WHEREAS, City of Tacoma, Department of Public Utilities Light Division, dba. Click! Network (the “Franchisee”) has requested that the City Council grant a nonexclusive franchise (this “Franchise”), and

WHEREAS, the City Council has the authority to grant Franchises for the use of its streets and other public properties pursuant to RCW 35A.47.040, NOW, THEREFORE,

THE CITY COUNCIL OF THE CITY OF PUYALLUP, WASHINGTON, DO ORDAIN AS FOLLOWS:

Section 1 Franchise Granted.

Section 1.1 Pursuant to RCW 35A.47.040, the City of Puyallup, a Washington municipal corporation (hereinafter the “City”), hereby grants to City of Tacoma, Department of Public Utilities Light Division, dba. Click! Network, its affiliates, heirs, successors, legal representatives and assigns, subject to the terms and conditions hereinafter set forth, a Franchise for a period of ten (10) years, beginning on the effective date of this ordinance, set forth in Section 40 herein.

Section 1.2 This Franchise ordinance grants Franchisee the right, privilege, and authority to construct, operate, maintain, replace, acquire, sell, lease and use all necessary Facilities for a telecommunications network, in, under, on, across, over, through, along or below the public Rights-of-Ways located in the City of Puyallup, as approved pursuant to City permits issued pursuant to this Franchise. Public “Rights-of-Way” means the surface of, and the space above and below, any public street, highway, freeway, bridge, land path, alley, court, boulevard, sidewalk, lane, public way, drive, circle, pathways, spaces, or other public right of way which,

#### Section 4 Location of Telecommunications Network Facilities.

Section 4.1 Franchisee is maintaining a telecommunications network, consisting of Facilities within the City. Franchisee may locate its Facilities anywhere within the Franchise Area consistent with the City's Public Works Engineering and Construction Standards and subject to the City's applicable permit requirements. The City reserves the right to prescribe the location of Franchisee's Facilities within the Franchise Area and the time and manner of Franchisee's activities through the permitting process. Franchisee shall not be required to amend this Franchise to construct or acquire Facilities within the Franchise Area, provided that Franchisee does not expand its Services beyond those described in Section 2.

Section 4.2 To the extent that any Rights-of-Way within the Franchise Area are part of the state highway system ("State Highways") and are governed by the provisions of Chapter 47.24 RCW and applicable Washington State Department of Transportation ("WSDOT") regulations, Franchisee shall comply fully with said requirements in addition to local ordinances and other applicable regulations. Without limitation of the foregoing, Franchisee specifically agrees that:

(a) any pavement trenching and restoration performed by Franchisee within State Highways shall meet or exceed applicable WSDOT requirements;

(b) any portion of a State Highway damaged or injured by Franchisee shall be restored, repaired and/or replaced by Franchisee to a condition that meets or exceeds applicable WSDOT requirements; and

(c) without prejudice to any right or privilege of the City, WSDOT is authorized to enforce in an action brought in the name of the State of Washington any condition of this Franchise with respect to any portion of a State Highway.

#### Section 5 Relocation of Telecommunications Network Facilities.

Section 5.1 Franchisee agrees and covenants to protect, support, temporarily disconnect, relocate, or remove from any Rights-of-Way any of its Facilities when reasonably required by the City by reason of traffic conditions or public safety, dedications of new Rights-of-Way and

20  
21 WHEREAS, The City of Tacoma, Department of Public Utilities,  
22 Light Division, doing business in the State of Washington, has  
23 applied for a non-exclusive telecommunications franchise to  
24 construct, operate, and maintain telecommunications facilities  
25 upon, in, under, across, along, and over certain County roads,  
26 highways, and other County property in Pierce County, Washington as  
27 hereinafter set forth; and

1           WHEREAS, Said application came on regularly for hearing before  
2 the Pierce County Council on the date set forth below under the  
3 provisions of Chapter 36.55, Revised Code of Washington and Chapter  
4 12.34, Pierce County Code; and

5  
6           WHEREAS, It appears to the Council that notice of said hearing  
7 has been duly given as required by law and that it is in the public  
8 interest to grant the Franchise; NOW, THEREFORE,

9  
10           BE IT ORDAINED by the Council of Pierce County:

11  
12           Section 1. The Pierce County Council hereby finds that the  
13 Telecommunications Franchise, a copy of which is attached hereto  
14 and incorporated herein as Exhibit "A" to the City of Tacoma,  
15 Department of Public Utilities, Light Division, is in the public  
16 interest.

17  
18           Section 2. The Pierce County Council hereby authorizes the  
19 County Executive to enter into the attached franchise agreement,  
20 authorizing the City of Tacoma, Department of Public Utilities,  
21 Light Division to construct, operate, and maintain a  
22 telecommunications facilities system in, across, under, upon,  
23 along, and over County roads, rights-of-way, highways, and County  
24 property in Pierce County, Washington as described below:

1 All County roads lying within Townships 19 North through  
2 22 North, inclusive, of Range 1 West, Willamette  
3 Meridian, and all County roads lying within Townships 15  
4 North through 22 North, inclusive, of Ranges 1 East  
5 through Range 9 East, Willamette Meridian, and lying  
6 within the boundaries of Pierce County, Washington.

ARTICLE II - FRANCHISE

Section 1. Grant of Broadband Telecommunications Franchise.

A. Grant of Franchise. Subject to obtaining any permits as might be required under the County's Charter or Code or other applicable Laws (and subject to Grantee obtaining any additional necessary agreements, approvals or authorizations from any entity which owns poles or any other third party rights), the County hereby grants on a non-exclusive basis as provided in Pierce County Code 12.34.420 authorization for Grantee to attach, install, operate, maintain, remove, reattach, reinstall, relocate, and replace Facilities within the Rights-of-Way in unincorporated Pierce County for the purposes of providing Services to Persons located within or without the limits of the County. Exhibit I represents the initial phase of the location of the network which grantee intends to install. Any work performed pursuant to the rights granted under this Franchise may, at the County's option, be subject to the prior review and approval of the Director of Public Works and Utilities. During the term of this Franchise, the location of Facilities installed by Grantee or its designee shall be disclosed, in writing, to the County by Grantee within ten days before its installation, removal, or relocation. Such disclosures shall be incorporated in Exhibit I by way of a modification to this Franchise Agreement and shall not change except upon submittal of a revised Exhibit I, and a written request for a modification

1 Section 11. Authorization.

2 The undersigned respectively represent and warrant that its

R 34336

MINUTES OF MEETING  
OF  
FREEHOLDERS' CHARTER COMMISSION

Held November 10, 1926

Pursuant to notification by the County Auditor of Pierce County of their election to the office of Freeholder, the following Freeholders assembled at the Council Chambers at the City Hall:

- |                 |                    |                      |
|-----------------|--------------------|----------------------|
| Homer T. Bone   | G. W. Osgood       | Dr. M. J. McNerthney |
| Louis J. Muscek | C. B. Hurley       | Mary C. Hutchinson   |
| J. A. Eves      | F. P. Haskell, Jr. | Kathryn E. Malstrom  |
| E. K. Murray    | Fred Shoemaker     | Robert B. Abel       |

The above named Freeholders took their respective oaths of office before Genevieve Martin, City Clerk of the City of Tacoma, Washington. Whereupon the Freeholders were called to order with Homer T. Bone presiding as temporary chairman.

Nominations were declared open for the office of Chairman. Homer T. Bone was nominated. It was thereupon moved and seconded that the nominations be closed and Mr. Bone be declared unanimously elected. Mr. J. A. Eves presided as temporary Chairman and put the motion to the Freeholders assembled, which was unanimously carried.

Nominations were declared open for the office of Vice-Chairman. Mr. J. A. Eves was nominated. It was thereupon moved and seconded that the nominations be closed and Mr. J. A. Eves declared unanimously elected. Upon motion being put to the Freeholders assembled, it was unanimously carried.

Nominations were declared open for the office of Secretary. Robert B. Abel was nominated. It was properly moved and seconded that the nominations be closed and Mr. Abel declared unanimously elected. Upon motion being put to the Freeholders assembled, the motion was carried unanimously.

Thereupon Mr. Homer T. Bone, as Chairman of the Charter Revision Commission, called the Committee to order for the transaction of business at the hour of 7:30 p. m. Wednesday, November 10, 1926.

The following Freeholders being present:

Homer T. Bone	G. W. Osgood	Dr. M. J. McNerthney
Louis J. Muscek	C. B. Hurley	Mary C. Hutchinson
J. A. Eves	F. P. Haskell, Jr.	Kathryn E. Malstrom
E. K. Murray	Fred Shoemaker	Robert B. Abel
Dr. H. J. Whitacre		

The first business to come before the Committee was the consideration of the raising of funds to meet necessary expenses. It was properly moved and seconded that the Secretary write a letter to the City Council requesting an appropriation of not less than \$500 to defray stenographic and other expenses of the Committee. Motion carried.

It was moved by Mr. Osgood and properly seconded that the executive sessions of this Committee be held at the Public Library and that open meetings be held at the City Council Chambers at the City Hall; that the regular meetings of the Committee be held on Monday and Thursday evening of each week at 7:30 p. m. Motion carried.

It was moved by Mr. Murray and seconded by Mrs. Hutchinson that the following standing Committees be appointed:

- R 34336
- 23
1. Rules
  2. Revenue and Taxation
  3. Civil Service
  4. Accounting and Finance
  5. Harbor, Tidelands and Docks
  6. Utilities
  7. Public and Local Improvements
  8. Engineering
  9. Elections
  10. Officers, Employes, Salaries and Departmental Functions
  11. Contracts, Awards and Purchasing
  12. Miscellaneous provisions
  13. Health and Sanitation
  14. Franchises

After discussion, this motion was carried.

It was moved by Mr. Haskell and seconded by Mr. Shoemaker that each department of the City Council be requested to file in writing any suggestions in the change of the present city charter. Carried.

It was moved by Mrs. Malstrom and seconded by Mr. Shoemaker that this Board make a study of the different forms of municipal government. Carried.

It was moved by Dr. Whitacre and seconded by Mrs. Hutchinson that a committee of three be appointed to report on the different forms of municipal government at the next meeting of this Commission. Motion carried.

The following committee was appointed by the Chair:

Mrs. Hutchinson  
Mr. Shoemaker  
Dr. Whitacre

It was moved by Dr. Whitacre and seconded by Mr. Shoemaker that the motion of Mr. Murray for fourteen committees be stricken and that five committees of three each with proper grouping of subjects be worked out at a later date. Motion carried.

It was moved by Mr. Murray and seconded by Mr. Shoemaker, that the Chair appoint a committee of five to report back at the next meeting on organization and standing committees. No action was taken upon this motion.

It was moved by Mr. Haskell and properly seconded that the committee rescind their action on the motions of Mr. Murray for fourteen committees and Dr. Whitacre for five committees of three each and that the Commission as a whole proceed to the grouping of subjects and appointments of committees. Motion carried.

It was properly moved and seconded that the following standing committees be approved:

1. Utilities; Franchises; Public and Local Improvements; Miscellaneous
 

E. K. Murray, Chairman	Louis J. Muscek
Homer T. Bone	J. A. Eves
F. P. Haskell	
  
2. Revenue and Taxation; Accounting and Finance
 

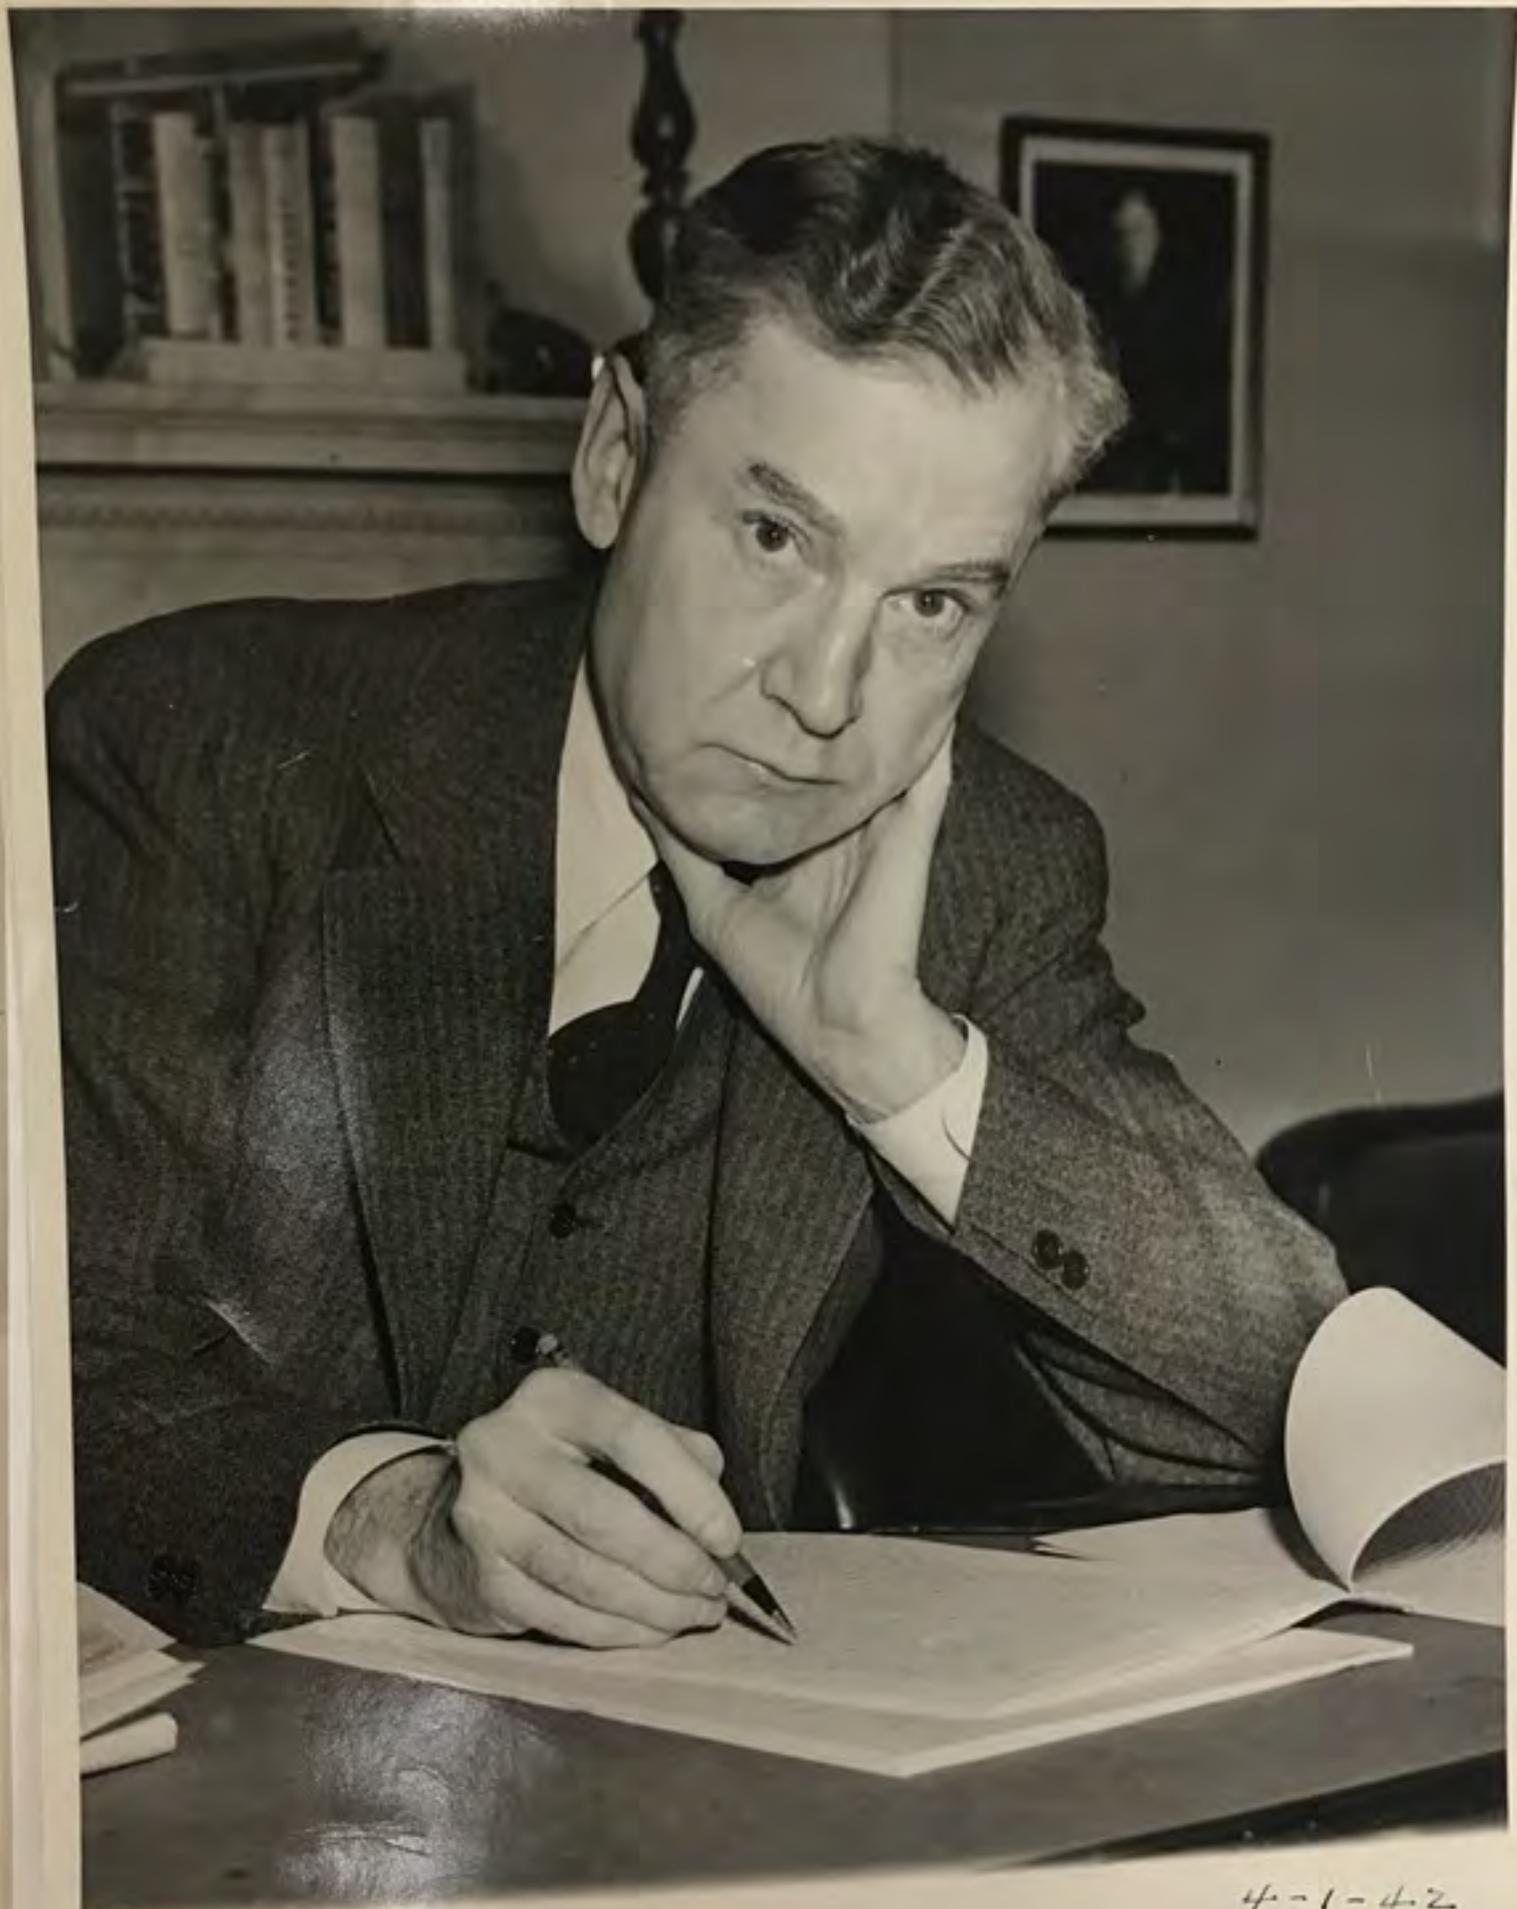

Fred Shoemaker, Chairman	J. A. Eves
F. P. Haskell, Jr.	E. K. Murray
  
3. Civil Service; Officers, Employees, Salaries and Departmental Functions; Elections.
 

Mary C. Hutchinson, Chairman	Louis J. Muscek
J. F. Hickey	Kathryn E. Malstrom
Dr. H. J. Whitacre	
  
4. Engineering; Harbors, Tidelands and Docks; Contracts and Awards
 

G. W. Osgood, Chairman	Ralph Shaffer
C. B. Hurley	Robert B. Abel
Dr. M. J. McNerthney	
  
5. Health and Sanitation
 

Dr. H. J. Whitacre, Chairman	Dr. H. J. McNerthney
Kathryn E. Malstrom

**EXHIBIT 67 (b)**

*Speech file*Mr. Bone's Speech -

The conscience of the people at a time of grave national problems has called into being a new attitude of mind toward these problems born of the nation's awakened sense of justice. The great body of progressive minded citizens who are now bringing to the democratic party a new spirit of liberalism are dedicating themselves to the fulfillment of the duty laid upon them--the duty to maintain that government of the people, by the people and for the people, whose foundations were laid by those before us. This country belongs to the people who inhabit it. It is now time to set public welfare in the first place. Political parties exist to secure responsible government and to execute the will of the people. Too often the major parties have deliberately turned aside from such a task. The time is here to face the fact that behind the outward forms of government sits enthroned an invisible government, owing no allegiance and acknowledging no responsibility to the people. The time is here for the people to destroy this invisible government and to dissolve the unholy alliance between corrupt business and corrupt politics. That should be

Page 2.

the first task of the statesmanship of the day.

During the past twelve years we have witnessed the fatal incapacity of the Republican Party to deal with the new issues of the new time. This form of incapacity has compelled the people to forge new instruments of government through which to give effect to their will. We see that exemplified in the adoption of weapons of popular government like the Initiative, the Referendum, and the Recall in the State of Washington. I compliment the people of this state for their courage and vision in securing to themselves these weapons of popular government.

The direct primary is an instrument of control which the people should zealously guard. If it is ever impaired or destroyed, popular government will disappear and in its place will come control by corrupt business interests that live and prosper by brutal exploitation of the people. The voters should be ruthless in dealing with those who would assail the direct primary. Its function should be broadened rather than restricted. To destroy the direct primary would be to assault the foundations upon which rests the principles and ideals of Thomas Jefferson.

The supreme duty of the nation is the conservation of human resources through a vastly enlarged measure of social and industrial justice. I believe in the principle of minimum wage standard for women in industry. Child labor is a social crime and should be outlawed as fully and completely as was human slavery. There can be no safety for any one under the American flag so long as we confront the sordid spectacle of millions of idle adults while children labor in industry. The American people must set themselves resolutely to the task of eradicating this scourge.

The water power resources of this nation belong to the people. It would be a calamity of the greatest magnitude for them to part with this, one of the greatest heritages that ever came to any people. The right of the people to develop under public ownership this great resource is beyond challenge. The remarkable thing is that this natural right has ever been subjected to challenge. We would regard it as a social crime of the first magnitude to give to a private corporation the control of the air by virtue of which it might compel citizens to

Page 4.

wear meters and buy the air they breathe by the cubic foot. And yet, we have complacently permitted private corporations to seize upon as vital an essential--the waters of the nation and subject them to private exploitation. Were it possible to seize upon and control the rainfall and parcel it out to farmers at rates fixed by a rain trust, the same interests would do that very thing.

The power trust of this nation has junked every standard of decency in its dealings with the public. It has debauched our institutions of learning and our legislative bodies. It has brazenly gouged the pocketbooks of the people to maintain a flood of propaganda calculated to deceive the public mind. Its victims have been compelled to pay for the flood of corruption it has loosed upon the country. It has set up a long train of abuses and usurpations of power, pursuing invariably the same object which is reducing the American people to a state of vassalage to the greatest instrument of plunder the world has yet produced. The people must not only destroy the power of this insolent organization, but write into the laws of the land new guards for future security against such monstrous invasions of

Page 5.

their rights. One need only look at the record of the Washington State Legislature to perceive how completely a public body can be dominated by a power trust lobby. The thing has become a stench in the nostrils of decency in the state of Washington which led the people of this great state to rise in their wrath and pass the Grange Power measure by a big majority in 1930. We have seen the principle of state regulation of power companies become a farce. When we adopted the principle of regulation, these companies simply plunged into politics and with their vast financial resources wrung from the pockets of consumers, ~~and~~ set about to control the politics of the state and thereby were enabled to very effectively regulate their regulators. The moment we permitted a private corporation to own this great natural resource which belongs to the people and should have been developed under public ownership, that very moment we enthroned corruption in government--we deliberately invited it.

We have seen the collapse of a monstrous bubble of power trust finance in the crash of the Insull power combine which now presents the spectacle of the greatest receivership in history. Private

Page 6.

power combines have floated huge aggregations of stock which represent a neverending opportunity to exploit the people of this country. Naturally they took advantage of this power and abused it, and I bluntly assert that the entire system of private ownership of power is a deliberate invitation to abuse.

We live in the richest country in the richest period of the world's history. Today, the average American worker, with the aid of modern machinery, can produce twenty times what his grandsire could, and yet, in the face of this marvelous productive capacity, millions of decent Americans find themselves in a death grapple with destiny itself. The American worker is the marvel of this age of industrial miracles. For the first time in human history the worker <sup>is living</sup> ~~has lived~~ in a period when the genius of man has so completely harnessed the forces of nature that they have become tireless toilers for the human race, and these instrumentalities of science have made it possible, for the first time, to abolish poverty. What shall we think of an economic and social set-up which dooms millions to involuntary poverty when the instrumentalities for the liberation of mankind are all about us?

## Bone, Homer Truett (1883-1970)

By Frank Chesley  
Posted 12/28/2003  
HistoryLink.org Essay 5628

---

**H**omer T. Bone, a Democratic senator representing Washington in the United States Congress (1932-1944) and later a Judge in the United States Ninth Circuit Court of Appeals (1944-1956), has been dubbed the Pacific Northwest's "father of public power." Bone was a pragmatic populist who vociferously championed public ownership of utilities while damning big business, especially the utility trusts. He was ousted from the Socialist Party in 1916 for being too moderate and later forayed into politics under the Republican and Farmer-Labor banners before alighting as a Democrat. Among Democratic Party loyalists, suspicions of apostasy would dog him his entire career. As a senator, he pushed the bills to build the Bonneville and Grand Coulee dams as well as that creating the National Cancer Institute. He was progenitor of a coterie of progressive politicians who would further nourish his vision and indelibly flavor Washington state's socio-political character for decades. Senator Warren G. Magnuson (1905-1989) was his most notable political descendent.

### Hardscrabble Childhood

Homer Bone was born in Franklin, Indiana, on January 25, 1883, to James M. and Margaret Bone, and he came by his populism and abhorrence of war naturally. His father had never really recovered from a brutal imprisonment during the Civil War and his mother's first husband had died in battle. Homer's middle name came from a prison mate of his father. His ancestors had served and suffered as well, he recalled, in wars going back to the American Revolution.

The Bones, left destitute by the Panic of 1893, moved to Tacoma in 1899 to seek a better life. The family survived on whatever young Homer could earn and his father's \$20 a month pension. Homer's formal education had ended in the eighth grade and he worked variously in a grocery store, a furniture store, and for the postal service. But he was ambitious and came from a family of some accomplishment in Indiana politics. A cousin, Scott C. Bone, had been editor of the *Seattle Post-Intelligencer* and was Alaska's territorial governor from 1921 to 1925. (It was Governor Bone who ordered a relay of dog teams to transport diphtheria antitoxin to Nome in 1925 to thwart a threatened epidemic, a mission now memorialized by the Iditarod sled dog race.)

## Self-educated Lawyer

Bone studied law at night and passed the bar in 1911, at age 28. Like many self-educated men, he remained a voracious reader all his life. He specialized in labor law, became a special deputy prosecuting attorney in 1912, served as corporation counsel for the Port of Tacoma from 1918 to 1932, and as attorney for Tacoma City Light.

On January 25, 1919, his birthday, he married Blanche Slye, a 1918 University of Washington journalism graduate whose first interview subject was the longshoremen's union attorney, Homer T. Bone. A son, Homer T. Bone Jr., was born in 1922.

Homer Bone was a "Debsian socialist" -- a rather mainstream type of socialist not unusual for the day, a member of the Socialist Party led by Eugene V. Debs (1855-1926). Bone first discovered the public-private power battle in 1908. He recalled later in a letter to a researcher: "I wonder what would have happened to me had I not been so vigorously stirred by the attacks on the patriotism of men whose only purpose was to have their city produce power for its own municipal system."

Bone became politically active, running unsuccessfully for prosecuting attorney and for mayor of Tacoma as a Socialist at a time when conservative Republicans firmly controlled the state. He ran for the Third District congressional seat as a Farmer-Labor candidate, but lost in the 1920 Warren G. Harding (1865-1923) landslide.

He was slight -- five feet, six inches tall and 135 pounds -- but his impassioned oratory and tart tongue quickly established him as the major Pacific Northwest voice for public power. He allied himself with other public-power visionaries of the time, among them Rufus Woods (1878-1950), publisher of *The Wenatchee World* who dreamed of harnessing the Columbia River, and James Delmage Ross (1872-1939), the "father of Seattle City Light." His opponents called him a radical, a demagogue, and a Bolshevik, among other epithets.

## Stormy Start

He finally won his state House seat in 1922 as a Farmer-Labor candidate, though his district was strongly conservative. He immediately submitted the "Bone Bill," which would give municipal electrical utilities -- such as Seattle's and Tacoma's -- the power to sell their service beyond the city limits. The two-month session, one of the stormier in legislative history, escalated the simmering public vs. private power battle and catapulted Bone into the political spotlight. "The power lobbyists were as thick as bees around a hive," Bone recalled. The Bone Bill did not pass until 1933.

Bone also served as counsel for the state Grange ("a virile and progressive group," Bone said) and, in 1928, helped the organization draft the Grange Bill, which would give counties the power to create public utility districts. It also gave PUDs the right of eminent domain over private power properties. The 1929 Legislature

declined to take action on the bill and it was submitted to voters at the November 4, 1930, state general election. It passed (with 152,487 votes in favor and 130,901 against), becoming Chapter 1, Laws of 1931, which is codified as RCW Title 54, Public Utility Districts.

Bone again ran for Congress in 1928, as a Republican, and again lost.

### **Senator Homer T. Bone**

For the third time, Bone ran for Congress in 1932, now as a Democrat, and easily won a U.S. Senate seat in the Democratic landslide led by President-elect Franklin D. Roosevelt (1881-1945). Bone's campaign was managed by Saul Haas (1896-1972), who became a power in state Democratic Party politics, a key member of the Bone-Magnuson circle, and a broadcast magnate with KIRO, Inc.

At this time the Depression was approaching bottom and Bone easily ousted Wesley Jones, who had held the seat since 1908. During the campaign, Bone hammered away at the numbers, particularly Tacoma's, which boasted the lowest electricity rates in the nation. He told a Wenatchee audience on October 10 that Tacoma "sells electricity for less than any other city in America and yet makes a profit." If Tacoma charged as much as the private utilities, he said, "there would be no need for taxes" (*Seattle P-I*).

The global arms race also was an issue and Bone flashed his isolationist credentials early. "Keep to America but Keep America Safe" was a slogan he offered during an October 1932 campaign speech in Port Angeles. He charged that the Olympic Peninsula was "glaringly unprotected" in the event of war in the Pacific.

Newspapers of that day made no pretense of fairness or balance and most of the state's papers, including *The Seattle Times*, viewed public power as Socialist nonsense and Bone as a radical or worse. The Hearst-owned *Seattle Post-Intelligencer* and the Scripps papers, including the *Seattle Star*, however, were Bone champions. Two weeks before the election, the *P-I* ran a gushing, five-part series, "Life Story of Homer T. Bone, Career Marked By Battles for People," accompanied by sidebars liberally quoting the candidate on the campaign issues.

Saul Haas was 34 when he managed Bone's campaign, but already had established a controversial reputation, particularly as managing editor of the *Seattle Union Record*. Haas spent 18 months in Washington, D.C., as Bone's administrative assistant, but made time to explore the Federal Radio Commission, further grounding himself for a future in broadcasting. Both Bone and Magnuson quickly learned to use radio, the new communications phenomenon.

Roosevelt, with an overwhelming mandate and a compliant Congress, immediately launched his New Deal, a massive, progressive effort to lift the country out of the worst Depression in its history. The package included banking reform, agricultural reform, jobless pay, Social Security, and huge public works projects such as the Columbia River dams and the Tennessee Valley Authority to create jobs and wealth.

Bone became chair of the Senate Committee on Patents, a low-profile post, but easily shifted his public

power fight to the national stage, with the enthusiastic support of Roosevelt. Bone saw the Columbia River as a mighty public resource and was instrumental in promoting construction of Grand Coulee and Bonneville dams. Bone introduced the Bonneville bill soon after he took office and construction on Bonneville Dam, as well as the Grand Coulee Dam, began in 1933.

While acknowledging his role in public power, he was most proud of his bill creating the National Cancer Institute, first introduced in 1937 and another revolutionary direction for government.

### **Bone and Boeing**

Bone was an isolationist, though not a pacifist. He began exercising his anti-military muscle on the Senate floor in 1934, lambasting early manifestations of the military-industrial complex and citing Boeing by name.

Boeing had yet to become a local sacred cow, but was the state's largest employer, with 1,000 on its payroll. Consistent with his position on public power, Bone wanted military wares produced by government-owned facilities to thwart profiteering. He charged that Boeing had made 68 percent profit on Navy business and 90 percent on Army contracts. He also railed against Boeing's new \$25,000-a-year executive hired to hustle federal business. The Seattle press, however, was now supporting military preparedness and ignored Bone's polemics.

Bone also supported an amendment proposed by Rep. Louis L. Ludlow (1873-1950), D-Ind., that mandated a popular referendum before the United States could go to war, but it was opposed by Roosevelt and defeated in 1938 (Kirkendall).

Bone's convictions earned him a seat on the Senate Munitions Investigating Committee, chaired by Gerald Nye (1892-1971), a progressive North Dakota Republican and an America First supporter. (The America First Committee -- now the America First Party -- was generally nationalist, anti-war, anti-imperialist, populist, and isolationist.) The munitions committee accused the nation's bankers (mostly Morgan) and munitions industry (mostly DuPont) of war profiteering and lobbying the United States into World War I. But after a two-year investigation, the committee's conclusions about profiteering were lost in the growing war fever as World War II approached.

A curious footnote: The committee's legal assistant was Alger Hiss (1904-1996), a bureaucrat who would rise through the ranks and become one of the Cold War's more controversial figures, accused of spying for the Soviet Union.

### **New Deal Woes**

By 1937, Roosevelt's New Deal juggernaut was slowed by conservative courts and an increasingly recalcitrant Congress, including some isolationist Democrats. Homer T. Bone was among them and Harold Ickes (1874-1952), Roosevelt's interior secretary, had lost faith in him. Bone did not fully support the president's controversial effort to reorganize the federal government and the Supreme Court. Ickes and Bone also disagreed over management of Bonneville Dam, but it was the failure of "[c]ertain so-called

liberals" to fully support Roosevelt's government reorganization bill -- what the critics were calling his "court-packing" bill -- that really angered Ickes. He singled out Bone for particular scorn, calling him "a liberal of the very soft variety" (Ickes, 349).

Ickes "was glad to hear" that Roosevelt's White House also was "looking for a candidate to run against Senator Bone," in the 1938 election, because "he abjectly follows Senator [Burton K.] Wheeler (1882-1975)," one of the most outspoken America Firsters in Congress (Ickes, 416).

The White House apparently didn't find a challenger because in 1938 Bone won re-election easily. Nationally syndicated columnist Drew Pearson praised Bone's campaign, especially the "astute organization work of Saul Haas," and noted that Haas and Bone were inseparable.

### **Power Struggles**

The public vs. private power battle, meanwhile, had not abated. In 1937, the offices of Bone and Rep. Martin Smith, D-Wa., had submitted bills that would create a permanent Columbia Power Authority. Both bills gave the organization the authority to buy private power companies. In 1940, private power forces in Washington state offered Initiative 139, which sought a citizen vote whenever a public utility district offered revenue bonds under the Grange Bill, on the assumption that such bonds were evidence of public debt which must be repaid by taxes.

The campaign was fronted by the "Let the People Vote League," but in a letter to a constituent, Bone said, "This league is a sham front for private power companies -- nothing else." On May 22, 1940, Bone even interrupted Senate debate on the defense program to declare that, "At this very moment, the federal power program in Washington state was confronted with a cold and deliberate attack."

The initiative lost, but another battle followed in late 1940 over purchase of Puget Sound Power & Light's Seattle territory under condemnation proceedings allowed in the Bonneville bill. PSP&L (now part of Puget Sound Energy) admitted spending more than \$670,000 fighting the effort and the tug of war lasted until 1951, when Seattle City Light bought out the private utility's Seattle service for \$27.8 million. At one point in the debate, Bone asked the Securities and Exchange Commission to investigate the "remarkable rise" in the value of Puget preferred stock.

### **Judge Bone**

In 1944, another election was looming, but Bone had broken a hip in 1939 and, despite two operations, was virtually crippled. He was 61, had lost some of his fire, and was considering retirement and returning to Tacoma to practice law. But Roosevelt, despite whatever residual animosity remained from earlier skirmishes, nominated Bone on April 1, 1944, to the Ninth Circuit Court of Appeals.

The Senate unanimously approved the nomination the same day, but Bone delayed resigning from the Senate until November 13 to prevent Republican governor Arthur B. Langlie (1900-1966) from appointing a Republican to the seat. Bone's heir-apparent, popular, four-term Rep. Warren G. Magnuson, ran for the seat,

defeating Harry P. Cain (1906-1979). Langlie was forced to name Magnuson to the seat, which gave him a seniority advantage over Arkansas' William Fulbright.

Blanche Bone died in San Francisco in 1955. Bone retired from the bench as a full-time judge in 1956, but served intermittently until 1968, when he returned to Tacoma. He died on April 12, 1970, a day when University of Washington students rioted against the Vietnam War. The public-private power battle was no longer front-page news, but war was still making headlines.

Bone was cremated and his ashes interred at Oakwood Cemetery, beside the remains of his father and mother. *The Seattle Times*, one-time Bone nemesis, noted with regret in a eulogistic editorial on March 13, 1970, that "No public power dam in this country ever was named for Homer Truett Bone."

## Superpower for Washington

**Bone Power Bill, Initiative Measure No. 25, Next Step in Development of  
Existing Public Superpower System in Washington**

By Carl D. Thompson

The state of Washington already has a public superpower system. It is the first one in the United States and second only to the great public superpower system of Ontario.

The Bone Power bill which goes to referendum vote of the people of the state at the general election on November 4th this year if adopted opens the way for the development of this existing organization into a state-wide, public superpower system with service at cost thruout the state.

### The Existing System

In these matters Seattle, the largest city in the state has led the way. It has gradually developed its municipal hydro-electric and steam power plants until today it has the greatest municipally owned power system in the United States. It is operated upon the principle of "service at cost" instead of "all the traffic will bear", as is the case with all private power companies. The rates are among the lowest, the service the best and the system the greatest in the country.

This great city stands ready and eager to extend and to cooperate with the other cities and the rural communities of the state in extending this power service at cost into every section of the state.

### Great Cities Ready to Cooperate

Tacoma, the third city in size in the state, having the second largest and in some respect the most remarkably successful power system in the country, also operated on the principle of "service at cost", has joined forces with Seattle, interconnected its splendid hydro-electric power system with the steam and hydro plants of Seattle and is supporting her in the present proposal. Tacoma also stands ready and eager to help extend the public—"service at cost"—power system across the state.

Last spring Aberdeen, in the Grays Harbor county, observing the amazing advantages of the public power system of Seattle and Tacoma, passed a bond issue of \$2,000,000 with which to construct hydro-electric power plants. These also are to be operated upon the principle of "public power service at cost". Aberdeen will tie in and cooperate with Seattle and Tacoma. Thus Aberdeen is offering its aid and cooperation to the other cities and the rural communities of the state in the development and extension of a public power system.

#### **Greatest Superpower System in the States**

Meanwhile Seattle is just completing a power system up in the Skagit river county near the Canadian border which when finished will be the greatest hydro-electric power system on the continent second only to the Ontario system at Niagara. Its total potential development will be over a half million horse-power. And this service will be brought down over the transmission lines thru cities, towns and villages and intervening rural communities, serving all who care to avail themselves of its power possibilities, and delivering its power into Seattle and into the general public power system.

Thus we have in this Seattle system together with the Tacoma and Aberdeen developments a public superpower system in Washington with a total transmission system of over 200 miles covering practically, or capable of covering, the entire western half of the state, serving the people at cost and offering its assistance and cooperation to every city, town, village and rural community in developing a general, state-wide, public power system.

#### **Fifteen Washington Cities Own Power Systems**

Besides Seattle, Tacoma and Aberdeen there are twelve other municipalities in the state that own and operate electric power plants. These are Blaine, at the extreme northwestern part of the state; Port Angeles, on the Puget Sound; Steilacoom, Centralia and Eatonville, south of Tacoma; Index and Skykomish, just east of Seattle; Waterville, Cashmere, Wilson Creek and Ellensburg, in the Great Bend section; and Chewelah, in the north-eastern part.

Thus there are fifteen cities in the state of Washington committed to, and conducting their power systems upon the principle of "service at cost".

#### **Two Government Plants**

And, finally, besides these fifteen "public service" cities the United States Government owns and operates two hydro-electric power projects in the state of Washington in connection with the Reclamation Service. One of these is located at Okanogan in the extreme northern part of the state and the other in the Yakima district in the central southern part. These plants, too, are established and operated by the United States Government not for profit but for service. They would therefore naturally fall into line as units of the public service system cooperating to mutual advantage all around.

#### **Washington's Superpower Opportunity**

Here, then, are all the elements of a supreme opportunity for the people of the state of Washington. First of all the state has by far the greatest water power and hydro-electric resources of any state in the Union. Twenty-one million horsepower of potential hydro-electric energy are possible of development upon the Columbia river and its tributaries. The greater por-

tion of these possibilities lie within the state of Washington. The public, service-at-cost system is already established and in operation. Two cities, one the largest and the other the third largest in the state have led the way. A third is nearly ready to join. Twelve other cities and two government plants are available for further inter-connection and cooperation. And all this achieved in spite of bitter and relentless opposition and an interminable fight by the private power companies; and, also in spite of restrictive laws that tie the hands and feet of the cities of the state while the private power companies are given every privilege and advantage. The cities of Washington are denied the simple right of selling current outside their limits. Private companies can sell current anywhere and everywhere. The cities may not—at least not in Washington. The cities of other state—Iowa and Missouri for example—have this right and have had it for many years. But the cities of Washington have not.

That shows how the state legislature of the state has been controlled by the private power companies so as to hog-tie and ham-string the cities of the state while giving the private power companies every opportunity and advantage to develop their private monopoly of the power of the state.

#### **Unshackle the Cities**

One thing is needed now to make possible the rapid extension of a public power system with service at cost thruout the state—just one thing: Unshackle the cities; give the cities of Washington the rights that the cities of other states have—the rights that the private power companies have—the right to sell their power service anywhere within the state, to interconnect their power systems, to extend their transmission lines and cooperate with each other; and with that right the great cities that have already developed their “service at cost” systems will quickly get into cooperation with the twelve other cities that have public plants and with the government systems; and finally these cities cooperating with the rural communities will speedily extend the system thruout the state.

#### **Look at the Map**

On the inside cover page will be found a map of the state of Washington showing the existing publicly owned superpower system, the location of the municipally owned plants, the government plants and the proposed extensions and interconnections that will constitute the state-wide system when completed.

The passage of the Bone Power bill will give the cities the simple right and power that will make these things possible.

#### **What “Service at Cost” Means**

And here just a word about what “service at cost” means: Private power companies are forever over-capitalizing their enterprises. That compels them to charge high rates for the service to earn their interest on the capital. Then, too, the private companies must have 8 or 10 per cent on their capital account including watered stock and fictitious values. And finally they never retire or amortize their capital account so the burden is there forever. In fact it is always increasing. So a private power monopoly means an ever increasing burden upon the people of the state.

On the other hand a public service at cost system such as the cities of Seattle and Tacoma have, such as the Province of Ontario has reverses all these

burdensome tendencies. The public system never waters its stock. The public can borrow money at 5 and even 4 per cent while the private company pays 8 and 10. And, finally, and most important of all, the public system gradually pays off, eliminates, amortizes the capital account. At the end of 30, or at most 40, years the capital account is all retired and there is no interest burden at all to carry after that.

No less an authority than Guy E. Tripp, Chairman of the Board of the Westinghouse Electric and Manufacturing Co. declares that four fifths of the cost of producing electric power by water power is due to the capital charges.<sup>(1)</sup> Therefore by amortizing and thus eliminating the capital account, as the public system alone can do, it will be possible to reduce the cost of electric service to one half, one third and finally to one fifth of what the private power monopoly must charge.

This has been fully and strikingly demonstrated by the experience of Seattle and Tacoma as well as by many other cities thruout the country. It has been still more strikingly and fully demonstrated by the 275 cities and 77 rural communities operating this very system in Ontario for the last 14 years. Write to the Public Ownership League, 127 N. Dearborn St., Chicago, for full information and the facts concerning this wonderful system. A very excellent story of its achievements may be found in Harper's Magazine for September on "Niagara Milks the Cows" by Robert Bruere, pages 480 to 490. Copies may be secured at any good news stand or publisher.

### What the System Will Do

This system by reducing rates as it has done elsewhere will make it possible ultimately to electrify every home in the state—not only in the cities, towns and villages, but in the rural communities as well.

It will enable the cities to offer such low rates for power that industries of every sort will spring up, expand and multiply and others will be drawn into the state. These industries, made possible by cheap power, will work up the raw materials of the state, especially the mineral resources available in the eastern part that will make of that section a Pittsburgh of the north west. In short, this system will open a new era of industrial, commercial and civic progress and prosperity such as no one here-to-fore has dared to prophecy.

### Power and Prosperity for the Farmer

This system is the only possible hope of the farmers of the state to get electric power on the farms. The cost of transmitting the electric current thru sparsely settled rural communities is too great to interest the private power companies who are seeking profits only. As in the rural free delivery service of the postal department—"it doesn't pay". Not in dollars and cents. Not in huge profits to private interests. Therefore only the public "service at cost" system will ever reach the farmer with adequate electric power.

This system will reach the farmers of Washington. And it will be the greatest boon, the greatest helpful service ever rendered to them. It will make the use of electricity possible in the farmer's home, bringing an infinite relief to the farmer's wife and brightening the home life and increasing the comfort and convenience, the attractiveness and the efficiency of the homes of the farms. It will put into the farmer's hands the greatest power and helpful agency the farm has ever had, and do it at cost. And what is most important

(1) "Superpower as an Aid to Progress" by Guy E. Tripp, Knickerbocker Press, New York, 1924, p. 11.

of all the tremendous industrial expansion that is certain to follow the development of this system will enormously increase the demand for farm products. This will stabilize the farmer's market and open a new era of agricultural progress and prosperity otherwise impossible.

Nothing—absolutely nothing that can now be conceived, means so much to the future of the state; so much of progress, prosperity and human betterment; so much to the homes, the municipalities, the agriculture, the industrial and commercial expansion of the state as the public power service system at cost.

And the first next step towards such a system is the passage of the Bone Power Bill, Initiative Measure No. 25.

And remember this: Either the people of the state of Washington will develop, own and control a **public service at cost superpower system**, such as we have described above, or the private power companies of Washington will develop, own and control a **private superpower monopoly operated for private profit**.

A monopoly of the power system is inevitable and unescapable. Shall it be superpower for public service or superpower for private profit?

The passage of the Bone Bill means an immediate advance all along the line, thruout the state towards a public superpower system for public service. The defeat of the Bone Bill means another victory for the power trust and a further tightening of the grip of private monopoly upon the vital resources, industries, municipalities and agriculture of the state.

To prevent this disaster: to win the victory of a power system for public service; to secure the passage of this Bone Bill Initiative Measure No. 25 on November 4th is a matter of such tremendous importance that if the people on the farms, in the cities in the forests, upon the railroads—everywhere, did nothing else from now until the votes were counted at the close of the ballot boxes on November 4th but to work for the passage of this measure it would repay them a thousand fold—they and their children and their children's children after them, in the larger, better, freer, happier lives of the people for generations to come.

### Will Help the Nation

Moreover, the carrying of this measure and the rapid development of a public service power system that is sure to follow in the state of Washington will have a very helpful and stimulating influence thruout the nation. For everywhere the struggle is on to save to the people the one remaining natural resource that God has given them that has not been monopolized and exploited for private profit viz.: the water power. And everywhere in every city and state and at the national capital there are heroic groups of public spirited people and their leaders valiantly battling for the conservation of our national resources, for their utilization in the public service and the larger, better, nobler life of the nation that such a service will make possible. To win this victory in Washington will strenghten these forces in every other state not only by sustaining the public service system that we already have in Washington and extending and enlarging it; not only by multiplying the power of the demonstration already made by the cities of Seattle and Tacoma; but also by the courage and hope that it will inspire in the hearts of those in every city and state and at the nation's capital who are struggling for the conservation of our natural resources, for the constructive development of the public service and the largest possible degree of social, industrial and civic progress and prosperity for the American people.

# The Bone Power Bill

By Hon. Homer T. Bone, Author of the Bill

The State of Washington is the richest state in the Union in hydro electric resources. One-sixth of all hydro electric power in the country is to be found in this state. This magnificent prize very naturally stimulates the cupidity of the power interests, and desperate efforts have been made to prevent public ownership and development of this resource.

The State of Washington has been the victim of ruthless exploitation. A certain land grant railroad has taken up such enormous areas of coal, timber and farm lands that it has become a veritable scandal. The wonderful timber resources of the state are controlled entirely by private individuals, and afford no revenue to the State of Washington except a comparatively small tax paid on standing timber. Of all the wonderful resources Nature has given us with such a bountiful hand, all that remains open to public development is the water power. The battle to control this is now tearing the state wide open in what promises to be the most savage political battle ever waged in this state.

## The Struggle for Public Ownership

On the one hand are the three private power corporation of this state, and all of them are working in perfect co-ordination and harmony. On the other hand are arrayed the public ownership forces that are gathering strength every day.

The last declaration on the subject of public ownership is to be found in the platform of the Democratic Party of the State of Washington, adopted at its State Convention May 2, 1924, in the City of Seattle, and which is a ringing challenge:

**"The State of Washington contains one-sixth of the potential water power of the United States. This is the bounty with which nature has endowed us to compensate for the absence of the deposits of oil and mineral that make the wealth of other states. This great resource is the most enduring and, under our modern civilization, the most valuable of natural endowments and should be held and developed under conditions that will never permit private monopoly or greed to limit or hamper its fullest and freest use by the people who inhabit the State.**

**"With respect to water power, we are reaching the point where we must choose one of two paths. We must either adopt a permanent policy of conservation and public development, or resign ourselves definitely to private exploitation. We do not believe the enlightened people of the State of Washington will follow the latter course. Twice have they voted down, by striking majorities, certificate-of-necessity laws, passed by pliant Republican legislatures. But they will not be content with this negative action. They demand a positive and affirmative program of public development, and, in line with their aspirations, we recommend a**

declaration of policy by the Democratic Party of this state, favoring the retention by the state of complete control of its water power, and the development of this power by the state itself in its corporate capacity as the needs of its people require for their use in city and in town, in hamlet and on the farm.

"We condemn the Reed bill as a measure favorable to the private power interests. On the other hand, we heartily favor the enactment of initiative bill No. 52, known as the 'free power (Bone) bill'".

**HON. HOMER T. BONE**  
Author of the "Bone Power Bill"

### **The Public Will Decide November 4th**

This declaration is the culmination of years of struggle against the aggressions of a selfish power monopoly that has sought to and has successfully controlled the legislature of this state for years past. For the first time the people of this state have been able to get the battle out of the legislature and before the public in the form of Initiative No. 52, commonly called the Bone bill.

This bill permits the cities of the State of Washington that own their own light and power plants, to tie them together freely in a super power system

and to sell electric current freely from their inter-city power lines, and to surrounding communities. The private power companies are using every resource at their command to defeat this bill. Every country newspaper that that will accept advertising is being swung into line thru this means. The campaign promises to become as intense as was the campaign in California in 1922, where the power companies spent an enormous sum of money in an effort to defeat public ownership. In Washington we are somewhat better off in that one of the great political parties has seen fit to take up the cudgels for public ownership.

When the power plants of Seattle, Tacoma and Aberdeen are fully developed, these three cities will have in excess of one million horsepower of hydro energy to put on the market, and this means the end of the private power monopoly in the entire Western half of this great state.

#### **Tacoma's Great System and Low Rates**

The City of Tacoma today has established power rates that are the cheapest in the United States, and yet its plant is enormously profitable. The writer used one hundred and seventy-eight kilowatt hours of service in his small home in March of 1924, at a cost of \$2.90, or at the rate of one and six-tenths cent per kilowatt hour. The City of Spokane, Washington, supplied by the private power trust, is said to give about the lowest rate given by a private company to any city in the country. The same bill in Spokane would have been \$6.14. It would have been \$8.34 in a city near Tacoma, which is also supplied by a private company. This will give readers an idea of what a wonderful graft the private power interests have in the control of the water power.

The City of Tacoma is now engaged in developing a new power site which will produce one hundred and forty thousand horsepower. It is known as the Cushman development, and promises to be one of the finest power plants in the United States. When that plant is finished, Tacoma will have a total maximum output of one hundred and eighty-four thousand horsepower. This whole power development is being built by utility bonds, payable solely from the revenues of the plant, and they can never be a burden upon the taxpayers. The first issue of the Cushman bonds will be paid off in fourteen years, a portion of the issue being retired each year, and this wonderful power system will then be the property of the City of Tacoma, without having cost the taxpayers one cent. This was the method of financing the Nisqually plant of the City of Tacoma, which has proven so profitable.

#### **Keep Your Eyes on Washington**

The City of Tacoma is a wonderful and outstanding example of how successfully a city may conduct a power business. It should be an inspiration to every other city in the United States that can possibly acquire her own power plant. Many of our public streets are great "white ways" that make Tacoma one of the best lighted cities in the world.

The people of the United States should keep their eyes on Washington, for this state is going to lock horns with the private power trust in a battle that will determine once and for all the policy to be pursued in respect to water power. The big financial interests of the East are expected to finance much of the fight, and it is very generally understood that millions of dollars will be poured into Washington, if necessary, to stem the tide in favor of public ownership.

# The Seattle Municipal Light and Power System

Address by J. D. Ross,  
Superintendent and Chief Engineer.

J. D. ROSS

Seattle's politics twenty years ago were dominated by the Seattle Electric Company, a Stone and Webster Corporation. Mayors and Councilmen were made and unmade, for monopoly means the usurping of the functions of Government. This company still dominates state politics, and, thru the state, strikes at the city power systems with telling results. Self preservation for the cities and rural districts must come thru the initiative and referendum, and through the tireless building of public plants welding the whole by tie lines into a great network.

For twenty years Seattle has so struggled until today in an addition to her Cedar Power Hydro, and a modern steam plant, she is preparing to bring in 50,000 H. P. additional, the first unit of the greatest power development any city has ever undertaken, the third step of a system rising toward 750,000 h. p. in the coming years.

### The Seattle System

The Seattle System now serves about 72,000 customers with light and power, besides all city buildings, streets and grounds. The street lighting is claimed to be the best in the world.

The private company is serving about 23,000 customers and competition has reached the stage of a gigantic struggle, its effects reaching not only to the confines of the state, but all over the nation.

Our City-owned Light and Power plant was one of the very first transmission systems in the world. It was built in 1902 and 1903. The highest voltage by which power was transmitted at that time was 30,000. This was raised to 45,000 for the Seattle lines.

The first plant consisted of two 1250 k. w. machines. The call for a City-owned plant was the natural outcome of high rates and the company's apathy toward the public. The city felt that a little competition would work wonders, and it did. Seattle was then a city of about 75,000 people. Today it is growing very rapidly and is variously estimated at from 350,000 to 375,000 population.

The City had launched the greatest undertaking of its kind in America. Her citizens were glad to vote for it but slow with their patronage, the one thing that could make it a financial success. The suburban districts with their small residence loads were willing to swing to their own plant, but not one in ten of the business men was willing to risk the new service.

This introduced a troublesome problem. The cost of distribution is the greatest item of expense and lines must be ready at all points to take on the business. Heavy costs with only ten per cent of the business, widely scattered, would be ruinous.

Necessity is the mother of invention and we solved the problem. Instead of using the present day system with its heavy cables and expensive voltage regulators the power was distributed directly from 15,000 volt lines. At that time this was the highest voltage for which any concern would build outdoor transformers. This system has been later extended and modified, the final system using 15,000 volts to ground in a three phase Star connection. This system of distribution will be the greatest factor in further reducing our residence rate. It gives vastly better regulation without regulators, and the largest wire required on the streets in almost every case, is No. 2, about the size of a lead pencil. No secondary substations are needed and very heavy loads at any distant point are welcome. Simplicity gives safety to life, and assures good service.

### Making a Million a Year

The first year and a half of operation showed us in the red. Then we began to pay back our debt and since that time have returned to our institution over \$5,000,000.00 profit and \$3,000,000.00 more marked off for depreciation. These sums have been used to retire bonds and to extend our lines and plants. This year out of \$2,800,000.00 gross receipts we will make a round million in profit after paying all operating costs and interests and after marking off \$300,000.00 as depreciation.

The City plant is in the hottest competition with Stone and Webster, who have gradually been driven to the heart of the city, where cost of distribution is lower and loads larger and more profitable, the cream of the business. The fight has been very bitter and soon developed into personal attacks in the usual way and with the usual rubbish printed in company newspapers, about

burdensome tendencies. The public system never waters its stock. The public can borrow money at 5 and even 4 per cent while the private company pays 8 and 10. And, finally, and most important of all, the public system gradually pays off, eliminates, amortizes the capital account. At the end of 30, or at most 40, years the capital account is all retired and there is no interest burden at all to carry after that.

No less an authority than Guy E. Tripp, Chairman of the Board of the Westinghouse Electric and Manufacturing Co. declares that four fifths of the cost of producing electric power by water power is due to the capital charges.<sup>(1)</sup> Therefore by amortizing and thus eliminating the capital account, as the public system alone can do, it will be possible to reduce the cost of electric service to one half, one third and finally to one fifth of what the private power monopoly must charge.

This has been fully and strikingly demonstrated by the experience of Seattle and Tacoma as well as by many other cities thruout the country. It has been still more strikingly and fully demonstrated by the 275 cities and 77 rural communities operating this very system in Ontario for the last 14 years. Write to the Public Ownership League, 127 N. Dearborn St., Chicago, for full information and the facts concerning this wonderful system. A very excellent story of its achievements may be found in Harper's Magazine for September on "Niagara Milks the Cows" by Robert Bruere, pages 480 to 490. Copies may be secured at any good news stand or publisher.

### What the System Will Do

This system by reducing rates as it has done elsewhere will make it possible ultimately to electrify every home in the state—not only in the cities, towns and villages, but in the rural communities as well.

It will enable the cities to offer such low rates for power that industries of every sort will spring up, expand and multiply and others will be drawn into the state. These industries, made possible by cheap power, will work up the raw materials of the state, especially the mineral resources available in the eastern part that will make of that section a Pittsburgh of the north west. In short, this system will open a new era of industrial, commercial and civic progress and prosperity such as no one here-to-fore has dared to prophecy.

### Power and Prosperity for the Farmer

This system is the only possible hope of the farmers of the state to get electric power on the farms. The cost of transmitting the electric current thru sparsely settled rural communities is too great to interest the private power companies who are seeking profits only. As in the rural free delivery service of the postal department—"it doesn't pay". Not in dollars and cents. Not in huge profits to private interests. Therefore only the public "service at cost" system will ever reach the farmer with adequate electric power.

This system will reach the farmers of Washington. And it will be the greatest boon, the greatest helpful service ever rendered to them. It will make the use of electricity possible in the farmer's home, bringing an infinite relief to the farmer's wife and brightening the home life and increasing the comfort and convenience, the attractiveness and the efficiency of the homes of the farms. It will put into the farmer's hands the greatest power and helpful agency the farm has ever had, and do it at cost. And what is most important

**SENATE RESOLUTION NO. 112**

Submitted by Mr. NORRIS

IN THE SENATE OF THE UNITED STATES,  
*September 9 (calendar day, September 11), 1929.*

*Resolved*, That as a part of its reports to the Senate, pursuant to Senate Resolution 83, Seventieth Congress, first session, the Federal Trade Commission be required expeditiously to transmit duplicates, or true copies, of all exhibits introduced into its record in hearings held and to be held pursuant to said resolution, and that they be printed as parts of said reports, to accompany the respective parts thereof printed in accordance with Senate Resolution 221 of May 3, 1928; except that as to copyrighted books, bulky volumes, and other lengthy exhibits only such descriptions thereof and pertinent extracts therefrom shall be printed as the Federal Trade Commission may indicate and transmit with such exhibits for that purpose.

Attest:

EDWIN P. THAYER,  
*Secretary.*

**SENATE RESOLUTION NO. 221**

Reported by Mr. SHIPSTEAD

IN THE SENATE OF THE UNITED STATES,  
*May 3, 1928.*

*Resolved*, That the reports submitted to the Senate, or which may hereafter be filed with the Secretary of the Senate, pursuant to Senate Resolution 83, current session, relative to the investigation by the Federal Trade Commission of certain electric power and gas utility companies, be printed, with accompanying illustrations, as a document.

Attest:

## LETTER OF SUBMITTAL

OCTOBER 15, 1935.

*To the Senate of the United States:*

Pursuant to Senate Resolution 83, Seventieth Congress, first session, approved February 15, 1928 (as extended by S. J. Res. 115, 73d Cong., 2d sess., approved June 26, 1934), directing the investigation of certain classes of holding and operating electric and gas companies, and associated engineering, finance, management, and construction companies, upon other matters specified in the resolution, and directing that the Commission "report to the Senate within each 30 days after the passage of the resolution and finally on the completion of the investigation", and that it transmit therewith the stenographic report of the evidence taken, this eighty-first interim report covering the period from September 16 to October 15, 1935, inclusive, is respectfully submitted.

Public hearings were held September 26 and 27, and October 7, 9, and 10, 1935.

Reports and testimony presented at the above hearings related to the following companies and matters:

Northern Natural Gas Co. and subsidiaries.

Utilities Power & Light Corporation (schedules E).

Granite Trading Corporation (formerly known as "G. L. Ohrstrom & Co., Inc.").

Federal Water Service Corporation (of Ohrstrom group).

Power, Gas & Water Securities Corporation (of Ohrstrom group).

Further evidence re Cleveland municipal system.

Further evidence as to British thermal unit content of gas.

The witnesses, of the Commission's staff, were H. H. Carter; Arthur E. Lundvall; Thomas W. Mitchell; Arthur C. Harper; John H. Crabtree; A. M. McDermott; Elmer R. Weaver, chemist of United States Bureau of Standards; Edward James Kenealy, electrical engineer, Cleveland municipal plant; John F. Merriam, assistant secretary Northern Natural Gas Co.

The reports and exhibits put into the record were—

Extensive excerpts from minutes of meetings of stockholders, boards of directors and executive committees, and of various journal entries, income accounts, balance sheets, annual reports, charters, bylaws, and other material of various companies of the Niagara-Hudson group. (Not sent for printing.) (Exhibits 6341 to 6360 and subnumbers, both inclusive)

Report by Harry H. Carter (Federal Trade Commission) on the interstate transmission of gas by the Northern Natural Gas Co. system, exhibit 6361).

Report by Andrew W. Wilcox (Federal Trade Commission) on the examination of the accounts and records of Northern Natural Gas Co. and subsidiaries, with exhibits and appendixes. Exhibits 6362 to 6364, both inclusive.

Extracts from schedules E furnished by the Utilities Power & Light Corporation (exhibit 6365).

Letters concerning conference on report of operations of G. L. Ohrstrom & Co., Inc., and reply (exhibits 6366 A and B).

The companies of the American Power & Light group operate in the States of Arizona, Florida, Idaho, Kansas, Minnesota, Montana, eastern Nebraska, Oregon, Texas, and Washington.

For the 2 years ending December 31, 1928, and December 31, 1929, the officers of the Electric Bond & Share Co. were the same as those of the American Power & Light Co., with one exception. In 1928 C. E. Groesbeck was a vice president of the Electric Bond & Share Co. and president of the American Power Light Co. In addition to having officers in common, three of the directorships of the American Power & Light Co. were held by the Electric Bond & Share Co.<sup>18</sup>

Many of the officers of the American Power & Light Co. were holding executive positions with the national associations, National Electric Light Association, American Gas Association, and joint committee of National Utilities Association. S. Z. Mitchell, president of the Electric Bond & Share Co., and of the American Power & Light Co., was a member of the joint committee of National Utilities Association, of the public-policy committee of the National Electric Light Association, and of the advisory council of the American Electric Railway Association. C. E. Groesbeck, vice president of Electric Bond & Share Co. and president of the American Power & Light Co., was a member of the joint committee of National Utilities Association and of the public-policy committee of National Electric Light Association; Vice President H. C. Abell, of Electric Bond & Share Co. and of American Power & Light Co., was a member of the joint committee and a member of the executive board of American Gas Association; H. T. Sands, vice president Electric Bond & Share Co. and of American Power & Light Co., was president of National Electric Light Association in 1927-28.<sup>19</sup>

In 1932, when the public-policy committee of National Electric Light Association was abolished and its work taken over by the advisory council, S. Z. Mitchell and C. E. Groesbeck were members of the newly formed advisory council. In January 1933, when the National Electric Light Association ceased to exist and the Edison Electric Institute was organized, the board of trustees governing the institute was composed of men representing the dominant groups in the electric and gas industries. C. E. Groesbeck was one of these trustees.<sup>20</sup>

#### Activities Concerning Legislative Matters

In the States of Oregon and Washington committees were organized within the electrical industry for the purpose of opposing the passage of laws considered detrimental to the proper development of the industry.<sup>21</sup>

Referring to the contributions made by the Northwestern Electric Co. of Portland, Oreg., to State political campaigns in 1924, the sum of \$500 was paid to the Washington committee on public-utility information, to be expended by that committee to oppose the passage in the State of Washington of a bill then before its voters, known as the "Bone bill", which this company "considered detrimental to the proper development of the electrical industry in the State of Washington." The sum of \$100 was paid by this company to the business men's committee for income-tax repeal in the State of Oregon.

<sup>18</sup> Pt. 20, p. 53.

<sup>19</sup> Pt. 71 A, pp. 410, 419, appendices 5, 7.

<sup>20</sup> Pt. 71 A, pp. 416, 417, 418.

<sup>21</sup> Ex. 4916, pt. 35, p. 215.

In 1926 this company paid \$3,837.40 to the Oregon Public Utility Committee and \$1,100 to a committee of utility employees, to be expended by those committees to oppose the passage of a constitutional amendment known as the "Housewives' council water and power amendment." For the same purpose there was also expended \$156.83 for postage and stationery and \$13.85 for the rental of a school auditorium in which was held a meeting of the employees of the company. The total expended by this company in 1926 amounted to \$6,108.08.<sup>22</sup>

Before the elections held in November 1930 this company expended, chiefly for pamphlets and advertising in opposition to the initiative measures known as the "Grange public-utility and power district bills" before the electorate of those States, the sum of \$273.37 in Oregon and \$1,866.17 in Washington. The sum of \$273.37 was exclusive of \$5,979.50 contributed to the utility taxpayers' committee for the purpose of opposing the measure in Oregon referred to above. There was also an additional contribution of \$173.46 collected by the committee against initiative no. 1 in Washington.<sup>23</sup>

District power bill initiative no. 1 was also opposed by the Washington Water Power Co. This total expenditure by this company was \$33,435.15. A large part of this sum was devoted to advertising in opposition to the measure, but contributions to committees and expenses of individuals also represented a great portion of this total expenditure.<sup>24</sup>

The Washington Water Power Co. in January 1933 was planning to send a representative to Olympia to represent the company while the legislature was in session.<sup>25 26</sup>

In 1924 the Pacific Power & Light Co. also made a contribution of \$19,496.84 to the Washington Committee on Public Utility Information, the major portion of which was expended by that committee to oppose the passage of the Bone bill, which this company "considered detrimental to the proper development of the electrical industry in the State of Washington."<sup>27</sup>

In 1926 there was paid by this company to the Oregon Public Utility Committee \$3,442.56 to be expended in opposition to the passage of a constitutional amendment then before the voters, known as the "housewives' council water and power amendment."<sup>28</sup>

Prior to the elections in November 1930 this company, like the Northwestern Electric Co., expended funds chiefly for pamphlets and advertising in opposition to the measures known as the "Grange public-utility and power district bills." The sums of \$2,796.45 in Oregon and \$4,635.57 in Washington were spent for this purpose.<sup>29</sup>

In addition to the sums mentioned in the preceding paragraph, there was also contributed by this company the sum of \$2,973 to the utility taxpayers' committee and expended by it in opposing the measure in Oregon and \$2,865 was contributed by the committee against initiative no. 1 and expended in opposing the measures in Washington.

<sup>22</sup> Ex. 4915, pt. 35, p. 214; ex. 4691, pt. 25, p. 923.

<sup>23</sup> Ex. 4916, pt. 35, p. 215.

<sup>24</sup> Ex. 4789, pt. 29, pp. 234-247; pt. 29, p. 54.

<sup>25</sup> Ex. 6100, pt. 70, p. 981.

<sup>26</sup> See Stone & Webster section post under subhead Lobbying.

<sup>27</sup> Ex. 4915, pt. 35, p. 214; ex. 5923, pt. 65, p. 429.

<sup>28</sup> Ex. 4915, pt. 35, p. 214.

<sup>29</sup> Ex. 4916, pt. 35, p. 215.

From January 30, 1924, to May 13, 1924, correspondence relating to the Bone and Erickson bills was passing between the Pacific Power & Light Co. and the Electric Bond & Share Co., which latter company was circulating the information and material in the East and among members of the other affiliated companies.

On January 30, 1924, F. G. Sykes, vice president of the American Power & Light Co., wrote to Guy W. Talbot, president of the Pacific Power & Light Co., acknowledging receipt of two copies of the "proposed Erickson bill and two copies of a digest of the same." He forwarded the letter to Messrs. Silliman, Groesbeck, and Odlum, the latter two of whom were officers of the National Power & Light Co., which is also an affiliated company of the Electric Bond & Share Co.<sup>20</sup>

On April 21, 1924, A. W. Flor, of the Electric Bond & Share Co., wrote to George L. Myers, assistant to the president of the Electric Power & Light Co., thanking him for copies of the Bone bill and commenting on some new features appearing in this bill:

I am moved to wonder at the basis for the rather unusual wording of section 3. However, whatever the reason may be, this new bill impressed me as a very sedulous affair and one which probably offers as much, if not more, opportunity for a real fight than did the original Erickson bill.<sup>21</sup>

Mr. Flor immediately wrote M. H. Aylesworth, managing director National Electric Light Association, on April 22, 1924, sending him a copy of the Bone bill, which had been recently substituted for the Erickson bill. He stated, with reference to the utility activities in the State of Washington:

The officials of certain of the companies in the Northwest have lately been busy in getting together a complete argument against the Bone bill for distribution in pamphlet form to approximately 100,000 voters. This pamphlet, it is expected, will be available within the next few days.<sup>22</sup>

On May 7, 1924, Mr. Myers wrote again to Mr. Flor mailing 25 copies of the pamphlet containing the essential argument against the Bone-Erickson bill. He stated:

This is the bill I wrote you about which is being circulated for the necessary signatures in the State of Washington to provide that electric light and power companies, municipally owned and operated may extend their services to communities outside of present incorporated limits within which they operate.

If for any reason you should wish additional copies of the pamphlet, I will be glad to see that you get them.<sup>23</sup>

In a letter from Samuel P. MacFadden, manager of the Western Public Service Co., Scottsbluff, Nebr., on December 17, 1925, to Stone & Webster, Boston, Mass., the following comment is made concerning the municipal ownership situation in Nebraska and the opposition to it in the legislature:

Mr. K. R. MacKinnon, general superintendent of the Nebraska Power Co., in Omaha, an Electric Bond & Share Co., also attended the meeting and after the meeting came on up here with Mr. Parks and me. From him, I learned that in the past, bills facilitating municipal ownership presented in the State legislature had been fought successfully by the Electric Bond & Share and Insull, but that during the last year or two Insull had more or less withdrawn his support, leaving the Electric Bond & Share to carry the entire load.

Omaha is the home of Senator Howell, one of the prominent municipal ownership advocates of the country, and his activities in and around Omaha have

<sup>20</sup> Ex. 5923, pt. 65 p. 428.

<sup>21</sup> Ex. 5923, pt. 65, p. 429.

<sup>22</sup> Idem. p. 429.

<sup>23</sup> Ex. 5923, pt. 63, p. 429.

The record further bears evidence of a loan made by Mr. Knight to a member of the Florida Railroad Commission. Commissioner A. D. Campbell wrote Mr. Knight on December 20, 1923, asking for a loan of \$2,000, and Mr. Knight acknowledged the request on December 24 by stating:

It so happens that at the present time I do not have it myself, but I have been able to get it locally for you, even though I must endorse the note.<sup>80</sup>

Mr. Knight sent Mr. Campbell's letter on to the Boston office on the same date, accompanying it with the remark:

Of course we must take care of this matter;<sup>81</sup>  
with which decision Mr. Wetterer was in full agreement, as witness has reply:

I can understand how necessary it is to take care of this request in the manner that you have arranged.<sup>82</sup>

#### Political Activities in the State of Washington

*Erickson and Bone bills.*—The city of Seattle, Wash., is the headquarters of the Puget Sound Light & Power Co. which in output is by far the largest unit of the Stone & Webster group. In its schedule E filed with the Commission, the Puget Sound Co. reported the expenditure of approximately \$100,000 in 1924 in opposing the so-called "Erickson and Bone bills."<sup>83</sup>

The Erickson bill as proposed in 1923 provided for the formation of power districts, State-wide or less in extent, and permitted such districts to purchase or condemn the existing light and power properties, or to construct properties of their own, among other things. Upon its proposal the Stone & Webster interests immediately got in touch with the National Electric Light Association in New York, as evidenced by the following excerpt from a letter from Mr. E. T. Steel to Mr. M. H. Aylesworth, of the National Electric Light Association, under date of August 28, 1923:

Letters and clippings received from Mr. Leonard at Seattle give a vivid idea of the activities of Messrs. Thompson and Erickson in organizing the Washington campaign for State ownership of water powers.<sup>84</sup>

In a letter dated the next day, Mr. Aylesworth proposed to Mr. Steel a plan of campaign. He suggested:

What our people need to do in Washington \* \* \* is to organize through various organizations other than public utility groups a definite campaign against the proposed agitation. \* \* \*

My experience has led me to believe that we should always be the aggressors and lay out plans for future electrical development and make them public rather than assume the position of the defense and answer the other fellow's statements.<sup>85</sup>

In an interoffice communication at the Stone & Webster headquarters in Boston, November 10, Mr. Steel made further suggestions to Mr. W. H. Blood, Jr.:

Mr. Leonard recommends that the Washington situation should be presented at a meeting of the public policy committee of the National Electric Light Association and their assistance definitely secured to the point, not only of giving financial assistance, but also securing as soon as possible one or more high-grade, capable publicity men and sending them out to Washington. \* \* \* Probably 90 percent of the newspapers in the State will oppose State ownership, and a lot of

<sup>80</sup> Pt. 70, p. 404.

<sup>81</sup> Idem.

<sup>82</sup> Ex. 6014, not printed.

<sup>83</sup> Pt. 70, p. 930.

<sup>84</sup> Pt. 70, p. 1005.

<sup>85</sup> Idem.

good work, could be done with these papers by the right kind of publicity which we have not the capacity for getting at at the present time.<sup>86</sup>

The campaign against the Erickson and Bone bills was handled by the Washington Committee on Public Utility Information. Mr. Norwood Brackett, of the Northwest Power & Light Association, testified that the committee expended \$175,000 in the campaign,<sup>87</sup> most of which was contributed by the power companies in the regions affected. The Puget Sound Co. was by far the largest contributor, its \$100,000 accounting for almost 60 percent of the total.

