internet service that can deliver 25 Mbps downstream – the speed increasingly recognized as a baseline to get the full benefits of Internet access – three out of four Americans do not have a choice between providers.

While increased competition will not necessarily solve all broadband access challenges, basic economics suggests that increased competition leads to a better deal for consumers. For example, a 2014 OECD survey of eleven OECD member countries found that new entrants in wireless markets have a substantial impact on both prices and quality of service. Tellingly, the OECD study indicated that this result occurred even when a market already had three participants – that is, the fourth entrant into a wireless market significantly improved costs and services.<sup>16</sup> As shown above, less than 1 out of 40 American homes has 3 or more choices of providers at speeds in excess of 25 Mbps. Entry also had a positive impact on the market even when the new firm was very small.<sup>17</sup> In the U.S., a 2013 NTIA report found that among those who reported switching their Internet service provider, 38 percent did so to get a better price, and this option is simply unavailable to consumers who are only served by a single Internet Service Provider—or a single provider at the speeds they require.<sup>18</sup>

Even the threat of new competition can lead existing firms to make investments to improve the quality of their goods or services. In the Netherlands, for example, incumbent wireless carriers began offering plans at lower rates in an effort to prevent a new entrant from capturing market share by undercutting existing prices.<sup>19</sup> The U.S. cable television industry also provides an example of the benefits of potential competition. Academic research has shown that during the 2000's U.S. cable television operators were more likely to upgrade their systems to allow two-way communications in cities where the cable operator faced a threat of entry from a local municipal electric utility.<sup>20</sup>

Domestic experiences also show how the threat of competition can produce gains for broadband consumers. When Google announced that Google Fiber was coming to Kansas, speeds on existing networks surged 97 percent—the largest year-over-year jump in bandwidth observed in any state, ever. Likewise, when Google indicated that it would begin offering extremely fast connection speeds in Austin, TX, AT&T responded by announcing its own gigabit network.

## **Community-Based Broadband**

Where the market does not generate the optimal level of competition or investment, the public sector can step in to make investments, encourage competition and provide choice to consumers. For example, government infrastructure investments, such as those made by the Department of Commerce and Department of Agriculture or by Massachusetts (as described below), may be able to put in place the “middle mile” network that lowers costs of entering the “last mile” market. These investments can attract the private sector or provide local governments the opportunity to build their own systems at much lower prices.

Antitrust and telecommunications policies can also promote competition. At the Federal level, the Department of Justice has an important role to play in preventing the unlawful acquisition or abuse of market power. The Telecommunications Act of 1996 also empowers the FCC to regulate service providers in a manner that promotes competition both within and between technology-based platforms such as cable, cellular, satellite, and wireless. The President’s recent call for strong Net Neutrality rules to ensure that no company can act as a gatekeeper to Internet content are fundamentally about preserving access and competition in the digital marketplace. And states have an important role in promoting competition and ensuring fairness in their local communications markets.

But these federal and state initiatives are only part of the solution. Local governments also have a critical role to play. In markets where private competition is anemic, whether because of regulatory barriers to entry or the high fixed costs of infrastructure investment, town and cities can build their own middle-mile networks and offer competitive access to the private sector, as Scott County, MN has done. Or municipalities can provide service directly to consumers, like in Chattanooga, TN. In either case, municipalities are creating more choices for consumers, fostering competition and creating opportunities for economic growth. Municipal broadband is often a logical choice for towns and cities that are already served by a municipal electric utility, since infrastructure costs can be shared across those two services, just as private cable companies leveraged their networks to provide Internet service. Hundreds of towns and cities around the country have experimented with these networks and created tremendous benefits for consumers and businesses. APPENDIX 1 includes a full list of municipal networks around the country.

Today, however, there are barriers to community-owned broadband in 19 states around the country. The Obama Administration believes that consumers should have the option to provide themselves broadband services through local government and locally-owned utilities and that state and local policy should support a level playing field for these community-based solutions. This section considers several detailed case studies of municipal broadband initiatives and their benefits for consumers, businesses and communities.

### **Chattanooga, TN: Gigabit service drives investment, innovation**

In 2007, Chattanooga's Electric Power Board (EPB), a municipally-owned utility, announced a 10 year plan to build out a fiber network to serve all of Chattanooga. Based on their analysis, EPB had determined that investments in the network could both drive a smart grid system that would generate significant savings by increasing the reliability of its electricity and also provide customers with improved communication services. In 2009, EPB began offering its triple-play services—Internet, phone, and cable television. Since 2009, EPB has upgraded the mid-tier consumer service from 15 to 30, from 30 to 50, and from 50 to 100 Mbps, without raising costs. In 2010, EPB announced it would offer the first 1 gigabit per second (Gbps) service in the United States. Today, EPB operates 8,000 miles of fiber for 60,000 residential and 4,500 business customers out of a potential 160,000 homes and businesses.

EPB's efforts have encouraged other telecom firms to improve their own service. In 2008, for example, Comcast responded to the threat of EPB's entrance into the market by investing \$15 million in the area to launch the Xfinity service – offering the service in Chattanooga before it was available in Atlanta, GA. More recently, Comcast has started offering low-cost introductory offers and gift cards to consumers to incentivize service switching. Despite these improvements, on an equivalent service basis, EPB's costs remain significantly lower.

EPB's investments are reshaping Chattanooga's economic landscape. The gigabit broadband service has helped the City attract a new community of computer engineers, tech entrepreneurs and investors. For example, local entrepreneurs have organized Lamp Post, a venture incubator that provides capital and mentorship to startups. Lamp Post now has over 150 employees in a 31,000 square foot office space in downtown Chattanooga. CO.LAB, a local nonprofit organization, provides shared working space, access to investor networks and hosts the annual summer GITANK program, a 14-week business accelerator. The investment community has responded in kind. Since 2009, Chattanooga has gone from close to zero venture capital to at least five organized funds with investable capital of over \$50 million. The growing tech ecosystem has been profiled by the *New York Times*, *Washington Post* and *The Atlantic*.

While the broadband network is opening up new economic pathways, EPB itself remains the most important customer for the fiber network, which it has used to develop one of the nation's leading smart grids. The smart grid, which involves 170,000 intelligent electric meters all reporting every 15 minutes, helps EPB monitor and respond to outages, emergencies, and electricity theft in real time. EPB's smart grid has cut duration of power outages by 60 percent, saving local businesses and industry an estimated \$45 to \$60 million. With the monitoring system in place, EPB crews can also respond in a targeted fashion during emergencies, helping families and businesses cope with tornados and other natural disasters.<sup>21</sup>

### **Wilson, NC: Municipal broadband encourages private competition**

In November of 2006, Wilson's City council voted unanimously to build a fiber-to-the-home (FTTH) network through the town's electricity provider, Greenlight. The City Council issued \$28 million in debt to start construction. Greenlight began offering its

services in 2008 and expanded its network to include triple-play (television, phone, and internet) services citywide by January 2009. In 2010, the city took another \$4.5 million loan from Wells Fargo to improve its network. The subscription base grew steadily in its first few years and numbers over 7000 today –more than a third of Wilson’s 21,000 households.

Greenlight has been a commercial success. Greenlight achieved its first monthly operating profit one year ahead of schedule in October 2010 and made a profit of nearly three-quarters of a million dollars in 2013. However, a 2011 state law prevents municipalities from providing broadband service to other towns outside of its area, limiting further growth.

Greenlight’s introduction of its triple-play service has increased industry competition, which has lowered prices for Wilson’s residents. From 2007 to 2009, Time Warner raised rates for almost all of its services across the board. According to a December 2009 presentation for the House Select Committee on High Speed Internet Access in Rural and Urban Areas, TWC raised rates in non-competitive areas around Wilson while holding Wilson’s rates steady. According to the same report, TWC raised its prices for basic internet service in the North Carolina Research Triangle — as much as 52 percent in Cary — but did not impose any rate hike in Wilson. Moreover, TWC stabilized prices in Wilson for the digital sports and games tier, while Triangle customers paid 41 percent more. The lowered prices in Wilson make a big difference. According to an independent consultant for Wilson, Greenlight saved its residents more than \$1 million each year compared to what Time Warner Cable customers in other areas pay.

Increased competition has also yielded increased speeds for Wilson customers. Greenlight’s system offers speeds of up to 1 gigabit for consumers and businesses. In 2008, Time Warner’s residential Road Runner service in the state offered speeds no higher than 10 Mbps, equivalent to Greenlight’s lowest consumer tier. TWC charged \$57 per month for the service while Greenlight charged \$35. In response, TWC upped its top-tier speed to 15 Mbps "because of the competitive environment," according to a Time Warner spokesperson.<sup>22</sup>

### **Lafayette, LA: Network increases customer savings, strengthens local anchor institutions**

The residents of Lafayette have a long history of supporting local infrastructure initiatives. Recognizing the need to modernize its broadband infrastructure in the early 2000’s, the community voted in 2005 to approve construction of a fiber-to-the-home (FTTH) network. After overcoming serious opposition from local broadband service providers, the publicly-owned Lafayette Utilities System (LUS) started connecting homes and businesses to its LUS Fiber network in 2009. The network seeks to provide equitable access to all of Lafayette’s citizens, and the system was rolled out across high-income and low-income neighborhoods equally. LUS Fiber now offers 100 Mbps speed for all subscribers.

As competing firms adjusted their plans to account for LUS Fiber's market entry, residents who weren't customers of the network started to see lower prices. Cox Communications, a major regional provider which had raised rates six times in four years, kept its rates stable from 2004 to 2007 to account for LUS's possible market entry. Still, LUS's prices have been consistently lower than those offered by Cox. Terry Huval, the director of LUS, estimates that the community saved \$4 million from these deferred rate increases. Using estimates of Cox's average competing discounts and LUS Fiber's lower rates, LUS projects the fiber system will create total savings of between \$90 and \$100 million over the its first 10 years.

The fiber network has brought in companies eager to obtain fast service at lower prices. Pixel Magic brought 100 to 200 jobs when it built an office in Lafayette to accomplish work on the movie "Secretariat". The high-speed capability of the broadband network was a big factor in their eventual decision to maintain their office in Louisiana permanently. The tech startup firm Skyscraper Holding moved from Los Angeles to Lafayette to obtain 100 Mb/s speeds at a fraction of the cost the company was charged on the west coast. The company pays just \$200 a month for more reliable service.

The network has strengthened community anchors as well, delivering greater value and opportunities for connectivity to Lafayette's school and library systems. By mid-2008, all of the schools in the Lafayette Parish School System were able to access 100 Mbps speeds for \$390/month. Not only can students now do more to leverage the Internet for better learning opportunities, this monthly fee saves community tax dollars by being a better value than competitors could offer. Lafayette's public libraries also benefit from the network by sharing a 90 Mbps connection from LUS that was rated as the best value amongst possible providers by the federal E-Rate program.<sup>23</sup>

### **Scott County, MN: Municipal government sees savings for county, school operations**

In the early 2000s, Scott County started exploring options for increasing broadband services for county government buildings and schools. In 2007, the County issued \$3.5 million in bonds to install a high-speed middle-mile network. The network connects all county-owned facilities, including schools, libraries, city halls, police and fire departments and public safety towers. It also connects with the state's high capacity backbone network and with multiple private providers. From the beginning, the project was a joint effort between local and state government and the private sector. While the county paid the upfront costs, the state pays for the network's operating costs in exchange for use of the network. The open architecture of the system allows private companies to offer their own services; private providers, in turn, cover the network's maintenance costs.

The network has achieved significant benefits. Scott County's annual bond payment for the construction of the backbone is \$35,000 less than what the County was paying for leasing private sector lines. Local schools have seen even greater savings. The costs for Scott County's school districts per megabit of Internet service went from an average of \$58.00 to \$6.83 per megabit for all school districts—a cost reduction of nearly 90

percent per megabit. The net effect was a tripling of availability (100 to 300 megabits) while costs fell from \$5,800 to \$2,049 a month. At the state level, the government is saving approximately \$1 million per year from access to the public network.

The network has also helped attract significant private investment and fostered job creation. In 2010, for example, Emerson Process Management was finalizing a decision on where to site a new \$70 million investment that would create 500 jobs. Emerson's two finalist sites were the town of Shakopee in Scott County, Minnesota and Chihuahua, Mexico. Recognizing the savings from the high-speed broadband network, Emerson chose Scott County.<sup>24</sup>

### **Leverett, MA: State and federal programs enable local investment**

In 2008, Massachusetts Governor Deval Patrick created the Massachusetts Broadband Initiative (MBI). MBI was charged with bringing broadband to all residents and businesses in MA within three years. The Broadband Act provided MBI with initial \$40 million in state bond funds. Over the last six years, Massachusetts has built 1,200 miles of new fiber optic cable that provide access to more than 120 communities in Western and North Central Massachusetts.

Of the original state funds, \$25 million were directed to build a broadband network in Western, MA. With the support of additional federal funds, MBI developed "MassBroadband 123", a middle-mile network serving 123 communities in the region. MBI worked closely with the private sector to build the project. Today, MassBroadband 123 is operated by Axia NGNetworks. The network has an open architecture that allows any Internet service provider to purchase wholesale services on the network at the same rates. The network also positions municipalities to focus on putting homes and businesses on the network through last-mile connections.

Leverett, MA saw the opportunity to build its own broadband system. In 2012, Leverett voters approved a modest property tax increase and a \$3.6 million bond to fund the network. Leverett created a publicly controlled Municipal Light Plant (MLP) entity to own and operate its network, named LeverettNet. The town is currently in the process of building the network – which will provide 1 gigabit service – and connecting it to all 630 households in the community.<sup>25</sup>

### **Choctaw Nation Tribal Area, OK: Public private collaboration brings broadband to new communities**

In early 2009, much of the ten Southeastern Oklahoma counties encompassed by the Choctaw Nation's Tribal Area lacked access to reliable broadband service. The low population density (8.3 to 19.7 people per square mile), the high poverty rate (25 percent of the population below the poverty line) and the rugged terrain made the economics of broadband infrastructure very challenging. Initial capital costs to deploy broadband meant that broadband service was limited only to commercially viable areas.

Pine Tele, the service provider offering voice, video, cell, long distance, and high-speed broadband in SE OK applied for and received 4 American Recovery and Reinvestment awards in 2009 and 2010. One grant was to build out fiber to the home in the area already covered by landlines, and the other three were for wireless – advanced 3G technology – to completely unserved areas. As of September 2014 Pine Tele had deployed 324 miles of fiber, 5,500 fiber drops, and 54 tower sites. New or improved broadband service had been made available to 1,757 fiber customers and 1,194 wireless customers. Today, Pine Telephone provides a variety of broadband packages over both their fiber and wireless facilities ranging from 1.5 Mbps to 5 Mbps for download speeds and 384 Kbps to 5 Mbps for upload speeds.

The benefits for the community have been significant. Every school in the 10 county Pine Tele service area is now connected with high-speed fiber optic broadband service. This has created the ability to integrate online educational tools into everyday teaching and assessments of student comprehension. Broken Bow School District is one example. This district serves approximately 1,280 students per day. They have been able to integrate smart boards, iPads, online lesson plans, and the “I-Ready program” to supplement learning. Hundreds of performance tests are now completed online. And family engagement is improved, as parents are increasingly provided online access to records of attendance, assignments, and test scores. The connectivity also allows the Choctaw Nation to multicast educational videos and share messages from Tribal leadership from a central location. For example, the Choctaw School of Language now offers distance learning courses to approximately 14 head starts and 32 high schools within the Choctaw Nation, in addition to several universities.<sup>26</sup>

## **Promoting Broadband that Works**

Last November, the President outlined his plan to keep the Internet open to new competition and innovation by safeguarding net neutrality – which will help ensure no one company can act as a gatekeeper to digital content. But there is more work to do so that every American has access to a free and open internet. This is particularly true in areas where broadband competition is lacking, resulting in high prices and slow service.

High-speed, low-cost broadband is paving the way for economic revitalization not just in Cedar Falls, but in places like Chattanooga, TN and Lafayette, LA – which have Internet speeds up to 100 times faster than the national average and deliver it at an affordable price. To help more communities achieve these results, support economic growth, and promote a level playing field for all competitors, the Obama Administration is:

- **Calling to End Laws that Harm Broadband Service Competition:** Laws in 19 states – some specifically written by special interests trying to stifle new competitors – have held back broadband access and, with it, economic opportunity. Today President Obama is announcing a new effort to support local choice in broadband, formally opposing measures that limit the range of options to available to communities to

spur expanded local broadband infrastructure, including ownership of networks. As a first step, the Administration is filing a letter with the Federal Communications Commission (FCC) urging it to join this effort by addressing barriers inhibiting local communities from responding to the broadband needs of their citizens.

- **Expanding the National Movement of Local Leaders for Better Broadband:** As of today, 50 cities representing over 20 million Americans have joined the Next Century Cities coalition, a nonpartisan network pledging to bring fast, community-supported broadband to their towns and cities. They join 37 research universities around the country that formed the Gig.U partnership to bring fast broadband to communities around their campuses. To recognize these remarkable individuals and the partnerships they have built, in June 2015 the White House will host a Community Broadband Summit of mayors and county commissioners from around the nation who are joining this movement for broadband solutions and economic revitalization.
- **Announcing a New Initiative to Support Community Broadband Projects:** To advance this important work, the Department of Commerce is launching a new initiative, BroadbandUSA, to promote broadband deployment and adoption. Building on expertise gained from overseeing the \$4.7 billion Broadband Technology Opportunities Program funded through the Recovery Act, BroadbandUSA will offer online and in-person technical assistance to communities; host a series of regional workshops around the country; and publish guides and tools that provide communities with proven solutions to address problems in broadband infrastructure planning, financing, construction, and operations across many types of business models.
- **Unveiling New Grant and Loan Opportunities for Rural Providers:** The Department of Agriculture is accepting applications to its Community Connect broadband grant program and will reopen a revamped broadband loan program which offers financing to eligible rural carriers that invest in bringing high-speed broadband to unserved and underserved rural areas.
- **Removing Regulatory Barriers and Improving Investment Incentives:** The President is calling for the Federal Government to remove all unnecessary regulatory and policy barriers to broadband build-out and competition, and is establishing a new Broadband Opportunity Council of over a dozen government agencies with the singular goal of speeding up broadband deployment and promoting adoptions for our citizens. The Council will also solicit public comment on unnecessary regulatory barriers and opportunities to promote greater coordination with the aim of addressing those within its scope.

## Appendix 1: U.S. Municipalities with Broadband Networks<sup>27</sup>

City	State	Name of Network	Type
Ketchikan	AK	KPU Telecommunications	cable

**A Light in Digital Darkness: Public Broadband after  
Tennessee v. FCC**

Mikhail Guttentag<sup>1</sup>

20 YALE J. L. & TECH. 311 (2018)

*Ten years ago, the city of Chattanooga, Tennessee built its own high-speed Internet network, and today Chattanooga's publicly owned Internet infrastructure ("public broadband" or "municipal broadband") is faster and more affordable than almost anywhere else in the world. In this Article, I make the case for why other communities currently underserved by private broadband providers should consider building their own high-speed broadband networks and treating Internet as an essential public service akin to water or electricity, and I explore means by which these communities can overcome the legal and political hurdles they may face along the way.*

---

<sup>1</sup> J.D., Yale Law School. My deepest thanks for the guidance of professors Alvin Klevorick, David Schleicher, and Gordon Silverstein; for the feedback and encouragement of Olevia Boykin, Ariel Dobkin, Paul Henderson, Lina Khan, and Theodore Rostow; for the editing of the *Yale Journal of Law and Technology*, particularly editors Anderson Christie, Allison Douglass, and Aislinn Klos; and for Mayor Andy Berke of Chattanooga, Tennessee, who warmly answered a law student's cold e-mail and invited him to check out his city. This Article is dedicated to my former students and coworkers at Heights High School in Houston, Texas, who bring light to darkness, digital and otherwise, and inspire this work. All errors are my own.

**INTRODUCTION:  
PUBLIC BROADBAND AND PUBLIC POWER**

*“Failure to provide broadband to rural areas of America is a death sentence for those communities. They cannot compete economically without access to broadband.”*

—United States Senator Angus King  
(I-ME)<sup>2</sup>

*“We see broadband in the 21st century as electricity was in the 20th.”*

—Danna Bailey (Vice President,  
Chattanooga EPB)<sup>3</sup>

Internet can be delivered like other publicly funded services, such as water, electricity, sewers, and roads.<sup>4</sup> To date, Internet provision is left almost entirely to the private sector, leaving many places without affordable or high-speed service. However, there are a growing number of municipalities in the United States who have built their own high-speed Internet networks and offer it like a public utility. More cities should join them.

Many communities currently underserved by Internet providers—rural areas especially—were once underserved by private electricity providers that offered electricity to big cities and wealthy customers but left the rest of the country behind.<sup>5</sup> These communities formed locally owned electric utilities to

<sup>2</sup> Mal Leary, *Angus King, Senators Want Improved Rural Broadband*, ME. PUB. (July 13, 2016), <http://mainepublic.org/post/angus-king-senators-want-improved-rural-broadband> [<http://perma.cc/HHT5-N77K>].

<sup>3</sup> Henry Grabar, *Republicans Are Coming Around to This Public Internet Idea*, SLATE (Sept. 1, 2016, 1:05 PM), [http://www.slate.com/blogs/future\\_tense/2016/09/01/public\\_broadband\\_is\\_a\\_bipartisan\\_issue\\_now.html](http://www.slate.com/blogs/future_tense/2016/09/01/public_broadband_is_a_bipartisan_issue_now.html) [<http://perma.cc/ML84-6XZA>].

<sup>4</sup> See Jeff Stricker, Note, *Casting a Wider Net: How and Why State Laws Restricting Municipal Broadband Networks Must Be Modified*, 81 GEO. WASH. L. REV. 589, 614 (2013) (“The only unique feature of telecommunications service provision by a government entity as compared to other government-provided services (such as electricity, water, sewers, and roads) is that the telecommunications industry is today predominantly administered by the private sector.” (footnote omitted)).

<sup>5</sup> See D. Stan O’Loughlin, *Preemption or Bust: Fear and Loathing in the Battle over Broadband*, 28 CARDOZO L. REV. 479, 482-83 (2006) (“Beginning in the 1880s, electric power in the United States was provided primarily by large, private electric companies . . . private power companies did not consider rural electrification to be economically feasible and focused their resources on the more profitable urban market, leaving most of the country’s smaller cities and rural areas underserved or totally without access to electricity.” (footnotes omitted)).

Chattanooga, and others, and build their own high-speed broadband networks. I look at how the Supreme Court's 2004 *Missouri Municipal League* decision emboldened ISPs to lobby states to restrict the growth of public broadband, and revisit Justice Stevens' lone dissent, a position which today looks increasingly prescient. The specter of *Missouri Municipal League* haunts efforts to build publicly owned broadband, and in light of the *Tennessee v. FCC* decision, I argue that *Missouri Municipal League* is due for review and reconsideration.

I conclude by arguing that advocates for public broadband should engage on all fronts to lift unnecessary restrictions on the public provision of broadband. Like electricity, broadband has become an essential service, and no community should be left in digital darkness.

### I. THE COSTS OF LIMITING CITIES TO PRIVATE BROADBAND

*“Here in Seattle, we don’t rely on for-profit companies to provide our water or electricity. The Internet shouldn’t be any different.”*

—Upgrade Seattle<sup>32</sup>

Like roads, broadband Internet is essential infrastructure for the modern economy.<sup>33</sup> Without utility-style regulation or public provision in areas where the private market for broadband has failed, communities will continue to fall behind.

Like electricity in the late nineteenth century, the provision of Internet service today largely follows the profit motives of private providers.<sup>34</sup> These profit motives disfavor providing affordable high-speed service to less profitable poor or rural populations when compared to denser, higher-income neighborhoods.<sup>35</sup> Some scholars have argued that these market

<sup>32</sup> See UPGRADE SEATTLE, <http://www.upgradeseattle.com> [<http://perma.cc/YB83-K6UA>].

<sup>33</sup> PENNY PRITZKER & TOM VILSAK, U.S. DEP’T OF AGRIC. & U.S. DEP’T OF COMMERCE, BROADBAND OPPORTUNITY COUNCIL REPORT AND RECOMMENDATIONS 12 (2015), [http://obamawhitehouse.archives.gov/sites/default/files/broadband\\_opportunity\\_council\\_report\\_final.pdf](http://obamawhitehouse.archives.gov/sites/default/files/broadband_opportunity_council_report_final.pdf) [<http://perma.cc/UT6S-HZP3>] (“Broadband has steadily shifted from an optional amenity to a core utility for households, businesses and community institutions. Today, broadband is taking its place alongside water, sewer and electricity as essential infrastructure for communities.”).

<sup>34</sup> See, e.g., Stricker, *supra* note 4, at 620 (“Broadband deployment is analogous to the deployment of electricity in the United States in the early twentieth century. In the 1880s, most electricity in the United States was supplied by large, private companies that did not view extending service to less densely populated areas as profitable or feasible and thus chose to ignore them in favor of urban markets.” (footnote omitted)).

<sup>35</sup> The basic thinking behind this approach is that in most cases, the more

The lack of broadband bears repeating: nearly four in ten Americans living in rural areas, and one in ten Americans overall, currently have no option—at any price—to subscribe to broadband access where they live.<sup>61</sup>

These digital divides—most pronounced among poor and rural communities, tribal areas, and senior citizens—represent a challenge and an opportunity for state and local governments hoping to bring residents and local businesses online to reap the numerous expected educational, economic, and social benefits of broadband access.<sup>62</sup>

Many communities who are still waiting for market competition to deliver universal, affordable broadband access should consider whether that approach has failed. The need for that service is urgent. To bridge these digital divides and deliver affordable, high-speed broadband, those communities should take a closer look at networks in cities like Chattanooga, Tennessee, as well as the nearly one hundred other local governments that provide public broadband.<sup>63</sup>

## II. THE PUBLIC BROADBAND ALTERNATIVE

*“I might call the right of people to own and operate their own utility something like this: a ‘birch rod’ in the cupboard to be taken out and used only when the ‘child’ gets beyond the point where a mere scolding does no good.”*

---

<http://www.pressherald.com/2013/01/14/googles-ultra-fast-internet-creates-silicon-prairie/> [<http://perma.cc/Z8XM-Y2PC>] (“The advantage [of high-speed Internet] for startups is simple: A fast Internet pipe makes it easier to handle large files and eliminates buffering problems that plague online video, live conferencing and other network-intensive tasks.”).

<sup>61</sup> FED. COMM’NS COMM’N, *supra* note 13, at 38 tbl.6.

<sup>62</sup> *See, e.g.*, Stricker, *supra* note 4, at 595-96 (“The benefits of high-speed Internet to both ordinary citizens and businesses are numerous and linked directly to broadband’s greater speeds. For individuals, broadband performs critical functions such as assisting people in finding employment and facilitating communication and education in addition to offering great convenience and entertainment value. Broadband also gives businesses the ability to expand their operations globally, find more and better customers and suppliers, streamline operations, advertise more efficiently, and recruit employees. The result is a substantial net benefit to the community, as communities with high-quality broadband networks are more likely to attract and retain businesses, offer greater educational opportunities, provide government services more efficiently, and attract tourists. Speed is key, as slower, non-broadband Internet connections render most of these benefits unobtainable either because of the time required to access the benefits or because the Internet products and services cannot be transmitted to users lacking broadband access.”).

<sup>63</sup> *Community Broadband Networks*, INST. FOR LOC. SELF-RELIANCE (Jan. 2015), <http://ilsr.org/wp-content/uploads/2015/02/cbbmap-fact-sheet.pdf> [<http://perma.cc/E2K8-6QPQ>].

change, and perhaps in a few years a “Dragonslayer” will again head the agency and take up this cause. If she does, she should encourage Congress to clarify the meaning of “any entity” in section 253 to include municipally owned utilities. She could ask Congress for an up-or-down vote on whether or not the statute provides the FCC authority to preempt non-neutral state laws that prohibit local governments from providing broadband. Given the widespread bipartisan public support for the right to offer public broadband, national attention could help.

Even if Congress does not take a vote, a recent federal court ruling upholding Title II reclassification of broadband service suggests growing public recognition of the essential nature of broadband service.<sup>286</sup> For this reason, the FCC may have more success if it again uses section 253 to selectively preempt state laws that unfairly restrict public broadband. If brought to court, the agency could follow a different approach than it did before the Sixth Circuit. Instead of distinguishing *Missouri Municipal League*, the agency should admit it made a mistake when it denied the Missouri Municipals’ preemption petition in 2004. Given broadband’s subsequent concentration into an oligopoly of providers, and a “crazy quilt” where only some cities can offer broadband and others cannot, the FCC should ask the Court to join the agency in reversing the legacies its twenty-year-old decisions have left.

Like electricity, broadband has grown from a luxury to an essential part of public life. Like electricity, citizens should have the right to choose to pool their resources and entrust their local government to provide it. There are many forms of public broadband, and cities should be able to choose the model that best fits their needs.

When Franklin D. Roosevelt campaigned for Americans’ right to own their own electric utilities, he argued that every big public electric project “will be forever a national yardstick to prevent extortion against the public and to encourage the wider use of that servant of the people— electric power.”<sup>287</sup> Publicly funded broadband networks can be the new yardstick to prevent extortion against the public and encourage wider

---

<sup>286</sup> See, e.g., Rebecca R. Ruiz & Steve Lohr, *F.C.C. Approves Net Neutrality Rules, Classifying Broadband Internet Service as a Utility*, N.Y. TIMES (Feb. 26, 2015), <http://www.nytimes.com/2015/02/27/technology/net-neutrality-fcc-vote-internet-utility.html> [<http://perma.cc/T225-7MYA>] (upholding the FCC’s classification of broadband providers as “common carriers” under Title II); see also WU, *supra* note 162, at 58 (“At the heart of common carriage is the idea that certain businesses are either so intimately connected, even essential, to the public good, or so inherently powerful—imagine the water or electric utilities—that they must be compelled to conduct their affairs in a nondiscriminatory way.”).

<sup>287</sup> Roosevelt, *supra* note 7.

Internet use.

So far, public broadband networks have shown that they can deliver high-speed broadband at affordable rates. In areas where a broadband market failed to materialize, it may be time for communities to realize that Roosevelt's "birch rod"<sup>288</sup> is a better solution than waiting for the private market to improve on its own.

Public power did not come easy. Public broadband will not come easy, either. But as the number of successful public networks grows, combined with widespread bipartisan public support for these efforts, public broadband advocates have plenty of reasons to see a bright future ahead.

## Telecom Programs

**Announcement** : For information about the broadband pilot program (ReConnect Program) authorized in the Consolidated Appropriations Act, 2018 please log into : <https://reconnect.usda.gov>

USDA is investing in Rural Broadband to rebuild America's infrastructure. [Read more.](#)

Access to broadband has become essential for the social and economic benefits it provides to American residents, businesses, governments and communities. Broadband is crucial for increased health, educational and economic opportunities, as well as for job and business creation and growth. Broadband can help close the digital divide between rural and urban communities.

USDA Rural Development's Rural Utilities Programs provide a variety of loans and grants to build and expand broadband networks. Loans to build broadband networks and deliver service to rural households and businesses, provide capital for rural telecommunications companies and broadband providers. Grants are reserved for communities with the highest need.

### **Telecommunications Loan and Grant Programs offered are:**

1. Community Connect Grants
2. Distance Learning and Telemedicine Grants
3. Rural Broadband Access Loan and Loan Guarantee
4. Telecommunications Infrastructure Loans and Guarantees

Eligible applicants include for-profit and non-profit entities, tribes, municipalities and cooperatives. USDA particularly encourages investments in tribal and economically disadvantaged areas.

Once funds are awarded, Rural Development monitors the projects to make sure they are completed, meet all program requirements and are making efficient use of Federal resources.

Each program has different applicant and project eligibility requirements and program objectives.

**Announcement** : [OPEN LETTER FROM THE ASSISTANT ADMINISTRATOR](#) regarding reorganizations of Awardee's companies for the Broadband Initiatives Program ("BIP") Awardees ("Awardees").

### **Functional Structure is focused on Customer Service**

The RUS Telecom Program is comprised of three divisions: the [Loan Origination and Approval Division \(LOAD\)](#), [Portfolio Management and Risk Assessment Division \(PMRAD\)](#), and the [Policy and Outreach Division \(POD\)](#).

### **Where a Loan or Grant Application Starts, is Completed and Submitted**

# EXHIBIT 24

**2SSB 5511** - H COMM AMD

By Committee on Capital Budget

**ADOPTED 04/16/2019**

1 Strike everything after the enacting clause and insert the  
2 following:

3 "NEW SECTION. **Sec. 1.** The legislature finds that:

4 (1) Access to broadband is critical to full participation in  
5 society and the modern economy;

6 (2) Increasing broadband access to unserved areas of the state  
7 serves a fundamental governmental purpose and function and provides a  
8 public benefit to the citizens of Washington by enabling access to  
9 health care, education, and essential services, providing economic  
10 opportunities, and enhancing public health and safety;

11 (3) Achieving affordable and quality broadband access for all  
12 Washingtonians will require additional and sustained investment,  
13 research, local and community participation, and partnerships between  
14 private, public, and nonprofit entities;

15 (4) The federal communications commission has adopted a national  
16 broadband plan that includes recommendations directed to federal,  
17 state, and local governments, including recommendations to:

18 (a) Design policies to ensure robust competition and maximize  
19 consumer welfare, innovation, and investment;

20 (b) Ensure efficient allocation and management of assets that the  
21 government controls or influences to encourage network upgrades and  
22 competitive entry;

23 (c) Reform current universal service mechanisms to support  
24 deployment in high-cost areas, ensuring that low-income Americans can  
25 afford broadband, and supporting efforts to boost adoption and  
26 utilization; and

27 (d) Reform laws, policies, standards, and incentives to maximize  
28 the benefits of broadband in sectors that government influences  
29 significantly, such as public education, health care, and government  
30 operations;

31 (5) Extensive investments have been made by the  
32 telecommunications industry and the public sector, as well as

1 policies and programs adopted to provide affordable broadband  
2 services throughout the state, that will provide a foundation to  
3 build a comprehensive statewide framework for additional actions  
4 needed to advance the state's broadband goals; and

5 (6) Providing additional funding mechanisms to increase broadband  
6 access in unserved areas is in the best interest of the state. To  
7 that end, this act establishes a grant and loan program that will  
8 support the extension of broadband infrastructure to unserved areas.  
9 To ensure this program primarily serves the public interest, the  
10 legislature intends that any grant or loan provided to a private  
11 entity under this program must be conditioned on a guarantee that the  
12 asset or infrastructure to be developed will be maintained for public  
13 use for a period of at least fifteen years.

14 NEW SECTION. **Sec. 2.** A new section is added to chapter 43.330  
15 RCW to read as follows:

16 The definitions in this section apply throughout this section and  
17 sections 3 through 6 of this act unless the context clearly requires  
18 otherwise.

19 (1) "Board" means the public works board established in RCW  
20 43.155.030.

21 (2) "Broadband" or "broadband service" means any service  
22 providing advanced telecommunications capability and internet access  
23 with transmission speeds that, at a minimum, provide twenty-five  
24 megabits per second download and three megabits per second upload.

25 (3) "Broadband infrastructure" means networks of deployed  
26 telecommunications equipment and technologies necessary to provide  
27 high-speed internet access and other advanced telecommunications  
28 services to end users.

29 (4) "Department" means the department of commerce.

30 (5) "Last mile infrastructure" means broadband infrastructure  
31 that serves as the final connection from a broadband service  
32 provider's network to the end-use customer's on-premises  
33 telecommunications equipment.

34 (6) "Local government" includes cities, towns, counties,  
35 municipal corporations, public port districts, public utility  
36 districts, quasi-municipal corporations, special purpose districts,  
37 and multiparty entities comprised of public entity members.

1 (7) "Middle mile infrastructure" means broadband infrastructure  
2 that links a broadband service provider's core network infrastructure  
3 to last mile infrastructure.

4 (8) "Office" means the governor's statewide broadband office  
5 established in section 3 of this act.

6 (9) "Tribe" means any federally recognized Indian tribe whose  
7 traditional lands and territories included parts of Washington.

8 (10) "Unserved areas" means areas of Washington in which  
9 households and businesses lack access to broadband service, as  
10 defined by the office, except that the state's definition for  
11 broadband service may not be actual speeds less than twenty-five  
12 megabits per second download and three megabits per second upload.

13 NEW SECTION. **Sec. 3.** A new section is added to chapter 43.330  
14 RCW to read as follows:

15 (1) The governor's statewide broadband office is established. The  
16 director of the office must be appointed by the governor. The office  
17 may employ staff necessary to carry out the office's duties as  
18 prescribed by this act, subject to the availability of amounts  
19 appropriated for this specific purpose.

20 (2) The purpose of the office is to encourage, foster, develop,  
21 and improve affordable, quality broadband within the state in order  
22 to:

23 (a) Drive job creation, promote innovation, improve economic  
24 vitality, and expand markets for Washington businesses;

25 (b) Serve the ongoing and growing needs of Washington's education  
26 systems, health care systems, public safety systems, industries and  
27 business, governmental operations, and citizens; and

28 (c) Improve broadband accessibility for unserved communities and  
29 populations.

30 NEW SECTION. **Sec. 4.** A new section is added to chapter 43.330  
31 RCW to read as follows:

32 (1) The office has the power and duty to:

33 (a) Serve as the central broadband planning body for the state of  
34 Washington;

35 (b) Coordinate with local governments, tribes, public and private  
36 entities, nonprofit organizations, and consumer-owned and investor-  
37 owned utilities to develop strategies and plans promoting deployment

# EXHIBIT 25

## A. Overview

Unless otherwise authorized or prohibited by state law and the City's Purchasing Code, the following standards and procedures apply to the disposition of surplus personal property owned by the City.

Surplus personal property with commercial value will be disposed of in an efficient manner that achieves the highest resale proceeds for the City of Tacoma. Surplus property with little or no commercial value or when disposal and sales efforts are judged more costly than estimated net proceeds, may be transferred in the order as stipulated in TMC 1.06.278, and eventually disposed of through salvage contracts or other efficient means if not so transferred. Items that are broken, unusable, and have no commercial, salvage or donation value may be declared as "trash" and efficiently disposed of as such. Regulatory or special disposal requirements shall be followed when applicable (e.g., hazard metals, cathode ray tubes). The dollar values referenced in this policy are the estimated current commercial or resale value of the property at the time the property is declared surplus, *not* the original acquisition value, as determined by the owning department/division and/or as determined by a knowledgeable third party hired by the owning department/division.

## B. Highlights

1. In addition to City website postings for disposal of surplus personal property, advertising, promotional and resale assistance through a third party contracted by the City may also be appropriate.
2. Traditional surplus disposal procedures are inefficient and costly to the City for items that are broken, unusable, and have no commercial salvage or donation value. Departments may declare and dispose of such items themselves as trash.
3. City employees are permitted in limited situations to participate in the surplus property program.
4. This policy does **not** apply to surplus real property, that is, real estate transactions.

## C. General Requirements

1. Declaration of Surplus Property (DSP) Form. This form can be found on the Purchasing website. The DSP form is used for declaring surplus property and must be completed for **all** disposal situations, including real property and "trash" items. Except for "trash" items, the form must be submitted to Purchasing prior to **initiating** the surplus property disposal process. For "trash" disposals, the form need not be submitted to the Purchasing Division, but is maintained by the owning department for accountability purposes for a period of two years after the disposal of "trash" items.
2. For personal property with estimated values over \$200,000, follow the sealed solicitation procedures for requests for bids outlined in Section XV. of the Purchasing Policy Manual unless a negotiated disposition process has been authorized per TMC 1.06.273 A. See subsection C. 19. below for additional guidance applicable to disposition of utility specific surplus personal property owned by TPU.

3. Surplus personal property with an estimated value between \$25,001 and \$200,000 shall follow the informal solicitation procedures for requests for bids outlined in Section XII. of the Purchasing Policy Manual. However, some items may be appropriate for on-line auctioning due to general public appeal, collector value and/or broader exposure of unique items for sale. Such requests may be approved by the Procurement and Payables Division manager on a case-by-case basis when on-line auctioning is anticipated to be more successful.
4. Surplus personal property with estimated values between \$1,001 and \$25,000 will be posted to the City website for a minimum of 10 business days, supplemented by posting announcements to the Association of Washington Cities surplus property website. Departments/divisions may post and distribute notices to their own mailing list or potential interested parties. In lieu of the above, the department/division may request on-line auctioning approval from Purchasing.
5. Surplus personal property with estimated values between \$250 and \$1,000 will be posted to the City website. After 10 business days, items not sold will be disposed of through salvage contracts or transferred in the order specified in TMC 1.06.278. If desired by the owning department/division, on-line auctioning may be requested. However, on-line auctioning approval from Purchasing for lower valued items may not be granted if special requirements render the process not cost-effective. For example, if special disclaimer or legal language (other than the standard) must be researched and incorporated with the posting, or if special posting, bidding or payment arrangements are needed that require the standard City set-up with the on-line auction company to be modified. These situations are not cost-effective for an item with estimated value of \$350, but may be for items valued at \$750.
6. Surplus personal property with estimated values less than \$250 may be transferred or disposed of in the order specified in TMC 1.06.278, on a first come-first requested basis. Items will be posted to the City website and items will become available to the next eligible group after a set period (5 business days unless otherwise specified) expires. Items valued less than \$199 may also be sold/transferred through "[2good2toss.com](http://2good2toss.com)", a waste reduction/recycling exchange website sponsored by the State Department of Ecology and other governmental entities including the City of Tacoma.
7. "Trash" Items. Surplus property that is broken, unusable, or has no commercial, salvage or donation value and no special disposal requirements (e.g., hazardous metals), may be declared as "trash" by the owning department/division by completing a Declaration of Surplus Property (DSP) form and disposing of the items themselves, using whatever method that is efficient (garbage, landfill, etc.). Purchasing does not need to be involved and these "trash" items are not handled through normal surplus procedures. Purchasing will pursue citywide contracts with salvage and junk dealers to aid in timely and environmentally proper disposal where practicable. **Please note that cathode ray tubes (CRTs) are banned from disposal as garbage by state regulations.** CRT containing devices include computer monitors, televisions or other items that contain a picture tube.

# EXHIBIT 25 (a)

## Practice Tips

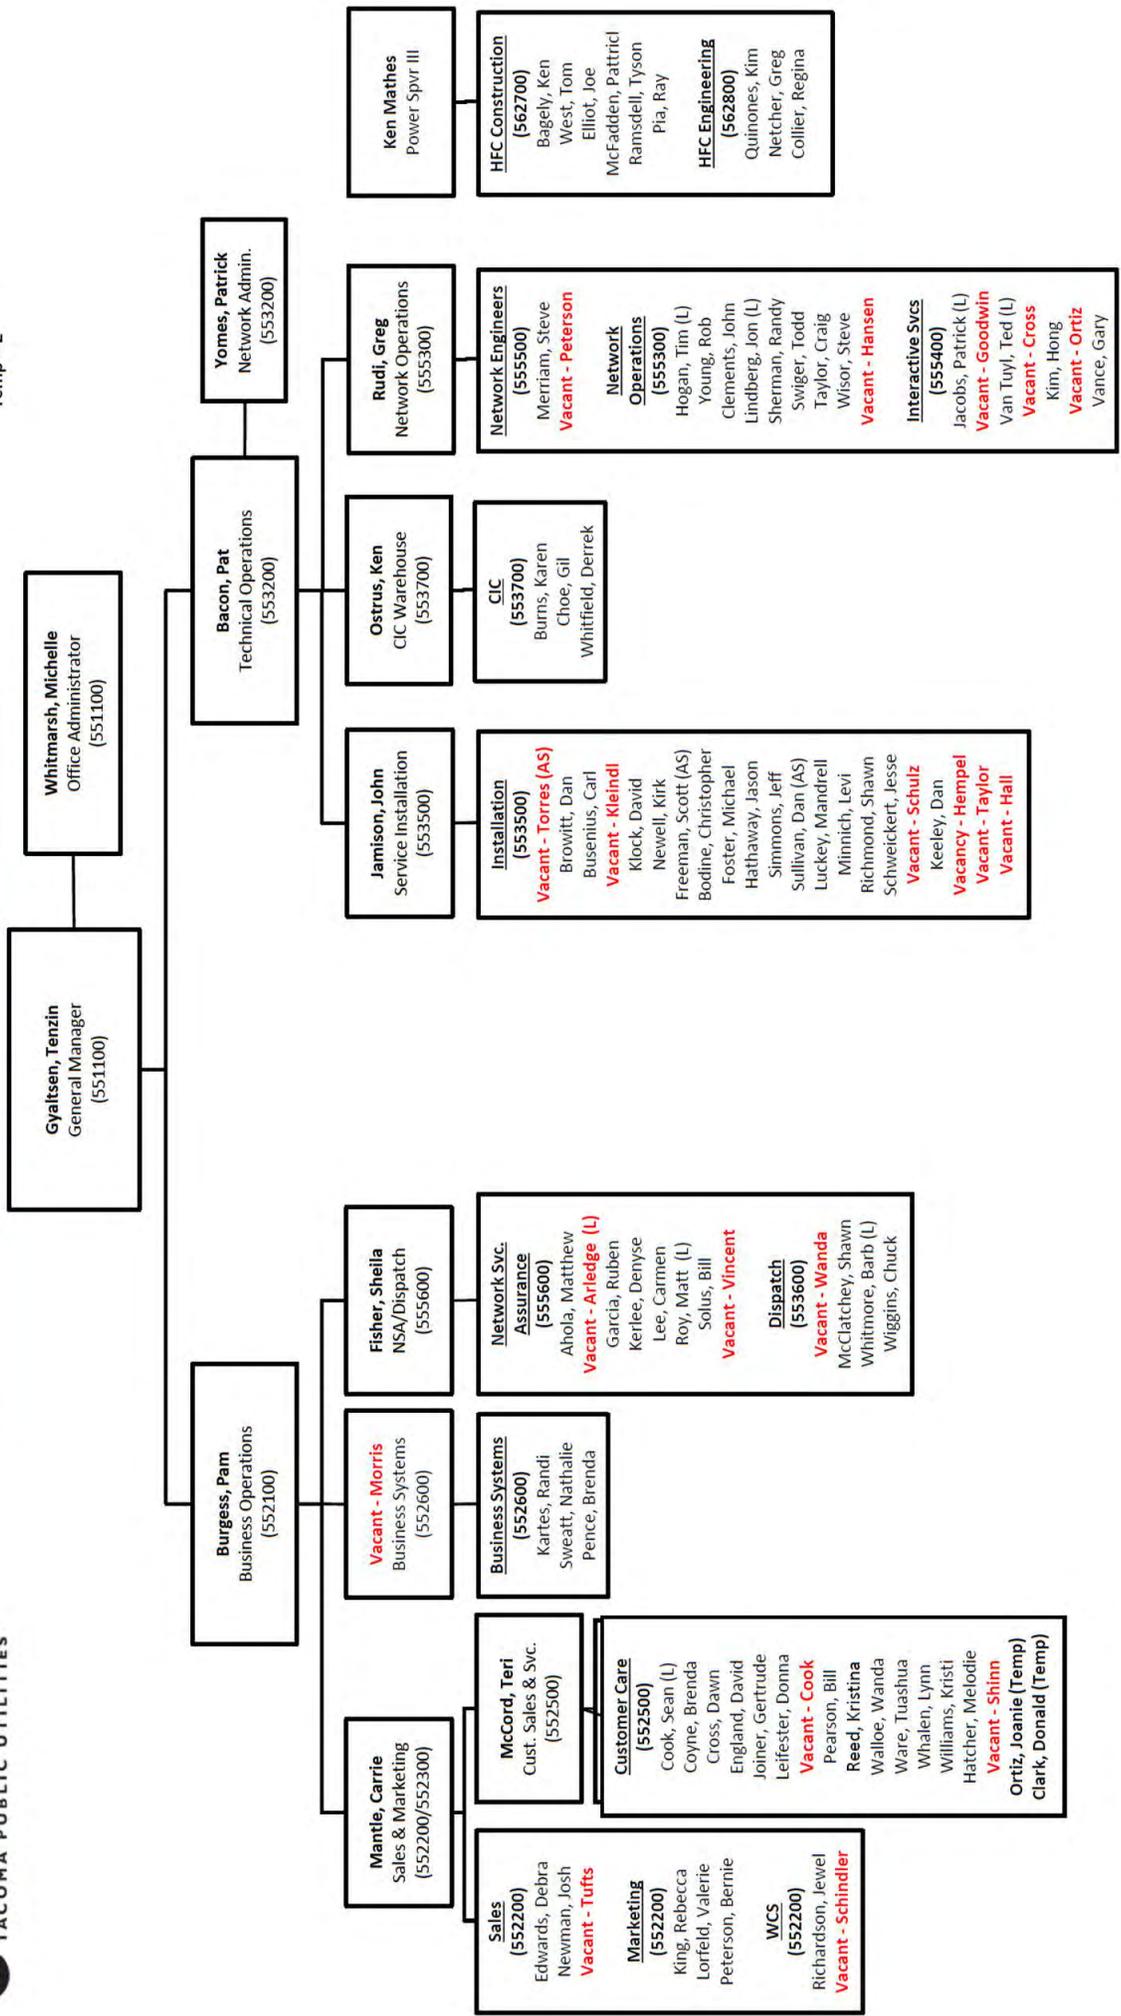

- **Prior to sale, always determine the fair market value of the item to be sold.** If you sell it for less, you may be violating the "gift clause," in Article VIII, Sec. 7 of the State Constitution, which states that "No county, city, town or other municipal corporation shall hereafter give any money, or property, or loan its money, or credit to or in aid of any individual, association, company or corporation, except for the necessary support of the poor and infirm, or become directly or indirectly the owner of any stock in or bonds of any association, company or corporation." But see [RCW 39.33.010](#) mentioned in the list of statutes above.
- **Hold a public hearing**, if required by [RCW 39.33.020](#) or [RCW 35.94.040](#). [AGO 1997 No. 5](#) concludes that the public hearing requirement in [RCW 39.33.020](#) only applies to intergovernmental transfers of property.
- **Pass a resolution** declaring the property to be surplus, and specifying how the property is to be sold, or delegating that task to a particular administrative official.
- **Proceed with sale as required by the town or city council, or in any commercially reasonable way.** Sale can be by auction, private sale, sealed bid, through a broker or agent, etc.
- **City officials and certain administrative officers may be restricted from purchasing surplus property due to conflict of interest concerns.** The general rule is that those who are involved in the decision to surplus property (the council) and those in charge of administering the sale (mayor, city manager, or other city officer responsible for the sale) should not purchase the property. General city employees can purchase surplus city property.
- **Consider adopting policies concerning sale of city property.** For examples, see the [Policies](#) section below.

AGO 2003 No. 11.

**Washington Attorney General Opinions**

**2003.**

**AGO 2003 No. 11.**

December 15, 2003

COUNTIES --- CITIES AND TOWNS - TELECOMMUNICATIONS --- Authority of cities, towns, and counties to provide telecommunications services.

Those counties and cities that have "home rule" powers (that is, charter counties, first class cities, and cities operating under the Optional Municipal Code) have authority to provide telecommunications services to their residents; other cities, towns, and counties lack this authority.

The Honorable Jeff Morris  
State Representative, 40th District  
P.O. Box 40600  
Olympia, WA 98504-0600

Cite As: AGO 2003 No. 11

Dear Representative Morris,

By letter previously acknowledged, you have requested an opinion on the following paraphrased question:

Do cities, towns, and counties have the authority to provide telecommunications services to their residents?

Specifically, you ask for a review and an update to AGO 53-55 No. 273, which concluded that a city was not authorized to own or operate a telephone system.(fn1)

**BRIEF ANSWER**

The answer to your question depends on the extent to which a municipal government may exercise "home rule" powers. First-class and code cities and charter counties may offer telecommunications services to their residents to the extent not specifically barred by state statute. These municipalities, often described as having "home rule" powers, do not need express or implied statutory authority to enact local legislation. Other classes of cities, towns, and counties are limited to those powers granted by statute, and since there is no statute providing authority to provide telecommunications services, they lack statutory authority to provide telecommunications services to the public. We overrule AGO 1953-55 No. 273 to the extent it is inconsistent with this opinion.

**ANALYSIS**

**A. Definition Of "Telecommunications"**

In your question, you ask whether municipalities (specifically to cities, towns, and counties) are authorized to be in the telecommunications business. To answer your question, we first must address the meaning of "telecommunications."

For purposes of regulating telecommunications companies, state law broadly defines "telecommunications" as:

[T]he transmission of information by wire, radio, optical cable, electromagnetic, or other similar means. As used in this definition, "information" means knowledge or intelligence represented by any form of writing, signs, signals, pictures, sounds, or any other symbols.

RCW 80.04.010 (defining "telecommunications" for purposes of laws regulating telecommunications companies).(fn2) For ease of reference, we will adopt this definition of the term.

#### B. General Rules Regarding The Authority Of Cities, Towns, And Counties

As a preliminary matter, there are several classifications of cities, towns, and counties under Washington law. There are first class cities, second class cities, code cities, unclassified cities, and towns. The classification of cities stems from the Washington Constitution, which provides, in relevant part:

Any city containing a population of ten thousand inhabitants, or more, shall be permitted to frame a charter for its own government, consistent with and subject to the Constitution and laws of this state[.]

Const. art XI, § 10. First class cities are those that have adopted a charter pursuant to this provision. RCW 35.01.010. Second-class cities and towns do not have their own charters but are governed by a statutory scheme set forth primarily in RCW Title 35.(fn3) Unclassified cities include those created by special charter prior to adoption of the state constitution (RCW 35.30.010) and statutory enactments supplement the powers they derive from their territorial charters. Finally, "code cities" are those which were incorporated, or have re-incorporated, under an Optional Municipal Code originally enacted in 1967. Laws of 1967, Ex. Sess., ch. 119, codified as RCW Title 35A.

Counties also vary as to the extent of their local legislative powers. The Washington Constitution allows any county to "frame a 'Home Rule' charter" for its own government subject to the Constitution and laws of this state". Const. art. XI, § 4.(fn4) Those counties that have not adopted charters are governed by a statutory framework which is primarily codified in RCW Title 36.

With respect to all municipal corporations, the general rule is that they are limited to those powers expressly granted by statute, those powers necessarily or fairly implied in or incident to powers expressly granted, and those powers essential to the declared purposes and objects of the corporation. *Port of Seattle v. Wash. Utils. & Transp. Comm'n*, 92 Wn.2d 789, 794-95, 597 P.2d 383 (1979). "If there is a doubt as to whether the power is granted, it must be denied." *Id.* at 795 (citations omitted).

However, this general rule does not apply to cities and counties that have adopted charters pursuant to the Washington Constitution (Const. art. XI, §§ 4, 10) or to cities operating under the optional municipal code ("code cities"). RCW 35A.11.020.(fn5) These cities and counties (first class cities, code cities, and charter counties) have legislative powers analogous to those of the state, except they cannot contravene any constitutional provision or state statute. *Winkenwerder v. City of Yakima*, 52 Wn.2d 617, 622, 328 P.2d 873 (1958). These municipalities, often described as having "home rule" powers, do not need express or implied statutory authority to enact local

legislation.

Despite their broad powers, the Washington Supreme Court has held that first class and code cities are not exempt from legislative control:

[A]t least when the interest of the State is paramount to or joint with that of the municipal corporation, the municipal corporation has no power to act absent a delegation from the legislature.

*Massie v. Brown*, 84 Wn.2d 490, 492, 527 P.2d 476 (1974) (citations omitted). In addition, a first class or code city's authority is preempted when the Legislature adopts a law concerning a particular interest, unless the Legislature has left room for concurrent jurisdiction. *Heinsma v. City of Vancouver*, 144 Wn.2d 556, 560, 29 P.3d 709 (2001). A city ordinance will be invalid (1) if a general statute preempts city regulation of the subject or (2) if the ordinance directly conflicts with a statute. *Id.* at 561.

The scope of a municipal corporation's powers also may depend on whether the powers are governmental or proprietary. *Hite v. Pub. Util. Dist. 2*, 112 Wn.2d 456, 459, 772 P.2d 481 (1989). Proprietary powers are more broadly defined than governmental powers. Where a municipal corporation is authorized to conduct a business, it may exercise its business functions in much the same way as a

PRIVATE

entity. *City of Tacoma v. Taxpayers of Tacoma*, 108 Wn.2d 679, 694, 743 P.2d 793 (1987). The provision of a product or service to the public--such as water, electricity, natural gas, or telecommunications--is a proprietary, rather than a governmental, function of a city or county. *Id.* at 694.

### **C. Authority Of "Home Rule" Cities And Counties To Provide Telecommunications Services**

As stated above, "home rule" cities and counties have broad, though not unlimited, legislative powers. The Washington Constitution states that providers of telephone services are common carriers subject to control by the Legislature. Const. art. XII, § 19. Telecommunications businesses are public utilities and are regulated by the state to varying degrees. RCW 80.01.040(3). Thus, the state has enacted statutes regulating telecommunications services. However, these statutes neither expressly permit nor expressly prohibit cities and counties from providing such services. The Legislature has authorized cities and towns to provide certain utilities such as electricity, gas, water, sewerage, and solid waste services. See RCW 35.92.010 (any city or town may provide water to end users); 35.92.020 (city or town authorized to provide sewerage and solid waste services to end users); 35.92.050 (city or town authorized to provide electricity and gas to end users); RCW 35A.80.010 (code city may provide utility service to extent authorized by general laws). Counties are authorized to provide a number of services to their residents, including transportation (RCW 36.57 and 36.57A), solid waste disposal (RCW 36.58), hospitals (RCW 36.62), and water-sewerage-drainage systems (RCW 36.94).

Neither cities, towns, nor counties are specifically authorized to provide telecommunications services. The question also arises whether the list of permitted utilities set forth in statute is exclusive, creating the inference that the Legislature did not intend for cities or counties to provide

any services beyond those authorized by various statutes.

This point was considered in *City of Issaquah v. Teleprompter Corp.*, 93 Wn.2d 567, 611 P.2d 741 (1980), in which Issaquah, a city operating under the Optional Municipal Code, had established and operated a cable television system serving the city's residents, taking over franchises previously held by a

PRIVATE

cable company. The cable company challenged the city's acts, and the state supreme court upheld the city. The court found that providing cable television service was of appropriate local concern to be the subject of city legislation, and that the state had not preempted the field by declaring it a paramount state concern. *Id.* at 572-575.(fn6) The court also rejected several other statutory and constitutional objections. *Issaquah* establishes that "home rule" cities and counties do not need express statutory authority to exercise their legislative authority.

As to "home rule" governments, then, the question is whether the state has enacted a "general law" that supersedes or controls the exercise of legislative authority. None of the Legislature's enactments purport to prohibit cities or counties from providing telecommunications services, and none are so sweeping and comprehensive as to leave no room for local legislation. We note also that courts in two other jurisdictions have upheld the authority of "home rule" local governments to provide telecommunications services. *GTE Northwest, Inc. v. Oregon Pub. Util. Comm'n*, 179 Ore. App. 46, 39 P.3d 201(2002); *In re Application of Lincoln Elec. Sys.*, 655 N.W.2d 363 (2003). The Oregon case involved a county with "home rule" powers, and the Nebraska case involved a charter city with "home rule powers."(fn7) Therefore, we conclude that "home rule" cities and counties may provide telecommunications services except as may be limited by specific statutory language governing particular services.

In AGO 1953-55 No. 273, we concluded that first class cities lacked authority to provide telephone service to their residents. Although the opinion specifically noted that first class cities were under discussion, it included no analysis of the effect of first class "home rule" powers on the question. To the extent that AGO 1953-55 No. 273 is inconsistent with this opinion, we overrule it.

#### **D. Authority Of Second Class Cities, Towns, And Non-Charter Counties To Provide Telecommunications Service**

As noted above, the Legislature has not expressly authorized such entities to engage in such business, nor is the provision of telecommunications necessarily implied or incident to the provision of authorized services. In addition, the authority of second class cities and towns is more limited than the authority of first class and code cities. Like most municipal corporations (and unlike the home-rule governments discussed above), second-class cities, towns, and non-charter counties cannot exercise powers except those expressly granted by the Legislature or those necessarily implied from granted powers. *See, e.g., Sundquist Homes, Inc. v. Snohomish Cy. Pub. Util. Dist. 1*, 140 Wn.2d 403, 997 P.2d 915 (2000); *Town of Othello v. Harder*, 46 Wn.2d 747, 284 P.2d 1099 (1955). Therefore, in the absence of any express legislation authorizing these categories of municipal corporations to provide telecommunications services, we conclude that they may not lawfully do so.(fn8)

We trust that the foregoing will prove useful to you.

Sincerely,  
SHANNON E. SMITH  
Assistant Attorney General

---

Footnotes:

1. Your original question was whether municipalities had authority to "be in the telecommunications business." This is a very broad term, and it potentially covered many unlikely possibilities. From the context of your letter and from general knowledge about proposals municipalities have considered, we limit our analysis to cities or counties seeking to provide telecommunications services to the general public rather than other forms of "telecommunications business."
2. This definition also applies to those statutes authorizing public utility districts and port districts to construct and operate telecommunications facilities for wholesale. RCW 53.08.005(2); 54.16.005(2). Port districts and public utility districts are authorized to construct and operate telecommunications facilities for their own use and for wholesale. RCW 53.08.370; 54.16.330. In granting this authority, the Legislature expressly provided that neither port districts nor public utility districts may provide telecommunications services to end users. *Id.*
3. RCW 35.23 contains provisions applying specifically to second-class cities, and RCW 35.27 contains provisions applying to towns.
4. A county and one or more cities may also form a combined city-county government (with "home rule" powers) through a constitutional charter process. Const. art. XI, § 16. However, as of this date, no city-county governments have been created under this provision.
5. Code cities with a population of 10,000 or more may adopt a charter, but they are not required to do so. RCW 35A.01.030.
6. The plaintiff in the *Issaquah* case argued that "home rule" cities could not operate any utilities beyond those listed in statute. *Issaquah*, 93 Wn.2d at 574. The *Issaquah* court found that the cable television system was not a utility (based on the representations of the parties before the court) and thus did not reach the question whether a city could operate a utility other than those specifically authorized by statute. *Id.* at 574-575. The court's decision did not appear to turn on this point, however. We conclude that the analysis is the same whether the provision of a particular telecommunications service is a utility or not.
7. The Nebraska court also found that a federal statute independently provides a basis for a municipality to provide telecommunications service and that this law preempts any contrary state law. Courts and other tribunals have differed on whether the federal statute barring states from prohibiting "any entity" to provide telecommunications services preempts state laws that preclude municipalities from providing such services. See, e.g., *City of Abilene, Texas v. F.C.C.*, 164 F.3d 49 (D.C. Cir. 1999); *Iowa Tel. Ass'n v. City of Hawarden*, 589 N.W.2d 245 (Iowa 1999); *City of Bristol v. Earley*, 145 F. Supp.2d 741 (W.D. Va. 2001). Whether "any entity" includes municipalities is thus not a settled question and will not be addressed here. Certiorari has been granted by the United States Supreme Court on this issue in *Nixon v. F.C.C.*, U. S. Supreme Court Docket No.

02-1386.

8. Of course, the Legislature is free to expand or limit the powers of cities, towns, and counties in the area, should it choose to do so. For reasons discussed in the main text, any limitations on the powers of "home rule" municipalities would need to be spelled out in statute. As to "non home rule" governments, new statutory language would be needed to authorize and define the services such governments would be allowed to provide.

KEVIN STOCK  
COUNTY CLERK  
**NO: 19-2-11506-3**

**IN THE SUPERIOR COURT OF THE STATE OF WASHINGTON  
IN AND FOR THE COUNTY OF PIERCE**

BOWMAN

Plaintiff,

V

City of Tacoma,

Defendant.

MITCHELL SHOOK,

Plaintiff,

v.

CITY OF TACOMA,

Defendant.

**NO. 19-2-11506-3**

**DECLARATION OF  
MITCHELL SHOOK**

I, Mitchell Shook, declare as follows: I am a resident of Tacoma, ratepayer of Tacoma Public Utilities, taxpayer to City of Tacoma, and customer of Click!, the municipal broadband telecommunications system operated by Tacoma Public Utilities. I am an expert in matters related to Click! Network and the ISP industry, having over 20 years of experience working with Click!

1 and other open access systems, in my role as Founder and CEO of Advanced Stream, an Internet  
2 Service Provider that operates on Click! Network. I am over the age of eighteen, competent to  
3 testify in this matter, and make this declaration on my own personal knowledge.  
4

5 1 It is my experience that municipalities, when disposing of property acquired for utility  
6 purposes, to avoid the mandatory “vote” requirement under RCW 35.94.040 follow a process in  
7 Washington state that involves a bidding stage, which follows a surplus declaration and public  
8 hearing. In my experience, such surplus resolutions generally involves things that are no longer  
9 useful, like old trucks, computers, desks, file cabinets, weed-whackers, copy machines etc.

10 For example, the City of Duvall recently disposed of “Property originally purchased for  
11 utility purposes.” The notice of public hearing cites RCW 35.94.040.

12 Notice is hereby given that the City Council of the City of Duvall, Washington  
13 will hold Public Hearing at the Riverview Educational Service Center, 15510  
14 1st Ave NE, Duvall, WA. at 7:00 p.m. or as soon as possible thereafter on  
15 October 1, 2019 regarding:

16 Property originally purchased for utility purposes that is either no longer  
17 needed for that use and / or past its useful life and the city desires to sell the  
18 property, pursuant to RCW35.94.040.

19 It is proposed that all items be disposed of to the general public by means of  
20 direct sales, sealed bid, trade-in, or auction, as determined to be in the best  
21 interests of the City by the Public Works Director and to the highest,  
22 responsible bidder.

23 I participated in that bidding process and found Duvall’s staff to be professional and courteous.  
24 Their actions represented the best practices for disposal of surplus utility property. I was successful  
25 with my winning bid for the hay rake! See my previous declaration in this case, under Shook Decl.  
26 10/29/19 Ex. 19.

1.

2. Attached hereto as **Exhibit 30** and incorporated herein by this reference is a true and  
correct copy of the City’s April 14, 1997 Memorandum in the case approving establishment Click!.

15 27. Attached hereto as **Exhibit 55** and incorporated herein by this reference is a true and  
16 correct copy of a City of Tacoma’s Resolution 39577 containing: WHEREAS the concerns raised  
17 about the current cost allocation methodology are significant and must be resolved and transcript of  
18 council meeting where City Attorney Bill Fosbre answers Council Member Blockers’ question  
19 about the Coates lawsuit.

20 28. Attached hereto as **Exhibit 56** and incorporated herein by this reference is a true and  
21 correct copy of Utility Tax Pages from City of Tacoma's Website, also the City’s Purchasing Policy.

22 29. Attached hereto as **Exhibit 57** and incorporated herein by this reference is a true and  
23 correct copy of a page describing Click!. FTTH services. I can testify that Click! provides “Voice  
24 Packages” to the ISP partners. These packages offering prioritization of data packets that enable  
25 telephone services to operate over Click! (ISP Agreement is Confidential and Available On Court  
26 Order).

30. Attached hereto as **Exhibit 58** and incorporated herein by this reference is a true and

1 correct copy of information related to Anacortes, WA broadband program, along with the U.S.  
2 Census Bureau report for 1907 on Telephones Farmer Lines, Coops And Mutual Phone Companies.

3 31. Attached hereto as **Exhibit 59** and incorporated herein by this reference is a true and  
4 correct copy of, Affidavit and Resume of Terry Dillon Confirming Telecommunication System.

5 32. Attached hereto as **Exhibit 60** and incorporated herein by this reference is a true and  
6 correct copy of About NBN Australia, from NBN website.

7 33. Attached hereto as **Exhibit 61** and incorporated herein by this reference is a true and  
8 correct copy of pages Striking Telegraph and Telephone and replacing those terms with  
9 Telecommunications, from Laws of 1985. Ch. 450, Sec. 13, Pgs. 1978 -1995..

10 34. Attached hereto as **Exhibit 62** and incorporated herein by this reference is a true and  
11 correct copy of MSA Agreement with Century Link and Integra as provided to me by TPU.

12 35. Attached hereto as **Exhibit 63** Nov. 20, 2019 City Council Action Memorandum, for  
13 Cable TV Franchise Agreement with Rainier Connect.

14 36. Attached hereto as **Exhibit 64** and incorporated herein by this reference is a true and  
15 correct copy of pages from Click! contract with City of Tacoma Public Library system, with recent  
16 Service Order information. As provided to me in a public record request by Defendant in 2019.

17 37. Attached hereto as **Exhibit 65** and incorporated herein by this reference is a true and  
18 correct copy of pages I downloaded from the American Registry for Internet Numbers (ARIN)  
19 website. I can personally testify to the shortage. I recently sought a small allotment of IP address  
20 from ARIN and the waiting list process, described in this Exhibit 65, took over a year for me to  
21 complete. I diligently pursued my application, for a /22 assignment, which is the equivalent of just  
22 1024 IPv4 addresses. My Initial Request, was submitted on 3/30/2018, and my IP addresses were  
23 finally issued on 9/4/2019.

24 38. Attached hereto as **Exhibit 66** and incorporated herein by this reference is a true and  
25 correct copy of pages from Click! Telecommunication Franchise with Pierce County and Puyallup.

26 39. Attached hereto, as **Exhibit 67** and incorporated herein by this reference are true and  
correct copies of historical Public Service Magazine pages, related to the power struggles at the time

1 RCW 35.94 was written. These are examples of the Private Power Trusts' Propaganda efforts to  
2 oppose public power and the BONE BILL. I have downloaded these from the Internet. Also  
3 included is historical information on efforts by public power to promote benefits of public power,  
4 including a letter by Honorable Homer T. Bone, obtained from the Library of University of Puget  
5 Sound.

6 I declare under the penalty of perjury under the laws of the State of Washington that the  
7 foregoing is true and correct.

8 DATED this 12<sup>st</sup> day of December 2019, at Tacoma, Washington.

MEMORANDUM IN SUPPORT OF CITY  
OF TACOMA'S MOTION FOR  
SUMMARY JUDGMENT

~~RECEIVED~~

~~APR 14 1997~~

~~THOMPSON, KRILICH, LAPORTE  
TACOMA, WASH. WEST INC., P.S.~~

## I. INTRODUCTION

The City of Tacoma (the "City") brought this declaratory judgment class action under RCW 7.24 and 7.25 and CR 23(B)(2) to confirm its authority to issue bonds for the purposes of constructing and operating a telecommunications system consisting of a hybrid fiber coaxial network (the "Telecommunications System").

On December 13, 1996, this Court ruled on four of the City's five requested declarations. The Court held that (1) the Court has jurisdiction over the subject matter and parties in this action; (2) Tacoma Ordinance No. 25930 (the "Bond Ordinance"), which provides for the issuance and sale of Electric System revenue bonds in the aggregate principal amount of \$1,000,000 (the "Bonds") in order to finance the first phase of constructing and operating the Telecommunications System, was properly enacted; (3) the City has authority under the laws of the State of Washington and the United

MEMORANDUM IN SUPPORT OF CITY OF TACOMA'S  
MOTION FOR SUMMARY JUDGMENT - 1

PRESTON GATES & ELLIS LLP  
5000 COLUMBIA CENTER  
701 FIFTH AVENUE  
SEATTLE, WASHINGTON 98104-7078  
TELEPHONE: (206) 623-7580  
FACSIMILE: (206) 623-7022

1 States to provide cable television service in the service area of the Light Division of the City's  
2 Department of Public Utilities (the "Light Division"); and (4) the City has authority under the laws of  
3 the State of Washington and the United States to lease telecommunications facilities and capacity to  
4 telecommunications providers. See Order Granting City of Tacoma's Motion for Summary Judgment  
5 dated December 13, 1996 (the "Order").

6 Only one issue remains: Whether the City has authority to issue revenue bonds to finance the  
7 first phase of construction and operation of the Telecommunications System. The City is entitled to  
8 summary judgment on this final issue. Issuing the bonds is a legislative act subject to review only for  
9 such deficiencies as fraud, bad faith, or ultra vires actions. Through the Order, the Court has already  
10 determined that construction and operation of the Telecommunications System is not ultra vires. No  
11 facts relation to fraud, bad faith, etc. have been alleged.

## 12 II. RELIEF REQUESTED

13 The City requests that the Court enter judgment declaring that:

- 14 1. The City has authority under the laws of the State of Washington to issue revenue  
15 bonds for the purposes of financing a telecommunications system to provide cable  
16 television service in the Light Division Service area and lease telecommunications  
17 facilities and capacity to telecommunications providers.

## 18 III. STATEMENT OF ISSUE

- 19 1. Whether the City may issue revenue bonds under the properly enacted Bond  
20 Ordinance for the purposes of providing cable television service and leasing telecommunications  
21 facilities and capacity pursuant to the authority confirmed by this Court's previous Order.

## 22 IV. EVIDENCE RELIED UPON

23 The City believes that the following facts are undisputed in every material respect. These  
24 facts are contained in the Declaration of Jon Athow in Support of Motion for Summary Judgment,  
25  
26

1 dated November 5, 1996 ("First Athow Decl.") and the Second Declaration of Jon Athow in Support  
2 of Motion for Summary Judgment dated April 11, 1997 ("Second Athow Decl.").