The committee's elaborate plan of campaign was summarized in a report of October 16, 1923, to Mr. Leonard, chairman of the committee as well as president of the Puget Sound Co. The committee decided:

That we should immediately begin an active campaign among the business interests. \* \* \*

Mr. W. B. Henderson was employed for this work. Through his long association with the chamber of commerce he has an intimate acquaintance with the business men of this state. \* \* \* His method of procedure is to bring the question to the attention of the president and secretary of each association. They then call a meeting of the executive committee of their association when the matter is fully explained, either by Mr. Henderson or myself. \* \* \*

These organizations then send out a letter prepared by us on their own stationery to each member of their organization, calling their attention to the dangers of this bill and urging them to do everything they can to defeat it.<sup>88</sup>

As a means of obtaining publicity the committee engaged—

the services of Mr. Wood to prepare special articles which are distributed by our company through Strang & Prosser to the newspapers in our territory and which are also sent to each electric light and power company in the State for publication by the papers in their territory.

As a preliminary to the publicity work, Mr. Mattison and Mr. Wood are visiting all of the newspapers of this State. \* \* \* Mr. Wood is visiting them as the representative of the Portland Oregonian and Mr. Mattison as secretary of the Republican State central committee.

During the course of their conversation it is not difficult for them to get an expression as to how they feel toward this bill and to discuss the bill with them. This should give us a very definite line on the papers which will publish the articles we desire. This work is not as yet completed but from the editors so far seen we are safe in assuming that 80 percent of them are against the Erickson bill.<sup>89</sup>

The report continues:

The bill as drawn is, in my opinion, subject to a successful attack in many of the provisions. It cannot be filed, however, with the Secretary of State as an initiative measure until after January 1, 1924. When once filed, its provisions cannot be changed. We are very much in hopes that no changes in the bill will be made prior to its being filed, but we believe that if we should at this time start pointing out its worst features that they would amend the bill and that our work would simply result in the filing of a bill which would be more difficult to defeat.<sup>90</sup>

The Puget Sound Power & Light Co. was prepared to do its part in addition to the committee's efforts in opposing the Erickson bill. An excerpt from a memorandum of managers' and staff officers' meeting of the company, October 16, 1923, reads:

Classes on the company's business totalling 250 employees are being held in the various districts, and out of these he expects to get 40 who will talk to 50,000 people in 1924. The talks will be from 30 to 40 minutes and the speakers will answer questions for perhaps an hour, principally before farmers' grange meetings.<sup>91</sup>

<sup>86</sup> Pt. 70, pp. 1003-1004.

<sup>87</sup> Pt. 13, p. 39.

<sup>88</sup> Pt. 70, pp. 1000-1001.

<sup>89</sup> Pt. 70, p. 1001.

<sup>90</sup> Pt. 70, p. 1002.

<sup>91</sup> Pt. 70, p. 1006.

When it was decided to send a representative to Ontario to get arguments against State ownership and operation of electric utilities, the Portland Oregonian gave the Washington committee its cooperation. Mr. Norwood W. Brockett, of the Puget Sound Power & Light Co. and also secretary of the Washington committee, wrote Mr. Leonard on October 24, 1923:

The Portland Oregonian finally decided that it would disrupt their Washington news service if Mr. Wood went to Ontario at this time. They readily agreed however, to have Mr. Cowen go in his place and appeared to have every confidence in him. Mr. Cowen, as you will remember, is the man who was suggested by the Spokesman's Review.<sup>92</sup>

The Washington committee printed 100,000 copies of the Erickson bill together with an analysis of its provisions which they mailed out to registered voters within the State.<sup>93</sup> Mr. Brockett testified that the copies cost approximately a cent apiece. As a result of the efforts of the power companies the bill was abandoned by its sponsors.

Then came the Bone bill, giving to cities owning and operating producing plants the right to sell electric current outside their corporate limits, and to condemn properties of the privately owned light and power companies. It appeared on a referendum ballot to be submitted to the voters at the general election in November 1924. Mr. Brockett admitted on the witness stand that the power companies advertised extensively to prevent signatures being obtained to the petitions necessary in order that the measure might be included on the ballot.<sup>94</sup>

Under the committee's direction, there were organized in various communities throughout the State citizens' committees composed of citizens opposed to the legislation. They advertised extensively in the newspapers against the measure, but while the advertisements appeared over their signatures, the bills were paid by the utility bureau. Their principal expense consisted of letters gotten up and signed by members of the citizens' committee in the various communities and sent to the people living in their vicinity. Mr. Brockett estimated that the letters cost approximately \$15,000.<sup>95</sup> In addition to the letters, in the city of Seattle, pamphlets were circulated by the citizens' committees, and these also were paid for by the power companies.

Mr. Brockett testified further that probably 75 percent of the advertising against the Bone bill was placed through Strang & Prosser,<sup>96</sup> and that company filed with the Commission statements of such advertising paid by the utilities, amounting to more than \$16,300.<sup>97</sup> Strang & Prosser also sent out cartoons against the measure as a gratis service which were reproduced by the newspapers. However, most of the cartoons were sent to newspapers direct from the committee and, as in the case of the ads and letters, carried no indications that they were put out by the power companies.<sup>98</sup>

The Puget Sound Co. approached the problem of beating the Bone bill from other angles. On May 6, 1924, President Leonard wrote Mr. F. S. Pratt of the Boston office of Stone & Webster:

I went to Spokane, and with Huntington, left Spokane at 8 o'clock, Tuesday, for Pullman to discuss with the president and a few of the faculty of Pullman

<sup>98</sup> Pt. 13, p. 43.

College the question of organizing in the State of Washington a committee on the relation of electricity to agriculture.<sup>9</sup>

Another quotation from the same letter throws light on the occasion for organizing such a committee:

I believe the sentiment in eastern Washington \* \* \* is quite general against the Bone and Erickson measures. However, the farmers are not in very good shape financially, especially in the wheat district, and they may possibly lean somewhat more toward radicalism between now and November than at present.

The president of Pullman College favored the idea of setting up such a committee but thought it should not be appointed until after the November election.<sup>1</sup>

On October 11, 1924, Mr. D. C. Barnes, district manager in Boston for the Puget Sound Power & Light Co., telegraphed Mr. Leonard:

Aylesworth talked with Mr. Pratt and Mr. Bradlee by telephone this morning and feels that it would be desirable to circulate broadly Hoover's speech, which is available in the pamphlet form from National Electric Light Association or could be printed locally in Seattle, if desired.<sup>2</sup>

The Washington State situations had national repercussions, as indicated in a confidential letter dated February 11, 1924, from Mr. Pratt to Mr. Leonard:

Sometime ago you wrote me a letter speaking of how the backers of the Bone bill and the Reed bill were representatives of the radical and more conservative wings of the Republican Party in the State of Washington and that the fight over these two bills was likely to split the party. You suggested that the president or his organization ought to know about this \* \* \*.

I told him [Mr. Frank Stearns] that it probably meant the expenditure of greater money and effort in the State of Washington in order to elect Coolidge \* \* \*.

Mr. Stearns asked me to write him a memorandum, which need not be signed, outlining in general this situation \* \* \*. I will get you to do this for me.<sup>3</sup>

In 1930 the people of Washington voted on the district power bill, initiative measure no. 1, known as the "Grange bill", which permitted districts to be created for engaging in power development and distribution. According to their schedule E, the Puget Sound Power & Light Co. contributed approximately \$124,000 in that year to the Washington Committee on Public Utility Information in the interest of defeating the measure.<sup>4</sup>

Communications between the Boston and Puget Sound offices of Stone & Webster indicate an ingenious device for covering the State through the aid of outside agencies, viz., the insurance companies. On September 20, 1930, Mr. D. C. Barnes wired Mr. Leonard in Seattle:

Paul Clapp has asked that representative of national fire-insurance companies have someone call on you to offer assistance in initiative campaign.

To which Mr. Leonard responded, September 27:

Fire-insurance companies today notified their special agents, numbering 30, who travel continuously over State interviewing local agents, to stress importance of defeat Grange bill. Automobile club today breaking all precedents authorized turning over list 12,000 members to us to send copy of proposed bill in automobile club envelopes.<sup>5</sup>

<sup>5</sup> Pt. 70, p. 1011.

The Western Public Service Co. spent a high in 1927 of \$25,900 for advertising, and a low in 1925 of \$5,400; for newspaper advertising, \$14,000 in 1929 and \$2,000 in 1925. Engineers Public Service Co., the top company for most of the operating subsidiaries, spent \$19,300 for all advertising in 1931, and \$600 in 1926; for advertising in newspapers in 1931, \$19,000, and in 1926, \$400.

Motion picture advertising cost Stone & Webster, Inc., \$10,500 during the period covered by schedules E; Stone & Webster Engineering Corporation spent \$2,300 for that purpose; Virginia Electric & Power Co., \$9,000; Western Public Service Co., \$1,000; Puget Sound Power & Light Co., \$8,400; and various other subsidiaries, smaller amounts. Radio advertising cost the Sierra Pacific Power Co., \$2,300; the Savannah Electric & Power Co., \$2,200; the Gulf States Utilities Co., \$5,300; and the Western Public Service Co., \$4,300.

*Contributions and dues to trade associations.*—The Puget Sound Power & Light Co. reports by far the highest sum contributed in 1 year to local trade associations throughout the entire system, \$154,600 in 1930. That was the year in which the Washington State private utility interests united to fight the "District power bill." In 1924, also, the Puget Sound Co. contributed a very large amount mainly in support of the fight against the "Bone bill", \$125,984. Its lowest total of expenditures to local associations was \$10,500 in 1919. The same company also contributed the highest amount to national associations in a single year, \$14,000 in 1930, with less than \$800 contributed in 1918. Its "other contributions" totaled something under \$20,000 in 1931, and something over \$2,300 in 1917.

Stone & Webster, Inc.'s total for "all other contributions" came to almost \$27,000 in 1925, and in 1933 had dropped to \$1,650. It contributed \$3,500 to national associations in 1931, and only \$750 the next year; \$1,650 to local bodies in 1928, and \$420 in 1933.

Virginia Electric & Power Co. made similar contributions in sizeable amounts: To local associations, \$15,000 in 1929 and \$4,200 in 1925; to national bodies, \$13,600 in 1929, and \$4,200 in 1924, and to "all others", \$20,000 in 1933 and \$2,000 in 1924.

The Gulf States Utilities Co. contributions are comparable in amount: \$12,000 to local bodies in 1931 and \$500 in 1925; \$5,600 to national associations in 1931 and \$1,300 in 1926; \$8,300 for all other purposes in 1928 and \$230 in 1925.

The Western Public Service Co. contributions "for all other purposes" jumped to a high of \$6,600 in 1933, and were only \$31 in 1925; its local contributions amounted to \$4,000 in 1932 and \$18 in 1925; its national, \$2,200 in 1927, and \$50 in 1925.

Stone & Webster Engineering Corporation contributed \$9,200 for "other purposes" in 1931; the Northern Texas Traction Co., \$7,800 in 1927. The amounts noted comprise the significant figures for the system.

In contributions to the Joint Committee of National Utility Associations, Virginia Electric & Power Co. ranks first, with \$6,800 in 1930 and \$3,000 in 1927, a total of \$9,800. Next comes the Puget Sound Co. with a total of \$8,400 for 3 years; then the Gulf States Utilities Co. with a total of \$2,700 for a 3-year period. The Savannah Electric & Power Co. contributed \$2,000 in 3 years, and the El

Paso Electric Co. \$1,300 in 2 years. Joint Committee contributions for other companies in the system come to much smaller totals.

*Attorney payments.*—The Stone & Webster top company's payments to attorneys ran to sizable figures in 1929, \$328,800, while in 1920 it spent only \$500. Stone & Webster & Blodget, the finance company of the set-up, in 1929 spent \$101,600 in legal fees as against \$7,400 in 1932. Virginia Electric & Power Co. spent a high of \$95,000 in 1925 and a low of \$43,600 in the preceding year. Puget Sound Power & Light Co. spent \$87,500 in 1931 as against \$33,500 in 1917; Western Public Service Co. \$74,000 in 1930, from a low of \$645 in 1925; Savannah Georgia Power Co. \$50,000 in 1926 and \$7,100 in 1927; and other companies in the system smaller amounts.

*Contributions to educators and schools.*—Stone & Webster, Inc., contributed \$30,000 to the Massachusetts Institute of Technology over the 3-year period, 1923 to 1926; \$2,000 to Harvard University, 1923 to 1925; \$3,500 to Drexel Institute, 1924 to 1926; \$2,000 to the college of William and Mary in 1926; and \$500 to Simmons College in 1923. A contribution of \$5,000 was made to Whitman College at Walla Walla, Wash., in 1925, concerning which the assistant to the chairman wrote Mr. Pratt of the same company on December 15 of that year:

With respect to the Whitman College contribution Mr. Stone asked me to say that he was anxious to have this appear not as a joint facilities charge, but as an expense of the operating division, inasmuch as he looked upon this gift as an expense incurred in furthering the public relations of our interest in the north-west territory, and therefore a proper deduction against such earnings as the management fee of the Puget Sound Co.<sup>67</sup>

Stone & Webster & Blodget, Inc., kept the dean of the College of Business Administration, College of the City of New York, Dr. George W. Edwards, on their pay roll over the period 1927 to 1933, inclusive, during which period Dr. Edwards was paid a total of \$37,390. The Stone & Webster Engineering Corporation made contributions to the Massachusetts Institute of Technology from 1929 to 1933, inclusive, totaling \$25,000. Virginia Electric & Power Co. gave the Medical College of Virginia \$2,125 from 1926 to 1930, the University of Richmond \$2,500 from 1927 to 1930, and the State Teachers College \$550 from 1927 to 1929. Puget Sound Power & Light Co. gave the University of Washington \$3,820 between 1923 and 1932; the School of Utilitarian Economics \$850 from 1923 to 1927; Auburn Academy \$450 in 1931 and 1932; and various smaller schools a total of \$840 over the 10 years 1923 to 1933. Other companies in the system report small contributions to schools.

*Newspaper stock ownership or loans.*—Stone & Webster & Blodget, Inc., reported ownership of 3,960 shares of stock in the Boston-Herald Traveler in 1929 with a value of \$149,057.50; 2,350 shares in 1930, value, \$84,913.64; 1,632 shares in 1931 with a written-down value of \$1,380.50, after which no such stock ownership was reported. Virginia Electric & Power Co. in 1933 advanced \$500 to the Suffolk News Co. "with the understanding that it was to cover prepaid advertising."

<sup>67</sup> Pt. 70, p. 1014.

The Western Public Service Co. reported ownership of 5 shares of voting stock in the Alvin Sun, Alvin, Tex., valued at \$500 in 1925. In 1929 the stock was sold to Gulf States Utilities Co. which disposed of it in the next year. Puget Sound Power & Light Co. made advertising payments in advance totaling over \$10,000, to various Washington newspapers in the years 1928 to 1933, inclusive, the company reporting "the monthly bills for advertising being applied to the prepayment as advertising space was used." Most of the accounts were closed at the date of reporting.

On November 15, 1928, the Puget Sound Co. purchased 25 shares of stock valued at \$2,500 from the Seattle Broadcasting Co. In a letter of August 22, 1933, Mr. McLaughlin, president of the power company, advised this commission:

The subscription was made with the understanding that the company, if it so desired, could appropriate the amount paid for the stock as an advertising fund and that the Seattle Broadcasting Co. would allow it 33¼ percent discount on all advertising until the full amount paid for the stock was used.<sup>68</sup>

Let us talk it over

## Purpose of this Magazine

**T**HE purpose of this magazine is to present the facts about public utilities, both privately and governmentally owned; to inform its readers about these important industries in which all citizens are vitally interested.

Dedicated to the public service, to the highest good of the taxpayer, this magazine is opposed to government ownership and operation of public utilities because it believes paternalism is the antithesis of industrial freedom and independence.

In steam and electric railways, in telegraphy and telephony, in electric and gas lighting, heating and power, the United States leads the world as the result of the genius, thrift and economy of individual initiative and private enterprise.

Political conditions in this country, as experience proves, defeat economic and the most efficient operation of public utilities by city, state or federal government. Experience also proves that government operation of public utilities burdens the taxpayers with great economic waste.

Experience convinces this magazine that the public can secure the best possible service at the lowest possible cost by leaving the ownership and operation of steam and electric railways, electric light and power, gas, water and telephone properties to individuals of technical knowledge and practical training under such governmental regulation as will best protect the interests both of the public and the companies.

The sinking of the ships surrendered by Germany would be altruism carried to the point of self-defeat.

“Thank God, the government at Washington still lives,” seems to lose its fervor with the president, the secretary of state and George Creel in far-off France.

Mayor Hylan appointed W. R. Hearst chairman of the New York committee to welcome our homecoming soldiers. The precedent having been established by our largest city, it is now in order to appoint Victor Berger as the head of the Milwaukee reception committee. While it is yet time, we want to suggest to Bill and Victor that the proper dress for occasions of this kind may include a plug hat and a frock coat, but certainly not a red cravat.

## Protecting Public Utilities

To the everlasting credit of the *thousands* of public utility operators of this country it may be said that *only two or three* of them have joined the socialistic movement for municipal ownership. During the past three or four years and at this time, with operating expenses sky-high and with capital charges almost prohibitive, the operation of a public utility has been nothing less than a big job for a big man. And the biggest part of the job calling for the biggest part of the man has been to keep the utility out of the bankruptcy courts. The selling prices of utilities cannot be raised at the will of the operators to meet advanced costs—and it has required the utmost in intelligent, patient, yet vigorous, effort to secure from some reluctant state commissions and city councils and some slow-going courts the legal authority to fit rates to costs. It should be said here that some state commissions and some city councils have granted just relief promptly, but even with these the burden of proof was carried by the utility operators.

The public should know, and it does in most cases, that no increase in rates has been sought for the purpose of adding to the profits of the owners of the property. In every case the effort has been to secure only such an increase as would cover the advanced operating expenses and fixed charges, including only such return on investment as was necessary to maintain the property in efficient operation and development.

In these trying times for the utility operators there have been and are three courses for them to pursue.

First—To keep the utilities in experienced and competent hands and thus assure the best possible service to the public; to make an honest and energetic effort for such fair and reasonable compensation as will protect the service for the public and the property for its owners.

Second—To turn the utilities over to the bankruptcy courts and force the public to pay such rates for the service as the courts may find it necessary to order.

Third—To unload the utilities, with all their responsibilities, on the municipalities and let the taxpayers pay the losses.

Of these three courses, over 99 per cent of the utility operators have chosen the first, which is the most difficult, and in this they have shown an unselfish devotion to the public interest. The road to bankruptcy or to municipal ownership is much

-and be fair about it.

easier, but to take it means deterioration of the service to the public and either higher rates or the saddling of heavy losses upon the taxpayers. The two or three utility operators who have sought to unload their properties on the municipalities have had but one desire—and that was to save their investors' money.

Again we say it is to the everlasting credit of the utility operators of this country that over 99 per cent of them have stood and are standing firmly against the waste, extravagance and inefficiency of bankrupt and municipally owned and operated public utilities.

### *A Mighty Reform Impends*

For twelve years this magazine has been pointing to the Sanitary District of Chicago as the greatest sink-hole for taxes existent in this country. The Sanitary District was created many years ago for the primary purpose of building and maintaining a drainage canal to divert sewage from Lake Michigan and thus remove the contamination of Chicago's water supply. The legislation necessary for its creation was put through with the understanding at the time that the canal could be built for \$20,000,000 and the cost of its maintenance and administration would be covered by the revenue from the sale of its water power and the lease of lands abutting the canal.

Like all other municipal undertakings the cost of the canal exceeded the preliminary estimate—in this case the excess being a trifle of about \$80,000,000. Instead of making the expenses of maintenance and administration out of the sale of water power and land leases, as promised at the beginning, the drainage district trustees are taking it out of the taxpayers at the rate of over a million dollars a year, the hydro-electric power generated by the district being sold for less money than it costs to operate the generating and distributing plant and the lands owned by the district being allowed mostly to remain in idle waste.

This gigantic sink-hole for the taxpayers' money has been built up and elaborated by the usual political methods of patronage. It has been considered the first political duty of the trustees, of whom there are nine elected by popular vote, to use the tax resources of the district for the support of a large army of what Col. George Harvey aptly terms "the salaried unemployed."

Last November three republicans were elected as members of the drainage district board over three democratic candidates for re-election. Before this

election there were five republican and four democratic members; now there are eight republicans and only one democrat on the board. During the recent campaign the five republican members of the board put out a signed statement, which said, in part:

Since 1912 the sanitary district of Chicago has been under the control of greedy and incompetent democratic spoilsmen.

Under the reign of the spoilsmen, of which the three present democratic candidates were ringleaders, jobs were peddled at wholesale as political plums to unprincipled and incompetent henchmen at enormous cost to the taxpayers. Pay rolls were topheavy with aids of ward bosses and kin of the trustees. Political contractors waxed rich at the expense of the people. Rapacity was rampant and the district was easy plucking.

Against candidates of such malodorous repute the republicans have nominated for trustees three men of unusually clean records for high ability and unimpeachable integrity.

This statement comes from the five members composing the majority of the board since 1915 and the question naturally arises: Why have they not, during the past three years, wiped out the evils they complain of? Maybe their majority of only one was not sufficient to carry out such a great reform. But now that the republicans have a majority of eight to one we may look for speedy and drastic reform.

We confidently expect to see hundreds of democratic names dropped from the pay rolls—and the names of republicans inserted therefor.

What "suckers" we taxpayers are!

### *Administering the Anaesthetic*

Governmental operation of the railroads became necessary as a war measure because political interference with the railroads for a great many years had prevented men of experience and ability from bringing and keeping our great carrier systems up to that standard of efficiency required to meet the unusual transportation demands of a nation at war. The truth of this assertion is admitted by the government in its action of doing with the railroads nearly everything which it had previously prohibited by law or denied by regulatory authority. If the railroad companies had not been subjected for a great many years to the harassing "political" control of the federal and all the state governments and if they had been permitted to charge for transportation an amount sufficient to provide increased wages for their employes and the maintenance of a credit for necessary extensions and improvements, no doubt they would have been in condition to render the maximum service required during the past two years.

In the face of the undeniable fact that years of governmental regulation impaired, rather than improved, the efficiency of the railroads, comes Di-

rector General McAdoo with the amazing proposition to extend the period of governmental operation for five years in order to give it a fair trial. Governmental regulation, on trial for decades, has failed, and it has failed not on account of any misunderstanding of railway economics on the part of the regulators, *but on account of political interference.*

Knowing that political interference is the sole cause of the failure of governmental regulation, the public is not ready to accept the hazards of government *ownership and operation* of railroads at this time, nor will it be ready in the fall of 1920. Nor will astute politicians be ready to go before the people in the fall of 1920 with a declaration favoring outright governmental *ownership* of railroads. No, indeed. It will be much safer for them to appeal for "a fair trial"—say five years—of governmental *operation*. We all know the American people are kindly disposed toward "fair trials."

### *Ignorance Is a Dangerous Leader*

Where private enterprise actually fails to render proper public utility service it is the duty of the municipal government to consider municipal ownership, and in doing so, it should investigate and determine these questions:

1. Is the failure of private enterprise to render satisfactory service the fault of the company rendering the service?

2. Assuming that the failure is the fault of the company, is such failure due to a willful and avaricious purpose to disregard public requirements? or.

3. Is such failure due to the conditions imposed by the franchise—or regulating conditions under which it is compelled to operate being such that it cannot—financially or otherwise—render satisfactory service?

4. If it appears that the franchise conditions are too stringent should the city undertake municipal ownership under similar rates and conditions; or, should the city prescribe rates and conditions of operation that will make it possible for the private concern to perform good service.

5. Assuming that the city cannot succeed without increasing rates and making for itself more favorable conditions—such as long term bonds and higher service rates—is it wise for the city to undertake municipal ownership; or, would it not be wiser to allow private ownership the same terms and conditions which the city would have to put into effect if it undertook municipal ownership?

The mere fact that private enterprise has failed to supply satisfactory service does not indicate that municipal ownership would certainly meet public requirements. In fact, municipal service might be less satisfactory than private ownership. Municipal governments are not always successful in perform-

ing even their imperative duties—health, police, street and alley cleaning. In fact, foreign students of American governmental conditions assert that the great failure in civic affairs in America is the incompetency and corruption of municipal governments.

Too often, men who are not well informed—who do not know the principles that govern—men who are addicts of passion and prejudice—men who seek for profit for themselves—propose and promise impossible benefits from municipal ownership. Ignorance is a dangerous leader in civic affairs.

### *Stop, Look, Listen*

A good many taxpayers in Chicago do not look with disfavor upon municipal ownership propaganda. They drifted into this mental attitude at a time when they were made to believe that if the city owned the street railways fare-rates would be reduced, lines extended, and revenue turned into the city treasury that would operate to reduce the burdens of taxation on real and personal property. It is unfortunate that real estate agents and property owners do not take cognizance of the fact that at this time there is strenuous agitation in favor of buying the traction lines and paying for them with bonds based upon the general credit of the city of Chicago. This would mean that unless the traction properties took care of themselves and earned enough to pay interest that taxes would have to be levied to make up the deficiency.

At the present time the municipal government of Chicago is running behind nearly five million dollars a year. To some extent this is due to diminishing receipts from saloon licenses. Before the November election there were twenty-eight dry states. November 5, four states voted for prohibition—making thirty-two states which, presumably, will vote in favor of the dry amendment to the Federal constitution. In addition, five states that were classed as "wet" have already adopted the national dry amendment. This makes thirty-seven states which, in all reason, may be counted upon to support the amendment. Thirty-six states are all that are required to adopt the amendment. In addition to the foregoing states may be counted, at least as probable, Illinois and New York. All of this is highly germane to the taxation system in Chicago. It means that, in all probability, within a year or so, Chicago will be deprived of more than one-fourth of its total revenues for municipal purposes. This will have to be made up, in whole or in part, from increased taxes upon real and personal property.

At the present time Chicago is in debt for money expended for its ordinary operating expenses about ten million dollars and most of this indebtedness is in the form of judgment notes in the hands of bankers, which can be taken into court when due, and the

judgment obtained, and a special tax levy ordered in addition to the regular legal tax rate. When this is done—and it is almost certain to be done—the tax rate will be increased about fifty per cent. Notwithstanding these financial embarrassments confronting Chicago, municipal ownership propagandists, as already explained, are persistent and insistent that the legislature, at its coming session, enact legislation that will enable the issuance of bonds to pay for the traction properties, plunging the city into a new maelstrom of financial complications.

---

### *Why Deceive the Public*

In an interview published in the Chicago Evening Post Donald R. Richberg, special counsel in gas litigation, made the following statement:

“At the outset the commissions were organized to protect the public from the utility corporations. Now, however, the pendulum is swinging the other way, and we find the utility corporations appealing to the commissions for permission to add to the burdens of the public on the plea of rising cost of labor and material due to the war.”

This is from a lawyer! It shows how people are being deceived by the attorney hired by the city council and paid for out of taxpayers' money. The fact is the public utility commissions were created to establish justice; and, not to save anybody from anybody else. The commissions came in as the best device that could be provided after city councils had failed to properly regulate rates and conditions of public utility service. As a matter of fact, at the time when the public utility commissions were organized, all of the courts—state and national—were cluttered with cases arising out of the attempts of city councils to make political capital out of rate regulation. The commissions came in and, taking the work away from the city councils, proceeded to uniformize regulation of rates and service by establishing similar rules for all.

Mr. Richberg's statement that the commissions were organized to protect the public from the utility corporations is true, but it is not *all* the truth, for the commissions were established, also, to protect the utility corporations' investors from political transient adventurers who try to perpetuate themselves by deceiving the people—just as Mr. Richberg seeks to do.

The most efficient of the state public utility commissions—those doing most *for the benefit of the public*—have declared in many recent cases that a utility rate may be unjust and unreasonable because it is too low on the very same principle that a rate may be unjust and unreasonable because it is too high.

---

One of the things of small consequence which we cannot understand is how Professor Edward W.

Bemis has so far escaped being drafted into the Wilson administration. Perhaps they are reserving the professor to take the management of the telephone and telegraph systems, a job for which he is particularly unfitted.

---

A copy of this magazine addressed, in printing, to Sioux Falls, S. Dak., was returned by the post-office with the notation “No such office in state named.” If we are to believe the postoffice department the metropolis of South Dakota is without postal service. Somehow or other, we can't believe it.

---

According to the political writer on the *Daily Journal* the principal result of the recent local election in Chicago was the shifting of several thousand pay-roll positions from “deserving democrats” to “deserving republicans.” Come on, you taxpayers—pay, pay, pay.

---

That sure was a pat caption Col. Harvey put under the pictures of General Leonard Wood and Col. Theodore Roosevelt in a recent issue of the *War Weekly*. It read: “He kept *us* out of war.”

---

The postoffice department, having almost completed the failure, financially and otherwise, of the postal service, is now ready to lend its talents in that direction to the telephone and telegraph service.

---

Taxpayers, beware of the public utility operator who advocates municipal ownership—he is simply tired of the job of discharging his obligations to the public.

---

### **Hughes on Public Ownership**

In commenting on a recent speech by Charles E. Hughes at Columbia University, the *North American Review's War Weekly* says:

“Regarding the respective merits of private and Government ownership and operation of public utilities, Mr. Hughes but puts in words the result of all but universal experience when he says that such Government ownership and operation mean inefficiency for one thing, and for another, the deadly danger to a Republic of vast bodies of organized political office-holders and job-holders. But Government Ownership is not the question which now concerns the country. It is not up for decision by the American people. What is before the people, and before them in ominously aggressive form, is whether the country shall be dragooned and tricked into a policy of Government Ownership without having an opportunity to say whether it wants it or not. It is that dragooning and chicanery process to which we are now being subjected. It is for the promotion of that Government Ownership policy in the interests of scheming politicians and Socialistic faddists that that temporary authority, granted under the impulse of generous patriotism, is now being exploited to ends never contemplated when it was granted.”

# Municipal Electric Lighting in Massachusetts

## Dr. Lincoln of Harvard University, in a New Book, Concludes There Is No Reason Why a Municipality Should Invest in an Electric Plant

"The Results of Municipal Electric Lighting in Massachusetts," by Edmond Earle Lincoln, M. A. (Oxon.) Ph. D. 484 pp. Published by Houghton, Mifflin Company. Sold by Utilities Publication Co., Chicago; price \$3.00.

The author of this book, Edmond Earle Lincoln, who is an instructor in economics at Harvard University, approaches his subject with a rare appreciation of its importance and a will to make his work informative. Therefore he makes no guesses, but enters upon a laborious investigation which brings out all of the facts essential to show "The results of municipal electric lighting in Massachusetts." It is by gathering these facts and presenting them in well ordered classifications that he brings about an inevitable conclusion:

**"Under such effective regulation of the electric light and power business as is found in Massachusetts at present, there is no reason whatever why a municipality should invest in an electric plant. \* \* \* No real economies are likely to be thereby effected and the possibility of loss is great."**

Before this conclusion is stated there are chapters devoted to a survey and criticism of the literature on the subject of municipal electric lighting in the United States, the Massachusetts laws and the work of the Board of Gas and Electric Light Commissioners of that state, physical statistics, analyses and comparisons regarding municipal and private electric plants in Massachusetts, financial statistics of generating and purchasing plants, the local survey and the local background. There is also a very interesting chapter on miscellaneous considerations, including labor and wages, labor legislation, valuation of estates and tax rates and the financial condition of municipalities owning electric plants.

"The object of the present study," says the author, "is

to determine as nearly as may be the results of municipal electric lighting in Massachusetts, viewed not merely from one or two angles, but from all angles. \* \* \* Though balance sheets, operating accounts and rates have been usually zealously invoked in researches on this subject, they *alone* can indicate but a limited portion of the real issues involved for they are *relative* rather than *fundamental* considerations. They are the results of other factors not so easily discoverable, but in many cases far more significant."

So Dr. Lincoln goes thoroughly into the "other factors," even into such matters as the proximity of the generating plants to navigable waterways and to sources of fuel supply, whether equipment is all owned or partially leased, the topography of the district served, the traits and traditions of the inhabitants, the character of the local government and labor legislation and conditions. In important details he goes much farther than any other writer on the subject has ever attempted.

The research covers 18 municipal generating plants, 21 municipal purchasing plants, 17 company generating plants and 16 company purchasing plants: a comparison of municipal with company plants being necessary to show the net results of municipal ownership and operation. Dr. Lincoln explains that in selecting the private plants he found it necessary to choose "the smallest and in many cases the more poorly managed" because only such could be fairly compared with the municipal plants, all of which, excepting Holyoke, are small. Therefore "the results of municipal electric lighting in Massachusetts," in this work, are not drawn from any comparison with such efficient private operation as prevails in Boston, Lowell, Worcester, Springfield, New Bedford and other large cities of the Bay State. As the author states, "*Existing circumstances have made it necessary to compare public business as*

### Profits That Failed to Materialize

From "Results of Municipal Lighting in Massachusetts."  
By Edmond E. Lincoln.

In 1897, a special investigating committee, appointed by the city of Holyoke to look into the subject of municipal electric lighting, reported that, under public ownership, there would result a saving of more than 25 percent in the rates, and that after five years the city would own its plant, debt free. Holyoke has done well, and the rates are low; but the outstanding liabilities, current and funded, together with the appropriations from the tax levy for debt payments, at present amount to about \$1,200,000, though the plant still confines its operations to its own narrow territory, and probably a large investment in a new station will soon be needed.

Sixteen years later, another special committee, having made a careful investigation with the assistance of a trained engineer, reported to the selectmen of South Hadley that, if the town would take over the plant of the South Hadley Falls Electric Company, there would, in one year, be effected a saving to the municipality of \$4,250, and the street lights, which had been costing \$5,800, could thus be secured for \$1,550. The plant was bought, and under the first year of public management, the actual cost of the street lights, allowing for taxes lost, was between \$6,500 and \$7,000, or one-sixth higher than when the service was supplied by private enterprise.

**Municipal plants should be required, by law if necessary, to be conducted exactly as if they were commercial enterprises. In no other way can the public be made to understand clearly what they are gaining or losing as a result of municipal ownership.**

---

*we find it with private business in many cases at its worst.* Consequently, if municipal ownership shall appear to hold its own, the reader can rest assured that it has been given the benefit of any doubt which might arise, and if the results are found to be unfavorable, the case against municipalization as a general policy will be thereby the stronger."

#### **Municipal Plants Not Progressive**

In his concluding chapter, Dr. Lincoln says:

"In the first place, it appears that the conditions under which the municipal generating plants are operating, both natural and artificial, are far more favorable to success than is the case in the corresponding group of companies. They serve a more densely populated territory, in which relatively more manufacturing is done than in the districts supplied by the other group. Nor does their history indicate that they have in general been instrumental in promoting the higher industrial development here found.

"When the pragmatic test is applied, it becomes evident that, from the physical, financial and developmental point of view, when due allowances have been made, this group of public plants (Holyoke excepted) have, in the more important respects, usually lagged somewhat behind the private plants studied. They seem not to be serving their more favorable territory so adequately as are the latter, nor have they made any attempt to develop new territory. They have probably tended to be too conservative in their extension policy, and, with a very few exceptions, have taken little thought regarding the future development of business, in so far as their station equipment is concerned. Their aim seems to have been to follow rather than to lead the growth of industry and the new demands for service. This, however, may be a far more correct policy for public industry to pursue than one of reckless expansion which sometimes characterizes the conduct of private enterprise.

"In a financial way they have recently, for the most part, been doing reasonably well—a condition of affairs due to over-conservation rather than to superior efficiency. The operating accounts and balance sheets make a much better showing for municipal ownership than do the physical features of the business, which are not so easily discovered, but which, when properly studied, furnish us with far more accurate tests than can be applied by means of a superficial survey of rates and balance sheets. Though the earlier deficits are generally being made good, the quality of the service rendered has, in many cases, appeared to suffer as a result.

"Upon the whole, while this group of plants have by no means been altogether failures, it cannot be truthfully asserted that, when all elements in the problem are considered, they have been any conspicuous success. With one or two exceptions they seem simply to be performing for themselves, with little or no return except the satisfaction derived from their exertions, those services which might have been rendered equally well, if not better, by private enterprise.

"Fortunately, these municipal plants have been in the main comparatively free from most of the sinister influences which frequently beset public business of this kind. Yet barring Holyoke, careful investigation has revealed the fact that the larger the city having its own plant, the greater is the danger from "politics" and "graft." In at least one unusually important case the conditions have been disgusting beyond relief, while in two other large plants, in the past at

any rate, the situation has been, to say the least, highly unpleasant.

"Nor is the outlook a propitious one. Not a municipal generating plant has been installed since 1904, though 18 purchasing plants have begun operation since 1907. There is a marked tendency in both groups in favor of purchasing current from large private concerns and doing only a distributing business. Already three of the companies studied for the year 1914-15 have ceased the generation of current, but within the same time seven municipal plants have, for the present, and probably for all time, stopped the production of current. And, in spite of the great loss which will result to the community if a public plant be 'scrapped,' and notwithstanding the greatly increased cost of street lighting which must be borne, it would probably be far more economical in many cases to follow this policy than to overhaul the old plants and equip them for future needs.

"In some respects a marked contrast is afforded by the municipal plants which operate only a distributing system. For them the conditions seem to be in large measure reversed. They have, in many instances, commenced operation in districts which could offer small inducement to private concerns, and it might appear that they would accordingly have little possibility of success. Yet, as a result of the united public sentiment back of them, and by reason of the careful supervision of the board in countless details, they have made an unusually good showing as contrasted with the purchasing companies.

"As would naturally be the case by reason of their more recent installation, this group of public plants is burdened with a far lower investment than are the private plants. As they have never generated any current, they have had no opportunity to accumulate a larger proportion of 'dead assets.' In fact, the relations existing between the two in this regard are such that it seems almost futile to attempt comparisons. But, measured by the tests which it is customary to apply, they appear to have been making a better record, under less favorable geographical and business conditions, than have the other plants. To be sure, they have not really made anything in a financial way—they have, upon the whole, simply kept even with the game. They are still young, and in the years to come, when repairs and renewals become urgent, the operating expenses can be expected to mount rapidly. A good share of their success also is due to the fact that they are dependent upon private enterprise for that portion of the business which is most difficult to be handled by public officials and employees. All credit is due them, however, inasmuch as they have been rendering, at a comparatively low cost, service which would in many cases have been difficult if not impossible to secure from private concerns.

"Finally, the writer believes that, under such effective regulation of the electric light and power business as is found in Massachusetts at present, there is no reason whatever why a municipality should invest in an electric plant, certainly not in a generating plant. No real economies are likely to be thereby effected, and the possibility of loss is great. There may be instances in which public ownership of merely a distributing system is highly desirable. Yet, this form of ownership also, from an economic point of view is justified only when private business cannot be induced to enter the field except at prohibitive rates. The day has long passed when there is no alternative between unrestricted private industry on the one hand, and public ownership on

**Whether under private ownership or under public control, there probably never has been and never will be a time when the best results can be attained if those methods which make for efficiency, those stimuli to individual initiative which are the basis of industrial and social development, are cast into the discard. From an economic point of view, the more nearly public business conforms to the well known canons of the best private enterprise, the more successful it is bound to be.**

---

the other. There now seems to be no valid reason for using the taxpayers' money for the sake of doing what can be as well done without adding to the ever-increasing municipal debt. The burden of proof clearly rests upon those who would, under the circumstances, advocate a further municipalization of the industry in this state."

\* \* \* \* \*

#### **Good Business Methods Urged**

"Finally, and far more important from an economic point of view, the municipal plants should be required, by law if necessary, to be conducted exactly as if they were commercial enterprises. In no other way can the public be made to understand clearly what they are gaining or losing as a result of municipal ownership. Only by subjecting these publicly owned plants to the same tests that are applied to private business can we reach any definite conclusions as to their real efficiency.

"This means that they should sell street lighting service to their municipalities at what appears to be a fair price, and that they should in turn pay taxes at the usual rate. They should either own all of their property, or, if municipal real estate be utilized, they should pay an equitable rental therefor. Further, the services rendered by any public official should be estimated and charged at the true value of that service. Probably not a single appropriation should be made from the tax levy for any purpose whatever in connection with a municipalized commercial enterprise, after it has become 'seasoned.' Such an industry should be given every opportunity that is afforded to private business, and it would, in addition, have the advantage of securing its capital at a lower than usual rate of interest. But here the public financial responsibility should end.

"If publicly owned commercial business were carried on as here suggested, the writer will venture to predict that, while many municipalities would be dissuaded from plunging into ills that they know not of, those which have already acquired an industry or which, under the new conditions, do make the experiment, will be encouraged to bring their business to the highest degree of efficiency. Whatever may be our conclusions regarding the desirability of public ownership for other than financial reasons, there seems to the writer to be no disputing the fact that if the attempt is made, it should be done in the most effective manner possible. Whether under private ownership or under public control, there probably never has been and never will be a time when the best results can be attained if those methods which make for efficiency, those stimuli to individual initiative which are the basis of industrial and social development, are cast into the discard. From an economic point of view, the more nearly public business conforms to the well-known canons of the best private enterprise, the more successful it is bound to be.

"In parting, what further light does the present study throw upon the broader problems of public ownership? The stress of the present war is greatly hastening a tendency which was already strongly pronounced in the electric light and power business throughout the country, i. e., the shutting down of small and wasteful generating plants, and the consequent development of a comparatively few large cen-

tral stations—hydroelectric wherever possible—which can keep pace with the economic growth of the industry, and thereby conserve for other uses our supplies of fuel. The electrification of practically all means of transportation is probably not far distant; the use of electric current will eventually, no doubt, displace other methods of heating; our factories will depend for motive power almost solely upon central station generation. We are on the threshold of marvelous possibilities in the art.

"But in the meantime much experimentation will be necessary, great risks must be run, many failures will ensue. The problem is fundamentally too vast to be bounded by the confines of any municipality, with its petty demagoguery and the jealousy of its neighbors. No unit smaller than the state could possibly deal with the situation. But would the state prove equal to the task? We fear not, so long as human nature remains as it now is. Under democratic institutions, the larger the governmental body, the less economic and the more political it becomes, and the more energy is wasted in accomplishing little. To blaze the trail is the work of a select few, not of the people en masse. The electrical industry, as all industries which reach their perfection, will be developed by personal genius and individual effort urged on by the desire to serve, no doubt, but more potently stimulated by the prospect of material rewards.

"What part the state and the national government will play in our future industrial life cannot well be foretold. The more primitive stages of civilization were marked by minute regulation of private affairs. The individual was submerged, while the ruler, or his representatives, was the chief entrepreneur. Such an extension of state activity to commercial undertakings does not appear to be compatible with freedom and growth. The most autocratic of civilized government has until recently also been the most active in industrial enterprises. Could it be otherwise? The present world struggle is forcing others to follow suit. Will the coming of peace bring with it a fuller realization of the dreams of the socialist, or will the former conditions be restored? Public ownership of some producers' goods may eventually become more general. We must not, however, be unmindful of the fact that, when the war is over, people will again be actuated by the old individual motives; most of the existing urgent incentives to unselfish group action will cease. Business now carried to a reasonable degree of perfection by the public powers will, if retained in public hands, be in danger of rapid stagnation. Whatever the sequel may be, this modest study, as well as most careful and unbiased investigations, points to the conclusion that as a rule only the simplest and the 'well-seasoned' enterprises are at all suitable for public operation; and even these are in grave danger of becoming less efficient than they would be in private hands. Though political expediency or social necessity may sometimes momentarily outweigh all economic considerations, it still seems inherent in the nature of things that private industry must continue to show the way."

**See advertisement of Dr. Lincoln's new book on  
Page 31 of this number of Public Service.**

The Extra Burden.

# The First Book to Cover the Whole Field of Rate Making

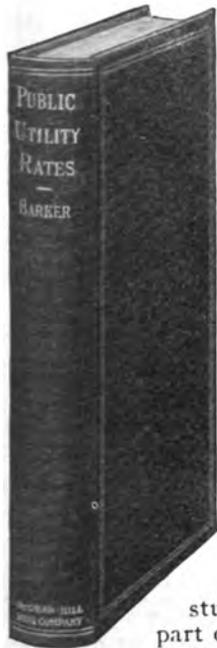

A broad survey of the whole problem of public utility rates is given in this book. It covers fully the principles and practice underlying charges for water, gas, electricity, communication and transportation service.

*Just Issued*

## Public Utility Rates

By HARRY BARKER, Associate Editor, *Engineering News-Record*, Mem. A. I. E. E. 387 pages, 6x9. \$4.00 net, postpaid.

Briefly, the work consists of a comprehensive discussion of:

(1) Such corporation and municipal activities as affect service and rates;

(2) The trend of public opinion and court and commission decisions; and

(3) The most important engineering and economic problems involved.

Because of the broad and, as far as possible, non-technical manner in which the whole subject is treated, this book possesses exceptional value to every man interested in public utility rates. It should appeal strongly not only to consulting engineers, public commissioners and company officials, but also to lawyers and legislators, students of municipal affairs and a part of the general public.

## The Latest Book ON Municipal Ownership

### THE RESULTS OF MUNICIPAL ELECTRIC LIGHTING IN MASSACHUSETTS

By

Edmond Earle Lincoln, M. A., Ph. D.  
Instructor in Economics, Harvard University

Contains 484 pages of facts and figures to prove

“there is no reason whatever why a municipality should invest in an electric plant.”

This book is a report of the author's unbiased investigation of the *physical* and *financial* conditions of 39 municipal and 33 private electric plants in Massachusetts.

Includes 59 statistical tables and 16 graphic charts.

Every claim that has ever been made for municipal ownership is refuted by the facts given in Dr. Lincoln's book.—H. J. Gonden, Editor Public Service.

one-half of their earnings in dividends. The other half they passed to their surplus accumulation. The Comptroller's Report says further:

"Based upon the capital stock, dividends were paid at an average rate of 11.82 per cent. Based upon capital and surplus, 6.78 per cent. The net earnings for the year are shown to have been 11.09 per cent on the capital and surplus."

It is not designed to find fault with the earnings of national, or other, banks, but it is worth while to ask the question, Why should there be restraints and criticisms of public service concerns because they earn, maybe, less than one-half as much as the national banks? And, too, it should, also, be considered that banks are not at any time liable to lose their entire investment by the expiration of their franchises, but can organize and proceed with their business. The more one considers the liberality and fairness with which governments—state and national—have dealt with the banks the more one is compelled to wonder why the same policy cannot be pursued toward investments which built up the physical and taxable values of cities.

## "The Public Be Damned"

A good many years ago one of the Vanderbilts was accused of saying "The public be damned!" He never said it, but how Vanderbilt was abused because of the rumor that he did say it!

It was charged that he said it in connection with the railroad business. But now that the government has charge of the railroads, how perfectly it carries out a policy of "The public be damned!" A gentleman tells me that in New Orleans he wanted to buy a railroad ticket. He took his place in a line and waited fifty-five minutes before he could transact his business. And when he finally reached a clerk, he was told he was lucky to be waited on in fifty-five minutes.

This is the railroad "reform" we have accomplished after years of effort. And rates are 25 per cent higher than under private ownership, with a tremendous deficit looming up.

Some of our wisest men say the proposed league of nations is a similar "reform."

That is the trouble with us fool Americans: we scream and agitate for a certain thing, claiming it will solve our problems, and then discover it isn't what we needed—that all our work for reform has been wasted.—From Ed Howe's Monthly.

## Weighed and Found Wanting

[From Harvey's Weekly]

THE President's Socialistic dreams seem doomed to a rude awakening. Three recent, or current, incidents have given them a shock from which we shall not expect to see them easily recover. For the American people are practical. They judge things by their results. And when those results directly concern the popular welfare, in both cost and efficiency of service, they will not be ignored, and no idealistic talk of voices in the air will seduce the people from the paths of judgment. This nation is quite willing to pay high prices for good service. It never complains of increasing cost when there is a commensurate increase in quality. It also is quite willing to let the management and control of utilities be vested in whatever hands can manage and control them best.

But the American people will not permanently consent to higher prices for inferior service, or to transfer of control to less efficient hands.

The railroads are one case in point. They are under dictatorial government control; and the Administration is trying its utmost to keep them there in perpetuity. What is the result? February, 1918, was the worst month down to that time in the history of American railroads. For that there was a reason. There was a scarcity of coal, and the weather was extraordinarily inclement. But February, 1919, proved to be a still worse month for the railroads. Conditions were reversed. There was plenty of coal and the weather was extraordinarily mild and pleasant. Moreover, freight rates had been considerably increased. Yet the net operating income of the roads was less by \$2,225,000 in February, 1919, than in the disastrous February of 1918. Rates were increased about 25 per cent, but the income decreased 14 per cent, and the service was slower. Nor was that month singular. The net operating income in January was \$37,000,000 below the average of three years. The deficits thus created must, of course, be met out of taxation. In 1918 the deficit averaged \$17,000,000 a month.

This year it has thus far averaged \$37,000,000 a month. Expert figurers and account-mongers may juggle with these facts as they please. The facts which appeal beyond all contradiction to the public mind are these:

The railroad service is poorer than it has been before in this generation. The trains are slower, less frequent and less trustworthy.

The cost of the service to the immediate patrons of the roads is higher than it has been before in this generation. Passenger fares are higher; freight rates are higher.

The people are being taxed as never before in this generation, through inquisitorial incomes, stamp and other taxes, to meet a deficit of hundreds of millions of dollars a year in railroad accounts.

In brief, government control of the railroads has meant, and now increasingly means, poorer service at higher cost.

The food supply is another case in point. Early in the war there was formed what was substantially a government food trust. The government assumed the power of fixing prices of wheat and other important staples, and of regulating their distribution. The result is that with larger stocks of food products on hand than ever before in our history, the cost of food to the people remains at famine figures. Here is the situation: The supply of wheat in hand today is about three times as great as it was a year ago; the prospect for this year's crop enormously exceeds the greatest ever before recorded. The winter wheat crop is estimated at about 900,000,000. That is many millions of bushels more than both the winter and spring crops put together ever were, save in two or three years. It is more than both those crops were in the bumper year of 1914, when farmers were glad to sell at 70 or 80 cents a bushel. And now, with this perfectly unprecedented crop in prospect on top of a plethoric present supply, they are holding wheat back from the market in order if possible to force

(Continued on page 136.)

# The Tribulations of Public Operation

By ELLIOTT CHURCH

THERE are people who have really believed that public ownership and operation would result in better service and lower cost to the public. These people were delighted when the war resulted in the Government taking over the operation of one utility after another. Rates were going to come down right away and the service was going to be better. Any of these people who have been forced to patronize any of the government operated utilities have not found it easy to keep their enthusiasm up to the high pitch that it was when the Government first began operations.

The railroads were the first to be taken over. It is true that this was a war measure and that the public could not expect the service that it had received. Nevertheless it was deceived by announcements made by government officials into the belief that better service would be rendered. It was announced that the "Public be damned" policy of the railroads would cease and that henceforth the policy would be "The public be pleased." This public be pleased policy was carried out by cutting down the number of passenger trains to the minimum, side tracking those which were run to give long fast freights the right of way, and holding up the shipments, or even refusing to take the shipments of private shippers. There is one thing very certain. The railroads under private operation could not have put through such practices under the slogan "The public be pleased."

At no time in the whole history of the American railroads have they been operated under a "public be damned" policy to the same degree that they have been during the time that they have been operated under the Government. There is no question but that this was necessary. The railroads have not been operated and it was not the intention of the Government when taking over the railroads to operate them under a "public be pleased" policy. From the very start they were operated under a "help win the war" policy. This was right and proper. They were taken over largely because it was felt that the "public be pleased" policy of private operation, the only policy that makes private ownership a success, would not result in the fastest possible movement of war supplies. The fact nevertheless that the Government did advertise a "public be pleased" policy and then not only failed to back up this advertising but operated on the opposite policy shows its inability to make a success of railroad operation under normal times. The public has become too much accustomed to the courtesy, good service and comfort of pre-war American railroad travel to take kindly to the sort of service that can be expected from government operation.

The method of standardization put into operation by the Government, though a good war measure, would if continued for any length of time result in reducing the efficiency of the railroad systems and very materially hold back progress. Standardization is all very well for quantity production, but quantity production does not spell progress. If all our automobiles had been manufactured in highly standardized factories, they would not have all the comforts and conveniences to be found in them today. This fact is demonstrated by an examination and comparison of those cars which have not been standardized to any great extent in the production processes and those which for many years have been manufactured where quantity pro-

duction and standardization are the main features of the factories.

Railroad rates instead of coming down have steadily advanced and the service has steadily depreciated. Today we have to pay much more and we get much less than we did under private ownership. If this was confined to the railroads we might be persuaded that the railroads are a special case but in everything that the Government operated the cost has mounted. It is hardly possible that it could have mounted as fast under private operation.

For years we have been accustomed to look upon the telephone and the telegraph service to be as reliable as the rising and the setting of the sun. Labor troubles were handled in such a way as not to seriously interfere with the service rendered to the patrons. Today my telephone is dead. It is of no use to me. No one can call me and I can call no one. I am still paying rates but am receiving no service. Why is this? Simply because the governmental powers now operating the telephones have not been able to handle the labor situation as satisfactorily as were the men who did this work under private operation. All commercial, industrial and social activities have come to depend to so great an extent upon the telephone that this is a real catastrophe. There is promise that continued government operation will result in placing our telephone service in the same class of that of other countries where government ownership and operation of telephones and telegraphs is in the hands of the Government. Up to the time that the Government took over the operation of these systems, the United States had the best and the most efficient systems in the world. They were dependable and the modern business man found it greatly to his advantage to make use of them.

The cost of using the telegraph lines is constantly rising and the increases are greater than at least one man whose experience in building up a great system should qualify him to know, claims is necessary. The public is being given poor and poorer service and it would almost seem is being mulcted at the same time.

The post office is held up as a shining example of the efficiency of government operation. Yet this service has not demonstrated its ability to meet emergencies any better than have privately operated utilities. The cost of the service has been increased and the quality and reliability decreased. This decrease in quality of service appears to become greater as the Government takes over the operation of more and more utilities. It would appear that when railroads were privately operated they tended to maintain the mail service on a high standard. Although government bookkeeping is such that it is rather difficult to get at the true condition of affairs it is quite evident that the post office service is not self-sustaining. It is also evident that at least a part, and this a goodly part, is due to the abuse of the franking system. It costs the Government thousands and thousands of dollars to carry free though the mails political propaganda that should and no doubt would under private operation have to pay its way. There is no question about a private corporation being able to render better service and to render it at lower cost than the Government is now doing in the mail service.

Free service rendered by large private corporations is being condemned by the Government but government operation means a greater and greater extension of free service

to politicians and a great and greater expense to the taxpayer. Why should and why does the Government permit abuses that it condemns in the case of private operation?

Some states have attempted to enter the insurance field. The state of Wisconsin organized a state life insurance company. The object of this company was to render life insurance service at a lower rate than do the privately operated companies. The government ownership visionaries expected this undertaking to show up the profiteering of the private companies. This undertaking was launched and started out with some promise of success. Within a few years, however, business fell off rapidly while expenses increased. Recently the time came when it would be necessary to very considerably increase the rates or re-insure the policy holders in a private company. The only satisfactory solution was to re-insure the policy holders. The state could not give the service rendered by the private companies and do it at as low a cost unless a deficit was made up by the taxpayers.

State and national governmental departments have usually been considered better qualified to operate big enterprises than municipal governments are to operate them. This idea is based upon the assumption that men of greater ability hold the state and national offices and that when the control is thus centralized, politics does not enter into the operation to so great an extent as when the government is strictly local in nature. Whether or not this is true, the state and the national governments have already demonstrated beyond every question of doubt that politicians, no matter how great their political ability, cannot operate business enterprises as efficiently and as satisfactorily as business men can operate them. Politics requires a certain sort of ability and business another. Successful business men do not ordinarily make great successes in politics and our politicians are not making a great success in business.

### A Public Ownership Sink Hole

Toronto's white elephant, the civic abattoir, continues to drain the city's finances at an alarming rate, and is now a quarter of a million dollars in the hole. Last year the cost of operating the institution amounted to 104,662, while the revenue was so small that a loss of \$75,000 was shown. The situation will be even worse this year, as the cost of operation will be larger. Including the civic cattle market, there will be a loss this year on the two enterprises of little short of 100,000—truly a costly price to pay in a single year for the satisfaction of supporting the public ownership fetish.

Even the most ardent advocates of public ownership in the city council are admitting that the situation looks bad, and at this week's meeting it was decided to set a committee to work to make a thorough investigation of the whole business. It is a foregone conclusion just what the result will be. Already Finance Commissioner Bradshaw, who for one does not believe in saddling the whole population of a city with the cost of operating undertakings for the benefit of the few, has expressed the expert view that it is impossible to make the enterprise remunerative, even if the city had power to force every butcher outside of the packing interests to slaughter all animals at the abattoir.

And to talk of the city plunging deeper into the morass, with the addition of a dead meat business, shows an infatuation on the part of Toronto's will-o'-the-wisp chasers that should be promptly dealt with by the citizens.

The city of Wheeling, W. Va., has lost more than \$1,000,000 on its municipal gas plant. It has closed down that plant now and the total loss may reach an additional \$500,000.

### Weighed and Found Wanting.

(Continued from page 134.)

the price up to the \$3.50 a bushel which the Administration itself anticipates. They are already refusing to sell at prices considerably higher than the minimum guaranteed by the government. But the government price-fixing system, which guarantees a minimum price which the farmer shall receive for his wheat, has either no power or no inclination to fix the maximum price which the people must pay for their bread.

Under the government food trust, the more plentiful food is the more costly it is.

The third current example is seen in the steel market. There also government control has been established, for the purpose of "stabilizing prices"—a sounding and glittering phrase. What is the result? The Industrial Board of the Department of Commerce fixed the prices which were to be paid for steel rails and other foundry products. And the Director-General of Railroads refuses to pay such prices and demands that the "stabilizing" business shall be thrown into the discard and that steel shall be thrown into an open market, free from government control. Explain it as anyone may, the simple fact of the case is this:

The government would not pay the prices which it had itself prescribed.

We have said that there are these three noteworthy current examples. There is a fourth, which we might mention, which is both current and of long-standing; in some respects the most flagrant of them all. That is, the extension of government control over the telephones, telegraphs and cables. But we hesitate to refer to it because of the difficulty of doing so in language befitting general circulation in polite society. Let us dismiss it with the restrained observation that services which were formerly inexpensive have been made much more costly, and that services which were formerly singularly efficient have been made so grotesquely bad that to mention "efficiency" in relation to them seems an offensive contradiction of terms.

Let not this criticism be misunderstood. We are not disputing the desirability, perhaps even the necessity, of making some of these arrangements as war-time expedients. We do not believe even that would have been necessary or desirable if affairs had been properly managed before the war. For example, if the government had not for years been apparently trying to starve the railroads to death, the war would not have found them in so inefficient a condition as to call for government intervention. The simple fact is that the government itself was chiefly responsible for the poor condition of the railroad service, and it is notorious that as soon as it took control of the railroads it immediately did with the roads the very things which it had refused to let them do for themselves. Only, if it had let them do those things for themselves, the service would have been improved, while, when the government itself did them, the service was not improved but impaired.

Nevertheless, let us concede that at least some of these extensions of government control were necessary as war measures. It was only as such that they could be justified, and the results to date are nothing short of a "horrible example" to warn us against continuing such control in time of peace. That is the great object-lesson before the American nation today—a lesson so striking and so beneficial as to be worth all its enormous cost to the nation, if only the nation will heed it and learn it and act upon it. Government control has meant and means less efficiency and greater cost; it has meant and means higher prices for the necessities of life. It has been weighed in the balance of practical experience and has been found wanting in profit to the public welfare.

# Some Present Problems of Public Utilities

## Address by Samuel Insull at the Annual Meeting of the Illinois Gas Association

Copyright 1919 by Samuel Insull

WHILST sitting here and enjoying the good-fellowship of the occasion, I could not help thinking what a fortunate people we are. Here at the close of the greatest war the world has ever known, before peace is declared, we go back to our ordinary avocations and pleasures, scarcely scarred, in proportion to our population and resources, by loss of life or sacrifice of national wealth; whilst other nations, after meeting the brunt of the awful conflict for nearly four years and grief stricken by appalling losses of life, are doomed to carry enormous burdens for generations.

And what a change has come within the year!

If we had met a year ago the air would have been charged with apprehension of the great German military machine which was to be let loose in a few days for its supreme effort; and instead of indulging in hilarity, we would have been fearful of the consequences of that effort, now ended so gloriously for the arms of the Allies and of the United States.

But notwithstanding our lightheartedness tonight, we in the utilities business have many grave problems before us. We are living in extraordinary times; we face conditions and problems calling for our best thought; and I ask you to pause in the pleasures of the evening to consider some of them.

As utilities men, we must carry our share of the after-the-war reconstruction burden; we must conserve the properties for which we are responsible to their owners, the stockholders; and in doing this we must not fail to maintain and extend the service which these properties render to the public, because maintenance and extension of service is both a duty to investors and to the public and a factor in the state's reconstruction tasks. To meet these obligations adequately, we need to take the broadest possible view of our obligations.

In the very first place we must see to it that the men who went from our service to war, with banners flying, do not have to look for a job when they return. Our duty to the communities in which we live and to the properties which we manage is to place those men on the payroll first and find them jobs afterwards; to see to it that every man who went from our service to serve his country gets as good a position as he had when he left and if possible a better one.

The public utilities business as a whole has been hard hit by the war, with selling prices of its products fixed by ordinance, by contract, or by commission order, and with prices of labor and material steadily advancing over a period of several years. The difficulties in that side of the business represented in this room have been very greatly increased by the still greater difficulties of other kinds of utilities, particularly the street and interurban railways. Their situation has at times frightened our security holders, who have failed to differentiate between the positions of gas and electric companies on one hand and street railways on the other. In the street railway business, labor is a far more important item of expense than any other. Great advances in wages (in many cases by governmental action) without any relative advance in price of service, have brought street railway properties to a dangerous position. Unless we can convince the public that we are not as seriously affected, we will suffer sympathetically as much as the street railways actually suffer.

This situation raises another disquieting question, namely, whether public utilities of any class can depend upon the governing powers for the calm, scientific and just treatment which is so essential both to the maintenance of good service and to the protection of investors in utility properties. This question is emphasized by the positive statement in the newspapers that the Chicago surface lines are to receive no relief whatever from the Public Utilities Commission, and by the hurried re-opening of the Peoples Gas Light & Coke Company's case before the commission, while that company is in the midst of applying recent orders of the commission. And with this discussion comes the further question, voiced in a leading newspaper only a few days ago, asking whether problems of utilities regulation were being considered from the viewpoint of service cost and fair return to the investor, or whether they were being considered with one eye on the Chicago mayoralty campaign and the other eye on the legislative chamber at Springfield.

Gentlemen, regulation of public utilities by state authority—non-political, scientific, just regulation—is on trial at this moment in Illinois.

If state regulation is to be a success, that regulation must be divorced absolutely from politics and administered without reference to the popular favor or prejudice of the moment; if the Public Utilities Commission's existence is to be justified, its decisions must be wholly on the basis of cost of service rendered and a fair wage for capital as well as a fair wage for labor.

I have some right to discuss this subject. I was the first man in the utilities business in this state, I believe, to advocate the regulation of public utilities. In 1868, as president of the National Electric Light Association, I urged regulation in place of competition as a means of stabilizing the utility business, developing service adequate to the needs of the public and lowering the cost of that service.

Regulation has shown, wherever given a fair trial, that it is sound in theory and workable in practice. Whenever given a fair trial it has worked better from year to year. But regulation will not work unless applied justly, in complete harmony with the fundamentals of the theory of regulation.

The right to regulate must carry with it the obligation to protect; and this obligation to protect is not subject to reservations or evasions. The Public Utilities Commission of Illinois was created, and clothed with full regulatory powers, for the protection of the citizens of the state, whether those citizens be producers of utility service or users of utility service. To sacrifice the interests and rights of either class to those of the other is equally reprehensible and unjust; and when injustice enters anarchy is at the threshold.

Whether the utility to be regulated is an individual or a corporate creature of the state, corporation and individual are equally entitled to protection, just as the smallest user of gas or electricity or other public service is entitled to protection; and until we can show the citizenship of the state that justice is not done unless we, as well as our customers, are treated justly, we will have failed in our mission as public utilities men.

Permitting political expediency to color the work of a state regulatory body will destroy that body's usefulness to

the people, and the evil consequences of that destruction will reach far beyond the utilities directly concerned.

Take Illinois as an example. How many people—how many of us utility men, even—realize the importance of this subject to the state as a whole?

The electric light and power, gas, and street and electric railway companies of Illinois represent \$850,000,000 of invested capital. They have a gross income of \$175,000,000 a year.

The new capital expenditures of these Illinois companies in this year of 1919, according to the budgets that have already been made, will be between \$65,000,000 and \$70,000,000; will be that is, *PROVIDED their credit is maintained* (by means of adequate rates) *on a basis that will permit them to secure the necessary funds.*

Think of what that one item means to the reconstruction problems of the state and to the task of providing work during an anticipated period of acute unemployment in general industry.

Let me make a comparison. We have heard much of the state's road building program as a factor in reconstruction and in providing employment; yet the state has provided only \$60,000,000 for road building and its plans provide for spreading expenditure of that sum over not less than a five-year period. In those five years, the public utilities will spend for new capital work in this state, provided their credit is maintained, not \$60,000,000, but probably all of \$450,000,000.

These companies have 45,000 employes, of whom 8,000 to 10,000 were in the fighting forces of the country during the war. They have, it is estimated, upwards of 35,000 stockholders, of whom 25,000 are citizens of Illinois, and there is probably an equal number of the holders of our senior securities, or a total of 50,000 stockholders and bondholders, who are citizens of this state.

The gas and electric companies of the state serve 1,700,000 customers. The street and electric railways carry 2,000,000,000 passengers each year.

In the light of these figures, no words of mine are needed to emphasize the importance of these public utility properties in the commercial, industrial and social fabric of the state. Unless these properties can live and prosper there will be no prosperity in Illinois.

Whilst the protection of this great public utility interest is, therefore, or should be, a matter of concern to all of the people of the state, it is the particular concern of us who manage these properties. Think what it will mean to us if we can bring home, to the communities in which we operate, the significance of the figures I have just given you.

Now it is our special job to get at the people of those communities; to get at our own 45,000 employes, our own 50,000 stockholders and bondholders, our own 1,700,000 customers, and the customers of the electric railways—the people we serve and who know whether our service is good or bad.

We ought to bring home to them that rate making in our business is not a simple matter of fixing a flat price for a product or a service; that a proper system of rates has to be adjusted to varying classes of service and to the conditions under which that service is rendered; that proper systems of rates cannot be worked out scientifically when politics enters, and that an enormous field for development will be opened alike to industry and to ourselves by proper systems of rates.

One of my young men—I do not know whether he was dreaming, or figuring, or just happened to put the decimal point in the wrong place—has worked out the conclusion that the Peoples Gas Light & Coke Co. would be doing an industrial gas business of \$90,000,000 a year if it were supplying gas to all the industries in Chicago that can use it to advantage. That may seem a wild dream. But I know

that the Commonwealth Edison Co., notwithstanding its large business, is doing less than one-third of the possible electrical business in Chicago, and that it would be entirely possible to do \$90,000,000 of electrical business a year instead of \$28,000,000, as this year, if we could get all of the available business and the plant to take care of it.

If that is so, the same figures are likely to apply eventually in the gas business, as the industrial field is more generally developed and we are permitted to work out rates that bear a closer relation to the actual service rendered to each customer, with the charge to him based upon the service rendered.

I am a great believer in publicity. I believe it is our duty to the properties we manage, to the stockholders who own them, and to the communities they serve that we should enlighten those communities on the situation. I believe in doing it not in any gum-shoe way, but openly and boldly. I believe in presenting the facts to the employes, whose interest is just as vital as that of the managers; to the citizens of the state who are owners of the properties; to every customer of a gas company, an electric light and power company or a street railway.

The public utilities have the means of getting at their customers, of getting at nearly every household in the state. If that is done, often enough and vigorously enough and fairly enough, you will find the newspapers taking notice of the facts. If that is done, the politician in quest of votes, whether as a candidate for mayor or other local office, or as a candidate for the legislature or for the highest executive office in the state, will be forced to discuss utility questions on the basis of the economic facts and not by drawing on his imagination to create prejudice against a great industry.

I am discussing this, gentlemen, because to my mind it is vital to our business at this time. I see here many who are in both gas and electric business. We are on the fortunate side of the public utilities business. The electric business has suffered some during the war; the gas business has suffered more; both are recovering and can look forward to years of substantial progress. The street railway business is in a very serious condition, especially in Chicago and the larger cities where heavy wage advances have been made by the federal war labor boards. It is up to us to do our part in presenting the facts, not only of our own business, but of the street railway business, so that justice may be done and promptly done. A great English statesman once said, "Justice delayed is justice denied." That is undoubtedly the case of the street railways today.

Control of public utilities by means of state regulation is at a crisis in Illinois. It must weather this crisis if it is going to establish itself in a way that is fair alike to the public and to investors and so become a permanent and respected function of our state government. And if we, openly and boldly, do our share in this crisis by challenging the fallacies and misrepresentations uttered against the public utilities business, we shall be doing a service to the whole state and to future generations of its citizens.

### Six Cents in Spokane

Following the hearing in Spokane, Wash., before the Public Service Commission on April 2, on the application of the Spokane Traction Company and the Spokane & Inland Empire Railroad for 7-cent fares the commission issued an order making a 6-cent fare effective immediately for a ninety-day period. The new rate was set to go into effect on all lines on April 6. No change in the present transfer or school-ticket system is made. It was proposed to supply conductors with strips of five tickets to be sold for 30 cents, as an accommodation to those not wanting to handle pennies.

# How Taxpayers Who Do Not Use Hydro Are Made to Bear Burden of Below-Cost Service

## Expenditures Paid by Province at Large as Indicated by Clarkson Report But One Instance of Unsound System

THE Clarkson report reveals that in order to show a surplus of \$174,919, Sir Adam Beck's Hydro Commission charged up the Province at large with \$1,117,433 of power general expenses—a deficit of \$942,514 is thus actually indicated.

Here is an outstanding example of how hydro projects, in order to kill private opposition, are financed at the expense of the ratepayers of the Province. Yet *The Financial Post* alone calls attention to the fact. Where are these servants of the people—the newspapers? Do they represent the interests of the ratepayers of the Province as a whole or only those who are users of Hydro power?

Sir Adam would undoubtedly argue that these expenditures were for the good of all citizens of the Province. But such arguments could not be “put over” on the people were it not that they are condoned by the newspapers. The T. Eaton Co. might just as well argue that its advertising expenditures are for the good of the city of Toronto and get the city council to pay the bills. The cases are parallel. There is just as much logic behind the idea that Toronto citizens who do not shop at Eaton's should pay for the running of the store for the benefit of those who do as there is behind the system by which the Hydro Commission spends the tax revenues from citizens who do not use Hydro for the benefit of consumers—and glorification of the name of Beck.

### Sinking Fund Responsibilities

And that is only one item in the count against the soundness of Hydro financing. Take the sinking fund situation as revealed by the Clarkson report. Charges for the first five years have not been deferred—in accordance with sound interpretation of the Act—but have been wiped out. Common business sense demands that sinking fund charges should be set aside every year. If the Hydro has not made proper allowances—and the investigations at Hamilton and St. Catharines have indicated that it has not—then eventually and inevitably the bill must be paid by someone and that someone is the general taxpayer of the Province.

Here, again, methods which only a public ownership project with the people's funds for backing and a public purse to draw upon have been used to crush the private companies and destroy the property of investors. But the piper must be paid at the end of the dance and it will not be the dancers alone who will pay. Not only is the burden upon the users of Hydro but also upon the general provincial taxpayer who does not.

Why are the ratepayers of the Province kept in ignorance of this state of affairs? Who are the newspapers serving?

### Those Rebates of Duty

Take, again, the claim of the Hydro chairman for a rebate of duties paid upon Hydro equipment. Here are the same tactics of demanding discrimination against the private companies which must pay the tariff charges imposed by the Dominion Government. On behalf of the users of Hydro-Electric, Sir Adam asks the national government to turn over to his commission funds which have been collected according to act of Parliament. Hydro customers

would, therefore, get the benefit of this refund while the amount was added to the burden of general taxpayers throughout Canada.

And if this is not done Sir Adam threatens to raise the rates for Hydro.

### Instances of Discrimination

Speaking further on this question of tax exemptions for the benefit of Beck ambitions and Hydro consumers we have recently heard a disquieting rumor that further concessions will be sought by legislation during the present session of the Provincial Legislature. And let it be said in passing that the usual procedure is to bring down these measures at the eleventh hour when they can be rushed through by the aid of the “big stick”—the voting power represented by the Hydro municipal ring—which Sir Adam has learned to wield so effectively.

In August, 1917, the Hydro Commission purchased the stock of the Ontario Power Co., a company generating about 160,000 horsepower, and formerly owned by Buffalo capitalists. The township of Stamford and the city of Niagara Falls have collected large sums for taxes each year from this company. The township gave this company a fixed assessment for 21 years from its inception, which covers all taxes except for school purposes. For school purposes the property is assessed at a small fraction of the amount for which it was valued at the time of the sale of the capital stock to the Hydro Commission. Now, so says the report, the Hydro Commission will seek to relieve itself of all these taxes because the stock of the company is owned by the Hydro.

The Hydro does not own the plant; it owns the stock, subject to the various bond mortgages of the Ontario Power Co. covering the plant. There is no reason why the Hydro Commission should not pay Stamford and Niagara the same rate of taxes as is charged to the other companies.

Having been able for the five-year period to pass sinking fund obligations and at the same time charge general expenses to the Province at large, Sir Adam is now evidently finding it necessary to discover some other means of camouflaging Hydro finances if he is not to charge the consumers what the service is costing. Otherwise he will have to raise the rates; he has threatened it himself. And why, we repeat, should he not do so? Why should his ambitious and fantastically financed schemes be placed as a burden upon the general ratepayer?

### The Vote of Hamilton.

The Hamilton situation is a case in point which illustrates the methods of public ownership finance. The figures of independent experts appointed by the Canadian Society of Civil Engineers proved conclusively that the Port Credit-St. Catharines line could not be made to pay. Yet Sir Adam “put it over.” He had to do so to find a market for the power which he is developing at the expensive Chippewa plant, and the Chippewa project represents, in the first place, justification of Sir Adam's overtures to the Niagara Park Commission for all the available water supply for the people's enterprise—an argument which was

# Facts on Municipal Ownership in 336 Towns and Cities

Copyright, 1919, by H. J. Gonden.

**Adair, Ia.**—Having failed of successful operation, the city sold its electric light plant to the Iowa Railway & Light Company, and quit municipal ownership.

**Alexandria, Va.**—The municipal electric light plant was built in 1889, costing \$17,000. It was sold in 1906 for \$3,500, which included a 30-year franchise. The company which bought the plant made a contract for street lights at \$75 per lamp per year, a saving of \$28 per lamp, and made many important extensions of service.

**Allegheny, Pa.**—The municipal plant began operations in 1890, giving city service only. The cost was \$562,000. Investigators for the National Civil Federation call the plant "poorly designed, inefficient and expensive to operate," and state that appropriations for equipment had been neglected to such an extent that "the electrician had to build his own switchboard out of such junk as he could collect from machine shop yards." They state that the payroll could be reduced 15 to 18 per cent, and criticize the use of the plant for political employment.

**Allerton, Ia.**—The municipal electric plant, which has been running at a loss for some time, was sold by practically unanimous popular consent to the Centreville Light & Traction Company.

**Ames, Ia.**—The engineering experiment station of Iowa State College issued data showing: "In a number of Iowa towns the waterworks (municipal systems) are not self-supporting." It showed, as a result of an investigation, that in many towns pumping costs, operating expenses and fixed charges brought the cost of water up to 75 cents per 1,000 gallons, yet the towns, in many cases, were charging only 50 to 66.7 cents per 1,000 gallons, throwing the remainder of the costs onto the taxpayers. The investigation also revealed waste and inefficiency in leaky valves, clogged wells, unsuitable machinery, and deficient underground flow.

**Amherst, Ohio.**—In 1912 the council abandoned the municipal electric plant and have since purchased current from a private company. The machinery was so worn out that the town could not sell it at any price, and in 1914 it was still standing idle in the plant.

**Appleton, Minn.**—The city finally got tired of the burden of its municipal electric plant and sold it to the Otter Tail Power Company.

**Arcanum, Ohio.**—A very exhaustive report on the municipal light and water plant for one year showed a deficit of \$5,397. Total revenue from all sources was \$11,674, operating expenses and fixed charges were \$17,072. The deficit amounted to over \$3.50 per capita.

**Arlington, Ohio.**—In one year the municipal electric plant turned up a deficit of \$4,048. The deficit equalled about 225 per cent of the total revenue from private consumers. To break even, the rate should have been 32½ cents per kilowatt hour instead of the 10 cents which was in force.

**Ashley, Ill.**—The municipal electric plant was sold at auction.

**Atchison, Kan.**—Superintendent E. C. Willits, of the State Orphans' Home, estimated that it cost the state two or three times as much to make its own power as it would have from a private company, so the public plant was shut down and a contract made with the Atchison Railway & Light Company.

**Athens, Ohio.**—The people voted to sell the municipal electric plant in 1914. With a registration of over 2,000, only 14 votes were cast in favor of retaining the plant. It had been losing money for years, even though high rates were in force, and the service was very poor. Lamp renewals cost the customers a great deal on account of the irregular voltage.

**Attalla, Ala.**—After a few years' operation of the municipal electric plant it was leased and afterward sold for less than \$25,000, though it cost \$50,000 in 1892. The city could not make the plant pay.

**Audubon, Ia.**—Arthur H. Grant states that a municipal electric light plant at this place was sold or abandoned prior to 1918.

**Bainbridge, Ohio.**—The village water and light plant had a deficit of \$4,926 in a single year. The figures showed this to be about twice as much as the total revenue from customers. This would have made necessary a rate of 24 cents per kilowatt hour for electricity and 75 cents per 1,000 gallons of water to make ends meet.

**Baltimore, Md.**—An audit of the books of the waterworks in 1911 showed that the department was operating at an annual loss of \$400,000, and that an increase in rates averaging 30 per cent was necessary.

**Ballard, Wash.**—After five years the municipal electric light plant, which cost \$10,600 in 1897, was leased for fifty years to a private company for \$3,800. The plant was leased because the income was about a third of the operating expenses.

**Barberton, Ohio.**—The waterworks had a deficit of \$4,175.35 in 1913, according to a report to the state auditor. Serious irregularities in conducting the business were also reported; among them were allowing accounts to run two or three years, and failure to collect penalties for non-payment of bills within a specified time.

**Batavia, O.**—The city's reports showed total income for its water and electric light plant of \$5,924 for the year, expenditures of \$5,602, leaving an apparent profit of \$312. But these "expenditures" included nothing for interest, sinking fund, depreciation and lost taxes, which totaled \$6,992. That converts the "profit" into a loss of \$1,068.

**Bay City, Mich.**—The municipal electric plant was shut down in 1919 and a contract made with a private company for current.

**Beatrice, Neb.**—The municipal electric street lighting plant showed a loss of \$6,051 for the year ending April 30, 1916, according to the report of J. M. McTaggart, expert accountant of Kansas City, who was engaged to investigate the records. In submitting his report Mr. McTaggart said: "Owing to the incomplete condition of the records, we were unable to obtain the necessary data as accurately as is usually available in accounts of private corporations and partnerships, where efficiency in every department is absolutely essential to their very existence."

**Bellefontaine, Ohio.**—An investigation into the water, gas and electric plants, made in 1914, showed that the gas cost \$2.25 per thousand feet to manufacture, while the deficit on the waterworks, including interest and other fixed charges, was \$10,077.31 in 1913. The electric plant was so run down that it could not give adequate services, and at least a third of the street lights had to be left off every night until enough people went to bed to permit the generators to carry the street lighting load.

**Berea, Ohio.**—After the town had built a waterworks, getting its supply from the seepage of an abandoned stone quarry, the State Board of Health forbade the officials to turn on the water until an ordinance was passed forbidding the citizens to use city water for drinking purposes.

**Berkeley, Cal.**—This city bought an electric plant in 1889. After ten years the plant was so worn out that it was not worth operating and was leased to the Berkeley Electric Lighting Company.

**Bethel, Ohio.**—The town council failed to pay the bills of the municipal electric plant in the winter of 1913-14, and the Board of Public Affairs turned off the street lights until the bills were approved. The 1913 deficit amounted to nearly 100 per cent of the total revenue from commercial customers.

**Beverly, Ohio.**—The municipal electric plant was sold in May, 1907, to Messrs. Walker and George. Reason for selling: Poor service, high rates, losses in operation.

**Birmingham, Ala.**—The North Birmingham waterworks, owned by the municipality, was shut down and abandoned in 1911 as the authorities considered it a menace to public health. Water was thereafter taken from the Birmingham Waterworks Company, a private corporation. An epidemic of typhoid was traced to the municipal plant before it was abandoned.

**Blacksburg, S. C.**—The municipal electric lighting plant was shut down in 1913 because it was cheaper to buy current than to make it. The plant was not a financial success.

**Blaine, Wash.**—The municipal electric light plant was shut down and abandoned in 1911 after three years' operation. Current has since been purchased from a private company. The service of the municipal plant was both costly and unsatisfactory.

**Blanchester, Ohio.**—The 1913 deficit of the municipal electric plant was \$701.77 short of making operating expenses. Interest and other fixed charges increased the deficit to \$6,085.10.

**Bloomington, Ill.**—The street lighting plant was made to show low operating cost by making no allowance for deprecia-

tion. The plant had to be entirely rebuilt in 1906, at a cost of \$40,000. The old machinery was sold for \$3,300, though the plant had cost \$87,000. A contract could be made with a traction company which would save the city \$10,000 to \$15,000 a year over the present cost of running the plant.

**Blue Island, Ill.**—J. B. Gobet, in 1907, when mayor, said the plant had been grossly mismanaged and that it cost twice as much to make current as it cost the North Shore Electric Company, with whom the municipal plant was in competition. The city made a contract with the Sanitary District of Chicago for a bulk supply of current, shutting down the generating plant, but did not pay their bills; so the Sanitary District, in 1912, had to threaten to shut down the plant unless it got its money—about \$30,000.

**Bowling Green, Ky.**—In 1914 the city abandoned its municipal electric street lighting plant and made a contract for service with the local company, resulting in lower cost and greatly improved service. It was the inefficiency and expense of the municipal plant which led to the change.

**Bowling Green, Ohio.**—The city went into the gas business about 1895, and sold out at \$6,000 in 1899. The original investment was \$60,000. In addition there were losses in operation estimated at \$50,000, making the total loss to the city for five years of municipal ownership \$104,000.

**Bradner, Ohio.**—Though but a village of about 900, this place was able in 1913 to maintain a municipal water and light plant that produced a deficit for the year of \$3,313. This was 130 per cent of the total revenue from private consumers. To offset it light rates should have been 18½ cents per kilowatt hour, instead of 8 cents and water basing rates of \$11.50 instead of \$5 for domestic use.

**Brainerd, Minn.**—The city got in debt to itself to the extent of \$6,000 for street lighting from its own plant and the lights were turned off. The people tired of darkness and demanded lights. The city council ordered the lights turned on. The lighting board refused until it could find a way of settling the \$6,000, the plant not producing income sufficient to meet the demand. A compromise was reached, but no way was found of making the plant an economic success.

**Brandon, Manitoba.**—The municipal street railway lost for the taxpayers \$33,868 in 1916, which with a 1915 deficit made a total deficit on January 1, 1917, of \$79,159. Quoting from the official report issued by the city treasurer, G. F. Sykes, we have this statement:

Deficit as at Jan. 1, 1917.....	\$45,290.98
Loss for the period as above (1916).....	33,868.60
<b>Total .....</b>	<b>\$79,159.58</b>
Less adjustment of depreciation charges....	\$12,233.80
Less contribution from city general account..	20,322.48
<b>Total .....</b>	<b>\$32,556.28</b>
<b>Total deficit .....</b>	<b>\$46,603.30</b>

So while the railway lost \$33,868 in 1916, it began the year 1917 with a deficit of \$46,603, even after allowing for the \$20,322 taken out of the general tax fund to help along. As a matter of fact, this \$20,000 comes from the taxpayer's pocket and not from the earnings of the street railway. It is interesting to note from the official report that in the six classes of tickets issued by the city's railways there were decreases in the proceeds from all except one and that was in miscellaneous, which showed an increase of but \$16 for the year.

**Brookfield, Mo.**—The municipal waterworks lost money for the city every year for at least five years as follows, according to the report of Marwick, Mitchell, Peat & Co., chartered accountants of St. Louis, employed by the city to go over affairs: 1911, \$1,242; 1912, \$1,651; 1913, \$1,126; 1914, \$829; 1915, \$1,785. Interest on bonds and the contribution for the sinking fund were paid from taxes. The accountants showed the amounts for these items paid each year from taxes. Interest for five years totalled \$4,429, sinking fund \$6,259.

**Brookfield, Mo.**—The city bought a theater for \$10,000, issuing bonds for the amount. The theater proceeded to lose a nice sum of money for the city, and, according to a local newspaper, "since the theater became the property of the city it has been going to the had."

**Braidwood, Ill.**—In 1910 the town sold its municipal electric plant to the Public Service Company of Northern Illinois. In 1909 the total income of the plant was \$3,578, while the expenses were \$5,700, leaving a deficit of \$2,122, according to a statement prepared by Alderman J. B. Howatt, chairman of the lighting committee. The tax levy for 1910 was exactly one-half what it was for the year previous, when the town had to meet lighting deficits.

**Brighton, La.**—The gas supply from the municipal plant is so bad that none of the city officials will use it. One of the councilmen is agent for a company selling individual gas systems, and is replacing the city service with these as fast as possible—an easy matter when service from the city plant is poor and gas costs \$1.75 per 1,000 feet.

**Brownstone, Ind.**—The municipal water and light plants were sold in 1908 to the Brownstone Water & Light Co., in order to get the plants out of politics.

**Brunswick, Mo.**—Debt was the only thing that this city got out of municipal ownership of water and lights. After ten years' operation the plant was sold for one-third its cost. The mayor is quoted as saying, "You could not give Brunswick such a plant under condition that the city run the business."

**Bucklin, Kan.**—The city abandoned its municipal electric light plant in December, 1915, deciding by a five to one vote at a popular election to buy current from a private corporation. The operating expenses and cost of repairs, not to speak of the fixed charges of the city's plant, exceeded the income and at that gave service only part of the night. The burden became unbearable to the taxpayers.

**Buffalo, Minn.**—The municipal plant was closed down and put on the market and the city made a contract for service with the St. Cloud Public Service Company.

**Burlington, Vt.**—The municipal light plant is a huge financial failure. Its report for 1911 shows a "gain" of \$1,321.81 for the year, but in another place the commissioners state that a law suit begun "more than a year ago is still lagging on and has cost the city thus far many thousands of dollars to end it." There is no mention of the "many thousands" in the accounts of the plant. The taxpayers, users and non-users of electric light alike, pay that money.

The suit mentioned is an injunction against spending money to rebuild the plant. The depreciation of the plant has not been properly charged off. The plant is completely worn out, though the depreciation fund amounts to only one-seventh of the cost of the plant. In other words, there is an investment of \$124,085.33 not represented by depreciation which must be written off with the exception of \$16,975.03, which represents land and buildings.

**Butler, Mo.**—H. M. Cannon, manager of the municipal electric plant, wrote, in 1914, as follows: "I have had enough experience with municipal ownership to know it is a dismal failure. I have figures to show that our plant has always been a failure and an expense to the people. The trouble with municipal ownership lies, in the fact that in the larger cities it soon drifts into public corruption and favoritism, and in smaller cities, where the council changes every year, the men and management never know what to depend upon, have no interest in the business other than their wages, and let things go to rack."

**Butler, Ohio.**—The municipal electric plant consumed so much fuel that in 1914 the council turned off the street lights on all nights but Saturdays. The tax levy for street lighting, however, was just as high as before. The deficit for 1913 was about 100 per cent of the revenue from private consumers.

**Caldwell, Ohio.**—This village of 1,800 has municipal water and electric light plants, against which \$44,500 in bonds had been issued up to the close of 1914, when the plant probably could have been reproduced for \$30,000. There was a loss on the plant for 1914 of \$5,844, or 175 per cent of the total revenue from private consumers. On that basis electric rates should have been 22.8 cents instead of 8 cents, while a certain water rate for homes should have been \$55.58 instead of \$19.50.

**Calgary, Canada.**—The municipal street railway system, with its 2½-cent fare, proved a failure. In 1914 its actual income was \$702,531 and expenses paid were \$698,698. The funded debt of the system was \$2,280,210, upon which there was an annual interest charge of \$106,359. The depreciation charge was \$29,299 in 1914, or less than 1½ per cent, which, of course, was absurdly low. Five per cent would be as little as conditions warranted. If the city had allowed 4 per cent depreciation, its loss for the year would have been \$58,000, net.

**Canal Dover, Ohio.**—The people started out to build a municipal electric light plant in 1908. They voted \$35,000 as the cost. It took three years and \$60,000 to get the plant in operation and this \$60,000 did not, of course, include expenses for election, litigation, preliminary reports, etc. In one year the light plant produced a loss of \$11,850. And that was not the first nor the second year of its operation, either. This loss was almost 100 per cent of the total revenue from private consumers. It was found necessary to increase the city's tax rate 10 per cent.

**Carthage, Ohio.**—When the town was annexed to Cincinnati the water and electric plant was abandoned, most of the equipment being sold for junk, and the electric pole line sold to the Union Gas & Electric Co.

**Casselton, N. D.**—The municipal electric light plant was installed in 1897 and sold in 1903 at about one-third of its cost.

There was a large deficit each year under municipal ownership.

**Cedar Rapids, Ia.**—In a decision of the Iowa Supreme Court in 1913, the court pointed out that municipal ownership was very costly to the people of Cedar Rapids. The people voted to buy the water works with the understanding that the rates would be reduced. The rates were not reduced, but, instead, a special tax levy is made to meet expenses connected with the plant which cannot be met from the revenue of the plant.

**Central City, Neb.**—Finding that municipal ownership was too costly, the city sold its electric plant to the Central Power Company.

**Chardon, Ohio.**—The municipal electric light plant has been such an expense that the people have four times voted down the proposition to establish a municipal waterworks. The books have not been kept accurately, and an investigation showed that the deficit in 1913 was \$1,860.83.

**Chariton, Ia.**—In 1914 the people voted to sell the electric plant because the town had no more money to spend on it.

**Chehalis, Wash.**—The municipal electric plant was leased to a private company about 1906, because it could not be made to pay. There were also serious accusations against the city officials in charge of the plant while under municipal management.

**Cheraw, S. C.**—In April, 1912, the voters authorized the town council to sell the municipal electric light plant to the Blewitt Falls Power Company, the purpose being to get cheaper and better service.

**Chicago, Ill.**—The loss on the municipal electric light plant operated by the Sanitary District of Chicago amounted to \$19,781.10 in 1911. The total losses during the four years of operation up to that time amount to over \$600,000. The actual expenses of the electric department of the Sanitary District for 1911 were \$901,723.47, while the total income from the sale of electric current amounted to \$701,942.37. In order to make a showing more favorable than the above the officials have charged part of the investment costs to other departments, and have neglected to make adequate provision for depreciation. On Jan. 8, 1914, the Chicago Tribune, always a defender of the Sanitary District administration, said: "The demonstrable fact is that the present cost of producing electricity is at least twice as high as it should be. This excessive cost is due to three general conditions: unsystematic engineering plans, grossly padded payroll costs, unbalanced consumption of the power of the plant. These three faults are all due to politics."

The waterworks has been run at a loss for years. Dabney H. Maury, consulting engineer for the "Merriam Commission," reported in 1911 that the plant was obsolete, and large sums were needed to put it in good condition. Aldermen place this sum at \$15,000,000. The leakage is astounding, being over 70 per cent. A water famine is a regular summer affair, owing to inefficient pumping and water waste. The rates are far too low. On account of the poor character of the service it is estimated by insurance engineers that the people of Chicago pay about \$1,500,000 annually in extra insurance premiums. In addition to water rates the property owners have to pay, in many cases, special assessments, for construction. In 1910 these amounted to \$152,436.76. It is impossible to estimate the millions of dollars invested in pumps which are necessary in all buildings over three stories high. In regard to actual cost the commissioner says in his 1910 report: "Nobody knows. The necessary accounting is not done."

**Chickopee, Minn.**—On Oct. 1, 1912, the city shut down its municipal electric plant, where the station operating expense alone was over 9 cents per kilowatt hour, and made a contract with the Minneapolis General Electric Company for service. The high generating cost was due to the discontinuance of electric service by some of the large power customers because the service was too unsatisfactory and unreliable.

**Chicopee, Mass.**—C. W. Whiting, consulting engineer for the Municipal Light Commission of Chicopee, made an examination of the plant in 1911, and found the equipment, which had cost \$65,000, to be worn out and practically useless. He found it would be necessary to spend \$90,000 to put the plant in condition adequately to serve the city. The report recommended a revision of rates, as a customer using 150 kilowatt hours can save \$1.40 by having one more kilowatt hour. The allowance for depreciation had been made a bookkeeping charge only.

**Chilton, Wis.**—This city attempted to establish a municipal electric plant in competition with the Calumet Service Company, but was prevented from doing so by the Supreme Court of Wisconsin. The decision (made in 1912) says:

"During the latter part of the 10-year period of the Bink franchise, the owner became financially weak and did not efficiently maintain the plant and give altogether satisfactory service, though largely or wholly because of defendants' (the city's) fault. The latter, ostensibly because of such poor service, refused to deal with such owner; whereupon the latter offered to comply fully with the franchise, or sell to the city,

or meet any competition, but said city refused all advances in that regard and invoked the Railroad Commission, Dec. 23, 1907, to grant a certificate of public convenience and necessity, authorizing another public utility in the city. The proceedings were dismissed because of the existing public utility and defendant's failure to proceed in reference thereto as contemplated by the public utility law.

"Notwithstanding the refusal to deal with plaintiff's predecessor, under the public utility law or the old franchise, public and private lighting was continued until January 17, 1908, though payment for public service and recognition of there being any existing privilege in the matter were refused. Hostility by the city, its efforts to have the claimed privilege superseded, as indicated, or by proceedings, by the attorney general, destroyed the then company's credit, caused its legitimate business to drop and forced it to temporarily suspend. However, it continued all reasonable endeavors to make some sort of arrangement with the city and failed in that regard."

Concerning the Public Utilities Law it says:

"That one of the principal mischiefs sought to be remedied by the new system, was elimination of the conditions promotive of hostilities between municipalities and public utility companies, after making large investment by permission and invitation to serve the public directly as well as indirectly—bitter controversies, sometimes for good reasons and sometimes not, but in any event at the expense of consumer of the product—seem quite certain.

"It likewise seems certain that one of the major means for attaining the desired end was elimination of excessive investments, and excessive expenses caused by two or more public utilities, each with its separate property and fixed charges, where the need of the consumers only required one, and elimination of risk to investors by encroachments, or threatened encroachments, upon an occupied field of public service without any public necessity therefor. Doubtless an unvarying and invariable economic law was squarely faced and appreciated, that all such subjects for elimination represent waste, which if not avoided would, in the main, fall on the product, increasing the cost of service per unit and be paid by the consumers. It was the interests of consumers which was the prime subject of legislative solicitude; such object to be conserved without injustice to others.

"In the situation pictured it could not have escaped legislative consideration and, necessarily, would not have been considerably left unguarded against that in the cities and villages of the state; in general, public utility service at the lowest practicable rates with the highest practicable efficiency is impossible without combining the municipal service with that to others.

"Further, it could not well have escaped appreciation and been left unguarded against, that one of the fruitful sources of waste to ultimately fall, largely, if not wholly, on consumers, and fruitful sources of wasteful controversies and injustice to owners of existing investments, many of whom were bondholders as in this case, was opportunity for municipalities to unreasonably menace existing investments by threatening to displace, or actually displacing, in whole or in part, existing public utilities in cases where proper regulation would secure efficient operation—ample efficient service in the whole field, thus creating waste in many ways and to a large amount in the aggregate, to the impairment of efficiency in general, and enhancement in cost per unit of service to the consumer, contrary to the purpose of the act."

**Christianburg, Va.**—The municipal electric plant was established in 1900. In 1907 the generating plant was shut down and power purchased from a private company. In 1908 the distributing system was sold to a private company which promised to make extensions and improvements which the city could not afford.

**Cincinnati, Ohio.**—The Madisonville municipal electric plant is a mystery to the people of Cincinnati. They are unable to get any facts regarding it. An investigation made in 1914 disclosed the fact that even the city officials themselves had never collected any comprehensive data regarding the plant. There is a discrepancy of hundreds of dollars between different reports of the same transactions. The city electrician reported a surplus of income over bare operating expenses of \$490.98 for 1913. Fixed charges turn this surplus into a deficit of \$15,698.70.

**Clarion, Ia.**—On July 9, 1910, the municipal lighting plant was sold. The plant had been a persistent loser, and was practically depreciated out of existence.

**Cleveland, Ohio.**—The municipal electric plant has been a consistent money loser ever since its establishment. A complete plant, which was to give cheap light to every citizen, was estimated by F. W. Ballard to cost not over \$2,000,000. Up to 1919 the municipal plant had as customers less than one-sixth of the actual users of electricity in Cleveland, the rest being supplied by a private company. It supplied only one-third of

the street lights, the company supplying the remainder. Its total plant capacity was rated at 17,000 kilowatts, while that of the company was 135,000 kilowatts.

Mr. Ballard, the plant's original manager, and one of its founders, stated, in 1915, shortly before his resignation, that "We expect to make \$200,000 surplus for the year 1915." The plant actually lost \$58,219 in that year, as established by Nau, Rusk, & Swearingen, certified public accountants, of Cleveland, who were employed by Mayor Newton D. Baker to report on the exact financial condition of the plant and settle some of the controversies which centered about it. They devoted about ten months to the investigation. This was evidently considered by the accountants as an unusually long period, for they said in their report: "The delay in rendering this report and the almost inexplicable length of time it has taken to prepare the statements herein must be entirely attributed to the chaotic conditions of the bookkeeping records for the year 1915." About seventy pages of the report were given over to corrections of errors found in the bookkeeping. The accountants found and reported that during 1915 the plant had capitalized one-half of its bond interest. The total amount of bonds outstanding was \$2,817,000 (on \$70,000 of these half the interest was not so capitalized) and the total investment in the plant \$3,667,688. In November, 1916, another bond issue of \$1,750,000 was voted, making the total bonds more than \$4,500,000. Originally they were \$2,770,000. The report further showed receipts for 1915 to have been \$548,574.72, operating expenses \$428,669.74, leaving \$119,904.98. From this the report shows the following deductions: Funded debt interest, \$112,655.90; other interest, \$9,545.48; interest on city investment, \$24,229.32, and taxes foregone, \$31,693.72, making a total of \$178,124.42. This exceeds the gross income by \$58,219.44. It was shown that the project could not have been financed at an interest rate of 4.5 per cent if the entire credit of the city had not been behind it.

**Cleveland, Ohio.**—The State Bureau of Inspection and Supervision of Public Offices examined the books of the South Brooklyn municipal electric plant for the three years ending 1908 and showed the following costs per arc lamp: 1906, \$81.10; 1907, \$73.15; 1908, \$69.25. Compare these with the claims of the municipal manager—1906, \$58.25; 1907, \$73.37; 1908, \$48.13. Compare them further with the prices paid by the city of Cleveland to the Cleveland Electric Illuminating Company for lights in areas not covered by the municipal plant—1906, \$69.72 per lamp; 1907, \$67.92; 1908, \$54.96. During the four years ending 1909 the lights furnished by the municipal plant cost \$133,000. If these lights had been furnished by the Cleveland Electric Illuminating Company they would have cost \$109,000, showing a loss to the city of \$24,000 on the small proportion of lighting done by the municipal plant.

Public Service Director Lea, in July, 1910, said of the two municipal light plants owned by the city of Cleveland: "For weeks accountants have been trying to arrive at a correct posting of the records of the two plants so as to enable us to tell whether they are paying or losing. I am satisfied that both plants have never earned a cent, if depreciation is figured in. Figures already compiled tell us this, but the system of bookkeeping employed has not been detailed enough to give us an accurate accounting."

**Coal City, Ill.**—In August, 1911, the municipal lighting plant was sold to the Public Service Company of Northern Illinois. The town had been losing money on its operation for fifteen years. The first cost of the plant was 20 per cent above the estimates. William E. Somerville, president of the board, says: "Depreciation was never figured on while we were running the plant. It should have been, of course, and many other things should have been figured on, too, for that matter, but they weren't. Under municipal ownership our plant was never run on a business basis, and from a business standpoint it was run at a steady loss. We corrected the evil, however, when we sold the plant, and as a result we now get much more satisfactory service at less money."

The original estimate of the cost of the plant was \$12,000, but this was too low, and \$15,000 was spent before the plant was completed, an increase of 25 per cent over the estimate.

**Columbia, Ala.**—The municipal electric plant was in existence two years, being sold in 1908 because the town could not afford to meet the losses in operation.

**Columbiana, Ohio.**—The State Inspector reported, under date of March 29, 1913, as follows: "The village owns and operates a water and light plant. Said plant is not self-supporting, as transfers amounting to \$6,000 have been made from the service fund to the water and light fund during the period covered by this audit."

**Columbiana, Ohio.**—The State Bureau for the Supervision of Public Offices examined the water and electric plants a few years ago, reporting the physical condition bad, and the financial condition worse. "Grave irregularities" were reported,

such as the issue of vouchers in such sums as to cause overdrafts of public funds and the failure of the clerk to keep any record of the water and light funds in his appropriation ledger.

**Columbus, Ohio.**—The Bureau of Municipal Research, of New York, examined the municipal electric plant, and reported in part as follows:

"The statement of bonds outstanding does not agree with the records of the sinking fund trustees, owing to the omission of a series of electric lighting supply (4 per cent) bonds amounting to \$18,000, issued in 1905, due 1915.

"Unless the rates are very carefully adjusted to take this fact into account, those utilizing city power for private residential lighting will receive a portion of this service at the expense of the taxpayer of the city."

There was an apparent profit for the year of \$216.41. However, the expert found that this took no account of sinking fund and interest. Sinking fund amounted to \$20,000 and interest to at least that much more. Taking \$40,000 or more from \$216 did not leave much "profit."

The experts stated in their report that the accounting system of this plant management was bad and needed replacing by an "efficient method." They also condemned the "politics and vascillating policy" of the management. They recommended that the management of the city water and light plants be combined, taken out of the hands of the city council and turned over to "specialized commissioners."

This plant was built originally in 1898 with \$68,000 raised by bonds, which amount the promoters said would be sufficient. It was only the starter. In 1901 the plant was reconstructed and then began successive bond issues, leading up to \$910,500 by 1915, aside from \$50,000 subscribed and paid for by the sinking fund commission. The net cost of the plant to the city in 1913 was \$245,751, instead of \$125,659, as reported by the lighting department. This plant has been the source of continual trouble, turning up its share of costly investigations and prosecutions, practicing favoritism and unbusinesslike methods in letting contracts and hiring employees. In 1916, when as a means of helping the city to meet a deficit, the light plant management suggested curtailing service, the Daily Citizen of Columbus observed: "Had the light plant been operated efficiently the last few years, there would be no need for retrenchment in the matter of street lighting today."

**Columbus, Ohio.**—The 1910 report of the municipal electric plant said: "It is necessary to call your attention to some of the conditions existing at the light plant at the beginning of January, 1908, and what was done to eliminate them.

"There was a lack of information and records giving the costs, location and number of poles, lamps and a map showing the location of lines, etc. The overhead lines were in poor condition; every wind that came up broke the leading wires at the lamps, and wires falling down on wires of other companies. This resulted in poor service and a very large maintenance cost.

"The current supplied was 6.6 amperes and should have been 6.9.

"Switchboard meters were never calibrated, and it was necessary to recalibrate them and send same to factory for repairs before any accurate record could be obtained.

"Boilers were very scaly, coal conveyor in poor condition, a very poor grade of coal was being used and the amount of coal burned was excessive."

**Columbus Grove, Ohio.**—When in 1902 this village started in to buy its electric plant from a private company it incurred legal expenses to the amount of \$4,000 in the process, but this \$4,000 was paid from general taxes and never charged to the cost of the property, which was put down at \$15,000. This is a common practice of municipal ownership. In one year the plant's gross income from private consumers was \$7,828 and credit for public service \$2,155, making \$9,983. Its operating expenses alone were \$8,404, to which was added fixed charges of \$7,300, making total expenses \$15,704 and the deficit, therefore, \$5,721.

**Concord, Mass.**—The report of the Electric Light Board for 1910 says, regarding the law requiring that depreciation be charged in municipal plants: "Reference was made to this law in our report of last year, and the town took no action in the matter. We again call the attention of the town to Section 21 of Chapter 34 of the revised laws, as amended by Section 1, Chapter 411, of the Acts of 1906. We respectfully refer the consideration of this matter to the town." Depreciation has never been charged off by this town. In 1910 it would have been, according to law, \$4,320 (3 per cent of \$144,021), and would have created a deficit, as the cash balance was only \$1,645.21. The city appropriated \$5,000 for operating expenses, and spent \$20,000 in 1909, a large part of which went for replacing worn-out equipment which had not been charged off to depreciation.

**Council Bluffs, Ia.**—Municipal ownership has not lowered water rates, but it has increased taxes by at least 5 mills.

according to a report of the State Examiner of Public Accounts made early in 1914. The meter rates for water are the same under municipal ownership as under the old company. The flat rates are higher. Under private ownership the people were taxed 2 mills to pay for hydrant rental. Now they are taxed 2 mills on account of water bonds, and 5 mills additional to meet running expenses.

**Crawfordsville, Ind.**—In 1910 Prof. J. W. Esterline, of Purdue University, was engaged to examine the municipal electric light plant with a view to rehabilitation. He recommended that the entire plant be scrapped, as it was worn out and obsolete. He estimated the cost of a new plant at \$93,000.

**Cuba, Ill.**—The city council has decided to sell the municipal electric light plant. Bids for the plant will be received by Virgil Durand, city clerk, until Aug. 13.—*Electrical World*, June 22, 1912.

**Cumberland, Wis.**—The State Railroad Commission ordered the municipal lighting plant to increase its rates in 1909 because the plant was losing money. The 1900 deficit was \$961.65.

**Cuyahoga Falls, Ohio.**—The municipal water and light plants piled up a deficit of \$14,057.24 in 1913, according to an investigator, who also found that the plant is ready for the scrap heap, and that political interference prevented the plant from being run economically.

**Dana, Ind.**—Municipal electric light plant sold to the Clinton Light & Power Co. for \$6,700.

**De Graff, Ohio.**—This village of 1,000 population has paid dearly for municipal ownership. It built its own electric light plant in 1893. Its deficit in one year amounted to \$3,188.36 and for more than twenty years it kept taxes so high as to discourage facing further debts for new ventures. In the summer of 1913 fire gutted the heart of the town, entailing a loss of about \$100,000. This could undoubtedly have been prevented, but for the lack of water. The town had no waterworks. Its electric plant absorbed all surpluses, by continuously creating deficits, which might otherwise have been invested in a waterworks.

**Decatur, Ill.**—When the people got an estimate on the cost of municipal lighting plant the figure was \$52,000. Later it was thought well to add more lamps, so the figure rose to \$60,000. Then the figure went to \$75,000 in order to provide high grade equipment. The real cost was \$90,000.

**Delta, Iowa.**—The municipal gas plant was disposed of in 1908. The new owner reduced the price of gas and relieved the taxpayers of the losses they had had to meet under municipal ownership.

**Dexter, Mo.**—The municipal electric plant was leased to B. F. Eicholtz in 1905 and later sold to him.

**Dubuque, Iowa.**—In 1907 the scandals surrounding the operation of the waterworks came to a head. The plant had then been municipally owned seven years. It was purchased for \$545,000, the idea being to take the plant out of politics, to extend the system, reduce taxes from "profits," reduce the "robber rates" which "oppressed" the manufacturers and domestic consumers. It was necessary to levy taxes to meet interest and sinking fund payments. Taxes to the amount of \$46,000 were raised. The city had paid the company \$12,000 for hydrants and other charges, so the increase in taxes used for water purposes was \$34,000. Large debts were incurred and kept a secret as long as possible. The trustees, manager and several employes were forced to resign and it was hard to get responsible citizens to act on account of their fear of besmirching their characters.

**Dunkirk, Ind.**—This city tried municipal ownership of electric light for three years, beginning 1901. In 1904 the city lost the plant to the bondholders, paying them \$2,300, besides meeting the operating losses during the period of municipal ownership.

**East Chicago, Ind.**—The operation of the municipal electric plant was so unsuccessful during the first three years (1900-1903) that a receiver was appointed. The plant was sold to a private company for a fraction of its cost in 1907.

**East Grand Forks, Minn.**—The municipal electric plant began operation in 1902. In 1907 it burned. Five days afterward the people held a mass meeting and decided unanimously not to rebuild. A contract was made with the company in Grand Forks, N. D., which is still in effect (1912).

**East Point, Ga.**—In 1914 the city shut down its generating plant and has since purchased electricity from a private company, reducing the deficit by over \$500 a month.

**East Portland, Ore.**—When the city consolidated with Portland it was not considered worth while to continue the year-old municipal electric plant so it was sold.

**Easton, Pa.**—The municipal street lighting plant has been the subject of criticism by city officials and citizens for many years. The manager, in his report dated April 1, 1911, recommends the purchase of current for part of the service, and says "a saving would be effected."

**Edgewood, Ga.**—The municipal electric plant had been in operation only a year when it was shut down in 1908 and sold,

the citizens getting their light from the Georgia Ry. & Light Co.

**Edmonton, Alberta.**—According to the statement of W. T. Woodroffe, superintendent of the municipal street railway, there was a deficit of \$26,495 during the year 1912. The *Official Gazette*, the city's publication, reports that the loss on the municipal street railway up to Jan 1, 1914, was \$405,394.

**Elgin, Ill.**—The municipal plant was turned over to a private company in 1904, after sixteen years of unsuccessful operation, during which time the loss is estimated to have been at least \$100,000. In 1911 the city tried to sell its generating machinery (which the company had found too antiquated to operate) and, although this machinery had cost the city \$50,000 twelve years before, the only bid received was an offer of \$1,000, delivered at Chicago. Depreciation, it is therefore evident, was at the rate of over 8 per cent, for which no allowance had ever been made during the time the city operated the plant.

**Ellensburg, Wash.**—Rates of the municipal light and water plants were raised, after several years of losses, in an attempt to make the plants pay. The rates for lighting were advanced, for instance, beyond those paid a private company by the neighboring town of North Yakima.

**Ellisville, Miss.**—In April, 1912, the people voted by an overwhelming majority to ratify the aldermen's action in selling the municipal lighting plant to the Laurel Railway, Light and Power Company.

**Ellwood City, Pa.**—The municipal generating station was unable to carry the load after three years' operation, so, in 1904, it was shut down and has been idle ever since, the city purchasing electricity from the Pennsylvania Power Company.

**Elk Rapids, Mich.**—The municipal electric plant did not pay and was sold in 1908 to the Elk Electric Company.

**Elma, Ia.**—By popular vote the city abandoned its municipal electric plant because it could not be operated without loss.

**El Paso, Tex.**—When the city bought the waterworks a rate of 20 cents per thousand gallons was put in effect. This was found to be such a heavy loser that the rates under municipal ownership had to be increased to 30 cents.

**Emaus, Pa.**—In 1895 the borough sold its electric plant, five years old, for one-third its original cost. The reason for selling was high cost of operation. A company supplied light at a much lower cost.

**Emporia, Kan.**—After leasing the municipal electric plant to a private company in 1912 the number of customers grew from less than 500 to over 1,300 in a year's time, showing that the plant was not properly managed under municipal ownership. It was freely admitted at the time the lease was made that the city's books had been so confused that it was impossible to tell the true financial condition of the plant.

**English, Ind.**—Seven years after the municipal electric plant started it was sold on account of the large losses incurred. The plant was sold in 1907 for about one-third its original cost.

**Escanaba, Mich.**—Only five years after the municipal electric plant started the finance committee of the council recommended that it be sold on account of inefficient management and losses. This was in 1905. The plant was not sold, but in 1908 the generating plant was abandoned and current purchased from a private company. Complaints of service are common among the citizens and in the newspapers.

**Fairbury, Neb.**—The city has light and water plants which it bought for \$135,000 with 5 per cent bonds, \$10,000 of which have been redeemed. The plants do not pay anything from earnings for bond redemption or interest. The city makes a direct tax levy for both annually.

**Falls City, Neb.**—Both the municipal water and light plants were economic failures and in 1916 an examination showed an absence of systematic records. The city engineer run the plants and a water and light commissioner made collections. There was some sentiment and a move toward selling the light plant.

**Farmington, Utah.**—Owing to unsuccessful operation, the city offered its electric light plant for sale to the highest bidder. The income from the plant, with the rates it charged, was not enough to pay interest on investment and depreciation, so the city gave up the effort.

**Fayette, Ia.**—After eight years of municipal ownership the people voted to abandon the city electric light plant and grant a franchise for the service to the Turkey River Power Company.

**Fayetteville, N. C.**—The municipal electric plant shut down its generating station in 1908, after six years' operation, and has since been purchasing power from the Carolina Power & Light Company for less than it cost the city to make its own power.

**Fergus Falls, Minn.**—At an election April 2, 1912, the citizens defeated the proposition to rebuild the city's waterpower dam, which had insufficient storage capacity to give steady service. Current is purchased now from a private power company.

**Findlay, Ohio.**—This city tried municipal ownership of a gas plant, but ran heavily in debt and sold the plant in 1899, the outstanding obligations at that time being over \$60,000. When

Findlay went into municipal ownership it purchased the plant from a private company for \$75,000. An additional investment of \$40,000 was made immediately after the purchase and from time to time money was spent until the total obligations amounted to over \$310,000 at one time. When the natural gas wells gave out in 1899 the city had no available funds for the construction of a \$150,000 artificial gas plant and therefore decided to sell. Instead of increasing rates to cover an expenditure of this sort, the plant was sold to the Citizens Gas Light and Coke Company for \$150,000. This company is still furnishing natural gas in Findlay. When asked about the plant, the former superintendent of the municipal plant said:

"When the city owned the plant unnecessary expenditures were constantly being made, while in many cases necessary improvements were ignored. The pipe line, some of which was thirty years old or more, was in very bad shape. A large amount would have been necessary to put the plant into shape by the city. It was therefore sold. The company immediately set to work to remedy the defects in the old plant, so that now practically all of the pipe lines in the city are new. No city can own and properly operate a gas plant."

**Florence, Neb.**—This little city, seven miles north of Omaha, Neb., is the site of the Omaha Metropolitan (municipal) water works' chief reservoir and pumping station. Under private ownership, Florence got most of its tax revenue from this plant. Under municipal ownership it reported to the Nebraska state authorities its inability to redeem \$3,000 Florence school bonds past due, giving as the reason, "the withdrawal of the water plant from the tax rolls."

**Forest Grove, Ore.**—In 1909 a municipal light and water plant was built, bonds being voted on the promise of low rates. In the summer of 1910 the rates were raised to a higher point than those paid by customers of private companies in nearby towns. Customers were also forced to buy their own electric light and water meters. In 1912 the plant was shut down and sold to the Independent Electric Co.

**Ft. Wayne, Ind.**—H. P. Page, certified public accountant, made an investigation of the municipal electric plant in 1910 which showed that the plant lost \$29,784.47 between Sept. 1, 1908, and Jan. 1, 1910.

**Ft. Worth, Tex.**—In 1911 the city abandoned its electric street lighting generating plant and has since purchased power from a private company. In 1911 there were 446 arcs and 500 incandescent lights supplied from the municipal generating station. In 1912, a year after beginning to take current from the private company, there were 700 arcs and 1,150 60-watt mazda lamps, yet the cost with privately owned supply was almost identical with the cost of the much smaller installation which had been supplied from the municipal plant.

**Fostoria, Ohio.**—One of the worst ventures the city ever made was to embark in the establishment of a natural gas plant in 1885. It soon found this out and disposed of the losing plant.

**Frankfort, N. Y.**—The municipal electric plant was sold to the Utica Gas and Electric Company in 1907 because it could sell current for less than the operating cost of the municipal plant. The plant was then four years old.

**Fremont, Neb.**—Both the municipal water and electric light plants were shown to be economic failures by the engineering firm of Harold Almert of Chicago, engaged by the city to examine the plants and records. The light plant had been operated by the city for twenty years and had never paid a penny of fixed charges from earnings, sloughing off the whole amount every year upon the taxpayers. The two plants together to date (spring of 1916) stood the city \$627,062 and could, the engineers showed, be replaced for \$477,099. In the last three years, 1913, 1914, 1915, they had lost for the city \$21,590, besides having \$23,090 in bad and uncollected bills and an overdrawn bank account of \$8,365. The net losses for the light plant alone for 1913, 1914, 1915, respectively, were \$12,584, \$12,306, \$5,093. The last loss was less because, the engineers explained, the city had taken on a number of new buildings erected the previous year and had begun properly to bill for merchandise sold, which it had not done before. Yet there was a net loss of \$5,093. The taxpayers had sunk, all told, more than \$340,000 in their light plant alone.

**Fulda, Minn.**—The municipal electric light plant lost about \$1,000 a year, according to the mayor, so it was given away in 1902.

**Gaffney, S. C.**—In 1913 the municipal electric light plant was shut down. It had always lost money. Current is now purchased from the South Carolina Light, Power & Railways Company.

**Galena, Ill.**—The municipal electric light plant was started in 1898, costing \$18,000. It was sold March 6, 1906, to the Tri-State Light & Power Co. for \$13,000, including franchises. The city secured twice the lighting from the company at an increase of

only 10 per cent over the amount of the old bills. Service was so bad that at times there was no street lighting at all.

**Galesburg, Ill.**—In the winter of 1910-1911 the city was in darkness for a month, owing to inefficiency of the municipal water and light plant. The boilers were in such poor condition that both water and light service could not be maintained. The steam was therefore used to maintain water pressure and the lights were not operated. Later the plant was shut down completely and a contract made with the Galesburg Railway, Light & Power Company.

**Galva, Ill.**—The receipts of the municipal water and light plant for the year ending March 31, 1910, were \$4,258.76. The operating expenses were \$4,191.33, to which are added interest (5 per cent on \$18,000) \$900, and depreciation (7 per cent) \$1,260, and sinking fund (2 per cent) \$360, making a total deficit of \$2,452.27, or more than half the total income from both plants.

**Galveston, Tex.**—The new 200 K. W. steam turbine plant was shut down in 1911, and a contract made with the Brush Electric Light & Power Co. for current for street lighting. The change was primarily due to faulty designing of the municipal undertaking, the lighting plant being in the same room as the high pressure water pumps. This resulted in a 10-cent excess premium being placed on all insured property in Galveston. It was cheaper to abandon the new electric plant than to pay the insurance, so the move met with universal approval.

**Garden City, Kan.**—The city sold its telephone plant to the Arkansas Valley Telephone Company because of unsuccessful operation.

**Garretson, S. D.**—In 1912 the municipal acetylene gas plant blew up putting the system out of business.

**Georgetown, Ohio.**—The municipal electric plant has never paid operating expenses. The plant cost \$27,000, though the people were assured in advance that it would cost only \$15,000. The 1913 deficit, including fixed charges, was over 77 per cent of the total revenue.

**Germantown, Ohio.**—After twenty years of trying to make municipal ownership pay its own way the city sold its electric plant to the Dayton Power & Light Company in 1919.

**Gilroy, Cal.**—The municipal gas plant was leased to a private company in 1908, after municipal ownership had been tried for six years. The plant had, to use the words of a council resolution, "been conducted at a large loss to the city," and was in poor physical condition. The new managers practically rebuilt the plant in order to give adequate service. An investigation of the water and electric plants, made in 1912 by Charles Remington, showed a loss of \$13,635.39 for the year 1911. In 1916 the city grew weary of trying to make its electric plant come out even, and leased it to private parties for a period of ten years.

**Girard, Ill.**—Poor service and poorer earnings led the people to sell their municipal electric light plant in 1912. The vote in favor of selling was ten to one.

**Gloucester, Ohio.**—An investigation into the municipal water and electric plants made in 1914 showed that it cost 64 cents per kilowatt hour to make electricity in 1913. In a town of 3,500 population there are only 35 electric light customers. The water supply from 1898 to 1913 was mine drip, and could not be used for drinking purposes.

**Goldboro, N. C.**—In 1912 the municipal electric light plant was sold to the Carolina Power and Light Company, a contract being made at the same time for the operation of the city pumping plant by electricity. The high cost of operating the steam plants is given as the reason for giving up municipal ownership.

**Grand Ledge, Mich.**—The municipal electric plant was sold in 1908 to the Commonwealth Power Company, thereby getting lower rates and better service than could be obtained under municipal ownership.

**Grand Island, Neb.**—Hanford & Stone, public accountants, report that bond interest on the electric plant is paid from taxes, and not from earnings of the plant, and that the taxpayers have been assessed \$18,677 for light improvements and \$61,116 for water improvements on account of the insufficiency of the bond issues made for these purposes.

**Granville, Ohio.**—An investigation in 1914 showed that the cost of 250-watt mazda street lights furnished by the municipal street lighting plant, and burning only until midnight on a moonlight schedule, cost \$48.64 each in 1913.

**Gravesend, N. Y.**—The municipal electric plant, built in 1899, was never put in operation. When Gravesend was consolidated with Brooklyn the plant, which cost \$120,000, was sold for \$31,000.

**Greenwich, Ohio.**—Though a place of less than 1,000 inhabitants, the village has a municipal water and light plant able to show up a loss in a single year of \$3,693. This was 100 per cent of the gross income from private consumers, indicating that to make ends meet the electricity rate should have been 17 cents

instead of 8 cents per kilowatt hour and the water rate 45 cents per 1,000 gallons instead of 20 cents.

**Greenwood, S. C.**—The light and water plant was built in 1898, but was shut down in 1907, as it was cheaper to buy power from a private company. None of the bonds have been paid, nor is there any sinking fund provided.

**Griffin, Ga.**—On August 27, 1911, the municipal generating station was shut down, and power purchased from the Georgia Power Company. The report for 1911 shows that the water plant's receipts failed to pay operating expenses alone by nearly \$1,000, exclusive of all fixed charges. Without any allowance for interest, depreciation, sinking fund, or lost taxes, the combined water and light plants were overdrawn \$2,309.46 on Jan. 1, 1912. The above fixed charges, figuring interest at 5 per cent, depreciation at 7 per cent, and sinking fund at 2 per cent, making no allowance for lost taxes, would make the total deficit for the year \$12,809.46.

**Grove City, Pa.**—The deficit of \$1,433.11 in the municipal lighting plant during 1909 resulted in the removal of the street commissioner and a policeman.

**Hagerstown, Ind.**—The State Examiner reported, in 1913, that the electric light receipts for four years—1909, 1910, 1911, 1912—were \$5,445.58, and the operating expenses for the same period were \$8,668.29, leaving a deficit of \$3,222.71. "In addition to the above," the report continues, "there was paid from Jan. 1, 1909, to Dec. 31, 1912, for meters, borrowed money, engine repairs, cement and lumber, \$1,989.14. During this period there were net transfers from the general fund to the electric light fund of \$4,161.19. This, however, is not included in the statement of receipts. Municipal ownership has not proved a success in Hagerstown."

**Hamilton, O.**—The municipal water, gas and electric plants have all been disastrous failures. In 1906 a report made to the state auditor said: "The administration of the board of public service extending over the period stated heretofore, is marked with evidence of mismanagement, extravagance and unbusiness-like methods in the operation of public properties placed in their hands." The city reports do not include interest, depreciation, lost taxes or legal expenses and therefore purport to show a profit which quickly disappears and becomes a large deficit in the case of each plant when the total cost to the taxpayers is included. C. S. Metcalf, state examiner for the Bureau of Inspection and Supervision of Public Offices, examined the municipal water, gas and electric plants in 1911 and found them all losing money. His figures on the gas plant for 1909 are as follows: Actual revenue, \$46,277.80; total actual expense, \$71,108.81; loss in taxes (\$161,000 value, 40 per cent of value at 3.45 per cent), \$2,221.80; loss to city, \$27,052.01. The utilities owned by the city of Hamilton are reputed to be the worst operated in America, and have been subject to severe criticism by state and city official investigators for years. In his report Mr. Metcalf said:

"Two and a half years ago, the electric light plant, which was built in 1903, was a complete wreck, and the figures obtained from careful examination into the cost from bond issue and from transfer from tax levy, showed for the life of this plant, fifteen years, a cost per arc lamp of \$113.33, while other cities furnished by private plants showed a cost of from \$55 to \$75; therefore, it is the opinion, that inasmuch as the price per arc can be regulated by the council to a great extent, the problem of municipal ownership of this plant has not so far been a decided success.

"It is admitted by many that such is the case and we should accent the situation as follows:

"The old electric light plant is conceded to have been a failure, and the condition should be the same as any bankrupt company, but such is not the case; the money is gone and the taxpayer will never be repaid and the interest on the money he has in the old plant must be charged up forever. The situation has been that for the privilege of municipal ownership the taxpayer has paid the interest on the bonds, the sinking fund levy for the retirement of the bonds, and stood a tax levy each year for street lighting nearly as great as the levy would have been had the city purchased its electric current from a private corporation.

"Of course, it cannot be helped now; the money is gone and the only purpose in setting forth this argument is to warn the citizens of Hamilton that bond issues submitted to popular vote should be given careful consideration and that it is within the power of council to regulate the charges made by public utilities."

An investigation made in 1914 disclosed the fact that, although the city had abandoned its gas manufacturing plant, which is a pitiful wreck, and purchases natural gas, the losses in 1913 on this service came to over \$40,000, while the losses on the electric plant were \$23,956.27, and on the waterworks they were \$55,580.80. This means a loss of nearly \$400 a day to the taxpayers of Hamilton on account of the city's venture into municipal ownership.

**Hampshire, Ill.**—In 1907 the municipal electric plant was called "unprofitable to and a burden upon said village" in the ordinance under which the plant was sold for about two-thirds of its original cost.

**Hart, Mich.**—The generating station of the municipal electric plant was cut down in 1908 and current purchased from a company. The saving amounts to about 25 per cent.

**Harvard, Ill.**—Just before the municipal electric plant was sold in 1907 it was estimated that arc lamps cost over \$150 a year. The plant had been in operation twelve years, and was in bad condition.

**Hastings, Neb.**—With a municipal electric lighting plant generally regarded in the city as a fine physical enterprise, the taxpayers have always footed the bills for interest, depreciation and other fixed charges. "Never," said A. T. Bratton, city clerk, who keeps close tab on the plant, in answer to a question if the plant paid its fixed charges from earnings. The plant was valued in 1916 at \$190,000 in round figures. It was established in 1901. In 1916 it had not a pound of its original machinery or equipment. Every pound of this had been scrapped at a complete loss, never a penny being put aside for depreciation or replacement.

**Herington, Kan.**—The municipal electric plant was so badly operated that the loss amounted to \$3 per capita. The plant was sold, but as soon as it began to show a profit under private management, the people tried to get the profits by buying the plant back, with the usual result that all excess income disappeared.

**Hickman, Ky.**—The municipal water and electric plant was leased to a private company in 1906 in order to get rid of the deficits which were piling up under municipal ownership.

**High Point, N. C.**—In 1902 the generating plant of the municipal electric system was sold. Current was purchased at a price lower than the cost of operating the municipal station. Even with no generating problems the city plant cannot make money.

**Holgate, O.**—After fifteen years of municipal ownership of electric light and water works, the town went over to private service, making a contract with and granting a franchise to the North Western Ohio Light Company for transmission of current from its Leipsic plant.

**Hubbard, Ohio.**—The municipal electric plant burned twice and was rebuilt. Then it was so mismanaged that the town got better service and saved money by shutting it down and buying current from a company in 1912.

**Hudson, Mass.**—In 1911 the receipts of the plant were \$22,030.46 from sale of energy. The total cash spent during the year was \$27,792.72, not including any allowance for depreciation. The report for 1911 shows the loss on the plant since establishment to be \$20,924.94. The State Commission on Gas and Electric Light gives the loss as \$21,443.51. The average lighting rate is 12 cents per kilowatt hour. In towns adjoining, the private companies charge a maximum of 10 cents per kilowatt hour. The large manufacturers refuse to patronize the city plant because of high power rates.

**Hudson, Ohio.**—An investigation into the municipal water and electric plants in 1914 disclosed the fact that the electric generating plant had been abandoned in 1913 after only two years' operation. The plant was given to the town without cost by a philanthropic millionaire, but, without figuring anything for interest or sinking fund, the expenses in 1913 were 644 per cent of the gross revenue.

**Hudson, Wis.**—While the municipality built a lighting plant in 1888 it has always been able to lease it on better terms than the cost of municipal operation, so the city has never run its plant.

**Huntington, Tenn.**—By leasing the municipal electric plant the town is able to save on street lighting and get better service than it did when the plant was municipally operated. It was first leased in 1905 and has been run by lessees ever since.

**Huntsville, Mo.**—After buying the municipal electric plant from a company, and running it for several years, the city sold it again on July 1, 1913. The plant cost \$38,000, according to the McGraw Electrical Directory. It was sold for \$5,150, which included the cost of holding the special election. The sale practically amounted to a gift, the purchaser merely agreeing to pay off the outstanding bonds. The plant was so badly run down that it had to be rebuilt.

**Huron, Ohio.**—The municipal electric light plant was built in 1898, but an investigator in 1914 found that there is no record of its cost on the city books. In 1909 the original plant was abandoned and the machinery installed in the waterworks which was built in that year. The 1912 deficit was \$7,717.61, that of 1913 was \$11,506.78 and for the first half of 1914 was \$4,596.69. The deficits for 1912-13 and January-June, 1914, average about 150 per cent of the gross revenue from private consumers during that time, after making a proper credit for street lighting and hydrants.

**Ionia, Mich.**—Dr. Geo. P. Winchell states that the plant is a heavy loser. No depreciation account is carried, and the interest and sinking fund are paid by taxes. Dr. Winchell estimates the annual loss at \$2,000 or more.

**Independence, Mo.**—Judgments amounting to \$50,000 against the city for personal injuries to men connected with the municipal electric plant were pending in 1914, but the city had no money, and had to levy a special tax to make payment.

**Itaska, Tex.**—According to M. J. Francisco, the municipal electric plant operated about six months at a loss of \$100 a month. The mayor was then authorized to sell the plant, which he did at a loss.

**Iuka, Miss.**—The municipal electric plant is leased to J. N. Graham. The city could not keep a competent manager and found operation unsuccessful.

**Jackson, Ga.**—The generating station of the municipal electric plant was shut down in 1912 and power purchased from the Central Georgia Power Co., according to "Public Service." Even though it was necessary to spend \$12,000 to build a new sub-station, it was cheaper to purchase power than run the old station.

**Jacksonville, Fla.**—Up to 1912 the municipal electric plant demanded a minimum of \$2.00 a month, or \$24.00 per year, from all consumers, whether they used that much current or not. Thus a customer using 10 kilowatt hours in a month paid 20c per kilowatt hour, although the advertised rate was only 7c. In 1912 this was modified by abandoning the minimum and substituting a "service charge" of 50c per month which must be paid in addition to the cost of current. A customer using 10 kilowatt hours pays 50c service charge plus 70c current charge, or \$1.20, making the true cost per kilowatt hour 12c. A special cooking rate of 2c per kilowatt hour has been much advertised, but current under this rate is not available between 5 p. m. and 10 p. m. So its use is very limited. Customers using this rate must also pay all installation costs. This expense, which is very high, also tends to preclude a wide use of this rate. The city has also always paid the municipal plant for street lights at rates higher than those generally in force in other cities of similar size.

**Johnstown, O.**—An investigation made in 1914 disclosed the fact that the operating expenses for 1913 were \$3,873.31, while the revenue from private consumers was \$1,473.40, making a deficit on operation alone of \$2,399.91. Allowing a credit of \$675 for street lights and hydrants, and including the fixed charges in the expense makes the actual deficit \$4,837.41.

**Joliet, Ill.**—The municipal gas plant, established in 1857, was sold in 1859 to a private company, on account of the losses which had been incurred under municipal ownership.

**Jonesboro, Ind.**—This town tried municipal ownership in 1902, but could not meet expenses and the bondholders took over the plant.

**Kalamazoo, Mich.**—In 1912 the citizens had to vote \$125,000 to rebuild the municipal lighting plant, which was worn out. No depreciation fund was available.

**Kansas City, Mo.**—An investigation by the council in 1910 showed the following conditions: "We find that the management of the Quindaro plant is characterized by carelessness, shiftlessness and incompetency. The machinery and plant generally are dirty, and particularly the basement, and machinery therein is clogged with filth. Valuable tools are thrown about in outhouses and are uncared for. We believe that a complete reorganization of the force at this plant is absolutely essential and necessary to bring about the efficiency and safety of the source of water supply for this city, and we recommend that steps be taken immediately to put this plant in thorough repair, and that all machinery therein be put through a thorough overhauling."

**Kendallville, Ind.**—The municipal electric plant is not large enough to carry the load, having lost efficiency through depreciation. The council did not want to sink any money in new construction, so a contract has been made with the Toledo & Chicago Interurban Railroad Co. to furnish current for all customers which the municipal plant is unable to supply.

**Kent, Wash.**—Because it could not be made to pay after ten years' operation the municipal electric plant was sold in 1902 for \$2,500.

**Kinmundy, Ill.**—The municipal electric light plant was sold in 1909. The present owner writes as follows: "City's reason for selling—they could not make it go. The reason they could not, I believe, was principally because the committee did not know anything about running a lighting system. Every two years they had new committee men on the job, and being paid no salary, they would not look after the plant. As is usual in councils, every new man thinks his way is right. When they first had a plant here they used alternating current. Then a new board came along and said it should be direct current, so they sold the A. C. machinery and put in D. C. The voltage at the plant was 250 and at the end of the line it was 150. When they

did get a good man, they all thought they knew more than he did and did not keep him. When I took the plant, I told them about Tungsten lamps and they laughed and said, 'We have them now and they are no good.' I took one from the line and found it a 250-volt lamp. I tested the line and found that the voltage was 178. I am now using Mazda lamps exclusively. They sold me the plant for \$10,000. I pay for it in city lighting, a thousand dollars a year."

**La Crosse, Wis.**—In 1911 the citizens had to appeal to the state railroad commission to force their own officials to bring the water plant to a state of efficiency. The plant was so run down that it required \$250,000 to put it into shape. The water was so poor that it could not be used at all for domestic purposes. Several disastrous fires have been due to poor pressure.

**La Grange, Ill.**—In a letter to Arthur H. Grant, the village president made the following statement:

"The water and light plant in this village was erected by a private corporation under a thirty-year franchise. At the end of the first ten-year period the village exercised the privilege which it had under the franchise, and bought the entire plant. The original cost is not known; we paid (or agreed to pay) the sum of \$160,000 for it. Municipal control and ownership were not successful, and after a few years it was sold to a branch of the Edison Company, the consideration being that the purchaser assume all obligations standing against the plant and put it in good order. Nothing had been paid on the principal by the village.

"The cost to the village for incandescent street lights under the original franchise was ten dollars a year; under municipal administration no one can tell, as the plant ran down so greatly that the new purchaser has paid over \$168,000 so far to put it in good order and is not through yet. Contract price at present again ten dollars a year.

"Reasons for selling—the village could not raise the money necessary to rehabilitate the plant. Under our law we could not pledge the corporate credit, but only the plant itself; the prospect that the village could manage it successfully was not attractive to capital."

The plant was in operation about 4 years: at the end of which time, it had depreciated to the extent of about \$60,000, although the Public Service Company of Northern Illinois has spent about \$200,000 since the plant was purchased by it in 1905. The superintendent of the plant was in favor of selling and in his report thereon he said:

"Respecting the rates for light, both for public use (street lighting purposes and other municipal purposes) and for domestic consumption, I beg to say that the rates, as set forth in the proposed ordinance and agreement, are the same in price which we have now, but under which provisions both the village and the consumers will derive more current and service for the same money as heretofore paid. I recommend the passage of this ordinance and the signing of the contracts and the adoption of said rates. The present condition of the plant is such that I cannot conceive how it can be operated longer by the village without the expenditure of large sums of money, and the incurring of many obligations."

**Lake City, Minn.**—Writing to the Wisconsin Railroad Commission for information, J. Cole Doughty, representing the board of water and light commissioners, concluded thus: "Our plant under aldermanic lack of management was permitted to run down to what might have been bankruptcy in an individually-owned concern."

**Lakewood, Ohio.**—The municipal electric plant was installed in 1897, the total cost to 1906 being about \$60,000. Expert accountants found the cost of street lights on moonlight schedule to be \$129.56 per year in 1905. The plant was sold in 1906 and a street lighting contract made at \$55 per year.

**Lancaster, Pa.**—The Lancaster Examiner, referring to the "profitable" city waterworks, says: "At the end of the fiscal year 1910-1911 there was an apparent balance in the city treasury of \$113,371.46, but as only \$19,354.93 was carried forward in the estimates for the succeeding year, it is presumed that the balance of over a hundred thousand dollars was largely fictitious, and that the actual amount left over was \$19,354.93. The system of city bookkeeping is a peculiar one, and it takes a full-fledged journeyman in that particular system to understand its vagaries. If there was a balance in the treasury of \$113,371.46, it is mighty bad municipal bookkeeping if the city could not build a new boiler house, costing but \$30,000, without borrowing the money."

**Laurens, S. C.**—The generating station of the municipal electric plant was shut down in 1908 on account of the cost of operation, and current has since been purchased from the Reedy River Power Co.

**Langdon, N. D.**—The cost of the municipal electric plant, including purchase price and improvements, was \$17,500. After four and a half years' operation the plant was sold for \$9,000. The loss on operation was \$2,000 a year, making a total loss

during the time the city owned the plant of \$17,500. The plant was sold in 1906.

**Lawrence, Mich.**—The village gas plant has been an expensive investment. The taxpayers have to pay interest, sinking fund, depreciation, and make up the lost taxes, besides contributing cash for paying operating expenses. Gas is sold for \$1.25 per thousand cubic feet, and the operating expenses alone come to \$1.37 per thousand cubic feet.

**Lebanon, Ohio.**—The city bought a gas plant from private parties, paying \$5,500 for it. The city issued \$15,000 of bonds with the proceeds of which it paid for the plant and made extensions and improvements. The income of the plant at the time of this examination was a little over \$2,500. Interest on the \$15,000 alone was \$1,500, not to speak of sinking fund, depreciation and displaced taxes, while the operating expenses were \$2,000 a year.

The city built its water works in 1892 and first turned on the water four years later. What went on in the meantime seems hard to find out. In 1913, taken as an average year, the receipts of the plant from private customers were \$5,477, expenses as published by the city, \$6,172. But this bill of expense included none of the fixed charges. Interest amounted to \$1,575, depreciation at 4 per cent would have been \$2,080 and lost taxes \$676. And as \$3,500 of bonds were paid off during the year from general funds, that should have gone down in the report for sinking fund. With an income of \$6,752 for private custom and city service combined and a total expense bill of \$13,493, it is evident the city had a deficit from its water plant that year of \$6,740.

The municipal electric light and power plant produced a total income from the year of \$13,441, with expenses, as set forth by the city of \$12,825. But these expenses included no fixed charges, except \$550 for bond redemption. Fixed charges, which came from taxes, convert the apparent "profit" into a deficit of \$2,240.

**Lebanon, Tenn.**—The generating plant of the municipal electric system has been shut down since 1906 when it was found cheaper to purchase current than to take it.

**Lehigh, Pa.**—The municipal lighting plant was given to J. J. Blakely in 1900, he assuming the bonds. The plant could not operate without loss. The year before the city gave up the plant the loss was \$2,500.

**Leon, Ia.**—While the city owned the electric plant its affairs were in a constant tangle. In 1903 the city had to issue \$5,000 in bonds to meet operating expenses. Finally, in 1905, the plant was sold for one-third its cost, and the city still had \$3,000 of outstanding bills.

**Lethbridge, Alberta.**—The municipal street car lines of this city, like those of other western Canada cities, showed up with snug losses in 1916, as they had done in preceding years. The deficit for the Lethbridge lines in 1916 amounted to \$27,924.89, as shown from the official statement given out March 1, 1917, by M. Freeman, commissioner of railways for the city. Their total revenue was \$49,639.54, total operating expenses \$41,535.04, leaving an operating profit of \$8,104.50. But interest, sinking fund, taxes, insurance and bank commissions totalling \$36,029.39, wipe out this and give a deficit or loss for the year of \$27,924.89, with nothing mentioned for depreciation.

**Lewisburg, Tenn.**—The municipal electric plant, after five years' operation, was sold in 1908 for half its cost.

**Linneus, Mo.**—In order to get continuous and reliable service, the municipal electric plant shut down in 1913, and current has since been purchased from a company. The plant had been in operation only eight years when it was abandoned.

**Lisbon, Ia.**—The service given by the municipal electric light plant was so poor that the people became disgusted and sold the plant in 1912 to W. S. Tasker.

**Lisbon, Ohio.**—A council committee found, on investigation, that the city was furnishing water at from 25 per cent to 50 per cent less than cost, according to the character of the service.

**Lockport, Ill.**—The village electric plant passed from the hands of the village authorities to the Sanitary District of Chicago in 1907. The superintendent said, at that time: "We are running about \$300 to \$350 in debt every month, due to political handling."

**Logansport, Ind.**—An investigation into the operation of the municipal electric light plant in 1913 disclosed the fact that in the 17 years' operation of the plant there was a surplus in only one year, and it is claimed this surplus was secured by failure to maintain the plant properly. This claim is borne out by the fact that the deficit was twice as much in 1911, the year following the year of the supposed surplus, as it was in 1909. The total deficits from 1895 to 1911, inclusive, amounted to \$309,869. Deducting the 1910 surplus of \$12,000 leaves a net deficit of \$297,869 as the result of municipal ownership.

**London, Ohio.**—The municipal electric light plant was to have cost \$15,000, but before its erection \$20,000 of bonds had been

issued. In eighteen years the town has installed four sets of street lights. Including fixed charges and a proper credit for street lighting, the financial statement for a year stood: Revenues \$13,722, expenses \$20,502, loss \$6,780. This was about 60 per cent of the revenue from private consumption.

**Los Angeles, Cal.**—The Los Angeles Municipal News, an idealistic municipally owned newspaper, was discontinued in 1913, after less than a year's existence. The expected advertising patronage did not materialize and the loss was in the neighborhood of \$35,000 before the people voted to discontinue publication.

**Loudonville, Ohio.**—The municipal water and electric plant had a deficit of \$8,522.46 in 1913, and in addition the people had to issue \$20,000 of bonds to repair the plants.

**Lowell, Ind.**—When the municipal electric plant was sold in 1907, it was worth about \$1,500 as junk. The purchaser of the plant, who got a 25-year franchise, sold all the equipment of the old plant and built a new one. The plant was in operation by the city for only seven years but was unable to operate without loss. The town had been run into debt so far that it could not finance the rebuilding of the old plant, and so private parties were called in to take the burden off its hands.

**Lowellville, Ohio.**—The municipal electric plant was shut down in 1911 and current has since been purchased from a private company. The machinery was in such poor condition that the town has not been able to sell it to anybody.

**Lynchburg, Ohio.**—The water and electric plant had a deficit of \$2,127.86 in 1913. The plant is nearly worn out and the building is full of cracks. The roof has sagged to such an extent that it is highly dangerous. The distributing system is in bad condition.

**Lyons, Ia.**—When the village of Lyons was annexed to Clinton in 1902 it was decided to abandon the municipal electric light plant in order to obtain superior and cheaper service from the company operating in Clinton.

**Madison, Ind.**—The municipal electric plant was abandoned in 1898 after being in operation about two years. The city thereby saved about \$20 per year per lamp on street lighting.

**Madison, Wis.**—After the burning of the capitol, the state railroad commission put a pressure gage on a hydrant and then turned in a fire alarm. It was forty-two minutes before direct pressure was given by the municipal waterworks. Madison is surrounded by lakes, any one of which could be purified and made available for unlimited use.

**Manitoba (Province), Canada.**—The first year's operation of the telephone system under government ownership (1911) resulted in a deficit of \$50,000, despite an advance in rates over the former charges of the Bell company. The Government, when agitating for public ownership, promised reductions in rates averaging over 50 per cent. Instead of keeping these promises it was found that the Government could not operate, even at the old Bell rates, and there has been an advance in many of the rates, instead of a reduction. Government officials are flooded with complaints of deterioration in service since the province took over the system.

**Mansfield, La.**—The municipal electric plant was sold in 1908 because the city had no funds with which to pay the plant's bills.

**Marblehead, Mass.**—Because of inadequate depreciation charges, the city paid more for reconstructing the municipal electric plant in 1910 than the original cost of construction. The light board's report is so incomplete as to be unintelligible, but appears to show receipts just about equal to expenditures, without any allowance for fixed charges.

**Marceline, Mo.**—This town had one of the first municipal electric plants, but it did not pay. The city operated it at a loss until it burned. Sentiment was so strong against municipal ownership that the plant was not rebuilt.

**Marengo, Ill.**—In a letter to Arthur H. Grant, in 1908, the mayor said, regarding the leasing of the municipal electric plant: "Our reason for doing this is that we consider municipal management a complete failure and the less there is of it the better for all parties concerned."

**Marietta, Ohio.**—A recent investigation showed that the cost of street lights as supplied by the municipal street lighting plant on a moonlight schedule was \$69.25 in 1913. The lights were off completely for several months after the 1913 flood, while the officials were haggling over the question of rebuilding. Hardly a year has gone by when the lights have not been put out by high water, owing to the poor location of the plant. A private company offered to do the lighting for \$55 per lamp with deductions for outages, so the city is losing at least \$14.25 per lamp through municipal ownership.

**Marion, Ind.**—The generating station of the municipal electric plant was abandoned in 1910. The result is summarized in the mayor's annual report as follows: "A saving of exactly \$22.05 per lamp per year for street lighting, or a little over \$6,000 per year on the 278 lamps now in use, and a decrease of eight cents

in the city tax levy over last year." The report of the board of public works says: "The cost to produce current alone at the old city light plant for the year 1910, as per bills on file, show the following:

Cost of coal, freight and drayage, repairs to plant, supplies for plant, telephone, extra and relief men in plant.....	\$4,699.52
Regular labor in plant.....	2,980.00
Total .....	\$7,679.52

Or \$35.88 per lamp per year for current alone. The cost for current alone under the new contract is \$22.05 per lamp per year, making a saving to the city of \$13.83 per lamp per year, in addition to the reduced rate for commercial lighting."

**Martin's Ferry, Ohio.**—An investigation in 1914, covering the operation of the municipal electric plant from 1908 to 1913 inclusive, showed the deficits to be nearly 50 per cent of the total revenue from private consumers. The total deficits during the six years investigated amounted to \$68,860, in addition to the payments of \$6,000 to \$8,000 a year made by the city for street lighting. The waterworks was also found to be losing money.

**Mayville, N. D.**—In 1912 it was found necessary to rebuild the electric plant, for which bonds had to be issued, as there was no money to meet depreciation.

**McAdoo, Pa.**—After losing money for nine years, the municipal electric plant was leased, in 1908, for 25 years. The council thus stated the situation:

"The borough is now owner of a certain municipal electric light in the said borough, and in the operation thereof has encountered certain losses to such an extent that the cost of operation and maintenance together with the interest on the bonded indebtedness incurred by reason of the erection of such municipal plant, exceeds the income derived therefrom."

**McArthur, Ohio.**—After allowing over \$50 each for the street lights, which burn only until midnight on a moonlight schedule, the deficit on the operation of the electric plant in 1913 was over 200 per cent of the income from consumers.

**McKinney, Texas.**—Tiring of the inefficient service and uneconomic operation of its municipal electric light plant, the city sold the plant to the Texas Power & Light Company.

**McRae, Ga.**—The municipal water plant was spending \$3,500 a year more than it was taking in. In an effort to improve things, the city took the management away from the regular city government and put it in the hands of a board of business men.

**Menasha, Wis.**—The city refused to make a report to the state railroad commission on its waterworks. Finally the commission had to serve notice that unless the report was forthcoming the commission would send a man to make an investigation at the expense of the city. Water is pumped from Lake Winnebago without any treatment whatever, even though the lake catches all the sewage from its watershed.

**Mendon, Mich.**—When it was found that the municipal steam generating plant of the electric system was costing over \$1,200 a year more than the revenue of the plant, it was decided to abandon the plant in 1911 and take current from a private company.

**Miamisburg, Ohio.**—A municipal electric light plant was built in 1890-92. It at once became a financial burden to the taxpayers, who desired to build also a city water plant. It was fourteen years, though, before they could do this, owing to the unprofitable operation of the light plant. Regardless of the fact that the town paid usual rates for its water and light, both plants were losers up to the last investigation. The original electric light plant was scrapped and a new one installed in 1904, but the last bond of the original plant ran on until 1910—six years after the plant had been scrapped. Up to June, 1913, \$37,000 in bonds had been issued against the light plant, \$94,000 against the water works. In addition to these obligations, the "department of public service" raised extra money by notes, aggregating \$26,150 at 6 per cent from August, 1905, to 1914, much of which money went to these two plants. A report from the records of the lighting plant for 1913 showed a deficit of \$9,942.

**Middleboro, Mass.**—The municipal gas plant has always lost money. The most favorable accounting shows that there was a loss of \$1,719 in 1911, and previous to that time the losses had been much greater, amounting to over \$3,000 a year. The loss is nearly half the total operating expenses, without any allowance whatever for fixed charges, which are very high on account of the reconstruction of the plant during 1910. The loss on the combined gas and electric plants amounts to \$2,279.70 in 1911.

**Middletown, Pa.**—In a letter to Arthur H. Grant, regarding the abandonment of the municipal electric plant in 1907, the chief Burgess says:

"Concerning shutting down our plant and taking up York

Haven power is because the York Haven people can furnish light much cheaper than we could run our plant, so we felt justified in making the change."

**Milan, Ohio.**—After vainly trying to make a success of a municipal electric plant, it was shut down in 1914 and current purchased from a nearby company.

**Milford Centre, Ohio.**—In 1907 the municipal electric and water plants were sold at auction. They had been losing money at the rate of about \$1,200 per year.

**Mineral City, Ohio.**—The municipal lighting plant has been offered for sale to the highest bidder on account of the huge deficits. The plant has never earned more than half its expenses.

**Minerva, Ohio.**—This municipal plant claims to have earned a "surplus" of \$30,000 for its municipal electric plant, but there was so little real money available at the beginning of 1919 that the rates had to be increased nearly 20 per cent. Investigators are not permitted to examine the books, it is reported.

**Mitchell, Ind.**—Early in 1911 the municipal electric plant was sold to S. D. Rowland for \$7,103, the price including a waterworks franchise. The electric plant had been running twelve years, constantly losing money.

**Modesto, Cal.**—The city shut down its electric generating station about 1906, and leased the poles and wires to a power company. The plant was worn out, as no depreciation had been allowed for, and the city got cheaper service from the power company. The waterworks was also found to be losing money and was disposed of.

**Mohawk, N. Y.**—The deficit on the municipal light plant from 1897 to 1904 was over \$3,000 per year. In 1904 the plant was leased to a company at a saving of about \$4,000 per year.

**Moline, Ill.**—The city was able to save over \$35 per lamp per year, in addition to getting improved lamps, by giving up its municipal electric plant and making a contract for street lamps. The plant cost \$25,000 and was sold for \$7,900.

**Montpelier, Ind.**—The electric light plant was built by the city in 1901 and sold for \$1.00 in 1905. It cost \$38,000. The plant was completely worn out.

**Montpelier, Ohio.**—The municipality built a water and light plant in 1895, which imposed heavy burdens upon it every year. Aside from many bond issues for money with which to make repairs, it has been necessary to contribute several thousand dollars a year from taxes to keep the plant going. The tax rate has been steadily going up. From 1913 to 1914 it rose from \$1.34 to \$1.40. It became necessary after thirteen years to reconstruct the plant. As depreciation had not been provided for by the plant, \$30,000 more bonds had to be issued when the old plant was scrapped. So far as the water plant, proper, is concerned, it was impossible to find out much about its financial condition, beyond the fact that the plant was a steady loser, because of the loose methods of accounting. For nineteen years the excess of expenditure over income for this plant amounted to about \$8,000 yearly.

**Monroeville, Ohio.**—The municipal electric plant, according to reports of officials, was a losing proposition, so in 1917 it was shut down and current purchased from a private company.

**Mooreville, N. C.**—The Southern Power Company sells power cheaper than the municipal plant could make it. Therefore the municipal generating plant was shut down and sold as junk.

**Mountain Lake, Minn.**—The municipal gas works, which cost \$3,000, has been offered for sale. Price \$500.

**Mt. Serling, Ohio.**—This village of 1,500 population built its own water and light plant in 1895, and it proved a loser every year. Despite continuous contributions from the tax fund to meet operating expenses, it is seldom the plant's account is not overdrawn. An investigation for one year, taking the city's fund ledger figures as basis, showed loss of \$6,675, which was more than 110 per cent of the total revenue from private consumers, indicating a cost of 21 cents per kilowatt hour for generating service and 50 cents per 1,000 gallons of water. For the first eleven months in 1914 the deficit was \$4,777, or 90 per cent of the total revenue from private consumers.

**Muncie, Ind.**—The municipal electric plant was shut down in 1906, and the machinery sold for scrap, the dismantled building still remaining in the hands of the city. During the fourteen years' operation the cost per street lamp practically doubled. The plant was considered a "white elephant" to use the words of the councilman, and the city was able to obtain much cheaper street lighting from the local electric company.

**Murray, Ky.**—Total water receipts for year, \$2,040; total expense, \$5,854; total loss, \$3,450.

**Murray City, Utah.**—The city officials failed to inform the people of the condition of the plant in 1914, and a local newspaper made an investigation which showed that the plant, estimated to have cost \$60,000, had cost \$85,459.08, and that \$15,000 to \$25,000 would be required to complete the plant. The

receipts for the first six months, including payments for street lights, were \$2,000, and the expenses, including interest but no other fixed charges, were \$8,774.28, making a loss of \$6,774.28 during a period of six months.