3 Plaintiff, the City of Tacoma, is a municipal corporation and a city of the first class of the  
4 State of Washington. The Defendants are taxpayers of the City and ratepayers of its electrical utility,  
5 the Light Division. Harold E. Nielsen, Jr., the taxpayer and ratepayer representative, is a resident and  
6 taxpayer of the City and a customer of the Light Division. The City currently owns and operates,  
7 through its Light Division, an electric utility (the "Electric System") for the purpose of providing  
8 electricity and other energy services throughout the City and other portions of Pierce County.

9 On July 23, 1996, the Tacoma City Council adopted Ordinance No. 25930 (the "Bond  
10 Ordinance"). The Bond Ordinance provides for the issuance and sale of Electric System revenue  
11 bonds in the aggregate principal amount of \$1,000,000 (the "Bonds") in order to finance the first  
12 phase of constructing and operating the Telecommunications System. The Telecommunications  
13 System will be used to improve the speed and capability of the existing real-time communications  
14 among certain Electric System substations, and to extend such real-time communications to the  
15 remaining substations. In addition, the Telecommunications System may be used to enhance such  
16 existing energy services as demand management, identification of outages, meter reading, billing and  
17 payment, and resource dispatch. The Telecommunications System may be used to perform similar  
18 functions for the City's provision of water service.

19 The City may also utilize a portion of the Telecommunications System to provide cable  
20 television service to customers within the Light Division service area, and to lease facilities or  
21 capacity to providers of video-on-demand, data transport, telephony, and other telecommunications  
22 services. This Court's previous Order determined that the City has the authority to engage in these  
23 activities, and that the Bond Ordinance was properly enacted.

24 The Light Division, with the assistance of numerous experts, has prepared a comprehensive  
25 Telecommunications Study. The City has recently adopted resolutions approving this Study and  
26

1 authorizing the Light Division to proceed with implementation. See Exhibits A, B, and C to Second  
2 Athow Decl. (Public Utility Board Resolution No. Substitute U-9258; City Council Substitute  
3 Resolution No. 33668; and Public Utility Board Amended Substitute Resolution No. U-9258.) The  
4 City Council acted unanimously after substantial public participation.

5 The Telecommunications Study incorporates a comprehensive business plan outlining the  
6 proposed services, operations, organizational structure and finances of the Telecommunications  
7 System. See Exhibit D to Second Athow Decl. (Telecommunications Study notebook), eleventh  
8 through sixteenth tabs. The chief concern raised by defendants' opposition on the previous summary  
9 judgment motion was the absence of such a plan. That objection has now been fully met.

## 10 V. ARGUMENT

### 11 A. Summary Judgment Standard

12 Summary judgment is appropriate to resolve actions or parts thereof when no genuine issues  
13 of material fact exist or when only a question of law exists. CR 56(c). "The burden is on the moving  
14 party to demonstrate that there is no issue as to a material fact." *Scott v. Pacific West Mountain*  
15 *Resort*, 119 Wn. 2d 484, 502-03 (1992). If the party seeking summary judgment successfully carries  
16 its initial burden, the burden shifts to the non-moving party to establish the existence of the facts on  
17 which it has the burden of proof at trial. *Young v. Key Pharmaceuticals, Inc.*, 112 Wn. 2d 216, 225  
18 (1989). The non-moving party must respond with specific facts and cannot rely on bare allegations.  
19 *Baldwin v. Sisters of Providence*, 112 Wn. 2d 127, 132 (1989). Conclusory statements or  
20 argumentative assertions are insufficient to raise an issue of fact. *Grimwood v. University of Puget*  
21 *Sound, Inc.*, 110 Wn. 2d 355, 359-60 (1988).

1 In the instant case, there are no issues of material fact relating to the City's authority to issue  
2 bonds. The City's authority to provide cable television service and to lease telecommunications  
3 facilities and capacity to telecommunications providers has already been confirmed. Only questions of  
4 law remain. The case should therefore be resolved on summary judgment.

5 **B. The City's Plans for the Telecommunications System Are Not Subject to Judicial**  
6 **Review in the Absence of Bad Faith, Fraud or Ultra Vires Actions.**

7 Judicial review of the legislative actions of Washington municipalities is extremely limited.  
8 The leading case on the question of judicial review of municipal legislative actions is *Blade v. La*  
9 *Conner*, 167 Wn. 403 (1932). In *Blade*, as in the instant case, a taxpayer sought to enjoin a town  
10 from issuing bonds for purposes of a utility project. *Blade* involved the acquisition of a water plant.  
11 In considering whether the town had authority to issue the bonds. The court declined to consider  
12 whether the plant could supply an adequate amount of water. As the court explained, "It is well  
13 settled that a court of equity will not review the action of the legislative authority of a municipality as  
14 to such matters as rest within its discretion unless fraud or bad faith are shown, or unless the action  
15 taken is clearly ultra vires." *Id.* at 407.

16  
17 In *City of Bremerton v. Kitsap County Sewer District*, 71 Wn. 2d 689 (1967), the court  
18 refused to consider claims remarkably similar to the defendant's suggestion here that proposed utility  
19 facilities may not be needed. *Bremerton* involved a sewer district's claim that installation of municipal  
20 water mains was illegal because there was no need for such mains. *Id.* at 704. Citing *Blade*, the  
21 court stated that its role was to determine only whether the city had authority to regulate and control  
22  
23  
24  
25  
26

1 the use, distribution and price of its water service. *Id.*<sup>1</sup> Because this Court has already confirmed  
2 Tacoma's authority to develop the Telecommunications System no further inquiry is warranted.

3 The sole question on this motion for summary judgment is whether the City has authority to  
4 issue bonds to finance an activity that is indisputably within its municipal powers: construction and  
5 operation of the Telecommunications System. Thus, no claim of ultra vires action can be sustained.  
6 Moreover, there has been no showing of bad faith or fraud. The City's actions are entitled to a  
7 presumption of good faith a defendants have the burden of proving otherwise. *Blade*, 167 Wash. At  
8 408. Therefore the Court must defer to the City's judgment on the desirability of constructing and  
9 operating the Telecommunications System and the means of doing so.  
10

11 **C. The City Has Authority Under Washington Statute To Issue Bonds for the**  
12 **Telecommunications System.**

13 Washington first-class cities may issue bonds for *any* lawful corporate purpose, RCW  
14 35.22.280(4). This Court has already determined that construction and operation of the  
15 Telecommunications System is a lawful corporate purpose of the City. *See* Order. Thus, the City  
16 may issue the Bonds to finance construction and operation of the Telecommunications System.  
17 Accordingly, this Court must find that the City has the authority to issue the Bonds for the purpose of  
18 financing construction and operation of the Telecommunications System.

19 **VI. CONCLUSION**

20 As this Court has determined, the City has authority to provide cable television service in the  
21 Light Division service area; and to lease telecommunications facilities and capacity to  
22

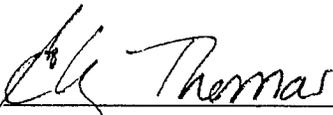

23 <sup>1</sup> *Accord Rowan v. Convention Center*, 78 Wn. App. 322, 329 (1995) (if municipal corporation's  
24 actions come within purpose and object of enabling statute and no express limitations apply, court  
25 leaves choice of means used in operating corporation to discretion of municipal authorities, and  
26 judicial review is limited to whether action is arbitrary, capricious or unreasonable); *Public Util. Dist.  
No. 1 v. City of Newport*, 38 Wn. 2d 221, 226 (1951) (desirability of city's operation of electrical  
distribution system that duplicated system of public utility district was "a problem for the  
legislature—not the courts.").

1 telecommunications providers. Thus development of the Telecommunications System is a lawful  
2 corporate purpose of the municipality. The only remaining issue is whether the City may issue  
3 revenue bonds to construct the Telecommunications System. Because the City may issue bonds for  
4 any lawful municipal purpose, it may issue bonds to finance the Telecommunications System. The  
5 Defendants have not alleged bad faith or fraud on the part of the City. The City is entitled to  
6 judgment as a matter of law that it has authority to issue bonds for the purpose of financing  
7 construction and operation of the Telecommunications System.

8 DATED this 11th day of April, 1997.

SECOND DECLARATION OF JON  
ATHOW IN SUPPORT OF MOTION FOR  
SUMMARY JUDGMENT

~~RECEIVED~~

~~APR 14 1997~~

~~THOMPSON, KRILICH, LAPORTE  
ATTORNEYS AT LAW~~

1. My name is Jon Athow. I am over the age of eighteen, competent to testify in this matter, and make this declaration based upon my own personal knowledge. I am employed by the Light Division of the City of Tacoma. My title is Telecommunications Project Manager. My responsibilities include planning for the creation and operation of a telecommunications system for the Light Division. I have been employed by the Light Division for three years.

2. The City of Tacoma, through its Light Division, is considering constructing and operating telecommunications facilities and services to enhance the Light Division's ability to provide highly reliable, cost-effective and convenient electric service to its customers. Such a system would also be capable of carrying other telecommunications services, including cable television service.

SECOND DECLARATION OF JON ATHOW IN SUPPORT OF  
MOTION FOR SUMMARY JUDGMENT - 1

COPY 680

1           3.     The Light Division produced a Business Plan for the telecommunications system as a  
2 key element of its Telecommunications Study.

3           4.     The Telecommunications Study was unanimously approved by the Tacoma Public  
4 Utility Board on March 26, 1997. A copy of the Board's Substitute Resolution No. U-9258  
5 approving the Business Plan is attached as Exhibit A.

6           5.     On April 8, 1997 the Tacoma City Council held a public hearing on the proposed  
7 development of the telecommunications system and on the Business Plan. Public testimony was taken  
8 and the Council debated the matter for over two hours. Earlier the same day, the Council had  
9 conducted a three-hour workshop.

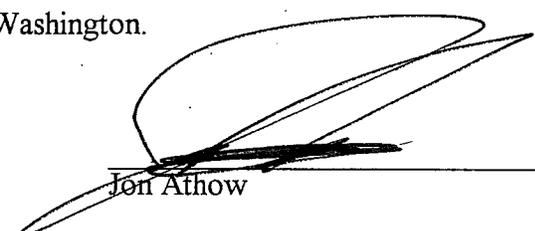

10          6.     The Telecommunications Study was unanimously approved by the Tacoma City  
11 Council on April 8, 1997. A copy of City Council Substitute Resolution No. 33668 approving the  
12 Telecommunications Study and authorizing implementation is attached as Exhibit B.

13          7.     On April 9, 1997 the Public Utility Board adopted Amended Substitute Resolution No  
14 U-9258 to conform the language of its resolution to City Council Substitute Resolution No. 33668.  
15 A copy of this Board Resolution is attached as Exhibit C.

16          8.     The Telecommunications Study is attached as Exhibit D. The Business Plan is  
17 comprised of all material contained behind the eleventh through sixteenth tabs.

18           I swear under the penalty of perjury of the laws of the State of Washington that the foregoing  
19 is true and correct.

20           Dated: April 11, 1997 at Tacoma, Washington.

# RESOLUTION NO.

SUBSTITUTE  
U-9258

1  
2  
3 WHEREAS the City of Tacoma, Department of Public Utilities,  
4 Light Division desires to: (1) develop a state-of-the-art fiber optic  
5 technology to support enhanced electric system control, reliability and  
6 efficiency; (2) develop capability to meet the expanding  
7 telecommunications requirements in an evolving competitive electric  
8 market, the most critical of which is real-time, two-way interactive  
9 communications with individual energy consumers, (3) create greater  
10 revenue diversification through new business lines (i.e. internet transport,  
11 cable TV, etc.), (4) enhance traditional products and service, and (5)  
12 maximize return on Light Division assets, and

13 WHEREAS these desired capabilities can be provided with a broad  
14 band telecommunications system for all of the Light Division's service area,  
15 and

16 WHEREAS a broad band telecommunications system will have  
17 available capacity for future Light Division needs and will also have the  
18 capacity to provide Telecommunications services for data transport, high  
19 speed internet access, full cable television service, and other uses, and

20 WHEREAS the Light Division has retained consultants to review  
21 and analyze the feasibility of a broad band telecommunications systems for  
22 the Light Division's service area, and a business plan has been prepared  
23 for this purpose (copies are on file with the Clerk), and

24 WHEREAS the cost of constructing, installing and commencing to  
25 operate a broad band telecommunications system will be approximately  
26 \$65 million dollars, but the benefits to the Light Division, the City and the  
27 Light Division customers are projected to exceed and justify the initial cost,  
28 and

# Surplus Property Hearing

Tacoma City Council Meeting

Public Hearing  
October 29, 2019

## PURPOSE

**Purpose:** This hearing is required pursuant to RCW 35.94.040. The purpose of this hearing is to take public testimony regarding a proposal to surplus property of Tacoma Power acquired for public utility purposes.

**Why is the property surplus:** In 1998, Tacoma Power built excess capacity in its HFC network for future anticipated utility needs. The Tacoma Public Utility Board has determined that this excess capacity together with certain property used by Click! Network are no longer needed by Tacoma Power for utility purposes and are surplus to Tacoma Power.

# Surplused Assets

## What Property will be Included in the Surplus Declaration?

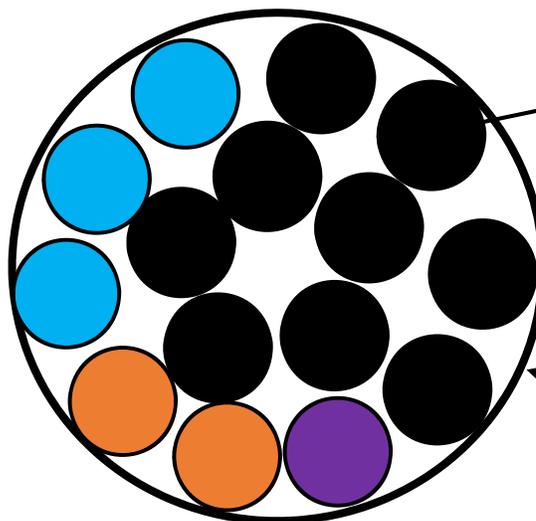

- Inventory, equipment and vehicles used by Click! Network that may be conveyed to Rainier Connect and which are described in the Click! Business Transaction Agreement and Indefeasible Right of Use Agreement
- Excess Capacity of the Tacoma Power HFC Network which includes the Click! Network and Dark Fiber as described in the Indefeasible Right of Use Agreement

## TIMING

**When will the Board and City Council take action?**

- **BOARD.** The Tacoma Public Utility Board has scheduled a special meeting for Wednesday October 30<sup>th</sup> to consider a resolution recommending that the City Council declare the property surplus and approving the Click! Business Transaction Agreement.
- **CITY COUNCIL.** The City Council will at its November 5<sup>th</sup> regular City Council Meeting consider approval of a resolution declaring the property surplus and approving the Click! Business Transaction Agreement.

# One Company Connecting The World™

## POWERFUL PRESENCE · PRODUCTS PERFORMANCE · PEOPLE

General Cable has been a wire and cable innovator for over 170 years, always dedicated to connecting and powering people's lives. Today, with approximately 14,000 employees and approaching \$6 billion in revenues, we are one of the largest wire and cable manufacturers in the world.

Our company serves customers through a network of 38 manufacturing facilities in our core markets and has worldwide sales representation and distribution. We are dedicated to the production of high-quality aluminum, copper and fiber optic wire and cable and systems solutions for the energy, construction, industrial, specialty and communications sectors. With a vast portfolio of products to meet thousands of diverse application requirements, we continue to invest in research and development in order to maintain and extend our technology leadership by developing new materials, designing new products, and creating new solutions to meet tomorrow's market challenges.

In addition to our strong brand recognition and strengths in technology and manufacturing, General Cable is also competitive in such areas as distribution and logistics, marketing, sales and customer service. This combination enables us to better serve our customers globally and as they expand into new geographic markets.

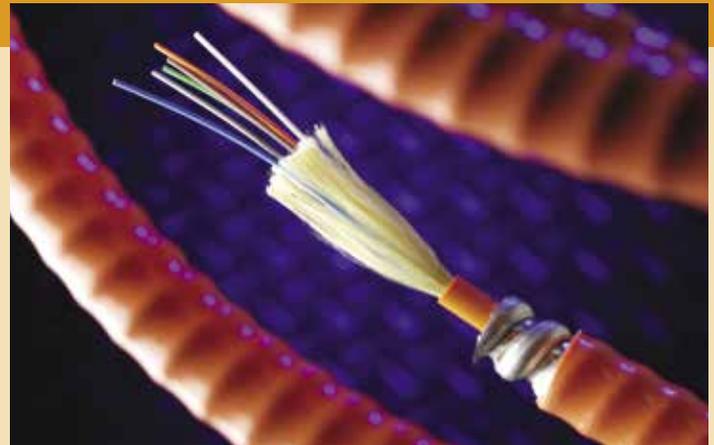

**General Cable offers our customers all the strengths and value of a large company, but our people give us the agility and responsiveness of a small one. We service you globally and locally.**

Visit our Website at  
[www.generalcable.com](http://www.generalcable.com)

## Optical Fiber

General Cable, Corning® Optical Fiber. Names that are synonymous with cable and fiber combine to create the ultimate in fiber optics. General Cable partners with Corning Optical Fiber to deliver the world's most reliable and technologically advanced optical fiber cables.

### Singlemode

#### Standard

General Cable utilizes Corning® SMF-28e+™ fiber as its standard singlemode offering. This is a full-spectrum fiber that is fully backward-compatible with legacy singlemode fiber. It enables increased optical launch power of legacy singlemode fiber, improved macrobend specifications from 0.05 dB to 0.03 dB, and tighter zero dispersion wavelength ( $\lambda_0$ ) tolerance from a range of  $\pm 10$  nm to  $\pm 7$  nm. This fiber supports all broadband applications and complies with the most stringent industry standards, such as:

- ITU-T G.652 (Tables A, B, C and D)
- IEC 60793-2-50 Type B1.3
- ISO 11801 052
- TIA/EIA 492-CAAB
- Telecordia GR-20-CORE

#### Long-Haul

For long-haul applications, rely on General Cable's long history of cable experience and the technology of Corning® LEAF® fiber. This is the most widely deployed non-zero dispersion shifted (NZ-DSF) fiber in the world and the first low water peak NZ-DSF fiber. Its large effective area and industry-leading polarization mode dispersion (PMD) specifications enable 10 Gb/s and 40 Gb/s network systems of the future.

#### ClearCurve® ZBL

General Cable, utilizing Corning® ClearCurve® ZBL Optical Fiber, delivers the best macrobending performance in the industry while maintaining compatibility with current optical fibers, equipment, practices and procedures. This full-spectrum singlemode optical fiber, when subjected to smaller radii bends, experiences virtually no signal loss. ClearCurve fiber exceeds the most stringent bend performance requirements of ITU-T Recommendations G.657.B3 while remaining fully compliant with ITU-T Recommendation G.652.D and the installed base of Corning SMF-28e® and SMF-28e+® fiber.

### Multimode

#### ClearCurve® Multimode Fiber

Corning® ClearCurve® ultra-bendable laser-optimized™ multimode optical fiber delivers the best macrobending performance in the industry while maintaining compatibility with current optical fibers, equipment, practices and procedures. ClearCurve OM3/OM4 multimode fiber is designed to withstand tight bends and challenging cable routes with substantially less signal loss than conventional multimode fiber.

These fibers have superior measurement technology and manufacturing control, and industry-leading CPC® coatings for superior microbend and environmental performance. ClearCurve fiber performance is ensured by minEMBc, the industry's leading standards-approved bandwidth measurement for OM3 fibers. ClearCurve fibers are the only ones to use this measurement to ensure 10 Gb/s performance.

#### 50 micron

These fibers support data rates of 10 Gb/s at 850 nm. They also comply with the most stringent industry standards, such as:

- ISO/IEC 11801, type OM2, OM3 and OM4\* fibers
- IEC 60793-2-10, type A1a.1, A1a.2 and A1a.3\* fibers
- TIA/EIA, 492AAAB, 492AAAC-A and 492AAAD

\* Assumes IEC draft standard is harmonized with 492AAAD, which was approved by TIA

#### 62.5 micron

These fibers support data rates of 1 Gb/s in both the 850 nm and 1300 nm windows. They comply with the most stringent industry standards, such as:

- ISO/IEC 11801, type OM1 fiber
- IEC 60793-2-10, type A1b fiber
- TIA/EIA, 492AAAA-A

# Color Coding Charts

## Color coding in compliance with TIA/EIA 598 C.3

### LOOSE TUBE BUFFER COLOR CODING

POSITION NUMBER	BASE COLOR AND TRACER	ABBREVIATION
1	Blue	BL
2	Orange	OR
3	Green	GR
4	Brown	BR
5	Slate	SL
6	White	WH
7	Red	RD
8	Black	BK
9	Yellow	YL
10	Violet	VI
11	Rose	RS
12	Aqua	AQ
13	Blue with Black Tracer	D/BL <sup>1</sup>
14	Orange with Black Tracer	D/OR
15	Green with Black Tracer	D/GR
16	Brown with Black Tracer	D/BR
17	Slate with Black Tracer	D/SL
18	White with Black Tracer	D/WH
19	Red with Black Tracer	D/RD
20	Black with Yellow Tracer	D/BK
21	Yellow with Black Tracer	D/YL
22	Violet with Black Tracer	D/VI
23	Rose with Black Tracer	D/RS
24	Aqua with Black Tracer	D/AQ

1) "D/" denotes a dashed mark or tracer. That is, D/BL is Dash-Blue, meaning blue with a tracer.

### TIGHT BUFFER COLOR CODING

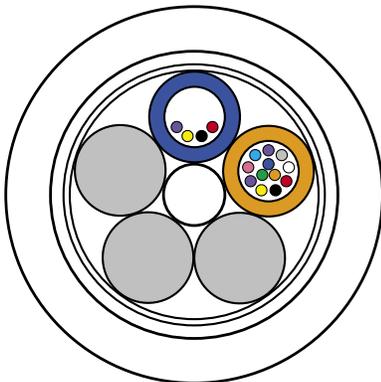

POSITION NUMBER	BASE COLOR AND TRACER	ABBREVIATION
1	Blue	BL
2	Orange	OR
3	Green	GR
4	Brown	BR
5	Slate	SL
6	White	WH
7	Red	RD
8	Black	BK
9	Yellow	YL
10	Violet	VI
11	Pink	PK
12	Aqua	AQ
13	Blue with Black Tracer	D/BL <sup>1</sup>
14	Orange with Black Tracer	D/OR
15	Green with Black Tracer	D/GR
16	Brown with Black Tracer	D/BR
17	Slate with Black Tracer	D/SL
18	White with Black Tracer	D/WH
19	Red with Black Tracer	D/RD
20*	Black with Black Tracer	D/BK
21	Yellow with Black Tracer	D/YL
22	Violet with Black Tracer	D/VI
23	Rose with Black Tracer	D/RS
24	Aqua with Black Tracer	D/AQ

1) "D/" denotes a dashed mark or tracer. That is, D/BL is Dash-Blue, meaning blue with a tracer.

\* Black tracer is visible on black buffer tube.

### JACKET COLOR CODING

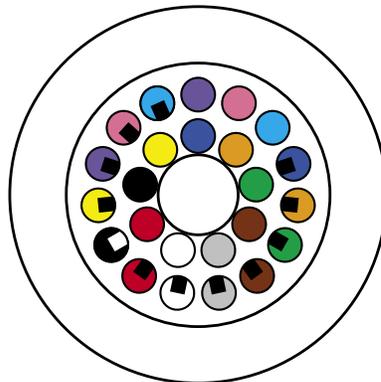

CONSTRUCTION	FIBER TYPE	JACKET COLOR
TIGHT BUFFER	Multimode	Orange
	10 G Multimode	Aqua
	Singlemode	Yellow
	Hybrid	Black
LOOSE TUBE	Multimode	Black
	10 G Multimode	
	Singlemode	
	Hybrid	

For loose tube hybrid cable constructions, cables containing both singlemode (SM) and multimode (MM), the first tubes in the TIA/EIA 598 color-coded tubes will contain singlemode, and the remaining tubes will contain multimode.

#### Ordering Part Number Example

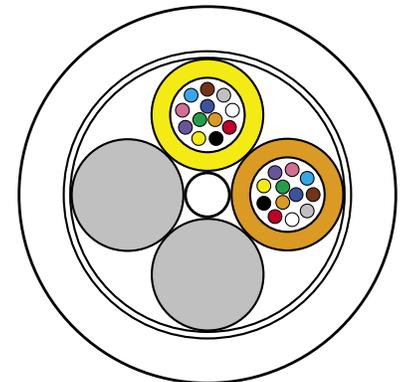

AQ012/BE0124M1A-DWB

For tight buffered single pass hybrid cable constructions ( $\leq 24$  fibers), cables containing both singlemode and multimode, the first buffers in the TIA/EIA 598 color-coded tubes will contain singlemode, and the remaining buffers will contain multimode.

#### Ordering Part Number Example

AP012/BE0121PNU

For tight buffered subunit hybrid cable constructions ( $\geq 24$  fibers), cables containing both singlemode and multimode, the singlemode subunit tubes will be yellow and numerically marked, 62.5  $\mu$  multimode subunit tubes will be orange and numerically marked, and 50  $\mu$  multimode subunit tubes will be aqua and numerically marked.

#### Ordering Part Number Example

AP012/BE0121P1R

# EXHIBIT 31 (c)

# Data Age 2025:

The Evolution of Data to Life-Critical

Don't Focus on Big Data; Focus on the Data That's Big

## EXECUTIVE SUMMARY

We are fast approaching a new era of the Data Age. From autonomous cars to humanoid robots and from intelligent personal assistants to smart home devices, the world around us is undergoing a fundamental change, transforming the way we live, work, and play.

Imagine being awoken and tended to by a virtual personal assistant that advises you on what clothing from your wardrobe is best suited to the weather report and your schedule for the day or being transported by your self-driving car. Or perhaps you won't need to commute to an office at all as technology will allow you to conjure workspaces out of thin air using interactive surfaces, and holographic teleconferencing becomes the norm for communicating virtually with colleagues. Weekends may involve browsing new furniture through an augmented reality app and seeing how a sofa looks in your living room before placing an order. As you relax on the new sofa, Saturday night's takeout will be a pizza made by a robot and delivered in record time by a drone.

Data has become critical to all aspects of human life over the course of the past 30 years; it's changed how we're educated and entertained, and it informs the way we experience people, business, and the wider world around us. It is the lifeblood of our rapidly growing digital existence. This digital existence, as defined by the sum of all data created, captured, and replicated on our planet in any given year is growing rapidly, and we call it the "*global datasphere*". In just the past 10 years society has witnessed the transition of analog to digital. What the next decade will bring using the power of data is virtually limitless.

While we as consumers will enjoy the benefits of a digital existence, enterprises around the globe will be embracing new and unique business opportunities, powered by this wealth of data and the insight it provides. Extracting and delivering simplicity and convenience from the complexity of many billions of bytes – be it through

robotics, 3D printing, or some other yet-to-come technological innovation – will be the order of the day. The opportunities already seem limitless, as does the sheer volume of data these connected devices and services will create.

From power grids and water systems to hospitals, public transportation, and road networks, the growth of real-time data is remarkable for its volume and criticality. Where once data primarily drove successful business operations, today it is a vital element in the smooth operation of all aspects of daily life for consumers, governments, and businesses alike.

In this white paper, sponsored by Seagate, IDC looks at the trends driving growth in the global datasphere from now to 2025. We look at their implications for people and businesses as they manage, store, and secure their most critical data.

IDC forecasts that by 2025 the global datasphere will grow to 163 zettabytes (that is a trillion gigabytes). That's ten times the 16.1ZB of data generated in 2016. All this data will unlock unique user experiences and a new world of business opportunities.

Data Age 2025 describes five key trends that will intensify the role of data in changing our world:

- **The evolution of data from business background to life-critical.** Once siloed, remote, inaccessible, and mostly underutilized, data has become essential to our society and our individual lives. In fact, IDC estimates that by 2025, nearly 20% of the data in the global datasphere will be critical to our daily lives and nearly 10% of that will be hypercritical.
- **Embedded systems and the Internet of Things (IoT).** As standalone analog devices give way to connected digital devices, the latter will generate vast amounts of data that will, in turn, allow us the chance to refine and improve our systems and processes in previously unimagined ways. Big Data and metadata (data about data) will eventually touch nearly every aspect of our lives — with profound consequences. By 2025, an average connected person anywhere in the world will interact with connected devices nearly 4,800 times per day — basically one interaction every 18 seconds.

## Conclusion

There is a massive opportunity for data to affect positive change on all of human society. Not only is data making business more effective, but it is in the process of transforming every aspect of the individual's life. Not only do new-paradigm services like those from Uber and Netflix depend on data, but the same is true for our cities, hospitals, stores, businesses of all type, and soon every single aspect of human society. We are finding ways for data to make our lives better that we didn't imagine even a few years ago.

The way society uses data is going through a fundamental shift:

- From entertainment to productivity
- From business focused to hyperpersonal
- From structured to unstructured
- From selective to ubiquitous
- From retrospective to here and now
- From life-enhancing to life-critical

As computing power becomes increasingly distributed, moving to the cloud and into the everyday IoT devices and infrastructure that surround us, data will continue to drive fundamental improvements to businesses, industries, our processes, and our everyday lives. These trends are causing the total amount of all data on the planet, the global datasphere, to grow exponentially. With three-quarters of the world's population soon to be connected, digital data will affect the life of nearly every human being, essentially becoming the lifeblood of our increasing digital existence.

The use and integration of data in businesses and our lives are quickly moving to real time. As such, data is delivered to not only inform but also determine actions — sometimes autonomously. While entertainment remains an important driver of data creation and consumption, it is ceding share to productivity data that will bring more efficiency and automation to not only business workflows but also the everyday stream of life. Therefore, the stakes are rising and, with them, the critical importance of our data's veracity and timeliness.

The lessons embodied in the forecast and analysis of our data-driven world include the following:

- As data becomes more life critical, business critical, real time, and mobile, the entities that manage and store it will need to develop measured approaches to increasing reliability, lowering latency, and increasing security. This process may start with audits but will need to be backed up with investment, coherent strategies, and top-notch IT talent.
- The migration of analytics from a post-activity event to a real-time and predictive enterprise will demand a step-function increase in the use of analytics for evidence-based decision making. This means not just digital transformation of an organization's processes but also the culture and organizational structure of the organization. Analytics will become a competitive advantage.
- The security and privacy challenges cannot be underplayed. Data breaches can put companies out of business, targeted attacks can halt operations, and hacking can compromise trade secrets. The business, IT, and security professionals in an organization must continually emphasize throughout the organization that security is not simply an IT technical problem with a purely technical solution. Rather, it is an organizational need requiring the participation of employees at all levels.
- The IoT will drive — or force — merged operations between the business leaders and IT departments accustomed to supporting back-office and financial functions and those that run operational systems — labs, operating rooms, factory floors, electrical grids, cable headends, and so forth — as all digital activity migrates to IP networks. Since IoT is one of the fundamental technology pillars of business improvement in the decades to come, optimized use of associated data is one of the key drivers of business success starting today. Leadership and technical integration will be critical to making the best use of IoT technology or at least avoiding chaos.
- The aggregate effect of the trends driving the global datasphere to new zettabyte levels is to make digital transformation an all-hands-on-deck effort for organizations to navigate the next decade successfully. It will also drive increasing reliance on third parties, from cloud providers and software firms to the baseline technology suppliers. Thus vendor selection will better be seen as a leadership function and partnering function rather than a procurement function. The organization will depend on it.

The 163ZB global datasphere projected in Data Age 2025 is only the beginning as we anticipate the increasingly connected and data-driven world. A decade in technology years can, and likely will, bring about unforeseen advancements, use cases, businesses, and life-changing services that rely on the digital lifeblood called data. The storage industry and all its participants will find no lack of customers looking to store their precious bits, which will help drive even the most intimate parts of our businesses and lives across the globe and make up part of our global datasphere.

## About IDC

International Data Corporation (IDC) is the premier global provider of market intelligence, advisory services, and events for the information technology, telecommunications and consumer technology markets. IDC helps IT professionals, business executives, and the investment community make fact-based decisions on technology purchases and business strategy. More than 1,100 IDC analysts provide global, regional, and local expertise on technology and industry opportunities and trends in over 110 countries worldwide. For 50 years, IDC has provided strategic insights to help our clients achieve their key business objectives. IDC is a subsidiary of IDG, the world's leading technology media, research, and events company.

# EXHIBIT 31 (d)

## Executive Summary

# Mankind is on a quest to digitize the world

The focus of this digitization is anything and everything that intersects our business workflows and personal streams of life.

This process of digitization is often referred to as digital transformation, and it is profoundly changing the shape of business today, impacting companies in every industry and consumers around the world. Digital transformation is not about the evolution of devices (though they will evolve), it is about the integration of intelligent data into everything that we do.

The data-driven world will be always on, always tracking, always monitoring, always listening, and always watching – because it will be always learning. What we perceive to be randomness will be bounded into patterns of normality by sophisticated artificial intelligence algorithms that will deliver the future in new and personalized ways. Artificial intelligence

will drive even more automation into businesses and feed processes and engagements that will deliver new levels of efficiency and products that are tailored to business outcomes and individual customer preferences.

Traditional paradigms will be redefined (like vehicle or white goods ownership) and ethical, moral and societal norms will be challenged as genomics and advanced DNA profiling influence healthcare directives, insurance premiums, and spousal choices. Entertainment will literally be transformed before our eyes as virtual reality technologies transport us into new digital realities and augmented reality will dramatically change the service industry as we know it today.

The data-driven world will be **always on, always tracking, always monitoring, always listening** and **always watching – because it will be always learning.**

Data is at the heart of digital transformation, the lifeblood of this digitization process. Today, companies are leveraging data to improve customer experiences, open new markets, make employees and processes more productive, and create new sources of competitive advantage – working toward the future of tomorrow.

### Global Datasphere expansion is never-ending

IDC has defined three primary locations where digitization is happening and where digital content is created: the core (traditional and cloud datacenters), the edge (enterprise-hardened infrastructure like cell towers and branch offices), and the endpoints (PCs, smart phones, and IoT devices). The summation of all this data, whether it is created, captured, or replicated, is called the Global Datasphere, and it is experiencing tremendous growth. IDC predicts that the Global Datasphere will grow from 33 Zettabytes (ZB) in 2018 to 175 ZB by 2025.

To keep up with the storage demands stemming from all this data creation, IDC forecasts that over 22 ZB of storage capacity must ship across all media types from 2018 to 2025, with nearly 59% of that capacity supplied from the HDD industry.

### An enterprise renaissance is on the horizon

The enterprise is fast becoming the world's data steward...again. In the recent past,

consumers were responsible for much of their own data, but their reliance on and trust of today's cloud services, especially from connectivity, performance, and convenience perspectives, continues to increase while the need to store and manage data locally continues to decrease. Moreover, businesses are looking to centralize data management and delivery (e.g., online video streaming, data analytics, data security, and privacy) as well as to leverage data to control their businesses and the user experience (e.g., machine-to-machine communication, IoT, persistent personalization profiling). The responsibility to maintain and manage all this consumer and business data supports the growth in cloud provider datacenters. As a result, the enterprise's role as a data steward continues to grow, and consumers are not just allowing this, but expecting it. Beginning in 2019, more data will be stored in the enterprise core than in all the world's existing endpoints.

IDC predicts that the Global Datasphere will grow from **33 Zettabytes** in 2018 to **175 Zettabytes** by 2025

## Cloud is the new core

One of the key drivers of growth in the core is the shift to the cloud from traditional datacenters. As companies continue to pursue the cloud (both public and private) for data processing needs, cloud datacenters are becoming the new enterprise data repository. In essence, the cloud is becoming the new core. In 2025 IDC predicts that 49% of the world's stored data will reside in public cloud environments.

## Introducing the world's first data readiness condition (DATCON) index

Not all industries are prepared for their digitally transformed future. So, to help companies understand their level of data readiness, IDC developed a DATCON (DATA readiness CONdition) index, designed to analyze various industries regarding their own Datasphere, level of data management, usage, leadership, and monetization capabilities. IDC examined four industries as part of its DATCON analysis: financial services, manufacturing, healthcare, and media and entertainment. Manufacturing's Datasphere is by far the largest given its maturity, investment in IoT, and 24x7 operations, and we found that

manufacturing and financial services are the leading industries in terms of maturity, with media and entertainment most in need of a jump start.

## China's Datasphere on pace to becoming the largest in the world

Every geographic region has its own Datasphere size and trajectories that are impacted by population, digital transformation progress, IT spend and maturity, and many other metrics. For example, China's Datasphere is expected to grow 30% on average over the next 7 years and will be the largest Datasphere of all regions by 2025 (compared to EMEA, APJxC, U.S., and Rest of World) as its connected population grows and its video surveillance infrastructure proliferates. (APJxC includes Asia-Pacific countries, including Japan, but not China.)

## Consumers are addicted to data, and more of it in real-time

As companies increase the digitization of their business and drive consistent and better customer experiences, consumers are embracing these personalized real-time

In 2025  
IDC predicts  
that

49%

of the world's stored  
data will reside in public  
cloud environments

engagements and resetting their expectations for data delivery. As their digital world overlaps with their physical realities, they expect to access products and services wherever they are, over whatever connection they have, and on any device. They want data in the moment, on the go, and personalized. This places greater demand on both the edge and the core to be able to produce the precise data consumers require, often in real-time. IDC predicts that due to the infusion of data into our business workflows and personal streams of life, that nearly 30% of the Global Datasphere will be real-time by 2025. Enterprises looking to provide superior customer experience and grow share must

have data infrastructures that can meet this growth in real-time data.

Today, more than 5 billion consumers interact with data every day – by 2025, that number will be 6 billion, or 75% of the world's population. In 2025, each connected person will have at least one data interaction every 18 seconds. Many of these interactions are because of the billions of IoT devices connected across the globe, which are expected to create over 90ZB of data in 2025.

## About this study

This study is based on IDC's ongoing Global DataSphere research and market sizing models. Industry and specific geographic DataSphere research was conducted in September 2018 by IDC. In addition, 2,400 enterprise decision makers were surveyed, and in-depth interviews were conducted with senior IT executives at a variety of industries to inform this study. The survey was with decision makers who had responsibility for or knowledge of their organization's use, management, and storage of data leveraging advanced technologies including Internet of Things, real-time analytics, and AI/machine learning. The survey spanned several countries and regions including the United States, China, EMEA, APJxC, and others.

# Global Datasphere Expansion is Never-ending

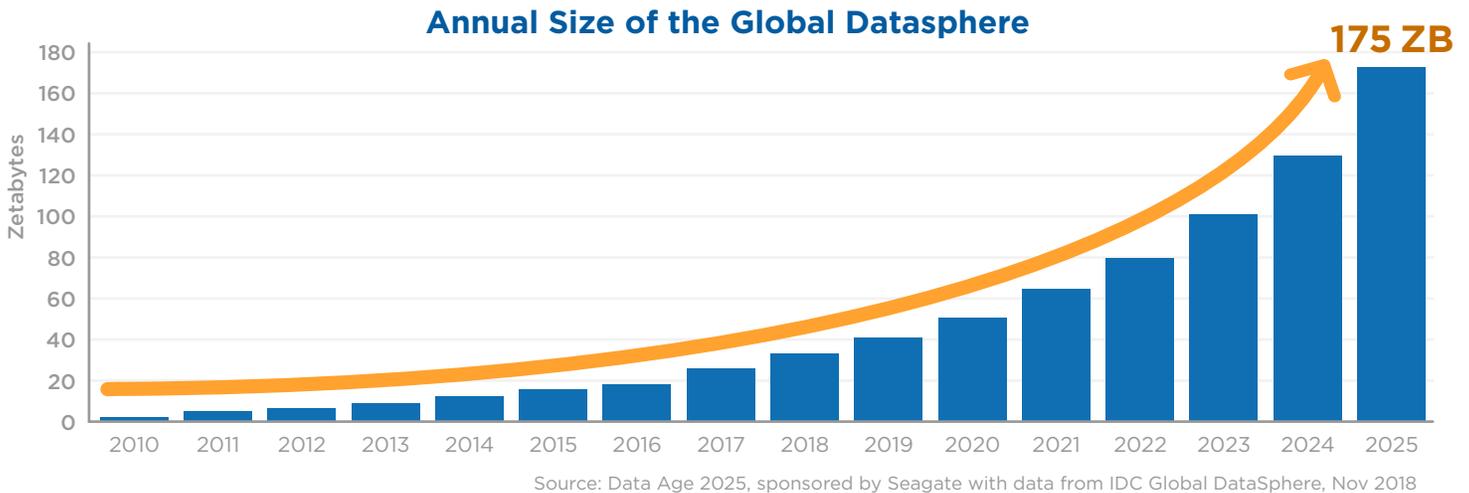

The use of data today is transforming the way we live, work, and play. Businesses in industries around the world are using data to transform themselves to become more agile, improve customer experience, introduce new business models, and develop new sources of competitive advantage. Consumers are living in an increasingly digital world, depending on online and mobile channels to connect with friends and family, access goods and services, and run nearly every aspect of their lives, even while asleep.

Much of today's economy relies on data, and this reliance will only increase in the future as

companies capture, catalog, and cash in on data in every step of their supply chain; enterprises collect vast sums of customer data to provide greater levels of personalization; and consumers integrate social media, entertainment, cloud storage, and real-time personalized services into their streams of life.

The consequence of this increasing reliance on data will be a never-ending expansion in the size of the Global Datasphere. Estimated to be 33 ZB in 2018, IDC forecasts the Global Datasphere to grow to 175 ZB by 2025. (Figure 1). See Appendix for methodology and data/device categories.

Figure 1 - Annual Size of the Global Datasphere

MRI image creation is driving storage requirements significantly. The trend is more images with thinner slices and 3D capability. We've gone from 2,000 images to over 20,000 for an MRI of a human head, and stronger magnets and higher resolution pictures means more data stored.

- Senior Director in IT, Major Healthcare Provider

My commission expires 10-8-21

## AMENDED RESOLUTION NO. U-10828

1 A RESOLUTION relating to Click! Network; authorizing Click! to prepare a  
2 business plan to provide, in addition to retail cable television, retail  
3 internet services including voice over data internet ("VoIP") protocol,  
4 commercial broadband and Gigabit service ("Retail Services").

5 WHEREAS the City Council of Tacoma authorized the Department of  
6 Public Utilities ("TPU"), Light Division (dba "Tacoma Power"), to implement and  
7 manage a broadband telecommunication system ("Click! Network" or "Click!" as  
8 authorized through City Council Substitute Resolution No. 33668, approved  
9 April 8, 1997, and Public Utility Board Amended Substitute Resolution U-9258  
10 approved April 9, 1997), and

11 WHEREAS Tacoma Power provided retail cable TV services to  
12 customers, wholesale internet to independent Internet Service Providers  
13 ("ISPs") who served retail customers and wholesale broadband service to  
14 business customers, and

15 WHEREAS the broadband telecommunication system is critical  
16 infrastructure for Tacoma Power, including the connection of substations,  
17 support of approximately 18,000 Gateway smart meters, as well as providing  
18 support for the City's I-net system, and

19 WHEREAS the City Charter Section 4.6 requires a vote of the people  
20 before the City may sell, lease, or dispose of any utility system, or parts thereof  
21 essential to continued effective utility service, and

22 WHEREAS the presence of Click! Cable TV in the marketplace provided  
23 savings for all cable TV customers, regardless of provider, in the Click! Market  
24  
25  
26

1

territory as compared to other Puget Sound market areas to an estimated average savings of \$10 million dollars a year, between 2004 and 2008, and

WHEREAS Click! services currently reaches 26.2% of the customers in the service territory with one or more of its services (Cable TV only, Internet only or Cable TV and Internet) according to Click! customer counts, and

WHEREAS 61% of those polled in May of 2015 said that it would be a good idea for Click! to provide internet service directly to customers, and

WHEREAS Click! infrastructure could provide Gigabit internet speeds to customers in the entire service territory with capital investment, and

WHEREAS customers' use of internet is increasing and use of Cable TV is decreasing, just as the cost for Cable TV is increasing significantly for the Click! network, and

WHEREAS Click!'s current business model creates future potential financial losses that may require the use of Tacoma Power ratepayer funds, and

WHEREAS the Public Utility Board has determined that the most reasonable path to meeting community objectives and financial sustainability is to pursue a business model where Click! offers additional retail products directly to its customers, including retail cable TV, Internet, voice over Internet (VoIP), and commercial broadband services ("All-In Retail model"); Now, therefore,

BE IT RESOLVED BY THE PUBLIC UTILITY BOARD OF THE CITY OF TACOMA:

Sec. 1. Definitions.

- a. "Click! or Click! Network" shall mean the telecommunication section of the Light Division of the Department of Public Utilities for the City of Tacoma, as established and described in Public Utility Board Amended Substitute Board Resolution U-9258 and City Council Substitute Resolution No. 33668.
- b. "Tacoma Power" shall mean the Light Division (doing business as Tacoma Power), of the Department of Public Utilities, for the City of Tacoma, as established by the City of Tacoma Charter Section 4.10.
- c. "Tacoma Public Utilities" shall mean the Department of Public Utilities (doing business as TPU), for the City of Tacoma, as established by the City of Tacoma Charter Article 4.
- d. "Retail Services" shall mean cable television and retail internet services including voice over data internet protocol, retail and commercial broadband, Gigabit service and related and enhanced services offered to customers from time to time as new technologies and services become available.
- e. "Expenditures" shall mean capital (including debt service) and operations and maintenance ("O&M") expenses determined on a "cash flow" basis incurred by Click! after January 1, 2016. "Expenditures" shall not include, and Click! shall not be charged Click! past physical plant and capital related costs made by Tacoma Power on behalf of Click! prior to January 1, 2016.

Sec. 2. Click! shall work with consultants as appropriate to develop a detailed business, financial and marketing plan (the "Business Plan") to provide customers the Retail Services and other aspects of the Business Plan contemplated herein. The goal will be for Click! to present to the Public Utility Board and the City Council an initial detailed Business Plan on or near April 7<sup>th</sup>, 2016. The goal will be for the Public Utility Board and City Council to approve the initial detailed Business Plan within 60 days thereafter.

- a. The Business Plan shall include annual, biennial and longer term goals, benchmarks and measures of financial progress and success, including
  - i. building customer counts and increasing market penetration
  - ii. financial projection and benchmarks
  - iii. designing and implementing rates that support customers count goals while providing revenue to pay Expenditures

- iv. achievement of revenues that exceed Expenditures to the extent reasonably feasible
  - v. capital expenditure planning, including debt financing where appropriate
  - vi. charging just and proper proportions of the cost and expenses of other departments or offices of the City rendering service to Click!, as required under City Charter section 4.5.
- b. The Business Plan shall also include annual, biennial and longer term goals, benchmarks and measures of progress and success for non-financial achievement, including
- i. coordination with goals and strategic plans of TPU and the City of Tacoma
  - ii. promotion of market competition
  - iii. fostering and enhancing educational opportunity and economic activity in Tacoma and Pierce County
  - iv. ensuring just access to internet service regardless of economic condition, social barriers and physical challenges.
- c. The Business Plan will make adapting to changing market conditions and increased competition a priority, including necessary capital investments to improve technologies and stay competitive.
- d. The Business Plan will authorized, but not obligate, Click! to enter into negotiations for new contracts with internet services providers using its network on terms and conditions economically acceptable to Click! and consistent with the Business Plan, including authority to purchase the businesses of the existing private internet service providers using its network. Click! will be authorized to utilize the services of third-party business valuation consultants, acceptable to all parties, in connection with such negotiations.
- e. The Business Plan will include analysis and action plans for the structure of the Click! workforce, including the negotiation with the relevant labor organizations when necessary, to meet the requirements of the Business Plan.
- f. The Business Plan shall require a separate enterprise fund (subaccount) within the Tacoma Power fund to account for Click! revenues and Expenditures.
- g. Subject to the outcome of the legal analysis authorized under Sec. 4, from January 1, 2016, going forward if Expenditures made on behalf of

Click! by Tacoma Power exceed Click! revenues during any month, such "Excess Expenditures" shall constitute a loan or advance from Tacoma Power to Click!, which shall be reimbursed as follows:

- i. "Target Date" means December 31, 2021 or a date when the cumulative Excess Expenditures reach \$31.6 million, whichever occurs first.
- ii. Click! shall reimburse the loans or advances from revenue exceeding Expenditures as soon as possible.
- iii. If Click! revenue in excess of Expenditures is insufficient to reimburse loans or advances in full by the Target Date, Click! revenue shall be supplemented with City of Tacoma non-utility revenue that, together with Click! revenue, will be sufficient to provide full reimbursement of cumulative loans or advances accrued prior to the Target Date within ten (10) years of the Target Date.
- iv. The Utility Board and the City Council may, at any time, fulfill their obligation to reimburse the cumulative loans or advances by applying the proceeds from a transaction (license, lease, sale, etc.) transferring some or all of the City's telecommunications system business to a private third-party. The Business Plan shall require Public Utility Board and City Council approval of budgets, expenditures, rates, and charges necessary to implement the business plan contemplated herein as part of the regular Tacoma Power budgeting, contract, and rates approval processes.

h. The Business Plan shall require Public Utility Board and City Council approval of budgets, expenditures, rates, and charges necessary to implement the business plan contemplated herein as part of the regular Tacoma Power budgeting, contract, and rates approval processes.

i. The Business Plan shall provide quarterly and annual reports to the Public Utility Board and to the City Council to monitor Click!'s actual performance relative to the approved business plan. Such reports shall include financial gains and losses and the balance of the loan account described below.

Sec. 3. The Public Utility Board and the City Council shall, upon adoption of this Resolution, appoint a Click! Engagement Committee to provide oversight and assistance to Click! in the development and implementation of the Business Plan. The Click! Engagement Committee shall be comprised of two (2) Public Utility Board Members, two (2) City Council members, two (2) members of the public who have experience in the broadband industry, and one (1) Tacoma Power ratepayer at large appointed by the City Council. The Click! Engagement Committee shall meet to consult with Click! on a regularly

scheduled basis established by the Committee and Click!. The Public Utility Board and the City Council may consider delegating specific authority in the governance of Click! to the Click! Engagement Committee in the future as the Business Plan is further developed and implemented.

Sec. 4. Prior to implementing the Business Plan contemplated in this resolution, TPU and the City's Legal Department, shall seek a legal opinion or declaratory judgment in Pierce County Superior Court, to confirm that Tacoma Power may operate the City of Tacoma's telecommunications system in accordance with the business plan. The City's Legal Department shall include in its request for a legal opinion or declaratory judgment, those specific components of the business plan necessary to provide the Utility Board and the City Council comfort that they may fully implement the business plan reasonably without threat of disruption by legal challenge. TPU and the City's Legal Department are authorized to utilize the services of third-party legal advisors in connection with this activity.

Sec. 5. Click! shall review and resubmit rate adjustments budgeted and proposed by Click! and approved by the Public Utility Board (previously approved by Board Resolution U-10773 on April 22, 2015), that support the Business Plan and the City Council is requested to approve an ordinance amending Tacoma Municipal Code Chapter 12.13, to authorize said rate adjustments.

Sec. 6. A fiscal note is attached to and incorporated in this Resolution U-10828. The fiscal note estimates the Capital and O&M budget requirements and impacts in addition to the financial gains and losses anticipated over the next five (5) years, in connection with the Click! business plan contemplated herein.

TACOMA PUBLIC UTILITIES  
 3628 South 35th Street  
 Tacoma, Washington 98409-3192

**To:** Chair and Members of the Public Utility Board  
**From:** William A. Gaines, Director of Utilities/CEO  
**Date:** November 25, 2015  
**Subject:** Financial Impact of Authorizing Click! to Provide Retail Internet Service Including Gigabit Internet Service, Voice over Internet Protocol Service and Commercial Broadband Service, and Approving a Five Year Business Plan

Background:

A variety of business models have been developed and presented to policymakers, including a base case or status quo model and prospective models for Click! offering retail internet and cable television services, Click! offering wholesale-only internet (no video) and Click! entering into a private use contract involving Tacoma Power/Click! facilities. The financial models considered both low and high growth assumptions. This report addresses the fiscal impact of authorizing Click! to provide retail Internet service including Gigabit Internet service, Voice over Internet Protocol Service and Commercial Broadband Service ("All-In Retail with Gigabit model") along with cable television services. The All-In Retail with Gigabit model anticipates a loss of 1,916 Cable customers under the low growth option and a gain of 1,152 Cable customers under the high growth option in five years. It also anticipates a gain of between 6,412 and 12,124 Internet customers, and a gain of between 5,168 and 7,563 Voice over Internet Protocol customers, low and high respectively. Table 1 below shows the financial metrics of the All-In Retail with Gigabit option.

Table 1

	All-In Retail w/Gigabit Low Option	All-In Retail w/Gigabit High Option
Revenue	\$181.4	\$207.1
O&M Expenditures	\$185.3	\$206.3
Capital Investment	\$27.7	\$28.8
Cumulative Cash Flow	(\$31.6)	(\$28.0)

Fiscal Impact:

The impact of pursuing the All-In Retail with Gigabit option is that the City will incur deficit spending in the range of \$28 million to \$31.6 million over the five-year business plan period, as shown in Table 1. However, as noted in Table 2 below, the Retail All-In with Gigabit model begins to produce positive cash flow in Year 8 under the high growth option.

Table 2

	LOW OPTION		HIGH OPTION	
	Cash Flow	Cumulative Cash Flow	Cash Flow	Cumulative Cash Flow
2016	(\$13,375,861)	(\$13,375,861)	(\$14,141,034)	(\$14,141,034)
2017	(4,894,538)	(18,270,399)	(4,728,564)	(18,869,598)

## CHAPTER 390.

[ S. B. 367. ]

## PUBLIC UTILITY DISTRICTS.

AN ACT relating to powers of public utility districts and amending section 1, chapter 143, Laws of 1945, as last amended by sections 1 and 2, chapter 209, Laws of 1951 and RCW 54.16.010 through 54.16.190.

*Be it enacted by the Legislature of the State of Washington:*

SECTION 1. Section 1, chapter 143, Laws of 1945, as last amended by sections 1 and 2, chapter 209, Laws of 1951 (heretofore codified as RCW 54.16.010 through 54.16.190) is divided and amended as set forth in sections 2 through 20 of this act.

Division and amendment.

SEC. 2. (RCW 54.16.010) A district may make a survey of hydroelectric power, irrigation, and domestic water supply resources within or without the district, and compile comprehensive maps and plans showing the territory that can be most economically served by the various resources and utilities, the natural order in which they should be developed, and how they may be joined and coordinated to make a complete and systematic whole.

Enacted without amendment.

Survey authorized.

SEC. 3. (RCW 54.16.020) A district may construct, condemn and purchase, purchase, acquire, lease, add to, maintain, operate, develop, and regulate all lands, property, property rights, water, water rights, dams, ditches, flumes, aqueducts, pipes and pipe lines, water power, leases, easements, rights of way, franchises, plants, plant facilities, and systems for generating electric energy by water power, steam, or other methods; plants, plant facilities, and systems for developing, conserving, and distributing water for domestic use and irrigation; buildings, structures, poles and pole lines, and cables and conduits and any and all other facilities; and may exercise the right of eminent domain to effectuate the foregoing purposes or for the acquisition and

Enacted without amendment.

Powers of district.

Right of appeal to supreme court.

the property of the appellant. In the same manner as provided with reference to cities of the first class an appeal shall lie to the supreme court from the judgment of the superior court, as in other cases, if taken within fifteen days after the date of the entry of the judgment in the superior court. Engineering, office, and other expenses necessary or incident to the improvement shall be borne by the public utility district: *Provided*, That when a municipal corporation included in the public utility district already owns or operates a utility of a character like that for which the assessments are levied hereunder, all such engineering and other expenses shall be borne by the local assessment district.

Expenses.

Enacted without amendment.

SEC. 18. (RCW 54.16.170) When an improvement is ordered hereunder, payment for which shall be made in part from assessments against property specially benefited, not more than fifty percent of the cost thereof shall ever be borne by the entire public utility district, nor shall any sum be contributed by it to any improvement acquired or constructed with or by any other body, exceed such amount, unless a majority of the electors of the district consent to or ratify the making of such expenditure.

Limitation on cost burden.

Enacted without amendment.

SEC. 19. (RCW 54.16.180) A district may sell and convey, lease, or otherwise dispose of all or any part of its works, plants, systems, utilities and properties, after proceedings and approval by the voters of the district, as provided for the lease or disposition of like properties and facilities owned by cities and towns: *Provided*, That the affirmative vote of three-fifths of the voters voting at an election on the question of approval of a proposed sale, shall be necessary to authorize such sale: *Provided further*, That a district may sell, convey, lease, or otherwise dispose of all or any part of the property owned by it, located outside its boundaries, to an-

Sale, lease, conveyance of property authorized; vote on proposed sale.

other public utility district, city, town, or other municipal corporation without the approval of the voters; or may sell, convey, lease, or otherwise dispose of to any person or public body, any part, either within or without its boundaries, which has become unserviceable, inadequate, obsolete, worn out or unfit to be used in the operations of the system and which is no longer necessary, material to, and useful in such operations, without the approval of the voters. Public utility districts are municipal corporations for the purpose of this section and the commission shall be held to be the legislative body and the president and secretary shall have the same powers and perform the same duties as the mayor and city clerk and the resolutions of the districts shall be held to be ordinances within the meaning of the statutes governing the sale, lease, or other disposal of public utilities owned by cities and towns.

Public utility districts—municipal corporations.

SEC. 20. (RCW 54.16.190) The commission of a district may adopt general resolutions to carry out the purposes, objects, and provisions of this title.

Enacted without amendment. General resolutions.

Passed the Senate March 9, 1955.

Passed the House March 8, 1955.

Approved by the Governor March 22, 1955.

**EXHIBIT 33 (b)**

## CHAPTER 143.

[ H. B. 342. ]

## PUBLIC UTILITY DISTRICTS.

AN ACT relating to public utility districts; providing for the sale of certain properties by said districts to other public utility districts, municipal corporations and public agencies in the state without an election; relating to the covenants of resolutions authorizing the issue of revenue bonds or warrants; amending section 6, chapter 1, Laws of 1931 (section 11610, Remington's Revised Statutes, also Pierce's Perpetual Code 833-11); and section 3, chapter 182, Laws of 1941 (section 11611-3, Remington's Revised Statutes, also Pierce's Perpetual Code 833-29).

*Be it enacted by the Legislature of the State of Washington:*

Amenu-  
ments.

SECTION 1. Section 6, chapter 1, Laws of 1931 (section 11610, Remington's Revised Statutes, also Pierce's Perpetual Code 833-11), is amended to read as follows:

Section 6. All public utility districts organized under the provisions of this act shall have power:

Powers of  
public utility  
districts.

(a) To make a survey of hydro-electric power, irrigation and domestic water supply resources within or without the district, and to compile comprehensive maps and plans showing the territory that can be most economically served by the various resources and utilities, the natural order in which they should be developed, and how they may be joined and co-ordinated to make a complete and systematic whole.

(b) To construct, condemn and purchase, purchase, acquire, lease, add to, maintain, operate, develop and regulate all lands, property, property rights, water, water rights, dams, ditches, flumes, aqueducts, pipes and pipe lines, water power, leases, easements, rights of way, franchises, plants, plant facilities and systems for generating electric energy by water power, steam or other methods, plant, plant facilities and systems for developing, conserving and distribut-

expenses necessary or incident to said improvement shall be borne by the public utility district: *Provided*, That where any municipal corporation included within such public utility district already owns or operates a utility of like character for which such assessments are levied hereunder, then all such engineering and other expenses mentioned above shall be borne by the local assessment district.

Whenever any improvement shall be ordered hereunder, payment for which shall be made in part from assessments against property specially benefited, not more than fifty per cent (50%) of the cost thereof shall ever be borne by the entire public utility district, nor shall any sum be contributed by it to any improvement acquired or constructed with or by any other body, exceed such amount, unless a majority of the electors of such district shall consent to or ratify the making of such expenditure.

Powers of  
public utility  
districts.

(m) It is, and shall be lawful for any public utility district organized hereunder to sell and convey, lease or otherwise dispose of all or any part of the works, plants, systems, utilities and properties authorized by this act and owned by it after proceedings and approval by the voters of the district as provided for in chapter 137, Laws of 1917, (sections 9512, 9513 and 9514 of Remington's Revised Statutes of Washington): *Provided*, That the affirmative vote of three-fifths ( $\frac{3}{5}$ ) of the voters voting at an election on the question of approval of such proposed sale, shall be necessary to authorize such sale: *Provided further*, That any public utility district may sell, convey, lease or otherwise dispose of all or any part of the property owned by it, located outside its boundaries, to any other public utility district, city, town or other municipal corporation without the approval of the voters; or may sell, convey, lease or otherwise dispose of, to any person, firm, corporation or public body, any part either

# EXHIBIT 33 (c)

upon such delinquent assessments prior to the making of such an application for the cancellation as herein provided, shall be; for the purpose of this act, considered as belonging to the city within which such local improvement district is located, whether the taxes be cancelled by the city or town or by the county.

Passed the Senate March 1, 1917.

Passed the House March 6, 1917.

Approved by the Governor March 15, 1917.

## CHAPTER 137.

[H. B. 337.]

### SALE OR LEASE OF PUBLIC UTILITIES OWNED BY CITIES OR TOWNS.

AN ACT authorizing cities and towns to lease or sell any municipally-owned water works, gas works, electric light and power plants, steam plants, street railway plants and lines, telegraph and telephone lines and plants and any other municipally-owned public utility, or public utility system similar or dissimilar in character.

*Be it enacted by the Legislature of the State of Washington:*

SECTION 1. It is and shall be lawful for any city or town in this state now or hereafter owning any water works, gas works, electric light and power plant, steam plant, street railway line, street railway plant, telephone or telegraph plant and lines, or any system embracing all or any one or more of such works or plants or any similar or dissimilar utility or system, to lease for any term of years or to sell and convey the same or any part thereof, with the equipment and appurtenances, in the manner hereinafter prescribed.

Authority granted.

SEC. 2. The legislative authority of such city or town, if it deems it advisable to lease or sell such works, plant or system or any part of the same, or any similar or dissimilar utility or system, shall adopt a resolution stating whether it desires to lease or sell the same. If it

desires to lease, the resolution shall state the general terms and conditions of such lease, but not the rent. If it desires to sell, the general terms of sale shall be stated, but not the price. The resolution shall direct the city or town clerk, or other proper official, to publish such resolution not less than once a week for four weeks in the official newspaper of the city or town if there be such an official newspaper, or if there be none then in any newspaper published in such city or town, or if there be none then in any newspaper published in the county in which such city or town is located, together with a notice calling for sealed bids to be filed with such clerk or other proper official not later than a certain time, accompanied by a certified check payable to the order of such city or town, for such amount as the resolution shall require, or a deposit of a like sum in money. Each bid shall state that the bidder agrees that if his bid be accepted and he fails to comply therewith within the time hereinafter specified, such check or deposit shall be forfeited to the city or town. If bids for a lease be called for bidders shall bid the amount to be paid as the rent for each year of the term of the lease. If bids for a sale and conveyance be called for the bids shall state the price offered. The legislative authority of the city or town shall have the right to reject any or all bids and to accept any bid which it deems best. At the first meeting of the legislative authority of the city or town held after the expiration of the time fixed for receiving bids, or at some later meeting if such legislative authority so decides, the bids shall be considered. In order for such legislative authority to declare it advisable to accept any bid it shall be necessary for two-thirds of all the members elected to such legislative authority to vote in favor of a resolution making such declaration. If such resolution be so adopted it shall be necessary, in order that such bid be accepted, to enact an ordinance accepting such bid and directing the execution of a lease or conveyance by the mayor and city clerk or other proper official. Such ordinance shall not take effect until it shall have been submitted to the voters

of such city or town for their approval or rejection at the next general election or at a special election called for that purpose, and a majority of the voters voting thereon shall have approved such ordinance. If approved it shall take effect as soon as the result of such vote be proclaimed by the mayor. If it be so submitted and fail to receive the approval of a majority of the voters voting thereon, it shall be rejected and annulled. It shall be the duty of the mayor to proclaim such vote as soon as it shall be properly certified.

SEC. 3. Upon the taking effect of any such ordinance the mayor and city clerk or other proper official shall execute, in the name and on behalf of the city or town, the lease or conveyance directed by such ordinance. The lessee or grantee shall accept and execute the same within ten days after notice of its execution by the city or town or forfeit to the city or town the amount of the check or special deposit accompanying the bid of such lessee or grantee: *Provided*, That if litigation in good faith be instituted within such ten days to determine the rights of the parties, no forfeiture shall take place unless such lessee or grantee fail for five days after the termination of such litigation in favor of the city or town to accept and execute such lease or conveyance.

Execution of  
lease or  
conveyance.

Acceptance  
of lessee  
or grantee.

Passed the House March 3, 1917.

Passed the Senate March 6, 1917.

Approved by the Governor March 15, 1917.

SENATE BILL NO. 2835

State of Washington  
43rd Legislature  
1st Extraordinary Session

By Senators Rasmussen, Gardner  
and Peterson (Ted)

Read first time March 14, 1973, and referred to Committee on LOCAL GOVERNMENT.

1 AN ACT Relating to the sale or lease of municipal utilities; and  
2 adding a new section to chapter 35.94 RCW.

3 BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:

4 NEW SECTION. Section 1. There is added to chapter 35.94 RCW  
5 a new section to read as follows:

6 Whenever a city shall determine, by resolution of its  
7 legislative authority, that any unimproved lands, unusable property,  
8 or equipment originally acquired for public utility purposes is  
9 surplus to the city's needs and is not required for providing  
10 continued public utility service, then such legislative authority by  
11 resolution may cause such lands, property, or equipment to be leased,  
12 sold, or conveyed. Such resolution shall state the fair market value  
13 or the rent or consideration to be paid and such other terms and  
14 conditions for such disposition as the legislative authority deems to  
15 be in the best public interest.

16 The provisions of RCW 35.94.020 and 35.94.030 shall not apply  
17 to dispositions authorized by this section.

Chairman and Committee Members

Re: Senate Bill 2835

Dear Sirs:

This letter is in reference to the subject bill recently introduced and referred to your committee and which should be promptly enacted in the best public interest. The background of the need for this amendatory legislation has been previously discussed with and furnished to the sponsors, Senators Rasmussen, Gardner and Peterson (Ted), and is restated herein for your full consideration.

During the routine course of ownership of a municipally owned public utility, various types of plant and properties are acquired for additions and betterments to the utility system. Some of these properties in turn become surplus to the utility needs and nonessential to continued effective utility service. The orderly procedure for the disposition of such properties under the general powers of cities of the first class (RCW 35.22.280(3)) has been clouded by the authority and procedure regarding the lease and/or sale of public utility works set forth in Chapter 35.94 RCW. Sections 35.94.020 and .030 require a formalized procedure with a confirming approval of the voters on a ballot proposition. Such procedure is, of course, desirable where in fact all or an integral part of an operating utility is to be so disposed of. However, the procedure is completely impractical for example in the disposition of property and equipment, lands, substations, and other parts and segments of facilities no longer required for utility service. Where surplus lands are to be leased or sold the purchaser may require substantial title insurance and/or require warranty of title and the right to convey protecting secondary financing for his projected improvements. Chapter 35.94 RCW as now enacted unfortunately prevents this. Thus, more flexibility of procedure is desirable and in the best public interest.

The proposed amendment would accomplish greater procedural flexibility in such transactions without repealing

Washington State  
Legislature

-2-

March 20, 1973

the formalized procedures in the proper situations. The proposed amendment merely adds a new section providing that upon finding and determination, expressed in a resolution adopted by the Legislative authority of the City, that the property is surplus and nonessential to continued effective utility service, it can be leased or sold in such manner and on such terms as are in the best public interest for the orderly disposition of the same.

The flexibility sought is reasonably consistent with that long enjoyed by Public Utility Districts under RCW 54.16.180, and investor-owned utilities. In many situations the local taxing entity will receive additional revenues when the surplus properties are returned to taxable status.

In summary then, for all these reasons, this is legally sound, desirable, necessary and helpful legislation and should be promptly enacted in the best public interest.

Thank you for your assistance.

Very truly yours,

Amendment to Senate Bill 2835  
By Senator Guess

On page 1, add a new section following section 1 as follows:

"NEW SECTION. Section 2. In the event that the property contained in section one of this act is real property (including lands, improvements thereon, and any interests or estates) and such real property is to be sold, the following additional procedures shall be followed: A written notice particularly describing the property to be sold and the time and place of the sale shall be posted in three public places in the city where the sale is to take place, for a period of not less than four weeks prior to the date of the proposed sale. Further, there shall be notice of the proposed sale published in a display advertisement of no less than two column by two inch or one column by four inch size in any daily or weekly legal newspaper of general circulation published in the county in which the real property to be sold is situated. This advertisement shall appear in the legal notices section and the real estate classified section. This publication shall appear for a period of not less than four weeks prior to the proposed sale and the notice shall particularly describe the property to be sold and the time and place of the proposed sale: PROVIDED, That if there is no legal newspaper published in this county, then such notice shall be published in the legal newspaper published in this state nearest to the place of sale."

PROPOSED AMENDMENT TO S.B. 2835

On line 7 after "any" delete  
the word "unimproved" and  
after "lands", delete the

Washington State Archivist

Chairman Joe D. Haussler called the meeting to order at 8:15 a.m. Saturday, April 7 in House Office Building 431. He thanked the members of the committee and the subcommittee chairmen for their concern and attention during the past session of the Legislature in Local Government committee measures. Rep. Amen expressed the appreciation of the committee for Chairman Haussler's fair and able chairmanship.

HEARING: Chairman Haussler turned the first portion of the agenda over to Subcommittee Chairman Jeff Douthwaite, and requested that those speaking limit their testimony to one pro and one con on each issue.

SB 2388 Annexation resolutions, final action. Provides that a petition or resolution to call an annexation election that is filed with the legislative authority shall be valid for 1 year, and if final action is not taken by the expiration of that time, the resolution shall be considered null and void.

Chairman Douthwaite called on Jim Guenther to explain the bill, and he stated that there had previously been no time requirement on it. Questions from the committee expressed concern over the possibility of the same group re-signing again at the end of the year, and whether an amendment should be added to preclude that possibility. Jim Guenther spoke of the lateness of time and the remote possibility of this happening.

Rep. North inquired if another group could file a petition within the year, and the reply was negative.

EXECUTIVE:

Rep. Zimmermen offered an amendment to add the word "petition" in two places: on line 24, page 1, and line 14, page 2 to make it consistent with the previous language. The amendment was adopted.

Representative Kalich moved SB 2388 out DO PASS AS AMENDED. The motion was seconded and carried.

HEARING:

ESB 2835 Municipal utilities property, disposition

Chairman Douthwaite asked Mr. Al Brenninger, Tacoma Public Utilities, to explain the bill. He stated that it was an amendatory legislation to formal procedures for the disposition of public utility properties, that it had the approval of the Association of Washington Cities, and is basically similar to HB 939, previously passed out of the committee. He proposed an amendment which would delete all of section 2, and which had been distributed to the committee members.

Mr. Brenninger stated that this deletes the requirement that notice of sale be posted and published in a certain manner. He also pointed out that utility property presently must be disposed of the same as other property, with the final approval by the voters, and that this bill pertained only to the disposition of utility property.

EXECUTIVE:

Rep. Adams moved the adoption of an amendment to delete Section 2 from Engrossed SB 2835.

After discussion, the amendment was adopted.

Rep. Zimmerman moved ESB 2835 out DO PASS AS AMENDED. The motion was seconded by Rep. Adams and carried.

HEARING: Subcommittee Chairman Hugh Kalich, presiding

ESB 2584 Diking dist. commissioners, compensation. Provides that diking district commissioners may receive \$8 compensation per day for meeting attendance, and shall receive the same compensation as similar labor does for all other necessary work or services performed in connection with their duties. Provides that such compensation shall not exceed \$1,000 per year, except during emergencies.

Representative Haussler explained that this was a district set up by the people themselves, and they tax themselves in order to operate; previously there had been some state matching money, but it was principally paid for by the people.

In answer to a question from the committee, Mr. Jim Guenther explained that there were three commissioners on a diking district commission, and that there were 97 diking and irrigation districts in the state.

EXECUTIVE:

Representative noted the misspelled word in the Engrossed bill, and moved the adoption of an amendment to correct it to read "declare" instead of "delare". The amendment was adopted (although spelled correctly in the Senate amendment).

Rep. Adams moved out ESB 2584 DO PASS AS AMENDED. The motion was seconded and carried.

HEARING:

Chairman Haussler presided over the last item on the agenda:

SSB 2554 Humane societies, county authority. This bill authorizes a county legislative authority to grant to one or more qualified corporations the authority to enforce the chapter on prevention of cruelty to animals. This authority is for a period of up to three years.

Rep. Frances North, sponsor of a similar House Bill (750) spoke briefly explaining that this bill now allows other humane societies to organize under the RCW.