**Muskogee, Okla.**—An investigation made by the Muskogee Times-Democrat disclosed the fact that the revenue of the city waterworks for 1913, including hydrants, was \$87,203.70, while the expenses were \$123,575. The deficit was \$36,371.23. The excessive payroll was given by the paper as the chief reason for the deficit.

**Napoleon, Ohio.**—The town has a municipal water and electric light plant, which began operation in 1895. The electrical equipment was renewed in 1904 and again in 1911, showing enormous depreciation. The joint plants turned up a deficit for the year 1913 of \$10,650.

**Nashville, Ark.**—The municipal gas plant was abandoned in 1908 because it could not be made to pay. The price of gas was \$3.00 per thousand feet—the cost of manufacturing was \$6.00 per thousand.

**Needham, Mass.**—The municipal electric distributing system was sold in 1908 for reasons of economy. It was found cheaper to have a company do the lighting.

**Nelsonville, Ohio.**—An investigation into the water and electric plants in 1914 showed that the deficit for 1913 on the waterworks was \$9,851.11 or nearly 200 per cent of the total income from consumers, while the electric plant lost \$9,106.14 in addition to the payments made by the city for hydrants and street lights.

**Newark, Ohio.**—An investigation into the municipal street lighting plant in 1914 disclosed the fact that there were \$21,000 of bonds outstanding under names which gave no clue to the fact that they were electric light bonds. In estimating the cost of service, these bonds have heretofore never been included. The plant was worn out, and the boiler capacity was not enough to carry the street lighting load. Although the city got \$5,000 worth of gas free in 1913, the cost per lamp for 6.6-ampere arcs was \$57.69 on a moonlight schedule. If Newark had had to pay for its fuel, as any other city would have to, the cost per lamp would have been \$69.71, which is among the highest rates paid in the state of Ohio.

**Newburgh, N. Y.**—The water board early in 1912 decided at a special meeting that it would be necessary to increase the water rates 20 per cent in order to make the plant less of a drain on the taxpayers.

**New London, Ohio.**—A village of 1,700 people has a municipal electric light plant with an annual deficit of \$1,235. At least that was the record when our investigation was made. While the officeholders in charge of the plant advanced the claim that the plant was meeting its bond redemption obligations, the books showed that in one year sinking fund requirements amounted to \$1,367, of which \$385 was paid from the plant's revenues. The remainder, or \$982, was paid from the village's general fund.

**Newport, Ky.**—In July, 1910, a special committee appointed by the mayor to investigate the municipal waterworks found conditions to be "deplorable and a menace to public health."

The report also says: "Your committee visited the Newport reservoir July 8 and the condition that met its gaze was alarming. On the bottom of the basin there lay, festering in the July sun, a puddle of muddy water, fringed with a border of pasty mud, and on the southeast end of the reservoir there was started a rank vegetable growth.

" \* \* \* The foundation for the new pumping machinery was begun in September, 1909; the machine was to be running by January 15, 1910; contractors were granted an extension of 30 days; the machine is not finished yet.

"Should council refuse to grant funds for that purpose (expert engineering) your committee feels compelled to raise such funds by private subscription."

**New Richmond, Ohio.**—The 1913 deficit on the municipal water and electric plant was \$3,708.49. The electric distribution system is dilapidated and falling down in places, one of the pumps in the waterworks will not work, and there is still in use a "temporary" wall for one side of the station building; this wall was erected in 1902 to replace the three-year-old brick wall which collapsed on account of faulty construction.

**New York, N. Y.**—Up to December 31, 1912, according to the New York Sun, the two municipal ferries in New York had cost \$15,354,257.02 more than they had brought in. One ferry had been in operation seven years, the other six years.

The city tried to light the Williamsburg Bridge from a municipal light plant using garbage as fuel. After about a year's trial the plant was abandoned in 1907, and the lighting was purchased from a private company at less than half the cost under municipal ownership.

**Niles, Ohio.**—The city installed its own water and electric plants in 1891 or 1892, at what cost no one can tell, for bonds were issued promiscuously, the proceeds being applied indis-

criminately, depending upon which plant was in need at the time. The water works was completely rebuilt once since originally established. The electric plant passed first through a stage of partial municipal ownership. At first it did only street lighting. Then it went through a stage of complete municipal ownership, doing both street and commercial lighting and finally it lapsed into a stage of private ownership. The city found a private company that could transmit current from a distance of six miles and deliver it for less money than the municipal plant could make it.

**Norristown, Pa.**—The municipal street lighting plant reports a cost of street lamps at \$39 per year in 1911, which looks very good until it is discovered the repairs during 1908-1909 were capitalized instead of being charged to operating expenses and that the repairs those years amounted to \$57.70 per lamp.

**North Bend, Ind.**—With the condition of the plant running down and expenses up, netting annual losses to the town, the municipal electric plant was abandoned after many years of operation in 1916.

**North Vancouver, British Columbia.**—The funds of the municipally owned ferries were overdrawn \$25,216.00 in March, 1913.

**Northville, Mich.**—The city got enough of municipal ownership and by a popular vote of ten to one sold its electric light plant for \$36,000 to the Detroit Edison Company.

**Norwood, Ohio.**—An investigation in 1914 disclosed the fact that the municipal water and electric plant had signally failed to keep up with the growth of the city. The electric plant was overloaded about 30 per cent and the voltage is so poor and irregular that the people must choose between having good light and high lamp renewal cost or miserable light if the lamps are of high enough voltage to withstand the sudden jumps to which the system is subject. There have been many serious shortages in the water supply. The 1913 deficit on the electric plant was \$12,972.76, and on the water plant was over \$36,000, after giving credit for such public service as was given by the plants.

**Osborn, Ohio.**—The municipal electric plant was sold in 1916 to a private company in order to stop increasing taxes.

**Oxford, Ohio.**—After spending large sums for improvements in an effort to make the municipal electric plant pay, it was sold in 1918.

**Painesville, Ohio.**—In the summer of 1911 the Warren Bicknell Co. of Cleveland was employed by the Council to examine and report on the electric light system. The report said:

"The present equipment is long since out of date and in no sense modern. Although it may continue to generate current for years to come, it will do so with extremely poor generating efficiency, and at high cost per unit of output.

"The switchboard equipment and layout is poor.

"The distributing system is poor and at many points even dangerous. Your arc lighting system should be thoroughly overhauled. In places the poles are too far apart, and many should be replaced on account of age. The arc light conducting wire is at many points dangerously near the ground, and at any moment the city may be liable for the death of any of its unsuspecting residents.

"There are many other details that might be referred to but the above statements should be sufficient to show the general condition of the plant."

**Paris, Tenn.**—Here is a municipal electric light plant generally reputed as among the most successful of its kind. Its superintendent, M. W. Younkin, in February, 1916, made the statement: "No allowance is made in any way for sinking fund or interest; no allowance is made for taxes lost through displacement of private ownership," and added that as for depreciation it was "taken care of in maintenance." The plant's alleged "profits" for the year were \$10,434. Its valuation was \$119,367. Bond interest and sinking fund, depreciation and taxes figured out, as should have been, on that amount would more than wipe out any "profits" of \$10,434.

**Peabody, Mass.**—The annual report of the electric light commissioners of the town of Peabody for 1910 says: "The Commission feels that the financial condition of the plant is understood by few of the citizens of the town. It is their intention, therefore, to state as clearly as possible, the true condition, and to recommend such changes in policy as the welfare of the plant demands. A financial statement of the assets and liabilities, as figured in the Massachusetts State Gas and Electric Commissioners' Report, shows a deficit of \$28,964.26, January 15, 1911. All figures used in this computation are taken from the report of the manager and must be correct. The assets are \$160,433.00 and the liabilities \$189,397.26. This means the plant is \$28,964.26 in debt, and that the operation of the plant has cost the town \$28,964.26 more than has been annually appropriated. The actual cost of the municipal lights, therefore, has exceeded the apparent cost by the amount of this accumulated deficit, according to the Massachusetts State Commissioners' report."

**Pelham, Ga.**—In return for street lighting concessions, the municipal water and electric plant was leased in 1908 to the Pelham Public Utilities Co.

**Pepperell, Mass.**—The town sold its municipal electric distributing system to the Shirley Electric Company. The municipal plant has charged high rates but could not make money. The company reduced the rates and made a profit.

**Philadelphia, Pa.**—Probably the most colossal failure of municipal ownership in America is that of the Philadelphia Gas Works. The plant was leased to the United Gas Improvement Co. in 1908. Prior to the lease, the city lost about \$400,000 a year. The city now secures an annual income of over \$3,000,000 as its share of the plant's income under the lease. For years the municipal gas works was the most corrupting influence in Philadelphia politics.

**Pierce City, Mo.**—This city tried municipal ownership for fifteen years; then it sold its electric plant to the Ozark Power Co.

**Pittsfield, Ill.**—In "Defunct Municipal Lighting Plants," the mayor is quoted as follows: "Cheaper to pay the Pittsfield Electric Company than do it ourselves. We ran it ourselves for several years, and have had it run by contract at least five years, saving money by contracting it to outsiders."

**Pontotoc, Miss.**—The municipal electric plant, after two years' operation, failed to pay expenses, so it was sold in 1907 at about two-thirds of its cost.

**Poplarville, Miss.**—Dissatisfaction with municipal ownership led the citizens to vote in 1912 to lease the municipal electric plant to J. G. Rouse with an option of purchase within five years.

**Portsmouth, Ohio.**—The municipal electric plant was first leased to the street railway company, who offered to do the lighting cheaper than the city could, and was sold to the railway company about 1905.

**Price, Utah.**—By leasing the municipal light plant in 1914 the town turned a deficit of over \$3,000 a year into a net income of \$1,200 a year, and in addition gets a considerable amount of free public lighting. The plant had been in operation only four years.

**Pulaski, Va.**—In 1912 the municipal electric light plant was sold to a private company. At the time of the sale the plant was very much run down, the service was a subject of general complaint, and the city was losing money.

**Pullman, Wash.**—The city council, in 1907, in its resolution to sell the municipal light plant at less than half its cost, said: "The electric light plant owned by the city of Pullman has proven to be a burden to the taxpayers of the city, and the same cannot be operated by such city so as to repay the cost and expense of operation."

**Raton, N. M.**—The city voted \$400,000 for a municipal water works, then had to go to court to find out whether it really owned the works or not. One thing it did not need legal light on was the fact that in one year, as a result of the bond issue, its taxes were doubled. City taxes in 1914 were \$15,368; in 1915, \$30,212.

**Reading, Mass.**—This town has owned its electric light plant for some time, but when it was proposed to go into municipal ownership of a gas plant the people voted, on June 20, 1911, by a majority of 123 to 28, not to go into municipal ownership of the gas plant, but to give a franchise to a private company. The electric plant has been very aggressive, yet the receipts from customers last year amounted to only \$33,962.38, while the cost of running the plant was \$45,125.09. With the exception of the money received for rent of poles, and for scrap, the taxpayers had to make up the losses. This has not been to their liking.

**Reading, Ohio.**—Failure to include fixed charges in the accounts of the municipal water and electric plants misled the people for many years into thinking the plants were successful. An investigation made in 1914 showed that the losses of the plants, after interest, sinking fund, depreciation and lost taxes were included, amounted to \$12,505.91 in 1913.

**Red Bud, Ill.**—In reply to a request for a report of the municipal light plant, the following was received in 1911: "Expense of plant from May 1, 1909, to May 1, 1910, including electrician's salary (\$1,140), \$4,660.36. Income for fiscal year, \$1,988.58. We have no published itemized report. This was published in City Clerk's (bulk) report last May."

**Regina, Sask., Canada.**—The municipal street railways of this city, rolled up a deficit for the taxpayers in 1916 of \$76,145.03. This was, however, much less than the deficit of the previous year, 1915, which amounted to \$115,919.29. The comparative figures of volume of business, income and expenses, as issued in the city's annual report of 1916 and given out by D. W. Houston, superintendent of the street railway system, are as follows:

	1916.	1915.
Passengers carried .....	4,671,402	3,661,177
Passenger revenue .....	\$197,188.00	\$156,200.00
Miscellaneous revenue .....	15,602.19	16,004.98
Total revenue .....	\$212,790.19	\$172,204.98
Operating expenses .....	191,359.68	180,410.34
Operating surplus .....	\$ 21,430.51	
Deficit .....		\$ 8,205.36
Debt service—Interest and sinking fund charges.....	97,575.54	107,713.93
Total deficit .....	\$ 76,145.03	\$115,919.29

**Richmond, Mich.**—The municipal electric plant was sold to a company in 1912, because in that way the people could get 24-hour service which the management of the municipal plant said was impossible under municipal ownership. There were only eleven votes in favor of having the municipal plant kept in operation.

**Richmond, Va.**—The municipal gas plant of Richmond is an example of large claimed profits which do not stand up under investigation. The profits are arrived at by charging operating expense to capital and paying interest out of taxes. A report made a few years ago by a council committee read:

"1. The chief causes for dissatisfaction among our customers are insufficient manufacturing capacity and holder storage, inadequate main system, lack of proper treatment of gas before it leaves the works and entire lack of system in maintaining the mains, services and meters, in regulating pressures and in following up and permanently removing sources of individual complaints.

"3. In reporting on the cost of production our management has heretofore omitted many items which should have been included.

"8. Our expert reports that the gross cost of distributing our gas has been phenomenally low, but declares that this economy has been at the expense of good service to the consumer, and by failing to provide for further extensions and repairs to the plant. As he declares: 'To give proper service to the public and properly maintain your property, your costs for general expense, distribution, etc., would be nearer 18 cents per 1,000 cubic feet than the present figure of 11 cents.'

"It has been the policy to cut down expenditures for such purposes to a minimum, making a show of apparently large returns, with the ultimate result that we find ourselves facing the necessity for a large outlay for replacement and extension."

**Romeo, Mich.**—Twelve years the town owned an electric plant. It could not be made to pay and the people were glad to accept the offer of the Eastern Michigan Edison Company to purchase the property. A thirty-year franchise was given. The Edison company gives continuous service, while the municipal plant did street lighting only until midnight and had no day service.

**Sabina, Ohio.**—Although the municipal light plant was found to be in good physical condition, it was not economically successful. Accounts taken from the town clerk's fund ledger showed a deficit of \$4,933 for the period from January 1, 1912, to November 30, 1914. An investigator was given the assistance of every town official from the mayor down in searching for a record of the bonds, but without avail. The 1912 and 1913 deficits were practically 80 per cent of the total income. This indicated that the rate should have been 11 cents instead of what it was, 6 cents per kilowatt hour.

**Sabina, Ohio.**—The municipal water works in 1912 and 1913 lost 80 per cent of its gross income, indicating the rate should have been 27 cents instead of 15 cents per 1,000 gallons.

**St. Bernard, Ohio.**—The State Inspector has found evidences of loose bookkeeping in the municipal water and light plants several times. There is no complete record of the deposits which have been made by customers as security for payment of bills. The equipment has always been second-hand and expensive to operate. For the first time in its history the plant was equipped with new machinery in 1914. Street lights are out frequently and there are serious interruptions of service. The 1913 deficit was \$21,223.81, more than 100 per cent of the total revenue from consumers for water and electricity.

**St. Charles, Mo.**—According to local opinion, St. Charles changed from one of the most poorly lighted towns in Missouri to one of the best when it abandoned municipal ownership and voted a franchise to the St. Charles Light & Power Co. in 1914.

**St. Paris, Ohio.**—Municipal electric light plant producing a loss of \$5,303 a year for a village of 1,250 population. To overcome this loss, which was almost 75 per cent of the total revenue from private customers, the rate should have been 14 cents per kilowatt hour instead of what it was, 8 cents.

**St. Peter's Minn.**—The city's electric distributing plant broke down and, pending repair, the city hooked up for current from the Northern States Power Company. Finding the service so much more economical and efficient than its own, the municipality continued it rather than resume operation of the city plant.

**San Francisco, Cal.**—A grand jury examined the operation of the municipal street railway in 1911 and found the books so tangled as to be unintelligible, the payroll stuffed for political purposes, and much equipment stolen. Both incompetence and dishonesty were discovered.

**Santa Clara, Cal.**—The generating plant of the municipal electric system was shut down about 1907, after ten years' operation, because it was cheaper to buy current from a company than to make it in the municipal plant.

**Santa Cruz, Cal.**—An inquiry for a report of the municipal light plant of Santa Cruz, made in 1912, brought the following reply from J. L. Wright, City Clerk: "I beg to say that we have no published reports."

**Seattle, Wash.**—In order to make a showing of apparent profit at low rates, the city charges itself exorbitant rates for street lighting, the highest in the United States in large cities.

In 1911 the Taxation Committee of the Seattle Chamber of Commerce reached the following conclusions and embodied them in a report: The plant collects direct from the taxpayers an average of \$181 per kilowatt per year for street lighting, while private consumers are getting service at from \$45 to \$80 per kilowatt per year. The street lighting requires 12 per cent of the maximum demand at the power plant, and the taxpayers pay 32 per cent of the total gross receipts of the plant. The plant cost \$3,500,000, and is not making enough to pay operating expenses and fixed charges, even though the city itself contributes a third of the gross revenue.

In 1912 the private company in Seattle offered to do the street lighting at the same rate at which they furnished current to commercial customers. This would have resulted in a saving of \$127,000 a year, but was rejected. The management of the municipal plant publicly admits that it grants discriminatory rates to those in a position to demand them.

**Sebewaing, Mich.**—When the village went into municipal ownership in 1911 it was stated that \$10,000 would build a suitable plant. The cost was \$17,000, and the tax rate was advanced from three-fourths of one per cent to 1¼ per cent the year after the plant started operation.

**Sharon, Wis.**—In a case affecting the municipal water and light plants of Sharon, before the Railroad Commission of Wisconsin, decided January 11, 1912, the commission says:

"With respect to the rates for water and gasoline gas, the statement of earnings and expenditures shows that after paying the expenses of operation, excluding interest charges upon the funded indebtedness, there is a large deficit in both the gas and water departments for each of the three years given. Inspection of the expenditures discloses that no allowance for depreciation, as such, has ever been made by the village.

"Owing to the absence of meters, and especially to the failure of the utility to keep the accounts and records as required by the Public Utilities Law, the information available at present is insufficient as a basis for rate schedules."

**Shepherd, Mich.**—Early in 1913 the village closed down its municipal electric generating station and has since purchased power from a private company. The village thereby got 24-hour service, and effected a considerable saving as well.

**Shepherdstown, W. Va.**—In a letter to Arthur H. Grant, the mayor says:

"The town electric plant was installed in 1901 at a cost of \$4,800, and sold for \$3,200. Reasons for selling were that no fund was accumulated for depreciation, and the town could not afford to pay for its property superintendence, and almost every year there was a change of officials. The rates were too low."

The plant was sold in 1907.

**Silverton, Colo.**—After spending twice as much as the estimates called for on a municipal electric plant, the city shut down its generating plant and purchased current from a private company at a considerable saving.

**Souderton, Pa.**—After spending large sums for enlarging the municipal light plant the authorities closed down the generating station and made a contract with the Excelsior Light, Heat & Power Co., which has been supplying current since 1907.

**South Lyon, Mich.**—In March, 1912, the taxpayers voted to sell the municipal lighting plant to the Eastern Michigan Edison Company, thereby saving a considerable sum on street lighting, as well as improving service and reducing rates to private consumers.

**South Pittsburgh, Tenn.**—After two years' operation and an expenditure in excess of \$12,000 the municipal electric plant was sold in 1907, payment being made in lighting. The reason for selling was high operating cost and lack of up-keep.

**Spokane, Wash.**—An investigation made in 1913 disclosed the fact that the waterworks deficit for 1912 was \$225,329.71, which did not include services of other city departments, legal expense, of which there was a great deal, or lost taxes. The gross revenue, including running services, was \$472,972.75, while the cost of operation, including interest, depreciation and sinking fund, came to \$698,302.46. The deficit is largely due to the practice of issuing bonds to meet the cost of operation and depreciation, and to the political influences which governed the plant for many years.

**Springfield, Ill.**—In 1914, J. E. Dalby, superintendent of the municipal electric plant, made the following statement: "The outage records at the plant which are very carefully kept, show that one or another of the light circuits have been off forty times during the past year. When a circuit is off it means that about 75 street lights are off. Despite a close daily inspection, we have frequent cases of burned out coils, grounded coils, grounded commutators and other mishaps, each of which causes from 75 to 150 lamps to be out for periods ranging from five minutes to several hours."

**Stockton, Kan.**—The municipal electric plant here was one of the first in operation, but was sold only two years after it was built on account of the difficulty of securing competent management. The plant lost money while the city owned it.

**Swift Current, Saskatchewan.**—The municipal electric plant in 1914 had to increase its base rate 12 cents per kilowatt hour in order to meet operating expenses.

**Sycamore, Ohio.**—In 1913 the municipal water and light plant produced a loss of \$6,558, according to the figures in the city clerk's fund ledger. The plants were practically put out of business early in 1914 on account of depreciation of equipment, for which they had from their earnings made no provision. Then reconstruction began at the general taxpayer's expense.

**Tiffin, Ohio.**—The city built a natural gas plant with \$500,000 worth of bonds and after operating the plant at a loss sold it to Kerlin Bros. of Toledo for \$27,000, still having to pay interest on and redeem the bonds.

**Tippecanoe City, Ohio.**—The village established jointly a water and electric light plant in 1897, issuing bonds of \$18,000 against the water plant and \$7,000 against the light plant, although as events proceed no distinction is made in appropriations and accounts for the two plants. In 1913 they stood on the books at a value of \$40,000, with a deficit for the year of \$5,420. The total income that year was \$12,072, total operating expenses \$10,573. The interest on investment—5 per cent on \$40,000—was \$2,000; depreciation \$2,400 and lost taxes \$520, making total expenditures of \$17,493 as against total income of \$12,072.

**Toledo, Ohio.**—The municipal water works, Director of Public Service Goodwillie reported, showed a loss in 1916 at the rate of \$100,000 when "proper allowance is made for deterioration." The director pointed out that the plant wasted and "gave away" water, which led the Toledo Times to remark: "It is an old trick of the bosses to exchange municipal favors for political influence, leaving the taxpayers to foot the bill."

**Toledo, Ohio.**—The million-dollar failure of municipal ownership in Toledo is one of the worst this country has seen. The city went into the natural gas business, but the wells shortly gave out, and the city was left with a useless investment of \$1,500,000. Finally the city lines were leased, and the lines outside the city sold for \$102,000. Most of the bonds are still unpaid and the people are paying interest on them.

**Toronto, Canada.**—The city auditor, reporting on the operation of the municipal electric distribution system, which purchases power from the Ontario Government Hydro-Electric System, found that, at the close of business June 30, 1912, the system had lost \$290,639.65 after about two years' operation. Too low rates and too many employees are given as the reasons for the shortage.

**Townsend, Mont.**—Early in 1912 an election was held for the purpose of deciding whether the town should sell the municipal lighting plant to the Butte Electric & Power Co. Only one vote was cast against the sale.

**Trenton, Mich.**—In 1907 the people voted 142 to 18 to sell the municipal electric plant, which had been losing about \$500 a year and was in very poor physical condition.

**Troy, Kan.**—The city had its own lighting plant, but gave up the ghost when the losses continued to roll in. It hooked up with several other neighboring towns to the lines of the Atchison Railway Light & Power Co.

**Troy, Ohio.**—Political interference caused the municipal electric plant to lose some of its best power customers in 1913, with the result that there was a deficit of \$3,097.22 on the year's operation.

**Ukiah, Cal.**—The generating station of the municipal electric plant was operated at heavy expense until 1908, when it was abandoned and current purchased from the Snow Mountain Water & Power Co.

**University Place, Neb.**—After trying municipal operation for three years, the generating station of the municipal electric plant was shut down in 1907 and power has since been purchased from the Lincoln Traction Company.

**Upper Sandusky, Ohio.**—This city acquired its own natural gas plant in 1889 for \$80,000, represented by bonds issued. It sold the plant in 1902 for \$8,000, just one-tenth of this sum. Nor did the plant ever produce a penny from its earnings for bond interest or redemption. All of this came from the general taxpayer's pocket.

**Urbana, Ohio.**—In 1890 the city issued \$250,000 6 per cent general municipal bonds maturing from ten to twenty years with which to acquire a natural gas plant. The plant was so unsuccessful that eight years later the city sold part of the property for \$15,000 and leased the distributing plant to a private company for \$3,000 a year. All fixed charges were paid, not from the plant's earnings, but from general tax funds. In 1897, a year before it disposed of the plant, the city defaulted on this bond interest and compromised with the bondholders by getting them to cut the rate from 6 to 4½ per cent. Between 1903 and 1909 \$55,000 bonds maturing had to be refunded. The last \$5,000 of these bonds was paid in 1916.

**Vancouver, Wash.**—In June, 1902, the municipal electric plant, costing \$70,000, was sold for \$11,000, including a franchise in which the purchasers agreed to give lower rates than had ever been given by the city. Even with high prices, the plant had always lost money.

**Versailles, Mo.**—The people voted in 1906, by a majority of 218 to 12, to shut down the generating station of the municipal electric plant and buy current from the local company, as the company's price was lower than the cost to the city in using its own plant.

**Versailles, Ohio.**—A village of 1,700 with a municipal light and water plant producing a loss of \$7,092 a year—in 1913. This deficit amounted to 90 per cent of the revenue from private consumption.

**Waddington, N. Y.**—The municipal electric plant was sold, after five years' use, for less than half its cost. The service was extremely bad.

**Wadesboro, N. C.**—The municipal electric plant was sold in 1912 to the Yadkin River Power Company on account of poor service and financing.

**Wakefield, Mass.**—According to the report of the municipal gas and electric department for 1911, the town has always paid more out of taxes for the maintenance of the municipal plants than it would have had to pay for lighting by a private company. The average annual amount taken from taxes up to 1903 was \$13,074, while the cost of lighting by a private company is estimated at \$8,500 a year. From 1907 to 1911 the average taken from the tax levy amounted to \$15,540 per year. In 1913 the town decided to shut down its electric plant and purchase current.

**Waynesville, Ohio.**—The municipal electric plant was sold in 1919 because the city officials had never been able to make it come out even.

**Westerville, Ohio.**—The municipal electric plant was shut down in 1914 because the cost per kilowatt hour was about five times the price at which current could be purchased from a private company. The town got 24-hour service and lower rates through the abandonment of its generating plant. Arrangements have also been made for the operation of the waterworks by electricity purchased from the private company at a considerable saving over steam operation.

**Wheaton, Ill.**—The electric plant was started in 1890. In 1904 the generating plant was shut down and current purchased from the Aurora, Elgin & Chicago Railway Company. The generating plant was worn out and no money was available. Later the city found it cheaper to sell the distributing system to the Western United Gas & Electric Co., which now does the lighting.

**Wheeling, W. Va.**—Municipal gas plant closed down March 31, 1916, because it proved a complete and costly failure. It lost several thousand dollars a year for the taxpayers. In June of 1915 alone it lost \$1,900. Its rates were double those of natural gas. It was unable to compete with the electric light company.

**Whitehall, Mich.**—The deficit of the municipal water and electric plant in 1912 was \$1,127 and in 1913 it was \$1,597, although the town contributed over \$3,000 a year as payment for street lights and hydrants. It is understood that the town also has paid the fixed charges in addition to the charge for street lights and hydrants.

**Williamsburg, Ohio.**—The municipal electric plant has been run by inexperienced men during the nine years of its existence. The plant was improperly constructed in the beginning, and much of the distribution system had to be rebuilt. The 1913 deficit was \$3,695.03, after allowing credit for street lights.

**Willoughby, Ohio.**—In 1910 the municipal electric plant, after only a few years' operation, broke down and left the town in darkness for months. It was found that the plant was worn out and not worth repairing. A contract was therefore made with the Cleveland, Painesville & Eastern Traction Co. The town's loss through municipal ownership was about \$75,000.

**Wilmington, Ohio.**—The municipal light plant was sold in 1903, after ten years' operation, for \$12,000. There had been \$110,000 spent on the plant, but it was a "complete wreck" and was giving only intermittent service. The people were so disgruntled that they refused to sanction further expenditure. The popular vote in favor of the sale was 896 to 34.

**Winfield, Kan.**—The report of the municipal electric plant for 1911 shows total receipts for current amounting to \$25,573.72 and expenses amounting to \$27,574.26, without any allowance for interest, depreciation or sinking fund. A book charge of \$6,739.90 is made for depreciation, but no money is provided to take care of the charge.

**Winnetka, Ill.**—While it is difficult to obtain information about this plant, the superintendent having said, "I would not even let a taxpayer look through our books and records," it is known that the losses to the village amount to at least \$3,000 a year. The revenue from all sources is about \$15,000 a year and the expenses are known to be at least \$18,000 a year.

**Winnipeg, Manitoba.**—The government telephones of Manitoba have proved a huge economic failure and inferior in service to the Bell system which they displaced. From a comprehensive investigation made by James Mavor, Ph.D., professor of political economy in the University of Toronto, who published a book setting forth the results of his discoveries, the following facts are presented:

The system, begun in 1908, represented a loss of \$1,000,000 to the people at the time of this investigation.

In 1909 the government proclaimed a profit of \$271,797, while there was instead a deficit of \$15,593.

In 1915 the government proclaimed a profit when the actual facts showed a deficit of \$97,629.

Payrolls are badly padded. "Men were forced upon foremen by members of the provincial legislature; cabinet members made 'recommendations' over the telephone," and "the whole running of the system has been permeated with politics."

There has been a good deal of labor trouble, despite the oft-made claim that public ownership does away with this.

The author says the Bell service and rates were satisfactory, and the government took over the telephones simply "to promote the political interest of the government party in such a way as to contribute to keep the government in power."

He also says:

"It is a compelling and fearless narrative of the true record of an American government in the management of a great commercial business. It tells what happened to the rates and what happened to the finances, what happened to the consumer and what happened to the taxpayer. It is essentially a vivid narrative of political intrigue and carries a lesson to every patriotic American.

"From the beginning of public ownership, the telephone system was used for political purposes, sometimes overtly, at other times furtively, but always with a cynical disregard for the interests of the public.

"The unsound financial policy and the management of the government brought the telephone system to the pass that either the revenue had to be increased or the system had to be permitted to gravitate rapidly into hopeless insolvency."

It has not reduced, but in some cases has raised, the rates of service.

**Winthrop, Mass.**—A committee of five was appointed by the town moderator under a vote passed at town meeting, held March 11, 1912, and this committee immediately entered upon a thorough investigation of the question of municipal ownership. Their report is illuminating in the thorough and competent way in which the investigation was handled.

The committee found that if the town operated its own plants it would be necessary to raise the price of gas and electricity from the present rate of 90 cents per 1,000 cubic feet of gas and 11 cents per kilowatt hour for electricity to approximately \$1.30 and 14 cents, respectively.

As at none of the public hearings which were held were any complaints registered on account of the character of the service furnished by the company, and as the committee found that the cost of gas and electricity would be considerably greater under municipal ownership, their recommendation was that the town should not purchase or acquire the gas or electric lighting plants and that the town should enter into a new contract with the gas and electric company for municipal lighting.

The following is a quotation from the conclusion of the committee's report:

"If your committee had been able to find from its investigation that the town could sell electricity at 11 cents per kilowatt hour and gas at 90 cents per thousand cubic feet, or if your committee could have found by its investigation that under municipal ownership electricity could be sold to private consumers a cent per kilowatt hour cheaper than it could be obtained from the company, such a slight advantage as that would not seem to justify the hazard and risk and the upsetting of town affairs that would be incident to the years of litigation which would follow the vote for municipal ownership."

**Woodsfield, Ohio.**—The municipal electric plant sells current for 7 cents a kilowatt hour. It costs 17½ cents to make. The taxpayers foot the bill.

**Woodville, Ohio.**—The municipal electric plant, started about 1896, was abandoned in 1911, and energy has since been purchased from the local interurban company. The plant was obsolete and the town could not afford to rebuild it. The interurban company made an offer which reduced the cost of current material, and so the municipal plant was shut down. It has been for sale ever since, but no purchaser has been found.

**Wyandotte, Mich.**—This plant has never paid interest or sinking fund on its bonds, has been rebuilt several times during its life of 22 years, the reconstruction funds in each case coming out of bond issues instead of being charged to operating expenses, and has been subject to political influences most of the time, according to the statement of a former official, made in 1913. He also states that the plant was not a success as a business proposition.

**Wymore, Neb.**—According to City Attorney A. D. McCandless, municipal ownership is responsible for all this city's financial troubles. He states the tax rate is the highest in Nebraska because the taxpayers have to contribute over \$12,000 a year to support the city electric plant, which never pays any of its fixed charges.

**Xenia, Ohio.**—The municipal light plant was sold in 1896 for \$2,500—about one-tenth of its original cost. After the plant was sold a contract was made for street lighting which effected a saving of \$40 per year per lamp.

**Ypsilanti, Mich.**—Concerning the waterworks Mayor Tracy L. Towner said in his 1912 inaugural address: "The installation of the plant cost in round figures \$143,000. Of this amount bonds were issued in the sum of \$125,000, drawing interest at 4 per cent per annum. These bonds will mature in the year 1919, at which time the city will have paid in interest alone the sum of \$150,000. Not one cent of the principal due on these bonds will have been paid and the issue will have to be refunded. Of the interest on water bonds, amounting to \$110,000 since the installation of the plant, but \$23,030 was raised from the receipts of the waterworks, the remainder being raised by direct taxation."

**Yorkville, S. C.**—In October, 1911, it was necessary to make material advances in both water and light rates because the income was not sufficient to meet the expenses.

**Zeeland, Mich.**—By a popular vote of over 87 per cent the people authorized the sale of its electric light plant to the Consumers Power Company.

## Home Rule and Other Utility Legislation

By B. P. ALSCHULER

*This is a plea made by Mr. Alschuler before the senate and assembly committees of the Illinois legislature against the passage of bills to reduce the powers of the State Public Utilities Commission and place the regulation of rates and service with local commissions, city councils and village trustees. As similar legislation has been attempted in many other states, Mr. Alschuler's argument for state control is of general interest throughout the country.—Editor.*

I HAVE been delegated by the Fox River Valley Manufacturers' Association to represent them at this meeting, but I also address you as a holder of public utility securities and as a holder of life insurance policies in old line companies which invest in public utility securities, and as a bank director and stockholder, banks being interested as holders and dealers in public utility securities. And it has been my fortune in the practice of the law to represent municipalities on occasion, and at other times to be opposed to municipalities; likewise, I have been employed by and against utility corporations. Of late years it has fallen to my lot to represent and work with and for utility corporations and I believe that I have had as much occasion as almost any other attorney in the state of Illinois to appear before our Public Utilities Commission, in consequence of which I feel that I am in a fairly good position to judge not only of the Public Utilities Commission law, but of its administration as well.

Obviously, the home rule advocate will at once remark that because I represent corporations, I naturally favor the law as it stands. This does not follow as a matter of course because from a purely selfish standpoint I can see my work greatly increased by the adoption of any of the bills now under consideration and I know that I can safely say that there is no unanimity of opinion in this regard among public utility companies. It has been my experience that a public utility company appearing before the Commission does not get the relief it may ask unless it is in a position to show that it is entitled thereto.

The state, by the creation of the public utilities law, sought to control the activities of the quasi-public corporations, which are the creatures of the state. We must not forget that the public utilities corporation owes its existence

to state law, not to local law, and should be amendable to state control of its activities with far greater show of reason in the last analysis than it should be to local control.

The time-honored and smooth-sounding phrase, "Home Rule," appeals to the agitator and to the man who does not give serious thought to the causes which may create dissatisfaction and to the effects which may result from the adoption of home rule legislation.

One of the principal problems that confronts all of us at the present day is that of reconstruction and provision for employment of the unemployed. It strikes me that rather than to curtail and hamper industry, it should be the object of everybody to foster and to aid. The proposed legislation can do nothing else than curtail and hamper public utility companies, and I will address myself to that thought at greater length further on in this discussion.

I listened with considerable of interest, at the hearing before your committee on April 24th, to advocates of the passage of the so-called Home Rule Bill and their reasons why the bill should pass. I did not hear any discussion of the bill itself and by that I mean House Bill 200, introduced by Mr. Wanless. I did hear considerable talk concerning the beauties of home rule and I also heard the complaints of those who had at some time been unsuccessful in litigation before the Public Utilities Commission.

The principal discussion and arguments offered, however, were of an entirely different tone from those made by the proponents of the bills before the Senate committee because the Supreme Court in its recent opinion in the Springfield case has held that part of the utilities law eliminating cities from its operation is unconstitutional, as a result of which the city fathers who have been a law unto themselves in the management of their city owned and operated utilities, must

now conduct their plants on an entirely businesslike basis and not as a political proposition. They must now justify their rates to their patrons, give service supervised by experts and keep their accounts as they should be kept. We will have no more low rates for political effect with deficits made up by taxpayers, but if you or I wish to know anything of the affairs of our municipally owned plants, the uniform system of accounting of the utilities commission will readily show us what we may want to know. The wonder to me is that these enthusiasts have not already had presented and have not appeared before you advocating the abolition of the Supreme Court.

#### **Municipal Accounting Uncertain**

I do not know how the accounts of the Springfield municipal electric plant or similar water or electric plants throughout the state are kept, but it is safe to assert that in most cases accounts are not properly kept. For instance, do water plants charge fire departments with hydrant rental as privately owned companies do and should do? If not, then the taxpayer gets the benefit at the expense of the water user, because water pumped must be paid for. If municipally owned utilities are controlled by our Commission, rates will be fair, will not be arbitrarily fixed by those who would use their actions in that regard for political capital, and the public at large will reap the benefit. I may have dwelt at too great length on this discussion, prompted as it is by the previous arguments before this committee, but the reason is obvious. The bills under consideration do not return this control to the cities and the discussion in that particular is beside the issue unless we seriously consider the bill to repeal the law. That bill, however, does not have the unanimous support of the proponents of amendatory legislation and I don't believe requires serious discussion. Some of these gentlemen have stated that they do not favor repeal, others favor it, and before the Senate committee others favored municipal ownership of all utilities, which of course might be brought about in any city under our present laws.

I want to say to you frankly that I have appeared in a great many cases before our Public Utilities Commission and not with a uniform degree of success as viewed by my clients. I have made it my practice to assert and claim those things which I thought were right, and I have not always found the Commission ready to agree with me. At the same time, I have been of that possibly peculiar temperament that I have been disposed to concede that possibly there may be two sides to a question and that it might even be possible that I was wrong in my contention, and I have always had the opportunity of recourse to the courts if I saw fit so to do to remedy the errors, if such there were, of the Utilities Commission.

The principal burden of complaint of most of the speakers seems to be that they feared that injustice was being done to municipalities. I say to you, gentlemen, that if such is the fact, then the fault cannot be ascribed to the principles of the utilities law nor to shortcomings of our commissioners, but rather to the frailty of human judgment which may and does err at times even in our trial courts and in the highest court of the state. We might as well contend that because errors of judgment will creep into the decisions of the courts, therefore the courts should be abolished and the people be a law unto themselves.

I represent, among other clients, several gas companies, at least two of which operate in different municipalities. It is also my fortune to represent almost every other kind of utility subject to Commission control. The proposed legislation provides, among other things, in Section 89, for the creation of municipal commissions. By its terms, a municipality that withdraws from state regulation may provide for a local public utility commission which shall, in general,

have the power to hear complaints, receive applications for changes in rates and charges, inquire into facts, make investigations, but shall have no power to decide anything, having power only, after doing the delegated things, to report to the city council or board of trustees. In other words, the larger and richer communities may and would create some additional political offices at the expense of the public, such additional officers having no real powers, and great expense will be incurred in the employment of such municipal commissioners, engineers, accountants, stenographers, investigators, lawyers, and all others who go to make up the machinery of an adequate commission, and such expenditure will be necessary if such commission will fairly and properly do its work, because we must not presume that any municipality or municipal commission would deal unfairly, either with the public or the utility corporation. Indeed, the complaint of these city officials who appeared here before you seems to be that they want to see to it that justice is dealt, they to do the dealing. On the question of rates, for example, would they not, if rendering real justice, employ competent engineers and competent accountants, competent investigators and competent lawyers, so that a thorough and complete investigation of the affairs of the particular utility involved may be made so that this even-handed justice may be rendered? But, of course, the answer to this may be that the amendment does not say that a public utility commission must be created in each municipality, it leaving it entirely to the discretion of the particular municipality to determine whether or not it shall have such commission.

#### **Lacking in Safeguards**

The proposed law would give to local authority control over practically everything that a utility company may do or may not do within a city or village, except the matter of the issuance of securities, and while a municipality may have a commission whose sole and ultimate authority is but to report, the decision of all questions involving public utilities is left to the discretion and tender mercies of the common council or board of trustees, as the case may be, without any safeguard as to actual investigation or appeal to the courts.

In cities like Springfield, for example, where we find a municipally owned electric light plant competing with a privately owned plant, we would find this situation: The privately owned plant, constructed and operated under public grant and authority, in which, because of such grant and authority, investors have placed their money, would find its rates and service controlled arbitrarily by those men who operate the competing plant and not be disinterested and impartial men. Springfield may be an exception in that political or ulterior motives might not actuate the minds of its commissioners in so regulating the privately owned utility. I do not have the pleasure of personal acquaintance with any of the men. But I cannot help but feel that however honest a man placed in such position may be, he cannot act as impartially as one entirely without interest in the matter.

In addressing myself to you gentlemen, I am proceeding on the theory that utility corporations have rights that must be protected, and at the same time I argue that the public have rights which must be protected, and I insist that when the utility company is eternally harrassed and embarrassed in manner such as must necessarily follow from the adoption of such law as the one proposed, not only will the utility company, its stockholders, bondholders, creditors and employes be seriously embarrassed, but a like degree of embarrassment must necessarily result to the public.

Let us, for the sake of argument, suppose that a city has withdrawn from the operation of the utility law, that its council has passed an ordinance fixing the rates, determining

## Purpose of this Magazine

**T**HE purpose of this magazine is to present the *facts* about public utilities, both privately and governmentally owned; to inform its readers about these important industries in which all citizens are vitally interested.

Dedicated to the public service, to the highest good of the taxpayer, this magazine is opposed to government ownership and operation of public utilities because it believes paternalism is the antithesis of industrial freedom and independence.

In steam and electric railways, in telegraphy and telephony, in electric and gas lighting, heating and power, the United States leads the world as the result of the genius, thrift and economy of individual initiative and private enterprise.

Political conditions in this country, as experience proves, defeat economic and the most efficient operation of public utilities by city, state or federal government. Experience also proves that government operation of public utilities burdens the taxpayers with great economic waste.

Experience convinces this magazine that the public can secure the best possible service at the lowest possible cost by leaving the ownership and operation of steam and electric railways, electric light and power, gas, water and telephone properties to individuals of technical knowledge and practical training under such governmental regulation as will best protect the interests both of the public and the companies.

### *Supreme Court on Competition*

**THE SUPREME COURT** of Illinois recently gave an important decision concerning the protection of private public service enterprises from municipal competition. The question was whether or not a municipality in Illinois owning and operating an electric light plant for the production of electricity for municipal uses could sell its excess product at rates far below what it was possible for a private corporation to supply the same service. The suit was brought by the Springfield Gas & Electric Company against the City of Springfield to protect the company from destructive competition.

The City of Springfield contended that it was expressly excepted from the operation of the public utilities act of Illinois, which defines a public utility to be "every corporation owning or operating a plant used for the production, transmission or sale of electricity, except such public utilities as are or

may hereafter be owned by any municipality in Illinois." The company contended that this exception could not possibly be made to apply to the business of the City in furnishing electricity to private consumers; because, to so apply it would be a violation of the limitation of the provision in the Illinois constitution, which prohibits the legislature from passing any local or special privileges; and, also that it would be in violation of the fourteenth amendment to the federal constitution which prohibits states from denying to any person "the equal protection of the law."

In deciding the case the Supreme Court of Illinois, with great clarity, pointed out that in operating an electric light plant to supply private users a municipality is not exercising its governmental powers; but, that it is exercising only private, or proprietary rights, and that its duties and liabilities are the same as those imposed by law upon individuals engaged in the same business. The court said:

"There is no doubt that the exception of municipalities owning or operating public utilities from the operation of the public utilities act, which applies to every other corporation, association or individual, grants to such corporations a special privilege which such other corporations do not enjoy, and is therefore obnoxious to the provision of the state constitution against special laws unless there exists some reasonable basis, having reference to the object of the legislation, for placing such municipalities in a class by themselves."

The court does not find that there is any condition making municipalities a class by themselves; and the tenor of the decision is altogether to the effect that it would not be possible to do so. It further points out that "the purpose of the public utilities act was to prevent extortionate charges and unjust discrimination by public utilities"; and, all concerns supplying public utility service are placed under the Public Utilities Commission, which is required to regulate rates and prevent unjust discrimination. Therefore, as the court indicates, it is the duty of the Public Utilities Commission to establish reasonable rates for the Springfield electric light company and that the same rates must be charged by any competitor that enters the field against it.

There is an aspect of this matter which the court does not touch upon, probably because it is not germane to the essential features of the case, and it is this: In such conditions as the Springfield case discloses it appears that the major portion of the public are compelled to obtain service from the public utility corporation at the reasonable rate necessary to

# Dead and Buried Municipally Owned Lighting Plants

Following is a list of municipally owned lighting plants which are dead and buried. They have gone out of business as losing propositions and the taxpayers—the small home owner and renter, as well as the wealthy merchant—have had to pay for the losses. Frequently the tax burdens have lasted for years after the abandonment of the plants. No figures are necessary. The fact of abandonment speaks for itself.

- Adair, Ia. (electric plant sold)  
Afton, Ia. (electric plant shut down)  
Alexandria, Va. (electric plant sold, 1906)  
Allenhurst, N. J. (plant sold)  
Allerton, Ia. (electric plant sold)  
Amherst, Ohio. (electric plant shut down, 1912)  
Appleton, Minn. (electric plant sold)  
Ashley, Ill. (electric plant sold)  
Argenta, Ark. (electric plant shut down, 1913)

## Service-at-Cost in Boston

By T. DAVID ZUKERMAN

New York Bureau of Municipal Research.  
 Reprinted from National Municipal Review.

THE electric railway industry is today the "sick man of business." It has come out of the war in much worse shape than other staple industries and is still facing a crisis. A material portion of the street railway mileage of the country is in the hands of receivers; not a little has been abandoned and sold for junk; and both processes are being continued. That the situation is no worse than it actually is can be ascribed to the mildness of the winter through which we have just passed as well as to the ending of the war.

The traction managers and investors are clearly at a loss as to the solution for the problems they are facing. When the need for additional revenues became insistent, apparently the one method of meeting it that appealed to the traction interests was an increase in fares. The evils of the industry were attributed to the fixed price at which transportation was being supplied. Now, however, that the companies operating in nearly four hundred communities throughout the country have been granted increases in fare—in many cases two or three times—ranging from 20 per cent to 100 per cent, it is becoming more and more evident that the fare increase in itself is not a panacea for the ills from which the street railways are suffering. The results are distinctly disappointing. That such is the case is frankly admitted by prominent traction managers and financiers.

### Service-at-Cost Franchise the Proposed Solution

The last hope of railway men for private ownership and management seems to be the service-at-cost franchise,

which furnishes that public co-operation which they now confess is vitally necessary for successful operation. The legislature of Massachusetts has taken the most radical steps to find a solution for the situation by passing a general service-at-cost act of which any company in the state may avail itself. That body went much further, however, in the case of the Boston Elevated Railway Company, which serves the metropolitan area of Boston. The Boston Elevated Act, passed in 1918, provides not only for automatic adjustments in the rate of fare to furnish the revenues necessary to cover all legitimate operating costs, including adequate maintenance and depreciation and a guaranteed dividend; it also provides for payment by the state of any deficits that may nevertheless be incurred.

The troubles of the Boston Elevated were but intensified by war conditions. The company was facing financial difficulties even before the outbreak of the war. The situation became so acute in 1913 that the Boston transit commission and the state public service commission sat as a joint board to consider the company's affairs. Again in 1914, the public service commission made a complete investigation at the request of the legislature.

### Special Commission of 1916.

Two years later the directors appealed to the governor of Massachusetts for a special commission of inquiry to suggest possible legislative remedies for the difficulties confronting the company. Reaffirming their belief that the fare charged was inadequate, they insisted on the necessity for a radical increase in revenue. The governor transmitted

If I were the trouble man I would try to render the customer the best service possible. I would do my work quickly and accurately, and try to create the impression that the company was interested in the proper operation of the customer's gas and electric equipment. I would be a firm believer in gas and electric labor saving appliances for the home, and would co-operate with the sales department by not "knocking" any appliances that might be giving trouble in the customer's home. I would try to acquire the salesman's point of view that a satisfied customer is the company's most valuable asset.

If I were a wireman I would strive to be a first class wireman. When working in a customer's home I would try to make as little muss as possible. I would always use drop cloths wherever possible, so as to avoid getting plaster or dirt on the rugs, or furnishings, of the home. When necessary to remove base boards or flooring I would try to avoid splitting them, and would see that they were replaced in as good condition as when I found them. I would do my work so well that the customer would be pleased and would recommend us to his friends.

If I were a salesman I would know my line so thoroughly that a customer could not ask me a question about my goods that I did not know. I would have a thorough understanding of the company's rates for service and a general knowledge of the business as a whole. I would be careful of my appearance, always clean shaven and well groomed. I would never misrepresent my goods, and would always try to satisfy my customers so that they would feel that it was a pleasure to deal with me and would refer their friends who were in need of gas and electric appliances to me.

If I were a sales clerk in the store, in addition to having a thorough knowledge of the goods I was selling I would make a study of merchandising methods and try to learn the best methods of displaying and selling goods. I would keep the stock clean and in good order. I would dress plainly and neatly. I would never call to another clerk across the room. I would not address a fellow employe by his given name, or use such terms as "Dearie," or "Gerlie." I would not chew gum or use tobacco while on duty. I would treat the customer with the utmost courtesy and respect, and would try to create the impression in the customer's mind that we appreciated his business and that it would receive our most careful attention.

If I were the head of the department I would not think of it as "My Department," but would think of it as a part of the company, and would so try to conduct the department that it would run smoothly in close cooperation with all the other departments of the company.

If I were the superintendent and you did not do your work properly, I would tell you about it. If you still persisted in making mistakes I would—but I must close as my space is limited.

---

### Scaife Company Opens Chicago Office

Wm. B. Scaife & Sons Company of Pittsburgh announces the opening on July 1st of a Chicago sales and engineering office at 38 South Dearborn Street, with Charles F. O'Hagan, formerly chief engineer of the company at Pittsburgh, as resident engineer and manager. This company is the oldest manufacturing concern west of the Allegheny mountains. During the more than one hundred years since their business was founded, they have from time to time as conditions arose, added to their manufacturing facilities. They now manufacture black or galvanized, riveted, brazed or welded steel tanks for air, gas and liquids, steel shipping drums, range boilers, steel structures, also the well known We-Fu-Go and Scaife water softeners and filtering equipment.

## PRIVATE OWNERSHIP THE BEST

By F. G. R. Gordon in N. E. L. A. Bulletin.

It is always easy for a municipality to do what someone else has already done. A gas or an electric lighting plant can be run by a city after the individual has solved the problem, but no one ever heard of a city initiating anything, except higher and higher costs for city government.

The theory of the municipal Socialists is that a municipality or a state can perform any service better than a private corporation or an individual.

The whole history of public ownership proves this theory to be false the world over. In order to make out a case for municipal or state ownership, a few places are picked out here and there which, owing to their superior location near coal fields, or vast water powers, are offered as illuminating examples of the alleged success of public ownership. But even in these cases it is generally found that only a part of the truth is shown. Almost always such overhead charges as depreciation, part of the cost for capital account, loss of taxes, etc., etc., are ignored.

And if all the costs are taken into consideration the alleged "profits" and "successes" are often turned into losses and failure. As a matter of fact it is losses and failure for nearly all the public-owned enterprises all over the world.

The United States Census proves that public ownership is much more costly than private ownership. Another point often overlooked is the fact that whenever you find a city that has plunged into public ownership you will find high taxes and a very great increase in the municipal debt.

For instance, the story has been published a hundred times over that Cumberland, Md., which owns its electric lighting plant, has street lighting for an average cost of \$34.06 per light per year. But an investigation proved that this price was secured without reckoning the depreciation on plant of some \$40,000 a year and the loss of taxes. If these two items were reckoned into the actual cost, it would have shown a net loss to the city of \$15,564.91 a year. What is more, a private company offered to light the city at a cost of \$7,500 a year, a saving over the socialistic price of more than 30 per cent.

In connection with this let us ask: Will public ownership decrease taxes? No. In 90 per cent of cases it has increased taxes as the history of public ownership will prove.

---

Pearly Morse, the author of the "A. B. C. of Government," says in the *Forum*: "No human being knows what the Government owns or how much it is worth; no department keeps a satisfactory record of depreciation—a thing is worth what it costs until it is thrown away, and precious little is thrown away on government books. And because the Government does not know what it costs to do business it never knows the exact expenses of any purchase or products." Of course this is true, and everybody who has taken the time to investigate knows that it's true.

---

The report of the Investment Bankers' Association committee on railroads says: "According to reliable authorities, the records of public ownership the world over show decreased efficiency, increased expenses, lessened initiative, political interference and economic waste. We find nothing in the experience of our own country in the field of public ownership which encourages the hope that we can profitably extend its sphere." This is exactly what every intelligent investigation will show, and yet we have several million citizens led by men like William R. Hearst and Senator LaFollette, who want to extend public ownership, not only to the railroads but to the wire systems, gas and electric lighting plants and coal mines, and so on.

\$2.00 PER YEAR

It has been shown very clearly by Mr. Pardee that in the matter of production alone the electric utilities play a big part. It is just as true that the electric roads and all the other utilities—gas plants, electric light plants and telephone companies—play parts of equal importance in virtually every phase of our modern life.

Thinking men can not but reach the conclusion that to hamper the development and operation of public utilities is to hamper the growth and development of the communities in which they operate, and that unreasoning prejudice, incited by demagogues in public life against the utilities, amounts to cutting off the public nose to spite the public utility face.

### HANSON UPHOLDS PRIVATE CONTROL

#### Former Seattle Mayor Points Out Fallacy of Municipal Ownership

Ole Hanson, former mayor of Seattle, knows about municipal ownership. His city tried it and still is trying to make its municipal street car system pay expenses. And as the result of that experiment Mr. Hanson has been converted. He no longer believes that municipal ownership is the universal panacea for utility ills. Here is what he says:

"I cannot believe from my experience that the public utility that employs any large number of men or where a large amount of capital is necessary can or will function as efficiently as a public operated utility as a private corporation which has individual reward at the end of the day. Nor do I believe that the cities of this nation or the government of this nation will ever be willing to pay for brains.

"Brains are the cheapest thing there is in the government and you are driving the men of brains away because of poor recompense. When you do get brains you cannot keep them. I think that is the main fault with our government ownership and municipal ownership.

"The time has come, it seems to me, to speak plainly. It is of no use to pussyfoot any longer. We have got to come out and tell the truth to the people and let them understand that the government of the United States is not a self-perpetuating Christmas tree for the benefit of anyone. It seems to me that the time has come to protect the great body of men and women who put their money in public utilities and who during the war have had their entire capital cut in two and you have never heard a murmur from them.

"The man who invested \$10,000 in a railroad bond seven or eight years ago or five or six years ago simply has his \$5,000 today, figuring on the meat and clothing and house rent basis. We must see to it, if we are honorable men that these men get a run for their money or else we are thieves. If we want to make the American government a kind of pickpocket the way to do is just to confiscate these great properties throughout the country."

### Third of Wealth in Utilities

Figures compiled by the Illinois Committee on Public Utility Information show that more than one-third of the total wealth of the country aside from real estate is now invested in public utility companies. If real estate, farm equipment and products and personal belongings such as clothing, furniture and vehicles are deducted, the utility companies account for approximately half the remaining wealth.

"In one way or another," says the committee's bulletin, "every economic activity now depends on the public utilities and if they are managed wrongly nobody can escape the consequences."

### REVEAL MUNICIPAL INEFFICIENCY

#### Indiana Commission Uncovers Public Ownership Faults at Anderson

Conditions not at all uncommon in the management and operation of municipally-owned utilities were brought to light early last year by the Indiana Public Service Commission's investigation of the publicly-owned water and electric plants at Anderson, an important manufacturing city of about 30,000 population.

The commission's engineers and accountants found that the large water and electric properties at Anderson, in which hundreds of thousands of the taxpayers' money had been invested, were being managed and operated with less efficiency than one would expect to find in the direction of a peanut stand. Of course the engineers and accountants made no reference to a peanut stand in their official reports, but they did say:

*"With our form of government, politics are necessary in certain places, but not in the public utility organization, and people who wish to pay their water bills and their electric light bills should not be compelled to run into political conditions in order to meet their public utility obligations."*

They found there were no means by which the management of these big business properties could find out what it cost to produce the service sold, no means for accurately measuring the sales and no means for correct collection of the accounts receivable. Here the reader may be reminded that any ten-year-old boy in the peanut business would know exactly what his product cost him, would make an accurate measurement of his sales and would know how to collect every penny of his revenue.

The commission found that the plant needed more boilers, that the equipment was sadly in need of repair, that no adequate record had been kept of meters installed and no tests made to see whether they were registering properly and the plant officials had no record of the amount of coal burned. The commission's accountants reported that the accounting methods were inefficient and should be revised completely.

These conditions, due solely to the mismanagement resulting from municipal ownership and its attendant political interference in utility affairs, were ordered corrected by the commission.

### Competition Disastrous to Public

Public utility men everywhere know that competition in the utility field is ruinous to the companies and detrimental to the public in the long run. That this view is not shared by the general public is due largely to the fact that political demagogues mislead the people by declaring that a municipal utility, placed in competition with the privately owned one will result in forcing the private utility to reduce rates, the inference being, invariably, that the existing rates are unreasonably high.

The fallacy is gradually being disproved, however, and commissions who inquire deeply into public utility affairs are daily discovering that such is not the case.

For instance, in a recent decision, the Public Service Commission for the Second District of New York refused to permit the Ausable Forks Electric Company to construct a generating plant which would enable the company to compete with the Northern Adirondack Power Company, the companies both having vested interests and being unable to reach an agreement to merge. The commission, in its decision, declared that "competition, while it works to the temporary advantage of the public, is, in the long run, disastrous to the public and to both companies."

# Municipal Plant Burden to Taxpayers

## Too Low Rates Causes Big Deficit in Rock Hill, S. C., Water and Light Plant

It is distinctly unpleasant even to consider what the mental attitude of the citizens of Rock Hill, S. C., would be toward municipal ownership if the rates of their municipal water and light plant were increased to the point where the plant would become a profitable investment for the taxpayers of that little city.

For the year ending March 31, 1919, the municipal plant saddled the taxpayers of Rock Hill with a deficit of more than \$24,000, amounting to about 65 per cent of the total revenue of the plant. To break even, rates would have to be increased about that much and municipal ownership's favorite argument—cheap service—would vanish.

The situation existing at Rock Hill shows very clearly the results of inefficient political management of a public utility. For instance, after taking over the electric plant from the private company in 1911, the city abandoned the generating station and erected a new one. A year later this plant was abandoned and the city began buying current from a private company.

After purchasing the plant the city installed a new street lighting system. Shortly after this decision was reached the council changed its mind and decided to replace the new system with lights of a different type.

Municipal ownership was rather forced upon the inhabitants of Rock Hill. Under private ownership the service was bad and there was continual war between the public service company and the council. This situation was found intolerable but the company can hardly be blamed for not making extensive improvements in the midst of a hot agitation for municipal ownership, and in the unfriendly circumstances which manifested themselves at every turn. The people voted for the construction of a badly needed sewer system but when someone suggested that construction of sewers would increase the volume of water used and thereby increase the revenue of the water company, the council held off construction of the sewers for several years, merely to spite the corporation. In the year following this decision there were 53 cases of typhoid with 17 deaths due entirely to the crude sanitation then in force.

After purchasing the light and water plants the city established rates about 20 per cent lower than those of the private corporation but the losses each year have been considerably more than 20 per cent of the gross revenue with the result that the service is costing the city considerably more than it did under private ownership.

The accounts of the municipal utilities of Rock Hill, while incomplete, are in far better condition than those of the average municipal plant. All city departments are charged at regular established rates for service and bills are rendered to the city for street lights and hydrant rental. Interest on the bonded debt is charged against the plants. Omitted items include rent of office in the city building, lost taxes on basis of taxation of old company, services of other city departments in helping manage and operate the property, interest on such proportion of the 1914 funding bond issue as is chargeable to water and light, and sinking fund requirements for the retirement of the original bond issues when they mature, as well as the proper proportion of the 1914 issue. The plant makes a charge for depreciation, but it is inadequate. For the year ending March 31, 1919, the plant charged off \$4,150 as depreciation but this amount is ridiculously small. The plant charged off \$1,000 as extraordinary depreciation (against an abandoned well purchased from the old com-

pany) and \$3,150 as depreciation of machinery and equipment. The maintenance of the properties has not been up even to the average and depreciation figures covering a great many properties show that with even average maintenance the depreciation rate is at least 7 per cent on electric properties and from 4 to 5 per cent on water properties, particularly in growing communities like Rock Hill, where new and larger water mains must frequently be laid to replace mains which have been outgrown. A fair depreciation charge, including depreciation chargeable against old company property purchased and junked, is certainly 7 per cent, which would make the depreciation, based on the reported plant value of \$256,819.03, amount to \$17,977.33 instead of only \$3,150, which was charged in 1919.

Making this correction in the accounting and including the charge for rent in the city hall, lost taxes, services of other departments, interest and sinking fund, we have:

Earnings water dept.....	\$18,152	
Earnings electric dept.....	36,858	
Joint earnings.....		\$55,010
Expenses water dept.....	\$10,389	
Expenses electric dept.....	16,934	
Joint expenses .....		\$27,323
Surplus earnings over expenses.....		\$27,687
Joint general expenses .....	\$ 7,611	
Bond interest .....	11,750	
Tools and supplies deficit.....	28	
Depreciation reserve .....	4,150	
		\$23,539
Net profit .....		\$ 4,148

The following items are chargeable against the net profit above not included in the city's accounting:

Office rent (estimated) .....	\$ 600
Lost taxes (on basis of valuation).....	2,863
*Services other city depts.....	1,200
**Depreciation .....	14,825
***Interest additional .....	1,125
Sinking fund requirement.....	7,685
	28,298
Deducted reported net profit.....	4,148
Net loss .....	\$24,150

This deficit amounts to slightly more than 65 per cent of the total revenue from water and lighting customers and would indicate that rates must be raised by that amount in order to make the plant break even. This would make the initial rate for water 44.5 cents per thousand gallons net, with a minimum bill of 82 cents net.

Municipal ownership in Rock Hill was justifiable as an escape from the intolerable condition which had arisen on account of the differences between the company and the city officials, but if it was entered into with any hope of profit, that phase of the situation must be a serious disappointment to the people.

\*Includes services of mayor, council, city attorney, city treasurer, police service in reporting trouble, etc.

\*\*This sum is 7 per cent normal depreciation less the auditor's nominal depreciation charge of \$3,150. Deep well depreciation is extraordinary.

\*\*\*Interest on one-half of funding bond issue of 1914 chargeable to water and light department. The issue was for \$45,000, for the purpose of funding the city debt and a considerable part of this debt if not all of it was incurred on account of the water and light plants.

# What Public Ownership Did to Taunton, Mass.

## Epidemic of Municipal Ills Directly Traceable to High Cost of Operating City's Light Plant

**T**AXPAYERS of the important industrial city of Taunton, Mass., of 38,000 people, are receiving a liberal education in the school of municipal ownership. The tuition fee in this school for the year 1919 was more than \$66,000, the amount of the deficit piled up by the municipal electric light plant. In addition to this drain upon the public purse, the consumers are paying higher rates than are in force in any comparable city in the state and, because of the inadequacy of the plant, 65 per cent of the industries upon which the city depends for prosperity have been forced to obtain their current from isolated plants.

Probably the greatest ill suffered by Taunton has been this effect of municipal ownership on industry. About 65 per cent of the power used in the industries of the city is generated in individually owned plants and although the municipal plant is called upon to carry only 35 per cent of the power load of the community, it is heavily overloaded and the management is endeavoring to obtain an appropriation for a new 4,000 KW. generating unit.

The municipal electric plant at Taunton has always required appropriations from general taxes, which have been considered in the light of payment for street lighting service, though the relation between the two has not always been very apparent. Today the domestic lighting rate, as well as other rates, take place as the highest in similar cities in Massachusetts.

In spite of the \$100,000 bond issue for operating expenses in 1919, and other bond issues, of which it is certain part of the proceeds were used for operating expenses, the plant is in a serious state of deterioration. The resident superintendent feelingly describes it as "rotten!"

The city tried municipal management from 1897 on, but in the summer of 1919 the city officials threw up their hands and turned the solving of the problem over to a committee of citizens, composed chiefly of men who were large users of the municipal power and large taxpayers as well. Their most important step was the employment of an outside engineering firm to act as operating managers, with no supervision or interference from the city officials. The engineering firm has a resident manager, who devotes his entire time to the plant. A significant fact is that the engineering firm receives about three times as much to act as manager as did the politically appointed superintendents preceding. Taunton has apparently learned a lesson, albeit belatedly, that cheap help is the most expensive.

### Demand Exceeds Capacity

The municipal electric plant has never adopted a progressive policy of expansion. The demand for electricity has always been ahead of the capacity of the plant, with the result that overloaded and neglected equipment has been subject to frequent breakdowns.

The expense of maintaining the electric plant is undoubtedly a contributing cause to the unsatisfactory condition of other public works, such as sewers, paving and park development. The sewer system was put in ten years ago, but has never been completed and is considered by many to be a serious menace to the health of the community. Owing to the scattered character of the city—an area of 50 square miles for a population of 38,000—there are many unpaved streets though the paving which is installed is in fair condition. There are only two city parks, aggregating about

two acres, and of these only one is improved. There are 28 grade schools and one high school in which crowded conditions prevail and there is an urgent need for new buildings.

Prior to July, 1919, the municipal electric plant was operated by a superintendent, appointed by the mayor, and directly responsible to him. The salary was \$1,800 a year. The term was for four years. Since 1903 there have been five superintendents, the changes being political in each instance. The action in July, 1919, was to take the electric plant out of politics and insure some sort of business supervision. In line with this effort, a special act was secured, calling for the creation of an Electric Light Commission of three members to be appointed by the mayor. Naturally the first commission, appointed at a time when the affairs of the plant were at a crisis, is composed of men who will, during their tenure of office, keep the plant out of politics; but it is a matter for the future to determine whether the injection of political influence into future commissions will not occur just as appointment of past superintendents has been a matter of politics. The commissioners receive \$300 a year each, with an additional \$200 for the chairman. This is hardly enough permanently to attract high grade men who will give the necessary time to supervising the management of an important public utility.

The crisis which brought about the attempt to reform the administration of the plant was not because of operating deficits, which have always been the rule, rather than the exception—it was not on account of the rates, though power rates had been increased by a 25 per cent fuel surcharge in September, 1918. It was on account of the fact that the service had become so poor and was so subject to interruption that the manufacturing interests of the community could not tolerate the condition any longer.

The management estimates that about 20 per cent. of the houses in the city are wired, with 3,400 meters in service. The plant furnishes about 35 per cent of the power used in the city, the remainder being furnished by isolated steam, oil and gas engine plants. The small percentage of houses wired for electric light again indicates the unprogressive nature of the municipally owned undertaking, and shows in a striking manner the unfairness of municipal ownership, where all the residents are taxed to pay operating deficits from which only 20 per cent of the families derive benefit.

A significant feature of the electric lighting situation in Taunton is shown by the fact that 50 per cent of the gas company's business is lighting business, even though the cost of gas is \$1.30 per thousand feet—an increase of 40 cents over pre-war prices.

The electric plant now carries a considerable overload, running as high as 50 per cent at times. On account of this overloaded condition the plant will accept no more power business, but makes an effort to connect up new residence customers within two or three days after application is filed, provided the customer is directly on the existing lines. No line extensions will be made until the new generating unit is purchased and installed.

### Electric Plant Statistics

The plant was purchased in 1897. The present generating station was built in 1902.

The real estate consists of 6,900 square feet of land on

which the original plant was situated, purchased from the old company in 1897, and valued at \$4,000, and 78,454 square feet of land on which the present generating station is located. This land belonged to the city and has never been paid for by the plant. It is valued at \$9,500. Since 1897 there have been eleven bond issues, ranging in size from \$125,000 to \$3,000 and bringing the total bonds issued to \$603,000. Of this sum, \$16,000 has been paid, bringing total bonds outstanding to \$587,000 on which the interest charge for 1920 will amount to \$24,760.

The official report for the year ending November 30, 1919, shows an operating deficit of \$3,939, as follows:

Earnings—	
Commercial and domestic light.....	\$129,842
Contract incandescents.....	542
Power.....	130,547
Municipal buildings.....	6,556
Cooking and heating.....	1,265
Street lighting.....	30,000
	\$298,552
Expenses—	
Station operation.....	\$259,460
Distribution.....	22,248
General.....	20,783
	\$302,491
Operating deficit.....	\$ 3,939

The above figures do not include the charges for depreciation, interest, bad debt and jobbing losses allowed in the official profit and loss account for 1919, which were as follows:

Depreciation.....	\$20,287
Interest.....	19,789
Bad debts.....	2,376
Loss on jobbing.....	238
	\$42,700
Add operating deficit.....	3,939
Year's deficit officially shown.....	\$46,639

The official accounting allows nothing whatever for lost taxes—the amount of tax revenue that would be derived by the city if this property were in private instead of municipal ownership. It is estimated that at least \$20,000 yearly in taxes would have to be paid on this property were it in private hands. So, without taking into consideration the decreased value of the dollar or adding anything to the above official depreciation charge to make up for it, but by merely adding \$20,000 for lost taxes to the officially acknowledged deficit of \$46,639, we find that municipal ownership and operation of an electric plant actually resulted in a loss of \$66,639 to the city of Taunton for the year of 1919.

The rates of the Taunton plant would have to be increased 23 per cent. to make the earnings cover the actual operating and fixed charges. The present maximum lighting rate is 15 cents per KWH. with a minimum of 13 cents; power rates range from 8.75 cents to 2.5 cents. The minimum monthly charge for lighting is 75 cents and for power a minimum of 75 cents for the first horsepower connected is charged with a 50 cent charge for each additional horsepower. The commercial charge, as reported to the State Board of Gas and Electric Light Commissioners, is “an operating charge of 5 cents a KWH. and a standing charge of 7 cents a KWH. divided by the hours a day of full load consumption, with a discount of 10 per cent of the gross charge if the bill is paid on or before the 15th of the month.”

This charge is now subject to a 25 per cent surcharge on account of war conditions.

Summed up briefly, municipal ownership in Taunton has accomplished the following results: (1) it has hampered industrial growth by failing to provide adequate power facilities; (2) forced consumers to pay more for light and power service than their neighbors; (3) saddled on the taxpayers, only 20 per cent of whom are consumers, a debt of more than half a million dollars, of which only \$16,000 has been paid and interest on which for 1920 will total approximately \$25,000; (4) piled up an annual deficit which for 1919 is computed at more than \$66,000; (5) cost the

city \$20,000 annually in lost taxes; (6) has given such poor service as the result of political interference that outside help had to be procured at great public expense to run the plant; (7) retarded necessary public improvements and (8) provided the city of Taunton with a plant which its own superintendent describes as “rotten,” and able to supply, even when overloaded, considerably less than half the power requirements of the city.

Taunton furnishes a shining example of the fact that an electric light plant cannot be successfully operated politically.

## PUBLIC DUTY TO UTILITIES

### Development of Public Utility Corporations Is for General Public Interest

There is frequent discussion in the newspapers and by politicians of the service the public utility owes the public, but it is rarely that the other side of the case is heard and one learns that the public also owes something to the utility which supplies it with service.

This is well illustrated by the testimony given before the public utilities commission of California recently with regard to the development of hydro-electric power.

In this particular case the witness, a banker, expressed the opinion that it would be fairer and more to the interest of the general public to promote the development of the utility company than for the people to listen to the bickerings of the politicians and quibble over differences in the proposed rates for service amounting only to a fraction of a cent. In support of his contention the witness cited the San Joaquin valley. This valley is one of the garden spots of California. Only one-fifth of it, he said, had been developed. Development of the other four-fifths depended absolutely on the development of hydro-electric power. The witness wondered what profit the residents of the San Joaquin could expect to gain by combining to force the power companies to charge rates that would give them little, or practically no return for the money invested. The valley, he said, could not develop without power; power could not be developed and the facilities of the public utility expanded to provide more power without credit; and credit could not be obtained unless the corporation could show where the company could earn money to pay off its creditors.

The banker's position was well taken. He knew what the public does not know, or rather what the public often-times chooses to disregard—that capital, other things being equal, will gravitate toward investments that promise the highest return. This is so true that it amounts to an economic law. And the public, by allowing itself to be duped into believing that public utilities are in the robber baron class, only work injury to the public. The public often wrecks the utility, but it suffers in turn. Failure to provide money for expansion results in no expansion and insufficient expansion means that the progress of the community is seriously hampered.

## TMLP History

When Taunton Municipal Lighting Plant (**TMLP**) began operating as a municipal electric utility in 1897, it already had 15 years experience providing electricity to customers in the business section of Taunton.

TMLP's predecessor, the Taunton Electric Lighting Company, was created as a business venture by several Taunton entrepreneurs who provided the funding for a 100' x 75' wooden structure on Mechanics Lane which contained a 60-horsepower engine, boiler and dynamo machines to illuminate 35 to 40 lights in the Main Street/City Square area.

Service began on a small scale, with 22 customers with one, two or three arc lights. Electricity was available from one hour before sunset until 10 p.m. each night except Saturday when electricity was provided until 11 p.m. By September 1892, 18 stores around the Green had electricity and streetlights were lit on Broadway, Main Street and City Square.

Taunton Electric Lighting Company made it possible for the first electric cars to start service from the Green to Whittenton and back on April 30, 1893. Service was later extended to Weir Street and back. By then, the company was generating enough power to illuminate 84 streetlights and 2000 incandescent lights throughout the city.

Demand for electricity increased and an addition to the generating station was constructed in 1890. As the demand for electricity increased, so, too, did the company's debt. In December 1896, the stockholders voted to sell the company.

The city of Taunton came to the rescue in 1897, and decided to purchase the floundering company, making it a publicly-owned electric utility. In June 1897, the city of Taunton purchased the electric light company for a total \$125,000.

Renamed Taunton Municipal Lighting Plant, the utility continued to generate power at the Mechanics Lane Service Station. The Mayor appointed a Board of Commissioners to help govern the utility. By 1918, TMLP was in financial disarray due to the lack of a permanent manager or commission. With the insistence of the Taunton Central Labor Union and the Taunton Chamber of Commerce, the state legislature passed a bill that created a three-person commission to oversee TMLP. Governor Calvin Coolidge signed a bill establishing the Taunton Municipal Lighting Plant Commission in April 1919.

Today, TMLP provides electric service to 34,000 customers in Taunton, Berkley, Raynham, and sections of Dighton, Lakeville and Bridgewater. TMLP is governed by a three-member Board of Commissioners, which is elected by the citizens of Taunton.

TMLP employs 165 associates and has an office location at 55 Weir Street and the Cleary-Flood Generating Station at 1314 Somerset Ave, Taunton, Massachusetts. The Generating Station, which has two units (#8 and #9), is capable of generating 136 mW. Unit #8 burns fuel oil (#6), and Unit 9 is a combined-cycle unit that burns natural gas and #6 fuel oil.

In late 1997, TMLP began offering Internet service for its customers as TMLP Online. TMLP Online today provides Internet and network service to residential, commercial, industrial, and municipal customers in the area, including the entire Taunton school system as well as Morton Hospital and its associated medical facilities.

TMLP and its associates are active members in regional and national organizations such as the Northeast Public Power Association, American Public Power Association and the Municipal Electric Association of Massachusetts. Locally, our employees sit on a number of Boards and participate with civic organizations including the Taunton Chamber of Commerce, Taunton Area School to Career, Taunton Boys and Girls Club, Rotary, Project Best, United Way and American Cancer Society.

## COMMUNITY

# Multiservice utilities: A one-stop shop for communities

May 9, 2018

[Betsy Loeff \(/people/betsy-loeff\)](/people/betsy-loeff)

[Home \(/\)](#) / [Periodical](#) / [Article](#) / [Multiservice utilities: A one-stop shop for communities](#)

Many public power utilities provide more than electric service for their communities; they might also manage the area's water, wastewater, cable, internet, waste, gas, and telecommunications services. For these utilities, being a multiservice provider brings opportunities in streamlining how work gets done, organizing the workforce, and giving back to the communities they serve.