Virginia Knouse, of PAWS, spoke for the bill, bringing out the fact that many of these first-incorporated humane societies no longer function properly to accomplish the desired goal of preventing cruelty to animals. The law says that they shall have the authority regardless of their effectiveness. Allowing more than one such organization would insure that the job got done. She felt it was a start in the right direction, as it was an expensive and large problem.

Mr. Charles H. McConnell, Washington State Dog Owners Assn. Inc., spoke against

REPORT TO SPEAKER'S OFFICE

(Confidential - Please Deliver in Envelope)

BILL NO. E.S.B. 2835 BY Senators Rasmussen, Gardner, and T. Peterson

BRIEF TITLE Authorizing an additional method for the disposition of certain property owned by municipal utilities

REPORTED BY: Committee on Local Government (20)

COMMITTEE RECOMMENDATION: Do Pass as Amended (15)  
(Indicate number signing report)

- A. EXISTING LAW: Utility property presently must be disposed of the same as other property, that is with final approval by the voters.
  
- B. PURPOSE OF BILL AND EFFECT ON EXISTING LAW:  
Authorizes city legislative authorities to sell, lease, or convey property originally acquired for public utility purposes which it determines is surplus to the city's needs and not required for public utility service. Provides for a public hearing.  
Requires the authorizing resolution to state the fair market value or consideration to be paid and other terms in the best public interest.  
Provides that present statutory requirements for closed bid procedures, and approval by the legislative authority and the voters shall not apply to such disposition.  
Provides for the posting and publishing of notices when the sale of real property is involved. Provides that real property offered for sale under the provisions of this section, but not sold, may be sold by negotiation after advertisement.
  
- C. EFFECT OF AMENDMENT(S): Strikes the second section of the bill (the Senate floor amendment). Deletes requirements that notice of sale be posted and published in a certain manner.

FISCAL IMPACT:  
none

BILL SUBSTANTIALLY SIMILAR: (if any)  
No. --

Rep. Joe D. Haussler  
Chairman

(Distribution: 1 copy, with copy of Bill Digest and amendments attached, to Speaker's Office)

DRAFTER: Code Reviser: \_\_\_\_\_

Other: \_\_\_\_\_

PRINCIPAL PROPONENTS: (Individuals and Organizations)

Al Brenninger, City of Tacoma, Department of Public Utilities

PRINCIPAL OPPONENTS: (Individuals and Organizations)

None

PRINCIPAL ARGUMENTS:

FOR: This is the same as HB 939 which was passed out of this committee on March 16. This bill offers cities a simpler way of disposing of property no longer needed for public utility purposes. The public interest is protected by the hearing process provided for.

AGAINST: none

ESB 2835 is substantially similar to HB 939, which we passed out of committee on March 16. Section 1 of ESB 2835 includes our two amendments-- namely striking out "unimproved" before "lands" on page 1, line 7; and striking out "unusable" before "property" on page 1, line 7. The Senate also added an amendment calling for public hearings before the property may be sold.

ESB 2835 also adds a section 2, which requires both published and posted notices of sales for real property. The final paragraph of this section is not precisely written. It is not clear whether real property, after the posting and publishing of notices has occurred, which has not been sold, must be re-advertised before it may be sold by negotiation, or may just be sold by negotiation without re-advertising.

# EXHIBIT 33 (m)

STATE OF WASHINGTON  
LEGISLATIVE COUNCIL  
LEGISLATIVE BUILDING  
OLYMPIA

MEMORANDUM

TO: Representative Joe D. Haussler, Chairman  
Local Government Committee

DATE: April 6, 1973

FROM: James W. Guenther  
Executive Secretary

SUBJECT: Senate Bill 2835 - Docks, certain family residences

Authorizes the city, by resolution, to dispose of land, property, or equipment which was originally acquired for public utility purposes when it is deemed to be a surplus by the city. It is required that such resolution shall state the fair market value and the conditions for such disposition of the equipment.

Under the existing law, there is a long, detailed requirement for the calling of bids, passing of resolutions and all this appears to be rather cumbersome for the purpose of disposing of surplus properties. This act, however, was amended in the Senate so as to set forth some detail as to where the notices should be posted and the requirements of publications, so as to assure adequate notice to the public of the availability of such lands or equipment which is to be disposed of.

Chairman and Committee Members

Re: Senate Bill 2835

Dear Sirs:

This letter is in reference to the subject bill recently introduced and referred to your committee and which should be promptly enacted in the best public interest. The background of the need for this amendatory legislation has been previously discussed with and furnished to the sponsors, Senators Rasmussen, Gardner and Peterson (Ted), and is restated herein for your full consideration.

✓ During the routine course of ownership of a municipally owned public utility, various types of plant and properties are acquired for additions and betterments to the utility system. Some of these properties in turn become surplus to the utility needs and nonessential to continued effective utility service. The orderly procedure for the disposition of such properties under the general powers of cities of the first class (RCW 35.22.280(3)) has been clouded by the authority and procedure regarding the lease and/or sale of public utility works set forth in Chapter 35.94 RCW. Sections 35.94.020 and .030 require a formalized procedure with a confirming approval of the voters on a ballot proposition. Such procedure is, of course, desirable where in fact all or an integral part of an operating utility is to be so disposed of. However, the procedure is completely impractical for example in the disposition of property and equipment, lands, substations, and other parts and segments of facilities no longer required for utility service. Where surplus lands are to be leased or sold the purchaser may require substantial title insurance and/or require warranty of title and the right to convey protecting secondary financing for his projected improvements. Chapter 35.94 RCW as now enacted unfortunately prevents this. Thus, more flexibility of procedure is desirable and in the best public interest.

✓ The proposed amendment would accomplish greater procedural flexibility in such transactions without repealing

Washington State  
Legislature

-2-

March 20, 1973

the formalized procedures in the proper situations. The proposed amendment merely adds a new section providing that upon finding and determination, expressed in a resolution adopted by the Legislative authority of the City, that the property is surplus and nonessential to continued effective utility service, it can be leased or sold in such manner and on such terms as are in the best public interest for the orderly disposition of the same.

✓ The flexibility sought is reasonably consistent with that long enjoyed by Public Utility Districts under RCW 54.16.180, and investor-owned utilities. In many situations the local taxing entity will receive additional revenues when the surplus properties are returned to taxable status.

In summary then, for all these reasons, this is legally sound, desirable, necessary and helpful legislation and should be promptly enacted in the best public interest.

Thank you for your assistance.

Very truly yours,

A. J. Benedetti  
Director of Utilities

# EXHIBIT 33 (n)

INFORMATION RE: SENATE BILL NO. 2835

Municipal utilities property, disposition

SENATE BILL 2835 is amendatory legislation to formal procedures for the disposition of Public Utility properties contained in RCW Ch. 35.94. It ~~authorizes~~ <sup>authorizes</sup> the sale or lease of lands, property or equipment of a city-owned Public Utility found by resolution of its legislative authority to be surplus to the city's needs, and not required for providing continued effective public utility service, at the fair market value, rent or consideration stated in the resolution and subject to such other terms and conditions as the local legislative authority deems to be in the best public interest.

This is with the approval of the AWC and at the request of cities owning and operating Public Utilities to provide greater flexibility for disposition of such surplus properties <sup>Needed</sup> to properly clear all title and warranty clouds; to return the properties to taxable status; and to provide authority similar to that authorized for public utility districts and inherent in privately-owned companies.

This <sup>bill</sup> ~~proposed amendment~~ will accomplish procedural flexibility in such transactions without repealing the formalized procedures required in the situations involving utility operating plant and properties. (RCW Ch. 35.94)

*Senate committee amendment assures public hearing in conjunction with the disposition of such properties.*

SENATE BILL NO. 2835

State of Washington  
43rd Legislature  
1st Extraordinary Session

By Senators Rasmussen, Gardner  
and Peterson (Ted)

Read first time March 14, 1973, and referred to Committee on LOCAL  
GOVERNMENT.

1 AN ACT Relating to the sale or lease of municipal utilities; and  
2 adding a new section to chapter 35.94 RCW.

3 BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:

4 NEW SECTION. Section 1. There is added to chapter 35.94 RCW  
5 a new section to read as follows:

6 Whenever a city shall determine, by resolution of its  
7 legislative authority, that any unimproved lands, unusable property,  
8 or equipment originally acquired for public utility purposes is  
9 surplus to the city's needs and is not required for providing  
10 continued public utility service, then such legislative authority by  
11 resolution may cause such lands, property, or equipment to be leased,  
12 sold, or conveyed. Such resolution shall state the fair market value  
13 or the rent or consideration to be paid and such other terms and  
14 conditions for such disposition as the legislative authority deems to  
15 be in the best public interest.

16 The provisions of RCW 35.94.020 and 35.94.030 shall not apply  
17 to dispositions authorized by this section.

ENGROSSED SENATE BILL NO. 2835

State of Washington  
43rd Legislature  
1st Extraordinary Session

By Senators Rasmussen, Gardner  
and Peterson (Ted)

Read first time March 14, 1973, and referred to Committee on LOCAL GOVERNMENT.

1 AN ACT Relating to the sale or lease of municipal utilities; and SB -6  
2 adding a new section to chapter 35.94 RCW. 2835;  
3 BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON: 002  
4 NEW SECTION. Section 1. There is added to chapter 35.94 RCW PARTA  
5 a new section to read as follows: ;001  
6 Whenever a city shall determine, by resolution of its 7  
7 legislative authority, that any lands, property, or equipment 8  
8 originally acquired for public utility purposes is surplus to the 9  
9 city's needs and is not required for providing continued public 9  
10 utility service, then such legislative authority by resolution and 10  
11 after a public hearing may cause such lands, property, or equipment 11  
12 to be leased, sold, or conveyed. Such resolution shall state the 12  
13 fair market value or the rent or consideration to be paid and such 13  
14 other terms and conditions for such disposition as the legislative 14  
15 authority deems to be in the best public interest. 14  
16 The provisions of RCW 35.94.020 and 35.94.030 shall not apply 15  
17 to dispositions authorized by this section. 16  
18 NEW SECTION. Section 2. In the event that the property 17  
19 contained in section one of this act is real property (including 18  
20 lands, improvements thereon, and any interests or estates) and such 19  
21 real property is to be sold, the following additional procedures 19  
22 shall be followed: A written notice particularly describing the 20  
23 property to be sold and the time and place of the sale shall be 21  
24 posted in three public places in the city where the sale is to take 22  
25 place, for a period of not less than four weeks prior to the date of 22  
26 the proposed sale. Further, there shall be notice of the proposed 23  
27 sale published in a display advertisement of no less than two column 24

1 by two inch or one column by four inch size in any daily or weekly 24  
2 legal newspaper of general circulation published in the county in 25  
3 which the real property to be sold is situated. This advertisement 26  
4 shall appear in the legal notices section and the real estate 27  
5 classified section. This publication shall appear once a week for 27  
6 four consecutive weeks prior to the proposed sale and the notice 28  
7 shall particularly describe the property to be sold and the time and 29  
8 place of the proposed sale: PROVIDED, That if there is no legal 29  
9 newspaper published in this county, then such notice shall be 30  
10 published in the legal newspaper published in this state nearest to 31  
11 the place of sale. 31  
12 Real property offered for sale but not sold, under the 32  
13 provisions of this section may be sold after advertisement, by 33  
14 negotiations. 33

# EXHIBIT 33 (r)

Brief Title: Authorizing an additional method for the disposition of certain property owned by municipal utilities.

Reported By: Committee on Local Government (20)

Committee Recommendation: Do Pass as Amended (15)

(Indicate number, signing report)

Authorizes city legislative authorities to sell, lease, or convey property originally acquired for public utility purposes which it determines is surplus to the city's needs and not required for public utility service. Provides for a public hearing.

Requires the authorizing resolution to state the fair market value or consideration to be paid and other terms in the best public interest.

Provides that present statutory requirements for closed bid procedures, and approval by the legislative authority and the voters shall not apply to such disposition.

Provides for the posting and publishing of notices when the sale of real property is involved. Provides that real property offered for sale under the provisions of this section, but not sold, may be sold by negotiation after advertisement.

**COMMITTEE AMENDMENT:** Strikes the second section of the bill (the Senate floor amendment). Deletes requirements that notice of sale be posted and published in a certain manner.

SENATE BILL NO. 2835

State of Washington  
43rd Legislature  
1st Extraordinary Session

By Senators Rasmussen, Gardner  
and Peterson (Ted)

Read first time March 14, 1973, and referred to Committee on LOCAL  
GOVERNMENT.

1 AN ACT Relating to the sale or lease of municipal utilities; and  
2 adding a new section to chapter 35.94 RCW.

3 BE IT ENACTED BY THE LEGISLATURE OF THE STATE OF WASHINGTON:

4 NEW SECTION. Section 1. There is added to chapter 35.94 RCW  
5 a new section to read as follows:

6 Whenever a city shall determine, by resolution of its  
7 legislative authority, that any unimproved lands, unusable property,  
8 or equipment originally acquired for public utility purposes is  
9 surplus to the city's needs and is not required for providing  
10 continued public utility service, then such legislative authority by  
11 resolution may cause such lands, property, or equipment to be leased,  
12 sold, or conveyed. Such resolution shall state the fair market value  
13 or the rent or consideration to be paid and such other terms and  
14 conditions for such disposition as the legislative authority deems to  
15 be in the best public interest.

16 The provisions of RCW 35.94.020 and 35.94.030 shall not apply  
17 to dispositions authorized by this section.

BILL NO. H. B. 939

BY Representative Kelley

BRIEF TITLE Authorizing an additional method for the disposition of certain property owned by municipal utilities

REPORTED BY: Committee on Local Government (20)

COMMITTEE RECOMMENDATION: Do Pass as Amended (16)

(Indicate number signing report)

A. EXISTING LAW: See RCW 35.94.

B. PURPOSE OF BILL AND EFFECT ON EXISTING LAW:

Authorizes city legislative authorities to sell, lease, or convey property originally acquired for public utility purposes which it determines is surplus to the city's needs and not required for public utility service.

Requires the authorizing resolution to state the fair market value or consideration to be paid and other terms in the best public interest.

Provides that present statutory requirements for closed bid procedures, and approval by the legislative authority and the voters shall not apply to such dispositions.

C. EFFECT OF AMENDMENT(S):

Refines language with regard to what property may be disposed of in this manner; deletes unnecessary adjectives.

FISCAL IMPACT:

WASHINGTON

DEPARTMENT OF PUBLIC UTILITIES

A. J. Benedetti, Director

March 5, 1973

Please address reply to:  
City of Tacoma  
Department of Public Utilities  
P. O. Box 11007  
Tacoma, Washington 98411

Attention:

Washington State Legislature  
House of Representatives  
Committee on Local Government  
Chairman and Committee Members

Re: House Bill 939

Dear Sirs:

This letter is in reference to the subject bill recently introduced and referred to your committee and which should be promptly enacted in the best public interest. The background of the need for this amendatory legislation has been previously discussed with and furnished to the sponsor, Representative Kelly, and is restated herein for your full consideration.

During the routine course of ownership of a municipally owned public utility, various types of plant and properties are acquired for additions and betterments to the utility system. Some of these properties in turn become surplus to the utility needs and nonessential to continued effective utility service. The orderly procedure for the disposition of such properties under the general powers of cities of the first class (RCW 35.22.280(3)) has been clouded by the authority and procedure regarding the lease and/or sale of public utility works set forth in Chapter 35.94 RCW. Sections 35.94.020 and .030 require a formalized procedure with a confirming approval of the voters on a ballot proposition. Such procedure is, of course, desirable where in fact all or an integral part of an operating utility is to be so disposed of. However, the procedure is completely impractical for example in the disposition of property and equipment, unimproved lands, substations, and other parts and segments of facilities no longer usable. Where unimproved surplus lands are to be leased or sold the purchaser may require substantial title insurance and/or require warranty of title and the right to convey protecting secondary financing for his projected improvements. Chapter 35.94 RCW as now enacted unfortunately prevents this. Thus, more flexibility of procedure is desirable and in the best public interest.

The proposed amendment would accomplish greater procedural flexibility in such transactions without repealing the formalized procedures in the proper situations.

Washington State  
Legislature

-2-

March 5, 1973

The proposed amendment merely adds a new section providing that upon a finding and determination, expressed in a resolution adopted by the Legislative authority of the city, that the property is surplus and nonessential to continued effective utility service, it can be leased or sold in such manner and on such terms as are in the best public interest for the orderly disposition of the same.

The flexibility sought is reasonably consistent with that long enjoyed by Public Utility Districts under RCW 54.16.180, and investor-owned utilities. In many situations the local taxing entity will receive additional revenues when the surplus properties are returned to taxable status.

In summary then, for all these reasons, this is legally sound, desirable, necessary and helpful legislation and should be promptly enacted in the best public interest.

Thank you for your assistance.

Very truly yours,

A. J. Benedetti  
Director of Utilities

# EXHIBIT 33 (v)

Chairman Haussler called the meeting to order and called the committee's attention to two bills which had had previous hearings: HB 564 and HB 685.

EXECUTIVE SESSION:

HB 564 - Annexation elections, petitioning - Rep. Patterson moved that we reconsider HB 564 for the purpose of the adoption of the amendment. Motion carried.

The chairman called on Mr. Bob Bartel of the Association of Washington Cities who wished to restore some of the original language in the law, which involved deleting a portion of the amendment previously proposed. The changes in the amendment were placed in the members' books.

Rep. Nelson moved that the committee adopt the three amendments which had been distributed. Rep. Blair moved an amendment to the amendment to strike the reference to county commissioners and substitute the wording "legislative authority". The motions carried and the amendments adopted.

Rep. Patterson moved the bill out DO PASS AS AMENDED. Motion carried.

HB 685 Fire protection, adjacent state lands - Rep. Patterson moved that we reconsider HB 685 for the purpose of the adoption of an amendment. Motion was seconded and carried.

Rep. Kuehnle moved the amendment. He explained the wording. Rep. Douthwaite raised a question with regard to the language, referring to the University of Washington, and his concern, as noted at the previous hearing. Rep. Kuehnle explained this measure would have no bearing on agencies inside the city.

Chairman Haussler asked Mr. Ernie Swanson, Washington Fire Commissioner's Assoc., to speak to this point. He explained that they do not have any jurisdiction within any incorporated area whatsoever. He further stated that small institutions within a town might contract with a town, but this would be an exception.

Rep. Frances North asked about fiscal impact. Mr. Swanson stated the reason for not having it was because they were not asking for any particular amount of money. He stated this was so they could negotiate first hand.

Rep. Zimmerman asked if the rules could be suspended so they could go back for one further amendment. Rep. Kuehnle moved an amendment to the amendment, placing an effective date of July 1, 1974. The motion carried.

Rep. Kalich moved HB 685 out DO PASS AS AMENDED. The motion was seconded and carried.

Subcommittee Chairman Jeff Douthwaite chaired the next item on the agenda:

HB 939 Municipal utilities, property disposition - Authorizes city legislative

authorities to sell, lease, or convey property originally acquired for public utility purposes which it determines is surplus to the city's needs and not required for public utility service.

Requires the authorizing resolution to state the fair market value or consideration to be paid and other terms in the best public interest.

Provides that present statutory requirements for closed bid procedures, and approval by the legislative authority and the voters shall not apply to such dispositions.

The committee amendment refines language with regard to what property may be disposed of in this manner; deletes unnecessary adjectives.

Chairman Douthwaite called on Mr. Paul J. Nolan, Deputy City Attorney for the Tacoma Public Utilities, who had distributed a letter to the members of the committee setting forth his favorable position on the proposed legislation. He stated it was an amendatory bill and outlined the existing law. He stated this would place property back on the tax rolls, and provided a modern and conservative way to dispose of the property. He stated he had talked with the city attorney of Seattle who agrees with him in the need for this bill, which is an amendatory bill which allows the municipal utility districts the same privileges in this instance as other public and private utility districts.

#### EXECUTIVE SESSION:

Bob Bartel of the Ass'n of Washington Cities, supported the bill. Rep. Kuehnle suggested a word change on Page 1, Sec. 1, Line 7. Rep. Adams moved the adoption of this amendment. It was seconded and carried. Rep. Kuehnle moved HB 939 and DO PASS AS AMENDED.

HB 812 Cities, six year street program - Rep. Kraabel, prime sponsor, explained that this removes the requirement that cities with urban areas must have a six year program for arterial street construction, as well as the requirement that each county having an urban area must have a six year program for arterial road construction. It repeals certain sections, as well as the requirement for urban arterial board to report to the highway commission and the joint committee on highways about the development of these six year programs.

Rep. Kraabel passed out material and suggested an amendment to the bill which would reinstate certain material deleted in the measure. He referred to Page 2, lines 18, 22, and 23, and felt they should no longer be stricken. A great deal of discussion followed regarding the possibility of removing this bill from the Local Government Committee and placing it in the Transportation Committee. Chairman Haussler suggested hearing the people who had planned to testify. A motion on removal of the bill from the committee was withdrawn by Rep. Laughlin.

Opposing the bill was Mr. Roger Polzin of the Urban Arterial Board, who spoke at length on the need for reinstating the deleted lines, and feared lawsuits from those areas who anticipated the continuance of the program. The balance of the funds in the program was announced as approximately eleven million dollars out of the original allotment of two hundred million dollars.

## CERTIFICATE OF CITY CLERK

I, Doris Sorum, City Clerk of the City of Tacoma, Washington, do hereby certify that the attached is a full, true and correct copy of Resolution No. 39902 adopted by the City Council on December 19, 2017.

Dated this 16<sup>th</sup> day of January 2020.

Doris Sorum, City Clerk  
City of Tacoma, Washington

**RESOLUTION NO. 39902**

1 BY REQUEST OF MAYOR STRICKLAND AND COUNCIL MEMBERS CAMPBELL,  
2 IBSEN, AND MELLO

3 A RESOLUTION related to Click! Network; urgently requesting the Tacoma  
4 Public Utility Board to contractually require all internet service providers  
5 using Click! Network to abide by the Click! Network Open Internet Policy  
6 supporting net neutrality.

7 WHEREAS the City of Tacoma, Department of Public Utilities, Light  
8 Division (d.b.a. "Tacoma Power") owns a hybrid fiber-coaxial ("HFC")  
9 communications network that delivers cable television, broadband internet, and  
10 other services within Tacoma Power's service area through its  
11 Telecommunications Section, Click! Network (d.b.a. "Click! Network"), and

12 WHEREAS, as a result of prior policy decisions, Tacoma Power provides  
13 wholesale broadband internet service to local Internet Service Provider ("ISP")  
14 companies, which, in turn, retail the broadband internet service to end-use  
15 customers, and

16 WHEREAS Click! Network has adopted an Open Internet Policy  
17 supporting the principles of net neutrality; specifically, Click! Network does not:  
18

- 19 • Discriminate among specific uses, or class of uses, on its network
- 20 • Impair, degrade, or delay VoIP applications or services that compete  
21 with its video services or services of its affiliates
- 22 • Impair, degrade, delay or otherwise inhibit access by customers to  
23 lawful content, applications, services, or non-harmful devices
- 24 • Impair free expression by slowing traffic from certain websites
- 25 • Demand pay-for-priority or similar arrangements that directly or  
26 indirectly favor certain traffic over other traffic

## Executive Summary

*“Access to high-speed broadband is no longer a luxury; it is a necessity for American families, businesses, and consumers. Affordable, reliable access to high-speed broadband is critical to U.S. economic growth and competitiveness. High-speed broadband enables Americans to use the Internet in new ways, expands access to health services and education, increases the productivity of businesses, and drives innovation throughout the digital ecosystem.” – President Barack Obama*

The United States continues to experience unprecedented growth and innovation in broadband and in the advanced applications and services it enables. While the benefits of increased broadband access and adoption are widespread, barriers like income and geography keep many Americans from taking advantage of the economic, educational and social benefits of broadband access. To make sure that the Federal government does everything within its power to support broadband deployment and adoption, on March 23, 2015, President Obama signed a Presidential Memorandum (Memorandum) “Expanding Broadband Deployment and Adoption by Addressing Regulatory Barriers and Encouraging Investment and Training.”<sup>1</sup> The Memorandum created the Broadband Opportunity Council (Council) and tasked it to produce specific recommendations to increase broadband deployment, competition and adoption through executive actions within the scope of existing Agency programs, missions and budgets. This Report responds to that directive.

The Council presents four overarching recommendations:

1. Modernize Federal programs to expand program support for broadband investments.
2. Empower communities with tools and resources to attract broadband investment and promote meaningful use.
3. Promote increased broadband deployment and competition through expanded access to Federal assets.
4. Improve data collection, analysis and research on broadband.

To pursue these objectives, Federal Agencies will take dozens of actions over the next 18 months. These include commitments to:

- Modernize Federal programs valued at approximately \$10 billion to include broadband as an eligible program expenditure, such as the Department of Agriculture’s (USDA) Community Facilities (CF) program, which will help communities around the country bring broadband to health clinics and recreation centers;
- Create an online inventory of data on Federal assets, such as Department of the Interior (DOI) telecommunications towers, that can help support faster and more economical broadband deployments to remote areas of the country;
- Streamline the applications for programs and broadband permitting processes to support broadband deployment and foster competition; and
- Create a portal for information on Federal broadband funding and loan programs to help communities easily identify resources as they seek to expand access to broadband.

The Council proposes continuing actions in support of its mission, including monitoring agencies’ progress in implementing the action items in the Report and exploring additional steps to further the goals set forth in the Presidential Memorandum.

# Broadband Opportunity Council

---

## 1. Introduction

### Progress to Date

Day by day, access to broadband, and the advanced applications it facilitates, becomes more integral to the daily lives of Americans and to the mission and work of the Federal government and its Agencies. Broadband drives the provision of services across nearly all government functions and across many of the activities that are key to advancement and opportunity for all Americans.

- Broadband enables greater civic participation, provides tools for open government and streamlines government processes.
- Broadband enables changes in how we access educational resources, collaborate in the educational process, conduct research and continue to learn anytime, anyplace and at any pace.
- Broadband enables improved healthcare access, treatments and information.
- Broadband enables new business models, creates business efficiencies, drives job creation, and connects manufacturers and store-fronts to clients and partners worldwide.
- Broadband can also help bring communities together and improve public safety, create a greener planet, and make our transportation systems more resilient and efficient.

Additionally, broadband provides a foundation for many of the advancements we will see across industry sectors in the coming years.<sup>2</sup>

That's why the Obama Administration has focused over the past six years on expanding broadband access for all Americans. Under the Obama Administration's leadership, the United States has experienced unprecedented growth and innovation in broadband networks and services. Since 2009, nearly 45 million more Americans have adopted broadband.<sup>3</sup> Today, 84 percent of Americans are "Internet users," up from 76 percent 5 years ago.<sup>4</sup> Tens of millions of households have seen their home broadband speeds more than double without paying significantly more for monthly service. Communities around the country are beginning to reap the benefits of gigabit speed fiber networks. And while other countries are just beginning to deploy fourth-generation wireless networks to scale, over 98 percent of Americans now have access to 4G mobile broadband.<sup>5</sup>

A combination of robust private investment and targeted Federal policy has driven these remarkable strides in broadband access and adoption. Through the American Recovery and Reinvestment Act (Recovery Act), USDA and the Department of Commerce (DOC) invested nearly \$7.5 billion in broadband networks to help connect under-served areas around the country:

- The Commerce Department's National Telecommunications and Information Administration (NTIA) awarded approximately \$4 billion in grants under the Broadband Technology Opportunities Program (BTOP) and approximately \$293 million in grants under the State Broadband Initiative (SBI) program. Grantees deployed more than 114,500 miles of new or upgraded network miles; connected more than 25,500 community anchor institutions; installed or upgraded more than 47,100 personal computers in public access centers; and prompted more than 670,000 people to subscribe to broadband services. SBI grantees mapped broadband availability in all 50 states and 6 territories and supported well over 200 local broadband planning teams across the country.
- USDA's Rural Utilities Service (RUS) expanded its existing telecommunications programs with an additional \$3.5 billion in loans and grants as part of the Broadband Infrastructure Program (BIP). The awards went to 285 last mile providers, 12 middle mile providers, and 4

## 4. Recommendations and Agency Actions

The Council was charged with making recommendations for actions that can be implemented within the scope of existing Agency programs, missions and budgets. The Council makes recommendations in four areas where Federal actions can strengthen broadband deployment, foster competition and promote broadband adoption:

1. Modernize Federal programs to expand program support for broadband investments.
2. Empower communities with tools and resources to attract broadband investment and promote meaningful use.
3. Promote increased broadband deployment and competition through expanded access to Federal assets.
4. Improve data collection, analysis and research on broadband.

Milestones reflect the Federal fiscal year calendar which begins October 1. Please see Appendix A for a list of Agencies and acronyms. Recommended next steps for the Broadband Opportunity Council are summarized in Section 5.

### 4.1 Modernize Federal programs to expand program support for broadband investments

Broadband has steadily shifted from an optional amenity to a core utility for households, businesses and community institutions. Today, broadband is taking its place alongside water, sewer and electricity as essential infrastructure for communities.

However, not all Federal programs fully reflect the changing social, economic and technological conditions that redefined the need for and benefits of broadband. In some cases, programs that can support broadband deployment and adoption lack specific guidelines to promote its use. Other programs have not integrated funding for broadband commensurate with its importance and role in program execution and mission.

**RECOMMENDATION: All relevant Federal programs, especially those supporting economic development, infrastructure and housing programs, will use rulemakings or guidance to open financing resources for broadband investments.**

To implement this recommendation, Council members will take the following initial 13 actions. Cumulatively, these actions will open up or clarify the potential uses for \$10 billion in Federal grants and loans for broadband-related activities.

- USDA: Update guidance for the Rural Development Community Facility Program: Rural Housing Service - Community Facilities (CF), which represents an estimated \$2.3 billion in FY16 funding, will develop and promote new funding guidance making broadband projects eligible.
  - Key Milestones:

OF THE

# STATE OF WASHINGTON

TWELFTH SESSION

Convened January 9; Adjourned March 9

# 1911

COMPILED IN CHAPTERS WITH MARGINAL NOTES

—BY—

I. M. HOWELL

SECRETARY OF STATE

PUBLISHED BY AUTHORITY

OLYMPIA, WASH.  
E. L. BOARDMAN, PUBLIC PRINTER  
1911.

## CHAPTER 117.

[S. S. B. 102.]

## PUBLIC SERVICE COMMISSION LAW.

AN ACT relating to public service properties and utilities, providing for the regulation of the same, fixing penalties for the violation thereof, making an appropriation and repealing certain acts.

*Be it enacted by the Legislature of the State of Washington:*

## ARTICLE I.

## PUBLIC SERVICE COMMISSION—GENERAL PROVISIONS.

SECTION 1. *Short Title.*

This act shall be known as the "Public Service Commission law," and shall apply to the public services herein described and the commission hereby created.

SEC. 2. *Public Service Commission: Appointment; Term; Removal.*

There shall be and there is hereby created, a public service commission consisting of three persons, one of whom shall be elected as chairman, to be appointed by the governor, by and with the advice and consent of the senate. The terms of the commissioners first appointed under the provisions of this act shall be, one for the term of six years, one for the term of four years, and one for the term of two years; and thereafter the term of each commissioner shall be six years from and after the expiration of the term of his predecessor. Each commissioner shall hold office until his successor shall have been appointed and qualified.

The governor may remove any commissioner for inefficiency, neglect of duty or misconduct in office, giving to him a copy of the charges against him, and an opportunity of being publicly heard in person or by counsel in his own defense, upon not less than ten days' notice. If such commissioner shall be removed the governor shall file in the office of the secretary of state a complete statement of all charges made against such commissioner, and his

[This act specifically repeals §§8627 to 8661, inclusive, and §§8691 to 8716, inc., Rem.-Bal. See §109 *infra* for repeal. By implication, §§8682, 8684, 8688, 8689, 8690, 9305, 9306, Rem.-Bal. are repealed.]

Name.

Commission of three persons.

Removal.

Electrical  
company.

The term "electrical company," when used in this act, includes any corporation, company, association, joint stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever (other than a railroad or street railroad company generating electricity solely for railroad or street railroad purposes or for the use of its tenants and not for sale to others), and every city or town owning, operating or managing any electric plant for hire within this state.

Transportation of  
property.

The term "transportation of property," when used in this act, includes any service in connection with the receiving, delivery, elevation, transfer in transit, ventilation, refrigeration, icing, storage and handling of the property transported, and the transmission of credit.

Transportation of  
persons.

The term "transportation of persons," when used in this act, includes any service in connection with the receiving, carriage and delivery of the person transported and his baggage and all facilities used, or necessary to be used in connection with the safety, comfort and convenience of the person transported.

Service.

The term "service," is used in this act in its broadest and most inclusive sense.

Telephone  
company.

The term "telephone company," when used in this act, includes every corporation, company, association, joint stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever, and every city or town owning, operating or managing any telephone line or part of telephone line used in the conduct of the business of affording telephonic communication for hire within this state.

Telephone  
line.

The term "telephone line," when used in this act, includes conduits, ducts, poles, wires, cables, cross-arms, receivers, transmitters, instruments, machines, appliances, instrumentalities and all devices, real estate, easements, apparatus, property and routes used, operated, owned or controlled by any telephone company to facilitate the business of affording telephonic communication.

Telegraph.

The term "telegraph company," when used in this act, includes every corporation, company, association, joint

stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever, owning, operating or managing any telegraph line or part of telegraph line used in the conduct of the business of affording for hire communication by telegraph within this state.

The term "telegraph line," when used in this act, includes conduits, poles, wire, cables, cross-arms, instruments, machines, appliances, instrumentalities and all devices, real estate, easements, apparatus, property and routes used, operated or owned by any telegraph company to facilitate the business of affording communication by telegraph.

Telegraph  
line.

The term "water system," when used in this act, includes all real estate, easements, fixtures, personal property, dams, dikes, head gates, weirs, canals, reservoirs, flumes or other structures or appliances operated, owned, used or to be used for or in connection with or to facilitate the supply, storage, distribution, sale, furnishing, diversion, carriage, apportionment or measurement of water for power, irrigation, reclamation, manufacturing, municipal, domestic or other beneficial uses for hire.

Water  
system.

The term "water company," when used in this act, includes every corporation, company, association, joint stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever, and every city or town owning, controlling, operating or managing any water system for hire within this state.

Water  
company.

The term "vessel," when used in this act, includes every species of water craft, by whatsoever power operated, for the public use in the conveyance of persons or property for hire over and upon the waters within this state (excepting row boats and sailing boats under twenty gross tons burden, open steam launches of five tons gross and under, and vessels under five gross tons propelled by gas, fluid, naphtha or electric motors).

Vessel.

The term "steamboat company," when used in this act, includes every corporation, company, association, joint

Steamboat  
company.

stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever, owning, controlling, leasing, operating or managing any vessel over and upon the waters of this state.

Dock,  
wharf.

The term "dock" or "wharf," when used in this act, includes any and all structures at which any steamboat, vessel or other water craft lands for the purpose of receiving or discharging freight from or for the public, together with any building or warehouse used for storing such freight for the public for hire.

Warehouse.

The term "warehouse," when used in this act, includes any building or structure in which freight is received for storage from the public for hire, intended for shipment or discharged by any water craft.

Wharfinger.

The term "wharfinger" or "warehouseman," when used in this act, includes every corporation, company, association, joint stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever, operating or managing any dock, wharf or structure where steamboats, vessels or other water craft land for the purpose of discharging freight for the public, and where such freight is received on such dock, wharf or structure for the public for hire within this state.

Public  
service  
company.

The term "public service company," when used in this act, includes every common carrier, gas company, electrical company, water company, telephone company, telegraph company, wharfinger and warehouseman as such terms are defined in this section.

## ARTICLE II.

### PROVISIONS RELATING TO COMMON CARRIERS.

#### SEC. 9. *Charges; Duties of Common Carriers.*

Charges.

All charges made for any service rendered or to be rendered in the transportation of persons or property, or in connection therewith, by any common carrier, or by any two or more common carriers, shall be just, fair, reasonable and sufficient.

Every common carrier shall construct, furnish, maintain and provide safe, adequate and sufficient service fa-

tract or agreement or any rule or regulation or any privilege or facility except such as are specified in its schedule filed and in effect at the time, and regularly and uniformly extended to all persons and corporations under like circumstances for like or substantially similar service.

Franks and passes.

No telephone company or telegraph company subject to the provisions of this act shall, directly or indirectly, give any free or reduced service or any free pass or frank for the transmission of messages by either telephone or telegraph between points within this state, except to its officers, employees, agents, pensioners, surgeons, physicians, attorneys-at-law, and their families, and persons and corporations exclusively engaged in charitable and eleemosynary work, and ministers of religion, Young Men's Christian Associations, Young Women's Christian Associations; to indigent and destitute persons, and to officers and employees of other telephone companies, telegraph companies, railroad companies and street railroad companies.

SEC. 41. *Unjust Discrimination.*

Uniform compensation.

No telegraph or telephone company shall, directly or indirectly, or by any special rate, rebate, drawback or other device or method, charge, demand, collect or receive from any person or corporation a greater or less compensation for any service rendered or to be rendered with respect to communication by telegraph or telephone or in connection therewith, except as authorized in this act than it charges, demands, collects or receives from any other person or corporation for doing a like and contemporaneous service with respect to communication by telegraph or telephone under the same or substantially the same circumstances and conditions.

SEC. 42. *Unreasonable Preference.*

Unreasonable preference.

[See § 9306, Rem.-Bal.]

No telegraph company or telephone company shall make or give any undue or unreasonable preference or advantage to any person, corporation or locality, or subject any particular person, corporation or locality to any undue or unreasonable prejudice or disadvantage in any respect whatsoever.

# EXHIBIT 37

# 1. Executive Summary

## 1.1 The Digital Imperative

The future of regional success is one of resiliency, diversity, sustainability, and connectedness built on an infrastructure that anticipates the current and future needs of populations. In our increasingly digital age, local governments are recognizing the need to mitigate the risks posed by the “digital divide”<sup>1</sup> by taking the opportunity to plan for initiatives that aim to improve quality of life, expand economic development, and equip governments with improved technologies.

*Pierce County is well-positioned to realize substantial economic gains from targeted investments in broadband infrastructure.* By linking its cities, natural assets, and rural areas with broadband, the County can attract investment, create economic opportunities, and operate more efficiently and effectively. Broadband and other digital technology directly enable transformation in business, education, health, transportation and other areas that make for great places, happy people, and vital enterprises. County government can be a catalyst for such transformation by making targeted investments in public infrastructure to reduce internal costs and improve operations. Such investment must align with and promote private investment, too. The keys to success are clear vision, committed leadership, and a solid plan.

## 1.2 Background

*Broadband is essential*, much like education, electricity, and water or sewer. It has become a primary enabler of economic mobility and prosperity, a “fourth utility” that is relied on by residents, businesses, and governments alike. Early in the digital revolution of the 1990s, communities realized they could not depend solely on private enterprise for internet access and began thinking forward about how to expand access to this new utility. Local governments like Pierce County now consider broadband a critical enabler of success in communities, playing a role in such issues as:

- **Attracting and retaining highly skilled talent**, particularly those in well-paid industries who can live most anywhere, with great quality of life that includes connectivity
- **Automating local government operations**, sharing applications among municipalities to reduce costs and increase impact
- **Monitoring and managing natural resources** while sustainably utilizing them for agriculture, industry, recreation, and utilities
- **Expanding value creation among existing businesses and developing new private enterprises**, especially those that fit the distinct character and resource base of the area, and create high-paying jobs
- **Improving skill development and housing mobility** as well as economic opportunities for residents

<sup>1</sup> “Digital Divide” refers to the gap between populations with access to internet and those whose occupational, educational, and social opportunities are negatively affected by lack of access to the internet. The term is often associated with rural or lower income communities.

# EPB FIBER OPTICS

## 4K ULTRA HD TV

EPB BECAME ONE OF THE FIRST IN THE U.S. TO OFFER 4K ULTRA HD CHANNELS

### MORE THAN 100 EPB2GO NETWORKS

EPB customers can access more than 100 networks anywhere they go on any mobile device.

### GREW TOTAL FIBER OPTICS CUSTOMERS TO 91,411

**7,155**

COMMERCIAL CUSTOMERS

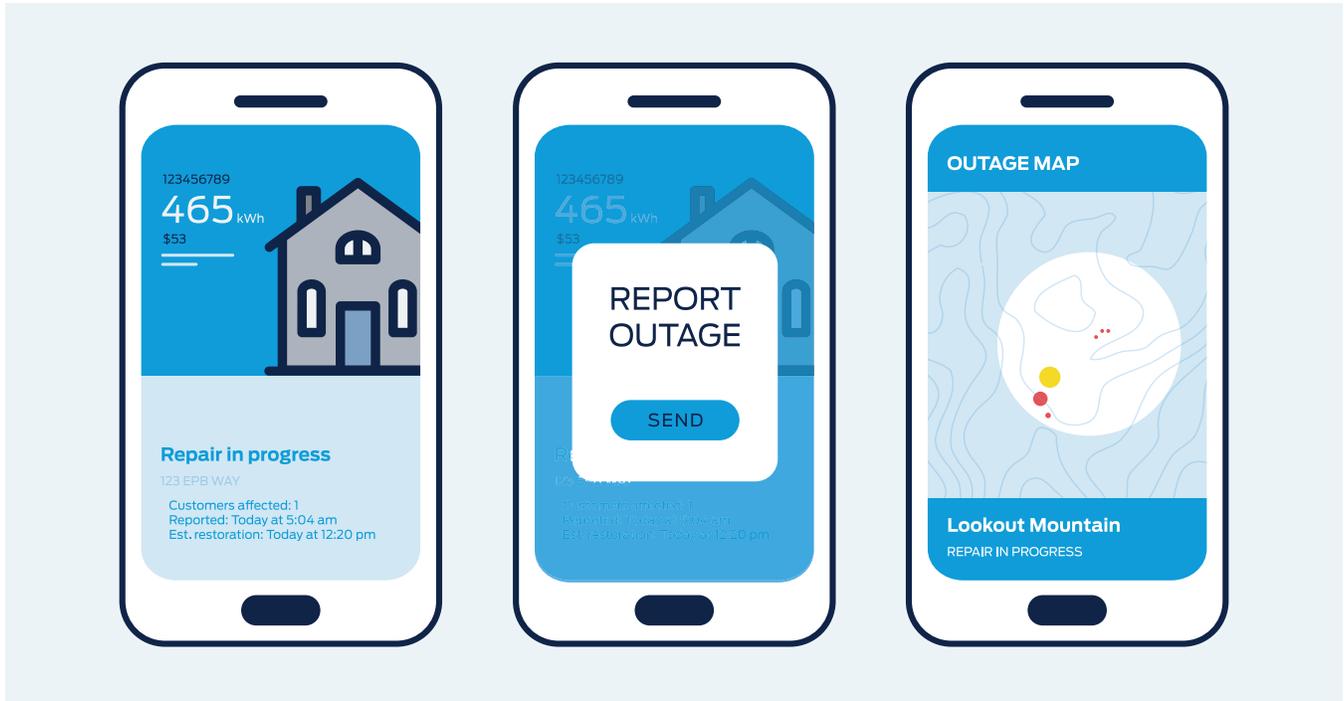

**84,256**

RESIDENTIAL CUSTOMERS

More than 9,800 of our EPB Fiber Optics customers had subscribed to 1-gigabit and higher Internet and data services, as of the end of fiscal year 2016-2017.

# THE POWER OF YOUR HOME'S ENERGY USE IN THE PALM OF YOUR HAND.

These days, you can access just about everything you do right from your mobile device. And now, that includes monitoring your home’s electric service. Last year, EPB developed myEPB, a mobile app that gives customers real-time access to their energy use data by the hour, day or month – anytime, anywhere. In addition to monitoring their power use, customers can report power outages and receive push notifications on outages and restorations in their area. And, future plans include convenient access to both electric and fiber optics account summaries, mobile bill pay and more. The myEPB App is compatible with iOS and Android devices and is available for download free at the App Store.

# TV WITH GREATER FLEXIBILITY.

Today’s consumers want products that can be tailored to meet their unique needs and lifestyle. In July of 2016, EPB Fiber Optics unveiled Fi TV Select, offering customers better choices and options for customizing their TV viewing experience.

**WITH FI TV SELECT, CUSTOMERS CHOOSE THE CHANNELS PACKAGE AND FEATURES PACKAGE THEY LIKE BEST. EVERYONE GETS HD AND VIDEO ON DEMAND TITLES. AND NOW THERE’S THE OPTION OF ADDING PREMIUM CHANNELS OR ADDITIONAL CHANNELS TO ANY PLAN.**

We also enhanced the viewing experience with new available features like the ability to rewind/replay live TV, a DVR that can record up to six HD channels at one time and an even sharper high definition picture with 4K Ultra HD quality. Thanks to the launch of Fi TV Select, EPB was one of the few television distributors in the nation to offer customers the opportunity to watch the Summer Olympics in 4K.

Combined with anytime mobile streaming on EPB2Go, Fi TV Select represents one more way EPB is responding to the ever changing landscape of entertainment options. In fact, Fi TV Select now accounts for nearly 13,000 of our more than 59,000 total television customers – including more than 6,300 legacy customers who’ve converted to the new platform.

# HOSTED PHONE SOLUTIONS: INSTALLED 25,000<sup>TH</sup> OUTSIDE LINE.

EPB Fiber Optics commercial sales team achieved a significant Hosted Phone Solution milestone in 2017. With 1,600 Hosted Phone customers choosing EPB as their provider, we installed our 25,000<sup>th</sup> Hosted Phone line this year. This achievement makes EPB the 15<sup>th</sup> largest customer in the world for our third-party vendor, MetaSwitch. One secret to our success? Unlike other local providers, EPB is the area’s only “one-stop shop” for everything it takes to set up and maintain a commercial phone system – plus the training and ongoing support to help customers do business, even better.

# PIONEERING THE SMART GRID OF THE FUTURE.

EPB'S SMART GRID DEVELOPMENT TEAM HAS PARTNERED WITH OAK RIDGE NATIONAL LABORATORY SCIENTISTS SINCE OCTOBER 2014 TO PIONEER THE ELECTRIC SYSTEM OF THE FUTURE.

Our living laboratory is Chattanooga's smart grid, a 9,000 mile fiber optic network connecting thousands of automated switches, sensors and smart devices that generate trillions of data points annually. This partnership enables us to participate in the Grid Modernization Lab Consortium, a U.S. Department of Energy initiative that leverages the resources from all of the national laboratories to develop and enhance the nation's electric system.

Our team is conducting research in a number of areas. First, we're working with state-of-the-art batteries to develop ways of reducing the community's peak energy demand while enhancing power quality and reliability. We have also developed a software algorithm that stabilizes voltage to customers. Additionally, EPB is testing a variety of low cost sensors that we have deployed in some of EPB's substations. The goal is to identify the best devices and practices to help ensure our electric system is operating at peak reliability and efficiency. These sensors also give EPB the ability to identify potential equipment failures and security issues in real time.

# STRONG FINANCIAL RESULTS.

Both of EPB's divisions delivered strong financial results during the 2016-2017 Fiscal Year. EPB Electric Power performed better than budget and the prior year with a positive net change in position of \$7.4 million, which was \$1.9 million better than budget. The division's capital investment to build electrical infrastructure in support of new housing and business construction exceeded budget by \$3.7 million; however, since these capital expenditures are driven by strong, local economic growth, they will translate into higher revenues in future years.

EPB Fiber Optics continued to outperform budget driven by continuing net increases in new subscribers for fiber optic services. In fact, the total number of EPB Fiber Optics customers grew to 91,411 households and businesses, a 9% increase over last fiscal year. As a result, EPB Fiber Optics revenues grew by more than 11% to \$150.1 million, driving a change in net position of \$27.9 million for the fiscal year.

# HIGHLIGHTS OF FINANCIAL PERFORMANCE:

**STRONG DEBT MANAGEMENT:** EPB Fiber Optics is now debt-free. In addition, for the use of the fiber-to-the-home network, EPB Fiber Optics pays EPB Electric Power access fees and allocations that more than cover the cost of the electric system's capital debt service on an annual basis.

**LOWER POWER RATES:** Because EPB Fiber Optics pays such substantial allocations and access fees to EPB Electric Power, the electric system has been able to avoid a significant electric rate increase. As a result, all electric customers are enjoying lower electric rates regardless of whether they are EPB Fiber Optics customers or not.

**LARGEST LOCAL TAX PAYER:** EPB paid a combined total of \$19.4 million to local governments, making EPB the largest contributor to local tax coffers.

# EXHIBIT 39

## RESOLUTION NO. 40467

1 A RESOLUTION relating to surplus utility property; declaring surplus pursuant to  
2 RCW 35.94.040 certain utility-owned property, including certain inventory,  
3 equipment, and vehicles allocated to the Click! Network together with the  
4 Excess Capacity of the Tacoma Power HFC Network, part of which is the  
5 Click! Commercial Network.

6 WHEREAS, in the mid-1990s, the City of Tacoma, Department of Public  
7 Utilities, Light Division (d.b.a. "Tacoma Power") determined that the best option to  
8 address the shifting advance in telecommunications in the electric utility industry  
9 landscape was to construct a hybrid fiber coaxial ("HFC") telecommunications  
10 network ("HFC Network"), and

11 WHEREAS, on July 23, 1996, the City Council passed Ordinance No. 25930,  
12 approving Tacoma Power's proposal to establish and create the HFC Network as  
13 part of Tacoma Power's electric utility infrastructure, allowing Tacoma Power to,  
14 among other things, connect its generation, distribution, and transmission assets  
15 and support the eventual adoption of smart meters, and further, to use the excess  
16 capacity of the HFC Network to: (1) sell retail cable television service to Tacoma  
17 Power's electric customers, and (2) sell data transport and wholesale internet  
18 access services to Internet Service Providers ("ISPs") and others, and

19 WHEREAS the Public Utility Board ("PUB") adopted Amended Substitute  
20 Resolution No. U-9258, approving Tacoma Power's proposed business plan to  
21 develop a state-of-the-art HFC Network to support enhanced control, reliability, and  
22 efficiency for its electric system and to generate additional revenue through new  
23 business lines (i.e., wholesale internet, cable TV, etc.), and  
24  
25  
26

1 WHEREAS, pursuant to Substitute Resolution No. 33668, the City Council  
2 authorized Tacoma Power to construct, control, and operate the HFC Network, and  
3 approved the PUB business plan to develop a state-of-the-art HFC Network to,  
4 among other things, create revenue diversification to maximize the return on  
5 Tacoma Power's investment in the HFC Network by offering new business lines  
6 providing cable television and internet transport using the available (excess)  
7 capacity of the HFC Network, and

8 WHEREAS the City Council determined that the new business line of  
9 Tacoma Power would be subject to substantially the same franchise agreements as  
10 the City grants for other similar businesses, and that the City Council would remain  
11 involved in major policy decisions, and

12 WHEREAS, since its construction in the late 1990s, the HFC Network has  
13 connected Tacoma Power's distribution and transmission assets and enabled  
14 automated meter reading and billing, distribution automation, and remote turn  
15 on/turn off for electric customers, and

16 WHEREAS, in 2004, Tacoma Power also established a pilot project  
17 deploying as many as 18,000 Gateway Meters (Tacoma Power's name for its initial  
18 smart meters) that relay information from its electric customers to Tacoma Power  
19 headquarters via the HFC Network over coaxial cable connected to the customer  
20 premises which interconnects with the fiber network, and

21 WHEREAS, within four years following deployment of the Gateway Meters,  
22 Tacoma Power began experiencing substandard performance of the Gateway  
23 Meters, including meter failures wherein Tacoma Power was unable to  
24  
25  
26

1 communicate with the meter through the network, read failures wherein the  
2 controller in the meter was not able to read the meter, and remote disconnect  
3 failures, all resulting in communications errors, failures to measure electrical  
4 consumption, a failure rate of up to 100 meters per month, and increased costs to  
5 replace defective meters, perform repairs, troubleshoot errors, and collect meter  
6 data, and

7 WHEREAS, by the mid-to-late 2000s, the electric utility industry began to  
8 recognize that wireless technology would take the place of wired  
9 telecommunications systems with respect to smart meter applications, and  
10

11 WHEREAS, in 2019, as a result of the advances in the reliability and  
12 efficiency of interconnecting meters wirelessly with the HFC Network and the  
13 substandard and unreliable performance of the Gateway Meters, Tacoma Power  
14 terminated the Gateway Meter Program and ended service over the HFC Network  
15 for all Gateway Meters, and  
16

17 WHEREAS the PUB has authorized agreements providing for the installation  
18 and operation of licensed spectrum advance meters that will interconnect wirelessly  
19 to that portion of the HFC Network allocated to Tacoma Power, known and referred  
20 to as the Power Control & Operations Network ("PCON"), and  
21

22 WHEREAS the "Excess Capacity of the HFC Network" is generally  
23 comprised of: (i) coaxial cable, conduit housing only coaxial cable, conduit installed  
24 for service drops (whether or not currently housing coaxial cable), and coaxial cable  
25 service drops installed in the Click! Network service area; (ii) specific strands of  
26 fiber in the Tacoma Power fiber network that are not reserved for current and future

1 use by Tacoma Power for utility purposes, conduit housing such fiber along routes  
2 that do not include reserved utility fiber, and excess space in conduit housing such  
3 fiber and reserved utility fiber; and (iii) electronic equipment and related hardware  
4 installed in the HUB sites and in rights-of-way, all of which is described in more  
5 detail, and defined as the "Tacoma Power Commercial System", in the draft  
6 proposed Click! Business Transaction Agreement, attached hereto as Exhibit "B,"  
7 and

8 WHEREAS certain inventory, equipment, and vehicles allocated to  
9 Click! Network are described in Exhibit "A.1-3," attached hereto, all of which are  
10 collectively referred to as the "Click! Assets," and  
11

12 WHEREAS, in 1998, Click! Network, a trade name used by Tacoma Power,  
13 began operating as a cable service provider over excess capacity of the HFC  
14 Network providing primarily cable television and wholesale cable modem (internet  
15 access) services, and  
16

17 WHEREAS, since that time, technology and consumer demands have  
18 changed with consumers shifting from predominantly consuming cable  
19 programming services to predominantly consuming internet access services, and  
20

21 WHEREAS operational costs for the Click! Network have significantly  
22 increased since 1998 while the Click! Network business model has become  
23 outdated and unable to respond quickly or efficiently to changes in the market place  
24 or provide the capacity to make capital investments necessary to upgrade the  
25 network and compete with the private sector, and  
26

21  
22  
23  
24  
25  
26

WHEREAS, in response to these challenges, the PUB began to study alternative Click! Network business models and, after many years of study, the PUB, in collaboration with the City Council, retained the services of CTC Technology & Energy (“CTC”) to assist in this analysis, and

WHEREAS, at the January 23, 2018, Joint Study Session of the PUB and City Council, CTC presented its report examining which of the following five alternative business models would best meet 12 Click! Network policy goals later adopted by the PUB and City Council:

- Continue finding ways to reduce costs and streamline operations;
- Become a retail internet service provider (“ISP”) and potentially eliminate cable TV operations;
- Upgrade the Click! Network to fiber-to-the-premises in an effort to better compete with incumbents in the market;
- Cease internet and cable operations and abandon the related parts of the network;
- Seek a partner willing to take on operating and other obligations and costs while agreeing to conditions that would preserve Click!’s significant policy achievements, and

WHEREAS CTC reported that the 12 policy goals could best be met through a business model in which the City retained ownership of the entire HFC Network, including the Click! Network, with a third party providing Cable TV and/or internet access services and covering the capital and operating costs associated with providing those services, and

WHEREAS, under this model, Tacoma Power would no longer provide cable television or wholesale internet access services, and the third party would provide cable television, video, and internet access services directly to the public, and

1 WHEREAS the PUB, pursuant to its prior Resolution No. U-10988,  
2 expressed its determination that while the 1997 business plan achieved many of the  
3 functions envisioned for the HFC Network, the Excess Capacity of the HFC  
4 Network and the inventory, equipment, and vehicles allocated to Click! Network are  
5 not needed now or in the future by Tacoma Power for utility purposes, and thus, will  
6 not be updated or improved or utilized for utility purposes, and are excess to the  
7 needs of Tacoma Power, and that the current Click! Network business plan and the  
8 proposed all-in retail service business model will not generate sufficient revenues to  
9 fully fund operational expenses and the costs of capital improvements needed to  
10 maintain the Excess Capacity of the HFC Network as a state-of-the art Network,  
11 and  
12

13 WHEREAS, through PUB Resolution No. U-10988 and City Council  
14 Resolution No. 39930, the PUB and City Council rescinded their approval of the  
15 all-in retail service business model; adopted 12 policy goals to be maximized  
16 through the use and preservation of the Excess Capacity of the HFC Network; and  
17 directed the Public Utilities Director and City Manager to work collaboratively to  
18 develop a plan to seek information, proposals, or qualifications from interested  
19 parties to determine whether the 12 policy goals could be achieved through a  
20 collaboration and/or restructuring of Click! Network, and  
21  
22

23 WHEREAS, at the August 21, 2018, Joint Study Session of the PUB and  
24 City Council, CTC recommended that the PUB and City Council authorize  
25 negotiation of term sheets with Rainier Connect and Wave Broadband, and  
26

1 WHEREAS the City Council and PUB, after a presentation by CTC and  
2 review of proposals from third parties at the March 5, 2019, Joint Study Session of  
3 the PUB and City Council, directed the Public Utilities Director to execute a letter  
4 agreement with Rainier Connect to enter into good faith negotiation of agreements  
5 through which: (1) the City, through Tacoma Power, would retain ownership of all  
6 of the existing HFC Network; (2) the capital and operating costs of the Excess  
7 Capacity of the HFC Network would be borne by a third party; (3) Tacoma Power  
8 would no longer provide cable television or wholesale internet access or data  
9 transport services; and (4) Rainier Connect would use the Excess Capacity of the  
10 HFC Network to provide cable, video, and internet access services consistent with  
11 the 12 policy goals adopted by the City Council and PUB, and  
12

13 WHEREAS negotiations with Rainier Connect commenced in April 2019, and  
14 the Click! Business Transaction Agreement is now complete, and  
15

16 WHEREAS, on October 23, 2019, the PUB held a public hearing and took  
17 public testimony regarding the proposed surplus of the Click! Assets and the  
18 Excess Capacity of the HFC Network, and  
19

20 WHEREAS, on October 29, 2019, the City Council held a public hearing and  
21 took public testimony regarding the proposed surplus of the Click! Assets and the  
22 Excess Capacity of the HFC Network, and  
23

24 WHEREAS, on October 30, 2019, the PUB adopted Resolution  
25 No. U-11116, declaring the Click! Assets and the Excess Capacity of the HFC  
26 Network surplus to the needs of Tacoma Power and Tacoma Public Utilities and not  
required for continued public utility services, recommending that the City Council

1 declare the above-referenced property surplus to the needs of the City, and  
2 approving the Click! Business Transaction Agreement conditioned upon approval  
3 by the City Council, and

4 WHEREAS the consideration proposed to be paid by Rainier Connect for  
5 conveyance of the inventory, equipment, and vehicles described in Exhibit A.1 is  
6 \$294,742.98, as set forth in Exhibit A.1; the consideration to be paid by Rainier  
7 Connect for the inventory and equipment described in Exhibits A.2 and A.3 are the  
8 contractual obligations of Rainier Connect as set forth in substantially the form of  
9 Exhibit "B" (Click! Business Transaction Agreement), and the use of the Excess  
10 Capacity in the HFC Network is proposed to be granted to Rainer Connect in  
11 consideration for the obligations of Rainier Connect as set forth in Exhibit "B,"  
12 including, but not limited to, annual payments of \$2,500,000 for year one,  
13 \$2,625,000 for year two, \$2,750,000 for year three, \$2,875,000 for year four, and  
14 \$3,000,000 for year five, and for each year after year five, the annual payment will  
15 increase to reflect the Consumer Price Index Increase as described in Exhibit "B,"  
16 and  
17

18 and  
19 WHEREAS, although a declaration that an asset is surplus often proceeds a  
20 decision to sell an asset, there is no requirement that a surplus asset be sold,  
21 and the City does not intend to recommend or approve for sale the Excess Capacity  
22 in the HFC Network, but rather the City, through Tacoma Power, will retain  
23 ownership of the entire HFC Network inclusive of the Excess Capacity in the HFC  
24 Network to ensure that it has control over how the HFC Network is used through the  
25 proposed agreements and to ensure that the entire HFC Network meets all security  
26

requirements and can continue to meet the needs of Tacoma Power, Tacoma  
1 Water, and Tacoma Rail, and

2 WHEREAS, on October 30, 2019, the PUB considered and adopted PUB  
3 Resolution No. U-11116, declaring that the Click! Assets and the Excess Capacity  
4 of the HFC Network, as described therein, are surplus to the needs of Tacoma  
5 Power and Tacoma Public Utilities, and  
6

7 WHEREAS the City Council, having considered the foregoing, the public  
8 comments received during the public hearing of October 29, 2019, and prior public  
9 meetings of the City Council and PUB, and the City records and files related to the  
10 construction, installation, and operation of the Click! Network, and having been in all  
11 matters fully advised, finds that it is in the best interest of the public to declare  
12 surplus to the needs of Tacoma Power and the City the Click! Assets and Excess  
13 Capacity of the HFC Network; Now, Therefore,  
14

15 BE IT RESOLVED BY COUNCIL OF THE CITY OF TACOMA:  
16

17 Section 1. That the City Council does hereby find and concur with the  
18 Tacoma Public Utility Board's determination and declaration pursuant to PUB  
19 Resolution No. U-11116, that the Click! Assets and the Excess Capacity of the HFC  
20 Network, as described therein, are surplus to the needs of Tacoma Power and  
21 Tacoma Public Utilities.  
22

23 Section 2. That, consistent with RCW 35.94.040 and Section 4.6 of the City  
24 Charter, the City Council does hereby find and determine that the Click! Assets and  
25 Excess Capacity in the HFC Network, as described in the recitals above, are not  
26 required for, and are not essential to, continued public utility service or continued

## RESOLUTION NO. 40468

1 A RESOLUTION relating to Click! Network; authorizing execution of the Click!  
2 Business Transaction Agreement by and between Tacoma Power and  
3 Mashell, Inc., d/b/a Rainier Connect and Rainier Connect North LLC.

4 WHEREAS, in 1998, Click! Network, a trade name used by Tacoma Power,  
5 began operating as a cable service provider over excess capacity of the  
6 HFC Network, providing primarily cable television and wholesale cable modem  
7 (internet access) services, and

8 WHEREAS, since that time, technology and consumer demands have  
9 changed, with consumers shifting from predominantly consuming cable  
10 programming services to predominantly consuming internet access services, and  
11

12 WHEREAS operational costs for the Click! Network have significantly  
13 increased since 1998 while the Click! Network business model has become  
14 outdated and unable to respond quickly or efficiently to changes in the market  
15 place or provide the capacity to make capital investments necessary to upgrade  
16 the network and compete with the private sector, and  
17

18 WHEREAS, in response to these challenges, the Public Utility  
19 Board ("PUB") began to study alternative Click! Network business models and,  
20 after many years of study, the PUB, in collaboration with the City Council, retained  
21 the services of CTC Technology & Energy ("CTC") to assist in this analysis, and  
22

23 WHEREAS, at the January 23, 2018, Joint Study Session of the PUB and  
24 City Council, CTC presented its report examining which of the following five  
25 alternative business models would best meet 12 Click! Network policy goals later  
26 adopted by the PUB and City Council:

1  
2  
3  
4  
5  
6  
7  
8  
9  
10  
11  
12  
13  
14  
15  
16  
17  
18  
19  
20  
21  
22  
23  
24  
25  
26

- Continue finding ways to reduce costs and streamline operations;
- Become a retail internet service provider (“ISP”) and potentially eliminate cable TV operations;
- Upgrade the Click! Network to fiber-to-the-premises in an effort to better compete with incumbents in the market;
- Cease internet and cable operations and abandon the related parts of the network;
- Seek a partner willing to take on operating and other obligations and costs while agreeing to conditions that would preserve Click!’s significant policy achievements, and

WHEREAS CTC reported that the 12 policy goals could best be met through a business model in which the City retained ownership of the entire HFC Network, including the Click! Network, with a third party providing Cable TV and/or internet access services and covering the capital and operating costs associated with providing those services, and

WHEREAS, under this model, Tacoma Power would no longer provide cable television or wholesale internet access services, and the third party would provide cable television, video, and internet access services directly to the public, and

WHEREAS the PUB, pursuant to its prior Resolution No. U-10988, expressed its determination that while the 1997 business plan achieved many of the functions envisioned for the HFC Network, the Excess Capacity of the HFC Network and the inventory, equipment, and vehicles allocated to Click! Network are not needed now or in the future by Tacoma Power for utility purposes, and thus, will not be updated or improved or utilized for utility purposes, and are excess to the needs of Tacoma Power, and that the current Click! Network business plan and

1 the proposed all-in retail service business model will not generate sufficient  
2 revenues to fully fund operational expenses and the costs of capital improvements  
3 needed to maintain the Excess Capacity of the HFC Network as a state-of-the art  
4 Network, and

5 WHEREAS, through PUB Resolution No. U-10988 and City Council  
6 Resolution No. 39930, the PUB and the City Council rescinded their approval of  
7 the all-in retail service business model; adopted 12 policy goals to be maximized  
8 through the use and preservation of the Excess Capacity of the HFC Network; and  
9 directed the Public Utilities Director and City Manager to work collaboratively to  
10 develop a plan to seek information, proposals, or qualifications from interested  
11 parties to determine whether the 12 policy goals could be achieved through a  
12 collaboration and/or restructuring of Click! Network, and

14 WHEREAS, at the August 21, 2018, Joint Study Session of the PUB and  
15 City Council, CTC recommended that the PUB and City Council authorize  
16 negotiation of term sheets with Rainier Connect and Wave Broadband, and

18 WHEREAS the City Council and PUB, after a presentation by CTC and  
19 review of proposals from third parties at the March 5, 2019, Joint Study Session of  
20 the PUB and City Council, directed the Public Utilities Director to execute a letter  
21 agreement with Rainier Connect to enter into good faith negotiation of agreements  
22 through which: (1) the City, through Tacoma Power, would retain ownership of all  
23 of the existing HFC Network; (2) the capital and operating costs of the Excess  
24 Capacity of the HFC Network would be borne by a third party; (3) Tacoma Power  
25 would no longer provide cable television or wholesale internet access or data  
26

transport services; and (4) Rainier Connect would use the Excess Capacity of the  
1 HFC Network to provide cable, video, and internet access services consistent with  
2 the 12 policy goals adopted by the City Council and PUB, and

3           WHEREAS negotiations with Rainier Connect commenced in April 2019,  
4 and the Click! Business Transaction Agreement is now complete, and

5           WHEREAS, on October 30, 2019, the PUB adopted Resolution  
6 No. U-11116, declaring the Click! Assets and the Excess Capacity of the HFC  
7 Network surplus to the needs of Tacoma Power and Tacoma Public Utilities and  
8 not required for continued public utility services, recommending that the City  
9 Council declare the above-referenced property surplus to the needs of the City,  
10 and approving the Click! Business Transaction Agreement conditioned upon  
11 approval by the City Council and

12           WHEREAS the City Council, pursuant to Resolution No. 40467, declared  
13 the Excess Capacity of the HFC Network and the Click Assets, as those terms are  
14 defined therein, surplus to the needs of Tacoma Power, Tacoma Public Utilities,  
15 and the City, and no longer required for continued public utility service, and

16           WHEREAS, pursuant to TMC 1.06.273, the Tacoma Public Utilities Director  
17 has recommended that the City Council find that disposal of the Click! Assets and  
18 the Excess Capacity in the HFC Network as defined Resolution No. 40467 be  
19 conveyed and leased through a negotiated process with Rainier Connect pursuant  
20 to agreements in substantially the form of the Click! Business Transaction  
21 Agreement on file with the City Clerk, and

22  
23  
24  
25  
26

1 WHEREAS approval of the Click! Business Transaction Agreement will  
2 allow use of the excess capacity of the HFC Network and ownership of related  
3 inventory, equipment, and vehicles to be transferred to Rainier Connect and will,  
4 among other things, continue use of the Click! Network to provide cable, video, and  
5 broadband internet access to families and businesses in Tacoma; maintain  
6 ownership of the Click! Network; require private capital to be used to operate,  
7 maintain, and upgrade the network to one gigabit speeds in competition with other  
8 providers; ensure that such services are provided in an equitable manner with like  
9 services and prices throughout the City; and, provide for reduced-cost internet  
10 access under the federal lifeline subsidy and to households eligible for TPU's  
11 electric service low-income program, and  
12

13 WHEREAS the Click! Business Transaction Agreement further provides that  
14 Rainier Connect will make annual payments to Tacoma Power of \$2,500,000 for  
15 year one, \$2,625,000 for year two, \$2,750,000 for year three, \$2,875,000 for year  
16 four, and \$3,000,000 for year five, and for each year after year five, the annual  
17 payment will increase to reflect the Consumer Price Index Increase, and further  
18 provides that Rainier Connect will invest a minimum of \$1.5 million annually in the  
19 network, adjusted annually to reflect the Consumer Price Index Increase, and  
20

21 WHEREAS the City Council, having considered the foregoing, the public  
22 comments received during the public hearing of October 29, 2019, and prior public  
23 meetings of the City Council and PUB, and the City records and files related to the  
24 construction, installation, and operation of the Click! Network, and having been in  
25  
26

all matters fully advised, finds that it is in the best interest of the public to approve  
1 the Click! Business Transaction Agreement; Now, Therefore,

2 BE IT RESOLVED BY COUNCIL OF THE CITY OF TACOMA:

3 Section 1. That the City Council does hereby find and concur with the  
4 Tacoma Public Utility Board's determination and recommendation that the  
5 conveyance of the Click! Assets and the grant of an indefeasible right of use of the  
6 Excess Capacity of the HFC Network to Rainier Connect through a negotiated  
7 disposition pursuant to the terms and conditions of the Click! Business Transaction  
8 Agreement, in substantially the form on file on the office of the City Clerk, is in the  
9 best interests of Tacoma Power, Tacoma Public Utilities, and the City, and all  
10 applicable competitive bidding and selection requirements are hereby waived.  
11  
12

13 Section 2. That the appropriate City officials are authorized to execute the  
14 Click! Business Transaction Agreement, in substantially the form on file in the  
15 office of the City Clerk, and that upon a joint determination by the City Manager  
16 and Public Utilities Director that the conditions precedent to transfer of operational  
17 control of the Tacoma Power Commercial Network to Rainier Connect have been

## AUTHOR

**Richard E. Brown** is the Senior Vice President of Operations and co-founder of Quanta Technology, a firm specializing in technical and management consulting for utilities and utility-related industries. Dr. Brown has been on the leadership team of three successful startup organizations, and has provided consulting services to most major utilities in the United States and many around the world. He is a frequent instructor, has taught courses in eleven countries, and is an adjunct professor at North Carolina State University.

Dr. Brown has published more than 90 technical papers related to asset management and performance management, and is also author of the book *Electric Power Distribution Reliability*. In 2007, he was elected to the grade of Fellow by the Institute of Electrical and Electronics Engineers (IEEE), which is conferred by the IEEE Board of Directors for an extraordinary record of industry accomplishments.

Dr. Brown earned his BSEE, MSEE, and PhD degrees from the University of Washington in Seattle, and his MBA degree from the University of North Carolina at Chapel Hill. He is a registered professional engineer.

## **PREFACE**

This is a book for utility engineers. Typical readers will have studied engineering in college, received an engineering degree, and somehow ended up pursuing a career within a utility or taken a job associated with utilities. Academic credentials for most of these readers will include advanced mathematics, probability, statistics, chemistry, physics, and materials science. Most will have further specialized in a specific area such as electrical engineering, mechanical engineering, or civil engineering. These types of readers are well-educated and intelligent, an assumption made by the author when presenting material, sometimes difficult material, throughout the book.

Utilities have many challenging engineering problems to be solved. New customers must be served. Old equipment must be maintained. New technologies must be assessed and adopted. To solve these challenges, engineers find themselves responsible for planning, engineering, system analysis, system design, equipment specification, maintenance management, operations, and a host of other functions.

Whatever their role, utility engineers make many decisions. Some of these decisions result from extensive and careful analyses. Others are made quickly during everyday activities. In virtually all cases, decisions have cost

# 1

## UTILITIES

*Public utilities* provide essential services to society. Because of their importance, legal precedent has upheld the need for specialized government oversight of these businesses to ensure that safe and reliable utility services are widely available for rates that are reasonable and non-discriminatory.

The types of public utilities considered in this book require large investments in fixed infrastructure, typically extending to the premises of end-use customers. Examples of these *infrastructure utilities* include electric utilities, gas utilities, telephone utilities, water utilities, and wastewater utilities. Sometimes public transportation facilities are also considered public utilities (e.g., railroads, buses, subways), called *transportation utilities*. Much of this book is relevant to both infrastructure utilities and transportation utilities, but there are certain aspects of infrastructure utilities that require special consideration. Most people use the terms public utility and utility interchangeably. Therefore, unless otherwise stated, the remainder of this book uses the term *utility* to refer to a public utility that relies heavily on fixed infrastructure to provide an essential utility service.