## Finding efficiencies in the field

"Operationally, one advantage we see in being a multiservice utility is having the ability to coordinate our various activities," said Ken Weber, chief executive officer of Harlan Municipal Utilities (HMU), which supplies electric, gas, water, and telecommunications services to some 5,100 people in Harlan, Iowa. Weber points to the convenience for customers that his utility can provide as a single point of contact for contractors and movers.

Coordination impacts field operations, too, said Gabriel Khalife, borough manager for Kutztown, Pennsylvania, a municipality about the same size as Harlan that also offers a gamut of services: water, wastewater, gas, electric, telecommunications, and waste management.

"If we're opening up a street, all the services get a chance to look at what's underneath and see if there is an opportunity to improve service," noted Khalife. "We get a firsthand look at what we can do all at once."

## **A well-connected workforce**

Efficiencies accrue in utility offices just as readily as they appear in the field.

"We definitely benefit from economies of scale for increased efficiency and productivity," said Kelly Simonsen, marketing and communications manager for Easton Utilities. The town of Easton is Maryland's first municipality to own all of its utility services. Easton Utilities provides electric, water, wastewater, natural gas, cable television, and internet utility services for nearly 17,000 people in the Town of Easton and its surrounding area.

In Easton, shared services covering functions including accounting, information technology, human resources, and marketing support all seven business units. "We regularly call on each business to support another, and that brings talent that we would not be able to have on staff full-time if we were just one business," she said.

Simonsen added that internal training, leadership development and corporate communications also benefit from the economies of scale inherent in offering multiple services to the community. For instance, in a recently implemented leadership program, the utility was able to bring in high-caliber training resources.

"Participants also grow from each other's experiences," she said. In fact, the utility is committed to cross training. "For example, our customer service team members will spend time in the field viewing what a lineworker does. They can better communicate with the customer when they understand a bit more what linework entails."

In Kutztown, Khalife said safety education crosses department lines. "We have a very active workforce that goes through monthly training meetings," he explained. With ongoing investments in safety equipment and instruction, the utility has recently experienced two accident-free years.

In addition to providing opportunities for savings, delivering several services also boosts employee retention. "It serves as a natural arena for career mobility," said Khalife.

For instance, a couple of years ago when two jobs opened on the electric side of the utility, two public works employees jumped at the opportunity to change fields. The borough, Khalife said, supported their training, certifications, and transition. In return, the city "retained their skills and knowledge of the borough," he said. "If another department needed help with heavy equipment or snow plowing, those skills are still with us."

Harlan's Weber sees similar value in the career mobility his utility can offer. "We had one of our cable television gentlemen go from the telecom department to the gas department," he said. "If there's anybody who knows where everybody lives in town, it's going to either be a cable guy or a gas meter guy. This employee's familiarity with the town, with the customers, and with the general operation of HMU made for a shorter training period."

### **More ways to promote good citizenship**

Employees of multiservice utilities aren't just acquainted with a town, they're part of it, so reinforcing community ties is a high priority. The many services these organizations offer provide plenty of opportunities for positive impact.

Kutztown's utility has what Khalife called a "passion for natural resources" that shows up in "tremendous volunteerism." For example, the town's environmental advisory commission teamed up with volunteers through Berks Nature, a local nonprofit agency focused on conservation, and the U.S. Department of Agriculture's Natural Resources Conservation Service to address high levels of nitrates in Sacony Creek, a vital watershed for the community.

The combined effort helped local farmers install fencing and animal crossings over the streambed to prevent contamination and adopt nutrient management practices that facilitated controlled and timely application of fertilizers. Both efforts limited pathogens from entering the water. Before this initiative, the city's water treatment plant had been updated with nitrate-removal equipment, but two years after this undertaking, that equipment runs at minimum capacity because nitrate levels have dropped by half.

Along with supporting the nearby ecology, multiservice utilities support the economy. In Harlan, utility managers chose to invest in a new building associated with the local community college.

"They were building a kind of technology incubator," Weber explained. "Not only did we see the big picture for improving the community college for education, we saw the big picture for the technology center."

He adds that the utility was the leading provider in the area capable of supplying the kind of high-speed internet such a center would require. HMU made a donation to help college officials get that center built, and now HMU is the provider of choice for the facility.

Easton's Simonsen said the utility's many services help the organization "be a more significant partner in the community by supporting organizations or events as a sponsor." As an example, as a cable provider, the utility is able to give non-profit organizations opportunities to share their messages on local TV broadcasts free of charge.

## **Challenges to consolidation**

While there are many advantages to being a multiservice utility, there can be some challenges, too.

One is the complexity of training for customer service representatives. "It is a little bit more of a learning curve for a CSR," said Weber. "They have to go across four different main services, and then the telecom CSR drills down into internet, cable TV, and telephone. But that's just standard operating procedure for us."

Another issue: the bigger bills when customers get invoiced for combined services. Weber compares his utility's bills to those in other markets, where a customer might get one bill for electric, and another for gas, water, wastewater and telecommunications, all from different organizations.

"In Harlan, a customer gets electric, gas, [and] water and we also collect for the city on the garbage and sewer side. That's one big bill," he said.

Meanwhile, Harlan sometimes finds itself with an interesting problem: popularity. "We often have requests to expand our service territory, especially with respect to internet service," said Simonsen. "With a mindset to always serve the customer, it is challenging for us to not accommodate these requests. Still, there are times when the cost of supplying such service is financially unattractive."

## **Building trust, earning loyalty**

Despite minor hiccups, multiservice utilities report that having more contact with the community also strengthens local support for the utility.

Kutztown's Khalife noted that the same convenience customers find in acquiring all their utility services from one provider extends to the grievance process. "In a one-stop shop, there's one place to thank and the same place to complain against," he said.

Khalife said his utility maintains "door-to-door response." That is, the utility helps customers onsite with energy assessments, cable TV troubleshooting, and more. "It's a response that customers might not get from a different utility venue."

Simonsen said such commitment encourages customer loyalty for Easton: "People who currently have some of our services are inclined to add other offerings we provide."

In Harlan, commitment to the community has similarly translated into opportunity and fierce loyalty. "The electric and water divisions of our utility were established in 1891. In the 1950s, there was a push to add natural gas, and an investor-owned utility tried to come into town," recounted Weber. "The community overwhelmingly approved a municipal gas utility over the competition."

The same thing happened in the 1980s, when a co-op tried to wrestle away electric service, and again in the 1990s, when the town voted to let HMU add telecommunications to its offerings. Today, competitive providers struggle to gain a foothold against the municipal provider that people trust for just about every utility need.

"We've been invested and involved in our town for 125 years, and now it's a back-and-forth arrangement," Weber said. "Our customers trust us, support us, and rebuke outside interference."

# EXHIBIT 69

# Comcast Spends Big on Local Elections: Would Lose Millions in Revenue from Real Broadband Competition

By H. Trostle & Christopher Mitchell

---

## Summary

Comcast has a lot to lose from a competitive market in broadband Internet access. The cable firm is often the only option for broadband Internet access as defined by the Federal Communications Commission today.<sup>1</sup> Comcast faces no competition in four out of ten census blocks where it offers broadband service and in 73 percent of the blocks that have competition, there is only one other option.<sup>2</sup> The cable giant joined incumbent telephone company CenturyLink in Seattle with a [\\$50,000 donation](#) to their preferred candidate, who just happens to oppose a municipal fiber network.

In Fort Collins, the state cable association and Chamber of Commerce have spent more than \$200,000 opposing an effort to amend the city's charter to add authority for a telecommunications utility (although the city has not yet decided how it would use such authority). Comcast is almost certainly the one writing big checks to those organizations.

And yet, Comcast is probably under-spending relative to the threat it faces from encouraged

local Internet choice. Evidence from other cities suggests that a real choice in broadband services could reduce Comcast's revenues by millions of dollars per month. Competition in Fort Collins would cost Comcast between \$5.4 million and \$22.8 million per year. In Seattle, robust competition would cost between \$20 million and \$84 million per year.

A few tens of thousands of dollars is a small price to pay to secure tens of millions in monopoly profits per year. Massive firms monopolizing single industries threatens our political system because of the large incentive they have to protect their turf. They can justify spending more single-handedly to influence elected officials than all sides typically spend in a campaign. And campaign expenditures are only one of many tools firms like Comcast use to protect their business from competition. Comcast also has regular access to decision-makers via direct meetings, trade associations, and via their ["philanthropic" pursuits](#).

---

<sup>1</sup> The Federal Communications Commission (FCC) defines broadband as at least 25 Megabits per second (Mbps) download and 3 Mbps upload.

<https://www.fcc.gov/reports-research/reports/broadband-progress-reports/2016-broadband-progress-report>

<sup>2</sup> According to the FCC's Form 477 June 2016 version 2 dataset, Comcast provides service in over 1.6 million census blocks and faces at least one competitive broadband ISP in only about 930,000 of them. These numbers are more than a year out-of-date, and we await the FCC publishing the next Form 477 dataset. <https://www.fcc.gov/general/broadband-deployment-data-fcc-form-477> This is the best available data set but it does not guarantee competition in blocks with more than one provider as they may have split the census block to avoid competing.

## Seattle

In Seattle, Comcast and CenturyLink have thrown their weight behind a mayoral candidate with a donation of \$50,000. This is pocket change compared to what they stand to lose. According to our estimates, Comcast could stand to lose an estimated \$1.68 million - \$7 million in revenue each month if faced with competition.

At the end of 2016, Comcast reported approximately 138,000 video subscribers. Comcast has roughly the same number of broadband subscribers as video. Comcast gets an [Average Revenue Per User \(ARPU\) per month of about \\$50](#) for Internet service customers. In our experience with municipal networks, we would expect Comcast to lose between 20 and 30 percent market share as well as a decreased ARPU from remaining subscribers due to more intense price competition.

We conservatively estimate Comcast losing 20 percent of its 138,000 subscribers and a

decrease in ARPU of 5 percent for the remaining subscribers. A high bound is Comcast losing 30 percent of its subscribers that are largely video customers, for which Comcast's [ARPU is \\$150 per month](#). Additionally, for this estimate, Comcast's ARPU would decline 5 percent due to price competition.

As a result of serious competition in Seattle, Comcast would lose between \$1.66 million and \$7 million per month. That works out to between \$20 million and \$84 million per year. Spending tens of thousands of dollars in Seattle is a no-brainer. **Spending more to protect its market share would be a sound investment but could backfire by drawing too much attention.** Comcast faced criticism previously for its [donations](#) to the previous Mayor Murray, who claimed he was not influenced by Comcast's support. Before resigning in disgrace, Mayor Murray did little to create Internet choice following a curiously framed municipal fiber study that deliberately

Table 1: Comcast's Potential Losses in Seattle

Low Estimate to Comcast Internet Service		Each Month
20% of Comcast subscribers at \$50 ARPU		\$1.38 million
80% of Comcast subscribers minus \$2.5 ARPU		\$276,000
<b>Total Comcast Lost Revenue</b>		<b>\$1.66 million</b>
High Estimate to Comcast Video Service		
30% of Comcast subscribers at \$150 ARPU		\$6.21 million
70% of Comcast subscribers minus \$7.5 ARPU		\$830,000
<b>Total Comcast Lost Revenue</b>		<b>\$7 million</b>

inflated costs to make any city effort appear too risky.

It isn't just campaign contributions that wear down local leaders, the constant meetings and pressure from client organizations help. But the scale of potential losses in monopoly profits from competition demonstrate Comcast's strong motivation to protect its turf.

## Fort Collins

Fort Collins, Colorado, is far smaller than Seattle but is getting a lot more attention from the cable giant. The city is home to approximately 164,000 people or about 65,500 households. In November 2015, Fort Collins overwhelmingly voted 83 to 17 percent to opt out of a state law that prevents cities from considering municipal networks, without active opposition from Comcast in that referendum. In November, 2017, Fort Collins voters will decide a referendum on amending the city's charter to add authority for a telecommunications utility -- the next step toward a municipal network.

Comcast is the dominant Internet service provider in the city and is contributing heavily to the opposition to the referendum. At [last count](#), 57 percent of the households in Fort Collins subscribe to Comcast. Opponents of the referendum, which include the Chamber of Commerce and Colorado Cable Telecommunications Association (Comcast being a dominant member of both), have spent [\\$200,000](#) as of two weeks before the vote.

If Fort Collins were to build a competitive municipal network, Comcast could lose between \$523,000 and \$2.13 million per month. That is from \$5.4 million to \$22.8 million per year. This calculation uses 37,335 residential Comcast customers (57 percent of the 65,500 households in town) and the same assumptions as above.

Comcast has a relevant history in Colorado, having previously spent on the order of half a million dollars (via the CCTA) to stop competition in Longmont, just south of Fort Collins. Longmont went on to build a fiber network that has done quite well, offering a \$50/month gigabit connection citywide.

Table 2: Comcast's Potential Losses in Fort Collins

Low Estimate to Comcast Internet Service		Each Month
20% of Comcast subscribers at \$50 ARPU		\$373,500
80% of Comcast subscribers minus \$2.5 ARPU		\$75,000
<b>Total Comcast Lost Revenue</b>		<b>\$450,000</b>
High Estimate to Comcast Video Service		
30% of Comcast subscribers at \$150 ARPU		\$1.68 million
70% of Comcast subscribers minus \$7.5 ARPU		\$224,000
<b>Total Comcast Lost Revenue</b>		<b>\$1.9 million</b>

Comcast's reaction? It has [blatantly lied](#) about the network in communication with Fort Collins City Council.

In a related note, the campaign against the referendum this year also lies, claiming that a yes vote in the referendum will result in borrowing \$150 million. Fort Collins has no plans to borrow \$150 million; the city simply needs to authorize an upper limit for borrowing in the event they decide to move forward with any investment.

## Conclusion

The big cable companies like Comcast have a stunning amount at stake in preventing additional choices and competition in the areas they currently monopolize. Our analysis doesn't even consider the additional costs that competition would mean for Comcast (often increased marketing, and earlier technical upgrades).

If Comcast faced more competition, the lost revenues wouldn't just disappear. It would remain in the pockets of subscribers in the form of lower monthly rates and in the salaries of people working for the new competitor. Money that today flows to Comcast executives and shareholders far outside these cities would be more likely to stay in the local and regional economies.

Spending a few hundreds of thousands of dollars once or twice to stop a referendum is a smart investment to stop competition that would cost many millions of dollars in lost revenue year after year. It also puts into perspective the relatively small price North Carolina cable and telephone firms [paid to block all local Internet choice](#) from local governments there.

Given the many reasons that communities have to create local Internet choice, including [better educational opportunities](#), [dramatic community savings](#), [key economic development wins](#), and more, some wonder why communities might decide against local investments. The answer is that the big cable and telephone monopolies are highly motivated to preserve the [broken broadband market](#).

# **BROAD-BANNED: THE FCC'S PREEMPTION OF STATE LIMITS ON MUNICIPAL BROADBAND AND THE CLEAR STATEMENT RULE**

## **ABSTRACT**

*Congress instructed the FCC in the Telecommunications Act of 1996 to take action to ensure that advanced telecommunications capabilities were being timely deployed to all Americans. In 2015, the FCC preempted statutes in North Carolina and Tennessee that limited the powers of municipally owned internet service providers to expand their networks to nearby underserved communities. The FCC had determined, pursuant to Section 706 of the 1996 Act, that these state limits on municipal broadband networks were anticompetitive barriers to infrastructure investment in contravention of the express purpose of the Act. The FCC reasoned that the municipal broadband networks were filling gaps in the broadband market, where private internet service providers were unwilling to invest in infrastructure or providing lousy service due to the lack of competition in the local markets.*

*North Carolina and Tennessee appealed the FCC order, arguing that the FCC did not have the authority to interpose itself between the States and their political subdivisions. Relying on the Supreme Court's earlier decision in *Nixon v. Missouri Municipal League*, which addressed a similar factual issue, the Sixth Circuit agreed with the States that the FCC lacked the authority to interfere with the States' management of their political subdivisions. This Comment argues that the Sixth Circuit should have applied a narrower reading of the clear statement rule, which would strike an appropriate balance between the FCC's unmistakably clear authority to regulate the deployment of broadband technology against the legitimate sovereign interests of the affected states.*

## INTRODUCTION

Upon the signing of the Telecommunications Act of 1996, President Clinton predicted that the Act would “help connect every classroom in America to the information superhighway by the end of the decade.”<sup>1</sup> Since the enactment of this bill, the Internet—the “information superhighway” to which President Clinton referred—has provided Americans with new opportunities in communication, education, healthcare, and the economy.<sup>2</sup> The benefits of these opportunities are particularly pronounced in rural America, where broadband empowers previously remote communities to become a part of the global community.<sup>3</sup> Access to these opportunities has increasingly become a necessity, especially for students and professionals, as the Internet becomes more central to daily life in America.<sup>4</sup> However, over two decades after the passage of the 1996 Telecommunications Act, approximately 24 million Americans still lack access to fixed broadband services.<sup>5</sup>

Around the country, communities that either lack access to broadband or are dissatisfied with their current service providers have banded together to launch their own municipal broadband services with the support of local governments.<sup>6</sup> Nineteen states, however, have laws in force that restrict communities’ ability to form municipal broadband networks.<sup>7</sup> These restrictions, nominally passed to prevent government boondoggles and ensure fair competition in the

telecommunications market,<sup>8</sup> have often been the subject of intensive lobbying efforts from private internet service providers (ISPs).<sup>9</sup>

In 2014, two cities with existing municipal broadband networks—Wilson, North Carolina and Chattanooga, Tennessee—petitioned the Federal Communications Commission (FCC) to preempt statutes in their states that limited their ability to expand broadband services to neighboring, underserved communities.<sup>10</sup> The FCC granted the petitions of Wilson and Chattanooga pursuant to its authority under Section 706 of the 1996 Telecommunications Act.<sup>11</sup> North Carolina and Tennessee promptly appealed the preemption, and the cases were consolidated in the Sixth Circuit.<sup>12</sup>

The Sixth Circuit overturned the FCC's preemption order in *Tennessee v. FCC*, reasoning that because this action interposed the federal government between the state and its political subdivisions, the clear statement rule enunciated by the Supreme Court in *Gregory v. Ashcroft* applied.<sup>13</sup> When preemption would “upset the usual constitutional balance of federal and state powers,” courts apply the clear statement rule, which requires that Congress's intent to preempt be “unmistakably clear” in the text of the statute.<sup>14</sup> The Sixth Circuit relied on the Supreme Court's application of the clear statement rule in *Nixon v. Missouri Municipal League*, in which the Court found that a different section of the Telecommunications Act of 1996 did not grant the FCC the authority to preempt a state statute prohibiting public utilities from providing telecommunications services.<sup>15</sup> Because the Sixth Circuit found more than one reasonable interpretation of Section 706, the three-judge panel ruled that congressional intent was not clear, and therefore the FCC lacked the power to

<sup>10</sup> City of Wilson, North Carolina, 30 FCC Rcd. 2408, 2413 (2015) (mem. op. and order).

<sup>11</sup> *Id.* at 2414 (“Section 706(b) requires that the Commission ‘take immediate action to accelerate deployment of such capability by removing barriers to infrastructure investment and by promoting competition in the telecommunications market,’ if it finds . . . that advanced telecommunications capability is not being deployed to all Americans in a reasonable and timely fashion.” (citation omitted)). See generally Matthew Dunne, Note, *Let My People Go (Online)*, 107 COLUM. L. REV. 1126, 1146 (2007) (arguing that Section 706 confers preemption authority on the FCC and obligates it to preempt if it finds that state law hinders broadband deployment).

<sup>12</sup> *Tennessee v. FCC*, 832 F.3d 597, 609 (6th Cir. 2016).

<sup>13</sup> *Id.* at 613.

<sup>14</sup> *Gregory v. Ashcroft*, 501 U.S. 452, 460 (1991) (citing *Atascadero State Hosp. v. Scanlon*, 473 U.S. 234, 243 (1985)).

<sup>15</sup> *Nixon v. Mo. Mun. League*, 541 U.S. 125, 140–41 (2004).

preempt these statutes.<sup>16</sup> However, in a partial dissent, Circuit Judge White argued that the clear statement rule does not apply to federal regulation of local governments that does not concern states' core sovereign powers.<sup>17</sup>

What is clear, however, is that Congress did grant the FCC the authority to ensure that broadband technology is deployed efficiently and universally. This Comment proposes that the Sixth Circuit should have adopted Judge White's narrower reading of the clear statement rule to empower the FCC to preempt those state statutes that exclusively effectuate regulatory communications policy.<sup>18</sup> As *Nixon* was factually analogous to *Tennessee v. FCC*, the Sixth Circuit relied on it extensively to reach its decision.<sup>19</sup> However, some of the laws that the FCC preempted that were at issue in *Tennessee* are plainly distinguishable from those statutes that deal solely with core issues of state sovereignty, such as the statute at issue in *Nixon*.<sup>20</sup> By narrowing the application of the clear statement rule in *Tennessee*, the Sixth Circuit would have enabled the FCC to exercise the authority granted to it by Congress to ensure the timely deployment of broadband technology to all Americans.<sup>21</sup>

This Comment proceeds in four Parts. Part I provides an overview of broadband technology and the municipal broadband policy debate. Part II discusses Congress's instruction to the FCC in Section 706 of the 1996 Telecommunication Act and the FCC's 2015 preemption order. Part III analyzes the Sixth Circuit opinion overturning the order, demonstrates that Congress plainly meant to grant the FCC preemption authority in Section 706, and argues that the narrower application of the clear statement rule proposed by Judge White would better reflect congressional intent and alleviate concerns that had been raised in previous clear statement cases. Finally, Part IV addresses the implications of this proposed tailoring of the clear statement rule, including expanded access to broadband technology, the increased authority of the FCC in the broadband space, and concerns for judicial and legislative economy. This narrower reading of the clear statement rule will empower the FCC to better effectuate its congressional mandate by ensuring that state communications policies accord with federal communications policy.

## I. BROADBAND TECHNOLOGY AND THE MUNICIPAL BROADBAND DEBATE

Broadband technology has developed rapidly over the last two decades, providing new opportunities for employment, healthcare, and education.<sup>22</sup> But access to these opportunities has been dictated by users' proximity to high-density population centers.<sup>23</sup> Local, state, and federal government entities have responded to this access gap with various legislative and executive actions. This Part first provides an overview of the current state of broadband access in the United States, followed by an explanation of the advent of municipal broadband networks, and concludes with a description of the restrictive state government responses to municipal networks.

### A. *Broadband Basics*

Broadband, commonly understood to be high-speed Internet, allows users to send and receive data using multiple frequencies, which increases the data transmission speed.<sup>24</sup> Broadband signals can be fixed—delivered using a physical transmission path—or mobile—received using a smartphone or similar device.<sup>25</sup> Rather than defining broadband by its underlying technology, the FCC defines broadband by the speed at which data is transmitted, allowing it to more easily update its standard as technology evolves.<sup>26</sup> In 2015, the FCC increased the benchmark for fixed broadband to 25 megabytes per second (Mbps) downstream (i.e., download speed) and 3 Mbps upstream (i.e., upload speed) citing the demand for streaming video services and simultaneous usage of multiple devices in a single household.<sup>27</sup> In practice, broadband service with these speeds allows users to download a three minute song in under two seconds and a two hour movie in about twenty-six minutes.<sup>28</sup> ISPs have begun to introduce fiber optic-based Internet services, which offer gigabit download speeds (1 Gbps), or about 1000 Mbps.<sup>29</sup> At these speeds, users can download

<sup>26</sup> *Id.* at 705.

<sup>27</sup> *Id.* at 706. This marked a significant increase over the previous benchmark of 4 Mbps downstream and 1 Mbps upstream, which had been in place since 2010. *Id.* The FCC maintained this standard in the FCC 2018 Broadband Deployment Report. 33 FCC Rcd. 1660, 1664–65 (2018).

<sup>28</sup> EXEC. OFFICE OF THE PRESIDENT, *supra* note 24.

<sup>29</sup> Mike Freeman, *Cox, Spectrum Upgrade Networks to Bring Gigabit Internet Speeds to San Diego*, SAN DIEGO UNION-TRIB. (July 11, 2018, 5:40 PM), <http://www.sandiegouniontribune.com/business/technology/sd->

100 songs in three seconds and a high-definition movie in sixty seconds.<sup>30</sup> Beyond its entertainment functions, “Americans increasingly rely on broadband for job opportunities, healthcare, education, public safety, and civic participation.”<sup>31</sup>

Although the broadband market as a whole has rapidly improved the quality and speed of its services, these improvements have not been evenly distributed throughout the United States.<sup>32</sup> The FCC found in its 2018 Broadband Deployment Report that about 8% of Americans lacked access to broadband that meets the FCC’s 2015 benchmarks.<sup>33</sup> However, for Americans living in rural areas,<sup>34</sup> that number increased to about 31%, while the same was true for only 2% of their urban counterparts.<sup>35</sup>

The broadband access gap between rural and urban Americans has been driven by the limited profitability of ISPs due to the mismatch between the high costs of infrastructure investment and small customer bases in rural communities.<sup>36</sup> Simply put, infrastructure costs increase with distance, and profitability increases with more customers.<sup>37</sup> Thus, ISPs are more willing to make the necessary capital investments to deliver high-quality broadband in densely populated urban areas where they can quickly recoup their investment while providing a reasonably priced product.<sup>38</sup> Unfortunately, rural areas are defined by the presence of few people over long distances, making the necessary infrastructure investment prohibitively expensive from ISPs’ perspective.<sup>39</sup>

### B. *Municipal Broadband Networks*

Many underserved areas have begun to tackle the broadband access gap by creating municipal broadband networks.<sup>40</sup> These networks can take one of several forms: a publicly owned entity, a public-private partnership, or a cooperative.<sup>41</sup> In a publicly owned municipal broadband network, the local government builds, finances, and operates the network.<sup>42</sup> Public-private partnerships can take many forms, but are commonly characterized by a private entity contracting with the local government to provide broadband service in exchange for some form of economic incentive—whether an infusion of public capital or access to existing public infrastructure.<sup>43</sup> Cooperatives follow a model inspired by electric and telephone cooperatives that originated in the 1930s to serve rural communities, and are owned and governed by their customers.<sup>44</sup> In many rural communities, electric cooperatives can use their preexisting infrastructure to begin offering broadband service to their members at lower cost than new entrants into the market.<sup>45</sup>

Today, municipal broadband networks have proliferated in small- and mid-sized rural communities.<sup>46</sup> As of 2015, nearly 500 municipalities had established some form of municipal broadband network.<sup>47</sup> Many of these networks have been built out through preexisting public utilities, like the Electric Power Board

<sup>46</sup> KRUGER & GILROY, MUNICIPAL BROADBAND: BACKGROUND AND POLICY DEBATE, at 2. This was not always the case, however. In the mid-2000s, several major cities—Philadelphia, Chicago, Houston, and San Francisco, among others—contracted with Earthlink, a small private ISP, to build citywide wireless networks. John Blevins, *Death of the Revolution: The Legal War on Competitive Broadband Technologies*, 12 YALE J.L. & TECH. 86, 104–06 (2009). Unfortunately, these projects were scuttled due to a combination of “unduly restrictive” contracts and Earthlink’s inability to deliver on its promises. Christopher Teters, *Municipal Broadband in Kansas: The Fight for Community Manifest Destiny*, 25 KAN. J.L. & PUB. POL’Y 89, 103 (2015).

<sup>47</sup> EXEC. OFFICE OF THE PRESIDENT, *supra* note 24, at 13, 20–33.

(EPB) network in Chattanooga, Tennessee,<sup>48</sup> the Greenlight network in Wilson, North Carolina,<sup>49</sup> and the BVU Authority in Bristol, Virginia.<sup>50</sup>

The most compelling argument in support of municipal broadband networks is that they can bridge the “digital divide” in underserved communities where private ISPs are either unwilling or unable to provide broadband services.<sup>51</sup> Furthermore, municipal broadband services can offer the benefits of competition by providing an alternative in the vast majority of communities that only have one broadband provider.<sup>52</sup> For example, in Wilson, North Carolina, Time Warner Cable responded to the creation of a municipal broadband network by holding rates steady, while they increased rates in neighboring service areas without a second provider option.<sup>53</sup> Finally, proponents argue that municipal broadband can bridge the financial digital divide—the access gap defined by socioeconomic status, as opposed to the previously discussed geographic digital divide—by providing low-income residents access to affordable broadband services without the profitability constraints of a private ISP.<sup>54</sup>

Opponents principally rely on two somewhat counterintuitive arguments.<sup>55</sup> First, opponents of municipal broadband networks claim that the government is incapable of providing broadband services more efficiently than the private sector.<sup>56</sup> Second, these opponents argue that due to the government’s regulatory advantages, the private sector would be crowded out by their entrance into the broadband market.<sup>57</sup> On the government capability argument, opponents point to prominent municipal broadband failures, like those in Philadelphia<sup>58</sup> and St. Cloud, Florida,<sup>59</sup> which demonstrate that building out a broadband network can be a high-risk venture with the potential of wasting millions of taxpayer dollars.<sup>60</sup> Additionally, broadband technology’s rapid development poses a

<sup>60</sup> KRUGER & GILROY, MUNICIPAL BROADBAND: BACKGROUND AND POLICY DEBATE, at 4.

unique challenge for government entities, which lack the flexibility of the private sector in adopting new technologies due to cost and bureaucratic constraints.<sup>61</sup> On the competition side, opponents argue that municipal broadband networks have inherent advantages over private ISPs, including ease of avoiding regulatory burdens and access to public capital.<sup>62</sup> They further argue that government investments in broadband infrastructure would create disincentives for private investment in that same infrastructure, ultimately leading to even greater costs for the taxpayer.<sup>63</sup>

### C. State Legislative Efforts to Restrict Municipal Broadband

Today, nineteen states have some form of law that restricts the ability of municipalities to establish broadband networks.<sup>64</sup> These legislative restrictions have often been the result of substantial lobbying efforts by private ISPs, who would prefer not to compete with municipal broadband networks.<sup>65</sup> The American Legislative Exchange Council (ALEC), a free-market advocacy group, has developed a model that has inspired many of the recent laws restricting municipal broadband.<sup>66</sup> ALEC's model legislation includes four major prongs to protect private sector ISPs and local taxpayers.<sup>67</sup> First, the ALEC model proposes that municipalities should not be able to cross-subsidize its broadband network from any other municipal funds.<sup>68</sup> Second, it recommends that before establishing a municipal broadband network, the proposal should be subject to a substantial deliberative process that prioritizes public-private partnerships and mandates public hearings and referenda.<sup>69</sup> Third, the model proposes that municipal broadband networks should not be provided any

advantages not available to private ISPs.<sup>70</sup> Finally, it suggests that municipal broadband networks must be thoroughly transparent as to their finances and make all records available for public review.<sup>71</sup>

In practice, these statutes vary in structure and effect from state to state.<sup>72</sup> Four states—Arkansas, Missouri, Nebraska, and Texas—have complete bans on municipalities establishing broadband networks.<sup>73</sup> Most restrictions on municipal broadband raise entry costs through a variety of methods, including public referenda requirements and limits on funding mechanisms.<sup>74</sup> Some scholars have noted that some of these existing restrictions, while facially applicable to broadband, do not apply to municipal broadband networks in practice.<sup>75</sup> In Arkansas, for example, several municipalities have experimented with wireless municipal networks, despite the purported ban on such activities.<sup>76</sup>

## II. SECTION 706 AND THE FCC'S 2015 PREEMPTION ORDER

The Telecommunications Act of 1996 was the first major change to the nation's communications law since the passage of the Communications Act of 1934.<sup>77</sup> Its passage reflected the understanding that emerging telecommunications technology would present both new opportunities for users and challenges for regulators.<sup>78</sup> Section 706 of the Act, titled “[a]dvanced telecommunications incentives,” serves as the primary source of FCC authority to regulate broadband technology.<sup>79</sup> This Part proceeds in two sections. Section A examines the grant of regulatory authority over broadband technology granted by Section 706 of the Telecommunications Act of 1996. Section B then describes and analyzes the FCC's exercise of this power to preempt the restrictive municipal broadband statutes in North Carolina and Tennessee in its 2015 order.

<sup>78</sup> *Id.*

<sup>79</sup> 47 U.S.C. § 1302(a) (2012).

A. *Section 706 of the Telecommunications Act of 1996*

Congress passed the Telecommunications Act of 1996 to “promote competition and reduce regulation in order to secure lower prices and higher quality services for American telecommunications consumers and encourage the rapid deployment of new telecommunications technologies.”<sup>80</sup> Section 706 of the Act instructs the FCC to act as follows:

[E]ncourage the deployment on a reasonable and timely basis of advanced telecommunications capability to all Americans . . . by utilizing, in a manner consistent with the public interest, convenience, and necessity, price cap regulation, regulatory forbearance, measures that promote competition in the local telecommunications market, or other regulating methods that remove barriers to infrastructure investment.<sup>81</sup>

It further instructs the FCC to undertake an annual study to “determine whether advanced telecommunications capability is being deployed to all Americans in a reasonable and timely fashion,” and if not, “it shall take immediate action to accelerate deployment . . . by removing barriers to infrastructure investment.”<sup>82</sup>

Section 706 defines advanced communications capability “as high-speed, switched, broadband telecommunications capability that enables users to originate and receive high-quality voice, data, graphics, and video telecommunications using any technology.”<sup>83</sup> The FCC retains the authority to interpret “the meaning of terms such as advanced, high-speed, and high-quality.”<sup>84</sup> The FCC has explained that it believes Congress intended that it define “advanced” based on the demands and needs of users, rather than a technological baseline, and thus it has taken a holistic approach that defines advanced by the speeds available to users.<sup>85</sup>

In 1998, the FCC determined that “in light of the statutory language, the framework of the 1996 Act, its legislative history, and Congress’[s] policy objectives . . . Section 706 [did] not constitute an independent grant of authority.”<sup>86</sup> This interpretation was revised in the Commission’s 2010 Open

<sup>86</sup> Deployment of Wireline Servs. Offering Advanced Telecomm. Capability, 13 FCC Rcd. 24,012, 24,047 (1998).

Internet Order, when it held that “Section 706(a) authorizes [it] . . . to take actions . . . that encourage the deployment of advanced telecommunications capability by any of the means listed in the provision.”<sup>87</sup> The D.C. Circuit upheld this new interpretation in *Verizon v. FCC*, holding that it was reasonable to conclude that Congress intended Section 706(a) to be an affirmative grant of authority to regulate broadband.<sup>88</sup> The court emphasized the importance of two limiting principles outlined by the FCC in the Open Internet Order.<sup>89</sup>

The first principle mandates that Section 706 “must be read in conjunction with other provisions of the Communications Act, including, most importantly, those limiting the Commission’s subject matter jurisdiction to ‘interstate and foreign communication by wire and radio.’”<sup>90</sup> The second principle requires that “any regulations must be designed to achieve a particular purpose: to ‘encourage the deployment on a reasonable and timely basis of advanced telecommunications capability to all Americans.’”<sup>91</sup>

As a somewhat distinct matter, the Open Internet Order elaborates that Section 706(b) of the Act can also serve as an independent grant of authority if the FCC determines that advanced telecommunications services are not being deployed in a reasonable and timely fashion to all Americans.<sup>92</sup> In 2010, the FCC determined that broadband had not been deployed in a reasonable and timely manner, and that the Section 706(b) powers had been triggered providing “express authority for . . . pro-investment, pro-competition rules.”<sup>93</sup> The D.C. Circuit upheld this interpretation, finding that “the provision may certainly be read to accomplish as much, and given such ambiguity we have no basis for rejecting the Commission’s determination that it should be so understood,” provided that the two limiting principles apply to Section 706(b) as well.<sup>94</sup>

<sup>92</sup> Pres. the Open Internet: Broadband Indus. Practices, 25 FCC Rcd. at 17,972.

<sup>93</sup> *Id.* In its 2018 Broadband Deployment Report, the FCC found for the first time since 2010 “that advanced telecommunications capability is being deployed to all Americans in a reasonable and timely fashion.” FCC 2018 Broadband Deployment Report, 33 FCC Rcd. 1660, 1707 (2018). This finding was based on the policy changes that the FCC has made since the issuance of the 2016 Broadband Progress Report, rather than statistical findings from its deployment analysis. *Id.* While this positive finding means that the Section 706(b) grant of authority has theoretically been deactivated, this change does not affect this Comment’s retrospective analysis.

<sup>94</sup> *Verizon v. FCC*, 740 F.3d 623, 641 (D.C. Cir. 2014).

## B. *FCC Order City of Wilson, North Carolina*

It is with this understanding of Section 706 that the FCC issued its 2015 order preempting two state statutes restricting municipal broadband. This order was issued in response to petitions from the EPB of Chattanooga, Tennessee and the City of Wilson, North Carolina asking that the FCC preempt restrictive statutes limiting their existing services.<sup>95</sup> This section will proceed by providing a brief overview of the services provided by these respective municipal broadband networks and of the laws in question in Tennessee and North Carolina. It will then examine the order issued by the FCC, including the arguments presented by the two dissenting commissioners from the five-member panel.

### 1. *EPB, Chattanooga, Tennessee*

The EPB began building out its fiber network in 1996 to improve the capabilities of its existing electric grid and begin offering Internet service to its customers.<sup>96</sup> By deploying broadband in conjunction with its electric smart grid,<sup>97</sup> EPB was able to take advantage of efficiency gains, share costs between the two systems, and raise additional revenue.<sup>98</sup> EPB first offered fiber services in 2009, and in 2010 was the first broadband provider in the nation to offer gigabit service to all its customers.<sup>99</sup> EPB claims that the expansion of its broadband services has created thousands of new jobs and attracted large corporations, such as Amazon and Volkswagen, to the Chattanooga area.<sup>100</sup> EPB also highlights the benefits to local schools, which all have 100 Mbps Internet speeds through EPB, and public libraries, which have become a model for libraries nationwide.<sup>101</sup>

Tennessee law currently allows municipal electric systems to provide Internet service, but prohibits them from offering these services in areas where they do not provide electric service.<sup>102</sup> However, these same municipal electric

<sup>99</sup> *Id.*; see *supra* Section I.B.

<sup>100</sup> *City of Wilson*, 30 FCC Rcd. at 2417.

<sup>101</sup> *Id.* at 2418.

<sup>102</sup> *Id.* at 2419.

systems have the authority to offer other telecommunications services anywhere in the state, regardless of their electric service territories.<sup>103</sup> EPB explained in its preemption request that it receives frequent requests to expand its broadband network to neighboring communities, which it argues are in “a digital desert.”<sup>104</sup> Thus, while EPB wanted to expand its broadband services to these neighboring communities, it was prohibited from doing so, even though Tennessee law allows it to provide telecommunications services to these same communities.<sup>105</sup> As such, EPB asked the FCC to preempt the phrase “within its service area” in the relevant Tennessee statute, allowing it to expand the service area for its broadband product.<sup>106</sup>

## 2. *Greenlight, Wilson, North Carolina*

The City of Wilson began exploring options for construction of its own municipal broadband network in the 1990s in response to local “complaints about the high cost and low quality of available voice and video services.”<sup>107</sup> Wilson began its municipal broadband network by constructing a “fiber optic backbone connecting all City-owned facilities” in 2005, which was later expanded into a network offering service directly to consumers called Greenlight.<sup>108</sup> Wilson credits the creation of Greenlight with a variety of economic benefits, including reduced Internet prices for local residents, savings in government expenses, and widespread usage of the network in Wilson’s business community.<sup>109</sup> Notably, Wilson attributes the competition from its municipal broadband network with holding broadband prices from private ISPs steady, while prices increased for neighboring communities.<sup>110</sup>

The North Carolina legislature passed H.B. 129 in 2011 to limit the ability of municipalities to establish broadband networks.<sup>111</sup> The bill was the subject of intensive lobbying efforts, with Time Warner Cable, CenturyLink, and AT&T spending over \$1 million collectively to push the measure through.<sup>112</sup> The statute contains a panoply of restrictions on municipal broadband networks, which the FCC grouped into three general categories: measures to raise economic costs,

---

<sup>111</sup> *City of Wilson*, 30 FCC Rcd. at 2425–26.

<sup>112</sup> *Id.* at 2426.

“level playing field” obligations, and measures to impose delay.<sup>113</sup> The measures to raise economic costs included prohibitions on pricing services below cost, requirements that they impute the costs typically encountered by private ISPs, and geographic limits on the service area.<sup>114</sup> The level playing field obligations essentially prohibit the municipality from doing anything to support its broadband network without also offering that same service to private ISPs.<sup>115</sup> Finally, the measures to impose delay require the municipality to conduct feasibility studies, hold hearings on those studies, hold referenda on incurring debt to finance the projects, and solicit proposals from private businesses to provide the services.<sup>116</sup> The City of Wilson’s already existing network was grandfathered in under H.B. 129, but the statute prohibits the City from providing broadband services in neighboring communities where it already provides electricity.<sup>117</sup> Wilson requested that the FCC preempt H.B. 129 by finding that it served “to thwart or unreasonably delay broadband investment and competition.”<sup>118</sup>

### 3. *The FCC Takes Action*

In February 2015, the FCC adopted the *City of Wilson, North Carolina* order in response to these two petitions on a three-to-two party-line vote.<sup>119</sup> The three Democratic commissioners—Chairman Wheeler, Commissioner Clyburn, and Commissioner Rosenworcel—voted for the order granting in whole the petition from EPB and granting in part the petition from the City of Wilson.<sup>120</sup> The two Republican commissioners—Commissioner Pai and Commissioner O’Rielly—dissented and issued separate statements explaining their opposition.<sup>121</sup> This section first describes the arguments laid out in the FCC’s holding and then turns to the arguments advanced by the two dissenting commissioners.

However, under Chairman Wheeler, FCC votes became increasingly partisan, with Democratic Commissioners Wheeler, Clyburn, and Rosenworcel in opposition to Republican Commissioners Pai and O’Rielly. *Id.*

<sup>120</sup> *City of Wilson*, 30 FCC Rcd. at 2408.

<sup>121</sup> *Id.* at 2506 (Pai, Comm’r, dissenting); *id.* at 2519 (O’Rielly, Comm’r, dissenting).

*a. Reasoning of the Order*

In the order, the FCC explained both the legal reasoning for its power to preempt state laws regulating the provision of broadband services by a state's municipal subdivisions under Section 706 and applied that reasoning to the laws challenged in the two petitions.<sup>122</sup> The FCC employed a three-step argument to demonstrate its preemptory powers. First, the majority asserted that Congress granted the FCC broad authority to regulate broadband in Section 706 and affirmatively mandated that they take action to ensure deployment of broadband by removing barriers to broadband infrastructure investment and promoting competition.<sup>123</sup> Second, the majority explained that since Congress had granted the FCC broad authority to act in this sphere, the FCC can “preempt state laws regarding interstate communication where they conflict with federal communications policy” consistent with their other powers.<sup>124</sup>

Finally, the FCC reasoned that it could preempt state laws regulating the provision of broadband services by their political subdivisions when those laws meet two independent criteria.<sup>125</sup> The first criterion is that the law must effectuate communications policy, which falls under the jurisdiction of the FCC for regulatory purposes, rather than merely exercising a state's core power over its political subdivisions.<sup>126</sup> Thus, the FCC cannot require a state to grant a political subdivision authority to provide broadband services, as that would be a matter of the state's core power over its political subdivisions.<sup>127</sup> However, once a state has granted a subdivision authority to provide broadband services, the state policy must be consistent with federal communications policy.<sup>128</sup> The second criterion, informed by the congressional mandate in Section 706, is that the law must serve as a barrier to broadband infrastructure investment or be an impediment to competition.<sup>129</sup>

Applying this legal analysis to the challenged laws, the FCC concluded that preemption would remove barriers to broadband infrastructure investment and promote competition in the broadband market.<sup>130</sup> First, the FCC found that EPB and the City of Wilson had invested in broadband infrastructure in their

respective communities in response to market failures on the part of private ISPs.<sup>131</sup> In the absence of these statutory limits on the exercise of their existing authority to provide broadband services, EPB and the City of Wilson had indicated an intention to invest in broadband infrastructure to begin serving neighboring communities that continued to suffer from those same market failures.<sup>132</sup> Further, the FCC found that the entrance of EPB and the City of Wilson into the broadband market had spurred a “virtuous cycle of competition,” which prompted private ISPs to improve the quality of their services and reduce rates for customers.<sup>133</sup>

The FCC also responded to the policy arguments that preemption would be anti-competitive and that municipal broadband projects are prone to failure.<sup>134</sup> In this instance, the FCC argued, the anti-competitive concerns were not applicable, as both EPB and the City of Wilson had initiated their broadband services in response to market failures, investing where private ISPs had elected not to.<sup>135</sup> Similarly, they reasoned that the fears of municipal broadband failure were not applicable to the EPB or City of Wilson petitions, since both services were financially sound.<sup>136</sup>

*b. Reasoning of the Dissent*

The two dissenting commissioners—Commissioner Pai and Commissioner O’Rielly—issued independent statements, but both relied on the same three major arguments.<sup>137</sup> First, the dissenting commissioners argued that the distinction the FCC created between laws that effectuate communications policy and those that deal with core powers of state authority over their municipal subdivisions is untenable.<sup>138</sup> Both pointed out that this distinction yields an absurd result: the FCC has no power to preempt a state law that completely denies a political subdivision the authority to provide broadband services, but a state would “relinquish [its] absolute discretion simply by affording a

<sup>136</sup> *Id.* at 2438–39.

<sup>137</sup> *See id.* at 2519 (O’Rielly, Comm’r, dissenting). Commissioner O’Rielly also expressed his “profound opposition” to the concept of any government entity offering broadband services, comparing it to economic practices in Cuba, China, Russia, and Venezuela. *Id.* However, this policy position is not central to the legal arguments in his dissent. *Id.*

<sup>138</sup> *Id.* at 2511 (Pai, Comm’r, dissenting); *id.* at 2520 (O’Rielly, Comm’r, dissenting).

municipality some, rather than plenary, authority to offer broadband service.”<sup>139</sup> As both asserted that these laws do involve matters of core state sovereignty, they argued that there must be a clear statement of congressional intent to grant this authority, per the holding in *Nixon v. Missouri Municipal League*.<sup>140</sup>

Commissioners Pai and O’Rielly further argued that Section 706 does not grant the FCC any preemptory authority.<sup>141</sup> Commissioner Pai highlighted Section 601(c)(1) of the Act, which states that the Act should not be construed to “modify, impair, or supersede Federal, State, or local law” unless expressly provided.<sup>142</sup> Turning to the provisions of Section 706, Commissioner Pai argued that each of the provisions are constructed in such a way to make it unlikely that Congress intended to convey preemptory authority.<sup>143</sup> Commissioner Pai also interpreted the legislative history of the statute to suggest that the removal of an explicit grant of preemption authority indicated that Congress did not intend to grant any preemption authority.<sup>144</sup>

Finally, both commissioners argued that Section 706 does not grant the FCC any independent authority whatsoever.<sup>145</sup> Despite the apparently affirmative language instructing the FCC to take action to encourage broadband deployment, both dissenting commissioners argued that the language of Section 706 does not expressly grant the FCC power to engage in rulemaking, order conduct, or enforce compliance and is therefore “hortatory” in nature.<sup>146</sup> This argument is contradicted by the D.C. Circuit’s holding in *Verizon v. FCC*, discussed above, where the court upheld the Commission’s interpretation that Section 706 contained an affirmative grant of power.<sup>147</sup>

### III. ADOPTING A NARROWER APPLICATION OF THE CLEAR STATEMENT RULE

The Sixth Circuit overturned the FCC's preemption order in 2016, finding that the FCC's preemption order dealt with an issue of core state sovereignty, and therefore the FCC required a clear statement of congressional intent before it could act.<sup>148</sup> The majority declined to address a number of questions, including whether Congress could act in this policy sphere and whether Section 706 granted the FCC any preemption authority.<sup>149</sup> However, in her partial dissent, Judge White argued that Congress could act in this sphere, that Section 706 did confer preemption authority on the FCC, and that the court should apply a narrower reading of the clear statement rule to uphold preemption of those laws that exclusively effectuate communications policy.<sup>150</sup>

Pursuant to its Commerce Clause powers, Congress created the FCC “[f]or the purpose of regulating interstate and foreign commerce in communication by wire and radio.”<sup>151</sup> By enacting the 1996 Telecommunications Act, Congress plainly delegated to the FCC the authority to take action with regards to broadband technology to “promote competition in the local telecommunications market [and] remove barriers to infrastructure investment.”<sup>152</sup> As such, the courts should apply a narrower reading of the clear statement rule, as suggested by Judge White. This narrower application of the clear statement rule would have directed the Sixth Circuit to uphold the FCC's exercise of its preemption power to promote competition and remove barriers to infrastructure investment in the broadband market as it applies to those state laws that exclusively effectuate communications policy.<sup>153</sup>

This Part proceeds in four sections. Section A analyzes the Sixth Circuit's holding in *Tennessee v. FCC*, including the partial dissent from Judge White that this Comment proposes should be adopted. This Part then addresses two of the questions left unanswered by the Sixth Circuit's majority holding. Section B establishes that Congress has the authority to regulate broadband technology and section C demonstrates that the affirmative grant of power in Section 706 includes preemption authority. Finally, section D argues that the narrower application of the clear statement rule suggested by Judge White better comports

with congressional intent and assuages some of the concerns raised by dissenting justices in earlier clear statement rule cases.

*A. The Sixth Circuit's Decision in Tennessee v. FCC*

After the FCC issued the order preempting the North Carolina and Tennessee laws, North Carolina filed an appeal to the Fourth Circuit and Tennessee filed an appeal to the Sixth Circuit.<sup>154</sup> The cases were consolidated in the Sixth Circuit, which ultimately vacated the FCC's preemption order.<sup>155</sup>

Petitioners argued that the order violated the Tenth Amendment by infringing on the states' right to determine the boundaries of their political subdivisions.<sup>156</sup> Further, they reasoned that even if Congress did have the authority to redefine the authority of a state's political subdivisions, Section 706 does not contain a clear statement of that intent as required by *Gregory v. Ashcroft* and applied in *Nixon v. Missouri Municipal League*.<sup>157</sup> The FCC argued that its preemption order affected only statutes that effectuated communications policy contrary to federal communications policy, and therefore it did not affect any issues of state sovereignty over political subdivisions.<sup>158</sup>

This section proceeds by first providing an overview of the Sixth Circuit's holding, including a discussion of the principal precedent relied on by the court in *Nixon v. Missouri Municipal League*. It then turns to and advocates for the adoption of the partial dissent from Judge White, which accepted the FCC's distinction between statutes that effectuate communications policy versus those that deal with core sovereign authority.

*1. The Majority's Holding*

The Sixth Circuit's decision in *City of Wilson* rested primarily on the Supreme Court's holding in *Nixon v. Missouri Municipal League*.<sup>159</sup> The *Nixon* case mirrored the case before the court in many ways, but dealt with a different part of the 1996 Telecommunications Act.<sup>160</sup> Section 101(a) of the Act authorized the FCC to preempt "state and local laws and regulations expressly or effectively prohibiting the ability of any entity to provide telecommunications

<sup>160</sup> *Id.* at 610–11.

services.”<sup>161</sup> Relying on this Section of the Act, the Missouri Municipal League petitioned the FCC to preempt a Missouri law which prohibited the state’s political subdivisions from providing or offering for sale any telecommunications services.<sup>162</sup> The FCC declined to preempt the Missouri statute after determining that the phrase “any entity” was not meant to include political subdivisions of a state.<sup>163</sup> The Missouri Municipal League appealed to the Eighth Circuit, which reversed the FCC’s decision, holding that the phrase “any entity” did contemplate political subdivisions.<sup>164</sup>

The Supreme Court subsequently overturned the Eighth Circuit’s decision, applying the clear statement rule enunciated in *Gregory v. Ashcroft*<sup>165</sup> to hold that “any entity” was not sufficiently clear to interpose the federal government between a state and its political subdivisions and justify the anomalous results this interpretation would create.<sup>166</sup> In *Gregory*, two Missouri state judges challenged the state’s mandatory retirement provision on the grounds that it violated the federal Age Discrimination in Employment Act (ADEA).<sup>167</sup> The Court held that applying ADEA to redefine the requirements for the state’s constitutional officers would “upset the usual constitutional balance of federal and state powers.”<sup>168</sup> Thus, to rule that ADEA preempted the mandatory retirement provision, the Court required that there be an unmistakably clear statement of Congress’s intent to do so in the statute.<sup>169</sup> This principle became the clear statement rule that the Court then applied in *Nixon v. Missouri Municipal League*.<sup>170</sup>

The Court in *Nixon* highlighted three anomalous byproducts that upholding the Eighth Circuit’s interpretation would produce.<sup>171</sup> First, the Court found in the absence of a state prohibition on municipal telecommunications services, such as Missouri’s, municipalities would still require an affirmative grant of power from the state to provide telecommunications services and therefore preemption would not have any practical effect.<sup>172</sup> Further, the Court held that

<sup>171</sup> *Id.* at 138.

<sup>172</sup> *Id.* at 135.

preemption would “treat States differently depending on the formal structures of their laws authorizing municipalities to function.”<sup>173</sup> Finally, the Court decided that preemption would create a “national crazy quilt” that “would result not from free political choices[,]” but from conflicts between federal preemption authority and municipal authority.<sup>174</sup> Justice Stevens dissented, arguing that “any entity” plainly encompassed municipal-run utilities, and the Court’s decision should therefore be based solely on the law before it rather than a series of hypotheticals used to illustrate the potential for an absurd result.<sup>175</sup>

The Sixth Circuit found that the fact pattern in *Nixon* was sufficiently analogous to require that the clear statement rule apply in *Tennessee v. FCC*.<sup>176</sup> Like the statute at issue in *Nixon*, the statutes in Tennessee and North Carolina defined the powers of the states’ political subdivisions, even if they also effectuated communications policy.<sup>177</sup> Furthermore, allowing the FCC to preempt these statutes would have had similar results to the proposed preemption in *Nixon*.<sup>178</sup> By preempting these statutes, the FCC would create an anomalous situation whereby a state could completely ban a political subdivision from providing broadband services, but once that state opened the door to municipal broadband, it could have no influence on broadband implementation.<sup>179</sup> Additionally, the court found that without this anomalous result, the clear statement rule would still be triggered, as preemption would interpose federal regulators between the state and its political subdivisions.<sup>180</sup>

Turning to the language of Section 706, the Sixth Circuit held that it does not contain a clear statement authorizing preemption of state laws regulating the provision of broadband services by its municipal subdivisions.<sup>181</sup> The court found that the language of Section 706 was unclear regarding whether infrastructure investment referred to both public and private infrastructure, or merely private infrastructure.<sup>182</sup> Additionally, it reasoned that the reference to promoting competition was not a directive to preempt “a state’s allocation of powers between itself and its subdivisions.”<sup>183</sup> Once again, comparing to the

<sup>180</sup> *Id.*

<sup>181</sup> *Id.* at 613.

<sup>182</sup> *Id.*

<sup>183</sup> *Id.*

statute at issue in *Nixon*, the court held that the “any entity” language, which the Supreme Court had held did not encompass public utilities, was broader than the language at issue in Section 706. As a result, preemption was not authorized under the Act.<sup>184</sup>

Importantly, the Sixth Circuit limited its holding to this issue. The court did not question the policy rationale asserted by the FCC in favor of municipal broadband expansion and emphasized that it did not address the following legal questions:

- (1) [W]hether § 706 provides the FCC any preemptive power at all[;]
- (2) whether Congress, if it is clear enough, could give the FCC the power to preempt as it did in this case[;]
- (3) whether, if the FCC had such power, its exercise of it was arbitrary or capricious in this case[;]
- and (4) whether and to what extent the clear statement rule would apply to FCC preemption if a State required its municipality to act contrary to otherwise valid FCC regulations.<sup>185</sup>

The court’s decision to refrain from addressing these issues left open many questions about the extent of the FCC’s power under Section 706 and the future efforts by the federal government to expand municipal broadband. This Comment discusses these ambiguous issues in greater detail in the remainder of Part III.

## 2. *The Argument from the Partial Dissent*

Judge White issued a partial dissent in which she agreed with many of the conclusions from the FCC order.<sup>186</sup> First, she concluded that Section 706 was an affirmative grant of preemptory power if state laws acted as a barrier to infrastructure investment and competition.<sup>187</sup> Judge White concurred with the majority that the clear statement rule, as applied in *Nixon*, applies to actions taken by the FCC that would interfere with a state’s authority to define the powers of its political subdivisions.<sup>188</sup> She further concurred that in many cases, a statute can both effectuate communications policy and address a state’s power over its political subdivisions.<sup>189</sup> In cases that deal with both a core state interest and effectuate communications policy, such as Tennessee’s territorial limitations on the provision of broadband services, *Nixon* requires that the FCC’s

---

<sup>184</sup> *Id.*

<sup>185</sup> *Id.* at 613–14.

<sup>187</sup> *Id.* at 614.

<sup>188</sup> *Id.*

<sup>189</sup> *Id.*

authority come from a clear statement of congressional intent, even if the communications policy is paramount.<sup>190</sup>

However, Judge White argued that there is an actual distinction between statutes that effectuate a communications policy and those that deal with a state's core sovereign powers.<sup>191</sup> Judge White agreed with the FCC's conclusion that some of these statutes solely effectuated communications policy.<sup>192</sup> For example, she argued that North Carolina's provisions, which required municipalities to impute costs that would traditionally be encountered by private ISPs, were solely an expression of communications policy and had little to do with the state's sovereign power over its political subdivisions.<sup>193</sup> Judge White concluded that since the provisions concerned exclusively regulatory and commercial matters, Section 706 granted the FCC the authority to preempt them.<sup>194</sup> This distinction leaves open the question of how the FCC should distinguish between statutes that are exclusively regulatory and commercial versus those with a dual purpose, and whether those determinations would be granted any judicial deference.

#### *B. Congress's Ability to Grant this Authority*

Among the issues that the Sixth Circuit declined to address in its opinion was the question of "whether Congress . . . could give the FCC the power to preempt as it did in this case."<sup>195</sup> Thus, as a threshold issue, Congress's authority to regulate the broadband market must be established. It is settled law that "[a]s long as it is acting within the powers granted it under the Constitution, Congress may impose its will on the States."<sup>196</sup> As outlined in the FCC's authorizing statute, the Communications Act of 1934, the agency was created pursuant to Congress's power under the Commerce Clause.<sup>197</sup> The Supreme Court has since established three broad categories of activity that may be regulated under the Commerce Clause: (1) "the use of the channels of interstate commerce[;]" (2) "the instrumentalities of interstate commerce, or persons or things in interstate commerce[;]" and (3) "those activities having a substantial relation to interstate commerce."<sup>198</sup> It has been well established that the Internet is a channel or

instrumentality of interstate commerce, and thus the FCC has the authority to impose its will on the states with regards to broadband deployment policy.<sup>199</sup>

*C. The FCC's Preemption Power Under Section 706*

While the FCC's preemption authority under Section 706 is central to this discussion, no court has answered the question of whether the FCC has any preemptory authority under Section 706. As discussed above, two subsections of Section 706 confer regulatory authority on the FCC.<sup>200</sup> The FCC took a circuitous route to its current interpretation of the Section 706 grant of authority.<sup>201</sup> Shortly after the 1996 Act's passage, the FCC interpreted Section 706(a) to confer no independent authority,<sup>202</sup> but then revised that interpretation in its 2010 Open Internet Order, which the D.C. Circuit upheld in *Verizon v. FCC*.<sup>203</sup> The FCC also interpreted Section 706(b) for the first time in the 2010 Order, concluding that it was also an independent grant of authority.<sup>204</sup>

On the face of the statute, the language of Sections 706(a) and (b) both appear to broadly grant regulatory authority.<sup>205</sup> Section 706(a) instructs the Commission to "encourage . . . deployment on a reasonable and timely basis" of broadband technology, using one of several enumerated methods, or "other regulating methods that remove barriers to infrastructure investment."<sup>206</sup> Similarly, Section 706(b) says that the Commission "shall take immediate action to accelerate deployment of [broadband] capability by removing barriers to infrastructure investment and by promoting competition in the telecommunications market."<sup>207</sup> The D.C. Circuit, the only court to have directly addressed the validity of the FCC's broad interpretation of Section 706 authority, concluded that the interpretation was valid.<sup>208</sup> In *Tennessee v. FCC*, the Sixth

Circuit did not reach the issue,<sup>209</sup> though the partial dissent concurred with the FCC's interpretation that Section 706's grant of authority included preemptory powers.<sup>210</sup>

Based on the text of the Section 706 and the apparent judicial consensus that it contains a broad grant of authority, this Comment assumes that Section 706 does in fact contain a clear grant of preemptory authority that the FCC may exercise.

#### *D. Applying Judge White's Narrower Clear Statement Rule*

Judge White's narrower reading of the clear statement rule strikes a proper balance between unmistakably clear congressional intent and concerns about preserving the proper balance between federal and state sovereignty. Judge White found that Section 706 unmistakably conferred preemption authority on the FCC for generally restrictive state statutes.<sup>211</sup> She did, however, agree with the majority that it was unclear whether this preemption authority was meant to extend to state laws restricting municipal authority.<sup>212</sup> Judge White proposed that the court could and should draw a line between two types of statutes considered.<sup>213</sup> She argued that "certain powers and spheres are historically so clearly confided to the States that Congress should not be understood to preempt the States' authority to act freely in those areas unless its intent is clear."<sup>214</sup> However, Judge White distinguished these types of statutes from those that happen to affect local governments but solely effectuate policy decisions about how the communications market should operate.<sup>215</sup> Under this narrowed reading of the clear statement rule, Judge White proposed that these statutes could be preempted under the FCC's Section 706 power.<sup>216</sup> This narrow reading would preserve the authority that has plainly been granted to the FCC to preempt barriers to investment and competition in the broadband market, while simultaneously protecting the sovereign interests of states.

This narrower reading of the clear statement rule would also address some of the primary concerns raised in the dissents in both *Nixon v. Missouri Municipal League* and *Gregory v. Ashcroft*. In his dissent in *Nixon*, Justice

<sup>213</sup> *Id.* at 615.

<sup>214</sup> *Id.*

<sup>215</sup> *Id.*

<sup>216</sup> *See id.*

Stevens argued that the statute at issue—Section 253 of the 1934 Communications Act, as amended by Section 101 of the 1996 Act—contained an unmistakably clear purpose and mandate, which the Court should not toss aside.<sup>217</sup> The statute at issue instructed the FCC to preempt any “State or local statute or regulation . . . [that would] prohibit or have the effect of prohibiting the ability of any entity to provide any interstate or intrastate telecommunications service.”<sup>218</sup> The majority held that the phrase “any entity” was sufficiently vague to invoke the clear statement rule enunciated in *Gregory v. Ashcroft*, and decided that Congress did not intend for the statute to cover municipally owned utilities.<sup>219</sup> In his dissent, Justice Stevens argued that the legislative history showed that Congress specifically contemplated the role of public utilities in expanding access to telecommunications services.<sup>220</sup> Therefore, he argued, the phrase “any entity” should be read to encompass them.<sup>221</sup>

Justice Stevens’s dissent echoes concerns that were raised by Justice White in his partial dissent in *Gregory v. Ashcroft*, when the clear statement rule was initially proposed.<sup>222</sup> Justice White worried that the enunciation of the clear statement doctrine as applied in *Gregory* constituted a judicially created restraint on Congress’s legislative authority, amounting to an intrusion on a coequal branch of government.<sup>223</sup> Instead, Justice White argued that the Court should apply unambiguous statutes as written against the states and not create new hurdles for Congress to clear.<sup>224</sup>

Applying the narrower reading of the clear statement rule would help alleviate the concerns raised by these two dissents, while still striking a balance in favor of preserving constitutional federalism. As applied to Justice Stevens’s dissent, the narrow reading of the clear statement rule would have encouraged the Court to acknowledge the plain meaning of the statute—that any entity meant *any* entity—while also allowing the Court to reach the same conclusion, which preserved the core interest of the state in determining how it orders its political

---

subdivisions. As applied to Justice White's dissent, this narrowed clear statement rule would have lessened the threat of a judicially created restraint on congressional power by applying statutes as written when possible, while still preserving the Court's desire to refrain from unnecessarily upsetting the balance of state and federal power.

Thus, under this revised regime, the FCC's preemption of North Carolina and Tennessee's statutes limiting Wilson and Chattanooga from expanding their broadband services would have been upheld in part as it pertained to those North Carolina statutes that solely effectuated communications policy.<sup>225</sup> As discussed above, Congress may regulate the Internet under its Commerce Clause authority, as it is a channel or instrumentality of interstate commerce, and therefore Congress would have been able to take this preemptory action.<sup>226</sup> Further, Section 706 contains a broad grant of power, limited by the policy directives to expand access to broadband and other limits contained within the Communications Act, which clearly empowers the FCC to preempt statutes that contravene federal communications policy.<sup>227</sup> Thus, while adopting the narrow reading of the clear statement rule would allow the FCC to exercise this power as it pertains to state statutes that solely effectuate communications policy, it would still preserve the balance between state and federal power on issues of core state sovereignty.<sup>228</sup>

#### IV. IMPLICATIONS

Narrowing the application of the clear statement rule in *Tennessee v. FCC* as proposed by Judge White would have three major implications, each on a different level of federal policy. On the most micro level, it would expand the FCC's ability to effectuate the stated broadband policy goals of the federal government.<sup>229</sup> On a slightly broader level, it would expand the authority of the FCC—and potentially other federal agencies—to preempt state statutes that affect local governments but do not affect core issues of state sovereignty. On a systemic level, this narrower application of the clear statement rule would increase the level of scrutiny applied by the courts, raising concerns about judicial economy, but resulting in positive effects for legislative economy. This Part will address each implication in turn.

<sup>225</sup> *Tennessee v. FCC*, 832 F.3d 597, 614–15 (6th Cir. 2016) (White, J., concurring in part and dissenting in part).

<sup>226</sup> *See supra* Section III.B.

<sup>227</sup> *See supra* Section III.C.

<sup>228</sup> *Tennessee*, 832 F.3d at 614–15 (White, J., concurring in part and dissenting in part).

<sup>229</sup> *See* 47 U.S.C. § 1302(a) (2012) (stating the policy goals of the statute).

### A. *Expanding Broadband Access*

Consistent with the stated purpose of Section 706, narrowing the application of the clear statement rule to this grant of authority would increase the ability of the FCC to guarantee access to advanced communications technologies for all Americans. Congress instructed the FCC to take action to eliminate those gaps where possible.<sup>230</sup> The FCC in turn determined that municipal broadband networks serve as a viable answer to those gaps in some circumstances.<sup>231</sup> By empowering the FCC to exercise its congressionally granted power to preempt statutes that solely effectuate communications policy, it could eliminate barriers to investment in broadband infrastructure, such as the measures to impute cost in the North Carolina statute.<sup>232</sup>

Of course, this limited preemption would still leave in place many municipal broadband restrictions that do concern issues of core state sovereignty.<sup>233</sup> Ultimately, states have a legitimate sovereign interest in determining how their municipalities interact with one another and in setting procedural and financial requirements for their political subdivisions.<sup>234</sup> However, these procedural hurdles are not insurmountable barriers. For example, Colorado law requires municipalities to hold referenda before providing broadband services.<sup>235</sup> In 2017, Fort Collins, Colorado placed a municipal broadband measure on the ballot, which attracted nearly half a million dollars in campaign spending by opposition groups.<sup>236</sup> Despite this substantial opposition from incumbent ISPs, the measure passed in Fort Collins with approximately 57% of the vote.<sup>237</sup> Thus, Colorado municipalities remain able to explore innovative alternatives to spur increased or improved broadband access, even as Colorado's referendum requirement—which undoubtedly concerns core state sovereignty—remains in effect.

Furthermore, opponents of the FCC's preemption order argued that preemption would create an anomaly whereby states could completely prohibit their municipalities from entering the broadband marketplace, but once they

<sup>231</sup> City of Wilson, North Carolina, 30 FCC Rcd. 2408, 2411 (2015).

<sup>232</sup> *Id.*

<sup>233</sup> See *Tennessee*, 832 F.3d at 614–15 (White, J., concurring in part and dissenting in part).

<sup>234</sup> *Id.* at 614.

<sup>235</sup> COLO. REV. STAT. ANN. § 29-27-201 (West 2017); see also Jon Brodtkin, *Sorry, Comcast: Voters Say "Yes" to City-Run Broadband in Colorado*, ARS TECHNICA (Nov. 8, 2017, 11:18 AM), <https://arstechnica.com/tech-policy/2017/11/voters-reject-cable-lobby-misinformation-campaign-against-muni-broadband/>.

<sup>236</sup> Brodtkin, *supra* note 235.

<sup>237</sup> *Id.*

allow them any authority, the state would be constrained in dictating how those same municipalities exercise that authority.<sup>238</sup> It is accurate that the FCC would not be able to compel a state to allow its municipalities to enter the broadband market if it maintains an outright ban on the practice, as this would infringe on the state's core sovereignty.<sup>239</sup> However, as previously mentioned, only four states currently have outright bans,<sup>240</sup> and thus this change would expand the ability of municipalities to fill market gaps in other states with some type of municipal broadband limit in force that exclusively effectuates communications policy.<sup>241</sup> Thus, while this power would not solve the problem of state limits on municipal broadband entities in every instance, it would tackle a sufficient number to be a worthwhile exercise of the FCC's preemptory power.

### *B. Expanded FCC Power*

This more limited application of the clear statement rule would mean that the FCC could successfully preempt certain state statutes that courts would currently protect with the clear statement rule.<sup>242</sup> The Commission would have to discern which statutes deal with core aspects of state sovereignty from those that merely effectuate regulatory communications policy. While this Comment does not suggest that such a determination should be afforded *Chevron* deference,<sup>243</sup> ultimately the decision by the agency about which category the statute falls into would necessarily be afforded some level of deference by the reviewing court.<sup>244</sup> Providing any deference to agency determinations about

<sup>239</sup> *Tennessee*, 832 F.3d at 610; *see also id.* at 614 (White, J., concurring in part and dissenting in part); *City of Wilson*, 30 FCC Rcd. at 2473 (suggesting that in the case of a flat ban on municipal broadband the Commission would be powerless to preempt).

<sup>240</sup> Stricker, *supra* note 38, at 608.

<sup>241</sup> *See City of Wilson*, 30 FCC Rcd. at 2475 (“[W]e find that the preemption of state communications regulation on municipal broadband providers—where the state has given an underlying authorization—will have the effect of promoting competition and infrastructure investment and is consistent with the state’s grant of authority to municipalities . . . .” (footnote omitted)); *see also Community Network Map*, *supra* note 7 (showing those states with restrictions less than a flat ban).

<sup>242</sup> *See Tennessee*, 832 F.3d at 615 (White, J., concurring in part and dissenting in part) (stating that applying this narrower reading would have allowed FCC to preempt law that the Sixth Circuit found was protected by the clear statement rule).

<sup>243</sup> *See id.* (arguing that *Chevron* deference does not apply to the FCC’s determination that it has authority to preempt, as distinguished from its decision whether to use that authority, because the statute’s silence or ambiguity is what triggers the clear statement rule). *See generally* *Chevron, U.S.A., Inc. v. Nat. Res. Def. Council, Inc.*, 467 U.S. 837 (1984) (establishing the test for deference accorded to agency interpretations of unclear authorizing statutes).

<sup>244</sup> *See, e.g., Skidmore v. Swift & Co.*, 323 U.S. 134, 140 (1944) (establishing that courts may defer to administrative decisions that do not carry the force of law if they find that they were reached through a thorough, valid, and consistent decision-making process). While the preemption at issue in *Tennessee v. FCC* was not an

which statutes deal with issues of core sovereignty and which solely effectuate policy that contravenes the federal interest would be a wholly new power for federal agencies.

*C. Concerns About Judicial and Legislative Economy*

Applying this narrower clear statement rule would require courts to apply a higher level of scrutiny to the statutes in preemption cases. As Judge White notes in her partial dissent in *Tennessee v. FCC*, courts would have to determine which state statutes deal with core issues of state sovereignty and which merely effectuate a policy that affects local governments.<sup>245</sup> While this distinction could often be easy to draw, as evidenced by the statutes at issue in *Tennessee*, reasonable judges may often disagree as to whether the statutes affect a core issue of state sovereignty or merely effectuate broadband regulatory policy.<sup>246</sup> Arguably, making this distinction could raise concerns about judicial economy, as it will require judges to inquire as to the purpose and effect of restrictive statutes to determine whether their effect on local governments is core or tangential to the state's sovereign powers. This inquiry could potentially yield unclear and inconsistent results across districts and circuits.

However, the current system is comparably unclear. Scholars have argued that rules such as the clear statement rule are meant to serve as notice to Congress to better construct statutes in order to clearly convey intent to the courts.<sup>247</sup> However, a survey of legislative drafters found that the clear majority of them were completely unaware of the clear statement rule.<sup>248</sup> Further, while courts have repeatedly made clear what does not satisfy the clear statement rule, what does satisfy the rule remains ambiguous.<sup>249</sup> Applying this narrower reading of the clear statement rule would ensure that apparent congressional intent is effectuated to the fullest extent possible without running afoul of constitutional federalism concerns. It would also ameliorate the concerns raised in *Gregory* by Justice White, that the clear statement rule would act as a judicially created restraint on Congress's legislative authority.<sup>250</sup>

---

interpretive rule subject to *Skidmore* deference, the lesser form of deference adopted in *Skidmore* is illustrative of the more searching inquiry that may be required in these cases. *Id.*; see also Dunne, *supra* note 11, at 1159 (suggesting that "a reviewing court might need to accord some level of deference to the agency determination").

<sup>249</sup> *Id.* at 972–75.

<sup>250</sup> *Gregory v. Ashcroft*, 501 U.S. 452, 477 (1991) (White, J., dissenting).

## CONCLUSION

Section 706 of the 1996 Telecommunications Act contains a clear directive to the FCC to ensure that broadband technology is deployed to all Americans, along with a broad grant of authority to accomplish this directive. In its order preempting the Tennessee and North Carolina statutes that restricted the abilities of their municipal broadband providers to expand their services to neighboring communities, the FCC exercised this authority to accomplish Congress's stated policy ends. However, the Sixth Circuit's decision in *Tennessee v. FCC* undercut the ability of the FCC to eliminate barriers to investment and competition in the broadband market.

The clear statement rule, as applied to the congressional grant of authority to the FCC in Section 706, has served to create a shield for states to contradict federal communications policy. At the behest of private ISPs, states have passed statutes restricting the abilities of their municipalities to enter the broadband market or expand their services, creating a less competitive environment for the incumbent ISPs. By applying the narrower reading of the clear statement rule as proposed by Judge White, the courts would empower the FCC to the full extent that Congress intended, allowing it to better ensure universal access to broadband technology for all Americans.

FOR IMMEDIATE RELEASE

Friday, April 24, 2015

**Comcast Corporation Abandons Proposed Acquisition of Time Warner Cable After Justice Department and the Federal Communications Commission Informed Parties of Concerns**

Comcast Corporation (Comcast) abandoned its plans to acquire Time Warner Cable Inc. (Time Warner Cable) for approximately \$45.2 billion after the Department of Justice informed the companies that it had significant concerns that the merger would make Comcast an unavoidable gatekeeper for Internet-based services that rely on a broadband connection to reach consumers.

"The companies' decision to abandon this deal is the best outcome for American consumers," said Attorney General Eric Holder. "The Antitrust Division of the United States Department of Justice has demonstrated, time and again, that it can and will defend the interests of the American consumer no matter the complexity of the issue or the size of the opponent. This is a victory not only for the Department of Justice, but also for providers of content and streaming services who work to bring innovative products to consumers across America and around the world. I commend the Antitrust attorneys and investigators whose outstanding work led to this outcome, and I know that the Department of Justice will continue to fight for fair access and free competition in every industry and every market."

"I want to thank our colleagues at the Federal Communications Commission for their close and productive cooperation throughout this investigation," said Renata Hesse, Acting Assistant Attorney General of the Department of Justice's Antitrust Division. "The collective expertise of the career staff at both agencies enabled us to analyze the complex issues presented by this transaction and to deliver a consistent message regarding the impact of the transaction on competition and the broader public interest. We are also grateful for the close cooperation we had with teams from many State Attorneys General offices during the course of our investigation."

Comcast is a Pennsylvania corporation headquartered in Philadelphia. With approximately 21.7 million video subscribers and 20.7 million broadband subscribers, Comcast is both the largest video and wired broadband Internet-access provider in the nation.

Time Warner Cable is a New York corporation with headquarters in New York. With approximately 11.4 million video subscribers and 11.6 million broadband subscribers, Time Warner Cable is the fourth-largest video and the third-largest wired broadband Internet-access provider in the nation.

## **Comcast and Charter Reach Agreement on Divestitures**

### **Comcast to Divest 3.9 Million Customers of Merged Comcast - Time Warner Cable Charter to Enhance Scale and Improve Geographic Footprint Divestiture will be Executed through Three Separate Transactions, Including the Creation of a New, Independent, Publicly-Traded Cable Provider**

PHILADELPHIA and STAMFORD, Conn., April 28, 2014 /PRNewswire/ -- Comcast Corporation (Nasdaq: CMCSA, CMCSK) and Charter Communications (Nasdaq: CHTR) today announced that the companies have reached an agreement (the "Agreement") on a series of tax-efficient transactions, whereby the combined Comcast-Time Warner Cable entity, following completion of Comcast's previously announced merger with Time Warner Cable, will divest systems resulting in a net reduction of approximately 3.9 million video customers. The divestiture follows through on Comcast's willingness to reduce its post-merger managed subscriber total to less than 30 percent of total national MVPD subscribers, while maintaining the compelling strategic and financial rationale of its proposed merger with Time Warner Cable.

Pursuant to the Agreement, and following the close of the Comcast-Time Warner Cable merger, Charter will acquire approximately 1.4 million existing Time Warner Cable subscribers, increasing Charter's current residential and commercial video customer base from 4.4 million to approximately 5.7 million, and making Charter the second largest cable operator in the United States.[1] Charter and Comcast will also each transfer approximately 1.6 million customers respectively. In addition, Charter, through a tax free reorganization, will form a new holding company (New Charter) that will own 100% of Charter, and acquire an approximate 33 percent stake in a new publicly-traded cable provider to be spun-off by Comcast serving approximately 2.5 million customers ("SpinCo"). Charter will provide management services to SpinCo. In aggregate, today's announced transactions will significantly enhance Charter's scale and improve both companies geographic footprint, driving operational efficiencies for Comcast, Charter and SpinCo.

The Agreement has been approved by the Boards of Directors of both companies and Time Warner Cable's Board has consented to the Agreement as required under the Comcast-Time Warner Cable merger agreement.

The Agreement will be executed via three separate transactions, which are subject to the completion of the proposed Comcast-Time Warner Cable merger:

1. Comcast will divest Time Warner Cable systems serving approximately 1.4 million existing Time Warner Cable customers directly to Charter for cash. Charter expects to fund the purchase with proceeds from debt, and to have approximately a 5 times debt to EBITDA leverage ratio at closing.
2. Comcast and Charter will transfer assets serving approximately 1.6 million existing Time Warner Cable customers and 1.6 million Charter customers in a tax-efficient like kind exchange, improving the geographic presence of both companies, leading to greater operational efficiencies, improved technology deployment and enhanced customer service.
3. Comcast will form and spin off to its shareholders a new, independent, publicly-traded company that will operate systems serving approximately 2.5 million existing Comcast customers. Comcast shareholders, including the former Time Warner Cable shareholders, are expected to own approximately 67 percent of SpinCo, while New Charter is expected to directly own approximately 33 percent of SpinCo. SpinCo expects to incur leverage of approximately 5 times estimated pro-forma EBITDA, and New Charter will then acquire its interest in SpinCo by issuing New Charter stock to Comcast shareholders (including former Time Warner Cable shareholders). SpinCo's nine-member Board of Directors will include six independent directors and three directors designated by Charter. Comcast will hold no ownership interest in SpinCo (or Charter) and will have no role in managing SpinCo.

The transfer of systems, asset purchase and SpinCo acquisition will be valued at a 7.125 times 2014 EBITDA multiple (as defined by the parties), and Charter will make additional payments to Comcast over time as tax benefits from the asset sale are realized.

As a result of these transactions, following the completion of the merger between Comcast and Time Warner Cable, Comcast's managed residential subscribers will be below 30 percent of the total MVPD subscribers in the United States, and approximately the same market share as Comcast's subscriber base after its completion of both the 2002 AT&T Broadband transaction and the 2006 Adelphia transaction - and Charter's subscriber base will increase by 1.4 million to a total of 5.7 million.

## **Comcast and Charter Reach Agreement on Divestitures**

### **Comcast to Divest 3.9 Million Customers of Merged Comcast - Time Warner Cable Charter to Enhance Scale and Improve Geographic Footprint Divestiture will be Executed through Three Separate Transactions, Including the Creation of a New, Independent, Publicly-Traded Cable Provider**

PHILADELPHIA and STAMFORD, Conn., April 28, 2014 /PRNewswire/ -- Comcast Corporation (Nasdaq: CMCSA, CMCSK) and Charter Communications (Nasdaq: CHTR) today announced that the companies have reached an agreement (the "Agreement") on a series of tax-efficient transactions, whereby the combined Comcast-Time Warner Cable entity, following completion of Comcast's previously announced merger with Time Warner Cable, will divest systems resulting in a net reduction of approximately 3.9 million video customers. The Agreement has been approved by the Boards of Directors of both companies and Time Warner Cable's Board has consented to the Agreement as required under the Comcast-Time Warner Cable merger agreement.

The Agreement will be executed via three separate transactions, which are subject to the completion of the proposed Comcast-Time Warner Cable merger:

1. Comcast will divest Time Warner Cable systems serving approximately 1.4 million existing Time Warner Cable customers directly to Charter for cash. Charter expects to fund the purchase with proceeds from debt, and to have approximately a 5 times debt to EBITDA leverage ratio at closing.
2. Comcast and Charter will transfer assets serving approximately 1.6 million existing Time Warner Cable customers and 1.6 million Charter customers in a tax-efficient like kind exchange, improving the geographic presence of both companies, leading to greater operational efficiencies, improved technology deployment and enhanced customer service.
3. Comcast will form and spin off to its shareholders a new, independent, publicly-traded company that will operate systems serving approximately 2.5 million existing Comcast customers. Comcast shareholders, including the former Time Warner Cable shareholders, are expected to own approximately 67 percent of SpinCo, while New Charter is expected to directly own approximately 33 percent of SpinCo. SpinCo expects to incur leverage of approximately 5 times estimated pro-forma EBITDA, and New Charter will then acquire its interest in SpinCo by issuing New Charter stock to Comcast shareholders (including former Time Warner Cable shareholders). SpinCo's nine-member Board of Directors will include six independent directors and three directors designated by Charter. Comcast will hold no ownership interest in SpinCo (or Charter) and will have no role in managing SpinCo.

The transfer of systems, asset purchase and SpinCo acquisition will be valued at a 7.125 times 2014 EBITDA multiple (as defined by the parties), and Charter will make additional payments to Comcast over time as tax benefits from the asset sale are realized.

As a result of these transactions, following the completion of the merger between Comcast and Time Warner Cable, Comcast's managed residential subscribers will be below 30 percent of the total MVPD subscribers in the United States, and approximately the same market share as Comcast's subscriber base after its completion of both the 2002 AT&T Broadband transaction and the 2006 Adelphia transaction - and Charter's subscriber base will increase by 1.4 million to a total of 5.7 million.

Comcast has reaffirmed that, after taking into account the transactions with Charter, it continues to expect its merger with Time Warner Cable to generate approximately \$1.5 billion in operating efficiencies. Comcast shareholders will receive meaningful value with shares in New Charter, as well as new shares in SpinCo. In addition, Comcast intends to use proceeds from these transactions to reduce its debt in a leverage-neutral manner and expand its share buyback program.

"Today's Agreement follows through on our willingness to divest subscribers, while also marking an important step in our merger with Time Warner Cable," said Brian Roberts, Chairman and Chief Executive Officer, Comcast Corporation. "These transactions enable us to deliver meaningful value to our shareholders. The realignment of key cable markets achieved in these transactions will enable Comcast to fill in our footprint and deliver operational efficiencies and technology improvements. We look forward to working with the management teams at Time Warner Cable, Charter and the new entity to close these transactions and ensure a smooth transition for the customers and employees of all companies."

"Charter's new customers will benefit from our philosophy of providing highly valued products, featuring enhanced on-demand, interactive video and increased broadband speeds, all in a simplified package designed to provide better value and service," said Tom Rutledge, President and Chief Executive Officer of Charter Communications. "The transactions announced today will provide Charter with greater scale, growth opportunities and improved geographical rationalization of our cable systems, which in turn will drive value for shareholders and more effective customer service. And through our meaningful ownership in and board representation at SpinCo, we can help it achieve similar market share growth in the markets it serves."

The transactions are subject to a number of conditions, including the closing of the Comcast-Time Warner Cable merger, receipt of Hart-Scott-Rodino, FCC and other required regulatory approvals, Charter shareholder approval, and various other matters.

J.P. Morgan and Paul J. Taubman acted as financial advisors to Comcast and Davis Polk & Wardwell LLP and Willkie Farr & Gallagher LLP are its legal advisors.

Goldman Sachs and LionTree Advisors are serving as lead financial advisors to Charter in connection with this transaction. Guggenheim Securities is also a financial advisor to Charter. BofA Merrill Lynch, Credit Suisse, and Deutsche Bank Securities Inc. are also financial advisors to Charter, and together with Goldman Sachs, are leading the financing for the transaction. The law firms Wachtell, Lipton, Rosen & Katz and Kirkland & Ellis LLP are also representing Charter.

#### **Teleconference and Webcast for Financial Community**

Charter and Comcast will host a conference call on Monday, April 28, 2014 at 8:00 a.m. Eastern Time (ET) related to the contents of this release.

The conference call will be webcast live via Charter's website at [charter.com](http://charter.com). The webcast can be accessed by selecting "Investor & News Center" from the lower menu on the home page. The call will be archived in the "Investor & News Center" in the "Financial Information" section on the left beginning two hours after completion of the call. Participants should go to the webcast link no later than 10 minutes prior to the start time to register.

The conference call and related materials will also be broadcast live and posted on Comcast's Investor Relations website at [www.cmcsa.com](http://www.cmcsa.com) or [www.cmcsk.com](http://www.cmcsk.com).

Those participating via telephone should dial 866-919-0894 no later than 10 minutes prior to the call. International participants should dial 706-679-9379. The conference ID code for the call is 35997372. A replay of the call will be available at 855-859-2056 or 404-537-3406 beginning two hours after the completion of the call through the end of business on May 28, 2014. The conference ID code for the replay is 35997372.

#### **About Comcast Corporation**

Comcast Corporation (Nasdaq: CMCSA, CMCSK) is a global media and technology company with two primary businesses, Comcast Cable and NBCUniversal. Comcast Cable is the nation's largest video, high-speed Internet and phone provider to residential customers under the XFINITY brand and also provides these services to businesses. NBCUniversal operates 30 news, entertainment and sports cable networks, the NBC and Telemundo broadcast networks, television production operations, television station groups, Universal Pictures and Universal Parks and Resorts. Visit [www.comcastcorporation.com](http://www.comcastcorporation.com) for more information.

#### **About Charter Communications**

Charter (NASDAQ: CHTR) is a leading broadband communications company and the fourth-largest cable operator in the United States. Charter provides a full range of advanced broadband services, including advanced Charter TV® video entertainment programming, Charter Internet® access, and Charter Phone®. Charter Business® similarly provides scalable, tailored, and cost-effective broadband communications solutions to business organizations, such as business-to-business Internet access, data networking, business telephone, video and music entertainment services, and wireless backhaul. Charter's advertising sales and production services are sold under the Charter Media® brand. More information about Charter can be found at

## INTRODUCTION

After a long day at the office, Carl Chicago comes home to spend a few minutes catching up on world events courtesy of CNN. Settling into the couch cushion, he turns on the TV, only to find the network blacked out. A message from his cable provider, Comcast, tells him that it is currently disputing its agreement with the station, and gives him a number to call to register his complaint. Carl is undeterred, and decides that he would rather just kick back with Finn and Jake on *Adventure Time* instead. But as he turns to Cartoon Network for some much-needed entertainment, he runs into a similar message from his cable provider. Carl, growing increasingly frustrated, decides to call his sister in Virginia, Wendy Williamsburg, who can see both of the stations fine. Carl begins complaining to her about the amount he pays for stations he cannot even access. “Well how much do you pay?” she asks. Carl tells her he pays about \$75 per month for the standard expanded cable. Wendy checks her own bill. Up until about a year ago, she had been paying roughly the same amount, around \$76.50 or so. However, for the same package of channels, she notices she is now paying almost \$84. “How can this be?” she asks Carl, wondering why his enormous cable conglomerate can offer such lower prices than hers. “Don’t ask me,” Carl retorts, “I didn’t pick them.”

Carl, as well as most of his neighbors and friends throughout the country, did not choose his cable company. That is because most localities have only one cable provider, and although there were previously hundreds, if not thousands, of different cable companies nationwide, most people today are served by one of only a few national conglomerates. More concerning than this lack of competition is that federal regulators at the Department of Justice (DOJ) and the Federal Trade Commission (FTC) have sanctioned this situation by choosing to measure a cable company’s growth only in individual markets, potentially ignoring nationwide gains.

The merger between Comcast and Time Warner Cable would have been the largest merger of two cable providers in history.<sup>1</sup>

1. See *Comcast and Time Warner Cable Transaction Fact Sheet*, COMCAST, <http://corporate.comcast.com/images/Transaction-Fact-Sheet-2-13-14.pdf> [http://perma.cc/H3RZ-

Before Comcast abandoned its plans after the tepid reaction of both the DOJ and the Federal Communications Commission (FCC),<sup>2</sup> the merger garnered substantial consumer opposition<sup>3</sup> and concerned policy analysts and economists over the power such a large company would have.<sup>4</sup> The cable industry began as a collection of small conglomerates serving one or a few localities,<sup>5</sup> until providers began to combine.<sup>6</sup> There are now only about seven companies serving most of the cable-using public nationwide, of which the four largest are Comcast, Time Warner Cable, Cox Communications, and Charter Communications.<sup>7</sup>

When companies merge, they must submit notice of the merger to the federal government.<sup>8</sup> Either the DOJ Antitrust Division or the FTC Bureau of Competition investigates the merger,<sup>9</sup> and then either approves it or sues to block it.<sup>10</sup> Regulators determine the

10. The FCC also reviews telecommunications (telco) mergers for possible effects on the telco market and the provision of services to consumers. Not only is FCC analysis usually duplicative of DOJ/FTC analysis, see Laura Kaplan, Note, *One Merger, Two Agencies: Dual Review in the Breakdown of the AT&T/T-Mobile Merger and a Proposal for Reform*, 53 B.C. L. REV. 1571, 1573-74 (2012), but it is frequently rejected by courts as being arbitrary and

potential anticompetitive effects of mergers by turning to ratios of companies' market shares<sup>11</sup> to predict the effect a merger will have on all other sellers in that market.<sup>12</sup> If the analysis shows the companies' merger would have anticompetitive effects, regulators generally sue to block the merger.<sup>13</sup> The argument between the merging companies and regulators is always over *which* market regulators measure.<sup>14</sup> Unlike most industries, in which the merger effects are measured nationally, the DOJ/FTC measures a cable merger for its local impacts, looking at whether it will decrease competition in Richmond, Virginia, as opposed to competition on a national scale.<sup>15</sup> Most markets have only one cable provider,<sup>16</sup> so Comcast and Time Warner Cable, for instance, do not compete in any market nationwide.<sup>17</sup> In fact, very few cable companies share territory nationwide.<sup>18</sup> Theoretically, the DOJ should have approved the Comcast-Time Warner Cable merger on the grounds that it would not have

decreased competition in any localities.<sup>19</sup> Where there is no competition to begin with,<sup>20</sup> a merger cannot make competition worse.<sup>21</sup>

While this may be the case on a theoretical level, the problem is that a cable company's national power *does* matter. The cable market is two-sided: a cable company negotiates nationally with programming companies to buy their content, and then sells it to consumers in localities.<sup>22</sup> A cable company with sufficient power nationwide could decide that it is tired of paying \$5.54 per month per customer for ESPN<sup>23</sup> and, because of its size, have a substantial ability to extract lower prices from ESPN.<sup>24</sup> ESPN would then have to either decrease operations or, to the extent it can, use its own power over smaller cable companies to extract higher fees from customers.

Programming companies' ordinary response in this situation would be to merge.<sup>25</sup> However, they cannot do so without raising

25. BARBARA S. PETITT & KENNETH R. FERRIS, VALUATION FOR MERGERS AND ACQUISITIONS 6-7 (2d ed. 2013).

significant antitrust concerns of their own, because regulators measure them—as they do companies in most industries—on a national level.<sup>26</sup> Programming companies are thus roughly stuck in place while a sufficiently large cable company, which is unfettered by the current enforcement scheme, can theoretically obtain unprecedented power to dictate prices to programmers, leaving the programmers to pass costs on to other cable companies' customers, like Wendy Williamsburg. This may have seemed unlikely until the proposed Comcast-Time Warner Cable merger, which would have made the two largest cable companies one. Even though that merger was scuttled, the immediate presence of another buyer for Time Warner Cable—Charter, the fourth-largest company—indicates that this merger activity will likely continue.<sup>27</sup>

Government regulators, however, have a little-used tool in their antitrust toolbox to measure buyer power in the market. This Note proposes that government regulators measure potential mergers for monopsony power—the ability of a single buyer to impact a would-be seller in a market—to ensure that they consider all economic effects of any future cable mergers.<sup>28</sup> Although monopsony has never been applied to the cable industry, the economic realities support dusting off this doctrine and putting it to work. This Note analyzes the abandoned Comcast-Time Warner Cable merger, which, as a proposed merger between the two largest cable providers in the country, put these issues front and center for regulators for the first time. Although the parties abandoned that merger, Charter Communications' proposed merger with Time Warner Cable would enlarge the merged company to almost the same size as Comcast.<sup>29</sup> These issues remain prevalent, as the future of cable seems to promise more of such activity.

---

26. See *infra* notes 115-17 and accompanying text (describing a proposed merger between two programming companies in the wake of the Comcast-Time Warner Cable announcement, which raised substantial antitrust concerns that would have needed to be addressed before the merger could have proceeded).

27. See Sydney Ember, *In Time Warner Cable Deal, Charter Seeks National Heft*, N.Y. TIMES (May 25, 2015), [http://www.nytimes.com/2015/05/26/business/media/in-cable-deal-charter-seeks-its-legitimacy.html?\\_r=0](http://www.nytimes.com/2015/05/26/business/media/in-cable-deal-charter-seeks-its-legitimacy.html?_r=0) [<http://perma.cc/32SZ-HDFB>].

28. The monopsonist can dictate terms to its suppliers. Consequently, if federal regulators determine that a cable merger might create monopsony power, they will be able to effectively curtail this growth as they have not been able to do before. See *infra* Part III.B.

29. See Ember, *supra* note 27.

Part I of this Note discusses the history and goals of cable regulation, including why conglomerates are traditionally allowed, and how programming companies are measured differently than cable companies. Part II examines the problems with measuring cable market-to-market. It begins by explaining how and why this structure does not check the size of cable providers, and how courts have eliminated prior rules. The only reasonable market solution to cable power is programming power, and if their mergers are blocked under standard antitrust doctrine, regulators may have inadvertently enshrined cable dominance over programming and consumers. This Part also discusses the potential losers in a large-scale cable merger.

Finally, Part III argues that, although other regulators have failed to stop cable's unchecked growth, antitrust laws should have more success. This Note proposes that the DOJ Antitrust Division and FTC<sup>30</sup> be required to measure both sides of the cable market—the influence of cable both market-to-market via consumer delivery, and the nationwide effects on programming purchasing via monopsony power. If either of these raises the concentration of the market beyond the established antitrust thresholds, the DOJ should sue to block the merger. This proposal will allow more robust consumer protection, uphold a free market, and keep cable companies from shifting economic equity towards themselves and away from their customers and competitors. The proposal also squares with the purpose of the antitrust laws, which should vest the authority to change their market analysis within the DOJ and FTC without their rules being struck down by the courts. This Part will also address alternatives, explaining why this proposal is more sustainable than others.

---

30. This Note applies to both the DOJ Antitrust Division and the FTC, but because the DOJ considered the Comcast-Time Warner merger, this Note makes shorthand references to the DOJ.

## I. CABLE'S REGULATORY TRADITION: MEASURING COMPETITION MARKET-TO-MARKET

### A. *Cable as a Natural Monopoly*

Two concepts in economics, efficiency<sup>31</sup> and equity,<sup>32</sup> are usually in tension with one another in regulators' calculations of economic policy. In the case of cable franchises, both of these actually work in tandem to establish cable as a "natural monopoly," where the best solution is a single provider in a locality. As a result, most localities in the United States are served by only one cable company.<sup>33</sup> These concepts are explored in detail below.

#### 1. *Efficiency: The Cheapest Good for the Greatest Number*

Cable, as a natural monopoly, validates efficiency concerns. Like other utilities, cable is the almost quintessential example of a natural monopoly, meaning that the most efficient market exists when only one provider serves a locality.<sup>34</sup> Because a cable system requires large capital expenditures up front to install coaxial cable and other equipment to transmit a cable signal,<sup>35</sup> the cost for each consumer decreases as it is amortized over increasing numbers of

31. Economic efficiency is the requirement that the market maximizes producer and consumer surplus—in other words, that producers sell the product for as low as possible, and that the maximum number of consumers willing to buy at that price are able to buy at that price. Put in more basic, non-economic terms, this intuitively means that the *most* people are made the *most* happy, as far as happiness can be measured through economic systems. See AVINASH DIXIT, MICROECONOMICS: A VERY SHORT INTRODUCTION 52-55 (2014).

32. Equity, as used in this Note, refers to the economic concept of equity, rather than ownership of a company. Economic equity describes how the benefits buyers and sellers get from competition accrue to each party (in other words, are they equal, or does one party benefit more than others?). See *infra* notes 123-25 and accompanying text.

33. OWEN M. FISS, THE IRONY OF FREE SPEECH 70 (1996); see also Reza Dibadj, *Toward Meaningful Cable Competition: Getting Beyond the Monopoly Morass*, 6 N.Y.U. J. LEGIS. & PUB. POL'Y 245, 265 (2003) (citing FCC data that only 2 percent of "cable community units" have more than one provider nationwide, and noting that only one in twenty customers responding to a Consumer Reports survey reported having a choice among more than one cable option).

34. Shaun Christensen, *Cable Television: Competition and the First Amendment*, 37 S.D. L. REV. 566, 576-77 (1992).

35. W. KIP VISCUSI ET AL., ECONOMICS OF REGULATION AND ANTITRUST 535 (4th ed. 2005).

customers.<sup>36</sup> Consequently, if two or more companies were to compete head-to-head, installing their own different sets of coaxial cable and equipment, they would have to amortize their costs over fewer consumers.<sup>37</sup> This would raise the cost of doing business for each company, and raise the price for consumers, to a point at which the price would be too high for consumers to pay and the costs too great for the companies to bear.<sup>38</sup> Efficiency considerations thus dictate that only one cable company exist in order to spread these capital expenditures among the highest number of customers, ensuring the lowest possible price for those customers.<sup>39</sup> Most local governments thus aim to have only one cable provider, and they have been fairly successful in that regard.<sup>40</sup>

## 2. *Equity: Providing the Local Voice*

Equity considerations have also guided federal regulators to a natural monopoly. The courts have long supported the FCC's decision to favor consumer equity<sup>41</sup> over economic efficiency.<sup>42</sup> The earliest of these decisions, *Carter Mountain Transmission Corp. v. FCC*, upheld an FCC rule prohibiting an outside corporation from importing its own offerings, delivered via microwave and providing better service than the local cable provider, because it "would result in the 'demise' of the local television station ... and the loss of service to a substantial rural population not served by the community antenna systems."<sup>43</sup> The court upheld the rule as a proper exercise of the FCC's regulatory power.<sup>44</sup> This decision is important because

---

36. *Id.*

37. For instance, if a company spends \$1,000,000 to start, and can sell to 100,000 customers in an area, their bill is \$10 (plus the ongoing costs of the cable company, profit, and so on). If two companies compete and each win half of the customers, they have each still spent \$1,000,000, but now only sell to 50,000 customers. Those customers pay an additional \$10, which might make them less likely to buy cable.

38. VISCUSI ET AL., *supra* note 35, at 535.

39. *Id.*

40. *See generally* Dibadj, *supra* note 33; *infra* notes 50-51 and accompanying text.

41. *See supra* note 32 (explaining the concept of equity).

42. *See Carter Mountain Transmission Corp. v. FCC*, 321 F.2d 359, 361 (D.C. Cir. 1963).

43. *Id.*

44. *Id.* at 362-63. The court upheld the decision despite the fact that the FCC's duties include considering both equity *and* efficiency concerns: "Relevant, too, is the congressional mandate that the Commission 'make such distribution of licenses, frequencies, ... and of power

pure efficiency, which reigns in most laissez-faire markets, would dictate that the government allow this arguably superior competitor to thrive because it could provide citizens with a better product than their local provider.<sup>45</sup>

Economic theory most often presumes that lower prices make for the best civic good.<sup>46</sup> The FCC's rule, and the *Carter Mountain* court's imprimatur, indicates a continuing desire by social planners to protect decisions that may actually cost consumers more money or provide worse service in order to keep a local voice in the community.<sup>47</sup> Regulators have long taken the view that cable's provision of the local voice vindicates a consumer right. Cable came into existence because not all communities received adequate broadcast signal<sup>48</sup>—the towns in *Carter Mountain* were Wyoming mountain towns that otherwise did not have strong television signals.<sup>49</sup> In exchange for cable companies incurring the substantial up-front fixed costs for laying the infrastructure necessary to provide cable service,<sup>50</sup> local government franchising authorities that dictate which firms are allowed to broadcast in a certain area granted them exclusive access to municipal rights of way.<sup>51</sup>

---

among the several States and communities as to provide a *fair, efficient, and equitable distribution of ... service* to each of the same.” *Id.* (emphasis added). This same impulse guides the “must-carry” provisions imposed by the FCC on local providers, which mandates that cable companies carry the local broadcast stations and their news media, even if they could execute a cheaper arrangement with a non-local news station. Interview with Brian Hendricks, Head of Tech. Policy & Gov't Relations N. Am., Nokia, in Williamsburg, Va. (May 5, 2014).

45. Economic equity, on the other hand, considers what each of the buyers and sellers gets—in this case, the local voice is “worth paying for,” even though each party gets a lower total surplus because they could have obtained a product for cheaper, and, as discussed in *supra* note 31, is what makes buyers “happiest” in economic theory. See PAUL A. SAMUELSON & WILLIAM D. NORDHAUS, *ECONOMICS* 38 (16th ed. 1998) (discussing the macroeconomic objectives of “promoting efficiency, achieving a fairer distribution of income, and pursuing macroeconomic objectives of economic growth and stability”).

50. See VISCUSI ET AL., *supra* note 35, at 535.

51. *Id.*

These barriers persist today, partially because of franchising protection.<sup>52</sup> Cable companies often enjoy solicitous relationships with their local franchising authorities.<sup>53</sup> In addition, the cost of “overbuilding”<sup>54</sup> on existing cable lines effectively stymies competitors and raises their marginal cost for adding customers, because additional customers usually only come from the existing customer base.<sup>55</sup> As a result, 98 percent of municipalities are served by only one cable provider.<sup>56</sup> The fact that cable is considered a natural monopoly, and the policy desire embodied in *Carter Mountain* to reward franchises, combine to keep competition low.

## *B. History of Cable Regulation and Deregulation*

### *1. Cable Regulation*

Though cable may have started as a small market characterized by a loose federation of local franchises, it is now quite different. Most of these small local companies have been absorbed over the years by larger “multi-system operators” (MSOs), such as Time Warner Cable, Charter, and Comcast, which may operate hundreds of “mini-franchises” in these localities.<sup>57</sup> This allows the cable compa

52. *Evolution of Cable Television*, *supra* note 48.

53. Thomas W. Hazlett, *Private Monopoly and the Public Interest: An Economic Analysis of the Cable Television Franchise*, 134 U. PA. L. REV. 1335, 1358-59 (1986).

54. Overbuilding is the practice of a separate cable company laying down lines using the same community rights of way. *See generally* Kevin Caves & Hal Singer, *Life After Comcast: The Economist's Obligation to Decompose Damages Across Theories of Harm*, 28 ANTITRUST 90 (2014) (discussing barriers to entry and the cost of overbuilding).

55. The primary deterrent for overbuilding is the fact that companies must absorb this cost before they are guaranteed any customers, and there are few “new” customers in a “mature” industry like cable. The cost to *both* cable companies in an area will be higher because they will have smaller customer bases than the single cable company would. *See* Dorothy Pomerantz, *If You Overbuild It*, FORBES (Apr. 16, 2001, 12:00 AM), <http://www.forbes.com/forbes/2001/0416/144.html> [<http://perma.cc/VGL2-Y5QV>]. Despite these challenges, some evidence suggests that not only are some companies attempting to overbuild and enter the cable arena, but also that large cable companies are trying to keep them out. *See* Brodsky, *supra* note 4 (explaining that Comcast and Time Warner Cable have spent money fighting overbuilders and creating an artificially singular provision of service).

56. *See* Eli Noam & Robert N. Freeman, *The Media Monopoly and Other Myths*, 29 TELEVISION Q. 18 (1997), [http://www.citi.columbia.edu/elinoam/articles/media\\_monopoly.htm](http://www.citi.columbia.edu/elinoam/articles/media_monopoly.htm) [<http://perma.cc/H2J8-5FH6>]; *see also* Dibadj, *supra* note 33, at 265.

57. Stuart Smith, *Introduction to the Cable MSO Industry*, MINTEK (July 21, 2010), <http://www.mintek.com/blog/cpe-management/introduction-cable-mso-industry/> [<http://perma.cc/>

nies to price their packages in each locality according to what consumers are willing to pay, while giving them substantial national market power because they can control their corporate policies at a national level.<sup>58</sup> This creates an inherent problem, as federal regulations were established to protect the monopolies of individual cable providers, which were usually small. These cable providers have been snapped up by the national firms, which have accumulated national largesse as a result. If left unchecked by the current legal scheme, this could allow cost increases for all customers whose bills do not come from the largest competitor in the market, particularly if that largest competitor has behind it the economic power created by one of these new mergers.<sup>59</sup>

Cable regulation historically has not been particularly robust, struggling with issues of fit in a dynamic market.<sup>60</sup> The only regulation has concerned the price of a basic cable package,<sup>61</sup> demonstrating that the FCC's primary focus is consumer access to basic channels and broadcast networks, and the presence of a "local voice" in the community.<sup>62</sup> The most impactful regulations are those enforced by the DOJ Antitrust Division and the FTC Bureau of Competition. These regulators administer the federal antitrust

58. *See Company Overview*, COMCAST, <http://corporate.comcast.com/news-information/company-overview> [<http://perma.cc/F59X-6VGE>] (last visited Sept. 27, 2015) (describing Comcast as "a global media and technology company," despite the fact that its biggest business, Comcast Cable, delivers "to residential customers").

59. *See infra* Part II.C.2 (explaining that Comcast could have forced concessions from programming companies as a result of its greater power, and that the programming companies in turn would use their power against smaller cable companies to charge more than they had before).

60. *See generally* Dibadj, *supra* note 33, at 250; Hazlett, *supra* note 16.

61. *Regulation of Cable TV Rates*, FCC (Dec. 30, 2014), <http://www.fcc.gov/guides/regulation-cable-tv-rates> [<http://perma.cc/88NV-4FTY>].

62. This is not necessarily a bad thing. During periods when cable prices were unregulated, they rose, but so did the provision of better channels like HBO and ESPN, and the actual price per channel of a cable package went down. During periods of regulation, the price remained the same. Not only did cable development stagnate during these periods, but the most desirable offerings—such as HBO—were moved off of the basic cable package and into premium packages. This means that now, the broadcast networks and local channels are some of the *only* offerings available to consumers under a regulated basic package, but the amount of money and time Americans spend on cable suggests that they receive substantial value from these packages—they *want* to pay for HBO. *See generally Evolution of Cable Television*, *supra* note 48.

statutes,<sup>63</sup> which originally rose during the era of Standard Oil and railroad cartels in order to keep companies from creating a monopoly that restrained trade.<sup>64</sup> In furtherance of these laws, regulators not only watch for agreements or conduct between two or more companies that restrain trade,<sup>65</sup> but also review mergers to assess whether they will enhance or restrain competition.<sup>66</sup>

## 2. Antitrust Oversight of Cable

Antitrust laws provide the most robust means for regulating a cable company's size, but, as is the case with all federal merger approvals, the way the merging companies and regulators define the relevant market determines whether regulators will allow the companies to merge. When companies plan to merge, they usually must file paperwork with federal authorities under the Hart-Scott-Rodino Act, which amended the Clayton Antitrust Act.<sup>67</sup> The DOJ or FTC then use the Herfindahl-Hirschman Index (HHI) to accurately measure the merger's effect on market concentration. The HHI provides a number between 0 and 10,000 for market concentration, with higher numbers demonstrating greater market power in fewer hands.<sup>68</sup> Regulators have termed markets between 0 and 1500 points "not concentrated," markets between 1500 and 2500 "moder-

---

63. The three primary statutes are the: (1) Sherman Antitrust Act, Pub. L. No. 107-203, 26 Stat. 209 (1890) (codified as amended at 15 U.S.C. §§ 1-7 (2012)), which prohibited businesses from engaging in anti-competitive conduct; (2) Clayton Antitrust Act, Pub. L. No. 63-323, 38 Stat. 730 (1914) (codified as amended at 15 U.S.C. §§ 12-27 (2012) and 29 U.S.C. §§ 52-53 (2012)), which first established provisions for the government to block mergers; and (3) Federal Trade Commission Act, Pub. L. No. 63-203, 38 Stat. 717 (1914) (codified as amended at 15 U.S.C. §§ 41-58 (2012)), which established the FTC.

64. *See generally* Standard Oil Co. of N.J. v. United States, 221 U.S. 1, 52 (1911) (introducing the "three evils" of monopolies the public cried out against at English common law: higher prices, reduced output, and reduced quality).

65. 15 U.S.C. §§ 1-2 (2012).

66. *Id.* § 18.

67. *Id.* § 18a.

68. Market concentration "is calculated by squaring the market share of each firm competing in the market and then summing the resulting numbers." *Herfindahl-Hirschman Index*, DOJ: ANTITRUST DIVISION, <http://www.justice.gov/atr/public/guidelines/hhi.html> [<http://perma.cc/3B5Q-9WZ8>] (last visited Sept. 27, 2015). For example, for a market in which there are four firms with market shares of 30 percent, 30 percent, 20 percent, and 20 percent, respectively, the HHI would be calculated as follows:  $30^2 + 30^2 + 20^2 + 20^2 = 900 + 900 + 400 + 400 = 2600$ . *Id.* Thus, the HHI would be 2600, making this a highly concentrated market. *Id.*

ately concentrated,” and markets over 2500 points “highly concentrated.”<sup>69</sup> In determining whether a merger is concerning enough to give rise to suit, the DOJ and FTC consider both (1) whether the market is already highly concentrated and (2) how much the merger would increase market concentration.<sup>70</sup> For instance, an increase of more than 200 points in a highly concentrated market is “presumed to be likely to enhance market power.”<sup>71</sup> In less concentrated markets, regulators look for a greater increase in market concentration before they are concerned.<sup>72</sup>

Federal policy does not inhibit firms from combining, except when the new firm could unreasonably restrain trade.<sup>73</sup> For instance, regulators famously blocked AT&T’s attempted purchase of T-Mobile out of concern that the merger would take away a valuable competitor in an already concentrated market and essentially allow a “duopoly”<sup>74</sup> between AT&T and Verizon.<sup>75</sup> However, regulators often approve mergers with certain requirements, such as divestiture of some of the merged company’s assets. When American Airlines merged with U.S. Airways, for example, it divested itself of some of its gates and flights at Ronald Reagan Washington National Airport because the combined company would have had an inordinate presence compared to other airlines.<sup>76</sup>

71. *Id.* at 19.

72. *Id.*

73. *See generally id.* (discussing the lack of concern for mergers in less concentrated markets).

74. Just as in a monopoly where one company controls most of the market, a duopoly exists where two companies effectively control the market. *See* George J. Stigler, *Notes on the Theory of Duopoly*, 48 J. POL. ECON. 521, 521 (1940).

75. *See* Michael J. de la Merced, *AT&T Ends \$39 Billion Bid for T-Mobile*, N.Y. TIMES (Dec. 19, 2011, 4:44 PM), <http://dealbook.nytimes.com/2011/12/19/att-withdraws-39-bid-for-t-mobile/> [<http://perma.cc/2V2A-EHCJ>] (explaining that AT&T and Verizon Wireless would have had almost three-quarters of the cellular market between them if AT&T had absorbed T-Mobile).

76. Ashley Halsey III, *American Airlines Ends Direct Service to 17 Cities from National Airport Under Merger Deal*, WASH. POST (Jan. 15, 2014), [http://www.washingtonpost.com/local/trafficandcommuting/american-airlines-ends-direct-service-to-17-cities-from-national-airport-under-merger-deal/2014/01/15/345610f4-7df4-11e3-9556-4a4bf7bcbd84\\_story.html](http://www.washingtonpost.com/local/trafficandcommuting/american-airlines-ends-direct-service-to-17-cities-from-national-airport-under-merger-deal/2014/01/15/345610f4-7df4-11e3-9556-4a4bf7bcbd84_story.html) [<http://perma.cc/WJJ2-G9UM>].

The whole battle of a merger is often won and lost over the definition of the market itself.<sup>77</sup> Companies seeking a merger generally argue that they are members of a larger market in order to increase the number of players, decrease the market concentration, and win when the DOJ performs its HHI calculations.<sup>78</sup> Regulators for the DOJ or FTC who want to block the merger will define the market as narrowly as possible, amplifying the effect of the proposed merger.<sup>79</sup> The DOJ Antitrust Division uses the HHI to measure cable market-to-market,<sup>80</sup> because each franchise exists in its own mini-market with its own natural monopoly.<sup>81</sup> Cable companies are frequently the only provider in their respective market.<sup>82</sup> For instance, when advocating for the Comcast-Time Warner Cable merger, Comcast Vice President David Cohen correctly stated that “Time Warner and Comcast do not compete in any relevant market,” such that any consumer who paid Time Warner Cable would simply just start paying Comcast post-merger, since Comcast was *never a player in their market to begin with*.<sup>83</sup> To put it succinctly, where there was never substantial competition to begin with, a merger between two cable companies cannot make such competition worse, which the-

78. See Jon Brodtkin, *Comcast: Without Time Warner, We Can't Compete Against Google, Netflix*, ARS TECHNICA (Apr. 8, 2014, 1:16 PM), <http://arstechnica.com/tech-policy/2014/04/comcast-without-time-warner-cable-we-cant-compete-against-google-netflix/> [<http://perma.cc/T5FE-VJD9>] (noting Comcast's statement to the FCC that, in addition to competing against other cable companies, its relevant market includes Google, Netflix, Verizon, Apple, and Sony).

79. Federal regulators have not yet indicated how they would define the market, but another example would be the airline industry: regulators typically do not include train and bus travel as adequate “substitutes” for airline travel, which would otherwise define the market for national travel more broadly, making the airline merger less impactful. See, e.g., Complaint at 10, *United States v. US Airways*, 38 F. Supp. 3d 69 (D.D.C. 2014) (No. 13-cv-1236).

80. Kevin Roose, *This Math Formula Shows Why the Comcast-Time Warner Cable Deal Should Be Blocked*, N.Y. MAG. (Feb. 13, 2014, 9:59 AM), <http://nymag.com/daily/intelligencer/2014/02/why-comcasttime-warner-cable-should-be-blocked.html> [<http://perma.cc/8AN7-AX7X>]. Roose notes that the telco industry has also argued that it should be considered market-to-market. *Id.*

oretically quashes any possible checks inherent in antitrust doctrine.

### C. Comcast-Time Warner Cable and Future Mergers

The aborted merger between Comcast and Time Warner Cable would have allowed the single largest cable provider in the U.S. (23 million customers) to merge with the second largest provider (11 million customers).<sup>84</sup> Comcast had agreed to divest itself of 3 million customers as part of the arrangement, meaning the merged company would have had just over 30 million subscribers.<sup>85</sup> This would have given Comcast control of one-third of all U.S. cable subscribers, while the second-largest, Cox Communications, would have had just 5 percent of subscribers.<sup>86</sup> A Comcast-Time Warner Cable company would have dwarfed all others, serving twenty of the top twenty-five markets nationwide.<sup>87</sup>

The aborted merger should have set off major alarm bells for regulators.<sup>88</sup> Rough estimates demonstrate that the merger would have increased market concentration by over 500 HHI points, up to an HHI score of 2454—almost to the DOJ's 2500 threshold delineat-

---

84. See Leichtman Research Grp., *supra* note 7; see also Brian Stelter, *Comcast Buys Time Warner Cable for \$45 Billion*, CNN MONEY (Feb. 13, 2014, 3:09 PM), <http://money.cnn.com/2014/02/13/technology/comcast-time-warner-cable-deal/> [<http://perma.cc/HR5E-9TY5>].

85. Stelter, *supra* note 84. This arrangement was designed to appease regulators, but there is little to bind Comcast long-term, and it is unlikely, given their past history of concessions, that they will voluntarily bind themselves long-term. See *infra* notes 95-98 and accompanying text.

86. George Winslow, *The Top 20 Multichannel Providers*, MULTICHANNEL (Aug. 6, 2012, 12:01 AM), <http://www.multichannel.com/news/cable-operators/top-20-multichannel-providers/326351> [<http://perma.cc/2TE4-36SP>] (citing statistics compiled by the consultancy SNL Kagan).

87. *Turn It Off: American Regulators Should Block Comcast's Proposed Deal with Time Warner Cable*, ECONOMIST (Mar. 15, 2014), <http://www.economist.com/news/leaders/21598997-american-regulators-should-block-comcasts-proposed-deal-time-warner-cable-turn-it> [<http://perma.cc/6DLN-C9QR>].

88. Importantly, the DOJ never actually had to reveal its exact position on the merger, as it was the FCC's proposed order for a hearing that would have delayed the merger far enough into the future that it became unpalatable for Comcast and Time Warner Cable to continue. See Roger Yu & Mike Snider, *How Comcast, Time Warner Cable Deal Unraveled*, USA TODAY (Apr. 25, 2015, 12:27 PM), <http://www.usatoday.com/story/money/2015/04/24/how-comcast-deal-to-buy-time-warner-cable-fell-apart/26313471/> [<http://perma.cc/9YR6-L2MN>] (quoting antitrust attorney Amanda Wait as stating that “the DoJ got the FCC to do the dirty work here.... The DoJ never had to show their hand”).

ing highly concentrated industries.<sup>89</sup> By all calculations, such an increase should essentially have mandated that the government block any such merger—if they measured the merger nationally. Although the merger was called off and the two largest competitors did not merge, Charter Communications quickly stepped into the breach to make its own bid for Time Warner Cable and another provider, which would make the post-merger Charter a close second in size to Comcast nationwide.<sup>90</sup> This merger activity seems poised to continue, so regulators will still have to confront the state of anti-trust doctrine as it applies to cable mergers, which is the focus of the next Part.

## II. THE FAILURE OF CURRENT GOVERNMENT MEASURES

### A. *In Search of a Limiting Principle*

The fundamental problem with cable growth is that, without a measure that tracks the company's national footprint, and concomitantly, without a legal mechanism to address this growth, cable company growth has no limiting principle.<sup>91</sup> If all that matters is that a company does not create less competition in any one locality, a single large cable company could theoretically expand to merge with every cable provider that serves customers in an area in which it does not. A ruling from a D.C. Circuit case interpreting rulemaking by the FCC nominally limits Comcast to a 60 percent market share,<sup>92</sup> but even a company half this size has the potential to dominate the cable industry.<sup>93</sup>

National cable companies now control most local monopolies and operate these franchises individually only with regards to pricing for consumers: each cable company acts mostly as a national

---

89. Tim Fernholz, *Why the Time Warner-Comcast Merger Isn't Going to Happen—At Least the Way It Looks Today*, QUARTZ (Feb. 13, 2014), <http://qz.com/177162/why-the-time-warner-comcast-merger-isnt-going-to-happen-at-least-the-way-it-looks-today/> [<http://perma.cc/4BC2-TGKG>].

90. See *supra* note 29 and accompanying text.

91. Stucke & Grunes, *supra* note 21, at 2.

92. See *Comcast Corp. v. FCC*, 579 F.3d 1, 4 (D.C. Cir. 2009).

93. See *infra* Part III.A. Under federal antitrust laws, as long as a merger does not “unreasonably restrain trade,” there is no clear limit to how much of the national market a cable company can have.

company, not a collection of local ones.<sup>94</sup> Moreover, there are few contractual remedies to limit these companies' growth. In presenting its merger with Time Warner Cable to the DOJ, Comcast agreed to divest itself of 3 million of its own customers to other cable companies,<sup>95</sup> presumably to make the merger more palatable to regulators.<sup>96</sup> This arrangement mirrored Comcast's decision when acquiring NBC Universal in 2011 to agree to uphold the FCC's then-effective net neutrality rules until 2017.<sup>97</sup> This self-imposed limit of 30 million customers would probably have expired at some point after the merger was approved, as it is unlikely that Comcast would have permanently limited itself to 30 million customers. After all, a corporation could not guarantee continued growth and returns to its stockholders if it limited itself from growing permanently.<sup>98</sup> Therefore, not only does a limiting principle not apply to companies like Charter Communications, but it would not have applied even to Comcast after a certain point. Regulators are unlikely to be able to contract out of this issue, which would primarily impact the other side of the market: programming companies.

---

94. See *Company Overview*, *supra* note 58.

95. Ryan Lawler, *Comcast and Time Warner Cable to Divest 3.9 Million Subscribers Through Charter Deal*, TECHCRUNCH (Apr. 28, 2014), <http://techcrunch.com/2014/04/28/comcast-twc-charter/> [<http://perma.cc/2W5M-G9RD>]. Time Warner would give Charter 1.4 million customers, Time Warner and Charter would "trade" about 1.6 million customers to increase Charter's overall geographic reach, and Comcast would spin off 2.5 million customers into a new company, two-thirds of which Comcast would own and one-third of which Charter would own. *Id.*

96. See *Comcast Offers to Divest Customers to Win TWC Approval*, CNBC (Apr. 28, 2014, 10:35 AM), <http://www.cnbc.com/2014/04/28/comcast-strikes-deals-to-divest-39-million-subscribers.html> [<http://perma.cc/DV3R-2KSV>].

97. See Emily Siner, *How the Big Cable Deal Could Actually Boost Open-Internet Rules*, NPR: ALL TECH CONSIDERED (Feb. 13, 2014, 3:24 PM), <http://www.npr.org/blogs/alltechconsidered/2014/02/13/276453747/how-the-big-cable-deal-could-actually-boost-open-internet-rules> [<http://perma.cc/X3H4-UEWM>]. Courts have since struck down these rules. See *Verizon v. FCC*, 740 F.3d 623, 628 (D.C. Cir. 2014). Because Comcast contracted with the FCC to abide by the rules, however, they remain in effect with regards to Comcast, and any Time Warner Cable customers it picks up in the merger through 2017. See Siner, *supra*.

98. Comcast ultimately is beholden to its shareholders and would be leaving profits on the table by permanently limiting its growth. See, e.g., *Dodge v. Ford Motor Co.*, 170 N.W. 668, 684 (Mich. 1919) (establishing the principle that, generally, a company's duty is to maximize shareholder value).

*B. Tales from the Other Side*

Many early responders focused on the costs the Comcast-Time Warner merger would extract from consumers,<sup>99</sup> but no cable company would practically be able to raise the price on its customers without risking losing those customers.<sup>100</sup> The true cost of a merger between such large cable companies would probably be to programming companies, the other side of the cable market. Cable is a classic example of the two-sided market, meaning that cable companies both transact with programming companies (nationally) and deliver their product to consumers (locally).<sup>101</sup> If there is no check on the cable companies, they will gain *national* power and a much stronger bargaining position with programming companies. If a cable company like Comcast had been allowed to merge with Time Warner Cable, it would have represented a full one-third of all U.S. cable customers—and the *most lucrative* one-third of those customers, given that it would have controlled twenty of the top twenty-five

---

99. See, e.g., *Join the Fight to Stop the Comcast-Time Warner Cable Merger*, FREE PRESS, <http://www.freepress.net/resource/105883/join-fight-stop-comcast-time-warner-cable-merger> [<http://perma.cc/JUG3-S8MZ>] (last visited Sept. 27, 2015).

100. See Matt Richtel & Brian Stelter, *In the Living Room, Hooked on Pay TV*, N.Y. TIMES (Aug. 23, 2010), <http://www.nytimes.com/2010/08/23/business/media/23couch.html> [<http://perma.cc/95TH-AFG9>] (quoting Comcast CEO Brian L. Roberts describing cable-only customers as “very price-sensitive,” meaning they react strongly to changes in price). Much has been made of the increase in cable “cord cutters,” the industry colloquialism for those who, while not actually cutting their cable cords, forego cable and instead rely primarily on Internet streaming video services for their entertainment. See, e.g., Timothy Stenovec, *Yes, Netflix and Hulu Are Starting to Kill Cable*, HUFFINGTON POST (Apr. 17, 2014, 3:44 PM), [http://www.huffingtonpost.com/2014/04/17/netflix-cable\\_n\\_5168725.html](http://www.huffingtonpost.com/2014/04/17/netflix-cable_n_5168725.html) [<http://perma.cc/226B-BFXY>]. This is somewhat misleading, as the true cost may be borne in younger customers who become accustomed to living without cable, choosing “over the top” video services like Apple TV or Google Chromecast, rather than current cable customers choosing to “cut the cord.” See Joan E. Solsman, *Cord-Cutter Wannabes Are Still a Small Group, but Growing*, CNET (Sept. 10, 2014, 9:00 PM), <http://www.cnet.com/news/cord-cutter-wannabes-are-still-a-small-group-but-growing/> [<http://perma.cc/4B3M-EC6V>]. This is in part because of the careful dance cable companies have undertaken to make sure that they do not raise prices on consumers past their willingness to pay, and why customers enter their zip code in order to get the price of a cable package that “their” market will bear. The chance, therefore, that an enlarged company is suddenly able to charge these customers more, without losing their business, remains unlikely. Additionally, most cord-cutting customers will continue to need internet service, which most often comes from their cable provider.

101. See Mark Armstrong, *Two-Sided Markets: Economic Theory and Policy Implications*, in RECENT DEVELOPMENTS IN ANTITRUST: THEORY AND EVIDENCE 39 (Jay Pil Choi ed., 2007).

markets.<sup>102</sup> Cable companies of this size would have substantial leverage over Disney, for instance, which owns ESPN. The merged Comcast could have decided it wanted to pay less to purchase ESPN<sup>103</sup> for its customers in New York, Chicago, and Los Angeles, and would have had a fairly good chance of extracting money from ESPN by threatening to cut off customers in these markets. As will be explained herein, the negotiations then become a matter of which company can outlast the other.<sup>104</sup>

Laissez-faire economic markets only work when each player is a price taker.<sup>105</sup> When there are many players in the market, each of whom is fairly similar to one another, they are forced to *take* the prices set by the market, rather than set the prices themselves.<sup>106</sup> If, on the other hand, a company is able to affirmatively set its own prices, regardless of the actions of consumers or their competitors, they are beholden to no one, and the theory of perfect competition breaks down.<sup>107</sup> A large enough cable company could have the power to dictate pricing terms to programming companies such as Viacom, the Walt Disney Company, News Corp., Time Warner, and CBS.<sup>108</sup>

---

102. *Turn It Off*, *supra* note 87.

103. *See* Ross & Maglio, *supra* note 23 (noting ESPN's high cost per subscriber).

104. The fact that Comcast depends on subscribers for its income, rather than advertisers, as its programming counterparts do, would give it substantial leverage allowing it to weather the storm of public opinion much longer. *See infra* notes 110-14 and accompanying text.

105. *Perfect Competition*, INVESTOPEDIA, <http://www.investopedia.com/terms/p/perfectcompetition.asp> [<http://perma.cc/PM73-SKYZ>] (last visited Sept. 27, 2015) (explaining the concept of price takers). In the economic ideal of perfect competition, all sellers in the market should be "price takers," meaning they all buy and sell products at the same equilibrium price. When there are 1000 firms that all sell the same widget and buy the same parts to make it, no one can truly charge more than the other 999 because customers will buy from any number of them—the firms all "take" the same price at which they buy and sell. When one of these 1000 sellers is more powerful than the others and can dictate what this equilibrium price is, raising it without customers being able to buy from the other 999, there are serious theoretical and real-world economic problems. *See* WAYNE C. CURTIS, MICROECONOMIC CONCEPTS FOR ATTORNEYS 9-10 (1984).

106. CURTIS, *supra* note 105, at 9-10.

107. *Marginal Revenue Under Single-Pricing*, LIVING ECON., <http://livingeconomics.org/article.asp?docId=319> [<http://perma.cc/Z46M-89V5>] (last visited Sept. 27, 2015).

108. Viacom owns over 160 cable channels including MTV, VH1, Nickelodeon, Comedy Central, and Spike TV. *Who Owns the Media?*, FREE PRESS, <http://www.freepress.net/ownership/chart> [<http://perma.cc/2HMT-9KSH>] (last visited Sept. 27, 2015). Walt Disney Company owns EPSN, Disney, ABC Family, and minority stakes in A&E, Lifetime, and the History Channel. *Id.* News Corp. owns FOX, Fox News, and twenty-five other cable channels. *Id.* Holding power over these entities *is* the ball game for cable.

The company could, for instance, decide that it no longer liked the idea of paying \$5.54 per customer to ESPN,<sup>109</sup> one of the highest cable rates. The cable company would thus have the power to shut out sports fans.

Comcast-Time Warner Cable would have represented over a third of the nationwide customer base, and a merger between Charter and Time Warner Cable would give the merged company close to a quarter of customers nationwide—if negotiations with programming companies break in a way that the cable company does not find favorable, it could simply black out that station to its customers. Even if the cable company were to *lose* in the court of public opinion and take the lion's share of the blame for the blackout, it still depends primarily on cable subscribers for its revenues, rather than advertisers.<sup>110</sup> If the top markets cannot watch ESPN, for example, its advertisers will walk away more quickly than the cable company's customers.<sup>111</sup> Cable has spent a lot of time and money to lock consumers into its ecosystem: consumers have a difficult time switching proprietary cable boxes, incur costs in switching to satellite, and, because of the buy-in they have already made with the company, are simply less likely to walk away from their cable company over what they perceive as a temporary blackout.<sup>112</sup> If a cable company controls *some* geographic areas, but not all, and if programming companies know they are dealing with several different

109. Ross & Maglio, *supra* note 23.

110. Tasneem Chipty & Christopher M. Snyder, *The Role of Firm Size in Bilateral Bargaining: A Study of the Cable Television Industry*, 81 REV. ECON. & STAT. 326, 333 (1999) (calculating the profit functions of programming companies based almost entirely on their income from advertisers, and noting that, although other revenue represents a growing portion of their revenue, "advertising revenue continues to be the largest portion of supplier revenue").

111. Hazlett, *supra* note 16, at 65 n.222 (defining elasticity of demand as the percentage change in quantity demanded for a percentage change in price). Although cable customers are somewhat demand-elastic, meaning they respond to price changes, they are not as sensitive as advertisers. See Steven C. Salop et al., *Economic Analysis of Broadcasters' Brinkmanship and Bargaining Advantages in Retransmission Consent Negotiations* 31 n.60 (Time Warner, Working Paper, 2010), [http://97.74.209.146/downloads/broadcaster\\_brinkmanship.pdf](http://97.74.209.146/downloads/broadcaster_brinkmanship.pdf) [<http://perma.cc/YDH3-ZU9Y>] (discussing how advertisers will depart from cable much more quickly than customers).

112. Andrew S. Wise & Kiran Duwadi, *Competition Between Cable Television and Direct Broadcast Satellite—It's More Complicated than You Think* 1 (FCC Media Bureau Staff, Working Paper No. 2005-1, 2005), [https://apps.fcc.gov/edocs\\_public/attachmatch/DOC-255869A1.pdf](https://apps.fcc.gov/edocs_public/attachmatch/DOC-255869A1.pdf) [<http://perma.cc/DYK3-EDTP>].

MSOs with about the same power nationwide, that begins to look like a fair market.<sup>113</sup> But there is little chance programming companies can afford to face off against the largesse of a sufficiently big cable company without harming their profits.

It seems obvious, then, that the typical response from most programming companies would be to merge themselves.<sup>114</sup> If Comcast-Time Warner Cable had wanted to use its 30 million subscribers as its ammunition, a Disney Company merged with Viacom could threaten to cut families off from ESPN, VH1, TLC, and Nickelodeon all at once. If the whole family is missing their favorite channels, they will be quicker to call DirecTV, and this will look more like a competitive market. Herein lies the other side of the coin that result's from cable's lack of a limiting principle.

### *C. Programmers Are Limited by Antitrust Law*

#### *1. Legal Limitations*

When faced with this scenario, most programming companies are likely to consider mergers to increase their own size, and, consequently, their nationwide negotiating power. It is unclear that they may do so, but it is not for lack of trying. Rupert Murdoch announced that his 21st Century Fox proposed to acquire Time Warner, Inc. over the summer of 2014.<sup>115</sup> Although Time Warner ultimately rejected Murdoch's advances, critics were nearly unanimous in their position that the merger would have created antitrust issues for regulators by concentrating too much media in the hands of one company. This is because programming companies are measured nationally, and if they were measured locally, Time Warner's products compete *in every local market* with those of 21st Century Fox—most cable packages actually group CNN and Fox News near

---

113. See *supra* notes 101-04 and accompanying text.

114. THE ANTITRUST REVOLUTION, *supra* note 12, at 51.

115. Time Warner, Inc. is a separate entity from Time Warner Cable. Time Warner, Inc. owns Warner Brothers Television, the CW Network, TBS, TNT, Cartoon Network, and HBO. See *Who Owns the Media?*, *supra* note 108. All future references to "Time Warner" concern Time Warner, Inc., while the company involved in cable acquisition continues to be referred to as "Time Warner Cable."

one another.<sup>116</sup> The combination of the two companies would have given 21st Century Fox control over a substantial portion of the pay cable packages, and thus they would probably have too much leverage over cable providers.<sup>117</sup> This is not to suggest that regulators counter cable company mergers by allowing programmers to bulk up as well; the regulations currently in place to limit this growth are there for a good reason and should remain in place. On the contrary, cable companies should be held to the same standard, not handed a loophole by virtue of having separate franchises in each market.

Given that there is an increasingly small contingent of major television and movie studios,<sup>118</sup> the market is already what regulators would call “highly concentrated.”<sup>119</sup> Since it is so concentrated, regulators are much more likely to scrutinize a programming merger and sue to block it because it harms competition in the national market. Current programmers would thus be locked into their current sizes, while cable companies could be allowed virtually unlimited growth nationwide.

The real fear, however, stems from the belief that the market operates best when these two sides compete on a fair playing field *against one another* to provide the lowest cost and the highest level of service for their customers. This is the accidental enshrinement of unfairness mentioned in the Introduction. Federal antitrust law tends to favor cable companies because the rights of way awarded to cable companies—which created a natural monopoly—were intended for small providers, not national conglomerates. This has granted these cable companies exceptional power over the other

market players and programmers, who, by these same laws, cannot combine to become much larger than they already are.

## 2. *Two Sets of Losers, Two Doctrines Lost*

Why should consumers and regulators fear this result? After all, the very definition of a natural monopoly means that it may in fact be economically more efficient for everyone to get their cable from one enormous company.<sup>120</sup> However, even if consumers do not feel the full brunt of the effects for some time, the approval of the merger of large cable companies could have far-ranging consequences for antitrust and telecommunications (telco) mergers. Economic regulatory theory recognizes two principal and competing goals: efficiency and equity.<sup>121</sup> Regulators are constantly trying to ensure that markets run as efficiently as possible. This means they want to reach “equilibrium,” the point at which the cost to the producer of producing each additional unit (“marginal cost”) is *equal* to the benefit of that unit to the consumer (“marginal benefit”), such that everyone who values an item at or above the marginal cost will buy the product, and others will not. Everyone is happy, either buying or not buying based on their prerogative.<sup>122</sup>

At the same time, other regulators would structure for maximum equity.<sup>123</sup> The degree to which a consumer’s marginal benefit exceeds what they paid for an item is called their “surplus.” Producers also have surplus, the degree to which they can sell a product for more than it costs to produce. There is a “total surplus” calculating the surplus across all consumers and producers.<sup>124</sup> Equity is the distribution of this surplus—who benefits more and who benefits less when prices are lower than value, or prices are higher than what it costs the producer to sell it.<sup>125</sup> Cable regulations allow a sufficiently large company to ignore both of these prerogatives, and consumers and programmers would pay for it.

A cable merger thus has the potential to create two sets of losers: other cable industry competitors would lose because programming companies, as explained below, are not going to absorb the costs the larger company extracts from them, so they are going to pass them along to smaller, weaker cable companies. Programming companies are also going to lose because not all market players will be price takers.<sup>126</sup> From an equity standpoint, one cable company could control 20 million subscribers, controlling the way that almost a quarter of the country accesses cable.<sup>127</sup> If a merged company is able to force lower prices on programmers, programmers will pass this cost on to all smaller cable providers, who will in turn pass those costs on to their consumers. Any customer not within the service area of the largest competitor will likely pay more in the long term for their cable, by virtue of their provider being a fraction of the size of the biggest players. Furthermore, the largest cable companies are not likely to pass their own gains on to their customers<sup>128</sup>—their prices will remain the same, with the company pocketing the money it receives as profit.<sup>129</sup> Such a merger thus also threatens efficiency. Current laws do not seem to limit the size of cable providers at all, but national content providers are limited by traditional antitrust doctrine, keeping them from competing with cable companies that may, by law, grow unchecked. This does not ensure that all firms in the market are price takers, which is economists' goal for antitrust law.<sup>130</sup>

126. See *supra* notes 105-07 and accompanying text.

127. *Comcast and Time Warner Cable Transaction Fact Sheet*, *supra* note 1.

128. Spencer Woodman, *Exclusive: Politicians Are Supporting Comcast's TWC Merger with Letters Ghostwritten by Comcast*, VERGE (Jan. 26, 2015, 11:46 AM), <http://www.theverge.com/2015/1/26/7878239/comcast-twc-fcc-merger-letters-politicians-ghostwritten> [<http://perma.cc/3Y57-7WS9>] (quoting Columbia University Law Professor Tim Wu that, in the case of the Comcast-Time Warner Cable merger, "Comcast could have said this merger will lower prices and committed itself to lower prices but it has made no sign that it will do this").

129. Of course, each negotiation between a programming company and a cable provider over rates will lead to slightly different outcomes for consumers—there is nothing to guarantee that a programming company gives the same price to each cable company. Nor should there be; that is properly within the realm of negotiation. This Note will demonstrate, however, that there is a *substantive* difference in the negotiating power of an entity like the merged Comcast and another like Cox, which has one-sixth as many customers.

130. Elzinga, *supra* note 121 (discussing economists' goal of maximizing efficiency, which results in maximizing total output).

This is the heart of Carl Chicago and Wendy Williamsburg's hypothetical problem. Wendy is served by Cox Communications, while Carl is a Comcast customer. If Comcast had merged, it would have been able to extract higher gains for itself in the form of profit. Carl would not see any of this money but, as a result, he would have experienced the ups and downs of negotiations on Comcast's terms. Wendy's cable provider, on the other hand, does not have the power to negotiate these terms, so she has all of the channels, but her cable company has to pay more for the profits Comcast extracts from CNN and Cartoon Network. Even though the Comcast-Time Warner Cable merger did not come to pass, this remains an enforcement loophole. Regulators ought to consider cable's national power to prevent customers from experiencing such wildly different results based on where they live.

### III. THE DOJ MUST MEASURE BOTH CABLE MONOPOLY AND MONOPSONY WHEN CALCULATING THE HHI (AND REJECT A MERGER EXCEEDING EITHER THRESHOLD)

The lack of adequate legal enforcement to stop current mergers is concerning. Beyond a few limited FCC rules, the lack of any future limiting principle to keep operators from expanding nationally is potentially disastrous.<sup>131</sup> Our procompetitive antitrust laws are the best defense against these anticompetitive practices.

This Note therefore proposes that the DOJ analyze cable, a two-sided market, by performing two HHI analyses. The first analysis would compare the market for cable delivery to consumers market-to-market. The second would have regulators, for the first time, consider the impact of the cable merger on buyer power over programming content nationally, by determining whether the merger would give the company monopsony power over programming companies. If either of these HHI analyses indicates that competition would decrease as a result of the merger, the DOJ should sue to block the merger.

One of the chief benefits of this plan is that it should be feasible to implement without new authority from Congress; the DOJ has

---

131. *Comcast Corp. v. FCC*, 579 F.3d 1, 4 (D.C. Cir. 2009) (establishing the only current limit on a cable company's national market share at 60 percent).

the authority to decide how to measure the markets, and what markets to consider.<sup>132</sup> The dual analyses do not depend on one another per se. They merely consider for the first time the impact of any cable merger on both sides of the market. The DOJ conducts separate market analyses for each, and then may draw its own conclusions about whether to grant approval or sue to block. This, of course, would not necessarily stop a merger. As discussed above in relation to the AT&T-T-Mobile and American-US Airways mergers,<sup>133</sup> litigation follows a DOJ lawsuit just as often as settlement or abandonment of the merger attempt. No plan is foolproof, but this proposal helps ensure that the DOJ has the ability to consider all potential market impacts when evaluating a cable merger.

### *A. The Legal Authority*

Monopoly laws are in place to prevent anticompetitive practices by firms<sup>134</sup> as well as mergers that will restrain competition in an industry.<sup>135</sup> The Clayton Antitrust Act, as amended by the Hart-Scott-Rodino Act,<sup>136</sup> prohibits any merger from taking place if it would substantially reduce competition in any one market,<sup>137</sup> as measured by the HHI described above. Competitive advantages given to large cable conglomerates, but disallowed to their strongest market opponents, ought to be considered to violate the antitrust laws for several reasons.

First, there could never be any effective competition if programming companies know that they are prohibited from becoming any larger while cable companies are essentially unlimited in their growth.<sup>138</sup> Second, if the most powerful cable company could dictate, rather than merely negotiate, prices, it would be difficult for other cable companies to retain current levels of pricing and services. The

138. Stucke & Grunes, *supra* note 21, at 2-3.

very basis for a competitive market is the idea that no single player in the market has the ability to set prices—in other words, all companies are “price takers.”<sup>139</sup> Whenever one company can affect what its competitors will pay through its own actions, it is no longer a price taker, and the market suffers.<sup>140</sup> Regulators need to be able to limit such uninhibited growth, and the antitrust laws provide them with the tools necessary to do so.

The FCC previously tried to use its own regulatory authority to limit the growth of cable, with disastrous results. In 1992, Congress passed the Cable Television Consumer Protection and Competition Act to require cable systems to carry local broadcast signals<sup>141</sup> and keep cable operators from charging local broadcasters to carry the signal.<sup>142</sup> The Act also gave the FCC the power to limit cable provider growth:

In order to enhance effective competition, the Commission shall, within one year after October 5, 1992, conduct a proceeding—(A) to prescribe rules and regulations establishing reasonable limits on the number of cable subscribers a person is authorized to reach through cable systems owned by such person, or in which such person has an attributable interest.<sup>143</sup>

After cable companies challenged the Act on its face, the D.C. Circuit held that the rule was content-neutral.<sup>144</sup> The FCC soon set a national ownership cap for cable providers at 30 percent of the market, based on their econometric analysis that programming companies needed to be able to access at least 70 percent of the market to remain viable.<sup>145</sup>

The FCC’s rule was purportedly based on an analysis of whether, if one or more cable providers denied access to a programming

139. ESTRIN ET AL., *supra* note 122, at 308.

140. *Id.*

141. This is called the “must-carry provision.” See *supra* notes 47-51 and accompanying text (discussing how cable companies are prohibited from transmitting an alternative local news station to localities even if it is cheaper than carrying the local station’s signal).

145. *Comcast Corp. v. FCC*, 579 F.3d 1, 4 (D.C. Cir. 2009).

network, it would otherwise be able to reach alternative video programmers of a sufficient size to allow it to survive in the market.<sup>146</sup> The underlying idea was to ensure that “no single cable operator ‘can, by simply refusing to carry a programming network, cause it to fail.’”<sup>147</sup> The FCC was to complete this analysis by considering the “minimum viable scale,” the number of viewers a channel needs to remain economically viable, the total number of subscribers available in the U.S. market, and the “penetration rate,” the number of subscribers the network will actually reach and cable providers will allow.<sup>148</sup>

The D.C. Circuit rejected the FCC’s choice of the 30 percent cap as “arbitrary and capricious” because it failed to take into account the increasing popularity of satellite and telco alternatives, which serve up to 33 percent of the market.<sup>149</sup> The court instead proposed a cap of up to 60 percent, based on evidence that satellite and telco alternatives meant that programming networks needed to reach only 40 percent of cable customers to survive and remain economically viable.<sup>150</sup> The FCC failed to rebut this evidence.<sup>151</sup> This eliminated a 30 percent subscriber cap and enshrined, for the time being, a subscriber cap that would have allowed Comcast to double its *post-Time Warner* subscriber base without running afoul of FCC regulations.<sup>152</sup>

At first blush, this looks like the death knell for any arguments that the government can regulate the size of a cable company until it serves around 60 percent of the cable market. Upon closer inspection, though, there are two major reasons that the court’s rejection of the FCC’s rulemaking authority should not burden rulemaking under antitrust laws. First, the D.C. Circuit’s analysis of satellite and telco alternatives concerned consumers’ ability to switch to those services if cable simply refused to carry the programming. The FCC’s central focus was not negotiations over rates between cable and programming—it was to “ensure that no cable operator ... can

152. *Id.*

unfairly impede ... the flow of video programming from the video programmer to the consumer.”<sup>153</sup> The FCC was concerned about a long-term blackout used by the cable companies to choke off competitors in the context of a larger bill *about cable choking off the local voice*, not about cable companies trying to extract money. The antitrust concerns focus on the competitive negotiations between cable and programming for their share of the total surplus.

Second, much of the D.C. Circuit’s analysis turned on the Commission’s admittedly feeble analysis that satellite was not a viable alternative to cable.<sup>154</sup> None of this matters in addressing the problems of negotiating power and distribution of total surplus. If Comcast gets a reduction in the amount it pays for ESPN, *all other providers* will bear these costs, whether they are a cable company like Cox or a satellite company like Dish Network.<sup>155</sup> There is nowhere for consumers to run (at least those who buy a package containing ESPN). The FCC’s analysis is largely inapposite to the current situation, but merely represents the completeness of regulators’ failure to limit cable’s rise in the past. If regulators are ever going to limit cable’s growth, they should look once again to the nation’s antitrust laws and their application instead of the FCC’s regulatory authority.

## *B. Enter Monopsony*

### *1. Background*

Most lay readers could be forgiven for not knowing monopsony—when it was first proposed during the Comcast-Time Warner Cable merger, most media treated it as a foreign concept.<sup>156</sup> The concept is basically the opposite of a monopoly: whereas a monopoly is concerned with the power of a single seller over multiple buyers,

---

153. 47 U.S.C. § 533(f)(2)(A) (2012).

154. *Comcast Corp.*, 579 F.3d at 6-7.

155. Because satellite and telco companies must also negotiate with programming companies for the prices of their shows, they are price takers as well. Therefore, if Comcast can dictate the market, but no other purchaser of programming can do so, customers at telco and satellite companies are hurt just as much as those at smaller cable companies.

156. See, e.g., David Ingram, *Not a Typo, Monopsony in Spotlight in U.S. Cable Deal*, REUTERS (Feb. 21, 2014, 3:21 PM), <http://www.reuters.com/article/2014/02/21/us-usa-comcast-monopsony-analysis-idUSBREA1K1VI20140221> [<http://perma.cc/F3JB-NBMF>].

monopsony is the power of a single buyer over multiple sellers.<sup>157</sup> A monopsonist is able to restrict the output of their product below competitive levels—by blacking out signal, as an example—which gives them the leverage to lower input prices below competitive levels as well.<sup>158</sup>

Monopsony analysis is most often conducted in two situations. First, economists examine monopsony power in the labor context, such as various examinations of Wal-Mart's ability, as the dominant employer in a local labor market, to exert wage power over workers and artificially suppress its output of paid positions.<sup>159</sup> Monopsony has also been applied in agricultural contexts.<sup>160</sup> It has never been applied to a cable merger. In fact, relatively few mergers have ever been challenged on the grounds that they will increase buyer power,<sup>161</sup> and few cases have ever gotten close to a finding of monopsony violation.<sup>162</sup>

However, the power to measure monopsony is actually present in the DOJ-FTC Horizontal Merger Guidelines.<sup>163</sup> More careful consideration of monopsony power is a fairly recent phenomenon: while once the DOJ-FTC merely addressed the assessment of monopsony concerns in one short paragraph, a longer discussion of buyer power

163. See HORIZONTAL MERGER GUIDELINES, *supra* note 11, at 32.

appeared for the first time in the 2010 Guidelines.<sup>164</sup> It is time for the DOJ and FTC to reacquaint themselves with this doctrine to more rigorously examine cable mergers.

## 2. DOJ/FTC Framework

The agencies would conduct their analysis in much the same manner as they do for monopoly, by measuring the number of buyers available to programming companies to sell their products.<sup>165</sup> As monopsony is in many ways the mirror image of monopoly,<sup>166</sup> the key definition in this case, as in all others, is the market.<sup>167</sup> Herein lies the benefit of monopsony measurement—the DOJ and FTC are to include in the market definition any *reasonably interchangeable* products that consumers could turn to if the buyer restricted output—in this case, in the form of a cable blackout.<sup>168</sup> Because cable companies typically have a natural monopoly in all of the areas where they provide to customers, *consumers do not have reasonable alternatives* to cable-line programming delivery.

A cable company might argue that the relevant geographic market is the same as in monopoly cases—in other words, because it does not currently compete to *buy* in the Chicago market with another company it intends to merge with, its merger cannot change this situation. However, the analysis of a monopsony measures the number of good substitutes to which to sell *from the point of view of the sellers*.<sup>169</sup> In this case, the “relevant market” from the sellers’ point of view is all the land where the merging companies provide service to customers. In this market, post-merger, the sellers go from negotiating with two companies in the proposed cable coverage

---

164. Compare DOJ & FTC, HORIZONTAL MERGER GUIDELINES § 0.1 (issued Apr. 2, 1992, revised Apr. 8, 1997), with DOJ & FTC, HORIZONTAL MERGER GUIDELINES §§ 8, 12 (2010). Section 12, on monopsony power, remains substantially shorter than portions discussing monopoly power. *Id.*

165. Note that this looks substantially like the FCC rule struck down by the D.C. Circuit. See *supra* Part III.A. However, the key difference is that the harm the regulators are working to combat in this case is not the limitation of speech by a complete blackout, but the use of a limited, short-term blackout to depress prices below cost for programming companies.

166. See Maurice E. Stucke, *Looking at the Monopsony in the Mirror* 4 (Univ. of Tenn. Research & Creative Exch., Working Paper, 2013).

167. Blair & Harrison, *supra* note 158, at 323-24.

168. *Id.*

169. *Id.*

areas, to negotiating with only one in this coverage area. The market for sale of programming in the proposed coverage area would be the relevant market from the point of view of the programming companies.

Finally, a cable company may claim that there is no need for the regulators to concern themselves with its monopsony power, because it is traditionally understood that if it results in decreased prices for consumers, monopsony is a good thing.<sup>170</sup> Comcast, however, specifically noted that consumers would not receive lower prices as a result of its merger with Time Warner Cable.<sup>171</sup> Therefore, any gains it would have made would have been, in part, because of its ability to extract lower prices from content providers, an ability the combined Charter-Time Warner Cable, or any other large MSO, could also have.<sup>172</sup> Whether this power extends from the competitor's legitimate negotiating skills, or from monopsony power, where it can decrease output in the form of a blackout to consumers, is something the DOJ and FTC will have to measure if they take up a torch for monopsony.

### *C. Balancing Efficiency and Equity*

This plan achieves balance between the two primary concerns animating all decisions by social planners and state economists—efficiency and equity. One or the other of these concerns is the major driver of economic policy for economists,<sup>173</sup> and many economic issues fail to appease both sets of interests.<sup>174</sup> A plan that requires the DOJ to conduct an HHI analysis for both sides of the relevant two-sided market vindicates both concerns.

Economists who follow the efficiency model, many of whom fall into the Chicago School,<sup>175</sup> believe that antitrust laws exist not to

---

170. Ingram, *supra* note 156 (quoting Professor Herbert Hovenkamp's explanation that monopsony is only a "problem when it threatens to decrease output").

171. *See supra* notes 127-29 and accompanying text.

172. As with most mergers, there would also be gains from scale and efficiency—closing down redundant factories, combining staff, and other measures. These gains are not the focus of this Note.

173. *See* VISCUSI ET AL., *supra* note 35, at 5.

174. *Id.*

175. The Chicago school of economics, named because of its creation through the work of faculty at the University of Chicago, is an economic theory that argues that free markets best

protect *consumers*, but to protect *competition*, and that maximizing the total surplus of the market is the most valuable and feasible goal for social planners.<sup>176</sup> Total surplus is maximized when consumers get the most utility and producers sell at the highest price possible.<sup>177</sup> There has already been a demonstration of how allowing a cable company to set what it is willing to pay will impact the market—costs will rise for programming companies and will be passed on to consumers at other cable companies, thus upsetting the natural equilibrium where each person willing to sell at a certain price matches each person willing to buy at a certain price.<sup>178</sup> If this match is lost, consumers who would buy cable at the ordinary price, but not at this higher price, will opt out, decreasing total surplus.