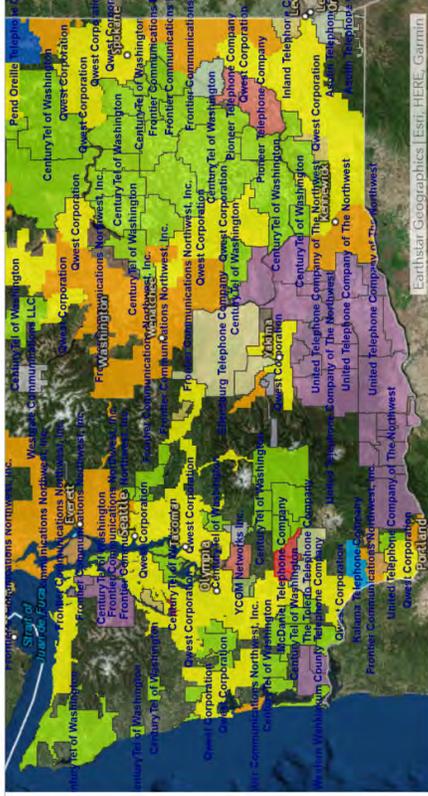

Many of the business topics in this book apply to all industries. However,

## Washington Utilities and Transportation Commission

### State investment

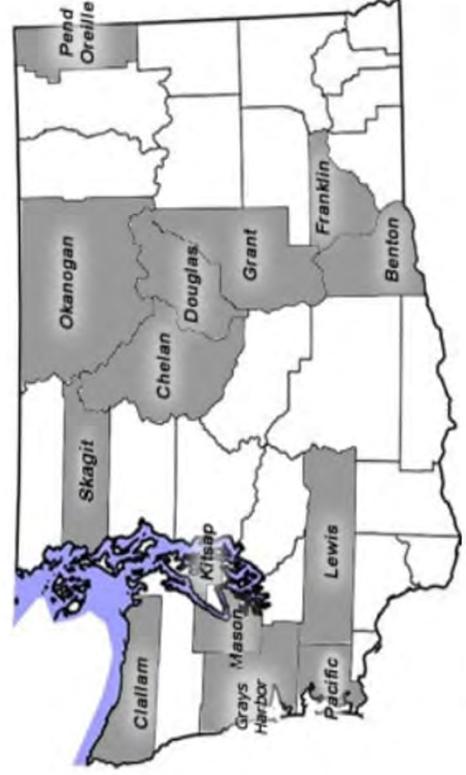

With the exception of CERB projects, the state of Washington's direct investments in broadband in the past five years have been confined to one-off projects using re-purposed funds, feasibility studies and services, as illustrated by this chart from the Department of Commerce.

### Local public utilities

Many of Washington's communities have established local customer-owned Public Utility Districts (PUD's) that offer a variety of utility services, sometimes including wholesale broadband infrastructure.

As of 2017, 14 PUD's were offering telecommunications services, with an aggregate infrastructure investment of \$509 million.

INVESTING IN WASHINGTON'S ECONOMIC FUTURE

## Community Economic Revitalization Board

1011 Plum Street SE • PO Box 42525 • Olympia, WA 98504-2525 • (360) 725-3151

I am pleased to introduce the 2018 Rural Broadband Legislative Report for the Washington State Community Economic Revitalization Board (CERB). This report highlights activities and outcomes from the 2018 calendar year.

In March 2018, the supplemental capital budget passed (ESSB 6095 H-5170.3). Section 1008 included the CERB Administered Rural Broadband Program. The proviso language included a \$10 million appropriation for fiscal year 2019.

The Rural Broadband Program has changed the conversation for many of our rural communities and Tribes. This program allows communities and Tribes to build and own the broadband infrastructure, and to collaborate with Independent Service Providers (ISPs) to provide retail service, which will allow more options for the end-user at a lower cost.

Since this program has changed the conversation, CERB has seen many communities come forward for planning projects for broadband. These planning projects are building a pipeline for future construction projects. Even more exciting, these conversations are bringing everyone to the table for collaboration: counties, cities, ports, PUDs, special purpose districts, Tribes, and ISPs.

Because this is a new program, the CERB Policy Committee and staff worked diligently designing policies, procedures, program materials, and conducting stakeholder outreach. The supplemental capital budget was passed on March 9, and CERB approved the program's policies, procedures, and materials on May 17. The accelerated timeline allowed staff to be out in the communities conducting workshops, attending speaking engagements, giving technical assistance, and educating communities and Tribes about the new Rural Broadband Program. Between May and June, staff spoke at 20 individual workshops and speaking engagements, reaching over 700 community members.

The first round of projects were awarded in September 2018 with far reaching impact:

- 3 Projects were awarded - \$2,816,649 CERB Investment
- The projects reached into 13 Communities
- 2,427 Connections are planned from the projects
- Cost per connection: \$1,161
- 100% Increase in Internet Speed
- Estimated increase from 6 to 17 ISPs

The Rural Broadband Program aligns with CERB's application and meeting date cycle. Applications are accepted on a first-come, first-served basis, and the Board meets every two months to review projects.

CERB members are committed Washington citizens and professionals with a passion for economic development. The investments that CERB has made, and the return on these investments, are a testament to this dedication. On behalf of CERB, I thank you for your continued support of this essential resource for growing Washington's economy.

Randy Hayden  
Community Economic Revitalization Board Chair

# Introduction to CERB

## COMMUNITY ECONOMIC REVITALIZATION BOARD

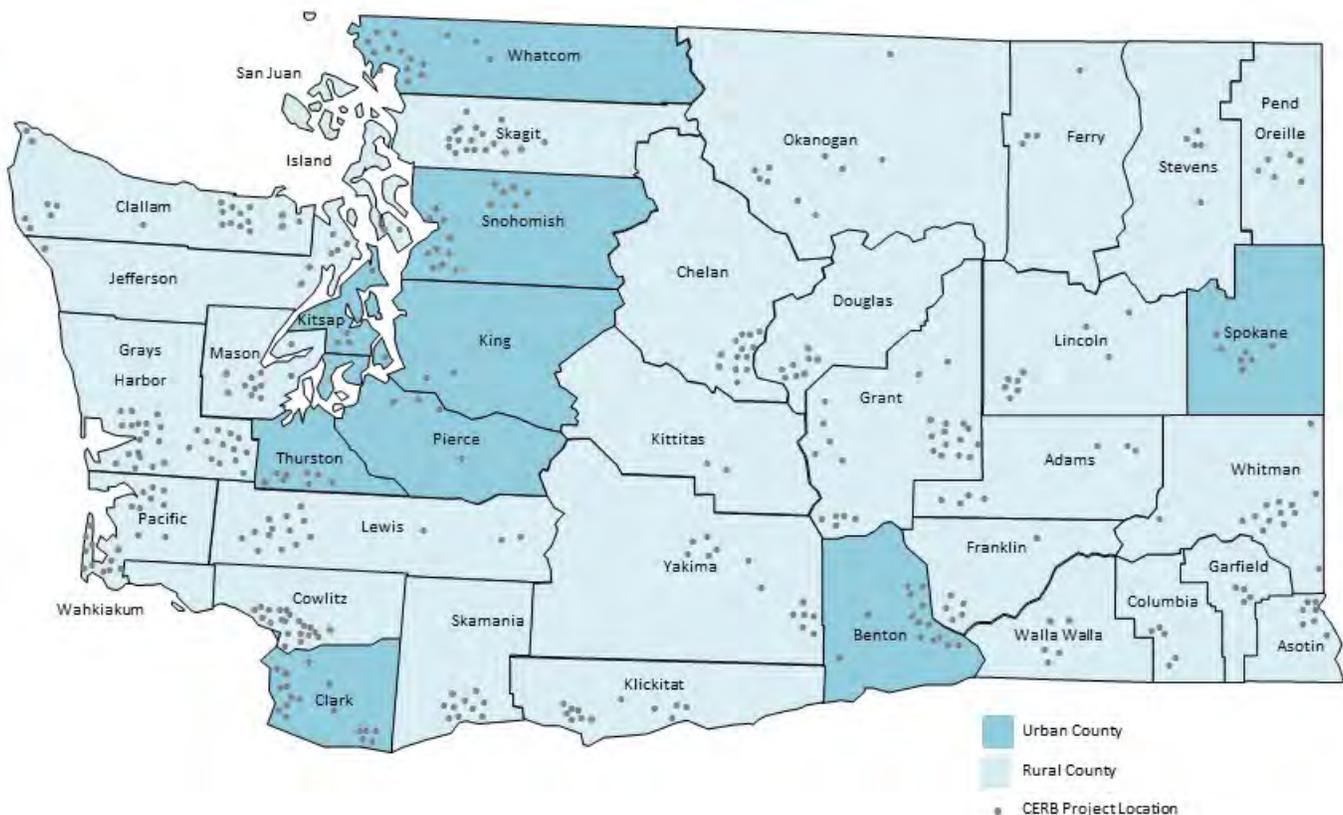

The Community Economic Revitalization Board (CERB) is a unique statewide economic development resource. CERB assistance is valued because it helps communities:

- Respond rapidly to immediate business siting and expansion needs
- Build feasible industrial sites for future business development
- Target expansions in manufacturing, food processing, assembly, warehousing, industrial distribution, advanced technology, and other key sectors
- Spur creation and retention of higher wage jobs

Since 1982, CERB has encouraged new development and expansion in areas where growth is desired. The Legislature created CERB to provide low-interest loans (and in unique circumstances, grants) to help finance the local public economic development infrastructure necessary to develop or retain stable business and industrial activity. These improvements include industrial water, general-purpose industrial buildings and port facilities, sanitary and storm sewers, industrial wastewater treatment facilities, railroad spurs, telecommunications, electricity, natural gas, roads, and bridges. CERB investments have been made in 37 counties since the program began.

The 20-member Board represents private and public sectors from across the state, as designated in statute. The Board sets policy and selects projects to receive CERB financing assistance. Administrative support to CERB is provided within the Local Government Division of the Department of Commerce. CERB's statutory authority is codified in Chapter 43.160 RCW.

### CERB Funded Projects in Washington State, 1982-2018

# Program Opportunities

## CERB Investment and Returns

CERB will track the following outcomes:

- Number of connections: households, businesses, and anchor institutions.
- Number of ISPs available for consumers.
- Internet speed being offered to consumers.

## Staff Assistance

CERB staff delivers program management, contract management, Board support, community and economic development for local projects, and works with applicants to develop and present projects for CERB review.

**Technical assistance**—Staff help each applicant identify project barriers, evaluate project feasibility, and develop funding and implementation strategies when the project is ready to proceed. Many times this involves convening a tech team with the applicant and other funders, to develop a project action plan.

**Project advocacy**—Staff prepare a comprehensive analysis of each project with recommendations to CERB. This analysis identifies the relative community and economic benefits of the project to the local community, the project dynamics, and areas of merit and/or controversy. The analysis of the project’s community and economic development goals and outcomes includes specific projections of the number of connections (households, businesses, and anchor institutions), speed service to the

end users, and number of ISPs available to the end user.

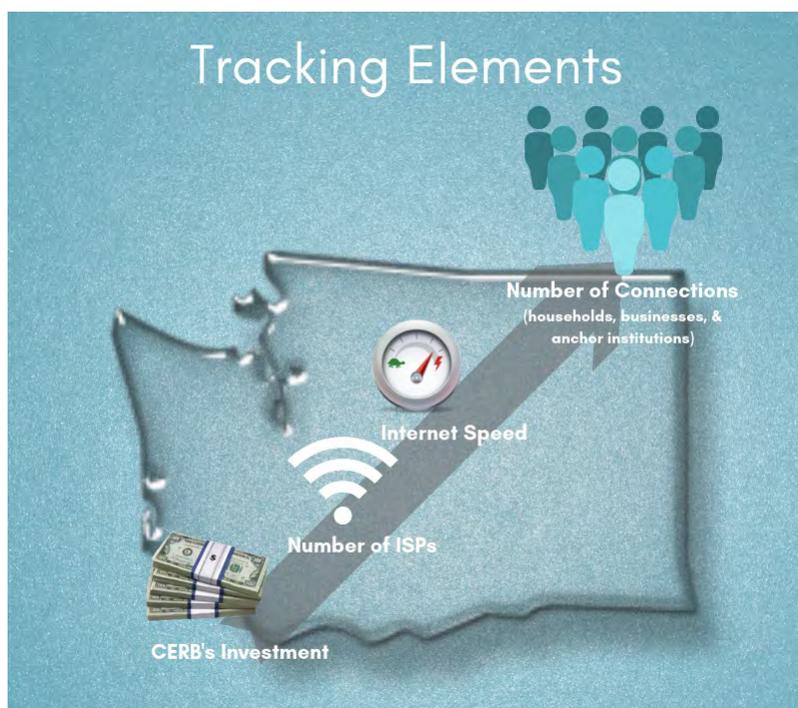

**Project monitoring**—Staff help local governments work out emergent problems during contract development and project implementation. Following construction of the public infrastructure project, project outcomes are tracked by CERB staff for five years. These outcomes include number of connections (households, businesses, and anchor institutions), speed service to the end users, and number of ISPs available to the end user. This tracking process links CERB investment to actual community and economic development outcomes.

## Key Successes

In March 2018, the Supplemental Capital Budget passed, which included the CERB Administered Rural Broadband Program. This proviso language included a \$10 million appropriation for FY 2019.

Timeline:

- **March - April:** CERB policy committee designed program policies, procedures, and program materials.
- **March - April:** Staff conducted Stakeholder Outreach Meetings (21 Entities)
- **May:** CERB approved the Rural Broadband Program policies, procedures, and program materials.
- **May 21:** 1st Rural Broadband application cycle opened.
- **May - June:** CERB staff held six rural broadband workshops across the state, and also took part in many speaking events to educate about the Rural Broadband Program.
- **July 16:** 1st due date for Rural Broadband applications.
- **September 20:** CERB approved three Rural Broadband construction projects - \$2.8 million.

## AMENDED RESOLUTION NO. U-10828

1 A RESOLUTION relating to Click! Network; authorizing Click! to prepare a  
2 business plan to provide, in addition to retail cable television, retail  
3 internet services including voice over data internet ("VoIP") protocol,  
4 commercial broadband and Gigabit service ("Retail Services").

5 WHEREAS the City Council of Tacoma authorized the Department of  
6 Public Utilities ("TPU"), Light Division (dba "Tacoma Power"), to implement and  
7 manage a broadband telecommunication system ("Click! Network" or "Click!" as  
8 authorized through City Council Substitute Resolution No. 33668, approved  
9 April 8, 1997, and Public Utility Board Amended Substitute Resolution U-9258  
10 approved April 9, 1997), and

11 WHEREAS Tacoma Power provided retail cable TV services to  
12 customers, wholesale internet to independent Internet Service Providers  
13 ("ISPs") who served retail customers and wholesale broadband service to  
14 business customers, and

15 WHEREAS the broadband telecommunication system is critical  
16 infrastructure for Tacoma Power, including the connection of substations,  
17 support of approximately 18,000 Gateway smart meters, as well as providing  
18 support for the City's I-net system, and

19 WHEREAS the City Charter Section 4.6 requires a vote of the people  
20 before the City may sell, lease, or dispose of any utility system, or parts thereof  
21 essential to continued effective utility service, and

22 WHEREAS the presence of Click! Cable TV in the marketplace provided  
23 savings for all cable TV customers, regardless of provider, in the Click! Market  
24  
25  
26

territory as compared to other Puget Sound market areas to an estimated average savings of \$10 million dollars a year, between 2004 and 2008, and

WHEREAS Click! services currently reaches 26.2% of the customers in the service territory with one or more of its services (Cable TV only, Internet only or Cable TV and Internet) according to Click! customer counts, and

WHEREAS 61% of those polled in May of 2015 said that it would be a good idea for Click! to provide internet service directly to customers, and

WHEREAS Click! infrastructure could provide Gigabit internet speeds to customers in the entire service territory with capital investment, and

WHEREAS customers' use of internet is increasing and use of Cable TV is decreasing, just as the cost for Cable TV is increasing significantly for the Click! network, and

WHEREAS Click!'s current business model creates future potential financial losses that may require the use of Tacoma Power ratepayer funds, and

WHEREAS the Public Utility Board has determined that the most reasonable path to meeting community objectives and financial sustainability is to pursue a business model where Click! offers additional retail products directly to its customers, including retail cable TV, Internet, voice over Internet (VoIP), and commercial broadband services ("All-In Retail model"); Now, therefore,

BE IT RESOLVED BY THE PUBLIC UTILITY BOARD OF THE CITY OF TACOMA:

- a. "Click! or Click! Network" shall mean the telecommunication section of the Light Division of the Department of Public Utilities for the City of Tacoma, as established and described in Public Utility Board Amended Substitute Board Resolution U-9258 and City Council Substitute Resolution No. 33668.
- b. "Tacoma Power" shall mean the Light Division (doing business as Tacoma Power), of the Department of Public Utilities, for the City of Tacoma, as established by the City of Tacoma Charter Section 4.10.
- c. "Tacoma Public Utilities" shall mean the Department of Public Utilities (doing business as TPU), for the City of Tacoma, as established by the City of Tacoma Charter Article 4.
- d. "Retail Services" shall mean cable television and retail internet services including voice over data internet protocol, retail and commercial broadband, Gigabit service and related and enhanced services offered to customers from time to time as new technologies and services become available.
- e. "Expenditures" shall mean capital (including debt service) and operations and maintenance ("O&M") expenses determined on a "cash flow" basis incurred by Click! after January 1, 2016. "Expenditures" shall not include, and Click! shall not be charged Click! past physical plant and capital related costs made by Tacoma Power on behalf of Click! prior to January 1, 2016.

Sec. 2. Click! shall work with consultants as appropriate to develop a detailed business, financial and marketing plan (the "Business Plan") to provide customers the Retail Services and other aspects of the Business Plan contemplated herein. The goal will be for Click! to present to the Public Utility Board and the City Council an initial detailed Business Plan on or near April 7<sup>th</sup>, 2016. The goal will be for the Public Utility Board and City Council to approve the initial detailed Business Plan within 60 days thereafter.

- a. The Business Plan shall include annual, biennial and longer term goals, benchmarks and measures of financial progress and success, including
  - i. building customer counts and increasing market penetration
  - ii. financial projection and benchmarks
  - iii. designing and implementing rates that support customers count goals while providing revenue to pay Expenditures

- iv. achievement of revenues that exceed Expenditures to the extent reasonably feasible
  - v. capital expenditure planning, including debt financing where appropriate
  - vi. charging just and proper proportions of the cost and expenses of other departments or offices of the City rendering service to Click!, as required under City Charter section 4.5.
- b. The Business Plan shall also include annual, biennial and longer term goals, benchmarks and measures of progress and success for non-financial achievement, including
- i. coordination with goals and strategic plans of TPU and the City of Tacoma
  - ii. promotion of market competition
  - iii. fostering and enhancing educational opportunity and economic activity in Tacoma and Pierce County
  - iv. ensuring just access to internet service regardless of economic condition, social barriers and physical challenges.
- c. The Business Plan will make adapting to changing market conditions and increased competition a priority, including necessary capital investments to improve technologies and stay competitive.
- d. The Business Plan will authorized, but not obligate, Click! to enter into negotiations for new contracts with internet services providers using its network on terms and conditions economically acceptable to Click! and consistent with the Business Plan, including authority to purchase the businesses of the existing private internet service providers using its network. Click! will be authorized to utilize the services of third-party business valuation consultants, acceptable to all parties, in connection with such negotiations.
- e. The Business Plan will include analysis and action plans for the structure of the Click! workforce, including the negotiation with the relevant labor organizations when necessary, to meet the requirements of the Business Plan.
- f. The Business Plan shall require a separate enterprise fund (subaccount) within the Tacoma Power fund to account for Click! revenues and Expenditures.
- g. Subject to the outcome of the legal analysis authorized under Sec. 4, from January 1, 2016, going forward if Expenditures made on behalf of

Click! by Tacoma Power exceed Click! revenues during any month, such "Excess Expenditures" shall constitute a loan or advance from Tacoma Power to Click!, which shall be reimbursed as follows:

- i. "Target Date" means December 31, 2021 or a date when the cumulative Excess Expenditures reach \$31.6 million, whichever occurs first.
- ii. Click! shall reimburse the loans or advances from revenue exceeding Expenditures as soon as possible.
- iii. If Click! revenue in excess of Expenditures is insufficient to reimburse loans or advances in full by the Target Date, Click! revenue shall be supplemented with City of Tacoma non-utility revenue that, together with Click! revenue, will be sufficient to provide full reimbursement of cumulative loans or advances accrued prior to the Target Date within ten (10) years of the Target Date.
- iv. The Utility Board and the City Council may, at any time, fulfill their obligation to reimburse the cumulative loans or advances by applying the proceeds from a transaction (license, lease, sale, etc.) transferring some or all of the City's telecommunications system business to a private third-party. The Business Plan shall require Public Utility Board and City Council approval of budgets, expenditures, rates, and charges necessary to implement the business plan contemplated herein as part of the regular Tacoma Power budgeting, contract, and rates approval processes.

h. The Business Plan shall require Public Utility Board and City Council approval of budgets, expenditures, rates, and charges necessary to implement the business plan contemplated herein as part of the regular Tacoma Power budgeting, contract, and rates approval processes.

i. The Business Plan shall provide quarterly and annual reports to the Public Utility Board and to the City Council to monitor Click!'s actual performance relative to the approved business plan. Such reports shall include financial gains and losses and the balance of the loan account described below.

Sec. 3. The Public Utility Board and the City Council shall, upon adoption of this Resolution, appoint a Click! Engagement Committee to provide oversight and assistance to Click! in the development and implementation of the Business Plan. The Click! Engagement Committee shall be comprised of two (2) Public Utility Board Members, two (2) City Council members, two (2) members of the public who have experience in the broadband industry, and one (1) Tacoma Power ratepayer at large appointed by the City Council. The Click! Engagement Committee shall meet to consult with Click! on a regularly

scheduled basis established by the Committee and Click!. The Public Utility Board and the City Council may consider delegating specific authority in the governance of Click! to the Click! Engagement Committee in the future as the Business Plan is further developed and implemented.

Sec. 4. Prior to implementing the Business Plan contemplated in this resolution, TPU and the City's Legal Department, shall seek a legal opinion or declaratory judgment in Pierce County Superior Court, to confirm that Tacoma Power may operate the City of Tacoma's telecommunications system in accordance with the business plan. The City's Legal Department shall include in its request for a legal opinion or declaratory judgment, those specific components of the business plan necessary to provide the Utility Board and the City Council comfort that they may fully implement the business plan reasonably without threat of disruption by legal challenge. TPU and the City's Legal Department are authorized to utilize the services of third-party legal advisors in connection with this activity.

Sec. 5. Click! shall review and resubmit rate adjustments budgeted and proposed by Click! and approved by the Public Utility Board (previously approved by Board Resolution U-10773 on April 22, 2015), that support the Business Plan and the City Council is requested to approve an ordinance amending Tacoma Municipal Code Chapter 12.13, to authorize said rate adjustments.

Sec. 6. A fiscal note is attached to and incorporated in this Resolution U-10828. The fiscal note estimates the Capital and O&M budget requirements and impacts in addition to the financial gains and losses anticipated over the next five (5) years, in connection with the Click! business plan contemplated herein.

Adopted 12-3-15

TACOMA PUBLIC UTILITIES  
 3628 South 35th Street  
 Tacoma, Washington 98409-3192

**To:** Chair and Members of the Public Utility Board  
**From:** William A. Gaines, Director of Utilities/CEO  
**Date:** November 25, 2015  
**Subject:** Financial Impact of Authorizing Click! to Provide Retail Internet Service Including Gigabit Internet Service, Voice over Internet Protocol Service and Commercial Broadband Service, and Approving a Five Year Business Plan

Background:

A variety of business models have been developed and presented to policymakers, including a base case or status quo model and prospective models for Click! offering retail internet and cable television services, Click! offering wholesale-only internet (no video) and Click! entering into a private use contract involving Tacoma Power/Click! facilities. The financial models considered both low and high growth assumptions. This report addresses the fiscal impact of authorizing Click! to provide retail Internet service including Gigabit Internet service, Voice over Internet Protocol Service and Commercial Broadband Service ("All-In Retail with Gigabit model") along with cable television services. The All-In Retail with Gigabit model anticipates a loss of 1,916 Cable customers under the low growth option and a gain of 1,152 Cable customers under the high growth option in five years. It also anticipates a gain of between 6,412 and 12,124 Internet customers, and a gain of between 5,168 and 7,563 Voice over Internet Protocol customers, low and high respectively. Table 1 below shows the financial metrics of the All-In Retail with Gigabit option.

Table 1

	All-In Retail w/Gigabit Low Option	All-In Retail w/Gigabit High Option
Revenue	\$181.4	\$207.1
O&M Expenditures	\$185.3	\$206.3
Capital Investment	\$27.7	\$28.8
Cumulative Cash Flow	(\$31.6)	(\$28.0)

Fiscal Impact:

The impact of pursuing the All-In Retail with Gigabit option is that the City will incur deficit spending in the range of \$28 million to \$31.6 million over the five-year business plan period, as shown in Table 1. However, as noted in Table 2 below, the Retail All-In with Gigabit model begins to produce positive cash flow in Year 8 under the high growth option.

Table 2

	LOW OPTION		HIGH OPTION	
	Cash Flow	Cumulative Cash Flow	Cash Flow	Cumulative Cash Flow
2016	(\$13,375,861)	(\$13,375,861)	(\$14,141,034)	(\$14,141,034)
2017	(4,894,538)	(18,270,399)	(4,728,564)	(18,869,598)
2018	(5,064,295)	(23,334,693)	(4,541,133)	(23,410,731)
2019	(4,430,859)	(27,765,552)	(2,866,053)	(26,276,783)
2020	(3,829,670)	(31,595,222)	(1,750,548)	(28,027,331)
2021	(3,482,159)	(35,077,381)	(945,919)	(28,973,250)
2022	(3,832,725)	(38,910,106)	(608,528)	(29,581,779)
2023	(3,114,794)	(42,024,900)	480,572	(29,101,207)
2024	(2,877,105)	(44,902,005)	1,146,032	(27,955,175)

## AMENDED RESOLUTION NO. U-10879

1 A RESOLUTION relating to Click! Network; approval of an All-In business and  
2 Tacoma Power funding plan to provide retail telecommunication  
3 services.

4 #1. WHEREAS the City Council of Tacoma delegated authority to the  
5 Public Utility Board and the Department of Public Utilities ("TPU"), Light Division  
6 (dba "Tacoma Power"), to implement and manage a broadband  
7 telecommunications system ("Click! Network" or "Click!", as authorized through  
8 City Council Substitute Resolution No. 33668, approved April 8, 1997, and  
9 Public Utility Board Amended Substitute Resolution U-9258, approved April 9,  
10 1997), and

11 #2. WHEREAS the 1997 business plan contemplated that the revenues  
12 associated with telecommunications services related to city government  
13 communications, cabletelevision ("CATV") service, transport of signals to  
14 service providers offering telecommunications services, and internet access  
15 services would pay for the costs of such services and would provide an  
16 additional revenue stream to Tacoma Power to help offset the construction and  
17 operations costs associated with the telecommunications system, and

18 #3. WHEREAS many of the functions of the telecommunications system  
19 envisioned in the 1997 business plan have been achieved in their entirety since  
20 the infrastructure improvements were completed in 1999 including: conventional  
21 substation communication functions, distribution automation, city government  
22 communications functions, CATV service, and transport of signals for service  
23 providers offering telecommunications services (the last three functions are  
24 "Click!") and internet access services (through third-party providers), and  
25  
26

#4. WHEREAS other contemplated functions have been partially achieved for certain electric customers through the Gateway meter program, which include: remote turn on/off for electric customers, automated meter reading (electric), and provision of information to customers that is relevant to their energy purchasing decisions, and

#5. WHEREAS the customers of the fully implemented uses of the telecommunications system (city government communications functions ("I-Net"), CATV service, and transport of signals for service providers offering telecommunications services) have shared in part of the capital costs of constructing the telecommunications system as well as the operation and maintenance of the infrastructure to the benefit of electric customers who would have paid 100% of these costs, and

#6. WHEREAS the telecommunications system continues to provide interconnectivity, advanced control, and power management between electrical substations, which provide safe, reliable, and efficient use of electrical resources for the benefit of all Tacoma Power customers, and

#7. WHEREAS the existing business plan and current cost allocations for Click! functions do not generate sufficient revenues to fund current expenses and capital improvement costs related to these functions, and

#8. WHEREAS, on an ongoing basis, Tacoma Power will continue to use portions of the telecommunications system for conventional substation and other communications, distribution automation, etc., and

1 #9. WHEREAS, for a period of time, portions of the telecommunications  
2 system will continue to be utilized by Tacoma Power to support the Gateway  
3 meter program, which serves over 15,000 Tacoma Power customers, and

4 #10. WHEREAS future advanced meter infrastructure may use portions  
5 of the fiber network facilities of the telecommunications system and may, in  
6 part, rely on the hybrid fiber-coaxial ("HFC") infrastructure to fully implement the  
7 remaining functions described in the 1997 business plan, and that if and when  
8 such future uses occur, Tacoma Power should pay a share of the costs of the  
9 telecommunications system related to such uses, and

10 #11. WHEREAS, following a nine-month review by the Click!  
11 Engagement Committee (a committee comprised of representatives of the City,  
12 TPU, and citizens appointed by the City), the Engagement Committee  
13 described the community benefits of an enhanced Click! telecommunications  
14 system and an outline of the features of such a system, and

15 #12. WHEREAS Tacoma Power has determined, in part as a result of  
16 the Click! Engagement Committee work, that to increase revenues, Click!'s  
17 retail products must be enhanced to include retail internet services and voice-  
18 over internet phone services that can be bundled with the current CATV  
19 services (Click! would continue offering wholesale data transport services and  
20 city governmental communications functions), and

21 #13. WHEREAS the studies by the Click! Engagement Committee and  
22 Tacoma Power's financial analysis demonstrate that continuing to provide  
23 CATV services in support of retail internet services makes the sale of such  
24  
25  
26

1 services a more competitive overall product and improves the financial  
2 sustainability of Click!, with estimations that Click! customers cover over 90% of  
3 the cost of service, and

4 #14. WHEREAS the studies of the Click! Engagement Committee,  
5 Tacoma Power's financial analysis, and industry experts conclude that high-  
6 speed internet access of 1 gigabit will be the standard for the next generation.  
7 Click! needs to make capital improvements to the current telecommunications  
8 system infrastructure to achieve these or greater speeds and to keep the  
9 competitiveness of Click! internet services in the community, and  
10

11 #15. WHEREAS all financial models studied by the Click! Engagement  
12 Committee and Tacoma Power nonetheless show that the market price that can  
13 be charged for these enhanced Click! services and the market penetration that  
14 can be achieved will be insufficient to cover all of the costs associated with the  
15 operations and maintenance of the telecommunications system and the capital  
16 improvements necessary to update the HFC to allow for 1 gigabit service, and  
17

18 #16. WHEREAS the internet-related uses of the current Click!  
19 telecommunications system and an enhanced Click! telecommunications  
20 system would provide Tacoma Power customers benefits by giving them  
21 access to advanced customer services options such as: power use monitoring,  
22 outage reporting, scheduling of services, bill paying, and electrical appliance  
23 control, and  
24

25 #17. WHEREAS, in planning for an uncertain and unknown future, there  
26 may be other potential functions related to the supplying of electricity to

1 customers not considered in the existing business plan that might also make  
2 use of the telecommunications system infrastructure including: cyber security,  
3 electric car charger locations and metering, and enhanced customer information  
4 products (power usage by time of day, behavior-based saving programs,  
5 outage communications, energy audits, and participation in Evergreen Options),  
6 and  
7

8 #18. WHEREAS the Board has a duty to ensure that Tacoma Power  
9 ratepayers pay in their power rates only those costs that are directly and  
10 reasonably related to the provision of electric service, and  
11

12 #19. WHEREAS the Board has a duty to ensure that Tacoma Power and  
13 Click! are in compliance with legal and statutory requirements, and  
14

15 #20. WHEREAS Tacoma Power has excess power generation capacity  
16 within its service territory. In the past, Tacoma Power has benefited greatly by  
17 selling this excess capacity in the wholesale power markets to the benefit of all  
18 retail electric customers. Over the past few years, wholesale power prices and  
19 sales have dropped substantially. In support of Tacoma Power's strategic  
20 business plan, Tacoma Power wants to make up this lost revenue by looking at  
21 ways to increase its retail power sales through economic growth in the  
22 community. Communities across the nation have benefited economically from  
23 competitive access to internet services in their communities. Tacoma Power's  
24 continued operation and maintenance of the telecommunications system for  
25 internet access purposes assists in making the internet services competitive in  
26

1 Tacoma Power's service area, which increases economic growth that leads to  
2 greater retail power sales, and

3 #21. WHEREAS, in order to preserve the functionality and value of the  
4 telecommunications system for the benefit of Power customers, the Board has  
5 determined there should be a supplemental level of funding from Power to the  
6 telecommunications system based on direct services reasonably related to the  
7 provision of electric services as enumerated herein, and

9 #22. WHEREAS the Board nonetheless finds it wasteful and  
10 unproductive to abandon or leave unutilized the HFC components, which are  
11 currently used to provide Click! functions (including CATV and internet access  
12 services) and, in order to preserve the functionality and value of the Click!  
13 telecommunications system, the Board determines it prudent to provide a  
14 supplemental level of funding from Tacoma Power to the telecommunications  
15 system for a limited period of time until a stable source of funding from an  
16 alternate source can be secured, and

18 #23. WHEREAS the Board has determined that along with enhanced  
19 product offerings, the new business plan should also grant Click! management  
20 flexibility to change product offerings, prices, and marketing strategies,  
21 excluding the leasing of the entire network, without prior Board or Council  
22 approval so as to effectively compete with private companies offering similar  
23 products and services, and

#24. WHEREAS the Board finds it to be in the best interests of its electric customers and the citizens of Tacoma that a new business plan be approved for Click! functions; Now, therefore,

BE IT RESOLVED BY THE PUBLIC UTILITY BOARD OF THE CITY OF TACOMA:

Sec. 1. Click!'s proposed high-level "All-In" business plan (the "Business Plan"), attached as Exhibit A to this resolution, is approved.

Sec. 2. The Clerk of the Board is directed to forward this Resolution and the Business Plan to the City Council for immediate consideration. The Board requests, due to budget timing constraints, that the City Council make its decision in a timely manner. Upon approval of the Business Plan, funding, and other provisions of this resolution by Council, TPU staff is directed to complete the more detailed aspects of the Business Plan and then implement that plan.

Sec. 3. TPU's request that Click! management be delegated authority to make changes to products and service offerings, prices (within the limitations set forth in the Click! rates/charges ordinance approved by the Board and Council), and marketing strategies contained within the Business Plan without further approval by the Board and City Council is approved, and the Council is requested to concur in such approval. All significant material changes to the Business Plan that would remove TPU as the primary operator of Click! including, but not limited to, the sale or lease of telecommunications system equipment or capacity, outsourcing of work, permanent discontinuance of products or services, etc. shall be brought to the Board and City Council for approval. Such delegation includes approval of contracts allowing third parties to use surplus portions of the network to supply services to their customers so long as such use does not materially interfere with Click!'s operations of the network or Click!'s ability to implement its Business Plan and achieve its goals and objectives. Click! shall continue to bring contracts for the purchase of goods, services, and materials in excess of \$200,000 to the Board for approval.

Sec. 4. Tacoma Power's request to transfer an annual amount to the Click! fund from Tacoma Power electric revenues, to appropriately compensate Power's past, current and future beneficial uses of the telecommunications system infrastructure, which shall be used to pay Click! operating, maintenance, taxes, capital costs and debt, is approved. Tacoma Power's transfer from electric revenues under this Section 4 shall be a minimum of \$6 Million annually, and in the event Click!'s costs exceed \$6 Million for the year, Tacoma Power is approved to transfer additional funds not to exceed \$10 Million per year. Click! may use these transferred funds to make capital improvements and

1 purchase equipment as necessary to meet the objectives of the All-In Business  
2 plan.

3 Sec. 5. Staff will present, not less than annually, to the Board and  
4 Council on Click!'s status relative to its business plan objectives and any  
5 changes made to the business plan and business outlook for Click!. In 2020  
6 and 2025, staff will prepare a report to the Board and Council detailing business  
7 plan objective achievements and financial status of Click! to determine any  
8 adjustments in future funding. Staff reports will describe the past, current, and  
9 future expected use of the telecommunications network by Tacoma Power.

10 Sec. 6. The Board directs staff to identify business efficiencies and  
11 savings that can be made through staff reorganization, looking at both  
12 represented and non-represented positions. Staff will negotiate with appropriate  
13 union representatives to collaboratively identify opportunities for efficiencies and  
14 savings.

## Click! All-In Compete Business Plan

---

### Key Business Plan Elements:

- Click! is expected to provide retail cable modem internet, voice over internet protocol, commercial broadband services, and other advanced telecommunications services in addition to retail cable television service to residential and commercial customers.
- Click! is expected to provide bundled service of cable television, internet and phone services.
- The Click! network is expected to continue operating as an Open Access Network.
- Click! is expected to maintain its existing wholesale relationships with the Internet Service Providers (ISP), including Rainier Connect, Net-Venture and Advanced Stream. No buy out of the ISPs' businesses is assumed. Wholesale internet pricing offered to ISPs will need to be addressed.
- Click! is expected to maintain its existing wholesale relationships with the Master Service Agreement (MSA) holders, including Rainier Connect, Optic Fusion, twtelecom, Integra, CenturyLink, Spectrum Networks and Noel Communications. No buyout of the MSAs' businesses is assumed. Wholesale broadband pricing offered to ISPs will need to be addressed.
- Click! is expected to remain a unit of Tacoma Power within Tacoma Public Utilities and be governed by the Tacoma Public Utilities Board. More independent and flexible governance is a key element of the plan.
- Tacoma Power is expected to pay 6% of the total O&M costs as its proportionate share for utilizing the telecommunications network. Tacoma Power's proportionate share of O&M costs may change over time as its use of the telecommunications network changes.
- Click! is expected to upgrade its hybrid fiber coaxial (HFC) network to 1 Gigahertz, deploy DOCSIS 3.1 technology, and, over time, build new plant extension with fiber-to-the-home (FTTH) technology.
- Click! is expected to offer Gigabit and multi-Gigabit service to residential customers.
- Click! is expected to continue offering Gigabit and multi-Gigabit Metro Ethernet services to commercial customers.
- Click! is expected to continue maintaining and supporting the City's Institutional Network (I-Net).
- Click! is expected to offer discounted residential Cable TV and Phone services to payment challenged customers based on existing Federal poverty guidelines (up to 100% of the income threshold) that have been adopted by Tacoma Public Utilities.
- Click! is expected to offer a \$14.95 internet service for qualified low income customers, of which \$9.25 of the charge is expected to be covered by the new Federal Lifeline program leaving a customer out-of-pocket cost of \$5.70 per month.
- Click! is expected to achieve labor cost and operating savings by negotiating work rule changes, providing employee training and contracting out new and certain existing functions.
- Click! is expected to conduct door-to-door Sales Burst campaigns during the first and third years of the new business plan period, which are expected to generate between 4,000 and 6,000 new customers.

## Click! All-In Compete Business Plan

### Financial and Customer Summary (Low/High Growth):

Base - Assumptions		Year 2 - 2017	Year 5 - 2020	Year 10 - 2025
Homes Passed		113,950	113,950	113,950
# of Retail Internet Customers	L	10,416	26,215	31,379
	H	10,750	28,919	35,713
# of Wholesale Internet Customers	L	17,333	5,695	3,754
	H	17,333	4,556	3,003
Internet Market share	L	24.4%	28.0%	30.8%
	H	24.6%	29.4%	34.0%
# of Phone Customers	L	1,800	4,566	5,399
	H	2,173	6,058	7,557
Phone Market share	L	1.6%	4.0%	4.7%
	H	1.9%	5.3%	6.6%
# of Cable Customers	L	19,035	18,544	13,831
	H	19,185	19,378	15,136
Cable Market share	L	16.7%	16.3%	12.1%
	H	16.8%	17.0%	13.3%
# of employees	L	89	101	104
	H	91	106	110
Cumulative Capital investment	L	\$16.0M	\$29.5M	\$49.3M
	H	\$16.1M	\$30.0M	\$50.2M
Annual Cash Flow/Subsidy	L	(\$19.5M)	(\$4.9M)	(\$5.7M)
	H	(\$19.6M)	(\$4.4M)	(\$4.2M)
Cumulative Cash Flow	L	(\$19.5M)	(\$39.5M)	(\$65.6M)
	H	(\$19.6M)	(\$38.6M)	(\$58.7M)
NPV	LH	(\$19.5M)	(\$36.6M)	(\$56.5M)
		(\$19.6M)	(\$35.9M)	(\$51.2M)

- It is anticipated that Click! will continue to operate in a deficit situation for the foreseeable future.
- The viability of this business plan is contingent upon securing external funding.

# EXHIBIT 44

## Voice over Internet Protocol (VoIP)

Voice over Internet Protocol (VoIP) is a technology for communicating using "Internet protocol" instead of traditional analog systems. Some VoIP services need only a regular phone connection, while others allow you to make telephone calls using an Internet connection instead. Some VoIP services may allow you only to call other people using the same service, but others may allow you to call any telephone number - including local, long distance, wireless and international numbers.

### How VoIP works

VoIP converts the voice signal from your telephone into a digital signal that can travel over the Internet. If you are calling a regular telephone number, the signal is then converted back at the other end. VoIP calls can be made from a computer, a special VoIP phone, a traditional phone with or without an adapter, or using a wireless phone, depending on the type of VoIP service you subscribe to.

Here is one example of how VoIP service works:

### What equipment do I need?

Depending on the VoIP service you purchase, you may need a computer, a special VoIP telephone or a regular telephone with an adapter. If you are calling a regular telephone number, the person you are calling does not need any special equipment: just a telephone.

### Are there special considerations for using VoIP?

If you're considering replacing your traditional telephone service with VoIP, be aware that:

- Some VoIP service providers may have limitations to their 911 service. For more information on VoIP and 911 services, see the FCC's guide at [www.fcc.gov/guides/voip-and-911-service](http://www.fcc.gov/guides/voip-and-911-service).
- Some VoIP services don't work during power outages and the service provider may not offer backup power.
- VoIP providers may or may not offer directory assistance/white page listings.

Always check with potential VoIP service providers to confirm any limitations to their service, including 911 service.

## With VoIP, is there a difference between making a local and a long distance call?

Some VoIP providers do not charge for calls to other subscribers to the service. Some VoIP providers charge for a long distance call to a number outside your calling area. Other VoIP providers permit you to call anywhere at a flat rate for a fixed number of minutes. Your VoIP provider may permit you to select an area code for your VoIP service that is different from the area code in which you live.

## How does the FCC regulate VoIP?

- **911 Services:** Providers of "interconnected" VoIP services – which allow users generally to make calls to and receive calls from the regular telephone network – do have 911 service obligations; however, 911 calls using VoIP are handled differently than 911 calls using your regular telephone service.
- **Portability:** The FCC requires interconnected VoIP providers and telephone companies to comply with Local Number Portability (LNP) rules. (See our guide on Portability [www.fcc.gov/consumers/guides/porting-keeping-your-phone-number-when-you-change-providers](http://www.fcc.gov/consumers/guides/porting-keeping-your-phone-number-when-you-change-providers)).
- **Calling Records:** The FCC limits interconnected VoIP providers' use of customer proprietary network information such as your telephone calling records, and requires interconnected VoIP providers to protect it from disclosure.
- **Universal Service:** The FCC requires interconnected VoIP providers to contribute to the Universal Service Fund, which supports communications services in high-cost areas and for income-eligible telephone subscribers.
- **Accessibility:** Interconnected VoIP providers must contribute to the Telecommunications Relay Services Fund used to support the provision of telecommunications services to persons with speech or hearing disabilities and offer 711 abbreviated dialing for access to relay services. Providers and equipment manufacturers also must ensure their services are available to and usable by individuals with disabilities, if such access is achievable. (See our guide about TRS [www.fcc.gov/consumers/guides/telecommunications-relay-service-trs](http://www.fcc.gov/consumers/guides/telecommunications-relay-service-trs).)

## Filing a complaint

If you have concerns about an interconnected VoIP provider's handling of your 911 calls or telephone calling records, making services available to and usable by individuals with disabilities, or porting your telephone number, first try to resolve the matter with your service provider. If you can't resolve the matter directly, you have multiple options for filing a complaint with the FCC:

- File a complaint online at <https://consumercomplaints.fcc.gov>
- By phone: 1-888-CALL-FCC (1-888-225-5322); TTY: 1-888-TELL-FCC (1-888-835-5322) ; ASL: 1-844-432-2275
- By mail (please include your name, address, contact information and as much detail about your complaint as possible):

## Lifeline Support for Affordable Communications

Lifeline is the FCC's program to help make communications services more affordable for low-income consumers. Lifeline provides subscribers a discount on monthly telephone service, broadband Internet access service, or voice-broadband bundled service purchased from participating providers.

### How Lifeline Works

Lifeline typically provides up to a \$9.25 monthly discount on service for eligible low-income subscribers. Subscribers may receive a Lifeline discount on either a wireline or a wireless service, but they may not receive a discount on both services at the same time. Lifeline also supports broadband Internet access service and broadband-voice bundles. FCC rules prohibit more than one Lifeline service per household.

Lifeline is available to eligible low-income consumers in every state, commonwealth, territory, and on Tribal lands. The Lifeline program is administered by the Universal Service Administrative Company (USAC). USAC is responsible for data collection and maintenance, support calculation, disbursements, and assisting consumers with Lifeline eligibility and enrollment for the program. USAC's website (<https://www.usac.org/lifeline/>) provides additional information regarding the program, including program requirements.

To participate in the Lifeline program, consumers must either have an income that is at or below 135% of the Federal Poverty Guidelines (<https://aspe.hhs.gov/poverty-guidelines>) or participate in certain federal assistance programs, such as the Supplemental Nutrition Assistance Program or Medicaid. You can see if you are eligible by reviewing the information available at [lifelinesupport.org](http://lifelinesupport.org) (see "Do I Qualify?").

### National Verifier for Lifeline Eligibility

To apply for Lifeline, a consumer must use the National Verifier application system at: <https://www.checklifeline.org/lifeline>. The National Verifier is a centralized system established by the FCC and operated by USAC that verifies Lifeline applicants' eligibility and recertifies subscriber eligibility annually.

There are some states that may not use the National Verifier yet. You can check whether your state is already active here: <https://www.usac.org/lifeline/eligibility/national-verifier/>. If you are in a state that does not use the National Verifier or if you would like a service provider to assist you when you apply, you can use the "Companies Near Me" tool at <https://data.usac.org/publicreports/CompaniesNearMe/Download/Report> to locate a Lifeline program service provider near you.

### Program Rules

Key rules include the following:

- Lifeline is available only to subscribers whose eligibility can be verified by checking a program eligibility database or by submitting documentation demonstrating their eligibility.
- Only one Lifeline benefit is permitted per household. Federal rules prohibit subscribers from receiving more than one Lifeline service. If a subscriber or his or her household currently has more than one Lifeline-discounted service, they must de-enroll from other Lifeline services immediately or be subject to penalties.
- Only low-income subscribers who have been found to be eligible are qualified to enroll.
- Subscribers must recertify their eligibility every year and should respond to any requests from the National Verifier's or state Lifeline administrator to recertify eligibility. Subscribers who fail to recertify their eligibility will be de-enrolled from the Lifeline program.

## Enhanced Lifeline Benefits for Tribal lands

Because telephone subscribership levels on Tribal lands are the lowest in the country, enhanced Lifeline benefits are available to low-income residents of Tribal lands. You can find out more about which areas are eligible Tribal lands by visiting this site: <https://www.lifelinesupport.org/additional-support-for-tribal-lands/>.

Link Up, another federal benefit program, reduces the initial installation or activation fees of certain Lifeline providers offering telephone service on Tribal lands.

### What benefits are available through the Lifeline program's support for Tribal lands?

For low-income consumers living on Tribal lands, Lifeline provides a monthly discount of up to \$34.25 off the cost of telephone service, broadband Internet access service, or bundled services (either wireline or wireless). This discount consists of up to \$9.25 (which is available to all eligible low-income subscribers across the United States) plus up to an additional \$25 in enhanced support (which is available only to eligible low-income subscribers living on Tribal lands). This discount may also vary from state to state, depending on whether the state has its own Lifeline program.

Tribal Lands Link Up provides qualified subscribers living on Tribal lands with a one-time discount of up to \$100 on the initial installation or activation of telephone service at their primary residence. Tribal Lands Link Up also enables subscribers to pay the remaining amount that they owe on a deferred schedule, interest-free. Qualifying subscribers may be eligible for Link Up again only after moving to a new primary residence. Tribal Link Up support is only offered to carriers who are building out infrastructure on Tribal lands, so not all carriers may be discounting their activation fee.

### What limitations are there on Lifeline and Link Up?

Federal rules prohibit qualifying low-income consumers from receiving more than one Lifeline service at the same time. For instance, low-income subscribers who qualify may receive a Lifeline discount on either a home telephone or a wireless telephone service, but they may not receive a Lifeline discount on both services at the same time.

Additionally, only one Lifeline service may be obtained per household. "Household" is defined as any individual or group of individuals who live together at the same address as one economic unit. An "economic unit" is defined as "all adult individuals contributing to and sharing in the income and expenses of a household."

Lifeline support is available to eligible low-income subscribers living in group living facilities. Lifeline applicants may demonstrate when initially enrolling in the program that any other Lifeline recipients residing at their residential address are part of a separate household. Similarly, federal rules prohibit qualifying low-income consumers from receiving more than one Tribal Link Up discount at a primary residence.

## Frequently Asked Questions

### What is the current benefit under the Lifeline program?

The Lifeline discount for eligible subscribers is up to \$9.25 per month for monthly telephone service - wireline or wireless - or broadband or bundled service.

### What is the enhanced benefit amount for Tribal Lands?

Up to \$25 in enhanced support, in addition to up to \$9.25 for traditional Lifeline service, is available to eligible low-income subscribers living on Tribal lands.

APPENDIX A – Final Rules

APPENDIX B – Proposed Rules

APPENDIX C – Final Regulatory Flexibility Analysis

APPENDIX D – Initial Regulatory Flexibility Analysis

**I. INTRODUCTION**

1. The Commission’s Lifeline program plays a critical role in closing the digital divide for low-income Americans. Abuse of the program, however, continues to be a significant concern and undermines the Lifeline program’s integrity and effectiveness. Strengthening the accountability of the program is therefore essential to ensuring that it effectively and efficiently helps qualifying low-income Americans obtain the communications services they need to participate in the digital economy.

2. For years, the Commission has been taking steps to address waste, fraud, and abuse in the program, including through the establishment of a National Lifeline Eligibility Verifier. Today, we continue that work to strengthen the Lifeline program’s enrollment, recertification, and reimbursement processes so that limited Universal Service Fund (USF or Fund) dollars are directed only toward qualifying low-income consumers. Specifically, we restore the states’ proper role in designating eligible telecommunications carriers (ETCs) to participate in the Lifeline program, clarify the obligations of participating carriers, and take targeted steps to improve compliance by Lifeline ETCs and reduce waste, fraud, and abuse in the program. We also clarify several of the program’s rules in response to petitions for reconsideration and requests for clarification. Further, we seek comment on appropriate program goals and metrics for a modernized Lifeline program and additional improvements to program integrity.

**II. BACKGROUND**

3. The Lifeline program was originally established in 1985 to ensure that low-income consumers had access to affordable, landline telephone service.<sup>1</sup> Today, the Lifeline program provides qualifying low-income consumers discounts on voice or broadband Internet access service, as well as on bundled service, to ensure that all Americans can take advantage of the benefits that voice and broadband Internet access service bring, including being able to connect to jobs, family, education, health care providers, and emergency services.<sup>2</sup> Currently, qualifying low-income consumers receive a standard \$9.25 monthly discount on Lifeline-supported voice or broadband Internet access service or bundled service that satisfies the Commission’s minimum service standards, and those who reside on Tribal lands can receive up to a \$34.25 monthly discount on Lifeline service that satisfies the minimum service standards. Consumers can qualify for the Lifeline program by participating in a qualifying assistance program (i.e., Medicaid, Supplemental Nutrition Assistance Program, Supplemental Security Income, Federal Public Housing Assistance, or Veterans and Survivors Pension Benefit) or by having an income at or below 135% of the Federal Poverty Guidelines. Residents of Tribal lands<sup>3</sup> can also qualify for the Lifeline program by meeting the aforementioned criteria or by participating in a qualifying Tribal-specific

<sup>1</sup> See *MTS and WATS Market Structure, and Amendment of Parts 67 & 69 of the Commission’s Rules and Establishment of a Joint Board*, Report and Order, 50 Fed. Reg. 939 (Jan. 8, 1985).

<sup>2</sup> See 47 CFR § 54.400(n) (“Voice Telephony services and broadband Internet access services are supported services for the Lifeline program.”).

<sup>3</sup> See 47 CFR § 54.400(e) (defining Tribal lands for purposes of the Lifeline program).

**STATEMENT OF  
COMMISSIONER GEOFFREY STARKS  
CONCURRING IN PART AND DISSENTING IN PART**

Re: *Bridging the Digital Divide for Low-Income Consumers*, WC Docket No. 17-287; *Lifeline and Link Up Reform and Modernization*, WC Docket No. 11-42; *Telecommunications Carriers Eligible for Universal Service Support*, WC Docket No. 09-197.

A few short months ago, I stepped through the doors of Miriam’s Kitchen, a social services organization working to end chronic homelessness here in Washington, D.C. This organization is located just blocks away from pricey restaurants, a private university and elite law firms. The people who visit this organization’s facility look to gain access to warmth in the winter, food to nourish their bodies, and some genuine interaction from smiling employees looking to lend a helping hand.

I sat down at a folding table alongside six people experiencing homelessness as they shared with me that the only way they can access the internet or make a call through a device that they themselves own is through the Lifeline program. It was there that I heard what it actually means for them to have a phone: one person uses it to speak directly with her doctor and arranges appointments over the phone; another needed it for job applications; and virtually all of them spoke of the isolation of homelessness, and how a phone is essential to connecting with family and friends.

For those who were Lifeline subscribers, they were grateful that the government steps in to ensure people who are in unforeseen and unfortunate circumstances have access to communications services. That gratitude was even expressed while they identified significant flaws with our program such as their wait time to obtain a Lifeline phone, their troubles with customer service representatives, or even difficulties figuring out how best to ration their precious and limited data.

\*\*\*

The crux of our decision today is this: do we aim to strengthen the underutilized Lifeline program and build up some of our most marginalized citizens; or do we aim to deflate the program and further burden its recipients? I know which side I’m on.

If we truly seek to increase broadband adoption, then I do not believe the elimination of the Lifeline Broadband Provider designation would assist in this process. The *2016 Lifeline Order* asserted the Commission’s authority to designate ETCs for the purpose of offering broadband internet service providers in the Lifeline program as a method to “unlock the Lifeline program to new innovative service providers and robust broadband offerings for the benefit of low-income consumers.”<sup>1</sup> Commenters pointed out in that *Order* that the streamlining of the process and the cutting of red tape lessens the burden on both small and large carriers, thus causing increased service provider participation.<sup>2</sup> There are approximately 40 companies with pending LBP designations, many of which have applied to provide service in several states with high rates of poverty. With our actions today, we will never find out how much carrier participation would increase, and how many people could have easier access to life-changing health services, jobs, and connections.

Additionally, I am deeply troubled by many toxic questions asked by the *FNPRM*. It seeks comments on whether the Commission should “ask Lifeline applicants whether they would be able to afford their Lifeline-supported service without the Lifeline discount,” and asserts that some consumers

---

<sup>1</sup> *Lifeline and Link Up Reform and Modernization et al.*, WC Docket Nos. 11-42, 09-197, and 10-97, Third Report and Order, Further Report and Order, and Order on Reconsideration, 31 FCC Rcd 3962, 4044 para. 231 (2016) (*2016 Lifeline Order*).

<sup>2</sup> See *2016 Lifeline Order*, 31 FCC Rcd at 4047, para. 236 (citing comments by Cox Communications, the Benton Foundation, and the Telecommunications Board of Puerto Rico supporting a streamlined, national ETC designation process).

may be willing to “purchase some level of broadband service even in the absence of a Lifeline benefit” because they “may value broadband access so highly.” It goes on to ask questions about a fee in exchange for receiving a handset or device in-person at enrollment, and about program integrity recommendations as it relates to usage requirements.

To the best of my research, I don’t believe we’ve ever probed elderly Medicare recipients on how much they actually value their medical services; nor should we probe vulnerable, Lifeline recipients on how much they value their connectivity. These are government programs and services designed and targeted for the benefit of particular citizens, and frankly our chief concern should be exploring how to make sure that they are fully utilized. With regard to a fee, I heard firsthand from subscribers at the Larkin Street Youth Services center in San Francisco, California that they see the device alongside the voice and broadband service as inextricably linked. We shouldn’t even articulate the possibility of placing yet another barrier to participation in front of these communities. Regarding USAC check-ins and data use records, I stand opposed. These amount to unnecessary additional burdens on recipients, and in the case of data use records, a real risk of oversurveillance of low-income communities and communities of color.

Finally, I do believe that there are some common-sense measures in this item that prevent waste, fraud, and abuse and that is why I concur in part. As a former enforcement bureau official, I do believe that we have to preserve the integrity of this program such as triple checking that there are no ETC’s claiming and seeking reimbursement for deceased subscribers.

However, despite the efforts I agree with to save the integrity of this program, I find that it is packaged in a way that continues to create uncertainty in the lives of low-income people who are working to put clothing on their back and food on the table. Ultimately, I fear that much of today’s item will negatively impact the people I met at Miriam’s Kitchen and the Larkin Street Youth Services center.

Subject: Click!'s response to SBC's report

Annie,

Feel free to use any of this information on your web site.

As you know, there has been an organized effort by private industry to discredit municipal telecommunication networks. The information about Click! Network in SBC's report ("Failed Municipal Fiber Networks") is the same old, tired, out-of-context story from previous industry sponsored reports. Here's the real story:

1. Tacoma Power constructed a telecommunications network for their own needs (to connect 65 substations to a centrally located Energy Control Center for the purpose of monitoring the electric system, managing energy load, automatically reading meters, automatically connecting and disconnecting meters, etc.) because the incumbent telephone company and incumbent cable TV company could not provide the capacity the utility required. During the design phase of the network, Tacoma Power decided to add other capacity (for cable TV, data transport and Internet services) on the advice of Stanford Research Institute when their conclusive research showed the Tacoma area was underserved.
2. Arthur Anderson and the Washington Institute Foundation (both cited in the SBC report) based their analysis on an initial planning document (revised after telecom experts were hired) which was one of many elements the policy makers used to authorize the utility to move forward with building Click! Network. The \$40 million cited in the SBC report was never adopted as the budget. Instead, \$92 million was approved by the Utility Board and City Council over a two biennium period to fund the network. SBC continues to perpetuate inaccuracies from two flawed reports.
3. According to the Public Utility Board, the Tacoma City Council, the Tacoma Pierce County Chamber of Commerce, the Economic Development Board, The News Tribune and thousands of residential and business customers – Click! Network is a huge success.
4. SBC's link between Tacoma Power's rate increase and Click! Network has no basis in fact. Public utilities follow a very detailed rate case process, complete with public input. SBC's report shows a lack of understanding of the industry they attempt to discredit. The rate increase (the first in 5 years) was related solely to the energy crisis of 2000-01. Today, Tacoma Power customers pay some of the lowest rates for electricity in the country.
5. In the cities where Click! Network services are available (Tacoma, University Place and Fircrest) prices for cable TV and high-speed Internet are 20 – 25% lower than areas where competition does not exist.

6. Since Click! began providing services, both the incumbent telephone provider and the incumbent cable TV provider have rebuilt their networks, something that hadn't been done in the previous 25 years.

7. Since Click! began providing services, the timeframe for making business fiber connections decreased from 18 months (quoted by US West in 1997) to 30 days (quoted by Click!).

I hope SBC didn't invest too much on the report. It appears they didn't get their money's worth, if accuracy was a goal.

## NOTE

### Casting a Wider 'Net: How and Why State Laws Restricting Municipal Broadband Networks Must Be Modified

*Jeff Stricker\**

#### ABSTRACT

*One of Congress's purposes in passing the Telecommunications Act of 1996 was to encourage the widespread deployment of broadband Internet. As municipalities began constructing their own broadband networks, private sector Internet service providers, alarmed at the prospect of competing with these public networks, pushed back with lobbying campaigns encouraging states to enact laws prohibiting these municipal networks. This, in turn, slowed broadband deployment, particularly in areas that private providers believed to be unprofitable (and thus left unserved). Municipalities challenged these laws under the Telecommunications Act, arguing that the Act preempted the state laws, but the Supreme Court in *Nixon v. Missouri Municipal League*, 541 U.S. 125 (2004), upheld the state prohibitions, clearing the way for even more states to adopt such prohibitions. Today, twenty-one states have statutes restricting municipal networks, leaving many Americans without affordable broadband Internet access.*

*This Note argues that Congress should amend the Telecommunications Act to overcome *Missouri Municipal League* and preempt state laws restricting municipal broadband network deployment. Through preemption, state legislatures will be forced to revise or repeal overly restrictive statutes, paving the way for more reasonable restrictions that balance the importance of af-*

*fordable broadband with the need to protect private companies from direct competition with publicly funded entities. This Note next analyzes selected provisions of current state laws and proposes either to eliminate them as overly restrictive, modify them to be less restrictive, or retain them. The result is a framework of a balanced state law that protects private sector interests while also encouraging broadband deployment.*

## INTRODUCTION

A few years ago, Michael and Amy Tiemann decided to build and operate a cutting-edge recording studio in Pittsboro, North Carolina,<sup>1</sup> a rural town of 3,555 people.<sup>2</sup> In addition to the high startup costs of the studio, such as sophisticated equipment, Mr. Tiemann discovered that establishing a broadband Internet connection to the studio was one of the greatest challenges of the project because the area around the studio lacked broadband infrastructure.<sup>3</sup> “I spent more than two years begging Time Warner [Cable] to sell me a service that costs 50 times more than it should,” he explained, “and that’s after I agreed to pay 100 percent of the installation costs for more than a mile of fiber [optic cable].”<sup>4</sup> Mr. Tiemann was fortunate enough that his career path as a pioneer in computer software development provided him with the capital necessary to afford such installation.<sup>5</sup> But most Pittsboro residents do not have the same financial resources as Mr. Tiemann, given that the median family annual income is merely \$63,411.<sup>6</sup>

Mr. Tiemann and others like him faced immense difficulty in obtaining broadband in part because North Carolina passed House Bill 129, titled “Level Playing Field/Local Government Competition,” in May 2011.<sup>7</sup> Without that law, Mr. Tiemann and other businesses and residents of Pittsboro might have worked together with their local government to find a solution to their lack of broadband access, possibly by way of a municipal broadband network that could provide service at an affordable rate.

The North Carolina statute “essentially barr[ed] [municipal broadband networks] from the consumer market,” leaving Mr. Tiemann and others similarly situated across North Carolina with no al-

ternative but to continue to beg Time Warner and other Internet service providers (“ISPs”) for service, usually at great cost to the consumer.<sup>8</sup> Where, as in Mr. Tiemann’s case, the local telecommunications provider is clearly reluctant to enter a small unserved market at a reasonable price for consumers, a public network might be able to provide broadband Internet at an affordable rate.

Mr. Tiemann’s problem is not unique to North Carolina. In fact, when North Carolina’s bill passed in May 2011,<sup>9</sup> nineteen states already had enacted legislation restricting or banning municipal broadband networks to the detriment of underserved communities.<sup>10</sup> Such legislation has been a point of contention between private telecommunications companies and residents and businesses in underserved communities with, or seeking to build, municipal broadband networks. In North Carolina, Governor Bev Perdue declined to take a concrete position on the bill when she refused to sign or veto it (resulting in its enactment).<sup>11</sup> Governor Perdue explained, “My concern with House Bill 129 is that the restrictions the General Assembly has imposed on cities and towns who want to offer broadband services may have the effect of decreasing the number of choices available to their citizens,” and she urged the legislature to reconsider the law.<sup>12</sup>

State restrictions similar to North Carolina’s leave underserved municipalities caught in a bind: the private sector is unwilling or unable to provide sufficient broadband access at an affordable price, but the municipality is effectively prohibited from building its own network to compensate for the private sector’s refusal to enter the market. Consequently, residents and businesses in the vast majority of these municipalities are denied broadband Internet access, severely limiting their ability to conduct business and enjoy the many benefits broadband Internet offers.<sup>13</sup>

This Note argues that many current state laws which prohibit or effectively prohibit municipal broadband networks will continue delaying high-speed Internet access to individuals and businesses in un-

<sup>12</sup> Press Release, Office of Governor Bev Perdue, Governor Perdue’s Statement on House Bill 129 (May 20, 2011), <http://www.governor.state.nc.us/NewsItems/PressReleaseDetail.aspx?newsItemID=1861>.

<sup>13</sup> See *infra* Part I.B.

derserved communities, causing negative social and economic impacts.<sup>14</sup> To reduce delays in broadband deployment, state regulations should reasonably protect the private sector from government-funded competitors when such competition is likely to take place, but should also granting municipalities leeway to construct broadband networks when the private sector is unable or unwilling to provide service at reasonable rates.

This Note proposes specific provisions that states choosing to regulate municipal broadband networks should include in their regulations to protect private industry. This Note also highlights some existing state law provisions that should be stricken because they are overly protective of the private sector to the detriment of consumers.

To effect timely modification of overly restrictive state laws, this Note further proposes that the federal government take action. The most effective means of changing existing state rules is to use § 253(a) of the Telecommunications Act of 1996<sup>15</sup> to preempt state laws which prohibit or effectively prohibit municipalities from operating broadband networks. In order to overcome preemption, states with overly burdensome regulations would be forced to revise their laws to be less restrictive. However, the Supreme Court has interpreted § 253(a) in such a way that preemption is impossible at present.<sup>16</sup> Thus, this Note proposes that Congress amend § 253(a) with language making clear its application to laws targeting municipal entities (and not just private entities).

Part I of this Note sets the stage for the discussion by defining key technical terms, laying out the parameters of the substantive debate, and explaining the present state of affairs at both the federal and state levels. Part II presents this Note's two-pronged solution: Section A addresses how federal preemption can compel states to repeal or revise overly restrictive laws, and Section B evaluates existing state laws, highlighting some that should be modified or repealed. Part III contains additional justifications for this Note's proposed solutions beyond those presented in Part II, including the economic and social benefits of municipal broadband and how municipally-sponsored broadband deployment mirrors other successful municipal infrastructure deployments in this nation's history. Finally, Part IV identifies and rebuts potential counterarguments to the proposed solution.

## I. THE LEXICON, LIMITS, AND LAW OF THE DEBATE

### A. Terminology and Availability of Broadband

Before exploring the substantive issues, some fundamental terminology must be defined and parameters must be established. “Broadband” is a relatively vague term without a generally accepted definition. Commonly thought of as Internet connections faster than dial-up, broadband is often understood in terms of speed. In 1999, the Federal Communications Commission (“FCC”) defined broadband as an Internet connection capable of minimum speeds of 200 kilobits per second for both download (from the Internet to the user’s computer) and upload (from the user’s computer to the Internet).<sup>17</sup> Eleven years later, the FCC decided the prior definition was outdated and adopted a new definition requiring download speeds of at least four megabits per second and upload speeds of at least one megabit per second.<sup>18</sup> The FCC considers these speed benchmarks to be the “minimum speed required to stream a high-quality . . . video while leaving sufficient bandwidth for basic web browsing and email,” or, put another way, the FCC now considers this standard Internet usage.<sup>19</sup>

Under such a definition, the FCC estimates that out of 3230 counties in the United States, 1024 of them completely lack broadband service, resulting in about 24 million Americans without broadband access.<sup>20</sup> Moreover, these unserved areas, often rural, are typically far less densely populated than the national average population density.<sup>21</sup> The FCC concluded that “broadband is not being deployed to all Americans in a reasonable and timely fashion,” and, most critically, that “market forces alone are unlikely to ensure that the unserved minority of Americans will be able to obtain the benefits of broadband anytime in the near future.”<sup>22</sup>

---

<sup>17</sup> Inquiry Concerning the Deployment of Advanced Telecommunications Capability to All Americans in a Reasonable and Timely Fashion, and Possible Steps to Accelerate Such Deployment Pursuant to Section 706 of the Telecommunications Act of 1996, as Amended by the Broadband Data Improvement Act, 25 FCC Rcd. 9556, 9558 (July 20, 2010).

<sup>18</sup> *Id.* at 9559. Using the International System of Units, one megabit is the equivalent of 1,000 kilobits, i.e., one megabit per second is the equivalent of 1,000 kilobits per second. See *The NIST Reference on Constants, Units, and Uncertainty*, NAT’L INST. OF STANDARDS & TECH., <http://physics.nist.gov/cuu/Units/prefixes.html> (last visited Jan. 12, 2013).

<sup>19</sup> 25 FCC Rcd. at 9559.

<sup>20</sup> *Id.* at 9570.

<sup>21</sup> *Id.* at 9571–72 (explaining that the average household density of the unserved counties is 46.8 households per square mile as compared to the average U.S. county, which has a household density of 108.2 households per square mile).

<sup>22</sup> *Id.* at 9574.

### B. *The Need to Stay Wired*

While wireless networks are one option in broadband deployment, this Note only considers wire-based networks for three reasons. First, wired networks tend to offer faster speeds and more reliable connections than wireless systems because the shortage of wireless spectrum prevents wireless systems from offering connections with comparable speed and reliability.<sup>23</sup> Second, wireless broadband networks are subject to greater FCC regulation than wired networks, making them more difficult to build and operate.<sup>24</sup> Third, municipal wireless broadband can serve as both a primary and secondary source of broadband access and in many cases has taken on the latter character.<sup>25</sup> Such secondary source public networks are immaterial to this Note because they exist as a feature of convenience for residents in areas that already have broadband access.<sup>26</sup> For these reasons and others, wired systems are preferable even considering the greater cost in bringing them to unserved communities.<sup>27</sup>

The benefits of high-speed Internet to both ordinary citizens and businesses are numerous and linked directly to broadband's greater speeds. For individuals, broadband performs critical functions such as assisting people in finding employment and facilitating communication and education in addition to offering great convenience and entertainment value.<sup>28</sup> Broadband also gives businesses the ability to expand their operations globally, find more and better customers and

suppliers, streamline operations, advertise more efficiently, and recruit employees.<sup>29</sup> The result is a substantial net benefit to the community, as communities with high-quality broadband networks are more likely to attract and retain businesses, offer greater educational opportunities, provide government services more efficiently, and attract tourists.<sup>30</sup> Speed is key, as slower, non-broadband Internet connections render most of these benefits unobtainable either because of the time required to access the benefits or because the Internet products and services cannot be transmitted to users lacking broadband access.<sup>31</sup>

### C. *The Expense of Expansion*

Although broadband is critical to individuals and businesses nationwide, Internet Service Providers (“ISPs”) are reluctant to enter more remote or less populated markets.<sup>32</sup> Put simply, it is quite expensive to build out a wired broadband network.<sup>33</sup> The nature of wired broadband deployment requires large up-front costs of construction, essentially capital expenditures,<sup>34</sup> as broadband connections require running wires to customers’ homes or businesses.<sup>35</sup> However, once these up-front deployment costs are paid, the network is relatively cheap to operate.<sup>36</sup> Thus private ISPs price their service above transmission costs so as to recoup their capital outlay.

From a business standpoint, this sort of capital expenditure is more easily justified in densely populated areas, as the more densely populated an area is, the more customers there are within range of the network and available to pay for it.<sup>37</sup> Consequently, major metropolitan areas tend to have multiple private ISPs offering broadband ser-

<sup>35</sup> See *id.* at 6 (estimating the costs of connecting the ISP to the user’s premises).

<sup>36</sup> See *id.* at 7 (estimating that data transmission costs, exclusive of network connection, might fall somewhere in the ten to twenty cents per gigabyte range).

<sup>37</sup> See Bennett & Atkinson, *supra* note 32.

vice, because ISPs can more quickly recover their fixed costs of construction from the larger customer base.<sup>38</sup>

However, in less densely populated areas, the fixed costs will either take longer to offset<sup>39</sup> or require that a higher price be charged to customers.<sup>40</sup> Using these principles, private ISPs can calculate the likely profitability of expanding to unserved markets and determine whether it is worth expanding to serve the market.<sup>41</sup> Unfortunately, the more isolated and less densely populated the area, the less likely it is that the fixed costs of construction will ever be recouped, and thus such areas remain unserved.<sup>42</sup>

#### *D. The New Hope of Municipal Broadband*

Faced with these unforgiving economic realities, municipalities with large unserved areas began developing plans to create broadband networks, embracing their potential to “help bridge the digital divide” where private ISPs refused to offer service.<sup>43</sup>

One particularly successful municipal broadband project is in Cedar Falls, Iowa, where the local public utility, Cedar Falls Utilities (“CFU”), began selling fiber-optic broadband service in 1996.<sup>44</sup> While the project took eight years to become relatively cash-flow neutral,<sup>45</sup> in both 2008 and 2009, CFU’s communications network had operating income of approximately \$2.37 million, a figure which climbed to nearly \$3 million in 2010.<sup>46</sup>

While one city’s example is no guarantee that all municipal networks will enjoy financial success, successful projects like CFU indicate that the municipal broadband idea is at least economically feasible. The benefits of affordable broadband access are so important to a community that making a profit should not be the overarch-

ing goal.<sup>47</sup> The main purpose of municipal broadband should be to provide an increasingly necessary public service, not turn a profit.

*E. The Private Sector Strikes Back to Curb Municipal Broadband*

Fearing encroachment upon their traditional territorial domination, their ability to expand at their own pace, and their ability to choose which customers they will serve, private ISPs were quick to begin an aggressive campaign against municipal networks.<sup>48</sup> The campaign included lobbying for state laws restricting or banning such municipal networks as well as lawsuits to stifle their development.<sup>49</sup>

While all of the private ISPs' efforts are too extensive to list here, two are worth noting. First, the Wisconsin legislature approved a state-sponsored broadband network planned primarily for educational purposes.<sup>50</sup> The University of Wisconsin was supposed to manage the network and sell service to other schools throughout the state.<sup>51</sup> However, before the build-out of the network got very far, a group of thirty independent incumbent Wisconsin private ISPs (the same ISPs that declined to serve many potential customers for the state-sponsored project) filed multiple lawsuits and petitioned the Governor to delay and prevent the network's construction.<sup>52</sup> Delayed for over a year now, the project remains trapped in administrative and judicial limbo.<sup>53</sup>

The second example comes from Pennsylvania where private ISPs staged a massive lobbying campaign that amassed nearly \$5.3 million in fees for registered lobbyists between 2003 and 2004.<sup>54</sup> Of that sum, over \$3.1 million came from Verizon Communications, Inc. alone.<sup>55</sup> The lobbying effort paid off for the private ISPs: in late 2004 the state legislature passed a law prohibiting new municipal broadband projects<sup>56</sup> subject only to certain highly restrictive exceptions.<sup>57</sup>

<sup>56</sup> 66 PA. CONS. STAT. § 3014(h) (2012).

In addition to Pennsylvania and Wisconsin, private ISPs were successful in persuading a number of other states to pass laws preventing municipalities from constructing broadband networks.<sup>58</sup> The watershed battle in the fight to legislate municipal broadband out of existence took place in Missouri.

#### F. Missouri Municipal League *and* § 253(a) Preemption

In 1997, Missouri passed a law which effectively<sup>59</sup> prohibited a “political subdivision” of the state from selling telecommunications services or facilities to public or private ISPs.<sup>60</sup> In response, a group of Missouri municipalities, municipally-owned utilities, and municipal organizations petitioned the FCC for a declaration that the statute was preempted by § 253 of the Telecommunications Act of 1996.<sup>61</sup>

Specifically, the petitioners asked the FCC to find that the Missouri statute violated § 253(a) of the Telecommunications Act, which states, “No State or local statute . . . may prohibit or have the effect of prohibiting the ability of any entity to provide any interstate or intrastate telecommunications service.”<sup>62</sup> Under § 253(d), the FCC is empowered to “preempt the enforcement of such statute . . . to the extent necessary to correct such violation or inconsistency” with § 253(a).<sup>63</sup>

The FCC determined that the Telecommunications Act did not preempt the Missouri statute because the term “any entity,” as used in the statute, was not intended to include Missouri’s own political subdivisions.<sup>64</sup> Although the FCC found in favor of the state, the FCC made it clear that its decision was only following binding legal precedent.<sup>65</sup> Perhaps more importantly, the FCC’s opinion stated that the policy behind the Missouri statute was in conflict with the goal of the

---

<sup>57</sup> See *infra* Part II.B.3.

<sup>58</sup> See Blevins, *supra* note 10, at 109–10.

<sup>59</sup> One of the exceptions is that a municipality may sell telecommunications service only to private ISPs on a “nondiscriminatory, competitively neutral basis, and at a price which covers cost” as though the municipal network were acting as a private, for-profit entity. MO. REV. STAT. § 392.410(7) (2012). However, due to the narrowness of the exceptions and the fact that the law effectively foreclosed municipalities from building broadband networks, the Supreme Court deemed these exceptions “not pertinent” in preemption analysis. *Nixon v. Mo. Mun. League*, 541 U.S. 125, 129 n.1 (2004).

<sup>65</sup> *Id.* at 1162.

Telecommunications Act to promote broadband deployment, especially in rural areas.<sup>66</sup>

The municipalities scored a victory, though, when their appeal to the Eighth Circuit resulted in a unanimous reversal of the FCC's decision.<sup>67</sup> The appellate court held that the plain meaning of the words "any entity" included municipalities, despite the heightened standards imposed when federal law preempts a state's regulation of its own political subdivisions.<sup>68</sup>

But the victory was short lived: less than two years later, the Supreme Court overturned the Eighth Circuit and upheld the Missouri statute's validity for four reasons.<sup>69</sup> First, a state law regulating municipalities cannot be preempted because the municipality is not a separate entity from the state under the meaning of "entity" in § 253.<sup>70</sup> Second, even if the Missouri statute were preempted, municipalities would not inherently have the authority to build telecommunications networks absent a grant of such authority from the state.<sup>71</sup> The first and second reasons lead to the third: even if the statute was preempted and authority to build the network existed, the state could simply cut off funding for the network's construction or maintenance via budgeting decisions.<sup>72</sup>

---

<sup>66</sup> *Id.* ("[T]he legal authorities that we must look to in this case compel us to deny the Missouri Municipals' petition . . . . The Commission has found that municipally-owned utilities and other utilities have the potential to become major competitors in the telecommunications industry. In particular, we believe that the entry of municipally-owned utilities can further the goal of the 1996 Act to bring the benefits of competition to all Americans, particularly those who live in small or rural communities." (footnotes omitted)).

<sup>67</sup> The procedure of preempting a statute under § 253(a) begins with a party petitioning the FCC for preemption. The FCC then renders a decision on preemption which is reviewable by the applicable United States Circuit Court of Appeals for the jurisdiction in which the state law was challenged. In this case, that Circuit Court was the Eighth Circuit. *See Mo. Mun. League*, 299 F.3d 949, 951–52.

<sup>68</sup> *Id.* at 952–53.

<sup>69</sup> *See Mo. Mun. League*, 541 U.S. at 128–29.

<sup>70</sup> *Id.* at 134 ("[W]hen a government regulates itself (or the subdivision through which it acts) there is no clear distinction between the regulator and the entity regulated. Legal limits on what may be done by the government itself (including its subdivisions) will often be indistinguishable from choices that express what the government wishes to do with the authority and resources it can command.").

<sup>71</sup> *Id.* at 135 ("But what if the FCC did preempt the restriction? The municipality would be free of the statute, but freedom is not authority, and in the absence of some further, authorizing legislation the municipality would still be powerless to enter the telecommunications business.").

<sup>72</sup> *Id.* at 136 ("Surely there is no contention that the Telecommunications Act of 1996 by its own force entails a state agency's entitlement to unappropriated funds from the state treasury, or to the exercise of state bonding authority.").

Finally, the Court expressed concern that preemption would create a “national crazy quilt” of states where such networks were legal in some states and illegal in others.<sup>73</sup> States that had previously granted municipalities the authority to build such networks would be preempted if they tried to revoke that authority by legislation, but states that had never granted such authority in the first place could validly ban municipal networks.<sup>74</sup> The “crazy quilt” would not only be confusing, but would also be the product of federal law as opposed to “free political choices” at the state level.<sup>75</sup>

In the aftermath of *Missouri Municipal League*, the private sector intensified its efforts to eliminate municipal broadband networks. ISPs initiated enforcement actions in states with existing legislation regulating municipal broadband networks and increased lobbying efforts to have regulations passed in states without them.<sup>76</sup> Private ISPs also launched a publicity campaign, using media outlets to portray municipal networks as anticompetitive.<sup>77</sup> More importantly, the timing of these efforts (and the new legislation which resulted) was significant for the private ISPs, as many municipalities were in the process of planning and financing broadband projects nationwide.<sup>78</sup>

Thanks in large part to the substantial lobbying effort discussed above, at least twenty-one states have some sort of legislative barrier to municipal broadband networks.<sup>79</sup> Of these twenty-one, Arkansas,<sup>80</sup> Missouri,<sup>81</sup> Nebraska,<sup>82</sup> and Texas<sup>83</sup> have total prohibitions on new municipal networks. And while all of the states’ restrictions vary in their comprehensiveness, they all limit the availability of reliable

broadband Internet access to citizens in their respective underserved communities.<sup>84</sup>

## II. THE TWO-PRONGED SOLUTION

Though this Note does not dispute that the free market should govern when ISPs are willing to compete, ISPs should not be able to suppress competition in markets they have no intention of entering even if that competition comes from a public entity. But the line between cases where the ISPs are legitimately nervous about their ability to compete with municipal networks or where they simply want to suppress any and all forms of competition is often difficult to discern. In the municipal broadband context, there has been a strong lobby led by the private ISPs against municipal networks expressing a legitimate fear that the private sector will be unable to compete effectively with publicly subsidized or funded broadband networks.<sup>85</sup> But there has been a relatively strong outcry against state laws prohibiting municipal networks from both ordinary citizens<sup>86</sup> and the federal government.<sup>87</sup> For example, in May 2011 FCC Commissioner Michael Copps spoke at a telecommunications conference in North Carolina, imploring all states to stop and reverse the trend of prohibiting municipal broadband networks.<sup>88</sup>

Despite no clear consensus regarding the value of direct competition between the private sector and municipalities in the consumer broadband market, there is a workable compromise that will quickly get underserved communities municipal broadband Internet access while protecting private ISPs' economic interests. This Note highlights new and amended statutory provisions that would further two critical purposes of municipal broadband networks: (1) to incentivize private ISPs to expand their networks more rapidly, alleviating the need for municipal networks, and (2) to fill the remaining gaps in service that the private ISPs are unwilling to enter even when faced with the prospect of losing potential customers to municipal networks. To achieve this goal, legislation should make municipal networks permissible when circumstances are such that the private sector is unwilling to provide broadband service at reasonable rates.

<sup>87</sup> Ted Gotsch, *Copps Calls on States to Allow Municipalities to Offer Broadband*, TR DAILY, May 10, 2011, available at 2011 WLNR 9347480.

<sup>88</sup> *Id.*

This Note proposes a two-pronged solution. At the federal level, Congress should amend § 253 so that it applies expressly to public entities, thus overruling *Missouri Municipal League* by granting the FCC the power to declare overly restrictive state laws preempted. Such federal action would force state legislatures either to reconsider their laws or simply stand by as the overly burdensome state laws are preempted. At the state level, this Note identifies provisions of current state laws which have particularly important effects on municipalities' ability to construct and operate broadband networks and discusses how those provisions should be modified or eliminated.

A. *The Federal Prong: Amending § 253 per Missouri Municipal League*

Because the industry lobby has proven so strong even in the face of public opposition,<sup>89</sup> it is unlikely that states will suddenly begin resisting lobbying efforts and reverse their restrictive laws. Thus, proposals for modifying state laws alone are insufficient to exact any meaningful change. Accordingly, the best way to compel states to reconsider their statutes is to have federal law preempt those state laws which effectively prohibit public entities from providing telecommunications services. However, in light of *Missouri Municipal League*, federal action is now necessary for preemption to occur.

There are two viable options to overcoming *Missouri Municipal League*: the Supreme Court could overturn its own precedent or Congress could amend § 253 to meet the requirements set out by *Missouri Municipal League* and reach the state statutes in question. Although either remedy would suffice, this Note focuses on the congressional solution.<sup>90</sup>

1. *The Proposed Amendment to § 253(a)*

Congress should amend § 253(a) so that it expressly applies to states and their own political subdivisions. To illustrate this point, consider the following (the bold text is added to the current language

---

<sup>89</sup> North Carolina is a prime example, as the issue was so contentious that the Governor refused to sign or veto the bill. *See supra* Introduction.

<sup>90</sup> The fact is that eight Justices felt the language of § 253 is not clear enough to hold that preemption applied to statutes affecting public entities, so it is unlikely the Court would change its tune and side with Justice Stevens if the matter arose again. Given the relative ease with which Congress could remedy the statute's flaw to the Court's satisfaction, a congressional solution is best. Moreover, a discussion arguing the merits of overturning the Court's majority opinion would require delving into an entirely separate area of law, state sovereignty, which would detract from the primary focus of this Note.

of § 253(a)): “No State or local statute . . . may prohibit or have the effect of prohibiting the ability of any entity, INCLUDING PUBLIC ENTITIES, to provide any interstate or intrastate telecommunications service.”<sup>91</sup> Including some form of the term “public entities” in the statute, a phrase borrowed from *Missouri Municipal League*,<sup>92</sup> would overcome the Court’s conclusion that “Congress used ‘any entity’ with a limited reference to any private entity,” and thus expressly include the state laws discussed in this Note under the “preemption net” of § 253.<sup>93</sup>

## 2. *The Need for an Amendment to § 253(a)*

Amending § 253 in this way would likely sway the votes of at least two members of the majority still on the Court today, Justices Scalia and Thomas, who concurred in the judgment because § 253(a) “simply does not provide the clear statement which would be required . . . for a statute to limit the power of States to restrict the delivery of telecommunications services by their political subdivisions.”<sup>94</sup> The two even agreed with the majority’s conclusion that preemption “would have several unhappy consequences” but did not feel “that the avoidance of unhappy consequences is adequate basis for interpreting a text.”<sup>95</sup>

The majority opinion also put heavy emphasis on this state sovereignty issue and the statutory language necessary to overcome it.<sup>96</sup> Though it also relied on policy justifications, the majority opinion concluded “that § 253(a) is hardly forthright enough” due to “[t]he want of any ‘unmistakably clear’ statement” in § 253(a) that it applies to public entities.<sup>97</sup>

In his dissenting opinion, Justice Stevens argued that such an amendment is unnecessary, as he found the majority’s conclusion that “any entity” includes all entities except for “*municipally owned* entities” incorrect.<sup>98</sup> Justice Stevens argued that the majority’s interpreta-

---

<sup>91</sup> 47 U.S.C. § 253(a) (2006). The bold text is not part of the statute and was added merely for illustrative purposes. It is not intended to be any sort of formal or concrete proposal for how exactly to amend the language of § 253(a).

<sup>92</sup> *Nixon v. Mo. Mun. League*, 541 U.S. 125, 132–33 (2004).

<sup>93</sup> *See id.* (stating in part that “public and private” is often used “when both are meant to be covered”).

<sup>94</sup> *Id.* at 141 (Scalia, J., concurring).

<sup>95</sup> *Id.*

<sup>96</sup> *Id.* at 140–41.

<sup>97</sup> *Id.*

<sup>98</sup> *Id.* at 143 (Stevens, J., dissenting).

tion had to be based on one of the assumptions that either Congress did not know public utilities existed or that it purposefully disregarded public utilities in drafting § 253, and that both assumptions are “manifestly implausible” based on the great number of public utilities in the country.<sup>99</sup>

Justice Stevens pointed out another flaw in the majority’s reasoning, highlighting another section of the Telecommunications Act of 1996 that contains a more narrowly tailored definition of “utility.”<sup>100</sup> The Pole Attachments Act<sup>101</sup> specifically excludes entities “owned by the Federal Government or any State” from its definition of “utility,”<sup>102</sup> and the term “State” includes “any political subdivision, agency, or instrumentality,” of the state.<sup>103</sup> It is thus unlikely that Congress intended to restrict § 253 not to apply to public entities because elsewhere in the Telecommunications Act Congress specifically addressed public entities when it wished to treat them differently.<sup>104</sup>

While Justice Stevens’s argument is compelling, it is of little help as a practical matter given that the other eight Justices felt differently.<sup>105</sup> Thus, an amendment to § 253 is necessary if there is to be a significant chance for state-level reform via preemption. However, even if § 253 is amended, it is possible that the Supreme Court might invalidate the amended version on policy grounds, as the six-Justice majority opinion also expressed a number of concerns with the potential efficacy of such an amendment in practice<sup>106</sup>—concerns now ripe for discussion.

### 3. Responding to Further Preemption Concerns

An amendment to § 253 might still face difficulties in the Supreme Court, as the six-Justice majority opinion went beyond the textual issue, reasoning that there would be minimal positive effects from preemption because states would remain free to restrict municipal networks by denying municipalities the authority to construct them.<sup>107</sup>

---

<sup>99</sup> *Id.*

<sup>100</sup> *Id.* at 143–44.

<sup>101</sup> 47 U.S.C. § 224 (2006).

<sup>102</sup> *Id.* § 224(a)(1).

<sup>103</sup> *Id.* § 224(a)(3).

<sup>104</sup> *Mo. Mun. League*, 541 U.S. at 143–44 (Stevens, J., dissenting).

<sup>105</sup> *See generally id.* at 128–41 (majority opinion).

<sup>106</sup> *See id.* at 133–40 (discussing hypothetical scenarios and criticizing the dissent’s positions).

<sup>107</sup> *See id.* at 134 (“[P]reempting a ban on government utilities would not accomplish much if the government could not point to some law authorizing it to run a utility in the first place.”).

Even without a law banning such networks, municipalities would still need the power to build them, as “freedom is not authority, and in the absence of some further, authorizing legislation the municipality would still be powerless to enter the telecommunications business.”<sup>108</sup>

However, this argument is insufficient as a basis for refusing to allow preemption for two reasons. First, as Justice Stevens pointed out in his dissenting opinion, § 253(a) preempts laws that impinge on the “ability” of an entity to enter the telecommunications business, and the state laws at issue here most certainly inhibit the ability of municipalities to enter the market even in the absence of authority to enter (because even should that authority be granted, the law would prohibit entry).<sup>109</sup> Justice Stevens then extended this argument to say that § 253 prevents states from revoking authority already granted to municipalities, as such revocation would be equally prohibitive of an entity’s ability to enter the market as would a law banning municipal networks.<sup>110</sup> But those states which had not yet granted municipalities the authority to construct or operate broadband networks would be under no obligation to do so as a result of § 253, even in its hypothetically amended version.<sup>111</sup>

This leads to one of the majority’s primary policy arguments: that the result of preemption would be a “national crazy quilt” of states, some of which would permit municipal networks and others that did not grant municipalities authority to operate such networks.<sup>112</sup> Justice Stevens countered this argument with the simple yet astute observation that failure to preempt statutes prohibiting municipal networks has the same effect, as a “national crazy quilt” of states with and without such inhibitive statutes would be allowed to exist.<sup>113</sup> As Justice Stevens put it, “That the ‘crazy quilt’ . . . is the product of political choices made by Congress rather than state legislatures renders it no more absurd than the ‘crazy quilt’ that will result from leaving the matter of municipal entry entirely to individual States’ discretion.”<sup>114</sup> Indeed Justice Stevens’s prediction has proven quite accurate, as the

<sup>108</sup> *Id.* at 135.

<sup>109</sup> *See id.* at 145 (Stevens, J., dissenting).

<sup>110</sup> *Id.*

<sup>111</sup> *See id.*

<sup>112</sup> *Id.* at 136 (majority opinion).

<sup>113</sup> *Id.* at 145–46 (Stevens, J., dissenting).

<sup>114</sup> *Id.* at 146 (citation omitted).

twenty-one states that have passed such legislation vary greatly in their levels of prohibition.<sup>115</sup>

Moreover, the majority's practical assessment of the situation is contrary to that of the FCC, as even the majority recognized that the FCC "denounced the policy behind the Missouri statute" because it "substantially disserved the policy behind the Telecommunications Act."<sup>116</sup> The majority opinion intentionally "put[s] aside" the position of the FCC in this regard, though, as "it does not follow that preempting state or local barriers to governmental entry into the market would be an effective way to draw municipalities into the business," and the value of municipal broadband is not relevant to the resolution of the issues presented in the case.<sup>117</sup>

The policy arguments the majority opinion advances are difficult to embrace due to the opinion's conscious disregard for the benefits of municipal broadband. Furthermore, even the majority's legal policy arguments (e.g., the national crazy quilt) are unavailing. Justice Stevens recognized the majority's mistake in this regard when he noted that preemption under § 253 is not automatic but rather hinges on a case-by-case determination to be made by the FCC.<sup>118</sup> The FCC's role in preemption determinations would avoid the majority's "hypothetical absurd results"<sup>119</sup> because the FCC can consider all the issues of each case (including both the general and legal policy issues) before making a determination. Justice Stevens argued, "Rather than assume that the FCC will apply . . . [§ 253] improperly," the better solution is to allow preemption of state laws applying to public entities and permit the FCC to make its determinations.<sup>120</sup>

With preemption as a possible available remedy, the next Section addresses the second prong of the proposed solution: the substantive analysis of existing state law provisions and how to modify them to achieve the purposes of municipal broadband networks.

---

<sup>115</sup> See *supra* text accompanying notes 79–84. See generally *infra* Part II.B (discussing various approaches and laws which restrict municipal broadband networks).

## B. *The State Prong*

With many state laws restricting municipal broadband networks in different ways and to different degrees, a comprehensive, one-size-fits-all solution to meet any one state's particular circumstances is a pipedream. Instead, this Note focuses on a number of specific provisions contained in some states' laws, explaining how those provisions can be improved or why they should be done away with entirely. To clarify how each provision discussed should be treated, this Section is subdivided into three subparts: (1) provisions to eliminate, (2) provisions to modify, and (3) provisions to retain.

The provisions to eliminate include outright bans and wholesale service restrictions. The provisions to modify include those raising municipal entry costs, those restricting public financing, those mandating referenda, those restricting pricing and cross subsidies, and those imposing a number of other operating restrictions. Those provisions which should be retained in essentially their current form include those mandating feasibility studies before construction, those mandating appeals to the private sector to provide broadband service before construction, and those exempting unserved areas from many of the restrictions.

### 1. *Provisions to Eliminate*

There are two major restrictions present in state laws that should be phased out entirely from any legislation regulating municipal broadband: outright bans on municipal networks and restrictions limiting municipal networks to only wholesale service sales. These restrictions are overly prohibitive of municipal entry to the broadband consumer market and thus should not be included in legislation.

#### a. *Outright Bans*

Arkansas, Missouri, Nebraska, and Texas all have total bans on municipal networks.<sup>121</sup> Such total bans are patently repugnant to the spread of broadband service, as they remove municipalities from the list of potential entrants to the market. Or, in § 253's framework, total bans are the most prohibitive of an entity's ability to enter the market.<sup>122</sup> Therefore, such total bans should be entirely eliminated.

The impact of a total ban is twofold. First, the ban prevents municipalities from providing the critical broadband service their citizens

---

<sup>121</sup> See *supra* notes 80–83.

<sup>122</sup> 47 U.S.C. § 253 (2006).

demand and may even require. Second, the ban may delay the expansion of private ISP broadband networks to unserved areas by removing municipalities as potential entrants to the broadband market.<sup>123</sup> Laws preventing the entire class of public entities from entering the broadband market discourage private ISPs from expanding more aggressively, if they choose to expand at all, because there is no threat that a municipal provider will be first to reach an untapped market.<sup>124</sup> Thus, such total bans should be scrapped in their entirety.

*b. Wholesale Service Restrictions*

Another troubling type of restriction that should be eliminated is found in Washington and Nevada, where public utilities are only allowed to sell telecommunications service wholesale, not to end users.<sup>125</sup> Although the law in Nevada prohibits cities with populations exceeding 25,000 from selling telecommunication service to the “general public,” municipalities below 25,000 are apparently free to construct their own networks.<sup>126</sup> In theory, even those cities governed by the statute can construct and maintain certain telecommunication facilities so long as the services those facilities provide are not sold to the general public.<sup>127</sup> The theory behind this type of restriction is that the municipality invests in the infrastructure and maintains it but must then contract out the retail sale of such service to private parties.<sup>128</sup> The goal is to keep the private sector involved and allow for some competition between retailers to help keep prices reasonable for consumers.<sup>129</sup>

However, such restrictions have proven contrary to the quest for broadband expansion. While the municipal infrastructure can be helpful, the additional steps between investment and service provision

<sup>128</sup> *See id.*

<sup>129</sup> *See id.*

add uncertainty and expense to the mix, which can make the project less appealing to municipalities.<sup>130</sup> In fact, Washington's legislature is currently considering proposed legislation to permit public entities to sell telecommunications services directly to consumers.<sup>131</sup> The bill explains that unserved and underserved areas have persisted under the roughly seven years of the wholesale-only restriction and that the aim in removing the restriction is to speed the deployment of broadband service to those areas.<sup>132</sup> The bill grants municipalities the ability to operate networks with a great deal of autonomy and limited restraints and is currently under active consideration with hearings held as recently as mid-January 2012.<sup>133</sup>

While such wholesale-only restraints have apparently failed in Washington, there may be valid reasons for a municipality to impose such a restraint on itself in building a network in some cases. Just as there should not be a requirement that municipalities only sell broadband service wholesale, there also should be no requirement that they only sell broadband service at retail. Instead, each municipality should remain free to weigh its options in light of its unique circumstances, as in some cases a municipality's self-imposed restraint of wholesale-only sales may be appropriate. Such a self-imposed restraint may be useful in enticing private ISPs' cooperation in the project, rather than having the private ISPs view the project as a threat and seek to block it. Using such a self-imposed restraint as an incentive for cooperation with the private sector could avoid much of the fighting that tends to derail or increase the cost of municipal broadband projects. Despite this provision's potential utility in some municipal contexts, a statewide requirement that all municipal networks sell service only wholesale is overly broad and restrictive. Consequently, these bans should be removed leaving the choice to municipalities.

## 2. *Provisions to Modify*

This Section presents five categories of restrictions that certain states have enacted that, with some modifications, are not unduly re-

---

<sup>130</sup> See *id.* at 27 ("Open access can only work if private companies find it in their interest to act as 3rd-party service providers . . .").

<sup>131</sup> See *Bill Information: HB 1711*, WASH. ST. LEGISLATURE, <http://apps.leg.wa.gov/billinfo/summary.aspx?bill=1711&year=2011> (last visited Jan. 16, 2013).

<sup>132</sup> H.B. 1711, 62d Leg., 1st Spec. Sess. (Wash. 2011) ("In an effort to reach those areas of the state that are unserved or underserved, it is the intent of the legislature to grant public utility districts the authority to provide retail telecommunications services, including broadband . . .").

<sup>133</sup> See *Bill Information: HB 1711*, *supra* note 131.

restrictive of municipal networks: (1) restrictions which raise municipal entry costs into the broadband market, (2) restrictions on the use of public financing, (3) mandatory referenda, (4) restrictions on pricing and cross-subsidies, and (5) operating restrictions.

*a. Raising Municipal Entry Costs*

One legislative tactic to impede municipal networks is to add procedural requirements to the approval process that require time and expense to complete, thus raising the costs for a municipality attempting to construct a network. For example, Pennsylvania only allows municipalities to build their own networks if they obtain permission to do so from local incumbent telecommunications service providers.<sup>134</sup> If the incumbent declines to provide the requested service, the municipality may then construct its network.<sup>135</sup> Based on the terms of the statute, though, a local incumbent could theoretically delay the project by as much as fourteen months without successfully providing comparable service.<sup>136</sup>

The danger here is the potential for delay. At a minimum, a private incumbent not interested in providing service can simply run the clock for two months before the municipality can advance its planning and construction. Such delays can erode popular support for the public network or allow the incumbent additional time to exert political pressure at varying levels to derail the project. Worse still, the lack of penalties for incumbents who fail to provide the promised service leaves the door open for incumbents to act in bad faith. With the potential for delays and interference so great, the power over potential municipal networks in Pennsylvania has shifted almost fully to the incumbent private companies (even those not currently providing broadband service).

The likelihood of delays and hardships in dealing with the incumbents in this all-or-nothing way significantly raises entry costs for municipalities. Asking an incumbent for permission seems counterproductive, as it essentially asks the incumbent to give up some of its potential customers in the future, an unlikely outcome. Thus, the re-

---

<sup>134</sup> 66 PA. CONS. STAT. § 3014(h) (2012).

<sup>135</sup> *See id.* § 3014(h)(2).

<sup>136</sup> *See id.* After a municipality submits a written request to the local incumbent, the incumbent has two months to opt to provide the data speeds requested to the area. Should the incumbent opt to provide the service requested, it has fourteen months from the date the request was made in which to build out the network. The statute makes no mention of penalties or other repercussions for incumbents who choose to provide the service and fail to do so within the fourteen months.

quirement of permission from a local incumbent should be done away with and replaced with something more like North Carolina's mandatory appeal to the private sector.<sup>137</sup>

Florida's law raises entry costs for municipalities by requiring that each municipality develop a detailed business plan to "ensure that revenues exceed operating expenses and payment of principal and interest on debt within 4 years."<sup>138</sup> But four years is a relatively short period in which to turn cash-flow positive given the great expense of investing in infrastructure and the relatively long life such telecommunications systems are expected to serve.<sup>139</sup>

Moreover, the goal of municipal networks is to provide a critical service that the private sector has failed to provide, and thus, like other critical public services, the focus should be on delivering the service quickly, even if this means it takes longer to become cash-flow positive. How a municipality chooses to prioritize recoupment of its investment (i.e., the length of time, if ever, over which it expects to become cash-flow positive) should be determined by the municipality based on the exigencies of its particular situation.

However, the requirement of a business plan is not a provision that should be eliminated altogether. This requirement forces a municipality to look critically and objectively at the economic realities its network will impose upon the municipality, and requires the city to come up with a plan that will provide the service at a bearable cost. Thus, while the four-year restriction is overly burdensome, mandating that municipalities present some sort of a business plan (such as the feasibility studies Utah requires<sup>140</sup>) is a provision worth maintaining.

#### *b. Restrictions on Public Financing*

Restrictions on public financing for municipal networks are another tool used to impede the spread of municipal networks. For example, one of Florida's restraints requires special votes by elected representatives to approve the issuance of debt if the debt is to mature after fifteen years.<sup>141</sup> A more onerous example exists in North Carolina, where at least two public hearings must be held on the project before the municipality may apply to the state for permission to use

---

<sup>137</sup> See *infra* Part II.B.3.b.

<sup>138</sup> FLA. STAT. § 350.81(2)(c)(4) (2012).

<sup>139</sup> Cf. *supra* Part I.D (explaining the Cedar Falls, Iowa case and its eight-year path to cash-flow neutrality).

<sup>140</sup> See *infra* Part II.B.3.a.

<sup>141</sup> FLA. STAT. § 350.81(2)(e)(2).

public financing.<sup>142</sup> The state then conducts an independent review of the application before deciding whether to approve it.<sup>143</sup> As part of the review process, the public entity bears the burden of persuasion on all relevant issues, and the state will consider the “probable net revenues” of the project and issue a written report on the “reasonableness of the [public entity’s] revenue projections.”<sup>144</sup> These requirements in North Carolina are in addition to the municipality prevailing in a special election on whether the city should build the network in the first place.<sup>145</sup>

While there is certainly good reason for states to hold municipalities accountable for the debt they plan to incur, requirements that are as procedurally complex and difficult to navigate as North Carolina’s serve largely to defeat the ability of municipalities to build networks. Florida’s fifteen-year restriction, while somewhat arbitrary, is at least reasonable in that it simply requires an elected board to approve long-term debt without unduly restricting shorter-term debt. North Carolina, though, puts numerous hurdles between a municipality and its ability to build a network, including multiple public hearings, a referendum, and an application to the state. As discussed earlier,<sup>146</sup> even if successful on all the substantive matters, the delays a municipality faces in navigating the approval processes can be fatal to a network plan.

Consequently, states must walk a fine line when crafting legislation. While at face value North Carolina’s restrictions seem harmless and well-intentioned in calling for public involvement and multiple levels of review, such redundancy and excessive scrutiny has tremendous efficiency costs and makes building municipal networks far less feasible. And while a bright line is difficult to draw, the Florida restraint is certainly preferable to North Carolina’s in furthering the purposes of municipal broadband. Ideally states would go no further than a requirement that debt plans be included in some sort of overall business plan or feasibility study that must be presented prior to the municipality’s governing body voting on whether to go forward with construction.<sup>147</sup>

<sup>143</sup> *Id.*

<sup>144</sup> *Id.*

<sup>145</sup> *Id.* § 160A-340.4. See *infra* Part II.B.2.c for further discussion of these referenda.

<sup>146</sup> See *supra* Part II.B.2.a.

<sup>147</sup> Compare *supra* Part II.B.2.a, with *infra* Part II.B.3.a.

c. *Mandatory Referenda*

Some states have forced municipalities to prove that their citizens are on board with the network project before the project can proceed via mandatory local referenda. In addition to North Carolina,<sup>148</sup> Louisiana<sup>149</sup> and Colorado<sup>150</sup> are two such jurisdictions. Louisiana requires that, absent local rules to the contrary, a petition calling for a vote—signed either by fifteen percent of or ten thousand qualified electors, whichever is less—must be submitted within 180 days of submission of the project’s feasibility study.<sup>151</sup> Alternatively, Colorado requires only that the ballot describe the “nature of the proposed service, the role that the local government will have in provision of the service, and the intended subscribers of such service.”<sup>152</sup>

Here, again, arises the problem of excessive procedural hurdles. The only unique feature of telecommunications service provision by a government entity as compared to other government-provided services (such as electricity, water, sewers, and roads) is that the telecommunications industry is today predominantly administered by the private sector.<sup>153</sup> Therefore, where municipal governments see their entry as beneficial to the public interest in the telecommunications realm, the municipalities should not be subject to additional burdensome proofs of public approval above those the municipality would face in undertaking a project in any of the other aforementioned areas.

If local government is competent to make decisions in those other fields without state-level interference, there appears to be no good reason for a state to require a referendum in the telecommunications field.<sup>154</sup> These referenda serve only to further delay and potentially derail a project, as they present a prime opportunity for the private sector lobby to court voters. Special rules mandating referenda that

<sup>149</sup> LA. REV. STAT. ANN. § 45:844.50 (2012).

<sup>150</sup> COLO. REV. STAT. § 29-27-201 (2012).

<sup>151</sup> LA. REV. STAT. ANN. § 45:884.50(G)(1).

<sup>152</sup> COLO. REV. STAT. § 29-27-201(2).

<sup>153</sup> O’Loughlin, *supra* note 54, at 484. One could argue that Internet service is a service best provided by local government, just as these other services already are. See *id.* at 487–88 (“According to proponents of ‘municipal broadband,’ these community-owned networks are a natural outgrowth of traditional municipal functions such as the building and maintaining of infrastructure and the providing of public services.”).

<sup>154</sup> In fact, the North Carolina statute considers the local government competent enough to determine when the public network should be sold or shut down, as the public entity “shall not be required to obtain voter approval . . . prior to the sale or discontinuance of the city’s communications network.” N.C. GEN. STAT. § 160A-340.1(b) (2012).

apply only to municipal broadband are thus inappropriate, but if a state has legislation that requires a referendum for any major municipal infrastructure project the referendum would not necessarily be unfair. In deciding whether to require a referendum, laws should treat municipal broadband projects the same as any other municipal infrastructure project.

*d. Pricing and Cross-Subsidy Restrictions*

State regulations can also include two key financial constraints on municipal networks, namely that service must be priced at or above cost and that the municipality may not cross-subsidize the public network via other city revenue sources. Both Florida<sup>155</sup> and North Carolina<sup>156</sup> have adopted such restrictions. The price restraints are designed to keep prices in line with what a private entity would charge so that municipalities cannot price out private competitors.<sup>157</sup> The cross-subsidy prohibition furthers the goal of preserving fair competition by preventing cost reductions (which could translate into price cuts) with revenues not associated with the service.<sup>158</sup>

While both of these restraints serve a critical function in preserving private ISPs' ability to compete effectively, they also impede public network construction by making the public network less financially viable.<sup>159</sup> Assuming private ISPs refuse to enter the market because they do not believe they can provide service at a profit, or even at a break-even point, no municipality would be able to enter an unserved market given these restraints. The entire reason for municipal networks in unserved markets is to overcome the private sector's unwillingness to enter the market. These restraints preventing cross-subsidies force cities to make the networks at least cash-flow neutral within a certain time, as otherwise the funding for the network's operation would run dry. Similarly, forcing prices up to the levels of cash-flow neutrality would price out many potential customers, thus depriving them of the benefit the municipality seeks to provide.

Instead of imposing such requirements up front and indefinitely, the more prudent course of action is to impose these restraints only when private competition is reasonably certain to enter the market.

---

<sup>155</sup> FLA. STAT. § 350.81(2)(f) (2012).

<sup>156</sup> N.C. GEN. STAT. § 160A-340.1(a)(7).

<sup>157</sup> See O'Loughlin, *supra* note 54, at 488–89.

<sup>158</sup> See *id.*

<sup>159</sup> See Hannibal Travis, *Wi-Fi Everywhere: Universal Broadband Access as Antitrust and Telecommunications Policy*, 55 AM. U. L. REV. 1697, 1771 (2006).

One solution is thus to amend these provisions to apply only upon a private ISP notifying the municipality that it plans to provide service in the relevant market along with proof of such intent and a plan with an estimate of when entry is expected. The municipality would then face a deadline to bring its prices in line with costs and to eliminate cross-subsidies so that once a private ISP enters the picture, the competition between the two is fair. Such a solution allows for maximum broadband distribution yet also preserves the private sector's ability to penetrate markets served by public entities.

*e. Other Operating Restrictions*

An additional two key operating restraints face municipal networks in some states: advertising restrictions and tax collection requirements. North Carolina imposes both.<sup>160</sup> First, North Carolina municipalities cannot advertise public network service on “a public, educational, or governmental access channel if the city requires another communications service provider to carry the channel,” nor can they use resources not accounted for in the public network's books to promote the services.<sup>161</sup> Second, North Carolina's public networks must collect all applicable taxes and fees that a private ISP would collect and pay them to the relevant authorities, including the city's own general fund.<sup>162</sup>

As with price and cross-subsidy restrictions,<sup>163</sup> imposing advertising and tax restrictions is best reserved until competition appears reasonably certain. While the advertising restriction alone is relatively minor, it is still an impediment to efficient distribution of service, as it needlessly adds costs in unserved markets. The local government should be able to take advantage of its unique resources, such as public-access channels, to distribute the service more cost-effectively because it more efficiently furthers the goal of the public network to provide an otherwise unavailable yet critically important service in high-speed Internet.

That same logic translates to tax collection. While the municipality should reasonably expect to collect and pass along taxes and fees to other authorities (such as the state and federal governments), there seems to be little purpose served in requiring the city to pay taxes to itself other than to benefit private ISPs by raising municipal networks'

---

<sup>160</sup> See N.C. GEN. STAT. § 160A-340.1(a).

<sup>161</sup> *Id.* § 160A-340.1(a)(6).

<sup>162</sup> *Id.* § 160A-340.1(a)(9).

<sup>163</sup> See *supra* Part II.B.2.d.

costs. Instead of collecting this revenue to pay to itself, it makes more sense to permit the city to pass along those tax savings to customers as a price reduction to encourage adoption (if the city so chooses). However, should a private ISP announce its intent and ability to enter the market, fairness dictates that the city begin collecting the relevant taxes in the interest of fair competition.

### 3. *Provisions to Retain*

The following three types of provisions are worth keeping mostly unchanged because they offer the private sector a fair level of protection from public competition without unfairly delaying or otherwise inhibiting municipal networks. The first restriction, which requires municipalities to conduct feasibility studies before beginning construction, forces cities to think critically and obtain an objective analysis of the various impacts, both positive and negative, that the project will likely have. The second seeks to avoid battles between the private sector and municipalities by requiring municipalities to solicit broadband service from the private sector before building its own network. The third provision is unique from those previously discussed in that it creates a safe harbor from the restrictions imposed for municipalities that qualify as unserved.

#### a. *Mandatory Feasibility Studies*

One rather beneficial procedural obstacle that Utah has adopted is the mandatory feasibility study.<sup>164</sup> Utah's law requires that an outside consultant be retained to conduct a feasibility study, which plays a central role in the city's decision-making process.<sup>165</sup> The feasibility study must meet certain requirements, such as explanations of the impact the city's provision of telecommunications service will have on competition in the market,<sup>166</sup> whether a private party would provide the service if the city failed to do so,<sup>167</sup> the costs of construction,<sup>168</sup> projected demand growth for the service,<sup>169</sup> and projected revenues and expenses for the next five years.<sup>170</sup>

---

<sup>164</sup> UTAH CODE ANN. § 10-18-202(2) (LexisNexis 2012).

<sup>165</sup> *Id.* § 10-18-203.

<sup>166</sup> *Id.* § 10-18-203(2)(a)(ii).

<sup>167</sup> *Id.* § 10-18-203(2)(b)(ii).

<sup>168</sup> *Id.* § 10-18-203(2)(c)(i)–(ii).

<sup>169</sup> *Id.* § 10-18-203(2)(d)(ii).

<sup>170</sup> *Id.* § 10-18-203(2)(e)–(f).

Contrasted with requirements for cash-flow positivity, as exemplified by Florida's law,<sup>171</sup> Utah's feasibility study seems greatly preferable because its mission is to educate the municipality's decision-makers about the potentially harsh realities the city will face in its endeavor, rather than to impose onerous requirements on the project that may serve to undermine the project's prospects for success. Insofar as Utah's requirement meets this educational goal, it should be retained.

The key difference between the Florida approach and the Utah approach is the impact each has on the prospects for the municipal network's success in providing service. The Florida approach sets a high bar for the project to meet in order to avoid some form of termination, whereas the Utah approach lays out specific factors that the study must examine so that a better-informed decision can be made in the first place. This leaves the ultimate decision in the city's hands, as Utah only requires that the feasibility study result in a finding that the project can generate sufficient revenues to operate cash-flow neutral in the mid- to long-run.<sup>172</sup> While Utah's requirement of cash-flow neutrality may not be ideal, its imposition of a feasibility study remains a worthwhile one. Designed as an instrument to facilitate rational decision-making, the feasibility study is a highly valuable tool that states should require municipalities to invest in prior to deciding to construct a network.

*b. Mandatory Private Sector Appeals*

An innovative approach to resolving the public-private debate over municipal broadband is found in North Carolina's requirement that municipalities issue a request for proposals to private ISPs as part of the approval process.<sup>173</sup> Specifically, the city must make clear the nature and scope of broadband service it wants provided and explain what actions the municipality is prepared to take in facilitating service provision (e.g., subsidies, rights-of-way, tax incentives, etc.).<sup>174</sup> The municipality must then review the proposals it receives, considering "any relevant factors" including, but not limited to, technical matters, the proposer's experience in the market, and costs.<sup>175</sup>

---

<sup>171</sup> See *supra* Part II.B.2.a.

<sup>172</sup> UTAH CODE ANN. § 10-18-202(3) (LexisNexis 2012).

<sup>173</sup> N.C. GEN. STAT. § 160A-340.6(a) (2012).

<sup>174</sup> *Id.* § 160A-340.6(b).

<sup>175</sup> *Id.* § 160A-340.6(d).

A defining characteristic of North Carolina's system is that the municipality is then entitled to negotiate contracts with "any responsible proposer," bargaining over the relevant factors in order to ascertain which proposal will best suit the city's demands.<sup>176</sup> Once the city concludes its negotiations with all proposers and selects the most favorable proposal, a sixty-day window opens during which the city and that private company must finalize a contract, after which the city may open negotiations with the next-best proposer.<sup>177</sup> Should the municipality fail to reach an agreement with the next-best proposer, it may build its own network.<sup>178</sup>

On the one hand, this system suffers from the all-too-common flaw of adding procedural hurdles to the project, giving private ISPs the opportunity to needlessly delay the project simply by interacting for the sake of wasting time.<sup>179</sup> However, the negotiations permitted during this time make this system far superior to the requests for permission to build, as in Pennsylvania.<sup>180</sup> Such negotiations go to the heart of what the private ISPs want—the ability to provide service for profit—while allowing the municipality a chance to bring in the broadband Internet service at an affordable rate, perhaps via various forms of public subsidies. If successful, such negotiations will end in a compromise in which both sides get what they want, eliminating the need for protracted legal or public opinion battles. In the end, if the city still opts to build its own network, its actions will be out of necessity as the private sector will have opted not to enter the market on acceptable terms.

While this provision is quite reasonable as a middle ground, it in no way alleviates the need to reform other provisions in state laws, including North Carolina's. Other burdensome provisions weigh heavily against a municipality in its negotiations with private ISPs. In the context of this particular provision, the more difficult it is for a city to build a network, the less flexible private ISPs are likely to be in negotiations as they can be confident that even if negotiations fail the public network may still never materialize.

---

<sup>176</sup> *Id.*

<sup>177</sup> *Id.* § 160A-340.6(f).

<sup>178</sup> *Id.*

<sup>179</sup> *See supra* Part II.B.2.a–d.

<sup>180</sup> *See supra* Part II.B.2.a (describing Pennsylvania's requirement that incumbent ISPs have time to consider entering the market).

*c. The Unserved Area Exemption*

Recognizing the hardships faced by citizens in rural areas, some states have adopted the unserved area exemption, which protects municipalities deemed “unserved” by the private sector from the requirements of the statute. For example, North Carolina’s version defines an unserved area as “a census block . . . in which at least fifty percent (50%) of households either have no access to high-speed Internet service or have access to high-speed Internet service only from a satellite provider.”<sup>181</sup> Municipalities seeking this exemption must petition the North Carolina Utilities Commission for a determination that the area is unserved, at which time private ISPs may also object to the petition on any grounds that argue against the city’s eligibility to be deemed unserved.<sup>182</sup>

This form of exemption is absolutely critical to broadband deployment, especially in light of the FCC’s findings that deployment is proceeding more slowly than desired.<sup>183</sup> Unserved communities like those specified in North Carolina’s statute are exactly the sort of municipalities likely to crave a public network to fill the lack of broadband service. Those same communities are also likely to be viewed by the private sector as unprofitable and thus private ISPs are unlikely to enter the market. Consequently, municipal networks are the only real hope of broadband access for citizens in those areas, and imposing the restraints discussed in this Note would likely obliterate the prospects of a public network coming to fruition. The modified provisions discussed in Part II.B.2 are designed to protect ISPs’ interests in expanding into new markets. However, these procedural hurdles are not necessary in small rural communities because ISPs are unlikely to expend the resources necessary to serve these remote and sparsely populated areas.

### III. JUSTIFICATIONS FOR THE STATE-LEVEL PRONG

The primary justification for the state-level prong is that it facilitates broadband penetration in both unserved and underserved areas. The FCC expressed this view in its analysis of the circumstances of *Missouri Municipal League*.<sup>184</sup> Simply put, municipalities are entities

---

<sup>181</sup> N.C. GEN. STAT. § 160A-340.2(b).

<sup>182</sup> *Id.*

<sup>183</sup> See *supra* Part I.A and I.C for discussions of the FCC’s position on broadband deployment rates.

<sup>184</sup> See *Nixon v. Mo. Mun. League*, 541 U.S. 125, 142 (2004) (Stevens, J. dissenting) (“[M]embers of the Federal Communications Commission . . . have taken the view that municipi-

that can provide broadband Internet service and, in some cases, may be the only entity willing to take on the expense of providing such service. Thus, restrictions on municipalities' ability to provide that service, whether procedural hurdles or cost-raising measures, inhibit the national availability of broadband service.

Broadband deployment is analogous to the deployment of electricity in the United States in the early twentieth century. In the 1880s, most electricity in the United States was supplied by large, private companies that did not view extending service to less densely populated areas as profitable or feasible and thus chose to ignore them in favor of urban markets.<sup>185</sup> In 1889, Detroit was the first municipality to create its own power company, which was successful in cutting costs to customers.<sup>186</sup> Over the next few decades, following Detroit's example, over 3,000 municipalities formed their own power companies.<sup>187</sup> One commentator identified three major impacts of these developments: (1) Congress passed the Rural Electrification Act of 1936, which provided federal assistance for electricity service deployment to rural areas; (2) public companies put added pressure on private companies to operate more efficiently, lowering costs and igniting innovation; and (3) unserved municipalities were able to remain economically viable by taking matters into their own hands and building their own power systems.<sup>188</sup>

The similarities between the electricity and Internet markets in this context are striking. FCC Commissioner Copps pointed directly to rural electricity expansion in his praise for municipal broadband projects.<sup>189</sup> A scholar notes that private ISPs are acting the same way that private power companies did in lobbying strongly in opposition to public entities entering the market.<sup>190</sup> Thus, there is reason to believe that, with widespread municipal broadband, the result would be similar in that broadband service would become far more widely available and arguably at higher quality. Such a similarly positive result is not certain, as broadband technology continues to evolve relatively quickly as compared to plumbing or paving, but history indicates that

---

pal entry 'would further the goal of the [Telecommunications Act of 1996] to bring the benefits of competition to all Americans, particularly those who live in small or rural communities in which municipally-owned utilities have great competitive potential.').

<sup>185</sup> O'Loughlin, *supra* note 54, at 483.

<sup>186</sup> *Id.*

<sup>187</sup> *Id.*

<sup>189</sup> Gotsch, *supra* note 87.

<sup>190</sup> O'Loughlin, *supra* note 54, at 490.

municipalities stand a good chance of satisfactorily filling the role of service provider. Moreover, this Note is more concerned with unserved communities, as most areas populated enough to have private ISP broadband service available have no need—and thus little, if any, desire—to construct a municipal network that would compete directly with the private sector.

Another justification for municipal broadband is that municipal networks combat the private sector's tendency toward monopolistic or oligopolistic behavior, keeping prices reasonable and quality of service high.<sup>191</sup> Similarly, consolidation in the telecommunications industry is concentrating control over the Internet in the hands of a few private companies.<sup>192</sup> Municipalities serve as competitive threats to the established private ISPs, forcing them to keep prices down and quality high. Laws that restrict municipal entry into the market degrade the efficacy of this deterrent effect and thus should be minimized.

#### IV. COUNTERARGUMENTS TO THE STATE-LEVEL PRONG

The most prominent argument against municipal networks is that they are likely to fail under their own expenses and debt burdens. However, this counterargument has been addressed throughout the proposed solution, as debt management is an integral part of the proposed solution via feasibility studies.<sup>193</sup>

A novel counterargument to this Note's proposed solution is that some state laws may not actually apply to broadband networks at all, as broadband is technically classified as an "information service."<sup>194</sup> But this counterargument is speculative at best, as it is largely semantic and lacks any verifiable evidence that such an interpretation has ever been applied.<sup>195</sup> Moreover, the author advancing this argument, John Blevins, focused his research on the signaling and chilling effects of municipal broadband regulation, agreeing that the restrictions "have played a key role in stifling municipal services," and thus in

---

<sup>191</sup> See *id.* at 483.

<sup>192</sup> See Craig Dingwall, *Municipal Broadband: Challenges and Perspectives*, 59 *FED. COMM. L.J.* 67, 76–77 (2006).

<sup>193</sup> See *supra* Part II.B.3.a.

<sup>194</sup> Blevins, *supra* note 10, at 110–11 ("Indeed, several of the state laws never applied to broadband, or stopped applying after the FCC reclassified broadband access as an 'information service,' which . . . arguably limits the scope of some states' restrictions on municipal broadband," as some laws restrict "telecommunications services.").

<sup>195</sup> *Id.* at 111.

stifling broadband deployment.<sup>196</sup> Therefore, Blevins's argument does not obviate the need for this Note's proposed solution.

Another counterargument addresses the problem of broadband deployment by instead using federal funds to subsidize private construction of broadband networks in rural areas. For example, in October 2011, the FCC approved a plan to expand the purpose of the \$4.5 billion Universal Service Fund ("USF") from helping deploy only telephone service to rural areas to deploying broadband to rural areas.<sup>197</sup> In July 2012, the FCC announced \$115 million in public funding would be disbursed from the Connect America Fund (created via the USF's modernization) to deliver broadband service to about 400,000 customers in rural areas within three years.<sup>198</sup>

However, this sort of solution is insufficient given the still-significant lack of broadband deployment, especially in rural areas.<sup>199</sup> The USF and similar public funds are not enough to fill the gaps quickly and municipalities, which are vastly more responsive to their own economic needs and limits than public funds, are in a far better position to assess their respective situations. While subsidies of this sort are helpful, they do not go far enough, as unserved communities remain at the mercy of a large entity for help in obtaining broadband service (albeit a federal one rather than a private ISP) rather than having the power to take matters into their own hands and fix the problem quickly.

Another argument made against municipal networks is that they are anticompetitive to the point of creating antitrust liability for their owners. While the state action doctrine shielding state-sanctioned enterprises from federal antitrust law likely does not apply to municipalities,<sup>200</sup> this argument still fails because the proposed solution includes

<sup>197</sup> Whitney Burdette, *FCC Approves Plan to Reform Universal Service Fund*, ST. J. (Dec. 12, 2011), <http://www.statejournal.com/story/15915426/fcc-approves-plan-to-reform-universal-service-fund>.

<sup>198</sup> News Release, FCC, FCC Kicks-Off 'Connect America Fund' with Major Announcement: Nearly 400,000 Unserved Americans in Rural Communities in 37 States Will Gain Access to High-Speed Internet Within Three Years (July 25, 2012), [http://transition.fcc.gov/Daily\\_Releases/Daily\\_Business/2012/db0725/DOC-315413A1.pdf](http://transition.fcc.gov/Daily_Releases/Daily_Business/2012/db0725/DOC-315413A1.pdf).

<sup>199</sup> See News Release, FCC, FCC Broadband Report Finds Significant Progress in Broadband Deployment, but Important Gaps Remain (Aug. 21, 2012), [http://transition.fcc.gov/Daily\\_Releases/Daily\\_Business/2012/db0821/DOC-315866A1.pdf](http://transition.fcc.gov/Daily_Releases/Daily_Business/2012/db0821/DOC-315866A1.pdf) (finding that 19 million Americans still lack access to fixed broadband service, 14.5 million of whom live in rural areas).

<sup>200</sup> See *Parker v. Brown*, 317 U.S. 341, 350–51 (1943) ("We find nothing in the language of the Sherman Act or in its history which suggests that its purpose was to restrain a state or its officers or agents from activities directed by its legislature."). The state action doctrine may not apply to municipal broadband, though, because *Parker v. Brown* requires the state to affirma-

safeguards to prevent the municipal network from using its public resources to anticompetitive ends.<sup>201</sup>

Furthermore, as a matter of economic policy, the ISP with the greatest advantage in just about any market will be the incumbent (i.e., the first entrant to the market). Professor Hannibal Travis observed that “[t]he market for local access to broadband tends to be a ‘natural monopoly,’ at least in its stages of ‘growth,’” as “large economies of scale . . . favor monopolists over new entrants” regardless of whether the entity that first served the market is owned privately or publicly.<sup>202</sup> Considering the safeguards included in this Note’s proposed solution and the nature of the broadband market, any monopolistic advantage a municipal network enjoys would be the product of natural market forces. Any private ISP would enjoy the same advantages if it were to take advantage of this Note’s proposal to require a private sector appeal before constructing a municipal broadband network.<sup>203</sup>

A counterargument from the extreme end of the pro-municipal network spectrum is that this Note’s proposed solution does not go far enough and that municipalities should seize control of the “last mile”<sup>204</sup> of broadband infrastructure, leaving private ISPs to handle the “backhaul.”<sup>205</sup> The argument is efficiency-based, as it asserts that separating the backhaul from the last mile will encourage the separate entities to innovate and improve in their specific fields while cutting the excess costs associated with each ISP having to build its own lines in both the last mile and the backhaul.<sup>206</sup>

However, even the author of this argument admits that it might be an “unworkable” solution designed to educate regulators by aiding their understanding of “core issues with the current regulatory struc-

---

tively sanction the action, in this case the construction of municipal broadband networks. For further discussion of the state action doctrine in the municipal context, see generally Donald Gene Kalfen, *Municipal Antitrust: An Overview*, 60 CHI.-KENT L. REV. 349 (1984).

<sup>201</sup> See *supra* Part II.B.2.d–e (providing, among other things, that some advantages municipalities enjoy in constructing and operating broadband networks which private ISPs lack cannot be used by the municipality once private ISPs declare their intent to enter the market).

<sup>202</sup> See Travis, *supra* note 159, at 1715–16.

<sup>203</sup> See *supra* Part II.B.3.b.

<sup>204</sup> The “last mile” includes the wires run from the utility pole to the home. Myles Roberts, Note, *Opening the Last Mile to Competition*, 4 VA. SPORTS & ENT. L.J. 309, 310–11 (2005).

<sup>205</sup> “Backhaul” includes the more centralized data processing and delivery equipment into which the “last mile” is connected. See Rural Broadband Report, 24 FCC Rcd. 12,791, 12,828 (Oct. 19, 2009).

<sup>206</sup> See Roberts, *supra* note 204, at 331–33, 336–37.

ture” in hopes of facilitating a “major regulatory overhaul.”<sup>207</sup> While the proposal is bold and well-articulated, it is impractical in its scope and ambition as well as dangerous in creating a monopolist in every market that would lack incentive to innovate over the last mile. In contrast, this Note’s proposed solution is far more practical in that its suggestions are more politically palatable and less jarring to the status quo.

Another potential response to this Note’s proposed solution is to encourage municipalities to subsidize advanced wireless Internet service (e.g., individual wireless Internet computer plug-in devices from Verizon Wireless) wholesale from private ISPs for the benefit of residents and businesses. While this would save the municipality a great deal of money and time, it is ultimately an insufficient response to the core problems this Note seeks to resolve. Aside from wireless broadband’s present inferiority to wired networks in both speed and reliability,<sup>208</sup> this solution still relies on private ISPs to provide service to isolated and unserved rural areas, a prospect of questionable profitability for the private ISPs. The subsidization plan also commits the municipality to dedicating its resources to a budget expense indefinitely, without the prospect of recovering the costs in the long run through the operation of a profitable ISP business or via sale of the municipal network to a private entity in the future.

#### CONCLUSION

State legislatures are in the unenviable position of having to balance the sometimes competing interests of their various constituencies, and that is the case in the municipal broadband context. Many states have put too much emphasis on the private ISPs’ concerns by effectively prohibiting municipal broadband networks. While the private ISPs’ concerns about direct competition with public entities for customers are legitimate, states should not take the drastic step of prohibiting public entities from entering the broadband market entirely. Instead, states should carefully construct laws that are designed to facilitate municipal broadband in underserved communities because of the great benefits these communities derive from broadband. These laws, though, should also reasonably protect the private sector’s interests in expanding its networks to these same areas.

---

<sup>207</sup> *Id.* at 310.

<sup>208</sup> *See supra* Part I.B.

In light of the tremendous industry pressure the private sector exerts on state legislatures, the federal government must force states to relax their laws impeding municipal broadband. The most effective way for the federal government to do so is by amending section 253(a) of the Telecommunications Act of 1996 to expressly apply to public entities. Amending the law would grant the FCC authority to examine the impact of state laws on a case-by-case basis, declaring those statutes which effectively prohibit municipal broadband to be preempted.

Above all, policymakers at both the state and federal levels need to look past the economics of this debate and see the real impact the lack of broadband access has on people's everyday lives. The prospect of a home lacking electricity or telephone service today is unthinkable to most Americans, but this was not always the case. Federal, state, and local governments all played integral and often direct roles in ensuring that Americans in all areas of this expansive nation would have access to these critical services at affordable prices. As the Internet's role in daily American life continues to grow, the need for reliable and affordable high-speed Internet access will only become more pressing. Federal and state legislators should follow in their electricity-focused predecessors' footsteps by embracing municipal broadband as a means to illuminate the information technology darkness in which those without affordable broadband are forced to live.

*April 21, 2008 Publication: News Tribune, The (Tacoma, WA) Page: B05 Word Count: 399*

Editor's note: This originally appeared on the Inside the Editorial Page blog: [blogs.thenewstribune.com/oped](http://blogs.thenewstribune.com/oped)

Times do change. Pierce County telecom entrepreneur Brian "Skip" Haynes once hated the very idea of Tacoma Power's Click!Network.

Now his rapidly growing company, Rainier Connect, is using the utility's fiber-optic network to expand its business and is building a new headquarters in Tacoma's Brewery District.

The irony is not lost on the folks at Tacoma Power, although there was no trace of it in the announcement by Click! last week. The news: Rainier Connect, the 98-year-old, family-owned firm formerly known as Mashell Telecom, has signed to become the fourth private company, or ISP, providing broadband Internet services via cable modem to Click! customers.

Rainier Connect has been using the city's fiber-optic network since 2001 to provide phone and data service.

No small irony here. Back in 1996, when the City Council debated whether to allow Tacoma Power to build the network and provide a cable-TV alternative to widely detested cable monopoly Viacom (later TCI, now Comcast), Haynes objected loudly.

Haynes authored an oped piece for The News Tribune arguing that government had no business competing with private telecom companies. But Viacom's reputation for lousy service was so bad that the public clamored for any reasonable alternative to the cable monopoly, even if it was Tacoma Power. The council vote was unanimous.

There's no disgrace in Rainier Connect's new hookup with Click! Network. The company, based in Eatonville for most of its history, has prospered serving the rural market and built a reputation for responsive service. It was one of the first small, independent firms to take advantage of telecom deregulation to offer "bundled" products.

Now Haynes and Rainier Connect are ready to compete with Comcast and the three ISPs that operate over the Click! Network. And the winners are the Click! customers who have far more telecom alternatives to choose from than most U.S. consumers.

We haven't talked to Haynes lately. But he probably would admit that he never foresaw the competitive opportunities that Click! ultimately opened up for his own business.

Times do change.

### AFFILIATED TRANSACTIONS

Mashell Telecom, Inc. rents office space, utilized as corporate headquarters and network operations center, from its affiliate, Carrera GT, LLC. This leased property facilitates both the ILEC and CLEC operations of the business and is appropriately allocated between regulated and nonregulated operations using Part 64 factors and recorded in account 6121-3, Land & Building Expense-Rents.

During 2015, the Company along with another Click Preferred ISP, NetVenture, transferred all Click Network Subscribers to an affiliate Tacoma's Best Internet, LLC. This transfer provided the Company with a 50% membership equity in TBI. The Company entered into a management agreement with TBI to provide support to TBI's entire subscriber base. This agreement applies only to CLEC operations and all associated expenses and revenue are properly allocated to nonregulated operations.

Certain shareholders holding five percent or more of the stock, directly or indirectly, of the Company are also employees of the Company and receive from the Company employment compensation together with employment-associated benefits in accordance with benefit plans that are in place.

# EXHIBIT 48

## **Construction and Maintenance**

Tacoma Power has a number of established preventive and predictive maintenance programs and continues to develop more. For example, the substation predictive maintenance program can identify substation equipment requiring corrective action before a failure occurs through utilization of infrared, oil sample testing, and dissolved gas analysis. Tacoma Power owns and maintains approximately 49,000 power poles. The Pole Replacement program strategy is to test and treat 9% of the poles annually maintaining an 11-year cycle. Tacoma Power also performs tree trimming around its distribution and transmission lines, maintaining two and four year trimming cycles along with programs to replace dangerous trees with utility friendly trees.

## **Telecommunications Infrastructure**

Approximately 1,500 miles of fiber and coaxial cable have been constructed by Tacoma Power in the cities of Tacoma, University Place, Fircrest, Lakewood and Fife, and portions of unincorporated Pierce County, providing Tacoma Power with a state-of-the-art telecommunication system with which supports transmission and distribution operations, advanced metering, and retail and wholesale commercial services. The network currently covers approximately 66% of the households in Tacoma Power's service territory.

The network consists of a hybrid fiber-optic coaxial ("HFC") system, which delivers two-way signals for cable TV, cable modem Internet services, and advanced metering. In addition, SONET ("Synchronous Optical Network") and Gigabit Ethernet technologies are used to support communications across Tacoma Power's transmission and distribution system and to carry out data transport services for commercial customers. The network was designed and constructed to meet high telecommunications standards, containing a redundant backbone and redundant service loops, which seek to ensure uninterrupted signal transport in the event of a network break. A network surveillance system allows Tacoma Power to monitor the system at all times.

**Commercial Telecommunication Services.** Launched in 1998 under the brand name Click! Network, Tacoma Power provides three commercial telecommunication services to customers of Tacoma Power: retail cable television, wholesale broadband transport and wholesale high-speed Internet over cable modem. Click! Network is one of several providers of telecommunications services in the Tacoma area.

Click! Network is accounted for as part of the Electric System. In 2016 Click! Network's annual revenues were approximately \$26.6 million, and annual operating expenses plus gross earnings taxes were approximately \$29.7 million.

Cable television is Click! Network's primary retail business. Click! currently has approximately a 15% share of a very competitive local cable television market. Cable TV products available to both residential and business customers include broadcast television, digital and high-definition channels, digital video recording capability, TiVo with access to over-the-top ("OTT") content such as Netflix, Hulu, YouTube and Pandora, TVEverywhere, and a wide variety of video-on-demand services. Video-on-demand services include local programming tied to schools, colleges, local governments and community organizations strengthening Click! Network's brand identity in the communities served.

Under wholesale Master Service Agreements, seven telecommunications carriers provide high capacity last mile data transport circuits to their customers utilizing Click! Network's telecommunications infrastructure. The seven telecommunications carriers provide SONET data services ranging from DS-1 lines to OC-48 lines and customized Metro Ethernet circuits to meet data transport and web access needs of large and small businesses in the Tacoma area.

Also under wholesale Master Service Agreements, two qualified locally based Internet Service Providers ("ISPs") provide high-speed Internet services via cable modems to their customers utilizing Click! Network's telecommunications infrastructure. The ISPs provide a variety of speed packages to meet the needs of the residential

and business consumers in the Tacoma area. As part of the contract, the two ISPs also provide customer service, cable modem installation, customer premise equipment and technical support services to their Internet customers.

Click! ended 2016 with 17,468 cable TV customers, 23,344 wholesale high-speed Internet service customers, and 173 wholesale broadband transport circuits.

Click! also continues to provide the City of Tacoma I-Net services to approximately 190 sites to keep the cost of telecommunications low for many governmental entities.

Click! Network implemented a 12.9% cable TV service rate increase effective March 1, 2017. An additional cable TV rate increase is planned for March 1, 2018. These cable TV rate increases are expected to generate approximately \$7.7 million in additional revenue. A major portion of additional revenue will be used to cover increases in programming costs.

### **CAPITAL IMPROVEMENT PROGRAM**

Tacoma Power has funded its past capital improvement programs from contributions in aid of construction, proceeds of Parity Bonds and subordinate lien revenue bonds, and Revenues of the Electric System. The actual amounts spent during the past five years, together with the sources of funds used, are displayed in the table below.

#### **Historical Sources of Capital Improvement Funds (\$000)**

Source of Funds	2012	2013	2014	2015	2016
Parity and Subordinate Lien Bond Proceeds	\$ 51,730	\$ 35,723	\$ 58,834	\$ 58,003	\$ 50,995
Contributions in Aid of Construction <sup>(1)</sup>	4,716	3,735	3,029	4,777	3,293
Cash Reserves	16,643	23,656	21,160	19,301	30,536
<b>Total</b>	<b>\$73,089</b>	<b>\$63,114</b>	<b>\$83,023</b>	<b>\$82,081</b>	<b>\$84,824</b>

(1) Customer contributions to fund capital projects.  
Source: Tacoma Power

Tacoma Power has a long-term goal to finance an average of 50% of its normal capital requirements from net operating revenues with the balance from contributions in aid of construction received from customers and borrowed funds. However, due to varying water conditions, the amount of the capital improvement program, and periodic cash defeasance of outstanding Parity Bonds, the amount actually financed from net operating revenues varies from year to year. From 2012 to 2016, Tacoma Power financed an average of 66% of its capital improvements from borrowed funds. Tacoma Power's policy is to fund major projects with borrowed funds.

the City Council. The Department's budget is presented to the Board for review and approval and then forwarded to the City Council for approval and inclusion in the City's budget. The Board meets twice monthly.

The Department consists of the Light Division ("Tacoma Power"), Water Division ("Tacoma Water"), and Belt Line Railroad Division ("Tacoma Rail"). The Board has supervision and control over most Department business. In the case of budgets, rates, bond issues, and additions and betterments to a utility system and system expansions, actions approved by the Board must also be approved by the City Council.

The Board appoints the Director of Utilities who is the chief executive officer of the Department. The Board must evaluate the performance of the Director annually and reappoint the Director every two years subject to reconfirmation by the City Council with the next reconfirmation scheduled for 2017. The reappointment of the Director has been approved by the Board and is currently pending before the City Council. William A. Gaines will retire from the position, effective December 2, 2017. The Director, with the concurrence of the Board, has the power to appoint division superintendents.

Utility rates and charges are initiated by the Board and adopted by the City Council, and are not subject to review or approval by any other governmental agency. See "ELECTRIC SYSTEM CUSTOMERS, ENERGY SALES, REVENUES AND RATES—Electric Rates."

The City Charter provides that the revenues of utilities owned and operated by the City shall never be used for any purposes other than the necessary operating expenses thereof, including a reasonable gross earnings tax imposed by the City Council for the benefit of the general fund of the City, interest on and redemption of the outstanding debt thereof, the making of additions and betterments thereto and extensions thereof, and the reduction of rates and charges for supplying utility service to consumers. The funds of any utility may not be used to make loans to or purchase the bonds of any other utility, department, or agency of the City. See "FINANCIAL INFORMATION—Taxes Imposed on Tacoma Power."

### **Tacoma Power - General**

Tacoma Power is organized into six business units:

- **Generation** operates and maintains Tacoma Power's four hydroelectric generating projects (Cowlitz, Cushman, Nisqually and Wynoochee) and the associated recreational facilities, fish hatcheries and other project lands.
- **Power Management** manages, schedules and directs the power supply portfolio which includes Tacoma Power-owned generation and power supply contracts. Power Management markets bulk and ancillary power supply services, performs power trading activities, plans for and acquires conservation resources, and is responsible for compliance with various state, regional and federal regulatory mandates.
- **Transmission and Distribution** plans, constructs, operates and maintains the transmission and distribution systems including substations, the underground network system, revenue metering facilities and all overhead transmission and distribution systems.
- **Rates, Planning and Analysis** plans for and manages the retail rate process, financial planning activities, operations and capital budget development and monitoring, strategic asset management, construction project management, strategy management, and energy risk management analysis and modeling.
- **Click! Network** plans, constructs, operates and maintains a hybrid fiber coaxial ("HFC") telecommunications network that supports the operation of Tacoma Power's electrical transmission and distribution system, provides retail cable TV, and wholesale high-speed Internet and data transport services to resellers.
- **Utility Technology Services** ("UTS") addresses existing and emerging technology requirements essential to managing Tacoma Power's computing systems. This includes supporting and enhancing utility system operations, communications, metering, cyber security, relevant smart grid applications, and the information technology strategic planning. UTS unifies the planning, design, deployment and maintenance of operational

# EXHIBIT 48 (a)

## **2016 SUPERINTENDENT'S REPORT TACOMA POWER**

### **CLICK!**

#### Financial Status

Click! Network commercial revenues declined from \$27.3 million in 2015 to \$26.7 million in 2016. The retail cable TV customer base dropped 4.6 percent ending the year with 17,468 active customers, and the Internet cable modem customers served by the three wholesale Internet Service Providers (ISPs) - Advanced Stream, Net-Venture, Inc., and Rainier Connect, grew by .4 percent ending the year with 23,344 active customers. Click! provided 173 broadband transport circuits to Click!'s wholesale service providers allowing them to provide an array of telecommunication services to many businesses in the service area. Additionally, Click! continued to provide the City of Tacoma I-Net services to approximately 190 sites, keeping the cost of telecommunications low for many government entities, and also provided support for just over 15,000 gateway power meter connections.

#### Cable TV Rate Adjustments

Because a final policymaker decision regarding Click! Network's long term business plan remained outstanding in 2016, no cable television rate increases were implemented. Although Cable television prices continue to remain under market, the postponement of rate adjustments contributed to the decline in revenues.

#### Channel Additions

During 2016, Click! Network migrated 10 networks from optional service levels to its Broadcast package and migrated Big Ten Network and Sprout from its Sports & Family package to its Click! ON Digital package. Three networks discontinued operations in 2016, Pivot, UWTV, and MundoMax, but TV Tacoma HD was added, bringing the total to 376 video and 65 audio channels. Click! also added a variety of national and local video on demand content for a total offering of over 12,000 hours of content to make the product more competitive. Additionally, Click! added new networks to its Watch TV Everywhere service. Click!'s cable TV customers can now enjoy watching Click! video content from 84 networks on any of their mobile devices with an internet connection.

#### Website Improvements

Click! Network launched a new website in June 2016. Improvements included streamlined navigation, responsiveness to mobile device screen sizes, enhanced TV listings, and an online shopping cart. Click! cable television products, along with ISP internet packages, are now prominently displayed, enabling the potential customer to select services and submit a self-service order online.

### Customer Satisfaction Survey

Customer Satisfaction survey cards were mailed to all new cable TV customers and to all customers who had a service related issue. Click! customer service and technicians representatives received ratings averaging 3.7 and 3.8 respectively on a scale of 1 – 4. In addition, a Customer Satisfaction Survey conducted on Click! Network's behalf by Washington State University's Social & Economic Sciences Research Center (SESRC) showed a mean average overall customer satisfaction score of 8.08 on a 1-10 scale. The results revealed that customers are very satisfied with the services provided by Click! and in particular, recognized the quality of service provided by our Sales and Service Representatives and Service Technicians.