Economists who are primarily concerned with equity do not believe that our antitrust laws merely exist to protect the market but that the highest goal of this doctrine is consumer protection,<sup>179</sup> ensuring that the total surplus is distributed roughly equally among consumers.<sup>180</sup> In this context, it is perhaps even easier to see how the natural endpoint of the current law leaves consumers unprotected. By making sure that programming companies are on roughly the same footing, and that cable companies are in roughly the same bargaining position, this proposal ensures that consumers nationwide, who do not have any realistic choices among cable companies, will have roughly the same experience for roughly the same price.

#### *D. The Time Is Now, Not the Future*

Counterarguments and alternatives to the proposal in this Note are not as compelling. Although there have been previous econometric analyses concluding that the post-merger cable company might

---

allocate resources with minimal government intervention, and prizes total surplus as the most valuable measure of economic welfare. See generally Richard Ebeling, *Milton Friedman and the Chicago School of Economics*, FREEMAN (Dec. 1, 2006), <http://fee.org/freeman/detail/milton-friedman-and-the-chicago-school-of-economics> [<http://perma.cc/9JEW-B92Q>].

180. Elzinga, *supra* note 121, at 1192-94.

be the one to lose ground, these studies are outdated and do not resolve the fundamental equity distribution problems. Further, the concept of a luxury tax on the post-merger profits of a cable company deemed “too large” presents line-drawing problems and puts social planners into a dangerously active position. Finally, despite advancements in over-the-top video alternatives like Apple TV or Netflix, consumers still depend on cable, and would not be as empowered to cut the cord as commentators suggest.

### *1. Cable Companies Will Lose Ground*

Some of the most common counterarguments to putting legal structures in place to protect consumers from the unimpeded growth of cable fail to take into account just how unprotected the current market is. The most comprehensive examination of cable as a two-sided market suggests that larger cable companies will actually *lose* ground when negotiating with programming providers.<sup>181</sup> This point requires some explanation. The traditional understanding in business circles has been that “downstream concentration is negatively correlated with upstream profitability.”<sup>182</sup> This simply means that as downstream providers, such as cable companies, become larger, there is a negative impact on the profits that the upstream programming companies see as a result.<sup>183</sup> Tasneem Chipty and Christopher Snyder used the profit functions of roughly twenty-one providers over a nine-year period to estimate the impact of a cable merger on those profit functions.<sup>184</sup> The authors concluded that merging actually worsens the cable company’s bargaining position relative to the programming company.<sup>185</sup> The only reasons cable companies merge, they argue, are for the efficiencies they gain and the money they save—they can combine physical properties and sell unnecessary

185. *Id.* at 337-38.

buildings, eliminate redundant jobs, and free up those resources for the rest of the market to use.<sup>186</sup>

There is good reason to dispute the conclusion that Chipty and Snyder reach, or at least to doubt that it solves the problem of growing cable companies. To begin with, they conducted the study in 1999, using panel data<sup>187</sup> that ended in 1992.<sup>188</sup> At that time, cable companies were significantly smaller than they are in 2015, and there was more competition on the whole: there were both more cable providers and more programming companies,<sup>189</sup> making the power concentration of both in relation to one another much lower. The authors estimated that “for the bargaining effect to be positive ... cable providers would need to serve ... [at least] 39.1 million subscribers.”<sup>190</sup> This number may have been inconceivable in 1991, but Comcast would have been within striking distance post-merger, and nothing stops another company from reaching the same threshold.<sup>191</sup> Furthermore, even if Chipty & Snyder were correct, the equity concerns remain, but are just reversed. That is, if a larger company had to pay *more* instead of *less* than other providers, and therefore its customers paid more than the rest of the people in the market, economists and social planners would consider this just as unpalatable from an equity standpoint as the larger company’s

---

186. *Id.*

187. Panel data compares explanatory variables across one independent variable over a long period of time. In this case, the cable companies’ dataset consisted of the same variables drawn from each company over a period of between five and nine years. *See generally id.* (discussing the dataset used for their study).

188. *Id.* at 333.

189. The authors measured twenty-one cable companies. *Id.*

190. *Id.* at 337.

191. Cox Communications has 5.91 million customers. *See* News Release, Cox Enterprises, Cox Sees Lowest Customer Churn in Its History (July 26, 2007), <http://coxenterprises.mediaroom.com/index.php?s=26244&item=67835> [<http://perma.cc/KQ8W-HN94>]. Charter Communications would have had 8.2 million subscribers after the pre-merger divestitures from Comcast and Time Warner Cable. *See* Cynthia Littleton, *Charter to Become Second-Largest Cable Operator in Divestiture Pact with Comcast*, VARIETY (Apr. 28, 2014, 4:41 AM), <http://variety.com/2014/tv/news/charter-to-become-second-largest-cable-operator-in-divestiture-pact-with-comcast-1201165594/> [<http://perma.cc/G9LS-N6RY>].

customers paying less<sup>192</sup> and other customers paying more. Whoever pays more, they are no longer equal.

## 2. *Line-Drawing Problems*

Other counterarguments similarly fail to examine the present nature of the cable market and the previous failures of regulation. Commentators, such as Gary Wax, have argued that the best way to deal with large cable companies would be to impose a luxury tax.<sup>193</sup> The proposal would have the FCC<sup>194</sup> arrange to collect excess-profits taxes from cable companies in lieu of regulation. This approach certainly has some positive attributes, particularly its recognition of the FCC's failure to implement effective ownership caps. The proposal instead encourages bargaining between regulators and companies that harnesses the companies' natural inclination to expand and simply collects a (small) portion of that profit to share with consumers.<sup>195</sup> It also addresses Judge Posner's arguments in favor of natural monopolies, in which he opined that social planners, lacking any real concept of economics and held sway by third-party interests, were inadequate to determine what regulation should attach to industries.<sup>196</sup>

The problem with Wax's concept is that there is no true indication as to where the line should be drawn with regards to "excess profits." In other words, the big question would always be, "When is Charter making outside profits *due entirely to its size, rather than the fact that consumers demand its products?*" This is a line-drawing issue that ultimately requires the FCC to determine when size creates such outsized profits, and when a firm might have reached

---

192. Bear in mind that the reference to "customers" is mere shorthand. Comcast customers would, in all likelihood, pay the same amount they always have, with the company itself capturing the gains. Comcast has made no representations that a merger will improve costs for consumers. See *Public Interest Benefits Summary*, COMCAST, <http://corporate.comcast.com/images/Public-Interest-Benefits-Summary.pdf> [<http://perma.cc/VNU3-AU9V>] (last visited Sept. 27, 2015).

193. Gary Wax, *Cable Company Monopoly: Comcast and Time Warner Control the Board*, 28 LOY. L.A. ENT. L. REV. 159, 163 (2008).

194. The local franchising authorities would be responsible for levying the taxes, and the money would go directly to local coffers.

195. Wax, *supra* note 193, at 202.

196. Richard A. Posner, *Natural Monopoly and Its Regulation*, 21 STAN. L. REV. 548, 549-50 (1969).

that size through vigorous competition—the exact same threshold deemed “arbitrary and capricious” by the D.C. Circuit.<sup>197</sup> Deciding that something is “too big” or too anti-competitive to survive also goes against the HHI analysis the regulators perform on every merger; if a firm could be deemed too large per se, the DOJ and FTC would never have used the HHI in the first place.

### 3. “Would it be so bad?” Counterarguments

Other commentators argue that, were the worst to pass and were cable to become a product consumers were sufficiently unhappy with, they would have ample opportunities to switch to other options—telco and satellite alternatives,<sup>198</sup> over-the-top devices like the Apple TV or Google’s Chromecast, and the myriad streaming options available on most personal computers.<sup>199</sup> These options are simply not replacements. Cable retains advantages, such as the solicitude of the local franchising authority, and an incumbency often supported by local franchising laws and requirements that protect cable (as opposed to the alternatives discussed above).<sup>200</sup> Satellite and telco will never enjoy these advantages, and their customers would lose just as much if a merged company forced ESPN to raise prices on its competitors.

An over-the-top provision is also not a cure-all. Cable companies have worked hard to keep streaming companies and products from getting access to sports programming, one of the most lucrative and widely viewed cable products.<sup>201</sup> The late-breaking introduction of streaming applications by some of the strongest players—the cable stations HBO and Showtime, and the broadcast network CBS—that

---

197. See *Comcast Corp. v. FCC*, 579 F.3d 1, 3 (2009).

198. Manne, *supra* note 19.

199. See Geoffrey A. Fowler, *Getting Rid of TV: The Smartest Ways to Cut the Cord*, WALL ST. J. (July 15, 2014, 9:05 PM), <http://online.wsj.com/articles/getting-rid-of-cable-tv-the-smartest-ways-to-cut-the-cord-1405472757> [<http://perma.cc/284Z-BWPX>] (recommending that consumers purchase a home antenna and position it towards broadcast towers or take part in “login borrowing,” the practice of more than one household illegally sharing one user’s credentials for a service like HBO Go).

200. See Hazlett, *supra* note 16, at 9-10.

201. Chris Welch, *The NFL Is Finally Coming to Apple TV, but Not How You Want It*, VERGE (Aug. 4, 2014, 12:11 PM), <http://www.theverge.com/2014/8/4/5967123/nfl-finally-coming-to-apple-tv> [<http://perma.cc/J3ZX-CK4D>].

may be purchased without a cable subscription<sup>202</sup> will surely delight some fans. This has long been hailed as the beginning of the end for cable, or at least the beginning of a shift of power back into consumers' hands.<sup>203</sup>

However, not only is it too early to determine these effects, but one of the unspoken truths about cable packages versus à la carte programming purchases is that channels like HBO actually subsidize less popular but no less necessary cable channels such as the Discovery Channel, A&E, and the National Geographic Channel. Before Walter White, AMC's most profitable character was probably Michael Myers, and its *Halloween* marathons, although perhaps not a national treasure, probably deserve a space in the cable landscape that will be effectively lost if consumers can begin to pay for HBO on its own. For consumers with wide-ranging tastes, the cost of these bundles may quickly add up to a cable subscription. The answer must come from within the current cable structure, not outside of it.

### CONCLUSION

The Comcast-Time Warner Cable merger is no more, but no sooner did that deal fail than Charter Communications began its own bid for Time Warner Cable. It is clear that the merger between massive cable MSOs is now the order of the day, particularly in an era when they feel squeezed on several fronts by new competitors in smaller black boxes.

The average consumer probably does not think much about how they receive their cable, probably not any more than Carl and Wendy do until they are actually on the phone with one another. But over 100 million Americans receive cable, and they spend a substantial amount of time watching it.<sup>204</sup> Future cable mergers are

---

202. See Emily Steel, *Cord-Cutters Rejoice: CBS Joins Web Stream*, N.Y. TIMES (Oct. 16, 2014), <http://www.nytimes.com/2014/10/17/business/cbs-to-offer-web-subscription-service.html> [<http://perma.cc/8JKE-VCHU>].

203. See Brian Merchant, *HBO Finally Killed Cable*, MOTHERBOARD (Oct. 15, 2014, 3:26 PM), <http://motherboard.vice.com/read/hbo-killed-cable> [<http://perma.cc/RMW4-PQRA>].

204. BUREAU OF LABOR STATISTICS, AMERICAN TIME USE SURVEY SUMMARY (2015), <http://www.bls.gov/news.release/atus.nr0.htm> [<http://perma.cc/V3PN-VBBQ>] (indicating that Americans spend about 2.8 hours per day watching TV, the leisure activity that took up the most time).

going to impact all of these households whether they understand them or not, and it is not at all clear that federal regulation is adequately prepared for the long-term consequences of measuring cable companies market-to-market. This strategy has no clear end point for the size of Charter, Comcast, or any other cable company. It risks throwing the cable world into one in which the largest provider can extract money from programming companies, which comes out of the pockets of those under lesser rule.

The DOJ and FTC must take this opportunity to change their measures for the future. It is too difficult to say whether Charter-Time Warner Cable, measured nationally, would clear the threshold of the HHI such that regulators would sue to block a similar merger under this new rule; it is entirely possible that they could both approve the merger and amend their market measurement process. Whatever they do, however, they must do with the understanding that consumer news, entertainment, and culture depend on their next move.

**STATE RESTRICTIONS ON COMMUNITY BROADBAND  
SERVICES OR OTHER PUBLIC COMMUNICATIONS INITIATIVES  
(as of July 1, 2019)**

This list summarizes the laws of the nineteen states that still have substantial barriers to public communications initiatives and public-private broadband partnerships. These measures include explicit prohibitions on telecommunications, cable, broadband, or combinations of these services. They also include restrictions that may superficially appear to be benign—and were promoted by incumbent carriers as necessary to achieve “fair competition” and “a level playing field”—but are in practice highly discriminatory and prohibitory.<sup>1</sup>

The list does not include state laws of general applicability that apply to all local government activities in the state, not just to communications matters. Nor does it include state laws that allow community broadband initiatives and public-private partnerships but bar or restrict their access to state broadband subsidies. While we oppose such restrictions as shortsighted, unwise, and unfair—especially where they would prevent communities from obtaining access to substantially more robust communications capabilities than incumbent carriers would use the subsidies to provide—these restrictions raise different issues than those posed by the barriers discussed in this list.

1. Alabama authorizes municipalities to provide telecommunications, cable, and broadband services, but it imposes numerous territorial and other restrictions that collectively make it very difficult for municipalities to take advantage of this authority or succeed if they can even get started. For example, Alabama prohibits municipalities from using local taxes or other funds to pay for the start-up expenses that any capital intensive project must pay until the project is constructed and revenues become sufficient to cover ongoing expenses and debt service; requires each municipal communications service to be self-sustaining, thus impairing bundling and other

---

<sup>1</sup> The Federal Communications Commission analyzed a representative example of these laws in extensive detail in *In the Matter of City of Wilson, NC, Petition for Preemption of North Carolina General Statute 160A-340 et seq. ...*, 30 FCC Rcd. 2408 (F.C.C.), 2015 WL 1120113. The Commission preempted the North Carolina law, finding that “[t]aken together, these purported “level playing field” provisions single out communications services for asymmetric regulatory burdens that function as barriers to and have the effect of increasing the expense of and causing delay in broadband deployment and infrastructure investment.” *Id.*, at ¶ 30. In *State of Tennessee v. Federal Communications Commission*, 832 F.3d 597 (6<sup>th</sup> Cir. 2016), the Sixth Circuit found that the Commission lacked authority to preempt the North Carolina law, but the Court did not question the merits of the Commission’s findings about the negative effects of the law.

common industry marketing practices; and requires municipalities to conduct a referendum before providing cable services.<sup>2</sup> (*Alabama Code § 11-50B-1 et seq.*)

2. Arkansas allows municipalities that operate electric utilities to provide communications services, except that it expressly prohibits them from providing local exchange services. Arkansas does not permit other municipalities to provide communications services. (*Ark. Code § 23-17-409*)
3. Florida by imposes price-raising *ad valorem* taxes on municipal telecommunications services, in contrast to its treatment of all other municipal services sold to the public. (*Florida Statutes §§ 125.421, 166.047, 196.012, 199.183 and 212.08*). In addition, since 2005, Florida has subjected municipalities to requirements that make it difficult for capital intensive communications initiatives, such as fiber-to-the-home projects, to go forward. For example, Florida requires municipalities that wish to provide communications services to conduct at least two public hearings at which they must consider a variety of factors, including “a plan to ensure that revenues exceed operating expenses and payment of principal and interest on debt within four years.” Since fiber-to-the-home (FTTH) projects, whether public or private, often require longer than four years to become cash-flow positive, this requirement either precludes municipalities from proposing FTTH projects or invites endless disputes over whether or not a municipality’s plan is viable. (*Florida Statutes § 350.81*)
4. Louisiana requires municipalities to hold a referendum before providing any communications services and requires municipalities impute to themselves various costs that a private provider might pay if it were providing comparable services. If a municipality does not hold a referendum, it must forgo any incumbent provider’s franchise and other obligations (e.g., franchise fees, PEG access, institutional networks, etc.) as soon as a municipality announces that it is ready to serve even a single customer of the service in question.<sup>3</sup> The suspension remains in

---

<sup>2</sup> Referenda are time-consuming, burdensome, and costly for local governments. Moreover, incumbent communications service providers often vastly outspend proponents of public broadband initiatives. But as more than 100 communities in Colorado have shown, a simple majority referendum requirement, standing alone, is not necessarily a substantial barrier to entry. Applying this standard, we have removed Colorado while leaving Minnesota on our list, as Minnesota’s referendum provision requires a 2/3 supermajority vote. We have also continued to include the referendum requirements in Alabama and elsewhere that coupled with other onerous barriers to entry.

<sup>3</sup> Municipalities typically have lower costs than private entities and do not seek the high short-term profits that shareholders and investors expect of private entities. As a result, municipalities can sometimes serve areas that private entities shun and can often provide more robust and less expensive services than private entities are willing to offer. Imputed cost requirements—a form legislatively-sanctioned price fixing—have the purpose and effect of driving municipal rates up to the uncompetitive levels that private entities would charge if they were willing to provide the services at issue. Imputing costs is also difficult, time-consuming, inexact, and highly subjective. As a result, imputed cost requirements give opponents of public communications initiatives virtually unlimited opportunities to raise objections that significantly delay and add to the costs of such initiatives.

force until the monetary value of the municipality's obligations equal the monetary amount value of the obligations incurred by the private operators for the previous ten years. (*La. Rev. Stat. Ann. § 45:484.41 et seq.*)

5. Michigan permits public entities to provide telecommunications services only if they have first requested bids for the services at issue, have received less than three qualified bids from private entities to provide such services, and have subjected themselves to the same terms and conditions as those specified in their request for proposals. (*Mich. Comp. Laws Ann. § 484.2252*)
6. Minnesota requires municipalities to obtain a super-majority of 65% of the voters before providing local exchange services or facilities used to support communications services. (*Minn. Stat. Ann. § 237.19*). Also, the council of a municipality has the power improve, construct, extend, and maintain facilities for Internet access and other communications purposes, if the council finds that: (i) the facilities are necessary to make available Internet access or other communications services that are not and will not be available through other providers or the private market in the reasonably foreseeable future; and (ii) the service to be provided by the facilities will not compete with service provided by private entities. (*Minn. Stat. Ann. § 429.021*)
7. Missouri bars municipalities and municipal electric utilities from selling or leasing telecommunications services to the public or telecommunications facilities to other communications providers, except for services used for internal purposes; services for educational, emergency and health care uses; and "Internet-type" services. (*Mo. Rev. Stat. § 392.410(7)*).
8. Montana allows a city or town to act as an internet services provider only if no private internet services provider is available within the city or town's jurisdiction; if the city or town provided services prior to July 1, 2001; or when providing advanced services that are not otherwise available from a private internet services provider within the city or town's jurisdiction. If a private internet services provider elects to provide internet services in a jurisdiction where a city or town is providing internet services, the private internet services provider must inform the city or town in writing at least 30 days in advance of offering internet services. Upon receiving notice, the city or town must notify its subscribers within 30 days, and may choose to discontinue providing internet services within 180 days of the notice. (*Mon. Code Ann. § 2-17-603*).
9. Nebraska generally prohibits agencies or political subdivisions of the state, other than public power utilities, from providing wholesale or retail broadband, Internet, telecommunications or cable service. Public power utilities are permanently prohibited from providing such services on a retail basis, and they can sell or lease dark fiber on a wholesale basis only under severely limited conditions. For example, a public power utility cannot sell or lease dark fiber at rates lower than the rates that incumbents are charging in the market in question. (*Neb. Rev. Stat. Ann. § 86-575, § 86-594*)
10. Nevada prohibits municipalities with populations of 25,000 or more and counties with populations of 55,000 or more from providing "telecommunications services," defined in a manner similar to federal law. (*Nevada Statutes § 268.086, § 710.147*)

11. North Carolina imposes numerous requirements that collectively have the practical effect of prohibiting public communications initiatives. For example, public entities must comply with unspecified legal requirements, impute phantom costs into their rates, conduct a referendum before providing service, forego popular financing mechanisms, refrain from using typical industry pricing mechanisms, and make their commercially sensitive information available to their incumbent competitors. Some, but not, all existing public providers are partially grandfathered. (*NC Statutes Chapter 160A, Article 16A*) In 2018, the legislature added a requirement that “any lease by a city of any duration for components of a wired or wireless network shall be entered into on a competitively neutral and nondiscriminatory basis and made available to similarly situated providers on comparable terms and conditions and shall not be used to subsidize the provision of competitive service.” (*Section 160A-272(d)*)
12. Pennsylvania prohibits municipalities from providing broadband services to the public for a fee unless such services are not provided by the local telephone company and the local telephone company refuses to provide such services within 14 months of a request by the political subdivision. In determining whether the local telephone company is providing, or will provide, broadband service in the community, the only relevant consideration is data speed. That is, if the company is willing to provide the data speed that the community seeks, no other factor can be considered, including price, quality of service, coverage, mobility, etc. (*66 Pa. Cons. Stat. Ann. § 3014(h)*)
13. South Carolina imposes significant restrictions and burdensome procedural requirements on governmental providers of telecommunications, cable, and broadband services “to the public for hire.” Among other things, South Carolina requires governmental providers to comply with all legal requirements that would apply to private service providers, to impute phantom costs into their prices, including funds contributed to stimulus projects, taxes that unspecified private entities would incur, and other unspecified costs. These requirements significantly detract from the feasibility of public projects and are so vaguely worded that they invite endless disagreements and costly, protracted challenges by the incumbents. (*S.C. Code Ann. § 58-9-2600 et seq.*)
14. Tennessee allows municipalities that operate their own electric utilities to provide cable, two-way video, video programming, Internet access, and other “like” services (not including paging or security services), but only within their electric service areas and only upon complying with various public disclosure, hearing, voting and other requirements that a private provider would not have to meet. (*Tennessee Code Ann. § 7-52-601 et seq.*) Municipalities that do not operate electric utilities can provide services only in “historically unserved areas,” and only through joint ventures with the private sector. (*Tennessee Code Ann. § 7-59-316*) On February 16, 2015, the Federal Communications Commissions preempted the key anti-competitive provisions of § 7-52-601. *In the Matter of City of Wilson, NC, Petition for Preemption of North Carolina General Statute 160A-340 et seq. and The Electric Power Board of Chattanooga, Tennessee Petition for Preemption of a Portion of Tennessee Code Annotated Section 7-52-601*, 30 FCC Rcd. 2408 (F.C.C.), 2015 WL 1120113. In *State of Tennessee v. Federal Communications Commission*, 832 F.3d 597 (6<sup>th</sup> Cir. 2016), the Sixth Circuit overruled the FCC’s decision, finding that the FCC lacked authority to preempt such state barriers.

15. Texas prohibits municipalities and municipal electric utilities from offering specified categories of telecommunications services to the public either directly or indirectly through a private telecommunications provider. (*Texas Utilities Code, § 54.201 et seq.*)
16. Utah imposes numerous burdensome procedural and accounting requirements on municipalities that wish to provide services directly to retail customers. Most of these requirements are impossible for *any* provider of retail services to meet, whether public or private. Utah exempts municipal providers of wholesale services from some of these requirements, but experience has shown that a forced wholesale-only model is extremely difficult, or in some cases, impossible to make successful. (*Utah Code Ann. § 10-18-201 et seq.*) Legislation enacted in 2013 imposes additional restrictions on the use of municipal bonds. (*Utah Code Ann. § 11-14-103(4)*)
17. Virginia allows municipal electric utilities to become certificated municipal local exchange carriers and to offer all communications services that their systems are capable of supporting (except for cable services), provided that they do not subsidize services, that they impute private-sector costs into their rates, that they do not charge rates lower than the incumbents, and that comply with numerous procedural, financing, reporting and other requirements that do not apply to the private sector. (*VA Code §§ 56-265.4:4, 56-484.7:1*). Virginia also effectively prohibits municipalities from providing the “triple-play” of voice, video, and data services by effectively banning municipal cable service (except by Bristol, which was grandfathered). For example, in order to provide cable service, a municipality must first obtain a report from an independent feasibility consultant demonstrating that average annual revenues from cable service alone will exceed average annual costs *in the first year of operation*, as well as over the first five years of operation. (*VA Code § 15.2-2108.6*) This requirement, without more, makes it impossible for any Virginia municipality other than Bristol (which is exempt) to provide cable service, as no public or private cable system can cover all of its costs in its first year of operation. Moreover, Virginia also requires a referendum before municipalities can provide cable service. (*Id.*)
18. Washington authorizes some municipalities to provide communications services but prohibits public utility districts from providing communications services directly to customers. (*Wash. Rev. Code Ann. §54.16.330*)
19. Wisconsin generally prohibits non-subscribers of the cable television services from paying any cable costs. Further, it requires municipalities to conduct a feasibility study and hold a public hearing prior to providing telecom, cable or internet services. It also prohibits "subsidization" of most cable and telecom services and prescribes minimum prices for telecommunications services. (*Wis. Stat. Ann. § 66.0422*)

## ABSTRACT

This paper describes the process by which the City of Tacoma, Washington came to build an open access, broadband telecommunications system designed to promote effective competition in the provision of Internet and other telecommunications services. The decision by the City's electric utility to build a state-of-the-art communications system as a strategic response to deregulation in the electric utility industry is detailed. And, the decision to provide open access to the telecommunications system to promote competition in the broadband Internet services market is considered in light of telecommunications deregulation. Tacoma's open access cable system is analyzed in the context of contestable market theory. The state of broadband Internet competition is described, as is the current regulatory framework monopoly.

## INTRODUCTION

*I don't think society has figured out how to come up with a business model that is conducive for companies to make the size of investments that are necessary to solve that problem (a shortage of bandwidth in the 21<sup>st</sup> century) with a reasonable expectation of profit but without ending up with a monopoly position. [4]*

Andy Grove, Chairman of Intel Corp.

Live Internet E\*Trade Interview

Nov. 14, 1998

In this paper the authors place the Tacoma initiative within the context of existing regulations and current competitive conditions within the telecommunications and electric utility industries. The paper begins with a brief case study narrative of the events that transpired in Tacoma. The reader is given insight into the strategic decision-making and political considerations that led to the City's policy makers' decision to approve the telecommunications overbuild—the largest even undertaken by a municipally owned utility.[8] The paper will continue with a broader perspective. Four different broadband, Internet access technologies including cable, telephony (DSL), wireless, and satellite, are described. The rationale for the FCC's refusal to regulate Internet cable access is considered. And the current legal

challenges to the main cable Internet access provider (ATT/TCI) undertaken by the City of Portland and by a coalition of telephony-based DSL Internet access providers are described.

The authors' thesis that Tacoma has developed a viable business model for building broadband capacity without creating monopoly is introduced.

## **TACOMA'S BUSINESS STRATEGY DECISION: A RESPONSE TO DEREGULATION**

### **Background and context**

When President George Bush stood on an oil platform in the Gulf of Mexico to sign the 1992 National Energy Policy Act, Tacoma Power's management team knew that they had to plan for more than the electric utility's centennial celebration scheduled for the following year.[6] The century old municipally owned utility would now have to provide open access transmission service to wholesale or bulk rate providers and customers on an "unbundled" basis. And although "retail wheeling" was excluded from the federal statute, state policy makers were authorized to require the same open access for those providers and potential customers as well.[9] The days of a stable, regulated and monopolized marketplace would soon be ending for Tacoma Power.

Tacoma Power's management team faced this challenge by going to the private sector for advice. They queried a number of managers from other deregulated industries—airlines and banking—in a search for new models to deal with restructuring during uncertainty. What they learned was that the successful enterprises were led by managers who could think strategically. They were also told to know computers and follow technology, invest in process automation, learn to be more efficient and, most importantly, know your customer. The last point—know your customer—led to some disquieting findings from their own market research. While Tacoma Power's customers were satisfied, they were not loyal—in fact only ten percent of their customer based expressed loyalty.[6] The management team concluded that they were facing a true paradigm crisis where "all of the traditional rules blurred, experimentation was spreading rapidly, and practices once so accepted that they were simply a part of the woodwork were (now) being called into question." [3 p. 323]

### **A new strategy evolves**

The utility's managers chose to respond strategically by recognizing that their core business really was the reliant and efficient delivery of electrons. Thus, they sought a new paradigm—one that would steer the business, make it more reliable and customer friendly and, importantly, follow the technology. The technology in this case was fiber optics and the construction of a state-of-the art communication system for the purpose of automating the utility's distribution infrastructure.

Tacoma Power's managers realized that such a system would add considerable value for the customer: instant information on the time and location of power outages, remote connection and disconnection of services, information about electricity consumption patterns, real time pricing and appliance control systems.[2] As the utility's superintendent described it: "So what do we accomplish? We will keep the revenues going, the customers happy and we will be dispatching the crews where the problems are at." [6] In sum, the value-added services would truly put customers in the driver's seat and allow them "to control the resources" (real time pricing and appliance control) as well as to "choose the destination and route." [3 p. 181] The end result would be greater customer loyalty.

### **Building the system**

The question now was how to build such a system. An obvious option was a strategic alliance with the private sector. But those partnerships were not available. The local phone company, cable provider and a number of competitive access providers turned down overtures from Tacoma Power's management team.[6] And so the utility decided to move forward on its own—to build the infrastructure itself. But before making the multi-million dollar investment, the utility's director requested that Tacoma Power's citizen oversight body, the Utility Board, authorize an outside review by a consultant group—the Stanford Research Institute.

The Board approved and soon SRI's consultants came back with an interesting idea: Why not invest more dollars to expand the fiber optic pipe?[6] Then Tacoma Power could offer its customers an array of services—cable television, competitive Internet access, telephony and data transport. The Telecommunications Act signed into law by President Bill Clinton in 1996 had, in fact, given Tacoma Power this option by eliminating barriers to entry into the telecommunications market. This led Tacoma Power's superintendent to proclaim: "The new law afforded us the opportunity to embark on a broader strategy—one that would allow us to add smart electrons to the worker bee electrons the utility was providing for over 100 years." [6]

### **Testing the market**

The next step was to conduct a marketing survey. The findings were more than promising. Tacoma Power far outdistanced the competition as the preferred provider for cable television service.[10] And a financial analysis of the current market showed that a 25 percent penetration of the current customer base for cable service alone would lead to an operating profit within three years.[11] The pro forma income statement forecast over 33,000 cable customers in three years of operation. Within ten years time, the entire investment of \$100 million would be paid off and Tacoma Power would have enough revenue left over to plow into system upgrades.[11] But before embarking on this major undertaking, Tacoma Power borrowed once again from the private sector. The utility pulled together a panel of fourteen experts from an array of disciplines to review and pass on a final business plan. That plan, which was given the stamp of approval by the panel, called for retail and wholesale applications. On the retail side, the planned offerings included more reliable distribution of electricity, cable television, digital audio broadcasts, Internet over television and broadband services with customized point-to-point connectivity. On the wholesale side, Tacoma Power would offer a first-of-its-kind open platform highway for Internet Service Providers and their high speed modems.

### **Political currents**

The political dynamics revolving around Tacoma Power's plans to build a fiber optic system soon changed once the management team broadened their strategy to include an array of telecommunications services. The manager of the incumbent cable provider (TCI) sent a scathing critique of the utilities' business plan to the Tacoma City Manager. The twenty-one page letter ended with the warning: "(Tacoma's policy makers should)...pause and let the euphoria of the benefits you may now expect be replaced by a realistic appreciation of the pitfalls and risks associated with municipal ownership of what is traditionally an entertainment service provided by private enterprise." [5] After numerous public hearings, two declaratory judgements from the state superior court, a plea from the cable provider's national president and an additional due diligence review by three outside consultants, the city policy makers moved forward with the \$100 million overbuild.

The following section will discuss how contestable market theory applies to the Tacoma case and will bring the reader up-to-date on current and national developments.

## **THE ECONOMIC RATIONALE: CREATING CONTESTABILITY IN BROADBAND TELECOMMUNICATIONS AND ENHANCING COMPETITION IN THE CABLE TV MARKET**

### **Creating a Contestable Market in Broadband Telecommunications**

There are often strong parallels between the deregulation experiences of very diverse industries. In the early years of airline deregulation, Elizabeth Bailey, then a member of Civil Aeronautics Board, called for municipalities to bear the sunk costs associated with developing new airports in an effort to make the airline industry more contestable.[1] Entry by new airlines would be much more likely, she reasoned, if they did not have to bear the risk associated with investing in their own airports - investments which presumably could not be recovered if a new airline failed.

Similarly, entry into various branches of the telecommunications industry would be more likely if municipalities bore the sunk costs associated with broadband capacity. New telecom entrants could (for an appropriate charge) simply ride the municipal system much like new airlines contract for terminal space at the municipal airport. Moreover, as the telecom market becomes more contestable (as barriers to entry are reduced through public ownership of broadband capacity), the mere threat of potential competition becomes a more viable disciplinary force within the market. Existing providers of telecom services will be less likely to charge excessive prices or permit X-inefficient practices and less

likely to become technologically lethargic because of the constant threat of potential competition. A truly contestable telecommunications market, then, will provide consumers with an increasing variety of services produced in an efficient manner and offered at competitive prices.

The City of Tacoma has designed and built a broadband telecommunications system with the express purpose of providing *competitive* telecommunications services to businesses and residents within the City. By creating an open-access architecture (a feat which, until recently, AT&T contended was economically impossible), the City has made it possible for many competing Internet service providers to gain access to the system. It would appear that Tacoma's initiative provides one possible answer to Andy Grove's lament (as expressed earlier) that there appears to be no viable model for building much needed broadband capacity without creating a monopoly position.

### **Creating Competition in the Cable TV Market**

As noted above, the telecommunications system developed by the City also created the capacity to compete with TCI, the local cable TV provider. Though this was not the primary rationale for constructing the system, the possibility of injecting competition into the cable TV market was very attractive to local policy makers because of the poor quality of service then offered by the existing cable TV provider.[13]

The advent of competition did have its intended effect in Tacoma as the incumbent provider (now AT&T/TCI) responded to the City's entry into the market by upgrading its service. By adding fiber to its delivery system and moving to a digital format, the incumbent was able to match (or exceed) the various channel offerings the City's new system delivered. No such upgrades were provided by TCI in nearby Seattle, leaving that city at odds with its only cable TV provider.[13]

### **RECENT DEVELOPMENTS**

Presumably in response to legal challenges from the City of Portland, GTE and the Open NET Coalition, AT&T recently announced that it will open its broadband cable Internet system to ISP providers by 2002 when its contract with @Home, the sole provider currently riding its system, expires.[14] AT&T's general counsel had previously argued, "Regulation [a requirement to provide open access] would undercut the investment needed to expand cable's broadband services. It also would deter the private investment necessary to fund the construction of new broadband facilities, which will damage competition, not spur it." [7] According to AT&T, then, monopoly control of its broadband system was technologically determined. This, in effect, constitutes a natural monopoly argument, which would appear a dangerous position for AT&T to take.

However, the FCC, under William Kennard's leadership, has supported AT&T's position, arguing "At this nascent stage in the development [of broadband], one should not presume to have a regulatory cure for every anticipated marketplace ailment. It would be imprudent to act now. We must allow the marketplace to evolve." [7] The FCC recognizes at least four developing broadband technologies – cable access, DSL access provided by telephone companies, satellite access and wireless access.

Although AT&T's promise to open its system includes a pledge to not penalize customers for choosing a provider not affiliated with AT&T, the question lingers as to whether or not those independent providers of broadband services may be at some competitive disadvantage to AT&T's affiliates. The public ownership model developed by Tacoma represents a viable alternative – an alternative which should provide a more level playing field for ISP competition.

By the end of 1999, with substantial technical assistance from Cisco Systems, Tacoma's public utility had completed the construction of an open architecture, broadband telecommunications system. It was serving over 11,000 homes with cable TV services (exceeding the 25 percent penetration goal) and had contracted with one ISP to begin the provision of residential high-speed Internet services with other ISP providers in the wings. The utility also provides high-speed data transmission services to several major companies in the Tacoma area in competition with the regional Bell telephone company. As one of only three U.S. cities wired with a fiber-optic telecommunications system, Tacoma is attracting a variety of new high-tech businesses.[12] The economic development benefits of a truly competitive, broadband telecommunications system are clear and the public ownership model Tacoma has developed appears viable.

# Tacoma Decides To Build Its Own Fiber-Optics Network

Mar 17, 1997

Robert T. Nelson

*Seattle Times Staff Reporter*

TACOMA - When Congress and President Clinton deregulated the telecommunications industry a year ago, promising it would open the door to competition, they could not have imagined how the new rules would play out here.

In an era of smaller government, Tacoma has decided to spend \$55 million building a fiber-optics network that would compete head-to-head with the city's cable franchise and the local phone company.

It's a risky venture motivated by public dissatisfaction with cable giant Tele-Communications Inc. (TCI) and fear that Tacoma has fallen behind other cities in building the high-speed communications network modern business demands.

In the 1870s, Seattle and Tacoma competed for Northern Pacific railroad tracks. This time, the competition is for the technology that links businesses to computers and telephone systems throughout the world.

Thanks in large part to private investment, Seattle's downtown already has more fiber-optic cable than it can use. City Light and government agencies met their needs by simply expanding the private cable system as it went in.

Tacoma's system never got built.

About the time Tacoma officials were worrying that communications deregulation would impair the city's ability to compete for new employers, officials at the city-

owned Tacoma Public Utilities were concerned about how future deregulation of the electric industry would affect them. They concluded TPU needed a way to communicate directly with the 140,000 households and businesses it serves.

"As we approach deregulation, our ability to provide ever better service is going to be critical to our success," said Jon Athow, manager of TPU's telecommunications project. "Right now, if a customer loses power, we don't know it until they pick up a phone and tell us their lights are out. We think it would be nice to know when that happens without their having to call."

Nice, yes, but expensive.

The utility estimates it will cost \$55 million to run fiber optics to every neighborhood - and coaxial cable into every household and business - in its 180-square-mile service area, which includes Tacoma and the more populated areas of Pierce County. Recovering that cost through higher electric bills would drive up rates when other utilities will be trying to lure customers away with lower prices.

The investment only pays off, say Tacoma officials, if the cost is spread among customers who use the cable to make Internet connections, transmit computer data, talk on the telephone and receive cable-TV signals.

The new communications utility still needs the approval of the TPU board and the City Council, which has scheduled a vote for April.

But the fact the proposal has gotten this far is a commentary on TCI's standing in the community, Tacoma's moribund downtown and the uncertainties that surround deregulation.

### Dissatisfaction with TCI

TCI's spotty reputation with its customers helped establish a high level of popular support for the project. Tacoma Public Utilities broadened that support by promising to extend the network and provide the necessary electronics - free of charge - to every hospital, school, university, library, firehouse and police station in its service area.

The proposal has enraged officials at TCI, who have spent years trying to get the city to renew the franchise that permits it to route cable over city-owned power poles and public right of way.

"We approached the city in 1992 with a plan to begin rebuilding our facilities," said Barbara J. Wyatt, general manager of TCI of Washington. "Unfortunately, the city has elected to cancel meetings and delay the process. Customers want more channels and it's in our best interest to provide them. Our plan is to provide the best service we possibly can. We need a business license to do that. Unfortunately, to get it, we're having to negotiate with the very people we're competing with. It's a struggle."

Tacoma's response reflects just how strained relations are between the city and its cable franchise.

"TCI is always making claims about what it wants to do in the future," Athow said. "But it's always four or five years away. We've looked at their financials and know they're going to have a hard time doing what they have promised. We didn't create their \$15 million debt. The fact is they treat subscribers as real estate. They've loaded themselves up with so much debt (buying other companies) they can't rebuild."

This is a critical time for both TCI and Tacoma.

Like most of the rest of the cable industry, TCI is heavily in debt from acquiring other systems, many of which are old and under pressure to expand the number of channels they offer. The company faces the dilemma of giving customers the programs they demand, without investing tens of millions of dollars in a fiber-optics system that soon could be obsolete. TCI officials believe the cheapest solution is to expand the system by running digital signals over their existing coaxial cable lines.

Tacoma officials don't believe that is in their city's best interest. And because the city owns the poles along which TCI's cable is strung, it's using the renewal of TCI's contract to try to coerce somebody into building a high-speed, interactive communications system.

The struggle is occurring in a lot of communities afraid of being bypassed by companies suddenly free to service only the most lucrative customers. Electric Lightwave, headquartered in Vancouver, Wash., has a strategy typical in the industry.

"Our focus is on the business market," said Jack Hardy, the company's public-relations manager for Electric Lightwave. "We're not going after the residential side at all. It's quite an investment to go in and put fiber-optic cable into every home. There's just not enough activity in a house to recover that cost."

Tacoma officials contend companies are only interested in providing service to customers who make a lot of long-distance calls and have a need for high-speed data transmission.

"We have five to seven companies that have contacted us, champing at the bit to put fiber in," said Dan Voelpel, head of Tacoma's community-relations division. "The trouble is, they just want to come into town and put fiber in where they can make the most money. None of them are offering anything that's comprehensive."

George Chappell, area manager of communications for US West, agrees.

"That's exactly right," he said. "It comes down to dollars and cents. You will not see people building in Tacoma until there's a lucrative market for it."

### Solution has risks

Tacoma's solution to the problem is a bold business venture with elements of risk it cannot control. If and when TCI renews its business license, it could cut its rates and get into a protracted price war with the city. There also are legal questions about the city competing in an industry it regulates.

A greater risk is that by the time Tacoma completes its cable system, the technology may have been surpassed by the type of wireless communication system AT&T recently unveiled.

"Down the road they could be sitting on a technology that goes out of date real fast," said Seattle's telecommunications expert, Matt Lampe, who two years ago studied and rejected the idea of building a similar communications utility at City Light.

If Tacoma succeeds, it will have a data transmission network more extensive than Seattle's, stretching beyond downtown and opening the entire region to new development and more competition within the communications industry.

If it fails, Tacoma jeopardizes not only its investment but also the financial well-being of a public electric utility with an established reputation for sound fiscal

management.

It's a risk Tacoma officials, for now, seem willing to take.

# Tacoma decides to build its

BY ROBERT T. NELSON  
*Seattle Times staff reporter*

**TACOMA** — When Congress and President Clinton deregulated the telecommunications industry a year ago, promising it would open the door to competition, they could not have imagined how the new rules would play out here.

In an era of smaller government, Tacoma has decided to spend \$55 million building a fiber-optics network that would compete head-to-head with the city's cable franchise and the local phone company.

It's a risky venture motivated by public dissatisfaction with cable giant Tele-Communications Inc. (TCI) and fear that Tacoma has fallen behind other cities in building the high-speed communications network modern business demands.

In the 1870s, Seattle and Tacoma competed for Northern Pacific railroad tracks. This time, the competition is for the technology that links businesses to computers and telephone systems throughout the world.

Thanks in large part to private investment, Seattle's downtown already has more fiber-optic cable than it can use. City Light and government agencies met their needs by simply expanding the private cable system as it went in.

Tacoma's system never got built.

About the time Tacoma officials were worrying that communications deregulation would impair the city's ability to compete for new employers, officials at the city-owned Tacoma Public Utilities were concerned about how future deregulation of the electric industry would affect them. They concluded TPU needed a way to communicate directly with the 140,000 households and businesses it serves.

"As we approach deregulation, our ability to provide ever better service is going to be critical to our success," said Jon Athow, manager of TPU's telecommunications project. "Right now, if a customer loses power, we don't know it until they pick up a phone and tell us their lights are out. We think it would be nice to know when that happens without their having

to call."

Nice, yes, but expensive.

The utility estimates it will cost \$55 million to run fiber optics to every neighborhood — and coaxial cable into every household and business — in its 180-square-mile service area, which includes Tacoma and the more populated areas of Pierce County. Recovering that cost through higher electric bills would drive up rates when other utilities will be trying to lure customers away with lower prices.

The investment only pays off, say Tacoma officials, if the cost is spread among customers who use the cable to make Internet connections, transmit computer data, talk on the telephone and receive cable-TV signals.

The new communications utility still needs the approval of the TPU board and the City Council, which has scheduled a vote for April.

But the fact the proposal has gotten this far is a commentary on TCI's standing in the community, Tacoma's moribund downtown and the uncertainties that surround deregulation.

## *Dissatisfaction with TCI*

TCI's spotty reputation with its customers helped establish a high level of popular support for the project. Tacoma Public Utilities broadened that support by promising to extend the network and provide the necessary electronics — free of charge — to every hospital, school, university, library, firehouse and police station in its service area.

The proposal has enraged officials at TCI, who have spent years trying to get the city to renew the franchise that permits it to route cable over city-owned power poles and public right of way.

"We approached the city in 1992 with a plan to begin rebuilding our facilities," said Barbara J. Wyatt, general manager of TCI of Washington. "Unfortunately, the city has elected to cancel meetings and delay the process. Customers want more channels and it's in our best interest to provide them. Our plan is to provide the best service we possibly can. We need a business license to do that. Unfortunately, to

get it, we're having to negotiate with the very people we're competing with. It's a struggle."

Tacoma's response reflects just how strained relations are between the city and its cable franchise.

"TCI is always making claims about what it wants to do in the future," Athow said. "But it's always four or five years away. We've looked at their financials and know they're going to have a hard time doing what they have promised. We didn't create their \$15 million debt. The fact is they treat subscribers as real estate. They've loaded themselves up with so much debt (buying other companies) they can't rebuild."

This is a critical time for both TCI and Tacoma.

Like most of the rest of the cable industry, TCI is heavily in debt from acquiring other systems, many of which are old and under pressure to expand the number of channels they offer. The company faces the dilemma of giving customers the programs they demand, without investing tens of millions of dollars in a fiber-optics system that soon could be obsolete. TCI officials believe the cheapest solution is to expand the system by running digital signals over their existing coaxial cable lines.

Tacoma officials don't believe that is in their city's best interest. And because the city owns the poles along which TCI's cable is strung, it's using the renewal of TCI's contract to try to coerce *somebody* into building a high-speed, interactive communications system.

The struggle is occurring in a lot of communities afraid of being bypassed by companies suddenly free to service only the most lucrative customers. Electric Lightwave, headquartered in Vancouver, Wash., has a strategy typical in the industry.

"Our focus is on the business market," said Jack Hardy, the company's public-relations manager for Electric Lightwave. "We're not going after the residential side at all. It's quite an investment to go in and put fiber-optic cable into every home. There's just not enough activity in a house to recover that cost."

Tacoma officials contend companies are only interested in providing service to custom-

ers who make a lot of long-distance calls and have a need for high-speed data transmission.

"We have five to seven companies that have contacted us, champing at the bit to put fiber in," said Dan Voelpel, head of Tacoma's community-relations division. "The trouble is, they just want to come into town and put fiber in where they can make the most money. None of them are offering anything that's comprehensive."

George Chappell, area manager of communications for US West, agrees.

"That's exactly right," he said. "It comes down to dollars and cents. You will not see people building in Tacoma until there's a lucrative market for it."

#### **Solution has risks**

Tacoma's solution to the problem is a bold business venture with elements of risk it cannot control. If and when TCI renews its business license, it could cut its rates and get into a protracted price war with the city. There also are legal questions about the city competing in an industry it regulates.

A greater risk is that by the time Tacoma completes its cable system, the technology may have been surpassed by the type of wireless communication system AT&T recently unveiled.

"Down the road they could be sitting on a technology that goes out of date real fast," said Seattle's telecommunications expert, Matt Lampe, who two years ago studied and rejected the idea of building a similar communications utility at City Light.

If Tacoma succeeds, it will have a data transmission network more extensive than Seattle's, stretching beyond downtown and opening the entire region to new development and more competition within the communications industry.

If it fails, Tacoma jeopardizes not only its investment but also the financial well-being of a public electric utility with an established reputation for sound fiscal management.

It's a risk Tacoma officials, for now, seem willing to take.

Mr. Mark Crisson  
Director  
Tacoma Public Utilities  
3628 South 35<sup>th</sup> Street  
Tacoma, WA 98411-0007

April 24, 2000

**Subject: Click! Network Financial Performance Review**

Dear Mr. Crisson:

PricewaterhouseCoopers has completed its review of the Click! Network as outlined in our agreement of March 7, 2000 and is pleased to present the results of our work in the attached report.

We would like to thank your staff for their complete cooperation and participation throughout the review. All of the staff we worked with demonstrated a professional, enthusiastic approach to their roles in helping Click! attain its goals and serve the greater Tacoma community. Their success is reflected in the supportive articles in trade and general media publications, and in the limited customer contacts we made.

Our review was initiated by collecting and reviewing numerous construction, marketing, accounting, and management reports. We interviewed all of the senior managers in the Click! organization, including working extensively with the new General Manager Dana Toulson. We observed the Network Operations Center (NOC), including the head end and customer care operations, the set-top box inventory, programming and control area, a hub and the broadband interconnection point, one of the two field construction offices which initiates, supervises and inspects the work done on the system, and the engineering department responsible for the design and Multiple Dwelling Unit (MDU) build-out. We also worked with the TPU Finance Department to understand the financial control structure and the

processes for capturing and reporting on revenues, payroll costs, accounts payable costs, journal entries and the preparation of financial statements.

Overall, the Click! Network has been deployed to date within the approved budget, with service levels and quality equalling, and in some cases exceeding, the original plans. The technical quality and redundancy is a model system. Customer service is a hallmark of the operation, particularly your commitment to managing provisioning expectations within an approximate two-week window - then keeping the schedules you set. The extra attention to customer education and support is likely to enhance customer retention. Actual expenditures have been appropriately authorized, inspected and approved. We have identified a number of areas where accounting, reporting and forecasting can be improved, and many of these recommendations have been or are being implemented. After these accounting adjustments, and if the business continues as planned for the remainder of 2000, revenues are forecast to exceed expenses before June of 2001. In total, you have provided the substance to the reality of Tacoma, America's #1 Wired City.

We appreciate this opportunity to have worked with you and the Click! Network staff on this most important project and wish you success in your continued development of Click! Should you have any questions regarding this report, or desire assistance in implementing our recommendations, please contact Rick Van Mell at 415-957-3138.

Very truly yours,

*PriceWaterhouseCoopers LLP*

## Click! Network Review

April 2000

We were asked to review and provide recommendations on seven specific objectives which can be grouped into five general sections. The specific objectives are provided in italics at the beginning of each section. The five sections are:

- Construction Program
- Marketing Program
- Financial Control, Reporting and Projected Results
- Expansion into University Place
- Click!'s Position in the Telecommunications Evolution

### Construction Program

*"Review actual capital construction costs to date and how they conform to the budget."*

Overall, we found the construction program to be well run and closely coordinated with your marketing and customer service plans. By the end of 1999 your system was operational, and by the end of 2000 all of the initial construction contemplated for the City of Tacoma in the current plan is on track to be complete within the authorized budget of \$91 million. Recommendations for improvement include continuing refinement of the capital budget, as defined in the Work Order system, into discrete tasks associated with specific Click! business lines and cost centers. Each task should identify specific measurable physical milestones and the associated spending by month. Where appropriate, each Work Order should also be linked to specific Marketing and revenue generation plans. In particular, capital spending to support CATV, broadband and ISP customer growth should be directly tied to the Marketing plan. This recommendation is already being implemented for the remainder of this year, the preparation of the 2001-2002 budget, and the longer term financial modelling of Click! Network.

(4)

Marketing Program

*"Compare actual CATV subscriber penetration per activated node and as a system average for all activated nodes in relation to the business plan goal of 25%."*

The marketing program for CATV was developed with a penetration target of 25% of the homes passed within 18 months of node release. As of April 1, 2000, the overall penetration in the City of Tacoma stood just over 23%, even though only 15% of the available nodes have been released for subscribers for a full 18 months. 29 individual nodes have already exceeded 25% penetration, and all of them have been released for one year or more. 16 of the 29 have penetrations between 30% and 47%. 22 nodes are between 20-25% penetration, and 16 of them have been open more than 300 days. 17 of the remaining 26 nodes with less than 20% penetration have been released for less than 6 months. There are 8 nodes completed but not yet fully released to subscribers. At April 1<sup>st</sup>, Click! had approximately 13,000 subscribers, with a projected year end target approximating 19,000. When the subscriber count passes 15,575 the overall penetration for all nodes in the City will exceed 25% and this appears likely before year-end 2000. A hallmark of the marketing program has been to manage the release of nodes such that customers can be given an installation date within about a two week window. This has been accomplished with a structured, coordinated program which calculates the daily estimated installation effort based on the services customers have requested and the number of Service Technicians available. Our primary recommendation for Marketing is the reciprocal of the construction recommendation: the marketing revenue generation plan should be clearly related to the required numbers of installations or circuits and their capital costs. Revenues are currently forecast by separate business line, and should be augmented with a separate summary page of assumptions and construction or installation milestones. Spending in the capital section of the business model should be identified by month, and where considerable capital must be spent before revenue can be generated, the time lag should be clearly defined on the assumptions page. This recommendation has been substantially incorporated into the Click! business model currently maintained by Marketing, and the data aligned with construction and Operations. Only the development of a summary assumptions and milestones page remains to be done. An additional recommendation is that the Click! business model projections be frozen for the remainder of the year 2000 and report actuals against the budget. A rolling forecast may also be desirable to track changes as they occur.

(5)

**Financial Control, Reporting and Projected Results**

*"Assess the management and control of the three Click! Business Lines' actual revenues and expenses.*

*Assess the assumptions for all three Click! Business lines and associated rates of growth and the business plan projections that revenue will exceed expenses by June 2001.*

*Based on the short history for the CATV, Business Advantage and ISP Advantage business lines, evaluate whether there are any obvious area of concern in financial performance, control or reporting."*

As we conducted our review, we found these areas overlapped in many ways, and combined them into this *Financial Control, Reporting and Projected Results* section. For the reader to understand our findings and recommendations in the correct context, we believe it is instructive to describe the reporting and control environment as we found it.

**Control Environment**

First, past practice has been for Finance to provide monthly results to the Director and Superintendent before the division managers. Further, because the City (which provides TPU with its accounting systems) does not have an integrated financial system, the time lag for developing financial statements is considerable, and reports have not been distributed until late in the following month for March through November. This was explained as "waiting until the Board had approved the results" so there would be no distribution of unapproved information. While this may not be a problem for other TPU divisions, in the dynamic start-up environment of Click! Network, the Click! Manager is placed at a considerable disadvantage when asked to explain any given financial result without an effective mechanism to evaluate the supporting details. Another consequence of past practice and system limitations is the routine apparent distortion and delays in the December, January and February reports. For example, during our review which began in March 2000, the December results had just become available. The December Click! Network Operational Summary showed a

(6)

profit of approximately \$145,000 when actual cash operating costs continued to exceed revenues. However this was the result of several journal entries, accruals and deferrals, one exceeding \$1 million. This page appeared in the Financial Statement package provided to the Board and did not contain any supporting explanation. The subsequent January summary showed a loss of approximately \$427,000 which again did not reflect the actual operating results. On April 7th, the Click! Manager had not seen any February results, yet the Director had already seen preliminary *March* results.

#### **Actual Costs and Revenues**

We believe it is important to also note that the actual control of spending for construction and operations appears to be functioning well, despite the limitations of the Work Order, Purchase Order and payroll systems. Reviews of Click! field construction management showed a well-controlled systematic management under unit price contracts and rigorous design and inspection procedures. However, because contractors were assigned to build more than one part of the network when customer demand dictated, their invoices sometimes included work that covered more than one Work Order. The coding by Click! construction staff should have segregated these costs to the appropriate Work Order, and they usually did. Under the Work Order/Purchasing system however, the contractor is working under a single Purchase Order number, and since the control is the maximum amount of the P.O., the Work Order system establishes an encumbrance up to the maximum of the P.O. However, when the invoice distributes work done across multiple Work Orders only the original Work Order encumbrance is reduced. The net effect is to appear to over-run one Work Order while showing a larger than required encumbrance in the original Work Order. Again, this is not a control problem with the actual spending, but is a computer system imposed limitation which limits the ability of Finance to provide a more meaningful oversight role. It also limits the value of Work Order reports in reflecting the true status of open commitments and estimates-to-complete phases of the work. It is the detailed logs and spreadsheets maintained by Click! that provide the best control.

Revenue generation and reporting has not been an issue, and the Click! database was able to provide sufficient data when requested. The billing system is currently being replaced to gain

(7)

even more functionality, and, based on the prior results and the larger issues noted in this report, we did not specifically review this conversion.

We spent considerable time with the Finance Department and the Click! Manager to understand some of the major financial reporting issues, and to develop recommended solutions. Four of the largest issues involved capitalization of General and Administrative expenses, capitalization of connection costs for new subscribers, inter-company issues between Click! and Tacoma Power, and the formatting and presentation of Click! financial reports.

#### **Capitalization of General and Administrative Expenses**

The capitalization of General and Administrative expenses attributable to the construction program for 1999 accounted for over \$1,000,000. The entire sum was shown as a credit to expense in the month of December. The amount was calculated based on a long-standing formula used by Tacoma Power which compared the ratio of capital spending to operating spending, and was historically designed to capitalize a maximum amount of G&A under rate-based rule making. The formula creates a percentage which is then applied to the value of each Work Order for a division, subject to a maximum value which has been increased by 3% per year for about ten years. This same approach was applied by Finance for the first three months of 2000. The percentage factor used was 7.070%, with an individual line item value limited to \$94,000. Finance, as it went through the year end closing, assumed that all of the remaining amount in a Work Order not actually paid in 1999 would be spent in 2000, and added an extra \$2,000,000 for possible new work orders. The net result is another projected charge of approximately \$ 1 million for the year 2000, which was transferred by journal entry out of expense to capital for January, February and March of 2000 in the amount of \$85,000 per month. However, in late January when the amount to be capitalized was determined, the Click! Operations Manager issued Work Order revisions to close five old work order numbers and transfer the necessary remaining spending to five new Work Orders. The revised total spending for Work Orders is \$89 million, without any need for the additional \$2 million estimated by Finance. We re-ran the formula and arrived at a monthly G&A transfer closer to \$59,000, an annual difference of \$312,000. Finance has reviewed this analysis and suggests

(8)

reducing the monthly transfer by \$32,000 which they believe will reflect the current expectations and account for the higher levels in the first quarter. We would like to repeat, this finding is at bottom a manifestation of a culture and pattern of closely held financial practices, reporting and disconnected manual systems, not a reflection of any individual's particular job performance.

Further, the initial Click! capital program established Work Order 17013 in the amount of \$1.9 million to account for capitalized G&A. This was intended to include managers' costs charged to operating expenses. The capitalized G&A however is going directly to construction-in-progress property accounts, and not to Work Orders. The result is that the total of the property accounts will be larger than the sum of the Work Orders. Since both the Capital and Operating Expense budgets are approved, cash control is maintained as long as total spending is less than the sum of the two budgets. However, the potential exists for the capitalization of G&A to cause the sum of the capital accounts to exceed the authorized Capital budget. (We do not expect that to happen based on the current information and projections.) We recommend that future Capital and Expense budgets plan for any expected G&A capitalization and include it only in the Capital budget, even if it flows temporarily through the Expense budget accounts. The Expense budget should be the net spending on operating activities after the capitalized G&A has been transferred to the capital accounts.

A related issue is the capitalization of Tacoma Power expenses. The same formula is used to develop a percentage which reduces Tacoma Power's expenses and charges Click!'s construction account - again by individual Work Order. For 2000 the proposed percentage is 6.16%, totalling just under \$1 million per year and charged at \$80,000 for Jan-Mar. Click! management recognizes there is some level of G&A support from Tacoma Power, but they question if \$80,000 per month is the appropriate level. The overall effect is that Click!'s construction has been charged a 13.23% G&A cost. This remains an open issue.

#### **Capitalization of Connection Costs for New Subscribers**

During our review of the construction program and its controls we learned that connection costs for new subscribers were higher than originally planned for two primary reasons. First,

(9)

subscribers were requesting that more outlets be installed in their homes (approximately 3.5 vs. a planned 1.5). This meant that an individual Click! Service Technician might complete only one or two installations per day vs. a planned three to four. Second, given a high customer demand for service and the unplanned extra demand on Click! Technicians, third party contractors were assigned to make new subscriber connections, primarily in MDUs. These connections were invoiced to Click! at unit rates for the "drop" from the pole to the house and the first outlet, plus an additional charge for each additional outlet. A different rate is used if the connection is made at a pre-wired MDU (Multiple Dwelling Unit). When these contractor costs are invoiced to Click! they are normally coded to the capital Work Orders 17019 or 17027 depending if the connection was at an MDU or single residence.

The cost for all Click! Technicians flows through the payroll system as an operating expense to the 5534 and 5535 accounts. Monthly the Finance Department has been calculating a "new subscribers" count, multiplying it by an originally estimated cost based on a drop line and one outlet, then reducing operating expense and charging the capital Work Order for the resulting amount.

There are four problems with the way the system has worked. First, the "new subscribers" count calculation inadvertently included reconnects - about a 2% error. Second, the count included connections by both Click! Technicians and contractors - this resulted in the Work Orders being charged twice for the same connection. Once by the contractor's invoice and second by the capitalization journal entry. Third, starting in March 2000, this double charging was attempted to be corrected by transferring all of the contractor costs out of the Work Order to operating expense. (Approximate value \$244,000.) However, contractor costs are approximately 50% higher than the rate per connection being used to reduce operating expenses, resulting in overstating operating expense. Fourth, the contractor invoices accounted for all of the outlets installed, but the Click! operating expense reduction only accounted for the first outlet. Thus none of the cost for additional outlets installed by Click! Technicians has been capitalized. Though a specific count has not yet been determined, the estimated value for all additional outlets already installed or planned during the year 2000 approximates \$1.5 - 1.9 million.

(10)

"Revenue". Since these items do not produce any additional net cash and reflect Tacoma Power's use of assets to better deliver electricity, they might better be handled as credits to expense not subject to a Franchise Tax.

#### **Click! Network Financial Reporting**

We have already noted under Control Environment the historical communication and timing problems of financial reporting. The process of reviewing and developing the above recommendations has opened a new line of communication between Finance and Click! that should significantly improve the timing and quality of financial reporting. Some specific steps being implemented include providing access to the Click! Operational Summary spreadsheet on a regular schedule - approximately 2-3 days after the financial close on the 5<sup>th</sup> workday of the month. In addition, as new procedures for journal entries and transfers are developed when implementing these recommendations, there will be a mutual sign-off so all involved will know and understand the ramifications of the process.

The Board currently sees the Click! Network Operational Summary page in the quarterly financial report package. In addition, we understand they receive the Status Summary of Capital Programs. Working with Finance and the Click! General Manager, we recommend a few changes to the Operational Summary. First, the addition of a new line titled "Net Operating Income before Depreciation" to provide a measure for when revenues exceed expenses, and essentially Click! begins to contribute cash. Second, the current Depreciation and Amortization line represents all capital spent, and will be decreased when a Power/Click! segregation is established. Third, the "Summary of Cash" section should be removed because it provides a very incomplete picture of the construction program, and a complete view is provided in the Status Summary of Capital Programs document.

#### **Click! Network Revenues Exceed Expenses Projection**

We were asked to assess "the assumptions for all three Click! Business lines and associated rates of growth and the business plan projections that revenue will exceed expenses by June 2001."

(12)

Click! maintains a robust and complex spreadsheet business model which ties together projected subscriber and customer counts, levels of service for each business line, and operating expenses by account, all by month for 15 years, and a corresponding capital spending page by year broken down by individual Work Order. This is a dynamic model that has been updated as parameters change.

The revenue projections are based on releasing all City of Tacoma nodes this year, and achieving penetration rates consistent with past experience. Thus the CATV revenue is projected to increase steadily throughout the year, and the growth rate will taper off in 2001 as the target penetration is achieved. Broadband revenue is predicted to grow also, with new customer acquisition planned during 2000, which will provide full year revenues in 2001. These assumptions and rates are consistent with current experience, and while not guaranteed, seem reasonable. A requirement for achieving the revenue is that new connections are completed to support the projected addition of new subscribers. Year to date through March, new connections are running approximately 30 days behind original projections. However, new Technicians have been hired, are completing training, and their productivity is expected to be reflected in increased connection rates from April onward. Revenues also include the previously mentioned inter-company SCADA income at the rate of approximately \$1 million per year.

Expense projections are based on payroll figures and program acquisition costs, and are broken down into 19 accounts in four departmental groups. These monthly figures are adjusted periodically for planned salary increases and staff additions. They include the previously discussed credits for the capitalization of work done by Technicians, but only at the level of a drop and one outlet per new connection. They do not include credits for the capitalization of General and Administrative expenses, or depreciation expense. Otherwise, we believe this is a reasonable projection of operating expenses.

As the model currently stands, operating losses steadily decline each month through December 2000, and turn positive and steadily increase starting in January 2001. Without the SCADA income, the breakeven point is not achieved until July 2001. The model currently has two "bottom lines" - one with and one without the SCADA income. We recommend a series of

(13)

changes to the Click! model to better align it and the Operational Summary from Finance. These changes include incorporating a G&A credit line and increasing the credit calculation for new connections to reflect the capitalization of all outlets. The Construction page should be reviewed to be sure the Work Orders reflect the revised G&A and outlet capitalization. As the inter-company charge issues are resolved, any cost for pole attachments and revenues or credits to expense should also be added. Since some of these changes are large, approximating \$1 million per year, the net result will not be known until they are completed. However, on an order-of-magnitude basis, the removal of \$1 million of SCADA income will be approximately offset or exceeded by an increased credit for G&A and outlets. If this is the actual result, the breakeven point will likely occur between January and June of 2001.

An additional word of caution is that the journal entries to make these adjustments for past periods will result in what look like very funny Operational Statement results for the months when they are entered. Further, December 2000 and January 2001 will be impacted by year-end accruals and reversals because of the limitations of the current accounting systems and procedures beyond the control of Click!. We suggest that Finance consider modifying the December and January Operational Summaries to provide footnotes that describe the year-end adjustments and the operating results before the adjustments were made.

Expansion into University Place

*"Assess the financial assumptions and the resulting projections for capital construction costs, O&M expenses and benefits/revenues estimated to accrue as a result of expanding the market for the Click! Network's three primary business lines and meeting Tacoma Power's strategic business and operational needs in the service area of University Place."*

Click! has developed a business model for the proposed expansion into University Place. This model is constructed the same way as their City of Tacoma model, with the same levels of detail. The inputs are based on an actual design down to the node level, and actual walkouts to identify aerial, underground and can-we-serve (CWS) units. The construction cost is based on the current contract costs for the various types of fiber, aerial and underground work done in the City. There is currently no allowance for capitalized G&A from either Click! or Tacoma

(14)

Power, nor a specific contingency amount. The cost per home passed at the end of the second full year of operation in University Place is approximately 95% of the cost per home passed in the City. While it might be expected to be lower because the main fiber loops, head end, hubs and equipment do not have to be duplicated in University place, the underground construction required exceeds 50% of the homes passed compared to 10-15% in the City. A construction period of six months is planned before the release of the first node for customer service. Construction spending has been aligned by year with the rapid acquisition of subscribers in the first two years, and provided for in the model in future years to support a gradual subscriber acquisition program. The initial six month capital program is estimated at \$7.7 million with additional build-out spending of \$ 5 million during the first two years of customer service.

Revenues are based on market penetrations similar to the ramp-up experience in the City of Tacoma, and target penetration by the end of the second full year of operations is 24.8%. The service mix and price per service is also similar to the City. Broadband revenue is limited based on the lower mix of businesses passed. A modest amount of SCADA income is included.

Operating costs have been estimated on an incremental basis above the current City model. Thus additional costs will be incurred for the incremental programming, advertising, taxes, and additional staff in Customer Care and Service Technicians. No additional staff are considered necessary at the Click! Administrative level or for the NOC (Network Operations Center) to support the projected subscriber count. The credit to expense for the capitalization of new connections has been increased to include approximately 1.75 outlets per installation, but may need to be increased further in line with the recommendations above. Depreciation expense is not included in the model.

As currently modelled, revenues exceed expenses after the first six months of customer service - about 12 months from the start of construction in University Place. All full years of customer service have net positive cash flow, even if the SCADA income is not included. While annual cash flows are positive from the first year, the model shows cumulative cash flow becoming positive in year 14 of the project, based on current dollars. If construction were authorized for the second half of 2000, you may benefit from the availability of

(15)

construction crews familiar with your standards, capitalize on the current public momentum Click! has established, and approximately match the declining connection needs for your Service Technicians in the City by the end of 2000 with the opening of new nodes in University Place in approximately January 2001.

Click!'s Position in the Telecommunications Evolution

*"Assess Click!'s current and planned business and marketing model in the context of the evolving telecommunications technology as we understand it to suggest areas of risk/reward and the overall public benefit to the citizens and businesses served by Click!"*

Click! continues to be at the forefront among public and private utility telecommunications efforts. This position has brought considerable national recognition to Tacoma, and also significant tangible benefits. From a review of local press clippings, at least 400 new jobs, five building renovation projects, enhanced University of Washington and UPS academic programs, and several development projects are all linked to the development and presence of Click!. Establishing Click! prompted AT&T (TCI and Excite @home) to upgrade services to Tacoma residents much earlier than otherwise would have happened. Your decision to operate primarily as a wholesaler beyond the CATV service level will stabilize operating and development costs. You remain aware of the developing technologies in digital set-top boxes and the integration of telephony into a variety of services, and are studying ways to cost effectively deploy them to people on the Click! network - without going into head-to-head competition with your own customers.

The success of Click! and its continuing value to the community depends on a team effort among business, civic and education leaders to create a unique region with considerable growth potential. The fiber/coax network is literally and figuratively the thread that ties them together and enables this potential. Working together, this team can leverage the Click! asset to attract major new businesses, create jobs, attract students to programs that provide the skills for those jobs and generally enhance the whole community.

(16)

However, based on our experience serving large, national e-commerce firms, the exceptional benefits of a Wired City, modest real estate prices, available labor, and centers of higher education with technology programs, there is one dimension Tacoma may wish to evaluate in more detail, and that is taxes. When the likes of Webvan established their programs to build twenty-six \$40 million distribution and service centers with 5-600 jobs each, one of their critical site evaluation factors is the tax environment. When it comes to attracting large, sophisticated firms with the greatest benefits for Tacoma, competing sites will be any location within a mile or two of fiber because the cost to make the connection is minor compared to the project size. We understand Tacoma's tax structure has discouraged some businesses in the past, and may play a critical role in attracting new business. Reviewing tax policy options may be one of the more significant ways the City can contribute to the growth momentum you have established, and thus help to maximize returns on the Click! investment for the community.

Summary

Overall, the Click! Network has been deployed to date within the approved budget, with service levels and quality equalling, and in some cases exceeding, the original plans. The technical quality and redundancy is a model system. Customer service is a hallmark of the operation, particularly your commitment to managing provisioning expectations within an approximate two-week window - then keeping the schedules you set. The extra attention to customer education and support is likely to enhance customer retention. Actual expenses have been well managed, inspected and approved. We have identified a number of areas where accounting, reporting and forecasting can be improved, and many of these recommendations have been or are being implemented. After these accounting adjustments and if the business continues as planned for the remainder of 2000, revenues are forecast to exceed expenses before June of 2001. In total, you have provided the substance to the reality of Tacoma, America's #1 Wired City.

\* \* \* \* \*

We appreciate this opportunity to have worked with you and the Click! Network staff on this most important project and wish you success in your continued development of Click! Should you have any questions regarding this report, or desire assistance in implementing our recommendations, please contact Rick Van Mell at 415-957-3138.

Very truly yours,

## CTC CONTRACT – REQUEST FOR INFORMATION

- TPU Board Resolution No. U-10988 passed January 24, 2018: Directed the City Manager and Interim TPU Director to jointly seek information from interested and knowledgeable entities to determine how the 12 adopted community policy goals can be achieved through a restructuring of Click!.
- First Step (Develop RFI): Request for Information (RFI) will be developed by CTC. The RFI is intended to solicit detailed responses from entities that may have an interest in developing a partnership with the City. The RFI will provide background information (City and Click!) and will include the City’s 12 policy goals. Once released, the RFI will be placed on relevant lists and other distribution channels identified by CTC.

**March 16<sup>th</sup> (Friday):** Completion date of initial draft RFI.

**March 20<sup>th</sup> (Tuesday):** Draft presented to City Council and TPU Board at joint study session.

**March 30<sup>th</sup> (Friday):** RFI finalized.

**April 2<sup>nd</sup> (Monday):** RFI released.

**April 30<sup>th</sup> (Monday):** RFI closed.

- Second Step (Ranking and Recommendations).

Detailed Questions. After initial responses are received, high-level questions will be asked of the respondents to elicit more specific information to develop an understanding of the respondents experience, financial capability and commitment to partnering with the City.

Ranking and Recommendations: CTC will rank responses and follow-up with the viable respondents and provide a recommendation to City Manager and TPU Director.

**May 4<sup>th</sup> (Friday):** Ranking and Recommendation provided to City.

- Third Step (Follow-up): CTC will conduct in-person follow discussions with selected respondents which may include question and answer sessions between City staff and respondents and a tour of Click! facilities.

**May 11 (Friday):** Complete follow-up with selected respondents.

- Fourth Step (Assessment): CTC will analyze the data and prepare an assessment of the potential opportunities and market response. The assessment will include recommendations regarding potential next steps and an evaluation of what was learned, in particular, how the 12 policy goals fit may be accommodated and what the potential outcomes might be.

**May 29<sup>th</sup> (Tuesday):** Present report and recommendation to City Council and TPU Board (*Need to schedule joint study session if possible*)

## PROFESSIONAL SERVICES CONTRACT

THIS CONTRACT, made and entered into effective this **9th** day of **February, 2018**, by and between the **CITY OF TACOMA**, a municipal corporation of the state of Washington (hereinafter the "CITY"), and **CTC TECHNOLOGY & ENERGY**, a Maryland corporation (hereinafter the "CONTRACTOR");

WHEREAS in January 2018, Resolution No. U-10988 of the Tacoma Public Utility Board and Resolution No. 39930 of the Tacoma City Council were adopted establishing a vision and next steps for maximizing the value of Click! Network, and

WHEREAS, these resolutions identified twelve community policy goals and directed that the Interim Director of Tacoma Public Utilities and the City Manager work jointly to prepare requests for information, proposals and qualifications for entities expressing interest in working with the City to determine how the community policy goals can be achieved through collaboration and restructuring of Click!, and

WHEREAS, the resolutions provide that the Utilities Director and City Manager may retain the services of a consultant to assist in this work, and

WHEREAS, the City has the need for consultant services to, prepare a request for information, review and evaluate the responses to the RFI and make recommendations to the Tacoma Public Utilities Board and Tacoma City Council, and

WHEREAS the Contractor has expertise in providing public broadband network business model analysis, strategic planning and business planning and related services;

NOW, THEREFORE, in consideration of the mutual promises and obligations hereinafter set forth, the Parties hereto agree as follows:

### **1. Scope of Services/Work.**

A. The CONTRACTOR agrees to diligently and completely perform the services and/or deliverables described in Exhibit "A" (Scope of Work) attached hereto and incorporated herein.

B. Changes to Scope of Work. The CITY shall have the right to make changes within the general scope of services and/or deliverables upon execution in writing of a change order or amendment hereto. If the changes will result in additional work effort by the CONTRACTOR, the CITY will agree to reasonably compensate the CONTRACTOR for such additional effort up to the maximum amount specified herein or as otherwise provided by City Code.

## EXHIBIT “A”

### SCOPE OF WORK

#### Scope of Work

Building on our previous work with the City, we propose to perform the following tasks:

#### Task 1: Prepare an RFI

We will develop and draft the technical and business components of a request for information (RFI) designed to solicit detailed responses from public and private sector entities that may have an interest in developing a public-public or a public-private partnership with the City. The RFI will also serve to inform the public and private sectors—enabling respondents to understand the potential business opportunity and, just as importantly, to understand the City’s underlying policy goals as reflected in the 12 items adopted by resolution.

The RFI will also describe Tacoma and the region (i.e. Tacoma Power service area) itself—its location, demographics, and attributes—as a way to build a basic picture of market opportunities for potential bidders. The RFI will then describe the infrastructure and operations of Click! in some detail. It will then present the potential partnership opportunity in relatively simple business terms—without discussion of costs or legal structure, for example, because those are items about which we would seek input from the public and private sectors.

After setting the stage, the RFI will then ask respondents to reply to a series of relatively high-level questions, followed by a series of much more specific and pointed questions. The more detailed questions will be designed to solicit useful information from potential partners about their interest in partnering with the City, their existing operations, their experience, their financial stability, and their past experience and commitment to critical City goals such as net neutrality.

The RFI will also be designed to elicit as much practical financial information as possible, including the potential willingness of public and private partners to pay for the use of Click! assets under different scenarios.

As we discussed on the phone, the fact that this process will be public and that neither the RFI responses nor our summary recommendations can be kept private may mean that some of the responses will be less concrete and clear than we would like. We are hopeful that the RFI presents an opportunity to get a sense of the market. It will be designed to do so as effectively as possible, subject to the limitation that RFI respondents are sometimes reluctant to divulge too much information that would be available to their competitors.