### New Tools

Click! purchased the CPAT Flex Digital Leakage Monitoring System to address concerns about interference from cable leakage in the aeronautical and LTE bands. The CPAT Flex Digital Leakage Monitoring System automates the signal leakage detection process freeing up technicians for other tasks. Since the tool is continuously monitoring the network, signal leakage is quickly detected and repaired.

Click! also purchased the CheetahXD software to replace the former Cheetah Lite version. The CheetahXD software helps Click! network technicians manage the HFC network by providing end-to-end visibility across the HFC operations environment, and enables NOC personnel to proactively isolate network problems, trace root causes, assess potential impacts, and prioritize truck rolls by pinpointing fault and performance issues in real-time. With CheetahXD software, HFC network assurance is simplified, operational costs are reduced, and network performance is improved resulting in enhanced customer satisfaction.

### Spectrum Reclamation

In 2015, Click! fully converted its system from analog to digital and freed up nineteen (19) 6 MHz channel slots. Since then, 6 of those freed up channels have been added to the bank of downstream Internet channels to meet the growth in customers and Internet usage. Therefore leaving 13 channels available for use.

### Network Bandwidth

During 2016, Click! added NETFLIX cache servers to the local network. The addition of these cache servers has reduced bandwidth utilization by as much as 30%. Click! added an additional 10 Gig connection at Downtown South and Downtown North for a total of 30 Gig potential capacity at each location. The Core routers are being upgraded from the Cisco 7600 platform to the Cisco ASR 9912 platform. This will provide the necessary 10 gig ports and throughput to support current and future network growth. The Cable Modem Termination Systems (CMTS) are also being upgraded. The existing Cisco uBR 10000 series CMTSs are going to be replaced with new Cisco cBR-8 CMTSs. The first set of Cisco cBR-8 CMTSs were purchased during 2016. These will support DOCSIS 3.1 Gigabit services and provide higher port and bandwidth capacity for meeting bandwidth demands and subscriber growth.

### Asset Management Program

During 2016, Click! continued to build its asset list and has developed its registries for the Router, HFC Distribution, and Headend Equipment asset classes, and is prepared to participate in the Tacoma Power's Strategic Asset Management program. Click! also developed a Network Maturity Model, to more effectively manage its asset lifecycles and plan future capital expenditures.

### Safety and Work Practices

In 2016, Click! continued to make improvements to its safety management practices. Improvements included: (i) Focusing on reviewing past performance; (ii) improvements in the oversight of injured worker claims; and (iii) increased review of leading indicators such as near misses and non-medical injury reports. Additional training was provided on Home Safety and how the employees and their families can be impacted by the activities we engage in outside of our work life. Safety posters and bulletin board messages were utilized to promote safety awareness. Each business unit held monthly safety meetings and the Click! Safety Committee met quarterly to improve safety related communications.

## **GENERATION**

### Hydroelectric Projects

Tacoma Power's hydro plants were available 99.83 percent of the time in 2016 except for scheduled maintenance outages.

### Cowlitz

Construction is wrapping up on the Cowlitz Falls North Shore Collector for collection of downstream migrating smolts from the upper Cowlitz River. The collector, located at Lewis County Public Utility District Cowlitz Falls Dam, will improve natural fish runs in the Cowlitz River and help Tacoma Power meet its Federal Energy Regulatory Commission (FERC) license obligations. The \$35 million construction project is scheduled for final commissioning and operation in April, 2017. The 70 ton head gate for unit 51 was removed for the first time in 48 years and rehabilitated.

### Cushman

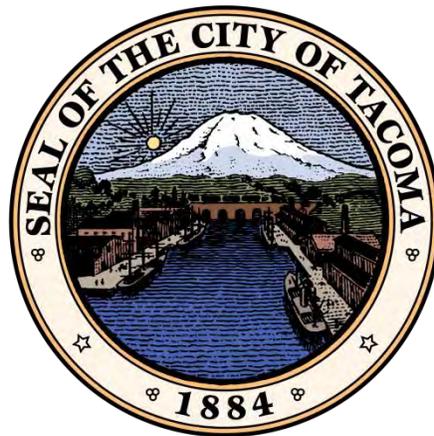

Construction on both of the new Cushman fish hatcheries were completed and began operation in 2016. One Cushman unit was modified to allow for synchronous condensing operation which will allow Power Management to supply and sell capacity without consuming water. The 20-year-old exciters for all three generators at Cushman 2 were replaced. Construction of recreation improvements in the Staircase area were completed and opened to the public during 2016.

### Nisqually

The 20-year-old exciters were replaced on four units at LaGrande and one governor was upgraded.

# Tacoma Public Utilities

---

## Mission

Tacoma Public Utilities (TPU) provides services that are vital to our quality of life.

## Key Function Organization Chart

## Department Services

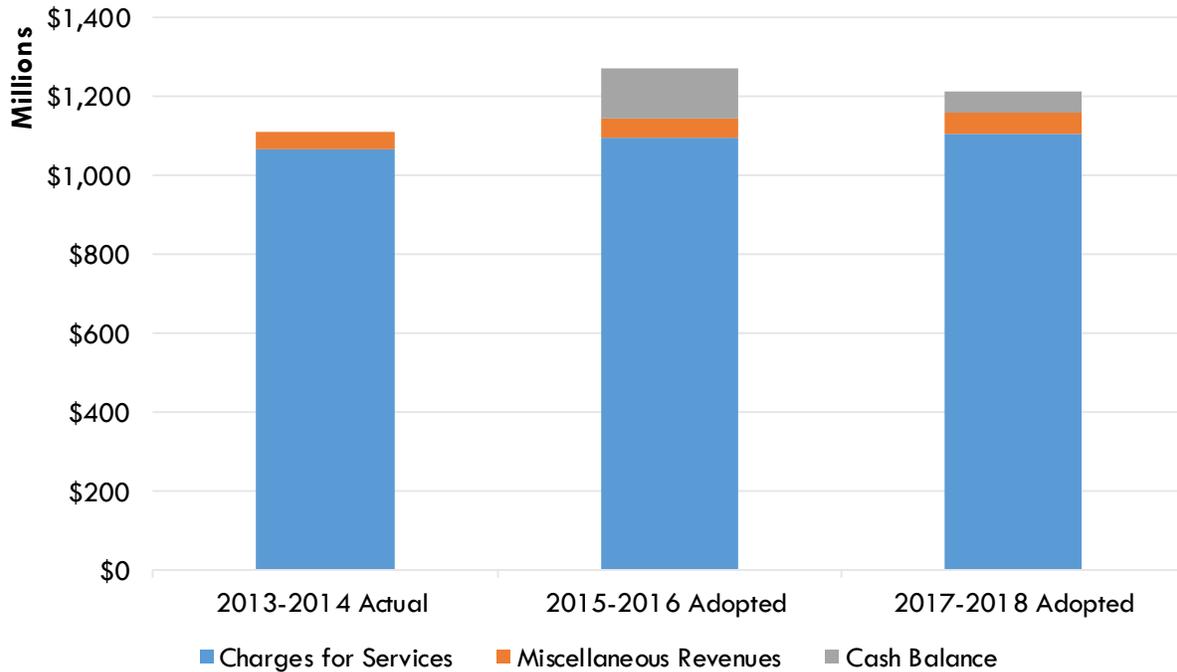

TPU is comprised of all the services of Tacoma Power (including Click! Network), Tacoma Water, and Tacoma Rail. Customer Services and Administration are internal service providers assisting the utilities in fulfilling their mission.

### Tacoma Power

Tacoma Power is a citizen-owned electric utility that generates, transmits, and distributes electricity and provides energy and telecommunications services in an increasingly competitive marketplace. Tacoma Power is committed to providing high-value, competitively-provided products and services to its customers through the quality of its employees and the responsiveness that results from local ownership.

Tacoma Power serves more than 170,000 customers over a 180-square mile area, both inside and outside the city of Tacoma. A first-class environmental steward, almost 100% of power supplied to Tacoma Power customers is from carbon-free and renewable hydroelectric resources. Tacoma Power is also a leader in conservation and maintains some of the lowest power rates in the region.

## Tacoma Public Utilities Funding by Category

	2013-2014 Actuals	2015-2016 Adopted	2017-2018 Adopted
Charges for Services	1,064,888,850	1,093,146,470	1,103,608,079
Miscellaneous Revenues	45,623,135	49,534,563	57,119,803
Cash Balance		128,230,160	51,383,527
<b>Grand Total</b>	<b>\$1,110,511,985</b>	<b>\$1,270,911,193</b>	<b>\$1,212,111,409</b>

## Funding Summary

TPU is comprised of enterprises, including Tacoma Power, Tacoma Water, and Tacoma Rail, which are primarily funded through customer charges for services provided. Services include the provision of electricity, telecommunications, Click! Network, and water to homes and businesses, as well as short-line rail services. Cash in the 2015-2016 biennium was higher than typical due to Tacoma Power paying off long-term debt using cash reserves.

## 2017-2018 Utilities Capital Spending Plan

Project Title	New 2017-2018	Previously Appropriated	Total Funding
<b>Tacoma Power</b>	<b>178,384,000</b>	<b>182,660,440</b>	<b>361,044,440</b>
<b>CLICK! Network</b>	<b>6,139,000</b>	<b>5,224,000</b>	<b>11,363,000</b>
CLICK! provides data-transfer to improve the reliability of the Tacoma Power electric system, fiber-optic cable access, and high-speed telecommunication. Sample projects include system capacity enhancements and internet bandwidth infrastructure growth.			
<b>General Plant</b>	<b>11,928,000</b>	<b>7,020,440</b>	<b>18,948,440</b>
General Plant projects include additions, replacements and modifications to general facilities and equipment including office buildings, warehouses, parking areas and the SAP system.			
<b>Power Generation</b>	<b>47,124,000</b>	<b>66,071,000</b>	<b>113,195,000</b>
Power Generation projects include work at Tacoma Power's four hydroelectric generating projects (Cowlitz, Cushman, Nisqually, and Wynoochee Projects) and the associated recreational facilities, fish hatcheries and other project lands.			
<b>Power Management</b>	<b>28,850,000</b>	<b>22,538,000</b>	<b>51,388,000</b>
Power Management manages Tacoma Power's long and short term power supply portfolio to meet customer needs. Energy conservation is the primary project. This is an ongoing program.			
<b>T&amp;D Projects</b>	<b>52,391,000</b>	<b>59,180,000</b>	<b>111,571,000</b>
Transmission & Distribution Projects include those associated with electrical transmission lines, distribution lines and related substations. Some sample projects include 230 kV System reliability improvements and downtown infrastructure development.			
<b>Utility Technology Services</b>	<b>31,952,000</b>	<b>22,627,000</b>	<b>54,579,000</b>
Smart Grid projects include those associated with networks, communications, operational systems and other utility business systems. Sample projects include enhancements of communication systems and equipment such as telecommunications and digital radio.			
<b>Tacoma Rail</b>	<b>5,660,000</b>	<b>10,538,000</b>	<b>16,198,000</b>
<b>Communications</b>	<b>235,000</b>	<b>500,000</b>	<b>735,000</b>
Upgrading Tacoma Rail's radio system with a radio repeater system and installing more remote health and location monitoring systems on locomotives.			
<b>Facility Upgrades</b>	<b>1,025,000</b>	<b>1,100,000</b>	<b>2,125,000</b>
Replacing Tacoma Rail's West end track pans and storm water treatment and filtration and upgrading the secondary fueling facility and Tacoma Rail's portion of the Tideflats Intelligent Transportation System.			
<b>Rail Equipment/Vehicles</b>	<b>1,000,000</b>	<b>2,665,000</b>	<b>3,665,000</b>
Locomotive repowers to continue to modernize Tacoma Rail's locomotive fleet.			
<b>Track Improvements</b>	<b>3,400,000</b>	<b>6,273,000</b>	<b>9,673,000</b>
Multiple track relays, switch replacements, and rail rehabilitation projects.

# EXHIBIT 49

## **A Brief History of American Telecommunications Regulation**

Tim Wu

While the history of governmental regulation of communication is at least as long as the history of censorship, the modern regulation of long-distance, or “tele,” communications is relatively short and can be dated to the rise of the telegraph in the mid-19<sup>th</sup> century. The United States left the telegraph in private hands, unlike countries and as opposed to the U.S. postal system, and has done the same with most of the significant telecommunications facilities that have been developed since. The decision to allow private ownership of telecommunications infrastructure has led to a rather particularized regulation of these private owners of public infrastructure -- similar to other laws governing “regulated industries,” yet also influenced by the U.S. First Amendment and antitrust law.

### *Prototypes for Regulation*

Broadly speaking, the regulations have been of three main types: 1) common carriage requirements; 2) interconnection requirements; and 3) scarcity management. Each of these types of regulation can be illustrated through the examples of the three main telecommunications industries of the Nineteenth and early Twentieth century: the telegraph, the telephone and broadcast radio.

The first commercial telegraph was constructed in 1839 in Great Britain. In the United States, by the 1850s the industry was intensely competitive, with multiple carriers frequently serving identical routes. The lack of integration between systems and the low profits for providers prompted a process of consolidation that culminated in Western Union’s gaining a monopoly on long-distance telegraph service by 1866. At the time, no federal antitrust law was available as a tool for regulation, so Congress responded to criticisms of Western Union by

passing the United States' first telecommunication regulatory statute, the Telegraph Act of 1866. The Telegraph Act was intended to foster competition by allowing any company to erect telegraph lines along post roads, and it also included a provision whereby the United States could buy out telegraph companies if it so chose. In practice, the Telegraph Act had little practical effect, as it failed to create effective competition for Western Union, and Congress never exercised its option to buy out the company and nationalize the industry. As a result, through the latter half of the Nineteenth century, Western Union was able to charge monopoly prices, support a newswire monopoly (the Associated Press) and discriminate against disfavored customers through its pricing. The firm was also able to use its monopoly to exert substantial political influence by, among other things, refusing to give certain news organizations access to its system to transmit their reporting. For example, in the contested Presidential Election of 1876, Western Union's backing of Presidential candidate Rutherford Hayes gave the candidate important advantages both in reaching newspaper and detecting the plans of his rival.

In the Mann-Elkins Act of 1910, Congress declared both telegraph and telephone companies (including AT&T, which at the time not only owned Western Union but also had its own monopoly in long-distance telephone lines) to be common carriers. The act placed communications, for the first time, under the jurisdiction a federal agency: the Interstate Commerce Commission (ICC). Being a common carrier meant that telephone and telegraph companies had to offer their services without discrimination to all willing customers who were able to pay, and that they had to charge reasonable rates set by the ICC. In return, the telegraph and telephone companies received certain benefits, such as immunity from liability for the content they carried. The "common carriage" concept, originally a product of English common law remains the basis for the regulation of telephone carriers today.

Shortly after the Mann-Elkins Act, the United States addressed a different but related aspect of AT&T's business practices. In addition to its long-distance monopoly, AT&T provided local phone service, where it faced competition in local markets. In an attempt to eliminate this competition, AT&T routinely refused to allow non-affiliated local carriers to use its long-distance lines, thereby limiting the value of the services they could provide. In response to pressure from the Justice Department, in 1913 AT&T entered into what became known as the "Kingsbury Commitment," which required it to allow competing local providers to interconnect with AT&T's long-distance services.

While important, the Kingsbury Commitment was not a full anti-discrimination remedy. It did not require that AT&T, for instance, connect its local service to that of its competitors, nor did it require AT&T to interconnect its long distance or local networks with competing long-distance carriers, should they arise in the future. The Kingsbury Commitment did not hinder AT&T from creating the phone service monopoly that it enjoyed for most of the Twentieth century, and in the view of many, it represented the U.S. acceptance of an AT&T monopoly.

Scarcity management, the third major form of communications regulation in the United States, became an issue with the rise of broadcast radio in the 1920s. The first commercial station in the country, KDKA in Pittsburgh, Pennsylvania, began broadcasting in 1920. By 1924, the United States had over 1,000 radio stations broadcasting in a state of anarchy under the *ad hoc* supervision of Herbert Hoover, the then-Secretary of Commerce. Throughout the mid-1920's, Hoover managed the station's mutual interference by making case-by-case decisions to have broadcasters either shift their frequencies or share them by operating only limited hours in a day. Ultimately, the courts held that Hoover lacked the legal authority to

impose even this minimal level of order, and the ensuing broadcast free-for-all prompted Congress to pass the Radio Act of 1927.

Because the broadcast spectrum is a physically scarce commodity, the Radio Act made plain that the spectrum would be publicly owned, that the government would regulate entry into the business of broadcasting, and that it would grant broadcasting licenses only “if public convenience, interest or necessity will be served thereby.” To this end, the Radio Act established a commission charged with dividing the spectrum into different classes of stations and issuing licenses to broadcast at particular frequencies, times, locations and power levels. The law also barred the government from censoring broadcasts and required any broadcaster who gave time to a political candidate to “afford equal opportunities to all other such candidates for that office.” The newly created Federal Radio Commission would also declare the first version of what would be called the “Fairness Doctrine”-- requiring that broadcasters give notice and time for advocates on both sides of an issue to be heard.

The provisions of the Radio Act of 1927 were folded into the Communications Act of 1934, which established the Federal Communications Commission and gave the Commission authority to regulate not only radio but interstate and international telegraph and telephone services as well. Its authority eventually extended to broadcast and cable television, as well as internet services. The Communications Act continues to this day to form the foundation for the regulation of these industries.

At the time of the Communications Act, and indeed as early as the Kingsbury Commitment, regulators generally believed that telephone services were a natural monopoly. That is, they thought that even if there were competition in the market, the nature of the underlying technology and business were such that it was highly likely that a dominant firm

would emerge to control the industry and, moreover, that this was the most efficient result. Rather than insist on what was viewed as detrimental competition in the industry, then, until the 1970s regulators supervised the Bell monopoly and regulated matters such as the rates it could charge, the quality of services it provided, and its areas of service coverage.

### *The Era of Deregulation*

For most of the 20th century the main telecommunications carriers were classic regulated industries. Monopoly was tolerated, and even encouraged, by government limits on market entry and exit. In exchange government set prices at reasonable rates of return, and imposed various public interest duties (such as the fairness doctrine discussed above). However, beginning in the late 1960s and continuing through the 2000s, a deregulatory movement transformed telecommunications policy.

By the 1920s the AT&T telephone monopoly was complete enough that the company was able to control vertically integrated markets. For instance, AT&T in the 1930s promulgated a tariff that precluded consumers from attaching any device to their phone lines that was not specifically approved by the company. This “foreign attachments” rule effectively extended AT&T’s phone service monopoly into the market for phones themselves, with the result that customers could only obtain equipment from AT&T. While this vertical integration may have represented a high watermark for AT&T’s monopoly, it became the site of the first cracks in the company’s monopoly.

In the word of Richard Vietor, “deregulation began more or less with a rubber cup.” In the 1950s a company called Hush-a-Phone contested AT&T’s foreign attachments rule, seeking permission to market what a special cup that attached to a phone and made conversations more private. The FCC, at the behest of AT&T, precluded the sale of the attachment, but the

Court of Appeals for the District of Columbia reversed the decision and set forth, for the first time, the rule that a consumer had a “right reasonably to use his telephone in ways which are privately beneficial without being publicly detrimental.” In 1968, in the *Carterphone* decision, the FCC adopted this principle, and over time promulgated the Part 68 Rules, which allowed users to connect whatever they wanted to the system as long as it did not harm either the network or other users. While it would take until 1981 for the FCC to create a full consumer right to attach devices to the network, the *Carterfone* and *Hush-a-Phone* decisions represented the first introduction of competition against AT&T, and the first limiting of its extended monopoly. Eventually, the *Carterfone* decision was extended into a general quarantine on AT&T’s involvement in consumer equipment. It also, importantly, led to rules that forced AT&T to allow others to provide “information services” over its phone lines (which would later mean “internet services”) and to support the rise of the internet service provider industry.

At the same time, several other deregulatory initiatives were underway. In the 1970s, the firm Microwave Communications Inc. (MCI) took advantage of regulatory loopholes and non-enforcement to begin offering limited long-distance services between St. Louis and Chicago, offering AT&T the first long-distance competition it had faced in decades. AT&T took various measures to try to destroy and block its rival, leading to MCI filing an important private antitrust suit. On November 20, 1974, the Justice Department began its own antitrust action against AT&T, alleging that it monopolized the markets for a broad range of telecommunications services and equipment. While the Justice Department had brought antitrust actions against AT&T previously, this suit for the first time sought as a remedy the actual break-up of the company, and in particular the divestiture of the Regional Bell Operating Companies (RBOCs) from AT&T.

On January 8, 1982, AT&T and William Baxter of the U.S. Justice Department reached an agreement that forced AT&T to divest the RBOCs by January 1, 1984. Thus as of that date the twenty-two RBOCs were formed into seven regional holding companies (Bell Atlantic, NYNEX, BellSouth, Ameritech, U.S. West, Pacific Telsis, and Southwestern Bell). These divested companies were not allowed to provide long-distance services in their territories or manufacture telecommunication equipment, both of which were businesses that remained with AT&T. Likewise, AT&T was precluded from providing local telephone service in competition with the RBOCs and from acquiring stock in any of the RBOCs.

The history of cable television has the same pattern of regulation and reregulation. The early cable systems were known as “Community Antennas,” and were constructed in the late 1940s to capture broadcast television signals and transmit them to consumers in remote towns where the broadcasts would not have reached otherwise. By the late 1950s, cable systems had grown into a potential competitor to broadcast televisions, and the broadcasters launched an effort to protect their markets against cable using state and federal lawsuits. After the lawsuits failed, the broadcasters turned to the FCC and convinced it to assert jurisdiction over cable in 1962. The broadcasters argued that cable systems would fragment the audience for broadcast television, destroy the economic viability of free television, and also, by importing distant signals, threaten the values of “localism.” Agreeing with the broadcasters, the FCC placed effective limits on cable’s growth in the late 1960s by requiring that cable operators receive special permission to enter urban markets, effectively blocking the further development of cable television. The hostile approach to cable changed during the deregulatory period of the 1970s, many of the most onerous restrictions on cable were gradually relaxed, in part due to an exchange for new copyright royalties payable to broadcasters.

Another chapter in the deregulatory movement of the 1970s and 1980s was the FCC's controversial repeal of the fairness doctrine, described above. First set forth by the FRC in 1928, and codified in 1949, the fairness doctrine had been upheld against a First Amendment challenge by the Supreme Court in the *Red Lion v. FCC*. However, in the mid-1980s the FCC stopped enforcing the fairness doctrine and eventually repealed most of it. The FCC argued that, *Red Lion* notwithstanding, the fairness doctrine was a violation of the First Amendment, and also claimed it failed to promote speech in the public's interest. Since that time Congress and numerous groups have attempted to have the Fairness Doctrine reinstated, but have not succeeded.

In the 1990s, the FCC also took its first steps away from the traditional model of spectrum management it had employed since the 1930s. Whereas previously the FCC allocated licenses either by lottery or to whomever it believed would "best serve the public interest," in 1994 it conducted the first spectrum auctions, granting the licenses to the highest bidder. While not free from controversy, the auctions have generally been thought to have been a success, as they led both to the market entry of new cellular phone firms, such as long-distance provider Sprint, and proved to be a more streamlined way of awarding licenses, which has encouraged the timely building of networks. The FCC has conducted several other spectrum auctions since 1994, frequently at Congress's direct command.

### *The Contemporary Regulatory Framework*

The Telecommunications Act of 1996, the first major revision of the country's telecommunications laws since the Communications Act of 1934, altered some features of the basic telecommunications system just described. One of the foremost goals of the 1996 Act was to promote competition in local telephone service. AT&T was allowed to return to the local

service market, while local Bell phone companies were allowed to enter the long-distance market and to merge with each other. In addition, the 1996 law created a “line sharing” scheme whereby market entrants would purchase the rights to use the “local loop” facilities owned by the local Bell companies and sell competitive local services. The 1996 Act also preempted all state and local barriers to entering the local phone service market, and since the passage of the 1996 Act the FCC has forborne from enforcing any restrictions on building or acquiring long-distance lines. Despite these substantial changes to the law, most believe the 1996 Act’s effort to create local service competition was a failure. Whether due to the economics of local competition, or foot-dragging on the part of the local Bell company, few viable local phone service companies have emerged since the passage of the Act.

The 1996 Act also failed to address the challenge of internet and broadband internet services. Pursuant to existing rules, telephone companies have long been regulated as common carriers, as discussed above. That meant that providers of DSL service – which runs over phone lines – were common carriers, while the status of cable operators who sell broadband services remained unclear. In 2002 FCC deemed cable broadband an unregulated “information service” not subject to common carriage rules, and it later classified DSL broadband similarly. In 2005, in the case of *FCC v. Brand X*, the United States Supreme Court upheld the FCC’s right to categorize cable broadband providers as “information services.” The practical import of these technical classifications has been to release broadband services from most anti-discrimination, common carriage or line-sharing obligations.

The arrival of broadband in the 2000s led to the rise of the issue of “network neutrality” on the internet, and the more general topic of internet regulation. The Internet’s technologies were born mainly out of government-funded research in the 1960s and 1970s.

While no specific regime governed the internet, in the 1980s and 1990s, new “internet service providers” took advantage of quarantines placed on the Bells to offer dial-up internet services independent of the Bell system. In the early 2000s, as cable and DSL broadband providers replaced dialup ISPs, the issue of Bell and cable control over the vertical internet markets again arose. In the mid-2000s, the center of the network neutrality debate is a debate over the merits or problems with discriminatory carriage -- favoring some content or applications over others. Ironically, today’s debates over network neutrality and discriminatory carriage echo the same concerns that first prompted calls to regulate telegraph companies in the 19th century.

## ECONOMIC DEVELOPMENT IN THE GREATER TACOMA/PIERCE COUNTY AREA

### PURPOSE

Tacoma, like other communities, has evolved in response to changing economic, social, political, and technical dynamics at work not only in the local area, but in the region, the country, and even the world. Understanding this change process for a given community is critical due to the reciprocal relationship between these dynamics and the community's economic base.

Over time, existing businesses contract, expand, or change focus in response to these dynamics — for example, the depletion of an area's natural resources, the building of a rail line, or the encroachment of competitors can each lead to change in the community's economic base. In other cases, certain conditions may lead new businesses or whole new industries to relocate in an area — for example, aluminum smelters' need for cheap power. The entrance of these new industries and fundamental changes in existing ones, in turn, contribute to and alter the original dynamics. As a result, reciprocal effects of the choices these businesses make are felt in a community's job mix, education system, infrastructure investments, and more. Based on this evolution, an area's economic base is built with tracks laid for its economic engine to take one route rather than another.

These periods of steady evolution, however, are occasionally punctuated by intervals of rapid revolution, where societies undergo more fundamental changes. We are in one such period now as we move from the industrial age to the information age. Being at such a juncture offers communities an opportunity to step back and ask questions such as: What direction is our economic engine heading? What direction do we want it to head? Are we building a base so tracks can be laid in that direction? Based on the answers to those questions, communities like Tacoma can make changes to influence the direction their economic engine heads.

One of the most significant ways a community and its economic base are intertwined is through an area's infrastructure. As a result, the evolution of a community's economy often depends upon the investments it makes in its transportation system, power system, and—given the shift to the information age—its telecommunication system. This study was therefore commissioned to investigate Tacoma's potential economic futures and the inter-relationship between its economic development and potential telecommunication system investments.

## Conclusions

The study team set out to answer a number of questions at the outset of this project:

- What is happening on the technological front?
- Who are the major telecommunications players, what have they done in the past, and what are they doing now?
- What is happening in the regulatory environment?
- What have other communities done with regard to telecommunications?
- What has happened historically in our community?
- What do the existing telecommunications options look like?
- What kind of market demand for telecommunications exists in our community?
- What are the economic development implications for our community if an advanced telecommunications system is built or fails to be built?
- And finally, could Tacoma City Light build and operate such a system and how would it look?

This study of telecommunications has answered those questions. But there is a final question that must be asked. Should Tacoma City Light create a modern telecommunications infrastructure to serve the local community? The answers to the previous questions are critical to understanding and answering this question.

This study has reviewed telecommunications both nationally and locally. In reviewing the local situation it is clear that the local market has a growing need for better telecommunications access. Despite growing local demand, the incumbent wire line service providers have stated that their investments in the local infrastructure will either slow without significant rate increases or be halted all together. One could hope that other companies would step forward and create a modern telecommunications system through out our community but the prospects for that occurring appear dim. While Competitive Access Providers will eventually enter the local market, their focus is almost exclusively on large business users. Other potential systems are either of low capacity or not scheduled to be fully deployed until the next century.

Tacoma City Light could create an advanced telecommunications system to meet the telecommunications needs of the communities it serves in addition to its own internal communication needs. If Tacoma City Light were to create such a system and operate it in a business like manner, the system would generate sufficient revenues to make the system self sustaining. By offering products and services that either meet customer needs directly and providing a pathway through which the private sector can meet additional needs, pricing those products and services competitively, and delivering them over a modern, high-speed, high-reliability telecommunications system, a

\* Assistant Professor of Law, *Florida International University College of Law*. The Southeastern Association of Law Schools selected this Article to be presented to the New Scholars Workshop during its annual meeting in July 2006. The author thanks his parents for providing him with abundant opportunities for seeing and reading about the world. He also thanks Associate Dean Ediberto Román and Professor Mark Seidenfeld for very helpful comments and suggestions, and Senior Articles Editor Phil Schreiber and Editor-in-Chief Melissa A. Troiano of the *American University Law Review* for their excellent work during the editing process.

connections, but failed.<sup>92</sup> Only after the debut of cable modem service in their territories, starting in the mid-1990s, did the Baby Bells make DSL service available in communities where cable modem access had been offered, and at comparable prices.<sup>93</sup>

The Baby Bells, cable companies, and a variety of commentators have argued that the adoption of residential broadband since 1996 has been rapid, reflecting faster dissemination of a new communications technology than occurred with broadcast or cable television.<sup>94</sup> Such comparisons, however, are often rigged to ignore the long period between the invention of broadband in the 1970s or 1980s and its commercialization, which only picked up in the late 1990s.<sup>95</sup> The undue lag between the technological feasibility of residential broadband and its commercial availability may have artificially inflated the adoption rate for the technology during the late 1990s and early 2000s.<sup>96</sup> Moreover, the relatively low adoption rates for analog technologies such as television or VCRs may be an inappropriate comparison; a better yardstick may be the high adoption rates for digital technologies, such as dial-up Internet access, the World Wide Web, e-mail, and Wi-Fi, all of which spread faster than broadband.<sup>97</sup>

### C. *Natural Monopoly and Network Industry Characteristics of Broadband*

The market for local access to broadband tends to be a “natural monopoly,” at least in its stages of “growth,” as compared to more

---

92. See Shelanski, *supra* note 90, at 111. One sign of this failure is that there were only a few hundred thousand DSL subscribers in the entire United States in 1999. LATHEN, *supra* note 91, at App.B, ch.2 (Oct. 1999).

93. See LATHEN, *supra* note 91, at 27 (noting that the Baby Bells only began offering DSL service once faced with losing potential customers to cable). Time Warner Cable began cable modem trials in California in 1996. Katie Hafner, *Living the Broadband Life*, N.Y. TIMES, July 15, 2004, at G1.

94. This claim buttresses the Baby Bells’ deregulatory arguments that forcing the sharing of their networks with competitors, or allowing subsidies for municipal broadband, are unnecessary and probably harmful disruptions of a dynamic industry characterized by rapid growth and popularization. See, e.g., *Industrial Competition and Consolidation: The Telecom Marketplace Nine Years After the Telecom Act: Oversight Hearing Before the H. Comm. on the Judiciary*, 109th Cong. 32 (2005) (statement of Michael Kellogg on behalf of U.S. Telecom Association) (arguing that U.S. broadband “penetration has increased at record rates” since FCC embraced deregulatory approach and abandoned broadband “unbundling” (or open access) policies).

95. See FERGUSON, *supra* note 5, at 141 (suggesting, instead, a comparison of adoption rates from the time of invention to the time of commercialization).

96. See *id.* (“[R]apid diffusion may be a response to pent-up demand and excessive delays in commercialization.”).

97. See *id.* (explaining that because analog technologies improve at a slower rate than digital, a comparison of the two is inappropriate).

“matur[e]” markets.<sup>98</sup> In a natural monopoly, a single provider may satisfy consumer demand at lower average cost than two or more providers.<sup>99</sup> In a more mature market, a city or neighborhood may support two or more methods of accessing the Internet over broadband, such as DSL, cable, fiber optic lines, satellite, Wi-Fi, or broadband over power lines.<sup>100</sup> Nevertheless, large economies of scale in connecting the “last mile” of wires to subscribers favor monopolists over new entrants, who must incur exorbitant fixed costs in order to challenge incumbent providers.<sup>101</sup> Thus, the marginal and average total costs of delivering broadband to the millionth user of an existing broadband network will tend to be much lower than to the tenth user to a newly constructed network.<sup>102</sup>

Broadband is also an industry characterized by network effects, and is therefore frequently described as a “network industry.”<sup>103</sup> Network effects characterize the broadband industry because the value of a broadband Internet connection increases dramatically as more Internet users have broadband, and as content providers make high-

98. Gerald Faulhaber & Christiaan Hogendorn, *The Market Structure of Broadband Telecommunications*, 48 J. OF INDUS. ECON. 305, 323 (2000).

99. Richard Posner, *Natural Monopoly and Its Regulation*, 21 STAN. L. REV. 548, 548 (1969); Neil Hamilton & Anne Caulfield, *The Defense of Natural Monopoly in Sherman Act Monopolization Cases*, 33 DEPAUL L. REV. 465, 465 (1984); Lemley & McGowan, *supra* note 41, at 484. Industries characterized by natural monopoly are often subject to economies of scale that are proportional or at least tied to the extent of consumer demand. See Joskow & Noll, *supra* note 58, at 1251 (providing examples of natural monopoly industries whose economies reflect consumer demand, such as local distribution networks in electricity, telephone and gas service).

100. See HIGH-SPEED ACCESS INQUIRY 1999, *supra* note 76, at 2423-24; Kathleen Q. Abernathy, *Extending Broadband to all Americans* (Jan. 13, 2005), [http://hraunfoss.fcc.gov/edocs\\_public/attachmatch/DOC-256079A1.pdf](http://hraunfoss.fcc.gov/edocs_public/attachmatch/DOC-256079A1.pdf) (encouraging the deregulation and development of cable wireline networks, wireless networks and satellite broadband providers).

101. See Lemley & McGowan, *supra* note 41, at 546-49 (finding that the telephone industry’s natural monopoly characteristics prevented new networks from competing, and regulation did little to ameliorate the situation); Aronowitz, *supra* note 30, at 890-91 (explaining that the costs associated with developing a telecommunications network render the creation of several competing networks inefficient).

102. See Dennis Carlton & J. Mark Klammer, *The Need for Coordination Among Firms, With Special Reference to Network Industries*, 50 U. CHI. L. REV. 446, 451 (1983) (explaining that creating a new network involves large initial costs, whereas using an existing network continuously decreases marginal costs); Lemley & McGowan, *supra* note 41, at 484 (finding that in a natural monopoly, the marginal and average costs of production decline as the demand increases in a given market).

103. See, e.g., Robert Crandall, *Broadband Communications*, 2 THE HANDBOOK OF TELECOMMUNICATIONS ECONOMICS (Martin Cave et al. eds., 2003); CPB NETHERLANDS BUREAU FOR ECONOMIC POLICY ANALYSIS, DO MARKET FAILURES HAMPER THE PERSPECTIVES OF BROADBAND? (Dec. 2005), *available at* <http://www.cpb.nl/nl/pub/cpbreeksen/document/102/doc102.pdf>. (finding that broadband shares characteristics typical of networks, including “network infrastructure, essential facility and economies of scale”).

bandwidth multimedia files and applications available.<sup>104</sup> For broadband, as for other “markets with network effects, the incumbent’s large installed base makes it difficult for new entrants to dislodge the incumbent.”<sup>105</sup>

Networks regulated solely by private property rights tend towards monopoly exploitation due to the “network effects” inherent in selling access to telecommunications facilities.<sup>106</sup> Access to the network is valuable in proportion to the number of devices hooked up to it, such as telephones or Internet-ready computers, so a new network with few subscribers may struggle to attract the “critical mass” it needs to compete.<sup>107</sup> Small upstart networks, as a consequence of “network externalities,” or benefits accruing to existing or potential subscribers from the connecting of a new subscriber to a network, may not always be able to challenge dominant networks effectively.<sup>108</sup> Dominant firms in network

104. Cf. William Kolasky, *Network Effects: A Contrarian View*, 7 GEO. MASON L. REV. 577, 579 (1999) (“As defined in the economics literature, network effects exist . . . when a product becomes more valuable as greater numbers of customers use it. The most obvious examples are communications networks, where the value to each customer increases exponentially the more ‘friends and family’ are on the same network.”); A. Douglas Melamed, *Network Industries and Antitrust*, 23 HARV. J.L. & PUB. POL’Y 147, 148 (1999) (“the defining characteristic . . . of network industries is that they involve products that are more valuable to purchasers or consumers to the extent that those products are widely used. This phenomenon is known as a ‘network effect’ or ‘demand-side economy of scale’”); Lemley & McGowan, *supra* note 41, at 484 (“network effects are demand-side rather than supply-side effects: the shape of the demand curve is affected by existing demand”).

105. Barbara van Schewick, *Towards an Economic Framework for Network Neutrality Regulation* (Sept. 20, 2005), [http://papers.ssrn.com/sol3/papers.cfm?abstract\\_id=812991](http://papers.ssrn.com/sol3/papers.cfm?abstract_id=812991) (follow Social Science Research Network “New York, USA” hyperlink to download document).

106. See Aronowitz, *supra* note 30, at 890-91 (“Creating multiple physical last mile connections for DSL or cable modem service would be . . . inefficient . . . . Thus, the first company to install the last mile enjoys a natural monopoly over the connection that makes the open access question particularly pressing.”); see also Carl Shapiro, *Antitrust In Network Industries* (Jan. 25, 1996), <http://www.usdoj.gov/atr/public/speeches/0593.htm> (“[O]nce achieved, the network effects that helped create dominance may make it more difficult for new entrants to dislodge the market leader than in other industries lacking network characteristics.”); Kolasky, *supra* note 104, at 579, 583 (warning that enforcement agencies in both the United States and Europe have become increasingly vigilant in monitoring network effects).

107. Carl Shapiro, *Exclusivity in Network Industries*, 7 GEO. MASON L. REV. 673, 675 (1999); see Aronowitz, *supra* note 30, at 890-91 (explaining that the costs associated with wiring the “last mile” discourage competing networks from entering the market); Lemley & McGowan, *supra* note 41, at 546 (noting that a network monopoly may be more efficient than competition due to cost advantages of dense networks, and bandwagon effects of compatibility and interconnection).

108. See Michael Kende, *The Digital Handshake: Connecting Internet Backbones* 3, 22-23 (Sept. 2000), [http://www.fcc.gov/Bureaus/OPP/working\\_papers/oppwp32.pdf](http://www.fcc.gov/Bureaus/OPP/working_papers/oppwp32.pdf) (suggesting also that dominant networks may refuse to connect their subscribers with those of the smaller networks, “squeeze” prices or engage in non-price

industries also deploy a host of predatory tactics to suppress new entry, such as mergers and acquisitions, refusals to provide access, exclusive dealing, monopoly leveraging, contrived incompatibility, preemptive announcements of new services or pricing, lawsuits based on invalid patents or trademarks, multi-product bundling, and below-cost pricing to win standards wars.<sup>109</sup>

Both the cable and the telephone networks are characterized by local monopolies, which carry over into broadband.<sup>110</sup> The local telephone and residential cable networks are natural monopolies in the sense that competing with the dominant firms typically requires building additional wiring and infrastructure, which would be wasteful and duplicative in many, if not most, local markets.<sup>111</sup> Fixed

---

discrimination by, for example, degrading interconnections with those other networks).

109. See Shapiro 1996, *supra* note 107 (stating that, although some of these tactics may be legitimate for firms with small shares in the market, use of same tactics by incumbent firms may be anticompetitive, by closing networks to upstart firms); Daniel Rubinfeld, *Competition, Innovation, and Antitrust Enforcement In Dynamic Network Industries* 4, 12 (Mar. 24, 1998), available at <http://www.usdoj.gov/atr/public/speeches/1611.htm>.

For example, the U.S. government has charged Verizon, the nation's dominant Baby Bell prior to the merger of SBC and AT&T in 2006, with a variety of anticompetitive tactics, including merging with Bell Atlantic, GTE, and now MCI in order to reduce competition in local telephone and Internet service markets. Private parties have complained of Verizon's refusals to deal, contrived incompatibility with competing service providers, and bundling of DSL service with telephone service. See, e.g., *United States v. Verizon Commc'ns, Inc.*, No. 1:05CV02103 (D.D.C. complaint filed Oct. 27, 2005) (examining Verizon's acquisition of MCI); *Law Offices of Curtis V. Trinko, L.L.P. v. Bell Atl. Corp.*, 305 F.3d 89, 107-08 (2d Cir. 2002), *rev'd sub nom. Verizon Commc'ns, Inc. v. Law Offices of Curtis V. Trinko, L.L.P.*, 540 U.S. 398 (2004) (examining refusals to deal with competing telephone service provider and monopoly leveraging); *Twombly v. Bell Atl.*, 425 F.3d 99, 104 (2d Cir. 2005) (examining refusals to deal with competing Internet service providers); *Greco v. Verizon Commc'ns, Inc.*, 2005 U.S. Dist. LEXIS 4434, at \*3-6 (S.D.N.Y. Mar. 17, 2005) (examining bundling). Plaintiffs have also charged Bell Atlantic, another large Baby Bell, with refusals to deal, contrived incompatibility, predatory pricing and price "squeezing," falsely pre-announcing DSL service availability, and bringing bad faith patent litigation. See *Covad Commc'ns Co. v. Bell Atl. Corp.*, 407 F.3d 1220, 1222 (D.C. Cir. 2005) (examining refusal to deal, price squeezing and patent litigation).

110. See FERGUSON, *supra* note 5, at 146, 59 (noting that the telephone and cable markets compete only in providing certain services, such as low-speed residential broadband and asymmetric services, and that the two industries are quite similar in certain aspects, including their inability to provide effective competition).

111. See, e.g., *Verizon Commc'ns, Inc. v. Fed. Commc'ns Comm'n*, 535 U.S. 467, 475-76 (2002) (noting that "persistently monopolistic local [telephone] markets" have long been regarded as "the root of natural monopoly in the telecommunications industry"); *AT&T Corp. v. Iowa Utils. Bd.*, 525 U.S. 366, 412-16 (1999) (Breyer, J., concurring in part and dissenting in part) (explaining that the Telecommunications Act of 1996 "recognizes that actual local [telephone] competition might not prove practical" because such competition could result in "wasteful duplication of resources"); *United States v. W. Elec. Co.*, 673 F. Supp. 525, 537-38 (D.D.C. 1987), *aff'd in part, rev'd in part*, 900 F.2d 283 (D.C. Cir. 1990) (finding that the "natural monopoly" characteristics of local telephone networks

costs associated with network development and installation are relatively high, while the marginal and average total costs reflecting the burden of adding more users are relatively low.<sup>112</sup> High barriers to entry in the cable and telephone industries prevent potential competitors from undercutting high prices in many instances.<sup>113</sup> The cable and telephone companies have built large networks under the protection of exclusive government franchises, “and therefore have first-mover advantages and scope economies not available to other new entrants . . . .”<sup>114</sup> Other barriers to entry in the telephone market, which most likely affect the cable market as well, include

---

mean that duplication of them “would require an enormous and prohibitive capital investment”); *Omega Satellite Prods. Co. v. City of Indianapolis*, 694 F.2d 119, 126 (7th Cir. 1982) (Posner, J.) (finding that cable television may be a natural monopoly because “[t]he cost of the cable grid appears to be . . . largely invariant to the number of subscribers the system has,” so that “the average cost of cable television would be minimized by having a single company in any given geographical area”); James Speta, *Deregulating Telecommunications in Internet Time*, 61 WASH. & LEE L. REV. 1063, 1089 (2004) (“Cable television service, like local telephony, has long been considered a natural monopoly service. Fixed costs are high; multiple wires to the home risks stranded investment; economies of both scale and density apply.”); Aditya Bamzai, Comment, *The Wasteful Duplication Thesis in Natural Monopoly Regulation*, 71 U. CHI. L. REV. 1525, 1530-32 (2004) (stating that a “natural” monopoly may exist where two providers serving same local area would require duplicative wiring, instruments, and billing) (citing 2 ALFRED KAHN, *THE ECONOMICS OF REGULATION: PRINCIPLES AND INSTITUTIONS* 123 (1971)).

112. See, e.g., *Omega Satellite Prods.*, 694 F.2d at 126 (noting that the cost of installing cable grid is greater than the cost of adding more users); Bamzai, *supra* note 111, at 1528-29 (arguing that in the telecommunications industry, “large fixed expenses” result in “declining average costs” as number of users increases).

113. See, e.g., *United States Telecom Ass’n v. Fed. Commc’ns Comm’n*, 359 F.3d 554, 572 (D.C. Cir. 2004) (discussing substantial barriers to entry into local telephone service identified by FCC, such as sunk costs and ILEC absolute cost advantages); FED. COMM’NS COMM’N, ANNUAL ASSESSMENT OF THE STATUS OF COMPETITION IN MARKETS FOR THE DELIVERY OF VIDEO PROGRAMMING, FOURTH ANNUAL REPORT, 13 F.C.C.R. 1034, 1043 (1998) (“Local markets for the delivery of . . . [cable television] programming generally remain highly concentrated and . . . characterized by some barriers to entry . . .”).

114. FED. COMM’NS COMM’N, REPORT AND ORDER ON REMAND AND FURTHER NOTICE OF PROPOSED RULEMAKING, REVIEW OF THE SECTION 251 UNBUNDLING OBLIGATIONS OF INCUMBENT LOCAL EXCHANGE CARRIERS, 18 F.C.C.R. 16978, 17046 (2003) [hereinafter SECTION 251 ORDER] (referring to cable industry); see *id.* at 17028-41 (making similar findings regarding barriers to entry into local telephone industry); *Turner Broad. Sys. v. Fed. Commc’ns Comm’n*, 512 U.S. 622, 634 (1994) (The U.S. “cable industry is characterized by horizontal concentration, with many cable operators sharing common ownership,” which has “resulted in greater ‘barriers to entry for new programmers’”) (quoting Cable Television Consumer Protection and Competition Act of 1992, § 2(a)(4), Pub. L. No. 102-385, 106 Stat. 1460); U.S. Telecom Ass’n, 359 F.3d at 572 (listing barriers to entry into local telephone industry, including “sunk costs,” incumbent telephone company “cost advantages,” “first-mover advantages,” and “operational barriers to entry” controlled by incumbent telephone companies); FMEA, *supra* note 3, at 11 (explaining that state and local governments created monopolies in telephone and cable television industry by granting “exclusive franchises . . . to serve a particular geographic area,” which protected private companies like BellSouth or Comcast from competition while they built “large networks with economies of scale and scope”).

“bottlenecks, entrenched customer preferences, the regulatory process, large capital requirements, access to technical information, and disparities in risk.”<sup>115</sup>

*D. The Lack of Effective Competition in Many Broadband Markets*

Consumers’ options in selecting high-speed Internet service have been very limited until recently. Some commentators describe the broadband market as a “cable-phone duopoly.”<sup>116</sup> By 2004, the FCC reported that close to forty percent of all U.S. zip codes either had monopoly or duopoly broadband access, or none at all.<sup>117</sup> “Thus, nearly half of all consumers lack meaningful choice in broadband providers.”<sup>118</sup> For the rest, a single DSL provider is typically the only effective competition to the dominant local cable provider in the market for residential broadband access.<sup>119</sup> These estimates actually overstate the extent of competition, because the FCC requires only that an entity has one subscriber in an entire zip code to be counted as a provider throughout that area.<sup>120</sup> In fact, when consumers were polled in 2004 regarding the availability of broadband in their area, nearly a tenth reported that it was not available in their area at all,

Commc’ns Comm’n, 359 F.3d 554, 585 (finding, in 2004, that cable companies provided nearly sixty percent of all high-speed lines). Cable has heretofore enjoyed several advantages over DSL in the United States, including coaxial cable’s superior bandwidth capacity and greater range than DSL, which is tied to central telephone switching office. *See* Dibadj, *supra* note 91, at 272-74 (explaining the technological constraints of DSL); Tongue, *supra* note 31, at 1104 (noting that the performance of DSL transmissions decreases as the customer’s distance from the central office grows and that DSL quality varies with the condition of the copper wires and the quality of the other equipment). In addition, between 1996 and 2004, the cable industry spent about \$95 billion, or \$1,300 per customer, in rebuilding its infrastructure to provide digital channels, telephone, broadband, and on-demand services. The amount spent specifically on broadband, however, is usually not broken out, precluding a focused examination of returns on broadband investments to date. *See* NAT’L CABLE & TELECOMMS. ASS’N, THE VIDEO MARKET IS FULLY COMPETITIVE: ALMOST 26 MILLION CONSUMERS NOW SUBSCRIBE TO CABLE’S COMPETITORS 5 (July 2004), <http://www.heartland.org/pdf/16369.pdf>; U.S. GEN.

Unlike other Internet and broadband providers such as AOL or Covad, which generally compete with one another by offering broadband on a national basis, the Baby Bells and the cable companies generally compete only in their specific local service areas.<sup>135</sup> The Baby Bells typically offer broadband Internet service “only within their geographical monopoly telephone service areas.”<sup>136</sup> Cable providers resemble the Baby Bells in exercising “geographical monopoly control over a local distribution bottleneck,” and in making slow progress in offering high-speed Internet access on a nationwide basis or at prices most consumers can afford.<sup>137</sup> The cable companies have resisted matching reduced introductory prices (i.e. about \$15 per month) for slower broadband service offered by Baby Bells such as Verizon and SBC Communications (now AT&T again<sup>138</sup>), even though broadband is bundled with cable television and/or telephone service, as Verizon and SBC/AT&T have bundled broadband with local and long-distance telephone service.<sup>139</sup> Now it appears that these same Baby Bells may recoup their foregone subscriber fees by charging Internet service providers such as Google for the privilege of being accessible to DSL subscribers, prompting fears of pervasive censorship and a pay-to-play Internet.<sup>140</sup>

140. See Glenn Fleishmann, *Advocates of Wi-Fi in Cities Learn Art of Politics*, N.Y. TIMES, Jan. 19, 2006, at C1 (explaining that in response to a suggested “pay-to-play” plan, advocates and community groups complained to state politicians); Associated Press, *Intel Joins Group In Favor of Internet Legislation*, SAN JOSE MERCURY NEWS, Apr. 26, 2006, available at [http://www.mercurynews.com/mld/mercurynews/news/local/states/california/northern\\_california/14435374.htm](http://www.mercurynews.com/mld/mercurynews/news/local/states/california/northern_california/14435374.htm) (describing Intel’s appeal to Congress to pass legislation that ensures that the Internet will remain “open and neutral”).

Lack of competition in the price of high-speed Internet service has been a significant problem. Monthly fees averaged \$50 in many areas on a consistent basis from 1998 to 2003 for service at one to two Mbps downstream and much less than that upstream.<sup>141</sup> This price stability presented a stark contrast to the much more rapidly increasing quality and plummeting prices of computers and other digital technologies during the same period.<sup>142</sup> With cable in control of nearly seventy percent of the broadband industry, there was “no real competition” in most local markets during that period, according to a spokesperson for a large Baby Bell, SBC.<sup>143</sup> The bursting of the telecommunications bubble starting in 2000 further entrenched many dominant broadband providers by destroying many telecommunications companies, wiping out \$2 trillion of stock market value,<sup>144</sup> and enabling the Baby Bells to slash investment in infrastructure in favor of exploiting their existing networks as long as possible.<sup>145</sup>

The divergence in the pace of price cuts and new innovations between broadband and other digital technologies may be due to mixed incentives facing diversified broadband providers. Robust

145. See FMEA, *supra* note 3, at 8, 10 (citing BellSouth and Verizon, who both reduced their investment spending by thirty-nine percent, or \$9.5 billion, from 2000 to 2003); see also FERGUSON, *supra* note 5, at 58-59 (stating that Baby Bells “reduced network capital investment sharply between 2001 and 2003”).

competition from the Internet threatens to destroy the cable and telephone companies' revenue base as Internet telephony captures the voice communication market, and as webcasting and digital delivery of entertainment content render cable television less necessary.<sup>146</sup> Conscious of this threat, most Baby Bells have heretofore refused to sell DSL to customers who do not also purchase local telephone service, giving rise to allegations of anticompetitive product tying, in violation of antitrust law.<sup>147</sup> Verizon's wireless broadband service is only available to a third of Americans, at \$60 per month for a two-year commitment plus a "qualifying voice plan."<sup>148</sup> Moreover, Baby Bells such as SBC/AT&T have indicated that they may refuse to connect DSL subscribers to their choice of Internet telephony services.<sup>149</sup> For their part, cable broadband providers have sought to shield their multichannel video businesses from Internet competition by prohibiting their subscribers from downloading excessive multimedia content or utilizing interactive video game servers, among other high-bandwidth activities.<sup>150</sup>

# EXHIBIT 52

# Community-Owned Fiber Networks: Value Leaders in America

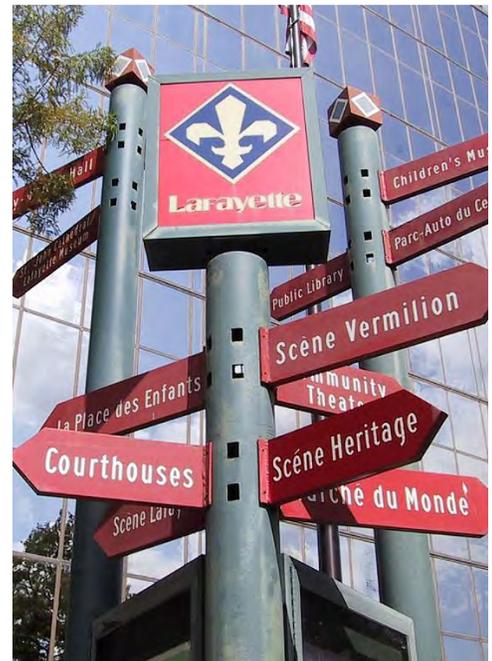

## Pricing Review Shows They Provide Least-Expensive Local "Broadband"

Our examination of advertised prices shows that community-owned fiber-to-the-home (FTTH) networks in the United States generally charge less for entry-level broadband service than do competing private providers, and don't use initial low "teaser" rates that sharply rise months later. We also found that Comcast varies its pricing by region. Our study was constrained by the lack of standardization in Internet service offerings and a shortage of available data on broadband pricing in the United States. The U.S. Federal Communications Commission doesn't comprehensively collect or make available data from internet service providers on prices advertised or charged, service availability by address, or consumer adoption by address.

David Talbot  
Kira Hessekiel  
Danielle Kehl

January 2018

Community fiber networks in Sandy, Oregon (bottom left); Opelika, Alabama (top right); and Lafayette, Louisiana are among those offering the lowest local prices for service meeting the FCC's "broadband" threshold (25 Mbps download, 3 Mbps upload).

## ABSTRACT

We collected advertised prices for residential data plans offered by 40 community-owned (typically municipally owned) Internet service providers (ISPs) that offer fiber-to-the-home (FTTH) service. We then identified the least-expensive service that meets the federal definition of broadband—at least 25 Mbps download and 3 Mbps upload—and compared advertised prices to those of private competitors in the same markets. We found that most community-owned FTTH networks charged less and offered prices that were clear and unchanging, whereas private ISPs typically charged initial low promotional or “teaser” rates that later sharply rose, usually after 12 months. We were able to make comparisons in 27 communities. We found that in 23 cases, the community-owned FTTH providers’ pricing was lower when averaged over four years. (Using a three year-average changed this fraction to 22 out of 27.) In the other 13 communities, comparisons were not possible, either because the private providers’ website terms of service deterred or prohibited data collection or because no competitor offered service that qualified as broadband. We also made the incidental finding that Comcast offered different prices and terms for the same service in different regions.

## KEY FINDINGS

- When considering entry-level broadband service—the least-expensive plan that provides at least 25/3 Mbps service—23 out of 27 community-owned FTTH providers we studied charged the lowest prices in their community when considering the annual average cost of service over a four-year period, taking into account installation and equipment costs and averaging any initial teaser rates with later, higher, rates. This is based on data collected in late 2015 and 2016.
- In these 23 communities, prices for the lowest-cost program that met the current definition of broadband were between 2.9 percent and 50 percent less than the lowest-cost such service offered by a private provider (or providers) in that market. In the other four cases, a private provider's service cost between 6.9 percent and 30.5 percent less.
- While community-owned FTTH providers' pricing is generally clear and unchanging, private providers almost always offer initial "teaser" prices and then raise the monthly price sharply. This price hike in the communities we studied ranged between \$10 (20 percent) and \$30 (42.8 percent) after 12 months, both imposed by Comcast, but in different communities. Only one community-owned FTTH provider employed this marketing practice for a data-only plan. This exception was a student discount offered by the MINET network in Oregon.
- Language in the website "terms of service" (TOS) of some private ISPs strongly inhibits research on pricing. The TOS for AT&T, Verizon, and Time Warner Cable (now owned by Charter), were particularly strong in deterring such efforts; as a result, we did not record data from these three companies.
- While the United States has 40 community networks offering broadband FTTH service (many of them serving more than one municipality), we did not make comparisons with private competitors in 13 cases, either because the TOS prohibited data collection or because no competing broadband service existed in the community network's home community.
- We noted that Comcast varied its teaser rates and other pricing details from region to region. Our sample size was small; just seven of the communities we studied were served by Comcast. Understanding Comcast's pricing practices and their consumer impacts across the United States would require much deeper study.
- In general we found that making comprehensive pricing comparisons among U.S. Internet service plans is extraordinarily difficult. The U.S. Federal Communications Commission (FCC) does not disseminate pricing data or track broadband availability by address. Additionally, service offerings follow no standard speed tiers or definitions (such as the specifics of video or phone service bundles). We focused on comparing entry-level broadband plans in part because of these complexities.

Suggested Citation: Talbot, David, Hessekiel, Kira, Kehl, Danielle. Community-Owned Fiber Networks: Value Leaders in America (January 2018). Responsive Communities. Available at: [cyber.harvard.edu/publications/2018/01/communityfiber](https://cyber.harvard.edu/publications/2018/01/communityfiber).

## MAIN FINDING

### COMMUNITY FIBER NETWORKS OFFER BETTER ENTRY-LEVEL BROADBAND VALUES AND CLEARER, TEASER-FREE PRICING

Our major finding is that in 23 out of 27 communities where comparisons were possible, entry-level broadband service from a community-owned FTTH network—meaning the lowest-cost service that met the FCC's definition of broadband (at least 25 Mbps download, 3 Mbps upload)—was less expensive, when considering the average annual cost of service over four years,<sup>8</sup> than such service offered by a private competitor.

The benefits ranged from a savings of 2.9 percent, or \$19, annually in Tullahoma, Tennessee, to more than 50 percent, or \$600, annually in Lafayette, Louisiana. Twelve of the community-owned FTTH providers beat their private competitors' prices by 20 percent or more for entry-level broadband service. In four communities, a private provider beat the community-owned FTTH network. In such cases, the benefits ranged from a 6.9 percent, or \$50, saving for users of Charter Spectrum in Jackson, Tennessee, to about a 30.5 percent, or \$298, saving, also for users of Charter Spectrum, in Churchill, Nevada.

The lowest-speed tier that met the broadband minimum varied from provider to provider. In 13 cases, the private provider's lowest-cost plan that met the broadband threshold offered higher speeds than did the lowest-cost broadband service of community-owned FTTH networks. In six cases, the reverse was true; in five cases, the speeds were the same.

Our secondary finding was that community-owned providers furnish consumers with dramatically clearer pricing. Of the 35 private Internet access plans we encountered in our data collection, 25 offered low-cost initial promo-

tional (or "teaser") rates and then increased the rate substantially at the conclusion of the initial period (typically 12 months). By contrast, we encountered only three examples of promotional pricing among the community-owned ISPs we studied. And MINET, in the towns of Monmouth and Independence, Oregon, was the only one to offer such a deal on a plan offering Internet access only, in the form of a special promotion for students.<sup>9</sup> The private providers' price increases at the expiration of the promotional period ranged from 20 percent, or \$10 monthly (Comcast Xfinity in Longmont, Colorado), to 42.8 percent, or \$30.04 monthly (Comcast Xfinity in Concord, Massachusetts).

We do not know what fraction of broadband subscribers take data-only plans as opposed to bundles. However, surveys of U.S. consumers by the Pew Research Center indicate a trend toward "cord cutting" (the practice of canceling a cable TV subscription and merely taking a data plan). In late 2015 Pew reported that about 15 percent of Americans were cord cutters and that another nine percent had never taken a TV subscription.<sup>10</sup> Younger people appear more likely to do without bundles. Pew's most recent survey, in September of 2017, found that 60 percent of people aged 18–29 said they mainly watched TV by using services such as Netflix.<sup>11</sup>

Our study, though limited in scope, contains a clear finding: community-owned FTTH networks tend to provide lower prices for their entry-level broadband service than do private telecommunications companies, and are clearer about and more consistent in what they charge. They may help close the "digital divide" by providing broadband at prices more Americans can afford.

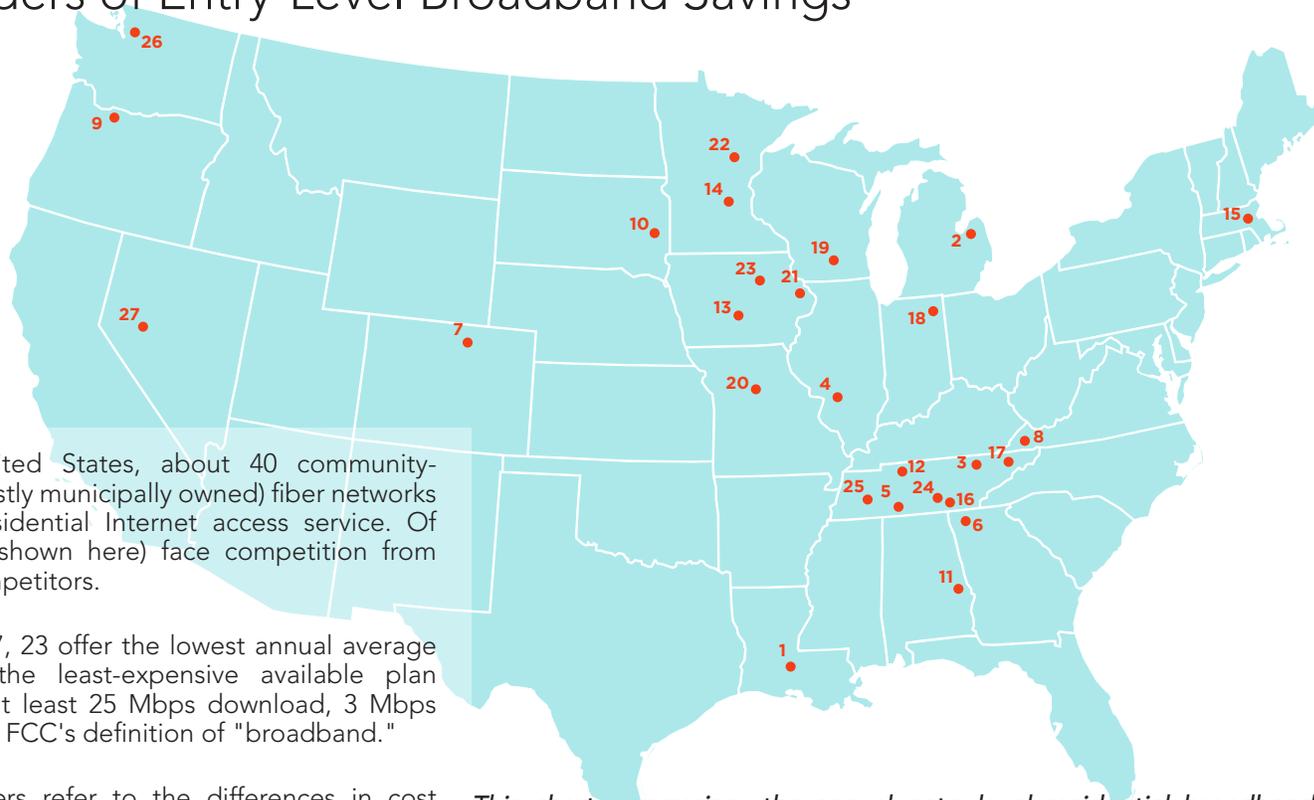

8 As part of our analysis we also ran the numbers for a three-year average, a method that would make private providers appear less expensive, given that they tend to use low initial "teaser" rates, typically for 12 months. Only one of the community-owned FTTH networks that were less expensive over four years became more expensive when a three-year term was considered: Cedar Falls, Iowa. See methods section for more details.

9 MINET's promotional pricing option is only available to area students and offers them a six-month discounted price. Because MINET did not have any competitors offering broadband-minimum speeds, we did not include this or their other plan offerings in our analyses. Additionally, community-owned FTTH networks in Lafayette, Louisiana, and Bristol, Virginia, offered bundled services (as opposed to the entry-level broadband plans we studied) having an initial promotional rate of one year.

# Community Fiber Networks: Providers of Entry-Level Broadband Savings

In the United States, about 40 community-owned (mostly municipally owned) fiber networks provide residential Internet access service. Of these, 27 (shown here) face competition from private competitors.

Of these 27, 23 offer the lowest annual average price for the least-expensive available plan providing at least 25 Mbps download, 3 Mbps upload, the FCC's definition of "broadband."

The numbers refer to the differences in cost per year, averaged over a four-year period, as advertised on the providers' websites during our review in late 2015 and 2016. The full dataset we generated is available at this address:

<http://dx.doi.org/10.7910/DVN/HHTTF1>

Some providers' entry-level broadband services offer higher speeds than others; the industry doesn't follow any standard speed tiers. We focused on the plan that minimally met the FCC definition, regardless of exact advertised speed.

Our analysis is limited in scope. A deeper study would require comprehensive data to be made available on advertised prices, actual prices charged, and service availability and adoption by address.

*This chart summarizes the annual entry-level residential broadband price savings (or premium) offered by community FTTH networks relative to private competitors. See the next two pages for full details.*

	Community network	Annual cost savings (or premium) relative to private competitor(s)	Community network	Annual cost savings (or premium) relative to private competitor(s)
1	Lafayette, LA	\$600.00	14	Monticello, MN

				(\$108.10)
			27	Churchill, NV
				(\$298.28)

# Cheapest Tiers Meeting Broadband Definition

## Community Fiber Networks Tend to Beat Private Competitors

This table reviews advertised broadband prices in 27 communities served by community-owned FTTH networks and one or two private providers. The dollar figures present average cost per year over four years and takes into account all fees and recurring costs.

Rank	Community	Entry-level broadband offering from community FTTH network Provider Download/upload speed (mbps) Avg. service cost per year for first 4 years	Entry-level broadband offering from private competitor Provider Download/upload speed (mbps) Avg. service cost per year for first 4 years	Annual savings or (premium)	Percentage savings or (premium)	Key (see next page)
1	Lafayette, LA	Lafayette Utilities Systems 60/60, \$599.40	KTC Pace 50/5, \$1,199.40	\$600.00	50.0%	1, 6
			Cox Communications 50/5, \$910.76	\$311.36	34.2%	1, 6
2	Sebewaing, MI	Sebewaing Light & Water 30/30, \$451.25	Comcast Xfinity 25/5, \$803.41	\$352.15	43.8%	1
3	Morristown, TN	FiberNET 30/30, \$419.40	Comcast Xfinity 75/5-10, \$743.52	\$324.12	43.6%	1, 4
			Charter Spectrum 60/4, \$678.63	\$259.23	38.2%	1, 4
4	Longmont, CO	NextLight 25/25, \$479.40	Comcast Xfinity 25/5, \$625.14	\$172.74	23.3%

25	Jackson, TN	Jackson Energy Authority 60/10, \$728.75	Charter Spectrum 60/4, \$678.63	-\$50.13	-6.9%	1
26	Issaquah Highland, WA	Highland Fiber Network 100/100, \$782.59	Comcast Xfinity 25/5, \$682.02	-\$100.48	-12.8%	6, 8
			Wave 55/5, \$674.40	-\$108.10	-13.8%	6
27	Churchill, NV	CC Communications 35/5, \$976.90	Charter Spectrum 60/4, \$678.63	-\$298.28	-30.5%	3

NOTE: The websites of some private providers did not display upload speeds to prospective customers. Upload speeds were added to this table after the fact for two providers, Charter Spectrum and Comcast Xfinity, by consulting with customer service representatives and independent reports.

## KEY

- 1: This community may also be served by AT&T. We did not collect data from AT&T because of prohibitions contained in the terms of service posted on AT&T's website.
- 2: This community may also be served by Verizon DSL service. We did not collect data from Verizon because of prohibitions contained in the terms of service posted on Verizon's website.
- 3: Because this community ISP offered only bundled phone/data, we used the phone/data price in place of a data-only price and did not attempt to subtract the value of the phone service.
- 4: This community provider also offered a higher speed that was closer to the entry-level speed of the private provider. However, we only compared the cheapest possible plans that met broadband definitions. We also did not attempt to verify actual delivered speeds for any ISP.
- 5: Longmont, CO, has a DSL provider whose website does not prohibit data collection and that offers broadband speeds. In this one case, we collected the pricing information in March of 2017.
- 6: Seven of the 27 communities were served by two private ISPs providing at least 25/3 Mbps service, resulting in the split row containing two sets of prices.
- 7: In August of 2016, Crosslake Communications was bought by Tri-Co Technologies, a partnership of three private companies. We collected our data before this occurred.
- 8: The Highland Fiber Network serves a community called Issaquah Highlands, a neighborhood within Issaquah, WA. It does not serve the larger municipality of Issaquah.

## CONCLUSION

Studying the pricing practices of U.S. Internet service providers is challenging. Many ISPs deter data collection, service plans and pricing strategies aren't standardized, and regulators don't collect and release enough relevant data. Against this backdrop, we did our best over more than 18 months to manually gather and harmonize data to explore whether community-owned FTTH networks or private providers offered the best values in providing a service that minimally met the FCC's definition of broadband.

We found that in 23 out of 27 communities where comparisons were possible, entry-level broadband service from a community-owned FTTH network was indeed less expensive than comparable service offered by a private competitor when considering the annual cost of service averaged over four years. What's more, the community providers were generally far clearer in how they presented pricing—steering clear of initial teaser rates that later rise sharply.

But the unavailability of comprehensive data leaves many fundamental questions unanswered. These include: What does broadband service actually cost consumers in the United States? To what extent do carriers actually charge the rates set forth in price lists? How many consumers attempt to renegotiate after teaser rates expire, and how many pay higher prices for many more years? Exactly how sensitive are consumers to price when choosing to adopt broadband service? Are publicly owned FTTH networks a better value overall than private ones? Do companies frequently vary pricing of the same service in different regions, and does this have a disparate impact on different demographic groups? Do municipally or other community-owned sys-

tems put downward price pressure on private company offerings?

Existing efforts at regulatory data collection fall far short of what would be needed to answer such questions. While the FCC collects data about advertised speed tiers and other service offerings through a telecom industry reporting document called Form 477, it does not comprehensively collect data on pricing. (It does collect some pricing data in specific circumstances, such as from schools and libraries that participate in the E-rate program, which subsidizes Internet access to those institutions.<sup>22</sup>)

The FCC also only collects data by census block, not address. The FCC recently sought comment on proposals to expand the scope of data collection under Form 477 and specifically asked whether collecting data at the street-address level would be beneficial.<sup>23</sup> Having gone through this data-collection exercise, we can report that the answer is yes. Street-address-level data, if available for study, would speak most clearly about the state of broadband service, price, and competition in the United States.

Some existing resources aren't useful in practice. The National Telecommunications and Information Administration (NTIA) in 2009 created a National Broadband Map, but among other problems with this resource, it provides no information about pricing, and data collection for the map ceased in June of 2014. The Commerce Department collects and publishes aggregate data about the state of broadband competition in the United States, but it does so only at the level of census blocks. In general, data is not collected in a coordinated manner, is often incomplete, and omits critical information like price.<sup>24, 25</sup> Other independent organizations have attempted to fill

22 Report and Order and Further Notice of Proposed Rulemaking in the Matter of Modernizing the E-rate Program for Schools and Libraries, WC Docket No. 13-184 (Jul. 23, 2014). See also Danielle Kehl, What's Inside the FCC's E-rate Order?, New America's Open Technology Institute (Aug. 4, 2014), <https://www.newamerica.org/oti/blog/whats-inside-the-fccs-e-rate-order-2/>.

23 Federal Communications Commission, WC Docket No. 11-10, Modernizing the FCC Form 477 Data Program (Aug. 4, 2017), <https://ecfsapi.fcc.gov/file/08041199205324/FCC-17-103A1.pdf>.

24 The National Broadband Map is missing a lot of data on smaller ISPs, including municipally owned networks. At the same time, it over-represents the state of competition in many areas because it includes ISPs that only offer commercial or enterprise service. In essence, according to the map it appears that someone who lives on a block that is in reality only served by one residential provider actually has other competitors to choose from.

25 The FCC, for example, has previously declined to collect pricing information from any broadband providers through the annual Form 477 reporting requirements it imposes on Internet access providers, and has itself conceded that it does not have the "reliable data as to the actual prices consumers pay for these services" that it would need to conduct substantial analysis on the impact of price. See, e.g., Patrick Lucey, FCC Prioritizes Incumbent Protection in Data Collection Order, Community Broadband Networks (Jul. 17, 2013), <http://muninetworks.org/content/fcc-prioritizes-incumbent-protection-data-collection-order>; 2016 Broadband Progress Report, Federal Communications Commission (Jan. 29, 2016) at para. 103.

# EXHIBIT 53

Why does

# BROADBAND

matter?

Broadband is the link that ties your community together and connects it to the world. It doesn't matter if your community is in an urban center or a remote plain; high-speed Internet access is the tool that will help your community members and institutions thrive.

## Education

K-12 schools **spend** more than **\$7 billion a year** on textbooks

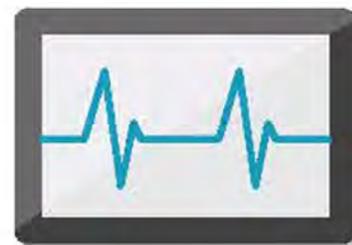

Going digital can **save** schools as much as **\$600 per student** per year

Broadband helps schools reallocate funds to resources and activities that **enrich student learning**.

## Telehealth

Hospitals without electronic health records will spend **\$371 billion** more

Telehealth reduces hospital admissions by **25 percent** and

Broadband enables **quick access to emergency services** so that first responders can **save lives**.

## Community

Communities with adoption rates below 80 percent have **2,000 fewer businesses** than their counterparts

Broadband access can increase home values by an average of **3.1 percent**

Broadband is a pillar for **community sustainability and growth**.

## 8 **RESOLUTION NO. R2019-74**

9

### 10 **A Resolution of the Pierce County Council Declaring Broadband to Be** 11 **Essential Infrastructure; Expressing Council Intent to Direct** 12 **Resources to Advance Broadband Internet Access within** 13 **Pierce County; and Identifying Actions for Further Evaluation** 14 **by the Council.** 15 16 17

18 **Whereas**, the term “broadband” commonly refers to high-speed internet access  
19 that is always on and significantly faster than traditional dial-up access; and  
20

21 **Whereas**, the Federal Communications Commission (FCC) defines broadband  
22 internet access as twenty-five megabytes per second downstream and three megabytes  
23 per second upstream (25/3 Mbps); and  
24

25 **Whereas**, by 2020, with an estimated four billion people worldwide connected to  
26 the internet, using over twenty-five million different applications, over fifty trillion  
27 gigabytes of data generated, and continuous technological innovations and  
28 advancements, future demand for access to high-speed internet will not only continue to  
29 increase exponentially, but become synonymous with a modernized standard of living;  
30 and  
31

32 **Whereas**, community broadband networks are essential for education,  
33 healthcare, market competition, consumer choice, economic development, and  
34 universal, affordable internet access; and  
35

36 **Whereas**, the economic health of municipalities depends on public and private  
37 investment to connect their communities; and  
38

39 **Whereas**, Pierce County wishes to promote broadband access at gigabit speed  
40 (1000 Mbps) in the urban area and at least 100 Mbps in the rural area as it believes  
41 speeds at these levels are necessary to fully access the capabilities and services  
42 needed and desired by citizens, institutions, and businesses within the community; and  
43  
44

1       **Whereas**, pursuant to the 2017 Pierce County Budget, the Pierce County  
2 Council requested a review and analysis of Countywide connectivity and access to high-  
3 speed internet; and

4  
5       **Whereas**, the Pierce County Broadband and Access Evaluation was completed  
6 by the Performance Audit Committee and its contractor, Magellan Advisors, in April  
7 2019; and

8  
9       **Whereas**, the evaluation identifies several goals and initiatives and a series of  
10 specific recommendations and action steps for Pierce County to prioritize, incentivize  
11 and advance the buildout of a Countywide broadband network; and

12  
13       **Whereas**, it is imperative to both the prosperity of individual residents and the  
14 overall economic success and future vitality of Pierce County to have reliable,  
15 affordable, high-speed internet access available throughout all of Pierce County; and

16  
17       **Whereas**, the Pierce County Council finds that it is in the public's interest to  
18 prioritize County resources to advance a Countywide broadband network to make  
19 reliable, affordable, high-speed internet available to all Pierce County residents;

20 **Now Therefore**,

21  
22       **BE IT RESOLVED by the Council of Pierce County:**

23  
24       Section 1. The Pierce County Council hereby declares that wireline and wireless  
25 communications providing abundant capacity which supports high-speed, advanced  
26 digital communications, referred to generically as "broadband" – forms the basis of an  
27 essential 21st Century infrastructure in our digital world and economy. It is vital to the  
28 economic development and quality of life for the residents, businesses and institutions  
29 of Pierce County and throughout Washington. The desired access speeds are at least  
30 one gigabit per second in the urban area and at least 100 megabytes per second in the  
31 rural area.  
32

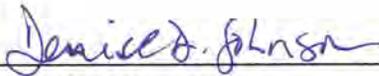

1        Section 2. The Pierce County Council declares its intent to direct resources to  
2 advance broadband access within Pierce County and identifies the following high  
3 priority items for action by the Council within 90 days of the passage of this Resolution:  
4

- 5 • Procurement of services by the Office of the Pierce County Council to support the  
6 development of a broadband strategic plan. (Broadband Strategic Plan)  
7
- 8 • Initiate a broadband stakeholder process to solicit the opinions, needs, and expertise  
9 of community members, business, broadband providers, institutions, and other  
10 stakeholders. (Stakeholder Engagement)  
11
- 12 • Revise existing County policies, standards, and code to remove barriers to  
13 broadband delivery. (Broadband Friendly Policies and Standards)  
14

15  
16        ADOPTED this 2nd day of July, 2019.

City of Tacoma  
Office of the City Clerk

## CERTIFICATE OF CITY CLERK

I, Doris Sorum, City Clerk of the City of Tacoma, Washington, do hereby certify that the attached is a full, true and correct copy of Amended Resolution No. 39577 adopted by the City Council on November 1, 2016.

Dated this 21<sup>st</sup> day of January 2020.

  
Doris Sorum, City Clerk  
City of Tacoma, Washington

## RESOLUTION NO. 39577

1 BY REQUEST OF COUNCIL MEMBERS BLOCKER, IBSEN, MCCARTHY, AND  
2 WOODARDS

3 A RESOLUTION directing the City Manager to hire an independent third-party  
4 consultant or consultants to audit, analyze, and establish a reasonable  
5 methodology for cost allocation between Tacoma Power and Click!  
6 Network and evaluate the expansion of Click! Network; authorizing the  
7 execution of professional services agreements, as necessary, which outline  
8 the scope and deliverables; and authorizing the use of up to \$100,000,  
9 budgeted from the City Council Contingency Fund, to pay the costs  
10 associated therewith, pending reimbursement from Click! Network.

11 WHEREAS, on December 15, 2015, the City Council approved Resolution  
12 No. 39347, which required Tacoma Power to develop a business, financial, and  
13 marketing plan to provide Click! Network ("Click!") customers with retail cable  
14 television, voice, and internet services, and

15 WHEREAS, following a nine-month review, the Click! Engagement  
16 Committee ("Committee") described the community benefits of an enhanced Click!  
17 telecommunications system and an outline of the features of such a system, and

18 WHEREAS, on September 28, 2016, pursuant to Resolution No. U-10879  
19 ("Resolution"), the Tacoma Public Utility Board ("Board") approved the Click!  
20 "All-In" Business Plan ("Plan"), and

21 WHEREAS, since its inception in 1996, Click! has been part of Tacoma  
22 Power's telecommunications system and was initially financed with Tacoma  
23 Power electric revenues, and

24 WHEREAS, since that time, the internal cost allocation between Click! and  
25 Tacoma Power has changed significantly and, over time, Tacoma Power has  
26 substantially increased the cost allocation borne by Click!, and

1 WHEREAS the most recent shift in cost allocation is supported by an  
2 accountant assessment which relies predominantly upon the cost-accounting  
3 recommendations of Tacoma Power, and

4 WHEREAS this dramatic change in cost allocation has been the key driver  
5 underlying the debate over the future of Click!, and has encouraged considerable  
6 public scrutiny as to the veracity and appropriateness of the current accounting  
7 assumptions and methodology implemented by Tacoma Power, and

8 WHEREAS the concerns raised about the current cost allocation  
9 methodology and the implications of said methodology on the Plan are significant  
10 and must be resolved, and

11  
12 WHEREAS, at the October 25, 2016, City Council Study Session, Council  
13 Member McCarthy shared a Council Consideration Request directing the City  
14 Manager to hire an independent third-party consultant or consultants to audit,  
15 analyze, and establish an independent cost allocation methodology between  
16 Tacoma Power and Click! and evaluate the expansion of the telecommunications  
17 system contemplated by the proposed Plan in the context of an evolving  
18 broadband telecommunications industry, and, further, to authorize the use of up to  
19 \$100,000 of City Council Contingency Funds for said purposes, and

20  
21 WHEREAS the purpose of the proposed audit is to provide the City Council  
22 with the best analysis and information available for its deliberations on the  
23 proposed Plan, and to encourage the public's confidence in both the process and  
24 underlying assumptions of the Plan, and

25  
26

1 WHEREAS Ordinance No. 22569 requires an affirmative vote of not less  
2 than six members of the Council in order to withdraw moneys from the City  
3 Council Contingency Fund; Now, Therefore,

4 BE IT RESOLVED BY THE COUNCIL OF THE CITY OF TACOMA:

5 Section 1. That the City Manager is hereby directed to hire an  
6 independent third-party consultant or consultants to audit, analyze, and establish  
7 a reasonable methodology for cost allocation between Tacoma Power and Click!  
8 Network, and evaluate the expansion of Click! Network.

9 Section 2. That the City Manager is hereby authorized to execute  
10 professional services agreements, as necessary, which outline the scope and  
11 deliverables necessary to perform the work described in Section 1.

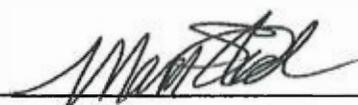

12 Section 3. That the use of up to \$100,000, budgeted from the City Council  
13 Contingency Fund, is hereby authorized to pay the costs associated with the work  
14 authorized herein, pending reimbursement from Tacoma Power.  
15

that with revenue from the internet.

That's essentially what we're faced with today.

We have the service provision in cable that is dramatically changing.

We heard from several people tonight that talked about cutting the cord.

That's the phenomenon we're wrestling with by being the retail provider.

>> Mayor Woodards: Council Member Blocker.

>> K. Blocker: Thank you mayor and director flowers for your detailed description of the history where we got to the place where today.

My question is for our city attorney.

We've mentioned that we are currently in litigation with individuals or groups that feel as though the City of Tacoma, our utilities is subsidizing the rates for Click!

Can you explain to the public where we are at with that litigation and how it may impact the City of Tacoma and the general fund budget?

>> The lawsuit was filed in 2018.

The plaintiffs ratepayers that will the city power department has been subsidizing the Click! loss to the tune of \$21 million -- loss to the tune of \$21 million if they're entitled to interest on those amounts which could be as high

as 12%.

They'd be asking for \$128 million.

Our reserve account is roughly \$35 million.

If we were hit with judgment, if we lose the appeal, they'd be asking for that money immediately.

We'd have to raise property taxes or essentially drain the general fund or layoff general fund staff, police, fire, legal department, finance.

>> K. Blocker: Thank you for that.

Based off your professional judgment, that will is not a risk that we want to take which is why we move towards the direction of working with a private entity?

>> The council in early 2018, they abandoned the all-in plan that because that would have required more public funds it provide the services and that was a substantial risk to all of city services if they were to be added on top of potential judgment that is out there.

Outstanding right now if we don't win the appeal.

>> And just one more question, people have raised concerns about the City of Tacoma not performing audit we've heard from deputy -- sorry, Director Flowers that we've done our own internal analysis but we planned to hire an outside consultant at that do an audit for us.

Is that correct?

Why didn't we move forward with that process?

>> As Director Flowers talked about a little bit, that came about the at the same time as the board passed two resolutions.

One recommending a third party lease and one recommending the all-in plan.

Both came to council.

Following a review, there was a request to look at number to analyze and review not necessarily an audit because as a subfund, it doesn't have its own financials per se.

You can't look at it like a separate enterprise fund, at the point that the all-in plan was abandoned and we were going to pursue the review of the 12 policy goals and public/private partnership, the idea of doing an audit didn't make any sense so at that point it was ended because we'd gone flew the moss Adams.

>> K. Blocker: If we were to do an audit at this point, what impact would it have object judgment that's been come down from the courts?

>> Well, we're still appealing that particular ruling.

Doing an independent audit of the finances today would potentially provide more information for the plaintiffs to use against the city and against Tacoma Power related to their allegations that we're illegally subsidizing the funds.

The audit could show we're not allocating enough Tacoma Power costs to the Click! customers and we're possibly using more power funds than we originally thought we were.

>> K. Blocker: It could hurt our case and put us at more risk.

>> Yes, more risk on the city.

>> K. Blocker: Thank you.

>> Mayor Woodards: Council Member Hunter.

>> L. Hunter: Thank you.

I want to also appreciate the questions of my colleagues here because I think that with those questions, you've been able to provide some clarity Director Flowers to some of the concerns we've heard here this evening.

I appreciate the work that you've been doing since arrived eight months ago and I appreciate the works of the TPU board of directors and in my first year here, steep learning curve of many aspects.

But the number of times that we've had mutual board meetings where we've been together ask analyzed and reviewed and gone over this, this has not been a capricious process.

What I want to do is just to point out that this, as has been said, Click! has been operating as a public and private partnership since its inception.

We have other examples where we have valuable assets that

# EXHIBIT 56

[HOME](#)[Print Friendly](#)

The City Utility tax refers to a tax on public service businesses, including businesses that engage in telecommunications, supply of electricity and natural gas, and solid waste collection. Utility tax is a gross receipts tax that is measured on the value of products or services, gross proceeds of sales, or gross income of business.

The tax is in lieu of the business and occupation (B&O) tax but is consistent with B&O tax. Utility tax is calculated on the gross income from activities. This means there are no deductions from the Utility taxable income for labor, materials, or other costs of doing business.

### **How to Report**

The Utility tax is reported and paid monthly. Monthly returns are due by the end of the month following the close of the tax period.

Communications/electricity/solid waste collection businesses with gross income of less than \$20,000 per month, as indicated by billings and/or charges to or for service to Tacoma customers, may request to report and pay the Utility tax quarterly.

If your business gross income is less than \$20,000 per month and you would prefer to report on a quarterly basis send an email to [taxinfo@cityoftacoma.org](mailto:taxinfo@cityoftacoma.org) with your City Account Number and request to change your filing frequency. Change in filing frequency can only be done at the start of a quarter (January, April, July, October).

### **Tax Classifications & Rates**

All business activity is reported under a certain tax classification and each classification has its own tax rate.

### **Deductions and Exemptions**

There may be deductions or exemptions available for the following types of businesses that engage in public service businesses. The information can be found in the Tacoma Municipal Code Subtitle 6A. Please follow the link below for more information.

Communications [TMC 6A.40.090](#)

Electricity and Solid Waste Collection [TMC 6A.50.060](#)

## **Utility Tax**

### **Telephone/Cellular Phone Charges**

The utility tax is levied on the utility company, however, many companies will include the City tax on their customers bill. An explanation of some local charges that may be on your phone bill can be found [here](#).

# EXHIBIT 56 (a)

## Tax Classifications

Business income is reported under a tax classification depending on the type of business activity. If you conduct multiple activities, it may be necessary to report under several B&O tax classifications. Review the definitions of [tax classifications](#). If you need assistance, [contact us](#).

City of Tacoma  
Office of the City Clerk

## CERTIFICATE OF CITY CLERK

I, Doris Sorum, City Clerk of the City of Tacoma, Washington, do hereby certify that the attached is a full, true and correct copy of Amended Resolution No. 39236 adopted by the City Council on July 14, 2015.

Dated this 21<sup>st</sup> day of January 2020.

  
Doris Sorum, City Clerk  
City of Tacoma, Washington

## RESOLUTION NO. 39236

1 BY REQUEST OF MAYOR STRICKLAND

2 A RESOLUTION providing for the submission of a proposition to the electors of  
3 the City of Tacoma, at the General Election to be held on November 3,  
4 2015, authorizing the City to levy an additional 1.5 percent earnings tax on  
5 utility companies, and a levy lid lift of \$0.20/\$1,000 in assessed value over  
6 a period of ten years, for the sole purpose of funding repair and  
7 maintenance improvements for residential and arterial streets, freight  
8 access, and bike and pedestrian mobility in the City of Tacoma; setting  
9 forth the ballot proposition; requiring an annual progress report; and  
10 directing the City Clerk to transmit to the Pierce County Auditor a certified  
11 copy of this resolution.

12 WHEREAS the City Council has identified infrastructure improvement as  
13 one of its Strategic Goals, and

14 WHEREAS adequate and dedicated funding to preserve and maintain City  
15 streets continues to be a significant challenge for the City, and

16 WHEREAS the City Council and Council-appointed task forces have  
17 consistently identified the issue of sustainable, dedicated funding for basic  
18 maintenance of City and neighborhood streets and road safety upgrades, pothole  
19 repairs, repaving of streets and arterials, safety improvements at intersections,  
20 sidewalks and crosswalks near schools, and bridged maintenance and safety  
21 repairs as a top priority, and

22 WHEREAS RCW 35.22.280 permits first-class cities to levy a tax on the  
23 privilege of conducting utility businesses such as electrical energy, natural gas,  
24 or telephone business, and RCW 35.21.870 limits imposition of such taxes to a  
25 rate of six percent in the absence of approval by a majority of the voters of the  
26 City, and

1           WHEREAS RCW 84.55.050 provides for the levy of regular property taxes  
2 in an amount exceeding the limitations specified in Chapter 84.55 RCW if such  
3 increased levy is authorized by a proposition approved by a majority of the voters  
4 at the general election held within the taxing district (a "levy lid lift"), and  
5

6           WHEREAS RCW 84.55.050 further provides that the proposition may limit  
7 the time period and purpose for which the increased levy is to be made and that,  
8 unless otherwise stated in the proposition, subsequent levies shall be computed as  
9 if the proposition had not been approved and the City had made levies at the  
10 maximum rates which would otherwise have been allowed, and  
11

12           WHEREAS, if approved by the voters, the funds raised by a 1.5 percent  
13 increase in the utility earnings tax and levy lid lift of \$0.20/\$1,000 in assessed  
14 value over a period of ten years would be used exclusively to finance Citywide  
15 street maintenance improvements and safety upgrades, and  
16

17           WHEREAS the City Council deems it necessary to submit to the qualified  
18 electors a proposed tax increase of 1.5 percent earnings tax on utility companies,  
19 and a levy lid lift of \$0.20/\$1,000 in assessed value over a period of ten years, to  
20 generate total revenues of \$130,000,000, for the sole purpose of funding street  
21 maintenance improvements and safety upgrades as described herein, and  
22

23           WHEREAS transparency and accountability of how funds are spent, the  
24 budgets of the projects, leverage of funds achieved and demonstration of  
25 progress made are critical to delivering the improvements promised to voters,  
26 and

1           WHEREAS, if the voters approve this proposition, the City Manager is  
2 directed to prepare an annual progress report to be made available to the public  
3 through the Transportation Commission to ensure transparency and  
4 accountability, and

5           WHEREAS, in furtherance of transparency and accountability of how the  
6 newly generated funds will be spent, it is the intent of the City to establish new  
7 and separate funds to segregate the revenues collected as a result of this  
8 measure, and to restrict the use of these funds for the purposes set forth in this  
9 measure; Now, Therefore,

10           BE IT RESOLVED BY THE COUNCIL OF THE CITY OF TACOMA:

11           Section 1. That the Pierce County Auditor, as *ex officio* supervisor of  
12 elections in Pierce County, Washington, is hereby requested to submit to the  
13 qualified electors of the City of Tacoma, for their approval or rejection at the  
14 General Election to be held on November 3, 2015, a proposition authorizing an  
15 additional 1.5 percent earnings tax on utility companies, and a levy lid lift of  
16 \$0.20/\$1,000 in assessed value over a period of ten years, to generate total  
17 revenues of \$130,000,000, for the sole purpose of financing street maintenance  
18 improvements and safety upgrades in the City of Tacoma.  
19

20           Section 2. The City shall submit a proposition to the electorate of the City  
21 of Tacoma in the form substantially as follows:  
22  
23  
24  
25  
26

26

The Tacoma City Council adopted Amended Resolution No. 39236 concerning levy rate and gross earnings tax increases for street improvements. If passed, Proposition No. 3 would authorize the City to increase the City's regular property tax levy by \$0.20 per \$1,000 of assessed value for collection for ten years beginning in 2016, and levy an additional 1.5% earnings tax on natural gas, electric, and phone companies for ten years, beginning 2016, to fund street repair, maintenance and safety improvements for residential streets, arterials, and freight access, including resurfacing, pothole repair, pedestrian safety improvements, school crossing beacons, and sidewalk improvements.

Should this proposition be approved?

Yes. . . . .   
No . . . . .

Section 3. That, prior to August 4, 2015, the City Clerk shall send to the Pierce County Auditor, as *ex officio* supervisor of elections, a certified copy of this resolution, together with a proposition substantially in the form set forth above, for the November 3, 2015, General Election.

Section 4. That, should the voters approve this proposition, the City Manager is directed to work with the Public Works Department to deliver an annual progress report to the public through the Transportation Commission so that citizens may easily understand the improvements made and budget and leverage achieved, among other indicators, important for transparency and accountability of these public resources.

Section 5. That the City Manager is directed to bring forward an ordinance establishing dedicated and restricted funds to ensure that any revenue

generated as a result of this measure is used solely as outlined in the initiative

proposal.

Additions to Intangible Plant in 2018 were \$1.6 million which primarily included an IT service management tool. Additions to Hydraulic Plant in 2018 were \$6.4 million, which mainly included replacement for generation breakers at Cushman, the boat ramp at Mossyrock, security upgrade at Alder Park, and replacements of hydro exciters, hydro governors, turbines, and generators.

Transmission additions were \$11.8 million, which included Pearl Cushman upgrades, Henderson Bay Tower replacement, and replacements of circuits, high-voltage switches, and other devices. Distribution additions were \$31 million, which included construction of Taylor substation, LED street lights, addition and replacement programs for new services, pole and cable, road related additions and replacements, distribution transformers and meters and devices. Regional Transmission additions were \$11.5 million, which primarily included EMS Hardware and Software. Additions to General Plant were \$6.5 million, which included the permanent decant facility, pay station kiosks, Voice Solutions system, security system in the administration building and parking lots, and other servers and systems. Click! additions were \$2.1 million, which included aerial and underground coax cables, enhancements and replacements of network infrastructure, and upgrades of security and network.

**2017 UTILITY PLANT**

**2017 PLANT ADDITIONS**

Additions to Hydraulic plant in 2017 were \$22.8 million, which included the Cowlitz license implementation and the hydro governor and exciter replacement program. Distribution plant additions were \$17.9 million, which included addition and replacement programs for new services, pole and cable, road related additions and replacements, distribution transformers and meters and devices. Transmission plant additions were \$9.2 million, which included Potlatch system ring bus, substation additions and replacements, Henderson Bay tower replacement, Pearl Cushman upgrade and protection and controls additions and replacements.

**CITY OF TACOMA, WASHINGTON  
DEPARTMENT OF PUBLIC UTILITIES  
TACOMA POWER**

**NOTES TO FINANCIAL STATEMENTS  
YEARS ENDED DECEMBER 31, 2018 AND 2017**

**NOTE 1 OPERATIONS**

**OPERATIONS OF TACOMA POWER** - The Light Division, doing business as Tacoma Power (Tacoma Power or the Division), is a division of the City of Tacoma, Washington (the City), Department of Public Utilities (the Department) and is included as an enterprise fund in the Comprehensive Annual Financial Report (CAFR) of the City. The Department consists of Tacoma Power, Tacoma Water and Tacoma Rail and is governed by a five-member Public Utility Board (the Board) appointed by the City Council. Certain matters relating to utility operations, such as system expansion, issuance of bonds and setting of utility rates and charges, are initiated and executed by the Board, but also require formal City Council approval. Tacoma Power owns and operates the City's electrical generation and distribution facilities and telecommunication infrastructure. Tacoma Power serves approximately 178,000 of retail customers and has 813 employees. Tacoma Power is organized into six business units: Generation, Power Management, Transmission and Distribution, Rates, Planning and Analysis, Click! Network, and Utility Technology Services.

**GENERATION** operates four hydroelectric generating projects (Cowlitz, Cushman, Nisqually and Wynoochee) and the associated recreational facilities, fish hatcheries and other project lands.

**POWER MANAGEMENT** manages the power supply portfolio, markets bulk and ancillary power supply services, schedules and dispatches division-owned generation and contract power supplies and performs power trading and risk management activities. Revenues and the cost of electric power purchases vary from year to year depending on the electric wholesale power market, which is affected by several factors including the availability of water for hydroelectric generation, marginal fuel prices and the demand for power in other areas of the country.

**TRANSMISSION AND DISTRIBUTION** plans, constructs, operates and maintains the transmission and distribution systems including substations, the underground network system, supervisory control and data acquisition (SCADA) systems, revenue metering facilities and all overhead transmission and distribution systems. Electricity use by retail customers varies from year to year primarily because of weather conditions, customer growth, the economy in Tacoma Power's service area, conservation efforts, appliance efficiency and other technology.

**RATES, PLANNING AND ANALYSIS** plans for and manages the retail rate process, financial planning, analysis and modeling, budget strategies, the capital program and risk management.

**CLICK! NETWORK** plans, constructs, operates and maintains a hybrid fiber coaxial (HFC) telecommunications network that supports the operation of Tacoma Power's electrical transmission and distribution system, provides retail cable TV and wholesale high-speed Internet services to residential and business customers, and data transport services to retail customers.

**UTILITY TECHNOLOGY SERVICES (UTS)** maintains communication networks, operational and informational technology systems, and related equipment and infrastructure to optimize utility operations and improve reliability and service quality. This includes a Project Management Office that establishes and leads Tacoma Public Utilities Information Systems project governance process and implements project portfolio management tools. UTS is responsible for all matters related to Tacoma Power's compliance with North American Electric Reliability Corporation (NERC) Reliability Standards, maintains overall responsibility for the NERC Reliability Standards and manages Tacoma Power's Internal Reliability and Compliance Project.

## AMENDMENT NO. 7 TO ISP ADVANTAGE AGREEMENT

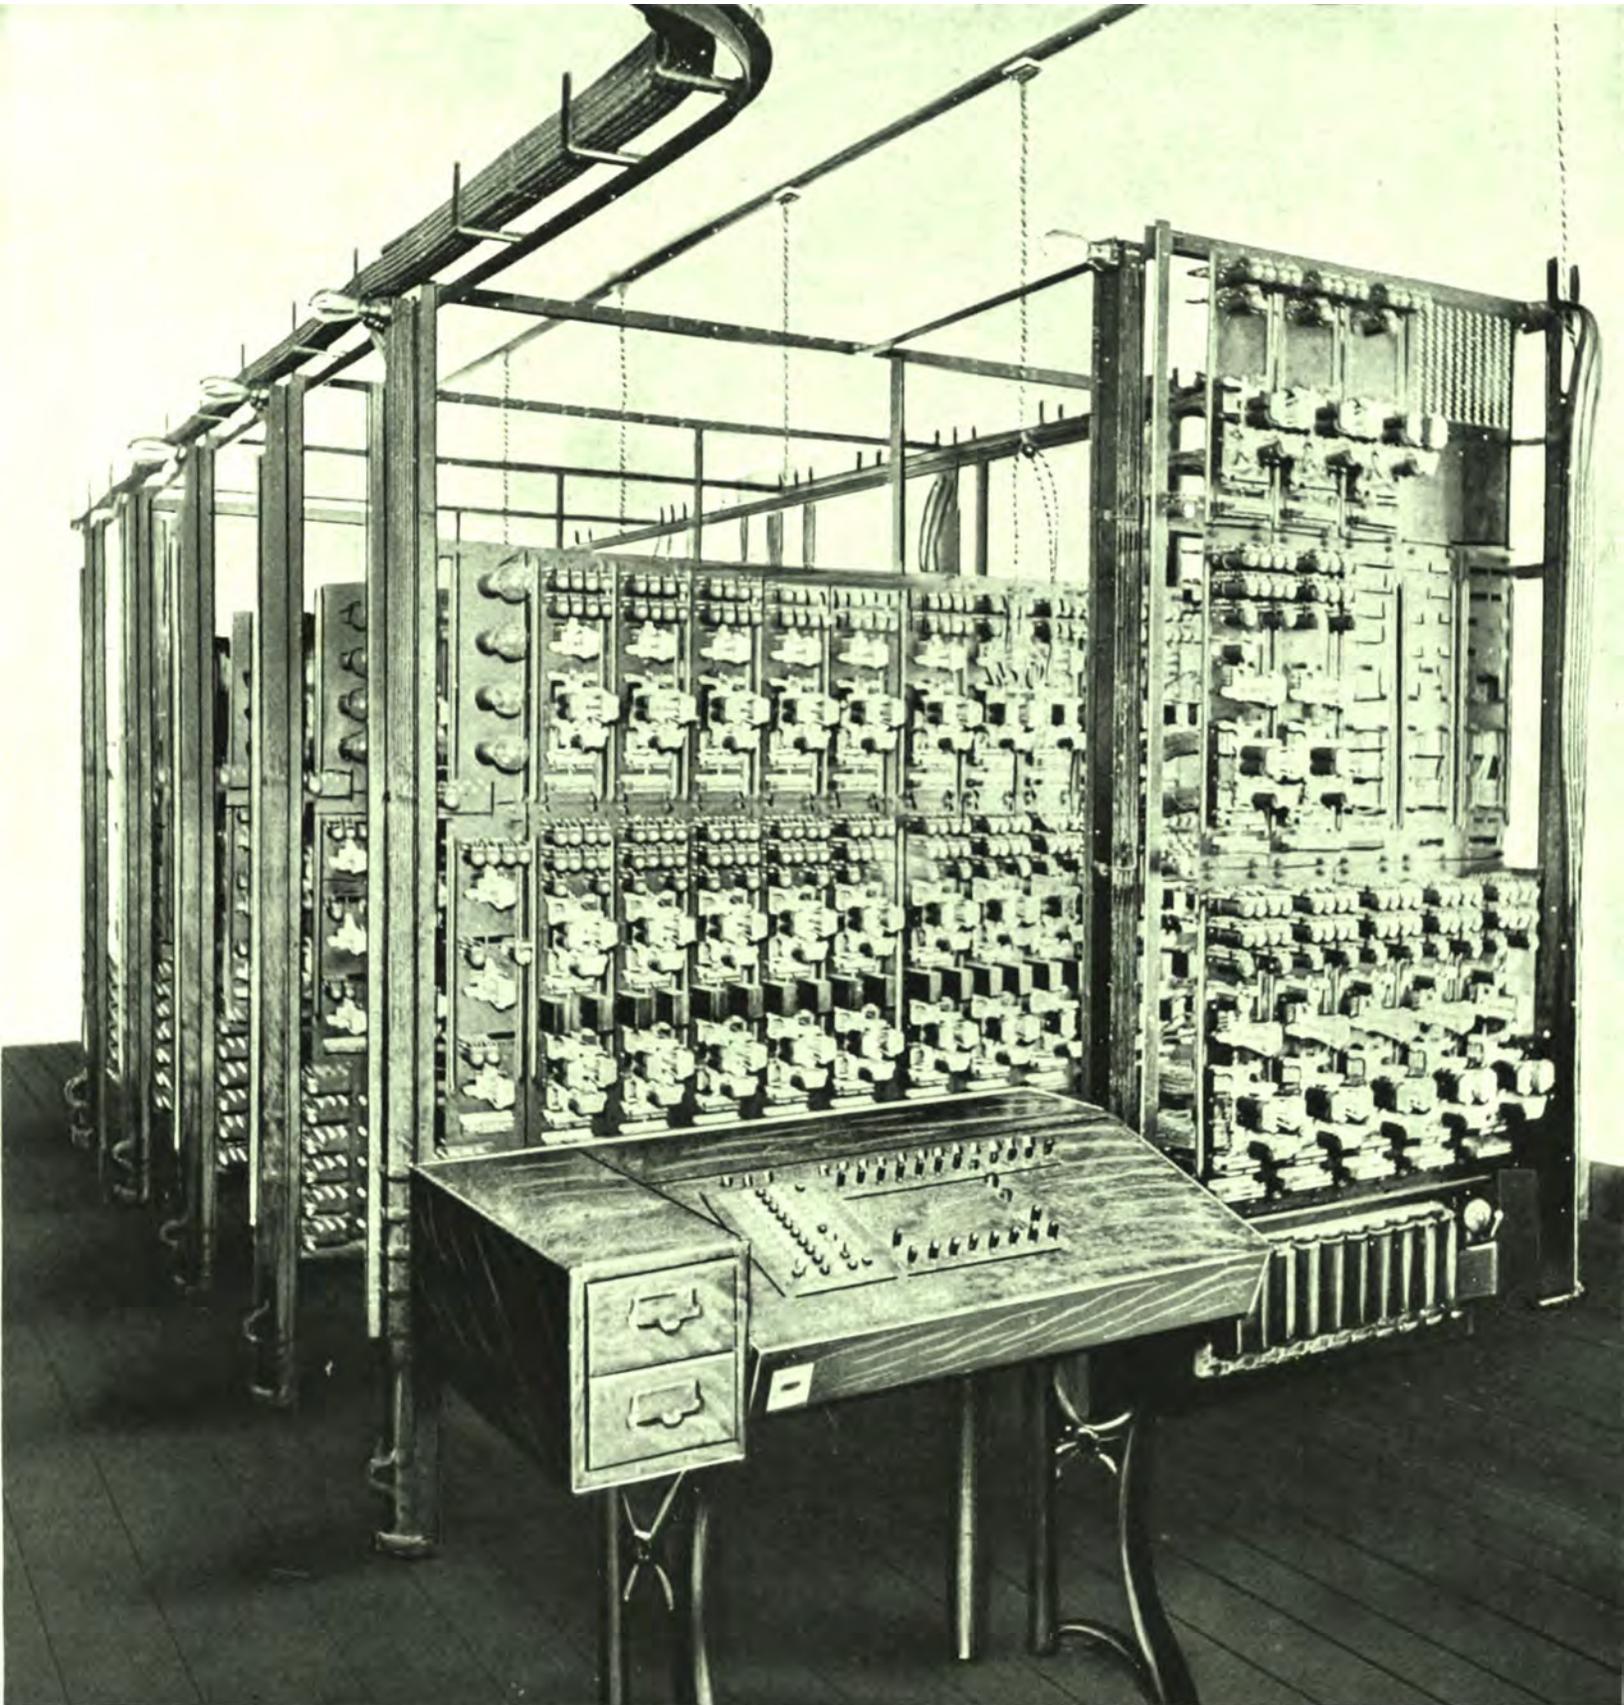

### Click! Network Role and Responsibilities

- A. Install, operate and maintain the Network equipment to make FTTP technology operational
- B. Notify ISP of new FTTP deployments and anticipated release dates
- C. Release all new FTTP addresses to ISP upon completion
- D. Determine the make and model of the ONT, which shall be capable of data, telephony, and video services. Models that are appropriate for outdoor mounting, indoors mounting, requiring powering and non-AC powered, and Wi-Fi capable shall be made available
- E. Purchase, own and install ONT equipment in End User premises or in a common connection location such as a communications closet where wiring can be extended directly to End User premises
- F. Provide dynamic and static IP address space
- G. Provision ONT according to the Fiber Service Plan indicated on ISP installation order
- H. Retain sole ability to provision and surveil the Network and ONT equipment. The provisioning platform cannot partition the End Users on the Network between ISPs, and therefore Click! Network shall bear no responsibility for any costs associated with the development of such functionality.
- I. Receive telephone calls or trouble tickets from ISP or End Users experiencing trouble with Fiber Service; perform troubleshooting
- J. Perform service call to correct trouble
- K. Assume no liability for the merchantability or functionality or reliability of any ISP provided services such as telephony and any other value-added services such as 911, E911, etc. over the FTTP Network that are not directly provided by Click! Network to the ISPs
- L. Fiber Service Plans are best effort services and therefore advertised speeds are not guaranteed
- M. Bill ISP for Fiber Service Plans, as per the Agreement, on a monthly basis.

### ISP Role and Responsibilities

- A. Establish up to three packages as defined in the Fiber Service Plans section above
- B. Establish standard, published, non-promotional retail rates for the Fiber Service Plan packages ("Retail Rate Schedule")
- C. Provide the Retail Rate Schedule for the Fiber Service Plans to Click! Network
- D. Promote and market Fiber Service Plans only in locations where Click! Network has constructed FTTP and Fiber Service Plans are made available
- E. If End User Subscriber is a data service only Subscriber, then ISP shall specify the type of ONT required on the installation order.
- F. Establish installation, move, and disconnection appointments for End Users in the online appointment scheduling application
- G. Coordinate with Click! Network for completion of installation and repair orders as necessary
- H. Open and transmit a trouble ticket to Click!, refer End User or transfer call to Click! Network for troubleshooting and repair of Network or ONT related trouble
- I. Remit payment to Click! Network, as per the Agreement, on a monthly basis. ISP remains solely responsible for all charges billed to it by Click! Network whether or not it collects those charges from End Users.

# TELEPHONES.

## CHAPTER I.

### INTRODUCTION.

*Classes of telephone systems included.*—The extensive use of the telephone has developed a number of different business methods for the organization and conduct of the industry. This census report covers all commercial and mutual or cooperative telephone systems, and also all independent farmer or rural lines that were in operation in the United States during any part of the year ending December 31, 1907; but does not include private lines used exclusively for communication between different rooms or departments of manufacturing or mercantile establishments, hotels, or private residences, systems operated for the benefit of Federal, state, and municipal governments, or those owned or leased by steam or electric railroads and operated by them for their own exclusive use. The companies for which statistics were collected have been divided into the following two classes:

(1) The American Telephone and Telegraph Company, and its subsidiary companies, commonly known as the "Bell system."

(2) Companies and systems operated independently of the Bell system and denominated "independent (non-Bell)" throughout this report.

All of the Bell companies have been considered as commercial, and the statistics for the entire system were obtained from the central office of the parent company at Boston, Mass.

The independent companies are divided into the following three classes:

(a) Commercial systems operated primarily for revenue.

(b) Mutual systems, or cooperative associations and companies, operated not primarily for revenue, but for the convenience of the patrons, who are assessed to pay expenses of maintenance, operation, and extensions. Many systems doing business on the mutual basis are organized as incorporated companies under the laws of the states in which they operate.

(c) Independent farmer or rural lines, which have no regular exchanges or centrals of their own, but which may or may not be connected with the exchange of a Bell or of a commercial or mutual system.

The term "independent," as used in connection with farmer or rural lines, does not relate to the distinction between Bell and independent (non-Bell) systems, but rather to a distinction between the farmer or rural lines and the lines owned by commercial and

mutual companies. The practice of establishing short telephone lines connecting two or more houses in the rural districts has increased very rapidly during the past ten years. Frequently these lines have no distinctive names, and their existence is known only to the persons in their immediate vicinities. They are extended gradually as other persons desire to be connected and, if they are in the neighborhood of a telephone exchange, it frequently happens that arrangements are made for exchange service. The extension of the farmer lines by additions or consolidations leads gradually to the establishment of exchange systems and the formation of mutual or commercial systems. This method of development makes it difficult to establish a line of demarcation between farmer or rural lines and mutual systems and between mutual and commercial systems.

Some companies operate on a combined commercial and mutual basis. This is due to the fact that the lines were constructed under a mutual arrangement and that later additional subscribers were taken on a revenue basis. In such cases if the assessment income for the census year exceeded the revenue income, the companies are classed as mutual; but if the revenue income exceeded the assessment income, they are classed as commercial.

A statistical line of demarcation between the independent farmer or rural lines and the small mutual systems can not be established with a degree of accuracy that will enable a comparison of the statistics for 1907 with those for 1902. At the census of 1902 the statistics obtainable for these small lines were rather incomplete, and practically all of the farmer or rural lines that operated switchboards were counted, without regard to size or amount of business, either as commercial or as mutual companies. The fact that a switchboard was operated was found to be of little assistance in establishing the line of separation, and therefore for the census of 1907 a different policy has been adopted. In this report there are included in the class of independent farmer or rural lines systems operated on a combined mutual and revenue basis, where the combined income and assessments for the full census year amounted to less than \$1,000, and small systems owned by individuals or firms and apparently operated for revenue having an income of less than \$500 for the full year.

The contract agreements for exchange facilities between different companies or between companies and farmer or rural lines are made to meet local conditions. In some cases the company owning the exchange obtains virtual ownership or control of the connecting lines; in some a fixed rental per month or year is paid to the owning company; while in some the compensation depends upon the number of stations connected, and in others it depends upon the number of messages transmitted. In making the census report the actual ownership of each line is used, so far as possible, to determine whether to include it as a member of the Bell system or as one of the several forms of associations operated independently of the Bell system. The statistics for the Bell system, therefore, represent only the lines and stations reported by the company as owned by it or by its subsidiary companies. In addition, however, the American Telephone and Telegraph Company (Bell system) reported the number of stations on the lines that have contract agreements for service at its various exchanges.

At the census of 1902 great difficulty was experienced in securing a satisfactory enumeration of the small independent commercial and mutual telephone companies and systems and of the independent farmer or rural lines. Therefore a special effort was made at the present census to enumerate all lines of this character. In the first instance a card index was prepared containing the names and addresses of all telephone companies and independent farmer lines known to the Census Bureau. The basis of this index or list was the reports made at the census of 1902. But in order to make it complete other sources of information were utilized; the postmasters throughout the country were required to furnish the names and addresses of all telephone companies and of the owners of individual farmer or rural lines operating in their cities or immediate vicinities; state officials were requested to furnish lists of the telephone companies in their respective states, and fairly complete lists were received from most of the states; county officials were requested to furnish lists of the names and addresses of the owners of farmer or rural telephone lines in their respective counties, and a great deal of information was obtained from them; all of the independent telephone associations were requested to furnish the names and addresses of their members, of any other companies in the same neighborhood, and of the proprietors of near-by independent farmer or rural lines known to them; and the names and addresses of telephone companies were obtained from the city directories for all cities having a population of 50,000 or over, and from lists kindly furnished by the publishers of *Telephony's* Directory of the telephone industry.

Blank schedules soliciting the statistics required for the census were mailed to all the companies and to representatives of each of the independent farmer or rural lines named on the lists prepared from these

sources, and in addition each company or person addressed was requested to give the names and addresses of all connecting farmer or rural lines and of all other companies or lines in the vicinity. Many additional names were secured by this means. The preliminary lists prepared from these various sources contained in the neighborhood of 35,000 names, a total which, of course, included quite a large number of duplications that had to be eliminated from the perfected card index. The Census Bureau, however, not yet satisfied that it had a complete list, divided the United States into eighty-four enumeration districts for making a personal canvass, and assigned one or more special agents to do the work in each district. They were given the names and addresses of all the telephone companies and of the proprietors of the independent farmer or rural lines located in their respective districts, and they were instructed not only to secure reports from each company or line whose name they had, but also to make careful inquiry for any other companies and lines in operation in the district during any portion of the year 1907.

It is believed that as a result of these efforts, returns were secured from practically every company or line that was in operation during any portion of the census year.

*Period covered.*—The statistics cover the year ending December 31, 1907, or the business year of each company which most nearly conforms to that calendar year. All statistics taken for a fixed date, such as cash on hand, number of telephones or stations, and wire mileage, are reported as of the last day of the business year covered by the report taken for each company. When possible, comparative data for the census year ending December 31, 1902, and for prior censuses are presented in connection with the data for 1907.

Since during the year 1907 many companies were organized and many systems were installed, and a number abandoned or absorbed by other companies, the statistics do not represent a full year's operation for every company reported. As the census can not be taken instantaneously and the number of telephones in operation changes daily, the numbers given in the annual reports of many companies do not agree with the number reported to the census for the date on which its report was obtained. These conditions should be considered in comparing the census figures with those compiled for other purposes.

*Limitations of the statistics.*—As small commercial systems owned by individuals and firms, many mutual systems, and the farmer or rural lines generally have no statistics concerning capitalization, and as many could furnish no data in regard to income and expenses, number of employees, salaries, wages, and some other subjects that are covered in the reports of the larger companies, it is impossible to compile for the entire industry totals showing all of the detail called for by the inquiries of the census schedule. In fact, the number

of telephones and the miles of wire are the only facts that could be collected for a great many of the independent farmer or rural lines and the small mutual systems. Statistics of capitalization, income, expenses, number of employees, salaries, wages, and other features presented in the detailed tables have been secured only for the commercial companies and the more important mutual systems. Therefore the statistics on these subjects do not represent all of the interests operating the 12,999,369 miles of wire and the 6,118,578 stations or telephones reported for all classes of companies, systems, and lines.

In the cases of some companies which keep no account books from which exact statistics concerning their incomes and expenses during the year could be obtained, estimates have been resorted to for approximate data. The employees of some of the smaller companies and systems do not devote their entire time to the telephone business, and so the wages reported by these companies are necessarily much lower than the wages reported by companies whose employees are paid for a full term of service.

The telephone companies do not limit their operations to the state, county, or city in which their principal offices are located, but extend their lines irrespective of the political subdivisions of the country. In compiling the statistics it is impossible, in many instances, to assign to each state the amount of capital, income, expenses, salaries, and wages that are incident to the operation of the wires and telephones within its limits. As a rule, the total for all items of this character is credited to the state in which the general office is located, but an exception is made in the case of the American Telephone and Telegraph Company, which segregated the statistics so as to assign to each state a portion of each item commensurate with the equipment located in it.

*Systems or lines.*—Throughout this report the designations "company," "system," and "line" are frequently used as synonymous terms. They represent

a statistical unit, the connotation of which varies slightly to meet the requirements of the different methods of bookkeeping of the various companies and the practice of the office in the compilation of the data. There is an increasing tendency to bring independent telephone lines under one ownership and direct their operations from a central office. The industry is constantly undergoing changes in this respect. New companies are being organized and old systems consolidated or reorganized. On the whole these changes increase the number of cases in which several lines are considered as a single system.

As a rule, distinct ownership marks the separation of the statistical units, and all exchanges and lines operated under the same ownership are counted as a single system. Where several lines are combined under one ownership, or several properties have been brought under one management by purchase or stock control, they are counted as one system. The subsidiary companies of the American Telephone and Telegraph Company are, of course, counted as separate units, as are the subsidiary companies of some other large companies which furnished separate reports for their subsidiary companies. Each independent farmer or rural line and each independent commercial or mutual company, however small, also is counted as a separate system. The "number of lines" in the tabulation therefore represents consistently the number of separate ownerships, without regard to the character of the ownership, and does not represent the number of circuits or pole lines.

Since the meaning of the terms "system" and "line" is not always the same, the number is no indication of the magnitude of the interests nor is it a true guide as to the number of exchanges. The process of consolidation may have resulted in an actual decrease in the number of companies, but at the same time the number of exchanges, miles of wire, number of telephones, and amount of business transacted may have increased.

Western.....	1907	6,405	5,094	9	1,302	90,464	48,135	2,823	39,506	62,744	31,337	2,083	29,324
	1902	204	157	21	26	3,864	1,606	1,845	413	2,559	1,182	1,169	208

<sup>1</sup> Mutual companies reported 12,378 party lines.

<sup>2</sup> Mutual companies reported 9,258 party lines.

The wire mileage and the number of telephones of the commercial rural lines are included in the wire mileage and the number of telephones given in other tables for the commercial systems. The statistics for the mutual systems and for the independent farmer or rural lines present in full the number of systems, the wire mileage, and the number of telephones for each class. Mutual systems reported 12,378 party lines in 1907 and 9,258 party lines in 1902, and the statistics for these lines would be analogous in the main to those for the rural lines owned by the commercial systems and to those for the independent farmer and rural lines. However, they would not include the total wire mileage and the total number of telephones reported for the mutual systems, as many of the tele-

phones are on single lines. Hence, as in the report for the census of 1902, the total number of mutual systems is used as the basis of comparison.

From Table 12 it appears that the greatest development of the rural telephone service of the country has been reached in the North Central states. By the end of 1907 these states contained 68.3 per cent of the wire and 72.2 per cent of the telephones employed in the rural service. While larger percentages of increase during the past five years are shown for other geographic divisions, the amounts involved are not so large.

Table 13 compares the statistics for the six states in which rural lines have had the greatest development.

# EXHIBIT 58 (a)

## RESOLUTION NO. 2013

### A RESOLUTION OF THE CITY COUNCIL OF THE CITY OF ANACORTES CONCERNING THE DEVELOPMENT OF A FIBER-OPTIC-BASED INTERNET NETWORK

**Whereas** the City of Anacortes has constructed a fiber optic network linking the Water Treatment Plant, the Wastewater Treatment Plant, and the various pump stations and other facilities that support the water and wastewater utilities for the purpose of telemetry and control of utility systems;

**Whereas** the City of Anacortes has connected that telemetry fiber network to other city facilities, including City Hall;

**Whereas** more than 1500 residents have responded to a City survey and shown overwhelming support for the City to move forward with a municipal fiber network;

**Whereas** the City published a Request for Qualifications for Internet Service Providers interested in leveraging a future City-owned fiber optic network to supply Internet access to residential and commercial customers within the city;

**Whereas** the Federal Communications Commission has recently repealed rules requiring "net neutrality," i.e., the principle that Internet service providers should treat all data on the Internet the same, not discriminating or charging differentially by user, content, website, platform, application, type of attached equipment, or mode of communication;

**Whereas** the City has accepted a \$205,000 grant (Interlocal #262) from Skagit County through the Port of Skagit to support a countywide fiber optic network, wherein the Port agreed not to offer dark fiber leases or internet services west of the Swinomish Channel;

**NOW THEREFORE BE IT RESOLVED** by the City Council of the City of Anacortes:

**Section 1. Findings.** The City Council finds that:

1. Information technology generally, and internet access specifically, plays an enormous role in our community today, and its impact to how we live, work, learn, and play, will continue to grow throughout the 21<sup>st</sup> century.
2. Businesses, and some residents, have an *existing* need for internet access at symmetric gigabit or higher speeds.
3. Businesses, residents, and the City will have an ever-growing need for high-speed, low-latency internet access in the future, given expected technological developments, e.g., ultra-high-resolution streaming television, ultra-high-resolution medical imaging, Smart Cities Initiatives, Internet of Things, 5G wireless, and self-driving vehicles.

4. Businesses and residents currently have few options for internet access, with most options at various performance tiers available from only a single provider.
5. World-class technology infrastructure, such as fiber-optic-based internet, helps communities attract invaluable human talent and capital, economic investment; create jobs; expand educational opportunities; improve telemedicine options, advance public safety, and position the community to take advantage of future technological innovation.
6. Fiber optic networks are widely considered “future proof” because they transmit signals at the speed of light and are constrained only by the electronics that manage the system.
7. Redundancy and resiliency of a fiber network is a critical part of making the City attractive to investment and economic development.
8. Fiber optic internet access is currently provided by private entities in the City of Anacortes but is prohibitively expensive due to the high cost of deploying infrastructure and lacks a redundant loop to the Internet backbone.
9. Private investment in capital-intensive technology infrastructure tends to converge around major metropolitan areas and population centers and is unlikely to occur organically in small cities like Anacortes.
10. A City-owned fiber-optic-based network would promote competition among Internet service providers that can both provide low-cost connectivity options for those with low incomes and offer commercial and residential stakeholders connectivity options superior to existing choices.
11. There is value in public ownership of critical infrastructure and utility services, like fiber-optic-based internet.

**Section 2. Objectives.** In implementing the directives below, the City Council intends that the City will accomplish the following objectives:

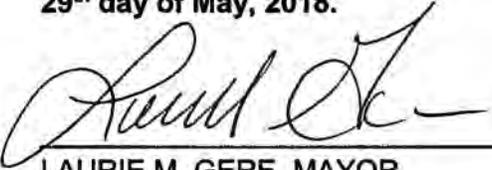

1. Offer “future proof” fiber-optic-based internet access to City residences and businesses.
2. Increase the resiliency of fiber-optic-based internet access throughout the County.
3. Provide affordable access to fiber-optic-based internet access to City residences and businesses.
4. Improve opportunities for economic development that utilizes and requires reliable and resilient fiber-optic-based networks.
5. Improve quality of life and property values for residents that would connect to fiber-optic-based internet, especially as the need grows for higher-bandwidth internet connections.

**Section 3. Directives.** The City Council authorizes and directs the preparation of a business plan to implement the following:

1. Build a redundant loop of fiber-optic-based internet access for the city.
2. Build a fiber-optic-based network throughout the city capable of delivering symmetrical internet and other network services.

3. Consider lease of dark fiber to other entities and businesses that require additional capacity or resiliency.
4. Ensure net neutrality for all internet access provided by the City.
5. Track revenues and expenses for the fiber optic system on its own balance sheet.
6. Operate the fiber optic system in a self-sustaining way without unreimbursed subsidy from general fund revenues.
7. Prioritize build out of the network within the City and its urban growth area, with intent to ultimately expand to serve the remainder of Fidalgo Island.

**PASSED AND APPROVED BY THE CITY COUNCIL OF THE CITY OF ANACORTES on this 29<sup>th</sup> day of May, 2018.**

  
\_\_\_\_\_  
LAURIE M. GERE, MAYOR

Approved as to form and legality:

  
\_\_\_\_\_  
Darcy Swetham, WSBA #40530  
City Attorney

ATTEST:

  
\_\_\_\_\_  
Steve D. Hoglund, City Clerk/Treasurer

# MISCELLANEOUS

## Through Early November 2019

### **INTERCONNECTION WITH CITY OF MOUNT VERNON**

*City of Mount Vernon will bring fiber to CoA Water Treatment Plant*

*Will allow CoA to connect Skagit County sites in Anacortes to sites in Mt Vernon*

*CoA Public Safety access to Spillman Technologies through CoA fiber*

*Will allow CoA to connect to upstream Internet providers with presence in Mt Vernon*

*Will allow CoA to connect sites in Anacortes to sites in Mount Vernon*

### **SECOND UPSTREAM INTERNET CONNECTION WITH WAVE**

*Blue Heron reservoir to Water Treatment Plant fiber complete*

*Makes CoA's Internet service more reliable*

# EXHIBIT 58 (c)

## FAQs

### Access - Anacortes Fiber Internet - Frequently Asked Questions

**Q: When will Access Fiber Internet be available in my neighborhood?**

A: Currently, we are scheduled to perform installations in the Central Business District in January 2020. Old Town is tentatively planned for Q1 of 2020 and our M Ave pilot area (24th to 32nd St.) in Q3 of 2020 as the attempt to cover the entire footprint of the city by 2023. While no other neighborhoods are scheduled yet, we are accepting orders city-wide.

**Q: If I place an order now, do I have to get service or face a fee?**

A: No. Placing an order now allows us to see where service is in high demand, and which plan is most popular. This helps us to plan and forecast more accurately as we grow our network. When we enter a neighborhood with several awaiting orders we will first contact the customers to confirm the order and the service requested. There is no penalty for changing your mind before an installation date is agreed upon and scheduled.

**Q: Do I need to rally my neighbors to get service to my neighborhood in Anacortes?**

A: We are already planning to make Access Fiber Internet available to every home and business in Anacortes, so you don't have to canvas your neighborhood. That being said, when all other factors are equal, a neighborhood that has far more orders than an equivalent neighborhood may get connected earlier.

**Q: How do I get billed?**

A: Residents that currently receive a utility bill will see Fiber Internet as a new line item on their existing account bill. Customers that don't currently have a utility billing account with the city of Anacortes will have one created.

**Q: How do I pay my bill?**

A: You can pay online at the city of Anacortes Online Payment page or in person at City Hall.

**Q: Will my bill go up after a promotional introductory period?**

A: No. Prices were established and approved by Anacortes City Council. Rates do not fluctuate and would only change with direct action from City Council through their usual public proceedings.

**Q: How much will I be charged in taxes on my bill?**

A: Since Internet alone is an information service, it is not taxed, therefore we do not have to charge any taxes on your service. No really. No taxes.

**Q: Is there a fee to have Fiber Internet connected at my home or business?**

A: There is a one-time Installation fee of \$100 after a representative has performed a walk through and an installation has been scheduled, which will appear on your first bill.

**Q: What does the installation process look like?**

A: In general, installation looks a bit like a traditional cable or DSL Internet installation. If you are in a location where the fiber is connected to telephone poles we would drop a line to your building, penetrate a wall to get the fiber inside, and terminate the fiber in the home. If you are in an area where utilities are underground, we bore or trench to the home and then follow the same steps as an aerial installation.

**Q: Will my router work with the Fiber Internet service?**

A: Yes, however routers that are more than a couple years old may not meet the newer WiFi standard which would limit your WiFi Internet performance. If desired, we can provide a router that we manage for an additional monthly cost of \$10.

**Q: What about modems?**

A: With Fiber Internet, an Optical Network Terminal (ONT) is roughly equivalent to a cable modem. This device transfers your Internet signal from the optical domain to the electrical. At installation, we will place an ONT inside the home or business. If you have a City Managed WiFi plan, the ONT will be integrated with router technology in order to provide a WiFi signal. If you do not have a City Managed WiFi plan, we will place a basic ONT in the site which can be connected to your router via an ethernet cable. There is no fee for the latter ONT device.

**Q: Why would I want a Managed WiFi plan?**

A: With a Managed WiFi plan, we will provide a high-end router at installation that our department can prepare and troubleshoot. Additionally, customers on a Managed WiFi plan that have larger floor plans will be issued a WiFi extender to ensure wireless coverage throughout the home, at no additional expense. If you provide your own router and have a connection issue that is determined to be outside of our network and hardware, we will not be able to troubleshoot a router or other equipment we have not issued.

**Q: If I want to provide my own router, how much should I expect to pay for a decent one?**

A: Routers range widely in price and specifications, but you can expect to spend anywhere between \$50-\$300.

**Q: If I start on one service plan, may I move to another plan without penalty?**

A: Yes, customers may change plans to accommodate their usage. Billing will be prorated.

**Q: How long do I have to keep the service?**

A: Residential customers will be on a month to month contract that they may cancel at any time without penalty. Business customers must pay for service for an initial 12 month period before their contract becomes month to month.

**Q: Do you cap or limit my data usage?**

A: No. There are no data caps on our service.

**Q: When can I cancel my former service?**

A: We recommend that you keep your existing service provider until Fiber Internet service has successfully been installed, in order to prevent any gaps in service.

**Q: If I rent or lease a property do I need to get permission from my landlord to get Fiber Internet service?**

A: Yes, we will contact the property owner on your behalf in order to get permission to install fiber.

**Q: If I live in a condo that gets a bulk-rate contract to provide service to all the units and is paid by the condo association, will Anacortes Fiber do the same?**

A: We can provide a bulk contract so that all of the bills are paid by the condo association, however we do not offer a discount. We are confident in our competitiveness, since our service is already a great price for the speed and we feel that bulk-rate discounts would not be fair to other residents.

**Q: What makes Fiber Optic Internet so great?**

A: Fiber Optic Internet infrastructure is future-proof, because once data hits the fiber optic cable it is moving at the speed of light.

**Q: My email is through my current Internet provider. Will Anacortes Fiber provide my new email?**

A: Anacortes Fiber Internet does not offer email accounts, but there are numerous options (Gmail, Yahoo, Outlook, Zoho, etc.) that offer free email services.

**Q: Won't 5G make Fiber Optic Internet obsolete?**

A: 5G may be great for mobile data, however it will rely on fiber optic infrastructure to the 5G towers and will be used in conjunction with fiber rather than replace it.

**Q: Is everyone in Anacortes required to get Internet from the city?**

A: No. Access will be available to businesses and residents in Anacortes, but service is not mandated.

I Terry Dillion declare as follows:

I am over the age of 18, a resident of Tacoma, Washington.

I declare under penalty of perjury under the laws of the State of Washington that the forgoing is true and correct.

1. That the Email attached hereto as Exhibit A, is a true and correct copy of an email I sent to Mitchell Shook on June 20, 2019.
2. That Exhibit B is a true and correct copy of my resume
3. That, by definition, Click! is a network that provides telecommunication products, and CATV is one of those telecommunication products.
4. That Telecommunication is the transmission of signs, signals, messages, words, writings, images and sounds or information of any nature by wire, radio, optical or other electromagnetic systems. Telecommunication occurs when the exchange of information between communication participants includes the use of technology. It is transmitted through a transmission media, such as over physical media, for example, over electrical cable, or via electromagnetic radiation through space such as radio or light. Such transmission paths are often divided into communication channels which afford the advantages of multiplexing. Since the Latin term communication is considered the social process of information exchange, the term telecommunications is often used in its plural form because it involves many different technologies.

Signed at Tacoma, Washington this 26<sup>th</sup> day of June 2019

  
Terry Dillon, Tacoma, Wasington

## Summary

A seasoned telecommunications professional skilled in management and technical disciplines. Major strengths in network management, organization, planning and supervision. Additional skills as a technical instructor, internal auditor, network security specialist, and a telecommunications technician. A dependable, thorough, and well-organized leader who communicates effectively and is a strong team player.

## Business Experience

*Retired*

2012 To Present

### **Click! Network Tacoma, WA**

*Network Operations Manager*

2004 – 2012

- Member of the Click! Network senior leadership team.
- Assembled organization; hired, supervised and mentored staff.
- Supervised and directed engineering staff responsible for Internet, broadband, video, INET and business data networks design, implementation and maintenance.
- Managed multiple Click! Networks; Cable modem Termination System (CMTS), Hybrid fiber Coax (HFC), Institutional (INET), Element Management System (EMS), Fiber Optic Cable, Synchronous Optical, Metro Ethernet.
- Management of Click! video headend facility.
- Responsible for Network Operations Center.
- Answerable for network and service quality assurance.
- Developed and maintained highly reliable, redundant Internet bandwidth Architecture.
- Accountable for annual capital and expense budgets.
- Internet, broadband, video, business data service customer interface and sales and marketing support.
- Internet, broadband, video, business data network vendor acquisition and management.
- Acquisition and growth of Internet and broadband carrier partnerships.
- Primary administrative and technical interface for City departments; City of Tacoma IT, Tacoma Police, Tacoma Fire, Tacoma Library System, etc.
- Technical and support interface for ISP (Internet Services Providers) and MSA (Master service Agreement) partners.
- Responsible for administration of Communications Assistance for Law Enforcement Act (CALEA) requests.
- Representative on Click! Networks new product development team.

*Broadband Services Manager*

1998 – 2004

- Assembled organization, hired staff and produced and maintained budget.
- Directed engineering staff responsible for Internet, broadband network design, implementation and maintenance.
- Supervised broadband services technicians responsible for installation and maintenance of business Internet, broadband digital networks and associated customer services.
- Managed extensive Internet Protocol Metropolitan Area Network.
- Answerable for 7x24 Internet/broadband network surveillance.
- Accountable for annual capital and expense budgets.
- Customer interface, sales and marketing support.
- Broadband services vendor acquisition and management.
- Development and growth of Carrier partnerships.
- Member of broadband product development team.
- Charter member Tacoma Technology Consortium.

**Century Communications Gig Harbor, WA**

*Circuit Design Engineer*

1997 – 1998

- Access carrier, special services, broadband and private line circuit design.
- Customer and marketing circuit design interface.
- Management of the facility equipment database.
- Provided technical assistance to employees as it relates to the circuit design function.

**U S WEST Communications Seattle, WA**

*Network Executive Staff; Internal Auditor, Manager*

1995 – 1997

- Performed internal operational audits for Network organization.
- Reviewed departmental compliance with policies and procedures.
- Evaluated existing business controls and their use.
- Recommended additional controls when appropriate.
- Determined extent to which company assets were protected and safeguarded.
- Audit findings and recommendations successfully supported process change
- Acted as a catalyst for continuous improvement.

*Business and Government Services Center, Manager*

1995

## Terry Dillon

---

- Supervised 24 technicians responsible for maintenance of broadband digital services in Washington, Oregon, and Colorado.
- Direct customer interface to remedy service problems.
- Acted as customer advocate with staff, engineering, and line management.
- Successfully facilitated occupational/management conflict resolution teams.

### *Network Executive Staff; Network Security Specialist, Manager* 1992-1995

- Administered corporate Information Asset Protection policy for 14 state Network organization and approximately 25,000 employees.
- Developed and implemented Information Asset Protection awareness program.
- Directed network security programs.
- Conducted regional network element and intellectual property security reviews.
- Advised network employees on network element and intellectual property security.

### *Digital Systems Operations Center; Field Work Group Manager* 1990 – 1992

- Effectively supervised 18 technicians.
- Conditioned and maintained 130 subscriber loop carrier systems.
- Arranged and supported broadband digital systems at customer premise locations.
- Provisioned 3,500 broadband carrier service orders annually.
- Managed the U S WEST-Boeing broadband network, annual revenue \$20M.
- Successfully managed broadband digital equipment for 16 central offices.

### *Digital Systems Operations Center; Provisioning and Restoration Manager* 1988 -1990

- Supervised 15 technicians and 3 clerks responsible for center.
- Successfully processed 7,000 broadband service orders per year.
- Facility Alarm Surveillance manager for Western Washington.
- Responsible for test equipment acquisition and inventory control for center.
- Organizational training coordinator.

### *Technical Course Development / Instruction, Manager* 1985 –1988

- Developed and delivered technical courses on broadband digital transmission system.
- Actively interfaced with internal, client, and vendor groups to successfully plan and deliver current technical training.
- Delivered first course offering and trained other technical instructors.
- Determined if local course development was cost justified; if not, arranged for vendor training.

**Pacific Northwest Bell Tacoma / Seattle, WA**  
1979 – 1985

*Facility Maintenance Center Field Technician*

- Installed and maintained first Fiber Optic transmission systems in Washington State.
- Accountable for extensive broadband digital network.
- Conditioned and sustained various digital technologies including broadband, pair-gain, asynchronous/synchronous fiber optic, digital cross connect systems and fiber optic cable termination equipment.
- Provisioned and maintained customer circuits; voice, toll grade, low speed data, high capacity broadband circuits and central office trunking.
- Responsible for multiple vendor environments.
- Member of the Communications Workers of America.

**Pacific Telephone San Francisco Bay Area, CA**

1967 – 1979

*Digital Network Center Field Technician*

- Installed, provisioned and maintained inter-office and last mile broadband digital communications systems and services.
- Member of the Communications Workers of America.

## About NBN Co

### Who we are

**NBN Co is the company building and operating the nation's wholesale, local access broadband network. By providing access to fast, reliable and affordable broadband services, NBN Co is helping Australian homes and businesses realise the social and economic benefits that high-speed broadband can unlock.**

NBN Co's purpose is to lift the digital capability of Australia.

NBN Co is accountable to the Commonwealth Government and is working to deliver a National Broadband Network that meets the government's Statement of Expectations<sup>1</sup>, 24 August 2016.

The Company is working to complete the network build and ensure that all Australians have access to fast broadband as soon as possible, at affordable prices, and at least cost to taxpayers.

In addition to building and maintaining a network that is resilient and secure, NBN Co is committed to delivering access to peak wholesale download speeds of at least 25 megabits per second (Mbps) to all premises, and at least 50Mbps to 90 per cent of the fixed-line premises<sup>2</sup>. NBN Co will ensure that upgrade paths are available for the network's multi-technology mix as required.

As the network wholesaler, NBN Co provides access to all Retail Service Providers (RSPs) on a non-discriminatory basis. This approach is intended to level the playing field in the Australian telecommunications industry, enhancing competition and providing greater choice for customers<sup>3</sup> across the country. It is through RSPs that customers connect to the **nbn**<sup>™</sup> network for access to high-speed internet.

NBN Co is delivering high-speed broadband to customers across Australia over an area of more than seven million square kilometres. The Company is committed to working with Delivery Partners, RSPs and stakeholder groups to help more Australians use the network to drive positive benefits for themselves and their communities.

1 <https://www.communications.gov.au/publications/nbnstatementofexpectations>

2 This will be achieved at the end of co-existence, which refers to the period where there are active Telstra services running over the parts of the legacy Telstra network that NBN Co has acquired from Telstra.

3 Final downstream customers to NBN Co's Retail Service Providers (RSPs).

## Delivering on our commitment

1

NBN Co's purpose

2

What are NBN Co's goals?

To lift the digital capability of Australia

Complete the build by 30 June 2020<sup>1</sup>

Enhance the network capability over time to meet the growing and diverse needs of Australian homes and businesses

<sup>1</sup> NBN Co's build completion commitment is that all standard installation premises in Australia are able to connect to the nbn™ access network as at the build completion date. This excludes premises in future new developments which will be an ongoing activity for the Company beyond the build completion date. It also excludes a small proportion of premises defined as 'complex connections' - which includes properties that are difficult to access, culturally significant areas and heritage sites - where connection depends on factors outside of NBN Co's control such as permission from traditional owners, and where network construction to allow such premises to connect will be an ongoing activity of NBN Co beyond the build completion date.

3

## What are NBN Co's priorities?

Ensure all Australians have access to **high-speed, resilient and secure broadband**

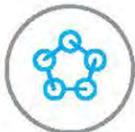

Keep NBN Co a great place to work, **underpinned by a customer-led culture**

Deliver a customer experience that drives **satisfaction, use and network preference**

Develop a product and pricing portfolio that **addresses our customers' diverse needs**

Strengthen relationships with government, industry and community to **optimise customer benefits**

Build capabilities for the future and grow profitability to **enable re-investment to benefit our customers**

4

## Supported by

**6,400<sup>1</sup>**  
NBN Co staff

**More than 100**  
Retail Service Providers selling services over the **nbn<sup>TM</sup>** access network

<sup>1</sup> This figure includes NBN Co employees and contractors.

## Board and Management message

**Construction of the nbn™ access network is one of the largest infrastructure projects ever undertaken in our nation's history, one that aims to lift Australia's digital capability by fundamentally changing the way we learn, do business and connect with each other.**

To date, NBN Co and its Delivery Partners have rolled out more than 280,000 kilometres of fibre-optic cable across Australia, and re-purposed and upgraded existing Hybrid Fibre Coaxial (HFC) and copper technologies, bringing fast broadband at scale to many parts of metropolitan Sydney, Melbourne, Brisbane, Adelaide and Perth. The company has built a Fixed Wireless network comprising some 2,200 towers and approximately 13,000 cells, providing coverage of approximately 250,000 square kilometres, as well as launching two satellites which overlook seven million square kilometres of this great continent.

Building this vast piece of critical network infrastructure has been a complex task. As we continue to improve the way we roll out the network and run the business, we must constantly balance a range of objectives for our company, the telecommunications industry, and the connectivity goals of our nation.

Firstly, we must meet the Statement of Expectations from the Commonwealth Government to complete the build, connect Australian homes and businesses to this network, and deliver a high quality, fast broadband experience. We forecast to achieve a 3.2 per cent return on the Commonwealth's investment of \$29.5 billion.

Secondly, we need to work with the telecommunications industry to create the right conditions that will allow us all to thrive and prosper in the long term. For NBN Co, this means reaching a positive annual cash flow, anticipated to be from FY23, so we can continue to reinvest in our network, our business and our products as technology and customer needs change in the decade ahead.

And most importantly – we need to ensure that we deliver the best possible experience for customers once they are connected to services over the nbn™ access network and increasingly incorporate online experiences into their daily lives.

Ten years since the formation of the National Broadband Network was first announced, we can proudly say that we have made extraordinary progress, but with lots of heavy lifting still ahead, as we strive to meet these objectives.

### Progress

Over the last 12 months we have seen improving customer service yield good results. We have improved the connection and service quality of our HFC network, scaled the rollout of our Fibre-to-the-Curb (FTTC) network, launched wholesale products designed for businesses that are capable of delivering Gigabit speeds<sup>1</sup>, and put in place better wholesale pricing options so more customers can experience higher speeds with reduced congestion during busy hours.

We have also continued to meet our construction targets with FY19 being the company's single biggest year for build and activations. On 30 June 2019, almost 10 million homes and businesses were made Ready to Connect (RTC) with more than 5.5 million premises connecting to a service over the nbn™ access network. This produced record revenue of \$2.8 billion in FY19. If NBN Co's revenue continues to grow beyond \$5 billion annually as forecast, it will underwrite our future investments into customer experience and a high-speed, resilient and secure network that can help enable Australia's digital needs.

Of course, as we edge closer to making 11.5 million homes and businesses ready to connect by the end of June 2020, we know we still have much work to do.

These construction and operational objectives will always be critical to our success, and connecting homes and businesses as quickly and seamlessly as possible remains core to what we do. But providing access to quality and affordable services that our customers – the people living in Australian homes and working in Australian businesses – need and deserve will be what drives us through the next phase of our evolution.

### Customer led

Over the period of this Corporate Plan, we will continue to work in collaboration with our Retail Service providers (RSPs), the industry, regulators and the government to better understand customers' needs and their experience with our services. We have made strong progress over the past financial year but recognise that there is always more to do to delight customers, address negative consumer sentiment, and in doing so enhance overall customer satisfaction.

Certain things are not completely within the control of NBN Co and require us to work closely with the telecommunications industry to help ensure that the products we deliver to the market meet the expectations of all Australians – from entry-level broadband customers to business enterprises. This we are committed to do, to produce the best possible customer experience we can.

We will also continue to focus on the future, to keep up with the latest technological trends and innovations to ensure our network can be enhanced and upgraded in a cost-effective and timely manner to meet the growing and diverse connectivity needs of Australian homes and businesses.

1 Regardless of the retail service you purchase, the actual wholesale speeds delivered by the **nbn**<sup>™</sup> Enterprise Ethernet product will be less than 1000 Mbps due to equipment and network limitations. Your experience, including the speeds actually achieved over the **nbn**<sup>™</sup> network, depends on some factors outside our control (like your equipment quality, software, and how your service provider designs its network). If your service provider has not selected a bandwidth in the highest of three classes of service available for **nbn**<sup>™</sup> Enterprise Ethernet, the speeds you experience may be affected by contention on the **nbn**<sup>™</sup> network, particularly in busy periods.

# EXHIBIT 61

light, heat, or power for hire; and any conduits, ducts or other devices, materials, apparatus or property for containing, holding or carrying conductors used or to be used for the transmission of electricity for light, heat or power.

"Electrical company" includes any corporation, company, association, joint stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever (other than a railroad or street railroad company generating electricity solely for railroad or street railroad purposes or for the use of its tenants and not for sale to others), and every city or town owning, operating or managing any electric plant for hire within this state. "Electrical company" does not include a company or person employing a cogeneration facility solely for the generation of electricity for its own use or the use of its tenants or for sale to an electrical company, state or local public agency, municipal corporation, or quasi municipal corporation engaged in the sale or distribution of electrical energy, but not for sale to others, unless such company or person is otherwise an electrical company.

"LATA" means a local access transport area as defined by the commission in conformance with applicable federal law.

"Private telecommunications system" means a telecommunications system controlled by a person or entity for the sole and exclusive use of such person, entity, or affiliate thereof, including the provision of private shared telecommunications services by such person or entity. "Private telecommunications system" does not include a system offered for hire, sale, or resale to the general public.

"Private shared telecommunications services" includes the provision of telecommunications and information management services and equipment within a user group located in discrete private premises in building complexes, campuses, or high-rise buildings, by a commercial shared services provider or by a user association, through privately owned customer premises equipment and associated data processing and information management services and includes the provision of connections to the facilities of a local exchange and to interexchange telecommunications companies.

"((Telephone)) Telecommunications company" includes every corporation, company, association, joint stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever, and every city or town owning, operating or managing any ((telephone line or part of telephone line used in the conduct of the business of affording telephonic communication)) facilities used to provide telecommunications for hire, sale, or resale to the general public within this state.

"((Telephone line" includes)) "Facilities" means lines, conduits, ducts, poles, wires, cables, cross-arms, receivers, transmitters, instruments, machines, appliances, instrumentalities and all devices, real estate, easements, apparatus, property and routes used, operated, owned or controlled by any ((telephone)) telecommunications company to facilitate the ((business of

affording telephonic communication)) provision of telecommunications service.

~~(( "Telegraph company" includes every corporation, company, association, joint stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever, owning, operating or managing any telegraph line or part of telegraph line used in the conduct of the business of affording for hire communication by telegraph within this state.~~

~~"Telegraph line" includes conduits, poles, wire, cables, cross-arms, instruments, machines, appliances, instrumentalities and all devices, real estate, easements, apparatus, property and routes used, operated or owned by any telegraph company to facilitate the business of affording communication by telegraph:))~~

"Telecommunications" is the transmission of information by wire, radio, optical cable, electromagnetic, or other similar means. As used in this definition, "information" means knowledge or intelligence represented by any form of writing, signs, signals, pictures, sounds, or any other symbols.

"Water system" includes all real estate, easements, fixtures, personal property, dams, dikes, head gates, weirs, canals, reservoirs, flumes or other structures or appliances operated, owned, used or to be used for or in connection with or to facilitate the supply, storage, distribution, sale, furnishing, diversion, carriage, apportionment or measurement of water for power, irrigation, reclamation, manufacturing, municipal, domestic or other beneficial uses for hire.

"Water company" includes every corporation, company, association, joint stock association, partnership and person, their lessees, trustees or receivers appointed by any court whatsoever, and every city or town owning, controlling, operating, or managing any water system for hire within this state: PROVIDED, That it shall not include any water system serving less than sixty customers where the average annual gross revenue per customer does not exceed one hundred twenty dollars per year.

"Cogeneration facility" means any machinery, equipment, structure, process, or property, or any part thereof, installed or acquired for the primary purpose of the sequential generation of electrical or mechanical power and useful heat from the same primary energy source or fuel.

"Public service company" includes every gas company, electrical company, ~~((telephone))~~ telecommunications company, ~~((telegraph company))~~ and water company. Ownership or operation of a cogeneration facility does not, by itself, make a company or person a public service company.

The term "service" is used in this title in its broadest and most inclusive sense.

NEW SECTION. Sec. 3. Telecommunications companies may petition to be classified as competitive telecommunications companies under section 4 of this act or to have services classified as competitive telecommunications

Sec. 17. Section 80.36.030, chapter 14, Laws of 1961 and RCW 80-36.030 are each amended to read as follows:

Such (~~((telegraph or telephone))~~) telecommunications company may appropriate so much land as may be actually necessary for its telecommunications line (~~((of telegraph or telephone))~~), with the right to enter upon lands immediately adjacent thereto, for the purpose of constructing, maintaining and operating its line and making all necessary repair. Such (~~((telegraph or telephone))~~) telecommunications company may also, for the purpose aforesaid, enter upon and appropriate such portion of the right-of-way of any railroad company as may be necessary for the construction, maintenance and operation of its (~~((telegraph or telephone))~~) telecommunications line: PROVIDED, That such appropriation shall not obstruct such railroad of the travel thereupon, nor interfere with the operation of such railroad.

Sec. 18. Section 80.36.040, chapter 14, Laws of 1961 and RCW 80-36.040 are each amended to read as follows:

Any (~~((telegraph or telephone corporation or))~~) telecommunications company, or the lessees thereof, doing business in this state, shall have the right to construct and maintain all necessary telecommunications lines (~~((of telegraph or telephone))~~) for public traffic along and upon any public road, street or highway, along or across the right-of-way of any railroad corporation, and may erect poles, posts, piers or abutments for supporting the insulators, wires and any other necessary fixture of their lines, in such manner and at such points as not to incommode the public use of the railroad or highway, or interrupt the navigation of the waters: PROVIDED, That when the right-of-way of such corporation has not been acquired by or through any grant or donation from the United States, or this state, or any county, city or town therein, then the right to construct and maintain such lines shall be secured only by the exercise of right of eminent domain, as provided by law: PROVIDED FURTHER, That where the right-of-way as herein contemplated is within the corporate limits of any incorporated city, the consent of the city council thereof shall be first obtained before such (~~((telegraph or telephone))~~) telecommunications lines can be erected thereon.

Sec. 19. Section 80.36.050, chapter 14, Laws of 1961 and RCW 80-36.050 are each amended to read as follows:

Every railroad operated in this state, and carrying freight and passengers for hire, or doing business in this state, is and shall be designated a "post road," and the corporation or company owning the same shall allow (~~((telegraph and telephone))~~) telecommunications companies to construct and maintain (~~((telegraph and telephone))~~) telecommunications lines on and along the right-of-way of such railroad.

In case of the refusal or neglect of any railroad company or corporation to comply with the provisions of this section, said company or corporation shall be liable for damages in the sum of not less than one thousand

dollars nor more than five thousand dollars for each offense, and one hundred dollars per day during the continuance thereof.

Sec. 20. Section 80.36.060, chapter 14, Laws of 1961 and RCW 80.36.060 are each amended to read as follows:

Any person who wilfully and maliciously does any injury to any (~~telegraph or telephone~~) telecommunications property mentioned in RCW 80.36.070, is liable to the (~~corporation or~~) company for five times the amount of actual damages sustained thereby, to be recovered in any court of competent jurisdiction.

Sec. 21. Section 80.36.070, chapter 14, Laws of 1961 and RCW 80.36.070 are each amended to read as follows:

Any person who injures or destroys, through want of proper care, any necessary or useful fixtures of any (~~telegraph or telephone corporation or~~) telecommunications company, is liable to the (~~corporation or~~) company for all damages sustained thereby. Any vessel which, by dragging its anchor or otherwise, breaks, injures or destroys the subaqueous cable of a (~~telegraph or telephone corporation or~~) telecommunications company, subjects its owners to the damages hereinbefore specified.

No (~~telegraph or telephone corporation or~~) telecommunications company can recover damages for the breaking or injury of any subaqueous (~~telegraph~~) telecommunications cable, unless such (~~corporation or~~) company has previously erected on either bank of the waters under which the cable is placed, a monument indicating the place where the cable lies, and publishes for one month, in some newspaper most likely to give notice to navigators, a notice giving a description and the purpose of the monuments, and the general course, landings and termini of the cable.

Sec. 22. Section 80.36.080, chapter 14, Laws of 1961 and RCW 80.36.080 are each amended to read as follows:

All rates, tolls, contracts and charges, rules and regulations of (~~telephone and telegraph~~) telecommunications companies, for messages, conversations, services rendered and equipment and facilities supplied, whether such message, conversation or service to be performed be over one company or line or over or by two or more companies or lines, shall be fair, just, reasonable and sufficient, and the service so to be rendered any person, firm or corporation by any (~~telephone or telegraph~~) telecommunications company shall be rendered and performed in a prompt, expeditious and efficient manner and the facilities, instrumentalities and equipment furnished by it shall be safe, kept in good condition and repair, and its appliances, instrumentalities and service shall be modern, adequate, sufficient and efficient.

Sec. 23. Section 80.36.090, chapter 14, Laws of 1961 and RCW 80.36.090 are each amended to read as follows:

~~((telephone company or telegraph))~~ telecommunications company refund or remit, directly or indirectly, any portion of the rate or charge so specified, nor extend to any person or corporation any form of contract or agreement or any rule or regulation or any privilege or facility except such as are specified in its schedule filed and in effect at the time, and regularly and uniformly extended to all persons and corporations under like circumstances for like or substantially similar service.

No ~~((telephone company or telegraph))~~ telecommunications company subject to the provisions of this title shall, directly or indirectly, give any free or reduced service or any free pass or frank for the transmission of messages by ~~((either telephone or telegraph))~~ telecommunications between points within this state, except to its officers, employees, agents, pensioners, surgeons, physicians, attorneys at law, and their families, and persons and corporations exclusively engaged in charitable and eleemosynary work, and ministers of religion, Young Men's Christian Associations, Young Women's Christian Associations; to indigent and destitute persons, and to officers and employees of other ~~((telephone companies, telegraph))~~ telecommunications companies, railroad companies, and street railroad companies.

Sec. 28. Section 80.36.140, chapter 14, Laws of 1961 and RCW 80-36.140 are each amended to read as follows:

Whenever the commission shall find, after a hearing had upon its own motion or upon complaint, that the rates, charges, tolls or rentals demanded, exacted, charged or collected by any ~~((telegraph company or telephone))~~ telecommunications company for the transmission of messages by ~~((telegraph or telephone))~~ telecommunications, or for the rental or use of any ~~((telegraph line, telephone line or any telegraph))~~ telecommunications line, instrument, wire, appliance, apparatus or device or any ~~((telephone))~~ telecommunications receiver, transmitter, instrument, wire, cable, apparatus, conduit, machine, appliance or device, or any ~~((telephone))~~ telecommunications extension or extension system, or that the rules, regulations or practices of any ~~((telegraph company or telephone))~~ telecommunications company affecting such rates, charges, tolls, rentals or service are unjust, unreasonable, unjustly discriminatory or unduly preferential, or in anywise in violation of law, or that such rates, charges, tolls or rentals are insufficient to yield reasonable compensation for the service rendered, the commission shall determine the just and reasonable rates, charges, tolls or rentals to be thereafter observed and in force, and fix the same by order as provided in this title.

Whenever the commission shall find, after such hearing that the rules, regulations or practices of any ~~((telegraph company or telephone))~~ telecommunications company are unjust or unreasonable, or that the equipment, facilities or service of any ~~((telegraph company or telephone))~~ telecommunications company is inadequate, inefficient, improper or insufficient, the commission shall determine the just, reasonable, proper, adequate

# EXHIBIT 62

## MASTER COMMUNICATIONS SERVICES AGREEMENT

THIS MASTER COMMUNICATIONS SERVICES AGREEMENT ("Agreement") is made and entered into this 17th day of November, 2008, by and between City of Tacoma, Department of Public Utilities, Light Division, d.b.a. and herein after called Click! Network, 3628 South 35th Street, Tacoma, Washington 98407-9192 ("Service Provider") and CenturyTel Long Distance, LLC, a Louisiana limited liability company doing business in the State of Washington, with offices located at 8102 Skansie Avenue, Gig Harbor, Washington, 98332 ("Customer")

### WITNESSETH:

**WHEREAS**, Service Provider owns and operates communications facilities and is in the business of providing dedicated transport services; and

**WHEREAS**, Customer desires Service Provider to provide such communications services to Customer; and

**WHEREAS**, Service Provider desires to provide dedicated transport services to Customer on Service Provider facilities pursuant to certain terms and conditions set forth in this Agreement;

**NOW, THEREFORE**, in consideration of the mutual promises and covenants herein contained, the Parties hereby mutually agree as follows:

### ARTICLE 1 - DEFINITIONS

**1.1** The terms used in this Agreement shall have their normal or common meaning, except that the following terms shall have the following meanings for the purpose of this Agreement:

(a) Acceptance or Accepted. Customer will be deemed to have given its "Acceptance" or to have "Accepted" a Circuit on the earliest date of: (i) when testing pursuant to Article 3.0 of Appendix 1 has been successfully completed; (ii) when Customer puts the Circuit into revenue producing service; (iii) five (5) business days past the scheduled due date for Customer's notifying Service Provider of Circuit Acceptance, if no such notice has been provided and no notice of non-acceptance has been provided; and (iv) in the event of an expedited order, the scheduled due date for Customer's notifying Service Provider of its Acceptance if no such notice has been provided and no notice of non-acceptance has been provided.

(b) Access Service Request ("Service Request" or "ASR") shall mean the capacity order for Service, executed by Customer and Service Provider, which delineates the type of Service, quantity of Circuits, location served, Point of Termination, protocols, Circuit term, requested Start of Service Date and other information necessary for the Service Provider to provide Service to the Customer. A blank ASR form is attached hereto as Exhibit A.

(c) Agreement. "Agreement" shall mean this Master Communications Services Agreement, including the attached Schedules, Appendices and Exhibits.

- (d) Chronic Trouble. "Chronic Trouble" shall mean a situation in which a particular Circuit has experienced the same type of Trouble twice or more within a thirty (30) day period, for which trouble tickets have been opened, and the Trouble is found not to be on the Customer's side of the Point of Termination.
- (e) Circuit. "Circuit" shall mean the individual telecommunications facility included as part of the Service.
- (f) Emergency Maintenance. "Emergency Maintenance" shall mean maintenance which if not accomplished promptly by Service Provider, could result in a serious degradation or loss of service to the Customer or the End User.
- (g) End-User. "End User" shall mean a user to whom Customer will provide telecommunications services utilizing, in part, the telecommunications Services provided by Service Provider to Customer under this Agreement.
- (h) Interconnection Facilities. "Interconnection Facilities" shall mean all local access facilities between Customer's Point of Presence, the local exchange carrier's central office, the long-distance carrier's point of presence and the End-User sites.
- (i) Mid-Span Meet Interconnection Arrangement. "Mid-Span Meet Interconnection Arrangement" shall mean a method of facilities interconnection in which Service Provider and Customer connect their respective outside plant facilities at a common cable splice point(s). Service Provider and Customer shall each be responsible for providing, controlling, operating and maintaining their respective optronic, electronic and other equipment necessary to support this method of interconnection.
- (j) Network. "Network" shall mean the telecommunications network of one of the Parties, as the context of the provision requires or as contemplated under this Agreement.
- (k) Network Interface. "Network Interface" shall mean the point of connection between communication facilities and terminal equipment. The network interface or demarcation point shall be located on the subscriber's side of the terminal equipment.
- (l) Network Interface Unit. "Network Interface Unit" shall mean a semi-intelligent device that serves as the point of physical and logical demarcation between the Customer and their end user business premise. It also allows the carrier to conduct an automated loopback test, which tests the integrity of the electrically-based, twisted pair, local loop.
- (m) On Net Services. "On-Net Services" shall mean those services that connect two locations served by Service Provider's network and will include termination at an End User's premises. On-Net Services are provided entirely by Service Provider.
- (n) Planned Service Outage. "Planned Service Outage" shall mean any Service Outage caused by scheduled maintenance or planned enhancements or upgrades to the Network as described in Appendix No. 2.

Customer's and End Users' reasonable rules regarding access to its/their Premises, provided, such rules are provided to Service Provider in advance.

**7.3** Notwithstanding any provision of this Agreement to the contrary, if Customer provides its own telecommunications equipment, Service Provider shall have no obligation to install, maintain or repair such Customer equipment.

**7.4** Neither Party shall adjust, align, or attempt to repair the other Party's telecommunications equipment except as expressly authorized in advance in writing by the other Party. Neither Party's telecommunications equipment shall be removed or relocated by the other Party.

**7.5** Except as provided in Article 12.1, Service Provider shall be liable for any loss or damage to Customer's and/or End-User's telecommunications equipment arising from Service Provider's gross negligence, intentional act, or unauthorized maintenance, within the reasonable control of Service Provider, its employees or agents. In the event of any loss or damage to the telecommunications equipment for which Service Provider is liable, Service Provider shall reimburse Customer and/or End-User for the reasonable cost of repair or replacement thereof within ninety (90) days after receipt by Service Provider of a written request for such reimbursement and a determination of responsibility by Service Provider.

**7.6** Except as provided in Article 12.1, Customer shall be liable for any loss or damage to Service Provider's telecommunications equipment arising from the negligence, gross negligence, intentional act, or unauthorized maintenance or other cause, including theft, by Customer or their contractors, employees or agents. In the event of any loss or damage to the telecommunications equipment for which Customer is liable, Customer shall reimburse Service Provider for the reasonable cost of repair or replacement thereof within thirty (30) days after receipt by Customer of a written request for such reimbursement.

**7.7** Service Provider's telecommunications equipment shall remain the sole and exclusive property of Service Provider or its assignee, and nothing contained herein shall give or convey to Customer (and/or Customer's End Users) any right, title or interest whatever in such telecommunications equipment, which shall at all times be and remain personal property notwithstanding that it may be or become attached to or embedded in realty. When Customer's equipment is installed along with Service provider's equipment, then both shall prominently affix identifying plates, tags or labels on such telecommunications equipment showing Customer's and Service Provider's ownership thereof. Neither party shall tamper with, remove or conceal such identifying plates, tags or labels.

## **ARTICLE 8 - WARRANTIES AND NETWORK STANDARDS FOR ON-NET SERVICES**

**8.1** Service Provider represents and warrants to Customer that it has the right to provide Customer the Service specified herein, and that it is an entity, duly organized, validly existing and in good standing under the laws of its origin, with all requisite power to enter into and perform its obligations under this Agreement in accordance with its terms.

**8.2** The Customer represents and warrants that it is an entity, duly organized, validly existing and in good standing under the laws of its origin, with all requisite power to enter into and perform its obligations under this Agreement in accordance with its terms.

**8.3** Service Provider represents and warrants to Customer that all Service rendered by it hereunder shall be designed, produced, installed, furnished and in all respects provided and maintained in conformance and compliance with applicable federal, state and local laws, administrative and regulatory requirements and any other authorities having jurisdiction over the subject matter of this Agreement and it shall be responsible for applying for, obtaining and maintaining all registrations and certifications which may be required by such authorities.

**8.4** The Parties agree that if any Party, in its sole discretion, determines that an emergency action is necessary to protect its own Network, that Party may block any transmission path over its Network by the other Party where transmissions do not meet the requirements of Telcordia Technical Publications and Appendix No. 1. The Parties further agree that none of their respective obligations to one another under this Agreement shall be affected by any such blockage except that the Party affected by such blockage shall be relieved of all obligations to make payments for charges relating to such Service which is so blocked and that no Party shall have any obligation to the other Party for any claim, judgment or liability resulting from such blockage.

**8.5** Service Provider represents and warrants to Customer that (i) the Service provided over its Network hereunder shall meet the service standards set forth in Appendix 1, other than for reasons of Planned Service Outages (scheduled maintenance) or reasons set forth in Articles 12 and 16 hereof; and (ii) the Circuits connecting two locations shall have a physically diverse serve and protect path (except with respect to laterals off the backbone and building entrances). In the event the standard established in the prior sentence is not met in a given month, upon written request of Customer, Service Provider will investigate the circumstances in order to isolate and remedy the cause.

**8.6** The warranties and remedies set forth in this Agreement constitute the only warranties and remedies with respect to this Agreement. SUCH WARRANTIES ARE IN LIEU OF ALL OTHER WARRANTIES, WRITTEN OR ORAL, STATUTORY, EXPRESS OR IMPLIED, INCLUDING, WITHOUT LIMITATION, THE WARRANTY OF MERCHANTABILITY AND FITNESS FOR A PARTICULAR PURPOSE OR USE.

## **ARTICLE 9 – INTERCONNECTION OF FACILITIES**

**9.1** Service Provider and Customer shall interconnect their respective networks utilizing a Mid-Span Meet Interconnection Arrangement at the CenturyTel hand hole vault at the east side of the Narrows Bridge. The purpose of such interconnection shall be for the exchange of access traffic between the Parties. Such traffic exchanges will occur at transmission speeds that shall include, but may not be limited to, 10/100/1000 Megabit Ethernet services determined by the parties to supply the initial capacity for the Mid-Span Meet Interconnection Arrangement. In general, the transmission capacity established for the Mid-Span Meet Interconnection Arrangement shall be available to and shared by the Parties on an equal basis. Each Party shall have the authority to designate carrier facility assignments (CFAs) on its respective share of such transmission capacity. If one Party should require the use of additional transmission capacity beyond its initial allocation of fifty percent (50%) of the available capacity, said Party must submit a notice of such requirement to the other Party. In the event that such a notice of a requirement for additional transmission capacity is submitted, such additional capacity shall be installed and made available to the party requiring additional capacity within sixty (60) days from the submittal of such notice. At

IN WITNESS WHEREOF, the Parties hereto have executed this Agreement as of the day and year first above written.

## APPENDIX NO. 1 SERVICE STANDARDS

### 1.0 INTERFACE REQUIREMENTS

#### 1.1 10BT Interface Requirements

The Network Interface and Customer Interface will be at an Ethernet port set at a maximum of 10 million bits per second (Mbps) or commonly called 10Megs of bandwidth. This is a standard electrical hand off. Optical hand-off can be accommodated on an individual case basis (ICB) and may require additional cost.

#### 1.2 100BT Interface Requirements

The Network Interface and Customer Interface will be at an Ethernet port set at a maximum of 100 million bits per second (Mbps) or commonly called 100Megs of bandwidth. This is a standard electrical hand off. Optical hand-off can be accommodated on an individual case basis (ICB) and may require additional cost.

#### 1.3 1000BT (GigE) Interface Requirements

The Network Interface and Customer Interface will be at an Ethernet port set at a maximum of 1000 million bits per second (Mbps) or commonly called 1000Megs of bandwidth. This is a standard electrical hand off. Optical hand-off can be accommodated on an individual case basis (ICB) and may require additional cost.

### 2.0 TRANSMISSION PERFORMANCE SPECIFICATION

2.1	Availability Objective per month:	10BT - 99.9%
		100BT - 99.9%
		1000BT - 99.9%

### 3.0 SYSTEM ACCEPTANCE CRITERIA

- 3.1 End-to-end system performance is performed with Ethernet test equipment. We run three RFC – 2544 compliant industry standard tests identified below.
- 3.2 Throughput – the actual amount of useful and non-redundant information which is transmitted or processed; the end result of a data call. It may only be a small part of what was pumped in at the other end. The relationship of what

- (i) Electronic Restoration. In the event of an electronic failure, Service Provider shall use its best efforts to restore service within 2 hours of arrival of maintenance personnel on site.
  - (ii) Cable Restoration. In the event of a cable failure, Service Provider shall begin cable restoral within two (2) hours after the faulty cable is identified. Service Provider shall use its best efforts to restore the cable no later than four (4) hours after failure.
- 2.6 Service Provider shall maintain a twenty-four (24) hours a day, seven (7) days a week point-of-contact for Customer to report to Service Provider system Troubles.
- 2.7 Equipment Spares. Service Provider will provide all maintenance spares plus repair and return Service of defected parts. In general, Customer will not provide equipment storage space in Customer facilities over and above storage space available in Service Provider's equipment racks.
- 2.8 Scheduled Maintenance.
- 2.8.1 Scheduled routine maintenance will be performed during specified Customer maintenance windows and will be coordinated between Service Provider and Customer.
  - 2.8.2 Maintenance which may place the system in jeopardy or require system down time will normally be performed during the "Maintenance Window" of 12:00 midnight and 6:00 a.m. or a time mutually agreed to by Customer and Service Provider. Jeopardy and down time must be requested from the Customer surveillance system operations, 72 hours prior to the requested maintenance time unless otherwise agreed to by Customer.
  - 2.8.3 Service Provider maintenance personnel will notify Customer prior to beginning scheduled maintenance work and must receive concurrence, which shall not be unreasonably withheld, to proceed. Service Provider personnel will notify Customer upon completion of scheduled maintenance work and receive concurrence that all Service is fully operational.
  - 2.8.4 Customer shall have the right to be present during Service Provider equipment testing, and during scheduled and non-scheduled maintenance and repair activity. Customer will notify Service Provider in advance of such requests.

## APPENDIX NO. 3

### ORDERING PROCEDURES FOR ON-NET SERVICES

1. Building Lists

Service Provider shall provide building list, including LEC COs and IXC POPs, to Customer's Access Management group on a quarterly basis. Building lists shall include buildings that are considered on the Service Provider's network (On-Net), and also include planned building addresses. Building list information will include street addresses, names of buildings, city and state, end office CLLI. Service Provider will provide information to Customer in a mutually agreeable format.

2. Ordering Vehicle

If an electronic format is available to transmit Access Service Requests (ASR) from Customer to Service Provider, this vehicle will be used. If an electronic format is utilized, Service Provider will follow any OBF standards for use thereof. If an electronic format cannot be utilized, Customer will transmit ASR to Service Provider via facsimile. Facsimile information will be provided to Customer and updated as needed.

3. Contacts and Escalation

Service Provider will provide a complete list of contacts for the On-Net service provided to Customer. In addition, Service Provider will provide an escalation list to Customer for purposes of escalation to the Network Service Assurance (NSA) and/or escalation to Click! Network's management structure.

4. Service Order Intervals

As used in this paragraph 4, use of "shall" and "will" with respect to the performance of Service Provider shall mean "use its best efforts to".

4.1 ASR Issuance - Upon receipt of an ASR from the Customer, Service Provider will provide a response to Customer pertaining to any corrections or clarifications required to process the ASR. This will be completed by the Service Provider by the end of the next business day following the receipt of the ASR.

4.2 Firm Order Commitment (FOC) - Service Provider will provide a firm order commitment to Customer within three (3) business days of receipt of a complete and accurate ASR. If the order is considered off-net, then the service provider will provide a firm order commitment within two (2) business days from the time of receipt of the off-net providers FOC or pending order commitment (POC). The firm order commitment will provide any necessary service intervals as well as a committed Start of Service Date.

4.3 Design Layout Record (DLR) - Service Provider will provide DLR information within three (3) business days of the due date or Start of Service Date that was provided to Customer in the FOC. If the order is considered off-net, then the service provider will provide DLR information within four (4) business days from the time of receipt of the off-net providers DLR. The interval of providing off-net DLR information will be based on off-net providers intervals. If the in-service date requested by the Customer is less than five (5) business days and a complete and accurate ASR has been received by the Service Provider, DLR issuance will be negotiated between Customer and Service Provider.

5. Installation Intervals

Ethernet 10/100

The standard installation interval, if equipment is installed and capacity is available, for all On-Net services Ethernet 10/100 will be established at fifteen (15) business days. It is understood between Customer and Service Provider that Service Provider will provide service on an individual case basis based on the requirements and expectations of the Customer.

Ethernet 1000

The standard installation interval for Ethernet 1000 On-Net services will be thirty (30) business days depending on availability of equipment. It is understood between Customer and Service Provider that Service Provider will provide service on an individual case basis based on the requirements and expectations of the Customer.

Off-Net Services

Off-net services terms and conditions, including intervals, FOC, and DLR will be negotiated on an individual case basis (ICB) dependent upon the standard intervals of 15 and 30 business days depending if both end locations are LIT with Ethernet, have enough capacity and whether or not construction is required.

Expedite Fees

If a shorter installation interval is required that is less than the standard 15 or 30 business days, Service Provider will make reasonable efforts to meet the expected Start of Service Date, and if Service Provider cannot meet expected Service date, then Service Provider will make reasonable efforts to negotiate in good faith the earliest Start of Service date possible with Customer. An expedite fee may be incurred by the Customer anytime the Customer wants the service installed on a date prior to the standard 15 and 30 business day due date. All expedite requests for service will incur a one-time five hundred-dollar (\$500.00) fee.

## APPENDIX NO. 4

### **ETHERNET TRANSPORT SERVICES SERVICE DESCRIPTIONS FOR ON-NET AND OFF-NET SERVICES**

#### **1.0 ETHERNET 10/100/1000**

Ethernet Transport Service is a shared service. It is VLAN configurable which allows the customer's data to be tagged so that it is segregated from all other data. The end user can also further use encryption to keep the data private and secure. The Customer must educate the end user that their VLAN configuration and any other configuration or encryption is part of their allowed bandwidth. The amount of configuration will decrease the allowable maximum bandwidth on throughput.

We, like other service providers implement over subscription on our transport service rings relative to the amount of bandwidth provisioned on the service ring. The rationale behind this industry practice is that typically an end user does not fully utilize the amount of bandwidth requested; also Ethernet protocols help manage traffic flow across a network. We monitor the bandwidth usage on the network. We have thresholds set on our network management platform to alert us when usage reaches a designated threshold. We then take appropriate actions to prevent impact to end users.

#### **2.0 ETHERNET 1000 – PRIVATE**

Ethernet Transport Service can be provided at a dedicated private level of service. It is VLAN configurable which allows the customer's data to be tagged so that it is segregated from all other data. The end user can also further use encryption to keep the data private and secure. The private arrangement ensures the only user of this dedicated service is by the end user. Therefore, the cost is greater to dedicate a portion within the network for these private Ethernet 1000BT customers. These services are offered on an (ICB) individual case basis and due date determined based on ordering equipment and possible construction and any upgrades required in our network to provide the service.

#### **3.0 POINT-TO-POINT**

Ethernet Transport Services are available between Customer-designated locations on a point-to-point basis. Service may be ordered between the Customer's POP and End User (EU) location, between two Customer POP's, or between two EU locations.

#### **4.0 OFF-NET SERVICES**

Two Point Service allows for two Customer designated locations to be connected by one shared or dedicated transport service. The service terminated at both locations must be the same speed/capacity. This connection is maintained and monitored by Click!. The MSA only bills for the circuit and is the point of contact for the end user.

APPENDIX NO. 5

**ETHERNET TRANSPORT SERVICE PRICING**

**1. MONTHLY RECURRING SERVICE FEES and NON-RECURRING SERVICE FEES**

**1a. Service Included**

Ethernet 10/100/1000 Shared

Ethernet 1000 Private

Terms are 1 - 5 years

**1b. Monthly Recurring Fee**

These rates are also found in a separate Wholesale Pricing Sheet.

Ethernet 10BT	12 month	24 month	36 month	48 months	60 months
Monthly	\$ 700.00	\$ 665.00	\$ 603.00	\$ 595.00	\$ 560.00

monthly fee is per leg; 3 or more legs is ICB

Tiering below 10BT is possible with VLANs by customer and MSA

Ethernet 100 BT	12 month	24 month	36 month	48 months	60 months
Monthly	\$ 950.00	\$ 902.50	\$ 855.00	\$ 807.50	\$ 760.00

monthly fee is per leg; 3 or more legs is ICB

Tiering above 100BT is ICB

GigE Shared	12 month	24 month	36 month	48 months	60 months
Monthly	\$ 2,880.00	\$ 2,808.00	\$ 2,400.00	\$ 1,875.00	\$ 1,550.00

monthly fee is per leg; 3 or more legs is ICB

GigE Private	12 month	24 month	36 month	48 months	60 months
Monthly	\$ 3,200.00	\$ 3,120.00	\$ 2,592.00	\$ 2,000.00	\$ 1,700.00

monthly fee is per leg; 3 or more legs is ICB

**1c. Non-Recurring Charge (Installation)**

The install fee covers all year terms.

ETHERNET	10BT	100BT	1000BT
SHARED	\$250.00	\$250.00	\$750.00
PRIVATE	N/A	N/A	\$1,000.00

**1d. Volume Discounts:**

Volume Discounts will be issued as a percentage off of the total monthly recurring bill. These discounts will be calculated manually in the form of a monthly credit. "Customer" must inform "Provider" on a monthly basis what volume has been achieved for these credits.

<b>1e. Monthly Recurring Amount</b> (At the end of monthly billing cycle)	<b>Additional Percentage Discount</b>
\$5,001 to 10,000	2%
\$10,001 to \$15,000	3%
\$15,001 to \$20,000	4%
\$20,001 +	5%

## MASTER SERVICES AGREEMENT II-A

This Master Services Agreement II-A (the "Agreement") made and effective this 6th day of November, 2002 ("Effective Date") sets forth the mutual agreement between the City of Tacoma, Department of Public Utilities, Tacoma Power Division doing business as "Click! Network" (hereafter referred to as "Service Provider") and Integra Telecom of Washington, Inc. an Oregon Corporation its principal place of business 20435 72<sup>nd</sup> Ave S, Suite 150, Kent, Washington, 98032-2358 (hereafter referred to as "Customer").

NOW, THEREFORE, in consideration of the mutual promises and covenants contained in this Agreement and of other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

### 1. SCOPE OF SERVICE

- a. Customer wants Service Provider to provision dedicated transport services to End Users on Service Provider facilities pursuant to certain terms and conditions set forth in this agreement and as more specifically set forth in Appendix No. 3. The parties hereby mutually agree that the Service Provider owns and operates communications facilities and is in the business of providing dedicated transport services.
- b. Service Provider agrees to provide to Customer and Customer agrees to accept and pay for the telecommunications services described in this Agreement consisting of providing Customer access to Click! Network's telecommunications system, (which, including without limitation all Equipment as defined below is hereinafter referred to as the "System"), upon the terms and conditions described herein and pursuant to the specific service orders in the form attached hereto as Exhibit B hereto (the "Services").
- c. Following the Effective Date, Click! Network will work with Customer to coordinate the engineering, site survey, System configuration, and other services that are necessary in order to provide Customer access to the Services (such activities collectively the "Engineering and installation Services"). Engineering and Installation Services shall be provided up to the date that the Service testing is completed based on Click! Network's customary testing procedure and the Service is available to the Customer (such date, the "Service Acceptance Date")
- d. Customer shall order Service from Service Provider by following the "Ordering Procedures For On-Net Services" set forth in Appendix No. 2. The applicable non-recurring and recurring charges shall be as set forth in Appendix No. 4. If the Service Provider accepts the ASR, each such ASR shall form part of this Agreement, subject to all terms and conditions herein. Service to On-Net locations shall include normal maintenance, inspection, repair and testing as provided in Section 5 and 6 herein.
- e. The payment for the cost of any special interface equipment or facilities necessary to achieve compatibility, if required because of End-User equipment, between telecommunications equipment of Service Provider and facilities of the

## MASTER SERVICES AGREEMENT II-A

End-User shall be at Customer's expense unless otherwise agreed. Service Provider may, but shall not be required, to provide any such equipment.

### 2. TERM

- a. The term of this Agreement shall commence on the date this Agreement is made and entered into, terminating five (5) years thereafter. This Agreement shall be automatically renewed in successive one-year periods unless terminated by written notice by one of the Parties at least sixty (60) days prior to the end of the five-year term or subsequent one-year term. Provided, however, that in the event the period of time for a particular Service or Services to be provided by Service Provider to Customer pursuant to the ordering provisions described in Appendix No. 2 herein extends beyond the effective date of termination, such Services(s) shall remain in effect for the agreed upon time of Service, subject to all of the terms and conditions of this Agreement as if it were still in effect with respect to such Service or Services.
- b. With respect to each Circuit provided to Customer under this Agreement, the term shall be as specified in the ASR for each Circuit but in no event less than one (1) year for both On-Net and Off-Net Circuits, unless otherwise agreed. If no term is specified in an ASR, it shall be one (1) year.

### 3. RATES AND CHARGES

- a. Subject to section 3.c. hereof, Customer will pay Service Provider the charges in the amounts set forth in Appendix No. 4 for services rendered at various times after the Effective Date as follows:
  1. Rates and charges with respect to the Engineering and Installation Services shall commence on the Effective Date. As compensation for the Services provided by Service Provider, Customer shall pay the recurring and non-recurring rates and charges set forth herein and/or in the ASR beginning on the Start of Service Date. Customer agrees to pay the undisputed monthly charges for the Services, at the address provided for herein, on or before thirty days (30) after the invoice is mailed. The Parties shall provide one another with reasonably requested information for bill validation including, but not limited to, the number of circuits and charges for each dedicated transport Service. The Parties will cooperate to enable Service Provider to provide its billing information in a diskette format. Service Provider represents that the rates and charges are in compliance with all laws and governmental regulations. Service Provider shall bill for all services rendered within one hundred eighty (180) days of the scheduled billing date. Service Provider will not apply late fees to the delayed billing amounts if the delay was the fault of the Service Provider.
  2. Undisputed charges remaining unpaid as of the date that is 30 days from the date of any invoice shall be considered past due amounts. Integra Telecom will not be assessed a late charge until 45 days after date of invoice described in this paragraph. Past due amounts owed by Customer to Click! shall be assessed a late charge of the lesser of one and one half percent (1 1/2%) or the maximum rate permitted under the applicable

**MASTER SERVICES AGREEMENT II-A**

level, the customer must then revert to individual contracts at the retail rate for 6 months before the customer can then renegotiate for the variable master service agreement pricing incentives and is not guaranteed that the incentives would remain the same.

- f. The customer may always do business with Click! Network. The customer has the choice to meet the requirements of the variable master service agreement or to purchase circuits at direct retail rate with individual retail contracts.
- g. Pricing Incentive (Table-1) Example. Full retail rates apply on all circuits if designated revenue levels are not met.

**TABLE-1: PRICING INCENTIVES**

<b>Wholesale Rate</b>	<b>% Monthly Discount</b>	<b>Time Period</b>	<b>Required Monthly Revenue</b>	<b>Required Total Revenue (set point)</b>
\$140.00	N/A	0 – 90 days	\$700.00	\$2,525.00
\$120.00	N/A	0 – 90 days	\$1,540.00	\$3,465.00
\$120.00	N/A	Over 90 days	\$1,540.00	\$3,465.00
\$120.00	2%	One-time	\$3,080.00	\$10,000.00
\$120.00	3%	2 months	\$6,160.00	\$31,500.00
\$120.00	5%	One-time	\$12,320.00	\$50,800.00
\$120.00	7%	2 months	\$24,640.00	\$100,000.00
\$120.00	10%	One-time	\$37,000.00	N/A
\$120.00	15%	N/A	\$50,000.00	N/A
\$90.00	N/A	1 year	\$55,000.00	N/A
\$90.00	N/A	Ongoing	\$59,500.00	N/A

When the customer successfully produces revenue amounts above the threshold levels represented in the table, Click! Network may allow the customer an audience to negotiate for additional incentives. Click! Network is not required to provide additional incentives above the discounts listed in the pricing table in this Master Service Agreement - II.

MASTER COMMUNICATION SERVICES AGREEMENT CONTRACT AMENDMENT  
NO. 2

The Master Service Agreement II-A between Integra Telecom of Washington, Inc. an Oregon Corporation and the City of Tacoma, Department of Public Utilities, Light Division (d.b.a. Click! Network) dated November, 2002 is hereby amended as follows:

4. EQUIPMENT AND EQUIPMENT INSTALLATION RESPONSIBILITIES is amended to add subsection (i) on a second interconnection to read as follows:
- i. Service Provider and Customer shall interconnect their respective networks utilizing an agreed upon arrangement. The purpose of the interconnection shall be for the exchange of access traffic between the Parties. Such traffic exchanges will occur at transmission speeds of 10 megabits or above as determined by the Parties over an initial OC-3 connection. If Customer requires additional transmission capacity to serve additional end users, such capacity shall be requested by Customer and mutually agreed upon. Capacity shall be installed and made available by Service Provider within sixty (60) days from the submittal of such notice. Service Provider and Customer shall each be responsible for upgrading and enhancing their own networks as related to such requested additional transmission capacity, and each shall be responsible for the costs associated with the upgrade or enhancement of its own network. Customer also shall be responsible for any expedite fees or other extraordinary costs incurred by Service Provider for supplying such additional transmission capacity, if that capacity is needed within a time frame earlier than 60 days.

All the rest and remainder of said agreement of November 2002, shall remain in full force and effect.

Agreed this 17 day of May 2005

# EXHIBIT 63

**TO:** Elizabeth Pauli, City Manager  
**FROM:** Jeff Lueders, Cable Communications & Franchise Services Manager, CMO/MCO  
Tanisha Jumper, MCO  
**COPY:** City Council and City Clerk  
**SUBJECT:** Ordinance – Cable TV Franchise Agreement with Rainier Connect North, LLC – City Council meeting 12/10/19  
**DATE:** November 20, 2019

---

**SUMMARY:**

The purpose of the memo is to request that the City Council review and consider for approval the Ordinance regarding a Cable TV Franchise Agreement between Rainier Connect North, LLC, and the City of Tacoma. Given the current transition with Click and the fact that the Cable TV Franchise-like agreement with Click is expiring at the end of 2019 (December 31), Staff and Outside Counsel have reviewed the situation and determined this is the best course of action. We then engaged in negotiations with Rainier Connect and their Counsel and have come to terms on this agreement. We are requesting your approval of this Ordinance.

**STRATEGIC POLICY PRIORITY:**

- Ensure all Tacoma residents are valued and have access to resources to meet their needs - This agreement enables another Cable TV Provider to enter the community and in doing so creates a competitive marketplace and allows our residents and businesses to have a choice, it also allows the City of Tacoma to continue to collect Franchise and PEG Fees per Federal Law which go directly into our Communications efforts.
- Foster a vibrant and diverse economy with good jobs for all Tacoma residents – This agreement allows another Cable TV provider into the community to offer their services, creating a competitive marketplace, and additional jobs in the community.
- Cultivate a vibrant cultural sector that fosters a creative, cohesive community – Through the negotiated terms of this agreement we will continue to provide Educational and Government Access channels in HD and the funding provided will allow for continued programming efforts such as Art town, Business Matters, and CityLine, which provide ample opportunities for the creative sectors of our community to share information about what they are doing.
- Assure outstanding stewardship of the natural and built environment - Through this agreement we regulate the proper use of the City's Right of Way and in doing so protect residents and businesses.

**BACKGROUND:**

The City of Tacoma has been fortunate to have two Cable TV Providers over the past 20 years (Comcast and Click). With Click's departure it is necessary for the City of Tacoma to have a Cable TV Franchise with the new provider, Rainier Connect North, LLC.

The Government Performance and Finance Committee considered this request for Ordinance at their November 5, 2019 meeting and approved this to be brought forward to the entire City Council for consideration and approval.

**ISSUE:**

This new 20 year agreement coincides with the IRU that Rainier Connect North, LLC is signing with the City of Tacoma/Tacoma Public Utilities to lease the TPU Commercial Network. This agreement preserves all of our rights as set forth in Federal Law under the Cable Act, State Law, and Municipal Code (Title 16A).

**ALTERNATIVES:**

If the City of Tacoma did not agree to a Cable TV Franchise Agreement with Rainier Connect North, LLC, we would then be in conflict with Federal Law Requirements. In addition, we would lose annual revenue of approximately \$992,032 in Franchise Fees and EG Fees.

**RECOMMENDATION:**

Staff recommends approval of this request for Ordinance for a Cable TV Franchise Agreement between the City of Tacoma and Rainier Connect North, LLC. The approval of this Ordinance will allow the seamless transition from Click to Rainier Connect North, LLC, for Cable TV Services which will allow the City of Tacoma to continue to Regulate our Right of Way protecting our Residents and Businesses along with continuing to receive Franchise Fees and EG Fees which allow the continued operation of the communications office.

**FISCAL IMPACT:**

Franchise Fee Revenues are based on a 5% gross earnings and an additional 1% for PEG Fees, which is directly impacted by the number of cable TV customers. PEG fees directly support capital purchases related to cable TV communication related infrastructure.

**REVENUES:**

FUNDING SOURCE	COST OBJECT (CC/WBS/ORDER)	COST ELEMENT	TOTAL AMOUNT
1431 – MCO & TV Tacoma	638140	4315351	\$820,000
1431 - PEG	638500	4315750	\$172,032
<b>TOTAL</b>			<b>\$992,032</b>

**FISCAL IMPACT TO CURRENT BIENNIAL BUDGET: \$992,032**

**ARE THE EXPENDITURES AND REVENUES PLANNED AND BUDGETED? Yes**

# EXHIBIT 64 (a)

Contract No. Tacoma Public Library 07- 01

BROADBAND SERVICES AGREEMENT

*(12)* This Broadband Services Agreement (the "Agreement") made and effective this 5 day of January, 2008 sets forth the mutual agreement between the City of Tacoma, Department of Public Utilities, Light Division doing business as "Click! Network" ("Click! Network") and **Tacoma Public Library**, its principal place of business at 1102 Tacoma Ave S., Tacoma, WA 98402 (hereafter referred to as "Customer").

NOW, THEREFORE, in consideration of the mutual promises and covenants contained in this Agreement and of other good and valuable consideration, the receipt and sufficiency of which is hereby acknowledged, the parties agree as follows:

1. SCOPE OF SERVICE

- a. Click! Network agrees to provide to Customer and Customer agrees to accept and pay for the telecommunications services described in this Agreement consisting of providing Customer access to Click! Network's telecommunications system, (which, including without limitation all Equipment as defined below is hereinafter referred to as the "System"), upon the terms and conditions described herein and in Exhibit A hereto (the "Services").
- b. Following the Effective Date, Click! Network will work with Customer to coordinate the engineering, site survey, System configuration, and other services that are necessary in order to provide Customer access to the Services (such activities collectively the "Engineering and Installation Services"). Engineering and Installation Services shall be provided up to the date that the Service testing is completed based on Click! Network's customary testing procedure and the Service is available to the Customer (such date, the "Service Acceptance Date).

2. TERM

This Agreement shall remain in full force and effect for a minimum period of 36 full calendar months following the Service Acceptance Date (such period including the first partial month, if any, and such full calendar months, the "Initial Term"). Customer shall be liable for charges at the times and in the manner described in section 3 hereof from and after the Effective Date. At the end of the Initial Term, this Agreement shall continue in effect on a calendar month-to-month basis upon the terms and conditions set forth in this Agreement, until terminated pursuant to Section 9 hereof (such period during which Service is provided following the Initial Term is referred to herein as the "Extended Term")

and the Initial Term and the Extended Term together are referred to herein as the "Term").

### 3. RATES AND CHARGES

- a. Subject to section 3.b. hereof, Customer will pay Click! Network the charges in the amounts set forth in Exhibit A for services rendered at various times after the Effective Date as follows:
  - i. Rates and charges with respect to the Engineering and Installation Services shall commence on the Effective Date.
  - ii. Rates and charges with respect to Service shall commence on the Service Delivery Date.
  - iii. The Customer agrees to pay Click! Network the charges described in section 3.a. and other amounts payable hereunder within thirty days from the date of invoice in accordance with the instructions contained in such invoice. Charges remaining unpaid as of the date that is 30 days from the date of any invoice shall be considered past due amounts. Past due amounts owed by Customer to Click! Network shall be assessed a late charge of the lesser of one and one half percent (1 1/2%) or the maximum rate permitted under the applicable laws of the State of Washington per calendar month (or any partial month) on the past due amount balance.
- b. In the event of billing disputes, the Customer shall notify Click! Network in writing, providing the bill date, the amount in dispute with applicable taxes and an explanation for the dispute. The Customer shall pay all charges not disputed within the period specified above. No charges may be disputed more than one year after the date such charges are invoiced. The parties will cooperate in good faith to resolve any such disputes within a sixty-day period after the dispute is submitted to Click! Network. If the dispute is not resolved during this period, then the parties shall resolve the dispute as outlined in paragraph 12.f.
- c. In addition to the amounts described in section 3.a. and 3.b. Customer will pay all applicable value added, sales, use, excise and other taxes, duties, imposts, fees or charges (collectively "Taxes") levied or imposed on it by a duly constituted and authorized taxing or other governmental authority with respect to the Services or Customer's use of the System or Click! Network's Equipment whether or not such amounts are required to be collected by Click! Network under applicable law. In addition, Click! Network will invoice and Customer will pay all state, local and federal taxes and franchise, tariff, and agreement fees (if any), imposed upon Click! Network with respect to its activities contemplated under this

Agreement in the event that any authority with jurisdiction imposes a tax on any aspect of the transactions contemplated hereunder including but not limited to taxes imposed pursuant to Chapter 82.29A of the Revised Code of Washington, Customer agrees to be responsible for and pay such tax, and Customer agrees to indemnify, and save harmless Click! Network from and against such taxes or other Taxes and any penalties and interest thereon or costs associated with any attempts to collect the same.

#### 4. EQUIPMENT AND EQUIPMENT INSTALLATION RESPONSIBILITIES

- a. All equipment owned by Click! Network as of the Effective Date and equipment purchased by Click! Network after the Effective Date that is not sold to Customer pursuant to a specific invoice specifically describing such equipment resale shall remain the sole and exclusive property of Click! Network (all such equipment, the "Equipment"), its lessors or assigns, and nothing contained herein shall give or convey to Customer any right, title or interest whatever in Click! Network Equipment, which shall at all times be and remain personal property, notwithstanding that it may be or become attached to or embedded in realty. Click! Network shall be entitled, at any time, to affix to Click! Network Equipment a label indicating the interest of Click! Network or any lessor or assignee of Click! Network.
- b. No Liens. Customer will use reasonable efforts to ensure that any party using the Services through it takes reasonable care of Click! Network Equipment at each location and does not sell it, keep it, encumber it, allow it to become subject to a mechanics or other lien, use it as security for any loan or allow it to be seized in satisfaction of a debt of Customer.
- c. No Removal. Customer will use reasonable efforts to ensure that Click! Network Equipment at each location is not removed or caused to be removed by any person, other than Click! Network or any persons authorized by Click! Network or without Click! Network's prior written consent, from the place at which it is installed without Click! Network's prior written permission or, after notice to Click! Network, pursuant to court order.
- d. Proper Environment. Customer shall use reasonable efforts to keep Click! Network's Equipment at each location in the proper environment as specified and described by Click! Network to Customer.
- e. Click! Network and/or its contractor will perform all installation associated with the Services to connect the System to the Customer's equipment located at Customer's premises. In addition to the undertaking to pay the charges set forth in section 3.a.i. with respect to the period from the Effective Date to the Service Acceptance Date, Customer will also be

liable for and will reimburse Click! Network for all costs incurred by Click! Network with respect to its Engineering and Installation Services during such period, including the costs of materials, supplies, and equipment used or included in the installation activity relating to Customer's premises, other than Equipment that is actually removed pursuant to section 9.d.2. hereof. This cost will not exceed \$750.00. Nothing in this section 4.e. will require Customer to pay Click! Network for costs incurred directly by Customer during the period up to the Service Acceptance Date. Customer agrees to pay Click! Network for its costs incurred with respect to Click's connection installation which will extend to a premise termination interconnect cabinet or rack owned and supplied by Click! Network located in Customer- provided and designated telecommunications room or other agreed upon location. Customer shall provide a duct system into his/her premises to the designated telecommunications room or other agreed upon location. Customer agrees to exercise due care and caution to protect Click's equipment from the weather, vandalism and other potential problems. Customer shall be liable for any loss or damage to Click! Network Equipment at any location arising from Customer's negligence, intentional act, unauthorized maintenance or other cause within the reasonable control of Customer, its employees or agents. Click! shall be liable for any loss or damage to Customer's Equipment at any location arising from Click!'s negligence, intentional act, unauthorized maintenance or other cause within the reasonable control of Click!, its employees or agents. In the event of any loss or damage to either party's equipment for which the other party is liable, the party shall reimburse the other party for the lesser of (i) the reasonable cost of repair or (ii) the actual cost of replacement.

- f. Customer will only connect to the System using industry standard equipment, which complies and is compatible with the service specifications set forth in applicable technical publications. Notwithstanding the undertaking of Customer in the prior sentence, if, in Click! Network's reasonable opinion, the technical integrity of the System or the Services being provided over the System to Customer or any other third party is being jeopardized or is likely to be jeopardized as a result of the connection of any Customer premises equipment to the System by Customer or by any other activity for which Customer is responsible, Click! Network may suspend the provision of the affected Service to any connection so affected. Following remedial action by Customer satisfactory to Click! Network, Click! Network will reinstate the Service provided through that connection as soon as possible.
- g. Premises Security. On or before the Service Acceptance Date, Customer and Click! Network shall reach agreement on guidelines relating to site security and password protection.

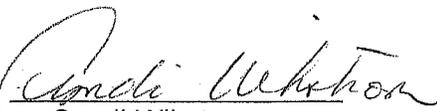

- h. Click! Network may from time to time issue technical instructions on the use of the System and Service to ensure the proper functioning of the Services or the protection of the System from damage or deterioration. Technical instructions will be observed by Customer.
- i. Where Click! Network Equipment is to be installed at a location, Customer shall, at its own expense:
  - 1. Obtain all necessary consents for the installation and use of Click! Network Equipment in the building, including consents for necessary alterations to buildings;
  - 2. Ensure that any floor loading limits will not be exceeded;
  - 3. Provide suitable accommodations, foundations and an environment to meet the environmental specification for Click! Network Equipment as agreed between Customer and Click! Network, including all necessary trunking, conduits and cable trays;
  - 4. Provide suitable electric power and any other utilities needed by Click! Network to install, test and/or maintain Click! Network's Equipment;
  - 5. Provide a suitable and safe working environment for Click! Network's personnel, including an environment safe from environmental hazards; and
  - 6. Take up or remove, in time to allow Click! Network to carry out installation as scheduled, any fitted or fixed floor coverings, ceiling tiles, suspended ceilings and partition covers, and carry out afterwards any making good or decorator's work required.
- j. Click! Network shall provide Customer with such information as is necessary for Customer to meet these obligations as part of the planning process for installation of Click! Network's Equipment.
- k. Customer shall provide Click! Network or other persons authorized by Click! Network with access (on both a routine and emergency basis) to each Customer location within the normal business hours (or as otherwise agreed) of each such location for the implementation of all services contemplated to be provided by Click! Network including without limitation the Service. After the Service Acceptance Date for a connection, Customer will provide Click! Network reasonable access to the Customer premises where any Click! Network Equipment is installed. Click! Network shall not be responsible for any faults on the System or any failure to perform the provisions of this Agreement to the extent that Click! Network, in good faith, requires access, and any such faults or failures or the continuation thereof are a result of the failure of Customer to provide access to the place at each location where Click! Network Equipment is installed supporting the failing Service or connection.

g. Counterparts. This Agreement may be executed in one or more counterparts, each of which shall be deemed to constitute one and the same agreement.

**IN WITNESS WHEREOF**, the parties have, through their authorized representatives executed this Agreement effective as of the date first above written:

# ARIN IPv4 Free Pool Reaches Zero

**Posted: Thursday, 24 September 2015**

On 24 September 2015, ARIN issued the final IPv4 addresses in its free pool. ARIN will continue to process and approve requests for IPv4 address blocks. Those approved requests may be fulfilled via the [Wait List for Unmet IPv4 Requests \(/resources/request/waiting\\_list.html\)](/resources/request/waiting_list.html), or through the [IPv4 Transfer Market \(/resources/transfers/index.html\)](/resources/transfers/index.html).

Exhaustion of the ARIN Free Pool does trigger changes in ARIN's Specified Transfer policy (NRPM 8.3 (</policy/nrpm.html#eight3>)) and Inter-RIR Transfer policy (NRPM 8.4 (</policy/nrpm.html#eight4>)). In both cases, these changes impact organizations that have been the source entity in a specified transfer within the last twelve months:

"The source entity (-ies within the ARIN Region (8.4)) will be ineligible to receive any further IPv4 address allocations or assignments from ARIN for a period of 12 months after a transfer approval, or until the exhaustion of ARIN's IPv4 space, whichever occurs first."

Effective today, because exhaustion of the ARIN IPv4 free pool has occurred for the first time, there is no longer a restriction on how often organizations may request transfers to specified recipients.

In the future, any IPv4 address space that ARIN receives from IANA, or recovers from revocations or returns from organizations, will be used to satisfy approved requests on the Waiting List for Unmet Requests. If we are able to fully satisfy all of the requests on the waiting list, any remaining IPv4 addresses would be placed into the ARIN free pool of IPv4 addresses to satisfy future requests.

ARIN encourages customers with questions about IPv4 availability to contact [hostmaster@arin.net](mailto:hostmaster@arin.net) (<mailto:hostmaster@arin.net>) or the Registration Services Help Desk at +1.703.227.0660.

# EXHIBIT 65 (a)

<https://access.ripe.net/?originalUrl=https%3A%2F%2Fwww.ripe.net%2Fpublications%2Fnews%2Fabout-ripe-ncc-and-ripe%2Fthe-ripe-ncc-has-run-out-of-ipv4-addresses>

# The RIPE NCC has run out of IPv4 Addresses

Today, at 15:35 (UTC+1) on 25 November 2019, we made our final /22 IPv4 allocation from the last remaining addresses in our available pool. We have now run out of IPv4 addresses.

Our announcement will not come as a surprise for network operators - IPv4 run-out has long been anticipated and planned for by the RIPE community. In fact, it is due to the community's responsible stewardship of these resources that we have been able to provide many thousands of new networks in our service region with /22 allocations after we reached our last /8 in 2012.

## Recovered IPv4 Addresses and the Waiting List

Even though we have run out, we will continue to recover IPv4 addresses in the future. These will come from organisations that have gone out of business or are closed, or from networks that return addresses they no longer need. These addresses will be allocated to our members (LIRs) according to their position on a new waiting list that is now active.

While we therefore expect to be allocating IPv4 for some time, these small amounts will not come close to the many millions of addresses that networks in our region need today. Only LIRs that have never received an IPv4 allocation from the RIPE NCC (of any size) may request addresses from the waiting list, and they are only eligible to receive a single /24 allocation.

LIRs that have submitted an IPv4 request can see their position on the waiting list in the LIR Portal. A [new graph](https://www.ripe.net/manage-ips-and-asns/ipv4/ipv4-waiting-list) (<https://www.ripe.net/manage-ips-and-asns/ipv4/ipv4-waiting-list>) has also been published that shows the number of requests on the waiting list and the number of days that the LIR at the front of the queue has been waiting.

## Call for Greater Progress on IPv6

This event is another step on the path towards global exhaustion of the remaining IPv4 addressing space. In recent years, we have seen the emergence of an IPv4 transfer market and greater use of Carrier Grade Network Address Translation (CGNAT) in our region. There are costs and trade-offs with both approaches and neither one solves the underlying problem, which is that there are not enough IPv4 addresses for everyone.

Without wide-scale IPv6 deployment, we risk heading into a future where the growth of our Internet is unnecessarily limited - not by a lack of skilled network engineers, technical equipment or investment - but by a shortage of unique network identifiers. There is still a long way to go, and we call on all stakeholders to play their role in supporting the IPv6 roll-out.

# IPv4 Waiting List

ARIN's free pool depleted in [September 2015](#)

(<https://www.arin.net/vault/announcements/2015/20150924.html>). The IPv4 Waiting List is one of several ways an organization may request IPv4 addresses from ARIN. Other available options are to [transfer resources](#) ([/resources/registry/transfers/](#)), or request IPv4 addresses from pools reserved specifically for micro-allocations ([NRPM 4.4](#) ([/participate/policy/nrpm/#4-4-micro-allocation](#))) or Dedicated IPv4 block to facilitate IPv6 Deployment ([NRPM 4.10](#) ([/participate/policy/nrpm/#4-10-dedicated-ipv4-block-to-facilitate-ipv6-deployment](#))).

## Waiting List Process

If an IPv4 Waiting List request meets current policy requirements, the organization will be placed on the IPv4 Waiting List for their approved block size. The qualifying organization must specify the smallest block size they would be willing to accept to fulfill their request. Receipt of IPv4 space in any amount via IPv4 Waiting List, 8.3 Specified Recipient Transfer, or 8.4 Inter-RIR Transfer removes the organization from the IPv4 Waiting List.

As IPv4 addresses become available, typically through revocations due to non-payment, they will be used to fill requests on a first-approved basis, subject to the size of each available address block.

Please note the following:

- An organization may only have one request on the IPv4 Waiting List at a time.
- Once a request is added to the IPv4 Waiting List, the smallest acceptable block size may be adjusted by the requestor at any time, however the maximum block size cannot be changed. To request a larger block, the organization must close their existing IPv4 Waiting List ticket and submit a new request for the larger block. The new request will be added to the IPv4 Waiting List in the order in which it is approved.
- If an organization declines to accept a block that becomes available, ARIN will consider the request fulfilled and will remove the request from the IPv4 Waiting List.
- Organizations must be current on all fees at the time a block becomes available. Organizations with an existing ARIN billing account will be notified of any past due fees and may remain on the IPv4 Waiting List, but will not be eligible to receive IPv4 addresses.

- If an organization's account is revoked for non-payment, their ticket will be removed from the IPv4 Waiting List. If the account is later reinstated and returned to good standing with ARIN, the organization must submit a new request, and the new request will be added to the IPv4 Waiting List in the order in which it is approved.
- Per [ARIN policy \(/participate/policy/nrpm/#4-1-8-arin-waitlist\)](/participate/policy/nrpm/#4-1-8-arin-waitlist), when an organization's IPv4 Waiting List request has been filled, the organization must wait 90 days after receiving said distribution before applying for additional space. This restriction applies to all organizations unless a waiver is requested and granted in accordance with policy requirements.
- Per [ARIN policy \(/participate/policy/nrpm/#4-1-8-arin-waitlist\)](/participate/policy/nrpm/#4-1-8-arin-waitlist), any IPv4 address space distributed from the waitlist cannot be transferred to another organization for 60 months. After 60 months, the space can be transferred.
- When an organization is notified that an IPv4 block is available, ARIN's Financial Services will request a [Registration Services Agreement \(RSA\)](/about/corporate/agreements/rsa.pdf) and/or [registration fees \(/resources/fees/fee\\_schedule/\)](/resources/fees/fee_schedule/) when applicable.

Additional information and instructions for submitting an IPv4 request for placement onto the IPv4 Waiting List can be found on the [Request IPv4 Addresses page \(/resources/guide/ipv4/request/\)](/resources/guide/ipv4/request/).

## Waiting List Status Report

The table below represents the current state of the Waiting List for Unmet Requests. This list is provided in chronological order beginning with the oldest waiting list request. The wait listed date column represents the date and time that the request was placed on the waiting list.

This table is **not** indicative of the order in which requests will be filled. That order depends entirely upon the order, size, and quantity of IPv4 address blocks that ARIN receives and places back into its IPv4 inventory. For some example scenarios, visit the [How Waiting List Requests Work \(/resources/guide/ipv4/waiting\\_list/scenarios/\)](/resources/guide/ipv4/waiting_list/scenarios/) page.

### Status Report for the IPv4 Waiting List

---

**Request's Position on Waiting List:** 1

---

# How Waiting List Requests Work

## ARIN Board Suspends Waiting List Issuance Policy

**07 February 2019:** We will continue to accept and process IPv4 requests according to NRPM 4.1.8, and organizations may be added to the waiting list while waiting list issuance is suspended. All future IPv4 address space issued under this policy is subject to the outcome of pending policy review.

**Details are available in the [recent announcement \(/announcements/20190207\\_waitlist/\)](/announcements/20190207_waitlist/).**

When a block of IPv4 addresses becomes available, ARIN examines the oldest request on the waiting list to determine whether or not the newly available block can fill it. ARIN then continues to the next oldest request as necessary. Waiting list request fulfillment is determined by the size of the available block(s) and the approved maximum and specified minimum acceptable block sizes for each organization. A table showing the current status of the waiting list is available on the [IPv4 Waiting List page \(/resources/guide/ipv4/waiting\\_list/\)](/resources/guide/ipv4/waiting_list/).

Below are some example scenarios to help illustrate how the waiting list works in practice.

**EXHIBIT 65 (b)**

# IPv4 address exhaustion

---

**IPv4 address exhaustion** is the depletion of the pool of unallocated IPv4 addresses. Because the original Internet architecture had fewer than 4.3 billion addresses available, depletion has been anticipated since the late 1980s, when the Internet started experiencing dramatic growth. This depletion is one of the reasons for the development and deployment of its successor protocol, IPv6. IPv4 and IPv6 coexist in the Internet.

The IP address space is managed globally by the Internet Assigned Numbers Authority (IANA), and by five regional Internet registries (RIRs) responsible in their designated territories for assignment to end users and local Internet registries, such as Internet service providers. The main market forces that accelerated IPv4 address depletion included the rapidly growing number of Internet users, always-on devices, and mobile devices.

The anticipated shortage has been the driving factor in creating and adopting several new technologies, including network address translation (NAT), Classless Inter-Domain Routing (CIDR) in 1993, and IPv6 in 1998.<sup>[1]</sup>

The top-level exhaustion occurred on 31 January 2011.<sup>[2][3][4][5]</sup> All RIRs have exhausted their address pools, except those reserved for IPv6 transition; this occurred on 15 April 2011 for the Asia-Pacific (APNIC),<sup>[6][7][8]</sup> on 14 September 2012 for Europe, Middle East and Central Asia (RIPE NCC), on 10 June 2014 for Latin America and the Caribbean (LACNIC),<sup>[9]</sup> and on 24 September 2015 for North America (ARIN),<sup>[10]</sup> and on 21 April 2017 for Africa (AfrinIC). ARIN and RIPE have exhausted their entire pool.<sup>[11]</sup> These RIRs still allocate recovered addresses or addresses reserved for a special purpose. Individual ISPs still have pools of unassigned IP addresses, and could recycle addresses no longer needed by subscribers.

## IP addressing

---

Every node of an Internet Protocol (IP) network, such as a computer, router, or network printer, is assigned an IP address for each network interface, used to locate and identify the node in communications with other nodes on the network. Internet Protocol version 4 provides  $2^{32}$  (4,294,967,296) addresses. However, large blocks of IPv4 addresses are reserved for special uses and are unavailable for public allocation.

The IPv4 addressing structure provides an insufficient number of publicly routable addresses to provide a distinct address to every Internet device or service. This problem has been mitigated for some time by changes in the address allocation and routing infrastructure of the Internet. The transition from classful network addressing to Classless Inter-Domain Routing delayed the exhaustion of addresses substantially. In addition, network address translation (NAT) permits Internet service providers and enterprises to masquerade private network address space with only one publicly routable IPv4 address on the Internet interface of a main Internet router, instead of allocating a public address to each network device.

## Address depletion

---

While the primary reason for IPv4 address exhaustion is insufficient capacity in the design of the original Internet infrastructure, several additional driving factors have aggravated the shortcomings. Each of them increased the demand on the limited supply of addresses, often in ways unanticipated by the original designers of the network.

### Mobile devices

As IPv4 increasingly became the *de facto* standard for networked digital communication and the cost of embedding substantial computing power into hand-held devices dropped, mobile phones have become viable Internet hosts. New specifications of 4G devices require IPv6 addressing.

### Always-on connections

Throughout the 1990s, the predominant mode of consumer Internet access was telephone modem dial-up. The rapid increase in the number of the dial-up networks increased address consumption rates, although it was common that the modem pools, and as a result, the pool of assigned IP addresses, were shared amongst a large customer base. By 2007, however, broadband Internet access had begun to exceed 50% penetration in many markets.<sup>[12]</sup> Broadband connections are always active, as the gateway devices (routers, broadband modems) are rarely turned off, so that the address uptake by Internet service providers continued at an accelerating pace.

### Internet demographics

The developed world consists of hundreds of millions of households. In 1990, only a small fraction of these had Internet access. Just 15 years later, almost half of them had persistent broadband connections.<sup>[13]</sup> The many new Internet users in countries such as China and India are also driving address exhaustion.

### Inefficient address use

Organizations that obtained IP addresses in the 1980s were often allocated far more addresses than they actually required, because the initial classful network allocation method was inadequate to reflect reasonable usage. For example, large companies or universities were assigned class A address blocks with over 16 million IPv4 addresses each, because the next smaller allocation unit, a class B block with 65,536 addresses, was too small for their intended deployments.

Many organizations continue to utilize public IP addresses for devices not accessible outside their local network. From a global address allocation viewpoint, this is inefficient in many cases, but scenarios exist where this is preferred in the organizational network implementation strategies.

Due to inefficiencies caused by subnetting, it is difficult to use all addresses in a block. The host-density ratio, as defined in RFC 3194, is a metric for utilization of IP address blocks, that is used in allocation policies.

## Mitigation efforts

Efforts to delay address space exhaustion started with the recognition of the problem in the early 1990s, and the introduction of a number of stop-gap refinements to make the existing structure operate more efficiently, such as CIDR methods and strict usage-based allocation policies.

The Internet Engineering Task Force (IETF) created the Routing and Addressing Group (ROAD) in November 1991 to respond to the scalability problem caused by the classful network allocation system in place at the time.<sup>[14][1]</sup>

IPv6, the successor technology to IPv4, was designed to address this problem. It supports approximately  $3.4 \times 10^{38}$  network addresses.<sup>[15]</sup> Although as of 2008 the predicted depletion was already approaching its final stages, most providers of Internet services and software vendors were just beginning IPv6 deployment at that time.<sup>[16]</sup>

Other mitigation efforts and technologies include:

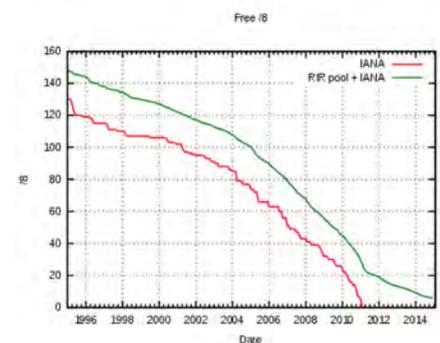

- use of network address translation (NAT)<sup>[17]</sup> which allows a private network to use one public IP address and permitting private addresses in the private network;
- use of private network addressing;<sup>[18]</sup>
- name-based virtual hosting of web sites;
- tighter control by regional Internet registries on the allocation of addresses to local Internet registries;
- network renumbering and subnetting to reclaim large blocks of address space allocated in the early days of the Internet, when the Internet used inefficient classful network addressing.<sup>[17]</sup>

## Exhaustion dates and impact

On 31 January 2011, the last two unreserved IANA /8 address blocks were allocated to APNIC according to RIR request procedures. This left five reserved but unallocated /8 blocks.<sup>[6][19][20]</sup> In accord with ICANN policies, IANA proceeded to allocate one of those five /8s to each RIR, exhausting the IANA pool,<sup>[21]</sup> at a ceremony and press conference on 3 February 2011.

The various legacy address blocks with administration historically split among the RIRs were distributed to the RIRs in February 2011.<sup>[22]</sup>

APNIC was the first regional Internet registry to run out of freely allocated IPv4 addresses, on 15 April 2011. This date marked the point where not everyone who needed an IPv4 address could be allocated one. As a consequence of this exhaustion, end-to-end connectivity as required by specific applications will not be universally available on the Internet until IPv6 is fully implemented. However, IPv6 hosts cannot directly communicate with IPv4 hosts, and have to communicate using special gateway services. This means that general-purpose computers must still have IPv4 access, for example through NAT64, in addition to the new IPv6 address, which is more effort than just supporting IPv4 or IPv6. The demand for IPv6 is expected to become pervasive over three to four years.<sup>[23]</sup>

Exhaustion of IPv4 addresses since 1995

# EXHIBIT 66

**ORDINANCE NO. 3148**