Our deliverable in this task will be comprehensive narrative RFI language. (We will require the City’s help in terms of a description of the Click! infrastructure, information

about the technologies used, and so on, so that we can include that material in the sections we prepare.) We will provide the business and technical narrative elements of the RFI and host the publication/release of the RFI, and be the point of delivery and collection of information responsive to the RFI.

Once the RFI is released, we will place the RFI on the relevant lists and in other distribution channels where we know potential partners would be notified about it. We will also make sure it is received by the dozen or so companies that we would hope would be interested in responding.

We will endeavor to complete the draft RFI by March 16th for presentation to the City Council at a joint study session with Public Utility Board on Tuesday, March 20<sup>th</sup> and will endeavor to complete Task 1 by Friday, March 30, 2018.

Our understanding is that the City intends to release the RFI on or around April 2<sup>nd</sup>, 2018 with a due date of April 31<sup>st</sup>, 2018.

### **Task 2: Review RFI Responses and Conduct Follow-up Calls or Meetings with Some or All of the Respondents**

Once responses from the public and private sectors are received we will review and evaluate them on the City's behalf. We will rank the responses, identifying those we feel are most viable and worthy of follow-up. We will verbally advise City staff on our ranking and make recommendations on appropriate follow-up steps. Upon completion of this process, we will confer our ranking and recommendations on follow-up steps with the Public Utility Board and the City Council. We will then be prepared to conduct follow-up phone calls and meetings with the highest-ranked respondents.

We will endeavor to complete this first phase of Task 2 by Friday, May 4th, 2018.

We will then conduct in-person follow-up discussions in Tacoma with the more interesting respondents—potentially giving the respondents the opportunity to ask questions about the Click! infrastructure and tour the City's facilities, while giving the City and CTC the opportunity to ask additional questions and get more input from the respondents about their interest in the opportunity.

We will endeavor to complete this second phase of Task 2 by Friday, May 11, 2018.

### **Task 3: Develop a Summary Memorandum and Make Recommendations in Regard to Next Steps**

Based on the data collected through the RFI (written responses) and follow-up discussions, we will write a summary memorandum and report of our assessment of the City's potential opportunities, how we think the market would react if the City were to issue an RFP, and how the City's interests could be promoted and protected. The memorandum will include a full set of recommendations for next steps, as well as

an evaluation of what we have learned about the potential trade-offs among policy goals and an analysis of potential outcomes.

We will endeavor to complete Task 3 by Tuesday, May 29<sup>th</sup>, 2018. Joanne Hovis will then be available to present the memo and recommendations, and to respond to questions, before the Public Utility Board and the City Council as requested.

### **Project Fees**

CTC proposes to perform the tasks identified in the scope of work above for a not-to-exceed cost of \$37,000. Travel costs for Joanne’s trips to assist in interviews and to present recommendations will be billed separately in addition to this budget.

We will bill this work at the following hourly rates:

<b>Labor Category</b>	<b>Rate</b>
Director of Business Consulting /	\$170
Principal Analyst / Engineer	\$160
Senior Project Analyst / Engineer	\$150
Senior Analyst / Engineer	\$140
Staff Analyst / Engineer	\$130
Communications Aide / Engineer Aide	\$75

CTC’s billing rates are inclusive of all routine expenses including administrative, accounting, and computer support, telephone calls, and photocopying. Local travel is billed at current standard mileage rates. Non-routine expenses and long-distance travel are recovered at direct cost with no mark-up.

**City of Tacoma, Washington, and Tacoma Public Utilities**

**Request for Information and Qualifications**

**for**

**Partnership Arrangements for Tacoma Power's Click! Network**

**March 23, 2018**

definition (HD) channels, and 11,000 hours of on-demand content. Click! also offers a multi-room DVR system, as well as TV Everywhere, allowing customers to watch TV from any device.

At the end of 2017, Click! had 21,303 wholesale residential internet subscribers and 1,310 wholesale commercial internet subscribers. Rainer Connect and Advanced Stream are the two companies that currently provide retail cable modem internet service over Click!'s open access network. They provide speeds ranging from 6 Mbps to 100 Mbps downstream, and from 1 Mbps to 10 Mbps upstream with prices ranging from \$31.95 per month to \$149.95 per month. These companies are on a month-to-month contract with Click!.

Rainer Connect, Optic Fusion, Zayo, Level 3, CenturyLink, Noel, and Wave have entered into agreements with Click! to provide a range of business services over the Metro Ethernet Forum (MEF) 2.0 certified network, including Ethernet Private Line, Ethernet Virtual Private Line, Ethernet Local Area Network, Voice, Colocation, Dark Fiber, Virtual Cross Connect, Cellular Backhaul, and Wavelength. A map of existing lit buildings is [located online](#). These retail business service providers typically have a five-year contract with Click! with an automatic one-year extension. Any Provider that is selected through this process to partner with the City will be obligated to honor Click!'s contracts with these companies until their expiration.

As a wholesale internet provider, Click! staff maintains, repairs, monitors, and upgrades the network as needed. The staff members install data service drops, provision cable modems, and provide marketing support. Click! charges its ISP partners 60 percent of the retail price as the wholesale rate.

Current rate cards are included in Attachment A; a rate history is included in Attachment B.

### **Market Overview**

While the Click! network offers service in Tacoma, Fircrest, University Place, Pierce County, Lakewood, and Fife, it does not pass every location that TPU's electric network passes. Click! passes roughly two-thirds of homes in TPU's electric service area. While Click! service is available to 90 percent of TPU electric customers in the City of Tacoma itself, it is only available to 59 percent of TPU customers in Fircrest, 55 percent of TPU customers in University Place, 58 percent of TPU customers in unincorporated Pierce County, 53 percent of TPU customers in Lakewood, and 42 percent of TPU customers in Fife. Approximately 24,500 homes passed (21.5 percent) subscribe to at least one service from Click! or its retail ISP partners.

The City and TPU seek to ensure that the network can be expanded to more of TPU's electric service territory through the collaboration contemplated here.

Click! competes with Comcast, DirecTV, and DISH Network for cable TV subscribers. As of May 2015, Click! had a 13 percent share of the video market.

Click!'s retail ISP partners compete with Comcast and CenturyLink. As of May 2015, Click!'s retail ISP partners had a combined 15 percent share of the internet market.

### **Operations and Staffing**

Click! is an operating section of Tacoma Power, the electrical division of TPU. It has 92 budgeted full-time employees. An organizational chart is included in Attachment D.

### **Financial Summary**

In 2017, the Click! network's total operating revenue was approximately \$2.2 million; of that, 67 percent came from cable television customers, 28 percent came from retail ISP partners providing broadband, 4 percent came from partner ISPs providing Ethernet and SONET services, and 1 percent came from interdepartmental sources. In the same year, Click! spent about \$1.8 million on administration and sales expenses and about \$900,000 on operations and maintenance expenses. Total expenses in 2017 came to \$2.7 million, for a net loss of just more than \$500,000.

An operational summary containing a breakdown of revenue and expenses for FY2016 and FY2017 is included in Attachment F. A detailed financial statement for FY2017 is included in Attachment G.

## **V. The Evaluation Process**

The City will use a variety of mechanisms to evaluate responses, and will review submissions based on:

- Respondents' expertise, experience, and technical and financial qualifications, per the instructions in Section VI
- How well the proposed business arrangement furthers the City's 12 community policy goals, as detailed in Section II
- How the proposed arrangement brings value and the benefits of next-generation broadband to the Tacoma community
- How the proposed business model provides a predictable revenue stream to TPU
- The potential of the proposed business model to enable expansion to areas of TPU's electric service territory that Click! does not yet reach
- Additional factors that may be determined in the course of this RFI/Q process

The City may provide more detailed information regarding available assets to one or more respondents, and ask those respondents to refine their responses.

### The Way Forward for Click! Network

Dear City of Tacoma Policy Makers,

As 20th anniversary celebrations are being planned for July, Click! is at a crossroads. Policymakers face serious alternatives, in a sea of uncertainty, with little undisputed information to rely on.

On one hand it's alleged that Click! is losing millions of dollars; and, therefore being illegally subsidized by Tacoma Power rate payers. On the other hand that allegation is vigorously opposed and disputed - even by the City of Tacoma's own attorneys<sup>1</sup>.

If the plaintiffs are correct, and the courts find Click! is an illegal activity and order it to be shut down<sup>2</sup>, then drastic measures would be required to save Click!. Our proposal provides a nimble strategy, that preserves Click!, while offering a way forward in the event of an unlikely, adverse, outcome to the lawsuit. We call this the "Pivot Plan".

However, if Click! is actually a legally operating endeavor, serving its intended purpose as an economic engine of growth and prosperity for our community, while bringing unseen benefits and savings to ratepayers, public education institutions and government stakeholders, then drastic changes are not needed at this time.

In this case, policymakers are free to support and improve Click!; and, to build upon the first 20 years of success -while leveraging Click! for digital equality in Tacoma. Perhaps the old saying applies, "If it ain't broke, don't fix it". Advanced Stream's proposal offers a simple solution. We present a prudent

<sup>1</sup> See page 3, line 14: <http://stickwithclick.com/images/Declaration-of-Kari-L-Vander-Stoep-In-Support-of-A-Stay.pdf>

<sup>2</sup> Candice Ruud March 2018 "Power revenues can't be used to pay for Click network's commercial expenses, judge says" <http://www.thenewtribune.com/news/local/article203633679.html>

and proven path forward. A way to redouble efforts and build upon the past 20 years - while preserving options.

Here we carefully consider and address the twelve policy goals outlined in the RFI/Q.

### **Alternatives For Click! - Achieving The 12 Policy Goals!**

The current situation is reminiscent of January 2012, when TPU management first announced that Click! was losing money and proposed a “Retail Compete” strategy that would have expanded Click!’s role, from a wholesale provider of ISP services, into a retail ISP and phone company. If implemented, that proposal - known as “All In” - would have put Click! into direct competition with its private ISP partners.

That “All In” proposal, which would have greatly expanded the role of government, was unanimously rejected by the TPU Board in 2012. Instead, the Board approved “Plan B”, requiring the ISPs to add 6,000 more Internet customers over a 4-year period.

With close collaboration, between Click! staff and the private ISP partners, “Plan B” was a tremendous success - delivering the promised 6,000 new customers ahead of schedule. Click! become profitable in 2014 and was also paying down all the sunk depreciation and amortization costs.<sup>3</sup> The 2012 “Plan B” example showed what can be accomplished through a prudent Public-Private Partnership.

Advanced Stream’s proposal clearly shows how Click! can, once again, expand and build upon the current public-private business model to become profitable and achieve all 12 public policy goals.

The Advanced Stream solution offers two clear alternatives for Click! going forward.

First, our “Plan B 2.0” option, which sees, in the next 20 years, a bright future and builds upon Click!’s substantial achievements to obtain a successful outcome of all 12 policy goals. The “Plan B 2.0” outlines cost savings and offers private ISP funding for Click! to achieve Gigabit speeds. We present marketing strategies to achieve maximum profitability and take into consideration some amazing opportunities for increasing revenue.

Secondly, we outline our “Pivot Plan” -which dramatically lowers sales, marketing and operating costs for Click! by having the ISPs function as payment and service centers - for their respective CATV customers - in support of the Click! CATV products. The ISP partners would also expand their current role of assisting with CATV sales<sup>4</sup>. This “Pivot Plan” provides policymakers a contingency alternative, way to “Pivot”, while remaining on the more desirable “Plan B 2.0” path. This strategy preserves Click!’s private-public partnership model and would only be required in the event of an adverse outcome in the pending legal case.

Advanced Stream’s proposal saves the living wage jobs of Click! Staff and provides a logical, flexible, way forward - even if unlikely legal, political, or market circumstances, one day, force drastic changes.

---

<sup>3</sup> <http://stickwithclick.com/images/Final-Click-Operating-Income-March-2015.jpg>

<sup>4</sup> Since the ISPs and Click!, in most cases, have a shared a relationship with these common customers, any transfer of the CATV customers must be sensitive to the current non-disclosure elements in the ISP contracts, in particular the private ISP customer lists and details of those valuable relationships. The ISPs have worked for many years to acquire these mutual customers and it would be unfair for Click! to hand over their CATV customers to just one of the ISPs - thereby harming the other ISP.

Mitchell Shook  
CEO  
Advanced Stream Broadband

mitch@advancedstream.com

## **2. Business Model Summary - Plan B 2.0! Building On The Open Access Model.**

Click! holds amazing potential for growth in the next 20 years. With less than 50% name recognition and only a 15% “take rate”, or market share, Click! has tremendous opportunity for growth.

Our proposal details surprising cost savings that will allow Click! to quickly and inexpensively implement Gigabit speeds.<sup>5</sup> We identify marketing strategies to achieve full profitability and highlight some of the amazing opportunities Click! has now to expand and increased revenue.

Now is not the time to abandon Click! Network’s successful business model. Results of the current lawsuit are not in; and, those findings may reveal that Click! is, in fact, a successful, legal and profitable undertaking.

It can be useful, however, to consider an alternative - contingency - path - a way for policy makers to change direction and “pivot” from our proposed “Plan B 2.0” path if Click! is declared to be an illegal activity and forced to exit or liquidate its business by a court.

Advanced Stream’s proposed business strategy provides a way for policy makers to respond, in the event a “Pivot Plan” is required. In section 8, below, we detail the “Pivot Plan” and the proposed establishment of a new 501 (c) non-profit entity to manage the wholesale broadband and Internet activities, perform installations, provide high level network administration, engineering and perform some CATV customer service functions.

### **2.1 Preserving The Current Public-private Partnership Model.**

“Plan B 2.0” preserves and expands Tacoma’s open access network, and the public-private partnership formula that has been the foundation of Click!’s success since its inception. Customers benefit from the increased competition and better service that open access brings to our local market.

Customers always talk about how much they love Click! and the local ISPs customer service. This is possible because of the dedicated, local, staff who focus on the customers’ needs.

When customers have computer issues and need technical assistance, for whatever reason, they will usually call their ISP. The ISP assists and retains these customers. Whether it’s computer viruses, WiFi router or networking issues, forgotten passwords, expired credit cards etc., the ISP takes that call and helps those customers.

When there are issues with CATV, Click! is there with world class, local support, taking calls almost instantaneously. The Click! customer service center is located just inside the lobby at TPU - a perfect location for attracting new customers and reinforcing the brand’s marketing message.

The ISPs are well suited for bringing in customers. They have tremendous entrepreneurial and marketing skills. They are a proven resource for capturing market share.

---

<sup>5</sup> Advanced Stream’s proposal provides Click! with funding, if needed, to implement DOCSIS 3.1 and SIPV.

One reason the wholesale partnership model has worked well for Click! is that the private sector ISP partners are nimble and free to practice marketing tactics that a government entity, such as Click!, are not be allowed to deploy. Price discrimination is one such example. In the competitive broadband market, it's very common for competitors to "wheel and deal" to win a customer. "What will it take" is one of Advanced Stream's most successful closing tactics for winning new customers. A bureaucratic, governmental, institution is not allowed to practice such "guerilla marketing" tactics. Do so would be considered a "gift of public funds" - an illegal act for public officials.

## 2.2 Low Hanging Fruit - Name Recognition and Take Rate

Click! has extremely low name recognition and market share rates for a municipal network. Given the communities' civic pride in Click!, combined with growing public support for municipal broadband networks generally, there is no reason that Click! cannot at least double its current 15% take rate - to achieve a 30% take rate.

With a gigabit offering, Click! might even achieve the amazing 60% take rate Chattanooga Tennessee's EPB<sup>6</sup> has accomplished. With a 30% take rate, Click! would show \$10 million a year profit. If Click! achieved a 60% take rate, it would be earning \$14 million a year - all after depreciation and amortization. Such take rates are not uncommon. A project in San Francisco has an estimated 48% take rate. Certainly Click can improve dramatically over its current 15% rate<sup>7</sup>.

## 2.3 The More The Merrier! Opening up our Open Access Network

"Plan B 2.0" preserves, even increases, existing competition in the market. Click! can build on this successful open access formula by allowing additional qualified ISPs to join the network. These new ISP partners can bring additional resources to bear, unencumbered by the government regulation and bureaucracy, in support of the marketing efforts needed to take market share and expand Click!'s wholesale ISP and Cable TV customer base<sup>8</sup>. It is a win-win for Click!, when the ISP partner signs up a customer - since nearly 50% of ISP customers also subscribe to CATV services<sup>9</sup>.

Why limit the network to just 2 or 3 ISP providers? With more ISPs promoting the Internet service to potential customers, more marketing resources can be deployed in acquiring customers. We believe this will allow Click! to grow its wholesale Internet customer base even faster. The profits from these activities can further support network expansion and our community's important digital equity initiatives.

This open access model is a proven strategy for winning new customers. The ISPs have demonstrated their ability to bring additional customers when called upon.

## 2.4 "Plan B 2.0" -The Clear Path Forward

Beginning in 2012, the current ISP partners<sup>10</sup> agreed to add 6,000 new Internet customers to Click! Network. They succeeded in achieving that goal, with an effort known as "Plan B" - the plan was

---

<sup>6</sup> Interview with Colman Keane, the Director of Fiber Technology for EPB Chattanooga 6/12/2017

<sup>8</sup> There were 22,650 ISP customers and 15,787 CATV customer, on March 1, 2018 -from RFI/Q Appendix

<sup>9</sup> From Click! 2018 RFI/Q Attachment -ISP w/CATV Penetration based on total ISP Subs

<sup>10</sup> Advanced Stream, Net Venture and Rainier Connect.

named as an alternative to the “All In” or “Retail Compete” model that Click! management proposed at the time. The goal was accomplished over a 4-year period.

Click! could, once again, enlist the support of its ISP partners, by leveraging their marketing skills and resources, to lead a membership drive designed to acquire an additional 8,400 Internet customers over the next 3 years.

This would generate an additional \$3 million a year in wholesale ISP profits for Click! -covering all of Click!'s operational losses<sup>11</sup>. The original Plan B was accomplished in under 4 years. We believe that Plan B 2.0 can be accomplished in 3 years -as our spreadsheet in Exhibit B shows.<sup>12</sup> The ISPs bear all the marketing expenses and promotional costs for acquiring these customers, while Click! benefits from the additional wholesale revenue<sup>13</sup>.

Such expanded usage of Click! Network, and the additional revenue it brings, ultimately supports the very important digital inclusion goals.

## 2.5 Preserving Competition –While rolling out Gigabit Speeds

The implementation of Gigabit speed is one of the most important goals for Click! Staying current with the latest technological developments is imperative. Historically, Every increase in speeds, over the history of Click!, has resulted in a surge in customer sign-ups. Once Gigabit services are offered, Click! market share will once again dramatically increase.

With the open access model intact, Click! staff can dedicate their time and resources to implementation of DOCSIS 3.1 Gigabit speeds, while avoiding complicated structural changes to the system at a critical time -when Click needs to be focused on expanding its commercial offerings, addressing digital equity and focusing resources on the deployment of symmetrical Gigabit speeds<sup>14</sup> via DOCSIS 3.1 and FTTH<sup>15</sup> deployments.

## 2.6 Switched IPTV and Gigabit Now!

Fortunately Click! is in the right place at the right time with its state of the art DOCSIS 3.1 capable platform. Moving Click! to IPTV and delivering Gigabit service to Tacoma is not difficult and will lead to a dramatic addition of customers.

Click! has issued an RFP for Software Based CMTS. The respondents have shown that new technology now allows a surprisingly inexpensive way to add symmetrical Gigabit speeds to Click! Network<sup>16</sup>.

---

<sup>11</sup> Click! showed an operating loss, of \$4.8 million, for 2017 -after depreciation and amortization. With 8,400 additional ISP customers, Click would be generating \$2 million a year in net profit -after paying down all depreciation and amortization costs -including costs for the DOCSIS 3.1 upgrade. ISP revenue is 100% marginal profit, since there are no variable costs. The cost for the gateway is a fixed cost.

<sup>12</sup> The author of this paper, Mitchell Shook, led the membership drive for Advanced Stream under Plan B

<sup>13</sup> The average revenue per ISP user on Click! is currently \$25. Our proposal increases this ARPU to \$30. Important to note that over 50% of ISP customers take CATV also. Since CATV has a 20% gross margin, the additional CATV customers could contribute an additional \$1.1 million a year in gross profit; but, to be conservative our projections do not assume any CATV customer growth.

<sup>14</sup>JEFF BAUMGARTNER, MultiChannel News, JAN 30,2018 "CableLabs adds MAC Layer support to extension to DOCSIS 3.1 that will deliver symmetrical multi-gigabit speeds"

<https://www.multichannel.com/news/full-duplex-docsis-takes-another-step-forward-417820>

<sup>15</sup> New plant extension are being done with fiber-to-the-home (FTTH) technology.

<sup>16</sup> Both the Cisco solution and Harmonic solution estimate DOCSIS 3.1 solutions, that deliver Gigabit, can be fully enabled for less than\$1.5 million.

Thanks to recent technological developments in the DOCSIS standards, distributed architecture, and specifically Remote PHY (R-PHY)<sup>17</sup>, proposals from vendors such as Cisco and Harmonic<sup>18</sup>, now show that fully deploying Gigabit over Click! will cost under \$1.2 million<sup>19</sup>.

Upgrading Click! to a switched IPTV (SWIP) platform - with a hosted and managed video control plane solution<sup>20</sup> is an inexpensive and prudent step in supporting Gigabit speeds and the need for future bandwidth growth.

## 2.7 A Realistic View Of Click's Financial Situation

There are many ways to improve Click! and build upon its success; but, measuring that success and progress is also important. Before looking further at the many opportunities for future growth and increased revenue, it is important to understand why many believe Click! is already very viable and can certainly be a profitable, financially stable, business with many amazing opportunities for our community.

### 2.7.1 Achieving Profitability – Easily Done!

More than anything, long term financial stability for Click! Network requires increasing revenues and controlling costs. Finding more users, commercial and non-commercial, increases profits. Profits that can support digital inclusion and be used to expand and maintain the network. Click! showed an operating loss of \$2.4 million in 2017<sup>21</sup>. That loss can easily be covered, by cutting one full time management position, that is no longer essential to Click! Operations, and introducing a \$5 price increase per ISP and CATV customer<sup>22</sup>. See Exhibit B.

### 2.7.2 Cutting Management Costs

Under our proposal the “All In” retail compete model would be shelved and the ISP contracts would be renewed. This would eliminate the need for the current General Manager of Click! - who was hired specifically for the Retail Compete (Plan A) program. This position can easily be filled from within, by current Click! Management<sup>23</sup>. Eliminating this position saves approximately \$17,645, per month. Other savings could be achieved by reducing management costs for CATV sales and marketing. This cost center, 552200, which is “Click Marketing and Administration” ran over \$1 million in 2017. There is no need for Click! to emphasize CATV sales under “Plan B 2.0” - since the ISP partners bear all the expense for bringing in new customers.

### 2.7.3 Adding Revenue - Creating Incentive for Investment

Renewing the 3 year contracts with the ISPs allows them certainty -which affords them the ability to invest the significant resources required in fulfilling the goals of Plan B 2.0.

---

<sup>17</sup> RPHY takes the QAM modulation/demodulation portion of the CMTS and separates it to a location outside of the CMTS. This function will now be handled directly in an HFC node in the field or a “shelf” type unit located in a hub or cabinet. The connection between the CMTS and the Remote PHY Device (RPD) is traditional Ethernet.

<sup>18</sup> Harmonic’s CableOS CCAP solution, Submitted by MegaHertz LLC has no licensing cost; but, is not “standards based”. It provides a software-based CMTS running on off-the shelf 1-RU servers. It is an end-to-end Remote PHY system with high RF port density, CableOS easily enables the migration to multi-gigabit broadband with DOCSIS 3.1

<sup>19</sup> Much less than the \$5 to \$ 10 million estimates that were presented by Click! Staff to City Council two years ago.

<sup>20</sup> High Speed Internet is becoming Click!’s most important service and RF spectrum must be managed efficiently.

<sup>21</sup> Not including the sunk cost of depreciation and amortization -which were \$2,455,130. With depreciation and amortization included, Click! shows a \$4.9 million loss.

<sup>22</sup> Given 38,437 total wholesale ISP and CATV customers, an increase of \$5 per month covers the losses.

<sup>23</sup> Either the current Business Operations (cost center 552100) or Technical Operation ( 552300) managers could do this.

Advanced Stream's proposed membership drive anticipates an increase in speeds, a small price increase and the addition of 8,400 more Internet customers<sup>24</sup> - all of which generates an additional \$5 million a year in wholesale ISP profits for Click! in under 3 years - thereby covering all of Click!'s losses. By the end of year 3, the plan generates \$6.2 million of additional revenue. See Exhibit B.

### 3. Affirmations - Addressing The Core Project Goals

This section shows how the 12 strategic goals are impacted by Advanced Stream's proposed strategy of "Plan B 2.0" with an option to "pivot" if needed.

#### 3.1 Public Ownership and Use of the Telecommunications Assets

"Plan B 2.0", by building upon the current public/private open access arrangement with the ISP and MSA retail service partners<sup>25</sup>, insures the continued public ownership of the telecommunications assets. This option provides the best security for the network and assets necessary for TPU operations and the least disruption for current Click! employees, while securing future access to the network for public purposes.

#### 3.2 Equitable Access to Services - Digital Equity Action Committee

With "Plan B 2.0", TPU and Click! staff remain fully in charge of future expansion decisions. Residential and commercial ratepayers continue to benefit from the impartial, equitable, strategy Click! has historically followed for building out the network.

#### 3.3 Affordability -Expanding Commercial Activity to Support Public Policy

Under the current model, Click! offers discounted residential Cable TV services to low income customers.<sup>26</sup> Advanced Stream has its \$14.95 Digital Inclusion package for qualified low-income customers. Click! can easily support such programs, in conjunction with the ISP partners, by simply providing a wholesale "Digital Inclusion" package to the ISPs. The ISPs would be contractually bound to deliver these services to the end users at the wholesale cost<sup>27</sup> - without making any profit on these customers.

Click! could update the agreements, when renewing the contracts with the wholesale ISP partners, and require them to provide some WiFi and cable modem services for free, or at low cost, to prioritized areas, or "inclusion zones", as part of their contracts.

#### 3.4 Net Neutrality For All Customers

This "Plan B 2.0" option makes no change with respect to Click's ability to set and adhere to net neutrality principles. This strategy supports Tacoma's strong belief in Net Neutrality – that all lawful internet content is equally accessible, regardless of its subject matter or viewpoint. With Click! in control of the DNS servers, the Internet gateway routers, and IP address block, a retail ISP over

---

<sup>24</sup> Like the ISP did in 2012 under Plan-B, when they added 6,000 new customers.

<sup>25</sup> The retail service providers, Advanced Stream, Rainier Connect, Net Venture, Optic Fusion, Zayo, Level 3, Centurylink, Noel, and Wave Broadband currently provide a range of services over Click! network

<sup>26</sup> Customers that qualify for TPU's Energy Assistance Program also receive discounted CATV services.

<sup>27</sup> The ISPs should not be profiting from customers on this program. It's their turn to "give back" to society -for the 20 years of success that they have enjoyed while operating over Click! Network.

Click! cannot speed, slow, or block internet content based upon political views, paid prioritization or other businesses interests.

Since President Trump has overturned the FCC internet privacy rules, private telecom companies can now collect and sell their customers' private online usage information. Given federal rollbacks of net neutrality and internet privacy protections, municipal ownership and operation of Internet services is one sure way to protect customers' constitutional rights to free speech and privacy.

The ACLU has recently called on local governments to pursue providing broadband to residents to help counteract federal rollbacks of net neutrality and internet privacy protections<sup>28</sup>. With Advanced Stream's plan no drastic changes are made to this part of Click! Network's proven business model.

### 3.5 Open Access - Preserving A Proven Strategy for Success

"Plan B 2.0" preserves Tacoma's open access network, and the public-private partnerships that have been the foundation of Click! success since its inception. Customers benefit from the competition and better service that open access brings to our local market.

This open access model is a proven strategy for winning new customers. The ISPs have demonstrated their ability to bring additional customers when called upon.

### 3.6 Preserving Competition –While rolling out Gigabit Speeds

"Plan B 2.0" preserves, even increases, existing competition in the market. With Advanced Stream's plan, more retail ISP partners are added to Click!

### 3.7 Safeguarding Municipal Use By Tacoma Power, The City, And Other Local Governments

Under the "Plan B 2.0" alternative, Click! would continue maintaining and supporting the City's Institutional Network (I-NET) and the 130 public institutions that currently benefit from it. Additional institutions that aren't currently using it can even be added, further benefiting the community.

Click! positively impacts our community, furthering education, job and civic engagement opportunities. This strategy safeguards continued municipal use. Clearly now is not the time to give up on Click!

### 3.8 Financial Stability For Click! - Switched IPTV and Gigabit Now!

The implementation of Gigabit speed is one of the most important goals for Click! Staying current with the latest technological developments is imperative.

Moving Click! to IPTV and delivering Gigabit service to Tacoma will lead to a dramatic addition of customers. Click! has always experienced growth in customers as new, higher speed, packages are introduced. The last major upgrade, from DOCSIS 2.0 to DOCSIS 3.0, occurred in 2012 and, in conjunction with Plan-B, resulted in an additional 6,000 ISP customers.

Fortunately Click! is in the right place at the right time with its state of the art DOCSIS 3.1 capable platform. Click! has issued an [RFP for Software Based CMTS](#). The respondents have shown that new technology now allows a surprisingly inexpensive way to add symmetrical Gigabit speeds to Click!

---

<sup>28</sup> Jay Stanley, Senior Policy Analyst, ACLU MARCH 30, 2018: [Public Broadband Can Help Protect the Open Internet and Close the Digital Divide](https://www.aclu.org/blog/free-speech/internet-speech/public-broadband-can-help-protect-open-internet-and-close-digital)  
<https://www.aclu.org/blog/free-speech/internet-speech/public-broadband-can-help-protect-open-internet-and-close-digital>

Network. Respondents have provided bids that will enable Click! to roll out Gigabit service for under \$1.2 million<sup>29</sup>.

Thanks to recent technological developments in the DOCSIS standards, distributed architecture, and specifically Remote PHY (R-PHY), proposals from vendors such as Cisco and Harmonic<sup>30</sup>, now show that fully deploying Gigabit over Click! will cost between \$1 and \$1.2 million<sup>31</sup>.

To meet the soaring demand for bandwidth, R-PHY<sup>32</sup> removes the physical layer (PHY) of a traditional cable headend CMTS or CCAP and pushes it to the network's fiber nodes that connect to the cable modem at the customer's site<sup>33</sup>.

For the Harmonic solution<sup>34</sup> the net price is just \$1.1 million - after a \$268,965 buy back discount for Click!'s CBR8 Cisco router<sup>35</sup>, while the Cisco solution would cost just \$1 million<sup>36</sup>, after a \$200K buyback credit. There is a licensing cost going forward, under Cisco's Infinite Broadband Unlocked (IBU) Licensing Program that allows the operator to deploy as much DOCSIS 3.0 / 3.1 downstream and upstream spectrum as they choose, but only pay a \$1.10 monthly fee based on the number of subscribers that the operator has on their system<sup>37</sup>.

Significant deployments of this new technology, with distributed architecture and specifically Remote PHY (R-PHY), are now happening around the world<sup>38</sup> and the current ISP partners are willing to support this effort with time and resources<sup>39</sup>.

A SIPV solution allows a full range of advanced digital video services – all without significant CAPEX, OPEX. This upgrade is estimated to cost \$415,568<sup>40</sup> and is essential for freeing up the channels needed for future broadband growth.<sup>41</sup> The move to SIPV will be seamless, from a customer perspective, since the new system is compatible with the current set top boxes and TiVo equipment.

---

<sup>29</sup> Both the Cisco solution and Harmonic solution estimate DOCSIS 3.1 solutions, that deliver Gigabit, can be fully enabled for less than \$1.5 million. Details of these RFQs are under non disclosure, but are in the possession of Click! Staff and available if needed.

<sup>30</sup> Harmonic's CableOS CCAP solution, Submitted by Mega Hertz LLC has no licensing cost; but, is not "standards based". It provides a software-based CMTS running on off-the shelf 1-RU servers. It is an end-to-end Remote PHY system with high RF port density, CableOS easily enables the migration to multi-gigabit broadband with DOCSIS 3.1

<sup>31</sup> Much less than the \$5 to \$ 10 million estimates that were presented two years ago.

<sup>32</sup> RPHY takes the QAM modulation/demodulation portion of the CMTS and separates it to a location outside of the CMTS. This function will now be handled directly in an HFC node in the field or a "shelf" type unit located in a hub or cabinet. The connection between the CMTS and the Remote PHY Device (RPD) is traditional Ethernet.

<sup>33</sup> <https://blogs.cisco.com/sp/putting-the-why-in-remote-phy>

<sup>34</sup> The Harmonic solution is not "standards based" -according to CCI (a competitive bidder on this RFP for Software Based CMTS Specification No. PC17-0454F <https://www.harmonicinc.com/solutions/software-based-ccap/>

<sup>35</sup> From Harmonic's Jan 2018 Proposal: "Harmonic will buy back the CBR8 -The buyback will be issued as a discount from total price, in an amount of \$268,965.52.

<sup>36</sup> Click!'s CMTS is Cisco based. CCI Systems, Inc is proposing the configuration and activation of Remote PHY CMTS Network for Click! Cisco has recently demonstrated full duplex DOCSIS 3.1 architecture. They are proposing a gigabit solution for \$1 million with a \$1.10 monthly subscription fee for licensing.

<sup>37</sup> The \$1.10 per user monthly subscription fee is billed quarterly.

<sup>38</sup> MultiChannel News FEB 14, 2018 "Com Hem, a Sweden-based operator that serves about 1.5 million customers, is deploying CableOS - the operator's lab unit is testing symmetrical speeds of 1.2 Gbps in Stockholm using DOCSIS 3.1" <https://www.multichannel.com/news/harmonic-ids-real-deployment-its-virtual-ccap-418128>

<sup>39</sup> Additional staffing is often required, to manage customer notifications, for planned outages that occur during upgrades. The ISPs have traditionally performed this important function. The ISPs can cover the costs for the ongoing licensing, if the Cisco solution is selected (estimated to be \$290K per year).

<sup>40</sup> Turn key cost as proposed to Click! by Adara. Includes the Digital content manager SIPV headend equipment, RF gateway, Motorola NE 2500 Bulk Encryptor, with MPTS licence, Virtual Services Resource Manager, and all configuration and setup

<sup>41</sup> Description of SIPV by Adara Technologies : <http://www.adara-tech.com>  
[http://www.adara-tech.com/sites/default/files/docs/resources/adara\\_sipv\\_white\\_paper\\_final\\_june24\\_2017.pdf](http://www.adara-tech.com/sites/default/files/docs/resources/adara_sipv_white_paper_final_june24_2017.pdf)

SIPV will enable Click! to quickly and inexpensively free up as many as 50 or more video QAM (or EIA) channels, making them immediately available for DOCSIS 3.0, 3.1 and FULL DUPLEX expansion.

### 3.8.1 Cable Television And Increasing Revenues

Click! Network's provision of retail cable television service supports the retention of the profitable wholesale ISP partners. Having a CATV product reduces customer churn. These products go hand in hand.

At the beginning of 2018 there were 22,600 ISP and 16,010 CATV<sup>42</sup> accounts. Of these ISP customers, 10,562 (nearly 50%) of them subscribe to CATV also.

If Click! took the drastic step of shutting down, or exiting the CATV business, those valuable ISP customers would be pushed into the hands of Comcast.

Generally, when a customer moves their CATV service to another provider they also bundle the Internet service; so, by exiting the CATV business Click! would lose both the Cable TV customer and the lucrative wholesale ISP customer.

These wholesale ISP customers are very profitable for Click!<sup>43</sup> - currently contributing about \$6.5 million in net profit per year<sup>44</sup>. Exiting the CATV business and losing these customers would be a very damaging financial mistake for Click!.

In Section 8, on Business Structure, we offer a contingency path for Click! - a way for policy makers to pivot under this "Plan B 2.0" path and shift Click! away from what is alleged to be an illegal operating structure under TPU (should circumstances require such a drastic change)

### 3.8.2 Aggressively Lowering Costs - Reducing Sales & Marketing Costs

The ISPs are capable and willing to take on management and administrative functions currently performed by senior Click! leadership; specifically, those tasks performed by the non-union general manager and the sales and marketing personnel. It does not make sense to continue investing significant resources in growing the CATV business, as this is a declining market opportunity. Reducing the non-union labor associated with these Sales & Marketing efforts would save more than \$500,000/year. Simply issuing contracts to the ISPs will provide the incentive necessary to allow the private sector partners to perform these sales and marketing functions currently performed but these Click FTEs. Renewing the ISP contracts will give the ISP partners the confidence they need to hire the people to replicate these efforts.

Although not part of our current proposal, it could also be possible to reduce Click! labor costs in the customer service area, if deemed essential<sup>45</sup>.

---

<sup>42</sup> As of Jan 2018, there were 16,010 total Cable TV Customers -with 15,455 Residential and 555 Commercial - source RFI/Q

<sup>43</sup> The total marginal cost for an ISP customer is approximately \$1.40 and the ARPU (average revenue per user) revenue is \$25, so the wholesale ISP customer has a monthly marginal contribution of \$23.60. This is a 94% profit margin. It should be noted that the cost for the gateway is essentially a fixed cost, so additional ISP revenue has a 100% profit margin.

<sup>44</sup> That is gross wholesale ISP revenue minus the fixed costs for the gateway.

<sup>45</sup> Job code 552500 could be reduced by 5 FTE, with those personnel being absorbed by the private sector ISP partners.

### 3.8.3 Revenue Increase and Ultimate Profitability

Financial stability of Click! is ultimately a function of profitability. Advanced Stream's proposed membership drive generates an additional \$5 million a year in wholesale ISP profits for Click! in under 3 years - covering all of Click!'s losses. By the end of year 3, the plan generates \$6.2 million of additional revenue.

For a detailed analysis of Plan B 2.0's path to profitability please see Exhibit B.

### 3.9 Promoting Economic Development And Educational Opportunities

"Plan B 2.0" is the best alternative for supporting Tacoma's economic development and educational opportunity. So much of Tacoma's amazing progress in this area is closely tied to the creation and growth of Click! Network.

Beginning in 1997, Tacoma was promoted as "America's most wired city". It was during this period that the University of Washington decided to locate its campus in Tacoma. Many companies located their businesses in Tacoma, to take advantage of the broadband speeds that were unavailable in other communities.

Similarly, by upgrading Click! now, to offer gigabit internet service, Tacoma can bring economic development and educational opportunities to our community for years to come.

#### 3.9.1 Gigabit Speeds Bring Economic Growth

Click! Management has partially implemented plans for delivering symmetrical Gigabit speeds -both over the current DOCSIS platform<sup>46</sup> and over the FTTP roll out<sup>47</sup>. The cost estimates for deploying Gigabit service over Click! have recently been drastically reduced. Deploying Gigabit will result in tremendous economic growth.

#### 3.9.2 Switched IP Video

Gigabit speeds and the ever increasing need for more bandwidth will require moving to IPTV technology to free up RF spectrum. This will require moving to Switched IP Video, or SIPV. Unlike all other technologies employed for DOCSIS 3.1 expansion, SIPV enables operators to quickly and inexpensively free up as many as 50 or more video QAM (or EIA) channels, making them immediately available, in as little as 90 days, for DOCSIS 3.1 and FULL DUPLEX expansion. In addition, using only 12 - 24 QAMs or fewer, SIPV delivers an unlimited video channel offering of SD, HD and UHD/4K programming.

### 3.10 Job Options and Security For Click! Staff And Protecting The Intellectual Capital Of The System

By following a "Plan B 2.0" strategy, Click! preserves living wage job security and the intellectual capital of the the system.

---

<sup>46</sup> Breakthroughs in [DOCSIS 3.1 now allow for symmetrical gigabit speeds](#).

<sup>47</sup> Click! has rolled out FTTH in greenfield areas and future expansion will utilize this technology.

### 3.11 Protecting Customer Privacy

Under the current model, the City, TPU and Click!'s well established policies for protecting customer privacy would continue. The Tacoma City Council passed Res. NO. 39702 in 2017 that protects customer privacy in Tacoma<sup>48</sup>

TPU employees are always careful when gathering information to provide needed services and in protecting the public's privacy. Click! carefully follows the requirements of Section 631 of the Cable Communications Policy Act of 1984<sup>49</sup>. Preserving the current business model insures these practices continues.

### 3.12 Preserving Click!'s Goodwill, Including Its Market-leading Customer Service

By following a "Plan B 2.0" strategy, Click! fully preserves its goodwill and world class customer service.

## 4. Structure, Financial Qualifications, and Experience.

Advanced Stream is an LLC, wholly owned by our founder, Mitchell Shook. With no debt, and 20 years of successful experience operating as an ISP partner in good standing over Click! Network, Advanced Stream is on solid footing to serve customers, partners, employees and the community for the long run.

Over these many years, Advanced Stream has collaborated with Click! staff on finding ways to reduce costs and streamline our operations. Those efforts would naturally continue under the current business model.

Advanced Stream has no debt and sufficient capital on hand to carry out its obligations and commitments under this proposal.

Advanced Stream has demonstrated its ability to implement and successfully complete aggressive customer acquisition strategies before. The example of the Plan-B, the last membership drive that Advanced Stream (and the other ISPs) participated in, from 2012, demonstrated this most clearly.

## 5. Technical and Transitional Capabilities

By "Plan B 2.0", Click! staff continues their capable management of all aspects of the HFC and FTTP network. Advanced Stream and the other ISP continue operating under the terms of their current ISP partnership agreements. In the event the "Drastic Change" pivot course is implemented by policy makers, the current Click! staff would transition to the proposed new non-profit entity, as described in Section 8.1, so there is a continuity of staff and technical capabilities under the Advanced Stream proposal.

## 6. Operational Capabilities

Advanced Stream, under its partnership with Click!, currently supports over 9,000 ISP customers, providing cable modem, Email and VoIP services. With 15 employees located in Tacoma, Advanced

---

<sup>48</sup> CANDICE RUUD <http://www.thenewstribune.com/news/politics-government/article145363804.html>

<sup>49</sup> Click! Customer Privacy Notice <https://www.clickcabletv.com/about/legal-notice/catv-subscriber-agreement/>

Stream is prepared to hire the additional staff needed for its proposed 9,000 new ISP customer membership drive.

## 7. Sales and Marketing - 20th Anniversary Membership Drive and Plan B 2.0

Under the current model, Click! Has a unique opportunity to take advantage of a key anniversary by announcing a membership drive. In July 2018, Click! will celebrate the 20th anniversary of installing its first customer. That customer is still with Click! today. By organizing media and promotional efforts, in conjunction with the ISP partners, Click! could use this opportunity to kick off a membership drive for adding more customers.

With cooperation and coordinated efforts between Click! staff and the ISP partners, amazing growth can occur. One example, of how successful such a program can be, happened in 2012, when the current ISP partners<sup>50</sup> agreed to add 6,000 new Internet customers to Click! Network over a four year period.

The ISPs succeeded in achieving that goal, with an effort that was known as “Plan B”<sup>51</sup> - the plan was named as an alternative to an “All In Compete” model that Click! management proposed at the time. The customer acquisition goals for Plan B were tracked on a monthly basis accomplished over that 4-year period<sup>52</sup>.

Click! could, once again, enlist the support its ISP partners, by leveraging their marketing skills and resources, to lead a membership drive designed to acquire the additional 8,400 Internet customers.

Under Advanced Stream’s plan these additional customers would generate an additional \$3 million a year in wholesale ISP profits for Click! - thereby covering all of Click!’s operational losses<sup>53</sup>.

This membership drive could be accomplished in a 3-year time frame<sup>54</sup> - with the ISPs bearing all the marketing expenses and promotional costs for acquiring these customers, while Click! benefits from the additional wholesale revenue<sup>55</sup>. The program could be tracked, on a monthly basis, with the ISPs adding 234 new customers per month.

Such increased usage of Click! Network, and the additional profits it brings, ultimately supports the roll out of gigabit services and the important digital inclusion efforts.

### 7.1 New Commercial Opportunities - Wireless 5G Technology

Recent breakthroughs in wireless 5G technology hold great potential as an additional revenue source for Click! and TPU’s telecommunications fiber plant. To support consumers’ ever-growing needs for bandwidth, with the Internet of Things (IOT) and smart homes, next-generation wireless platforms will soon require backhaul services for an increasing number of cellular antenna sites in public places<sup>56</sup>.

---

<sup>50</sup> Advanced Stream, Net Venture and Rainier Connect.

<sup>51</sup> [Click’s slide talking about Plan B](#)

<http://stickwithclick.com/images/Description-of-Plan-B-from-Tenzins-presentation-to-the-TPU-Board-6-2012.jpg>

<sup>52</sup> Against a backdrop of sensationally damaging media reports about the imminent demise of Click! and a proposal by TPU management to offload Click! in a firesale to Wave Broadband at one point in 2015.

<sup>53</sup> In 2017 Click! showed a small operating loss, before depreciation and amortization, of \$2.4 million. With 8,400 additional ISP customers, Click will generate \$3 million a year in additional ISP revenue - which is nearly 100% marginal profit, since there are no variable costs and the gateway is a fixed cost.

<sup>54</sup> Mitchell Shook, the author of this paper, led the membership drive for Advanced Stream under Plan-B.

<sup>55</sup> The average revenue per ISP user on Click! is \$24 and most ISP customers take CATV also. Since CATV has a 20% gross margin, the addition CATV customers would contribute be an additional \$1.1 million a year in gross profit.

<sup>56</sup> Sean Kinney RCR Wireless, “operators to deploy 100-350 small cells per square kilometer by 2020”

<https://www.rcrwireless.com/20171212/network-infrastructure/report-finds-major-increase-in-small-cell-deployments-tag17>

Click! Network, with its wireless-enabling infrastructure of fiber and pole attachments, is in the right place at the right time -perfectly situated to provide this backhaul functionality.

City and TPU staff must develop a comprehensive city-wide policy for streamlining the coming flood of requests for microcells on publicly owned assets. As wireless companies seek access and usage of public assets for their wireless deployments, the City should have requirements in place that allow for free or low-cost services to digitally disadvantaged Tacoma residents.

## 7.2 Expanded Utility Opportunities - Smart Meters and Water Heaters

Finding ways for TPU to expand its utilization of the telecommunication network ultimately supports the Click! business model.

We are surprised every day by the amazing potential Click! holds. One very recent example of a completely new usage for Click! is the "smart" water heater pilot project in the Salishan housing complex in East Tacoma.

This Salishan program is a partnership with Tacoma Power, the Tacoma Housing Authority and the Bonneville Power Administration for new "smart" residential water heaters that have Demand Response (DR) ability. Thru this program the old water heaters in 87 duplex and triplex units in Salishan were replaced with new, more efficient, "smart" water heaters that have a modular communications port. This program will allow utility customers an opportunity to play a significant role in the operation of the electric grid by reducing or shifting their electricity usage during periods of peak electric usage in response to specific time of day rates or other forms of financial incentives.

The imminent, \$80 million, AMI project represents a significant opportunity for leveraging the investment in Click!. As this project begins to unfold<sup>57</sup>, the successful bidder should be encouraged to study Click! and the telecommunications plant for ways these assets can play a role in supporting the AMI project's communication needs<sup>58</sup>.

One AMI meter manufacturer points to projects such as those by EPB Chattanooga<sup>59</sup>, Morristown Utilities and Jackson Energy Authority -where the fiber plant uses more AMI take out points closer to the home -rather than the typical AMI architecture.

As one AMI bid holder puts it, *"We have found that this architecture provides the utility as well as the telecom entity with maximum capability within the AMI network as well as maximum flexibility in how they choose to account for costs between the entities, which can be key to any cash flow analysis."*<sup>60</sup>

The city-owned electric utility in Chattanooga, Tennessee, offers Gigabit Internet access and the network also serves as the backbone for their smart meters and smart grid. The same box "that powers the Internet, TV and Phone also powers the smart meter."<sup>61</sup>

---

<sup>57</sup> The AMI RFP was released in April of 2018. Link: <http://cms.cityoftacoma.org/Purchasing/FormalBids/PS18-0015F.pdf>

<sup>58</sup> With Click! supporting the backhaul functions of the AMI project -it eliminates the need to install numerous 900Mh radios throughout the project footprint.

<sup>59</sup> The city-owned electric utility in Chattanooga, Tennessee, became the first U.S. company to offer Internet access speeds of 1 gigabit per second to customers. The [fiber also serves as the backbone for a sophisticated smart grid.](http://stickwithclick.com/images/Smart-Grid-Paybacks-The-Chattanooga-Example.pdf) <http://stickwithclick.com/images/Smart-Grid-Paybacks-The-Chattanooga-Example.pdf>

<sup>60</sup> Email 4/24/2018 from AMI vendor to Mitchel Shook, CEO Advanced Stream

<sup>61</sup> WTVC NewsChannel 9 "EPB Makes Lightning Fast Internet in Chattanooga" <https://youtu.be/L8sBp5tb3oA>

Their smart grid includes 180,000 smart meters that provide two-way communication; 1,400 smart switches that allow the utility to isolate power outages; and sensors that allow for precise voltage management to reduce waste.

## 8. Business Structure - “Plan B 2.0” and Contingency “Pivot Plan”

As we have shown in Section 3, with Advanced Stream’s “Plan B 2.0” proposal, the current public-private ISP partnership arrangement is leveraged and all 12 important policy goals are met. Click! remains operating as a part of TPU, while the private ISP partners stand ready to step in and help with a “Pivot Plan” - by taking over the marketing and customer service functions for much of the CATV business, if need be.

This strategy provides policymakers a successful path forward for Click! - with an option for lowering operating costs that can be implemented if ever needed.

Given existing uncertainty<sup>62</sup> over Click!’s status, it is not prudent to make drastic changes without all the facts. Click! is a valuable and prized asset of our community. One might ask, *“If Click! is such a troubled, unprofitable, enterprise, why are bidders lining up to take it off the community’s hands?”*

What is the actual legal status of Click!? Who is right, in the Coates v. City of Tacoma case? Perhaps the attorneys representing the City in this case are correct -in their insistence that Click! is a legally authorized endeavor and that financial losses are a “disputed issue”. On April 23rd, the City’s attorneys filed a compelling Motion for Discretionary Review, arguing that Click!’s operations are lawful and proper<sup>63</sup>.

On June 14th, 2018 the City’s Motion for Discretionary Review<sup>64</sup> was granted by the Washington State Court of Appeals. Now we have about 18 months to wait for a final decision on that matter; but, this sort of review is not granted lightly. So this is a very positive development!

Making drastic policy changes in such an uncertain environment is unwise; however, it is prudent to plan for all potential contingencies -which is why we are proposing the [emhttp://stickwithclick.com/images/Appeals-Court-Grants-City-of-Tacomas-motion-for-Discretionary-Review-on-Click.pdf](http://stickwithclick.com/images/Appeals-Court-Grants-City-of-Tacomas-motion-for-Discretionary-Review-on-Click.pdf)ergency “Pivot Plan”.

There are few, if any, risks associated with Advanced Stream’s proposed Plan B 2.0. This plan offers a path forward while the legal and accounting issues are resolved. We can immediately implement Advanced Stream’s proposals, by simply renewing the ISP contracts and set about bringing equitable access to Tacoma.

Since the Appellate Court has granted the City’s motion for discretionary review, there will now begin an estimated 18 month wait for a decision on the partial summary judgement issue.

In the meantime, there is great risk in following a path toward privatization. We risk turning over 20 years of hard work and community investment in our precious municipal asset to an outside entity.

In the time it will likely take to resolve the current legal issues at Court, Plan B 2.0 could be completed -thereby clearly establishing Click!’s profitability and long term solvency.

---

<sup>62</sup> The City of Tacoma’s Motion for Discretionary appeal was granted on June 14th, 2018. We feel certain Click! and the City will prevail in the [Coates v City of Tacoma case](http://stickwithclick.com/images/City-of-Tacomas-Response-to-Plaintiffs-Mo-for-Partial-SJ-50739118.pdf)

<http://stickwithclick.com/images/City-of-Tacomas-Response-to-Plaintiffs-Mo-for-Partial-SJ-50739118.pdf>

<sup>63</sup> City of Tacoma April 23, 2018 -[Motion for Discretionary Review](http://stickwithclick.com/images/City-of-Tacoma-Motion-for-Discretionary-Review-4-23-18.pdf) - Granted

<http://stickwithclick.com/images/City-of-Tacoma-Motion-for-Discretionary-Review-4-23-18.pdf>

<sup>64</sup> <http://stickwithclick.com/images/Appeals-Court-Grants-City-of-Tacomas-motion-for-Discretionary-Review-on-Click.pdf>

Perhaps “If it ain’t broke, don’t fix it” is the appropriate policy at this moment; and, redoubling efforts to improve Click!, while providing a last resort contingency plan, for unlikely and unexpected events, as Advanced Stream proposes, is the proper path forward.

### 8.1 The “Pivot Plan” - Covering All Bases

Advanced Stream’s proposal offers a two step solution - a safety net for an unlikely event, or a worst case emergency scenario. An example of an “unlikely event” might be if Click! is declared by the Courts to be an illegal activity and forced to exit or liquidate its business. Advanced Stream’s proposal offers a way for policy makers to then dramatically lower cost by “pivoting”, from our “Plan B 2.0” strategy, to the “Pivot Plan” strategy.

Under this contingency alternative, Advanced Stream proposes that some Click! engineering and operations staff would continue to operate the telecommunications plant, as employees of TPU, while the private sector ISP partners would expand their current role, of assisting with CATV sales, customer support and to begin accepting monthly payments for Click! CATV products - essentially like a payment center.

### 8.2 Establishment Of A New 501 (C) Non-profit Entity

The biggest change to Click! with the implementation of the “Pivot Plan” would be the establishment of a new 501 (c) non-profit entity to continue managing the wholesale broadband and Internet activities, perform installations, provide high level network administration, engineering and some CATV customer service functions. This entity would operate under an agreement with TPU - similar to the current ISP contracts.

In addition to allowing the ISPs to function as payment and service centers, for their respective CATV customers,<sup>65</sup> another significant change would be expanding the ISPs responsibility for CATV support. Customers that do not subscribe to Internet service and have no ISP relationship would continue to receive direct support from the new non-profit entity; additionally, the Click! customer service center would remain in the TPU lobby. This is an amazing location for marketing the Click! products to the ratepayers. Most of them are Comcast customers and have never heard of Click!. The lobby presence is essential for Click! and that cannot change.

Since the ISPs and Click!, in most cases, have a mutual relationship with their shared Internet-CATV customers, any strategy to transfer away the CATV business and customers from TPU must be sensitive to the current non-disclosure agreements in the ISP contracts - in particular the private ISPs’ customer lists and the details of those valuable relationships. The ISPs have worked for many years to acquire these mutual customers and it would be unfair, illegal and harmful for Click! to hand over one ISP’s CATV customers to another, a competitor, ISP.

Advanced Stream, for example, has spent 20 years building up its customer base - a mutual customers base - with Click! as a partner. Those shared customers are valuable assets that belong, partially, to Advanced Stream and the other respective ISPs. Putting one ISP’s customers in the hands of a competitor would be unfair; therefore, our solution places them into a non-profit entity that would protect the privacy and confidentiality of these customer relationships.

---

<sup>65</sup> Essentially a franchise, licensing or joint venture type arrangement in support of the Click! brand.

As future ISPs join the network, the newly created Click! non-profit entity would continue managing services on the network - much as Click! does now. This ensures the continued confidentiality of the mutual customer information - thereby protecting the ISPs valuable customer lists.<sup>66</sup>

Nevertheless, Since the ISPs have had a good run, with 20 years of success, operating on Click! Network, it seems reasonable to seek their support in event such a “worst case” transition is required.

Advanced Stream feels this “Pivot Plan” would be a way for the ISPs to “give back” to the community -by stepping in to “save the day” in the event of an emergency.

In this spirit, of “giving back”, the ISPs would agree to fund the creation of this 501 (c) non-profit entity - which would license the Click! CATV brand and purchase the existing CATV assets from TPU at book value<sup>67</sup> and enter into a operating agreement with TPU for the plant and network. This agreement could be similar to that by which the ISP partners currently operate under. We have provided a flowchart in Exhibit A that depicts the arrangement.

This new non-profit entity would hire most of the current Click! Staff - with current pay rates, contracts and accrued benefits intact. This would include all staff associated with Technical Operations, Service Installations, Network Operations, HFC construction and Engineering, Network Service Assurance would be mostly unaffected.

Some reduction in management, sales and marketing personnel would be certainly possible.

Since the "All In" proposal would no longer be on the table, and promoting the CATV product should no longer be a priority<sup>68</sup>, personnel assigned to those efforts could be reassigned to other areas of the utility. The jobs affected would include the current General Manager position (job code 551100) and most of the Sales and Marketing roles (job codes 552200).

Advanced Stream is willing to carry out, alone if necessary, the facilitation of this type of transition; hopefully, the other ISP, Rainier Connect, would similarly support our proposal for a shared solution - after all, the ISPs have collaborated successfully in the past -to deliver solutions at key moments in Click!’s evolution. A notable example is the original “Plan B”, where the ISPs invested their resources to capture 6,000 new customers by agreement.

### 8.3 Honoring The Terms Of The Contract With IBEW Local 483

Advanced Stream’s “Pivot Plan” proposal would include honoring the terms of the contract with IBEW Local 483, thereby insuring Click! staff’s benefits and contracts are kept intact. Advanced Stream would also work with TPU on a transition path to make sure that all the personnel’s benefits and contract terms are accurately transferred and that a seamless relocation plan is created for all of affected Click! employees.

Finally, Advanced Stream, or the ISPs jointly,<sup>69</sup> would agree to provide immediate funding for the costs associated with needed CATV upgrades - such as implementing a switched IPTV platform. Any

---

<sup>66</sup> Since the ISPs and Click!, in most cases, have a shared a relationship with these common customers, any transfer of the CATV customers must be sensitive to the current non-disclosure elements in the ISP contracts, in particular the private ISP customer lists and details of those valuable relationships. The ISPs have worked for many years to acquire these mutual customers and it would be unfair for Click! to hand over their CATV customers to just one of the ISPs - thereby harming the other ISP.

<sup>67</sup> Including the set top boxes and other CPE assets.

<sup>68</sup> CATV is no longer a growth market and it makes less sense to continue investing in expanding and marketing this product.

<sup>69</sup> We would propose sharing the costs, on a prorata basis.

profits that accumulate from CATV operations would remain in the non-profit entity and be used for future network expansion, upgrades, maintenance and funding employee benefits.

This alternative preserves the benefits Click! has brought to our community while maximizing TPU ratepayer's investment in this \$200 million asset.

#### 8.4 The City Can Help Reduce Risks

One way that the City policymakers can reduce risk, and protect the Click! brand, is by being proactive and strongly supporting the existing public-private partnership model. This is accomplished by renewing the ISPs' contracts. At this important moment in Click!'s history, such support and certainty is essential. It will give confidence to our customers, prospective clients, and the employees of both Click! and the ISP partners.

Policymakers can also provide certainty, by strongly supporting Advanced Stream's strategy of "Plan B 2.0". Doing otherwise risks delaying implementation of Click!'s roll out of gigabit service -resulting in a huge lost opportunity of winning customers that could easily be acquired with a first mover advantage. Even worse, if Comcast offers gigabit first, then Click! could suffer an exodus of customers.

#### 9. Schedule - Gigabit in 90 days.

Once a "Plan B 2.0" strategy is approved, and the ISP contracts are renewed, the ISPs can get to work immediately and begin adding the proposed 234 customer per month.<sup>70</sup> We can kick off the program with a "20th Anniversary" celebration and grass roots membership drive.

Rolling out SIPV will take an additional 90 days. Once completed, this frees up the bandwidth that allows Click! to bond channels needed for achieving Gigabit speeds under the current DOCSIS 3.0 plant.<sup>71</sup>

#### 10. Maintenance

Under our "Plan B 2.0" proposal, Click! would continue to maintain the network and the CATV system, while the ISPs would continue to maintain the cable modems and other Internet related customer premise equipment.

#### 11. Financing, Funding, and Payments

Under "Plan B 2.0" there are no drastic changes, the ISPs and MSAs will continue making their monthly payments, which currently total \$810,000 a month, to Click! for wholesale Internet and broadband services. The payments are based on the number of subscribers - according to the service level pricing provided by the ISP and MSA contracts. These payments would increase under the "Plan B 2.0" proposal, given the proposed price increase and added customer counts. The amounts are also subject to increases and adjustments, under the terms of the ISP and MSA contracts.

Since these contracts are already in place, they would just need to be renewed for the usual 3 year term that has historically served us well. There would be no delay in implementing this strategy.<sup>72</sup>

---

<sup>70</sup> This strategy is similar to the Plan-B from 2012 and will add 9,000 customers over the next 4 years.

<sup>71</sup> DOCSIS 3.1 requires the Harmonic or Cisco upgrade. We can still get Gig service by bonding more channels under 3.0

<sup>72</sup> The Contracts have always automatically renewed for 3 years

To assist with the implementation of DOCSIS 3.1 and SIPV, Advanced Stream is willing to provide an Interest free loan, if needed, to fund these improvements. This loan would be retired in exchange for future services billed under the ISP contract.

In the event of a worst case scenario and the "Pivot Plan" is required, Advanced Stream would provide funds for the formation of the non-profit entity to continue running the CATV, broadband and wholesale Internet business. These funds would be used to purchase, from TPU, the assets associated with Click! -such as the CPE equipment, and other assets, required to carry on the business.

Advanced Stream requires no outside financing, or other sources of capital, to facilitate the expansion of the partnership or implementation of our proposal.

Advanced Stream has outlined, in section 8.1, its proposal for funding network expansion, equipment refreshes and customer expansion. No financing will be required and no service payments from the City are needed.

Our proposal would continue Advanced Stream's "low price guarantee" strategy - with current subscriber pricing, or lower, to be maintained. Current pricing is available on our website.<sup>73</sup> When Gigabit speeds become available, we propose offering that service at \$75 a month.

Advanced Stream has demonstrated its ability to execute grass roots, social media charged, highly effective customer acquisition strategies. From knocking on doors to shaking signs, Advanced Stream is highly visible in the community during customer acquisition campaigns. Advanced Stream also employs direct marketing, via postal mailers and inserts in the Tacoma Public Utility billing statements. We leverage our existing customer base, by offering them financial incentives (finder fees) for referring new customers. These practices, and others would form the basis of our marketing strategy.

Click! has approximately a 15% market share of Internet subscribers. Our sales objectives for Internet customers would be to add net 2,808 new customers per year. So the first year we would increase the customer base by 2,808 and 5,616 by the second year and 8,424 by year three.

If we begin now, Click!'s market share would be 16.5%<sup>74</sup> in June of 2019, 18% by June of 2020 and 19.5% by June 2021.

Past performance has demonstrated Advanced Stream's ability to aggressively acquire customers and achieve the proposed increases in market share and take rate.

We have provided a flowchart, in Exhibit A, that depicts the flow of funds.

## **12. Services - Switched IPTV and Gigabit Now!**

Plan B 2.0 will allow the retail ISP partners to continue providing Internet, phone, hosting and email services, while Click! staff can continue to serve their MSA customers while completing their well organized, and partially implemented, roll out of Gigabit speed services - one of the most important goals for Click!

---

<sup>73</sup> Residential pricing is available: <http://www.advancedstream.com/content/residential>

Commercial pricing is available: <http://www.advancedstream.com/content/commercial>

<sup>74</sup> As of May 2015 Click! Had a 15% market share of Internet.

Staying current with the latest technological developments is imperative. Moving Click! to IPTV and delivering Gigabit service to Tacoma will lead to a dramatic addition of customers.<sup>75</sup>

Thanks to recent developments in the DOCSIS standards, distributed architecture, and specifically Remote PHY (R-PHY), proposals from vendors such as Cisco and Harmonic<sup>76</sup>, now show that fully deploying Gigabit over Click! will cost under \$1.2 million<sup>77</sup>.

With a state of the art DOCSIS 3.1 capable platform, Click! is in the right place at the right time.

Through Click!'s recent RFP for Software Based CMTS, respondents have shown new technology allows a surprisingly inexpensive path to symmetrical Gigabit speeds for Click! Click! Can roll out Gigabit service for under \$1.5 million<sup>78</sup>.

To meet the soaring demand for bandwidth, R-PHY<sup>79</sup> removes the physical layer (PHY) of a traditional cable headend CMTS or CCAP and pushes it to the network's fiber nodes that connect to the cable modem at the customer's site<sup>80</sup>.

For the Harmonic solution<sup>81</sup> the net price is just \$1.1 million - after a \$268,965 buy back discount for Click!'s CBR8 Cisco router<sup>82</sup>. While the Cisco solution would cost just \$1 million,<sup>83</sup> after a \$200K buyback credit. There is a licensing cost going forward, under Cisco's Infinite Broadband Unlocked (IBU) Licensing Program that allows the operator to deploy as much DOCSIS 3.0 / 3.1 downstream and upstream spectrum as they choose, but only pay a \$1.10 monthly fee based on the number of subscribers that the operator has on their system<sup>84</sup>.

Significant deployments of this new technology, with distributed architecture and specifically Remote PHY (R-PHY), are now happening around the world<sup>85</sup> and the current ISP partners are willing to support this effort with time and resources<sup>86</sup>.

---

<sup>75</sup> Click! has always experienced growth in customers as new, higher speed, packages are introduced.

<sup>76</sup> Harmonic's CableOS CCAP solution, Submitted by Mega Hertz LLC has no licensing cost; but, is not "standards based". It provides a software-based CMTS running on off-the shelf 1-RU servers. It is an end-to-end Remote PHY system with high RF port density, CableOS easily enables the migration to multi-gigabit broadband with DOCSIS 3.1

<sup>77</sup> Much less than the \$5 to \$ 10 million estimates that were presented two years ago.

<sup>78</sup> Both the Cisco solution and Harmonic solution estimate DOCSIS 3.1 solutions, that deliver Gigabit, can be fully enabled for less the \$1.5 million.

<sup>79</sup> RPHY takes the QAM modulation/demodulation portion of the CMTS and separates it to a location outside of the CMTS. This function will now be handled directly in an HFC node in the field or a "shelf" type unit located in a hub or cabinet. The connection between the CMTS and the Remote PHY Device (RPD) is traditional Ethernet.

<sup>80</sup> <https://blogs.cisco.com/sp/putting-the-why-in-remote-phy>

<sup>81</sup> The Harmonic solution is not "standards based" -according to CCI (a competitive bidder on this RFP for Software Based CMTS Specification No. PC17-0454F <https://www.harmonicinc.com/solutions/software-based-ccap/>

<sup>82</sup> From Harmonic's Jan 2018 Proposal: "Harmonic will buy back the CBR8 -The buyback will be issued as a discount from total price, in an amount of \$268,965.52.

<sup>83</sup> Click!'s CMTS is a Cisco based. CCI Systems, Inc is proposing the configuration and activation of Remote PHY CMTS Network for Click! Cisco has recently demonstrated full duplex DOCSIS 3.1 architecture. They are proposing a gigabit solution for \$1 million with a \$1.10 monthly subscription fee for licensing.

<sup>84</sup> The \$1.10 per user monthly subscription fee is billed quarterly.

<sup>85</sup> MultiChannel News FEB 14, 2018 "Com Hem, a Sweden-based operator that serves about 1.5 million customers, is deploying CableOS - the operator's lab unit is testing symmetrical speeds of 1.2 Gbps in Stockholm using DOCSIS 3.1" <https://www.multichannel.com/news/harmonic-ids-real-deployment-its-virtual-ccap-418128>

<sup>86</sup> Additional staffing is often required, to manage customer notifications, for planned outages that occur during upgrades. The ISPs have traditionally performed this important function. The ISPs can cover the costs for the ongoing licensing, if the Cisco solution is selected (estimated to be \$290K per year).

A switched IPTV solution allows a full range of advanced digital video services – all without significant CAPEX, OPEX. This upgrade is estimated to cost \$415,568<sup>87</sup> and is essential for freeing up the channels needed for future broadband growth.<sup>88</sup> The move to SWIP will be seamless, from a customer perspective, since the new system is compatible with the current set top boxes and TIVO equipment.

Switched IP Video (SIPV) will enable Click! to quickly and inexpensively free up as many as 50 or more video QAM (or EIA) channels, making them immediately available for DOCSIS 3.0, 3.1 and FULL DUPLEX expansion.

## 12.1 FTTH program

Staying relevant, with cutting edge technology, is essential for Click!'s long term success. Click! has always been updated and remained a competitive force in the market. Currently, Click! is rolling out cutting edge technology with a recent, successfully completed, FTTH pilot project in a new subdivision (The Knolls) consisting of 165 homes in University Place.

Click! is currently in the process of completing the integration of the Calix AXOS platform with existing back office systems, conducting staff training, and developing sales and marketing plans. Marketing of FTTH service will begin once these activities have been completed.

## 12.2 Cable Television And Increasing Revenues

Providing a retail CATV product makes the platform “sticky” - supporting retention of very profitable wholesale ISP customer. Since the CATV product reduces customer churn, these products go hand in hand.

With 22,600 ISP and 16,010 CATV accounts, more than 70% are Cable TV customers<sup>89</sup>. If Click! were to take the drastic step of shutting down, or exiting the CATV business, those customers would be pushed into the hands of Comcast.

Generally, when a customer moves their CATV service to another provider they also bundle the Internet service; so, by exiting the CATV business Click! would lose both the Cable TV customer and the lucrative wholesale ISP customer.

These wholesale ISP customers are very profitable for Click!<sup>90</sup> -contributing about \$6.5 million in net profit<sup>91</sup> -per year. Exiting the CATV business and losing these customers would be a very damaging financial mistake for Click!.

---

<sup>87</sup> Turn key cost as proposed to Click! by Adara. Includes the Digital content manager SIPV headend equipment, RF gateway, Motorola NE 2500 Bulk Encryptor, with MPTS licence, Virtual Services Resource Manager, and all configuration and setup

<sup>88</sup> Description of SIPV by Adara Technologies : <http://www.adara-tech.com>  
[http://www.adara-tech.com/sites/default/files/docs/resources/adara\\_sipv\\_white\\_paper\\_final\\_june24\\_2017.pdf](http://www.adara-tech.com/sites/default/files/docs/resources/adara_sipv_white_paper_final_june24_2017.pdf)

<sup>89</sup> As of Jan 2018, there were 16,010 total Cable TV Customers -with 15,455 Residential and 555 Commercial

<sup>90</sup> The total marginal cost for an ISP customer is approximately \$1.40 and the ARPU (average revenue per user) revenue is \$24, so the wholesale ISP customer has a monthly marginal contribution of \$22.60. This is a 94% profit margin. It should be noted that the cost for the gateway is essentially a fixed cost, so additional ISP revenue has a 100% profit margin.

<sup>91</sup> That is gross wholesale ISP revenue minus the fixed costs for the gateway.

## 12.3 Switched IP Video

The need for more bandwidth will require moving Click! CATV to a switched IPTV technology and Advanced Stream is willing to provide the capital, as an interest free loan, for this upgrade<sup>92</sup>.

Switched IP Video, or SIPV, will allow Click! to inexpensively free up as many as 50 or more video QAM channels for DOCSIS 3.1 and FULL DUPLEX expansion. With just 12 to 24 QAMs, SIPV delivers unlimited video channels offering of SD, HD and UHD/4K programming.

## 13. Pricing

Advanced Stream has always provided transparency and a “low price guarantee”. What you see is what you get. There are no confusing taxes or misleading “surcharges” on our billing. No hidden charges or other shenanigans typically found in the billing practices of the big ISPs.

Advanced Stream does provide lower, introductory, prices to new customers; but, unlike the large ISPs, there is no contract or “early termination” penalty for cancelling the service.

Advanced Stream is committed to bringing the lowest prices for Internet access to our community and to bridging the digital divide for low-income individuals. Under a “Plan B 2.0” strategy, Advanced Stream will donate at least 200 computers per year to qualifying families, while expanding its \$14.95 “Digital Inclusion” program<sup>93</sup>.

Advanced Stream will also support Click! efforts to make Tacoma a Gig City - delivering a Gigabit product for \$75.95 a month.

## 14. Equitable Access to Services - Digital Equity Action Committee

Click! serves the entire community. Over the past 20 years, Click! has taken an equitable approach to constructing the Network. It has been built in a way that makes it available to residents of Tacoma without consideration of geographic, demographic, or socioeconomic status.

The key to equitable access is ensuring the financial sustainability of Click!’s business model. Achieving financial sustainability requires a business plan that incorporates strategies to expand the usage of Click!.

This can be accomplished by redoubling efforts to acquire customers under the current open access business model; and, by collaborating with local governments and public stakeholders.

Tacoma could benefit by following Seattle’s lead in the formation of a Digital Equity Action Committee<sup>94</sup>. This committee would provide guidance and craft community policies for sustainable equitable access.

---

<sup>92</sup> Loan to be retired from amounts due under the ISP contracts

<sup>93</sup> [Advanced Stream’s Digital Inclusion Package](https://www.advancedstream.com/digital-inclusion) <https://www.advancedstream.com/digital-inclusion>

<sup>94</sup> Statement from City of Seattle: “Digital equity seeks to ensure all residents and neighborhoods have the information technology capacity needed for civic and cultural participation, employment, lifelong learning, and access to essential services. Working toward digital equity involves intentional strategies and investments to reduce and eliminate historical barriers to access and use technology”  
<https://www.seattle.gov/tech/initiatives/digital-equity>

## 14.1 Digital Equity Action Committee -Community Broadband Roadmap

Click! has made significant accomplishments, bringing lower rates and better service for Tacoma<sup>95</sup>; however, more can be accomplished.

With the establishment of a “Digital Equity Action Committee”, Tacoma could coordinate efforts for developing a “Community Broadband Roadmap” for digital inclusion. This committee could follow strategies outlined by ConnectHome USA<sup>96</sup>.

This “Roadmap” would contain Tacoma’s strategic vision and goals for digital inclusion. By locating and identifying existing community resources, the “Roadmap” will help public officials, planners, citizen groups and other stakeholders achieve the goal of getting residents connected.

Last month the City of Pittsburgh and the Housing Authority of the City of Pittsburgh announced their success; *“The ConnectHome USA platform catalyzes collaboration towards a bigger vision for the city and county around digital inclusion. The initiative provides a framework for building a more substantial plan for digital inclusion in addition to providing resources through local and national partnerships and mentorship from cities leading in connecting residents. to close divide in HUD housing”*<sup>97</sup>

This important issue cannot wait! With a lack of access to the Internet, and the equipment and skills necessary to use it, disadvantaged families are becoming increasingly isolated from our digital society.<sup>98</sup>

Under the current business model, the ISP partners can be enlisted to deploy their resources and knowledge in bringing solutions for digital equity to Tacoma.

## 14.2 Equitable Internet Access and Computers Too

With a Digital Equity Action Committee, and a Community Broadband Roadmap, we can coordinate efforts to distribute computers in support of digital inclusion efforts. Click!’s ISP partners are willing to donate computers and help organize these efforts.<sup>99</sup> It is estimated that over 500 computers per year could be given to qualifying families by such a program.<sup>100</sup>

---

<sup>95</sup> A [recent study by the Berkman Klein Center](#) for Internet and Society at Harvard University looked at the prices charged by community-owned broadband networks and found that in 23 out of 27 networks the municipal supported offering had the lowest price in the market for broadband.

<sup>96</sup> ConnectHome was a pilot, launched by the White House and HUD in 2015, to narrow the digital divide for K-12 families living in public housing. ConnectHomeUSA builds upon the success of the ConnectHome pilot by expanding to reach new communities with digital inclusion best practices and resources provided by numerous stakeholders to help their residents get connected. Under the leadership of national nonprofit EveryoneOn, ConnectHomeUSA aims to reach 100 new communities by 2020 with a potential impact of connecting 350,000 residents.

<sup>97</sup> On March 13, 2018 Allegheny County and the Allegheny County Housing Authority and the City of Pittsburgh and the Housing Authority of the City of Pittsburgh have announced their acceptance into the ConnectHome USA Program. <http://www.sopghreporter.com/story/2018/03/13/news/city-county-accepted-into-connecthome-digital-inclusion-program-to-close-divide-in-hud-housing/18630.html>

<sup>98</sup> From <https://connecthomeusa.org> “As of 2016, 46% of families living in public housing do not have high-speed Internet at home or rely solely on smartphones. These Americans are missing out on the high-value educational, economic, and social impact of the Internet, and being left behind. Kids on the wrong side of the “homework gap” lack the tools they need to do their coursework outside of school.”

<sup>99</sup> Advanced Stream has led such programs in the past, where computers are loaned or given to families that need them.

<sup>100</sup> Advanced Stream would be willing to donate 200 computers per year. Rainier Connect and Net Venture have indicated they would likely match that number. Chromebox and notebooks can be provided for about \$150 each

Local businesses and community organizations—such as universities, schools, government agencies, libraries, hospitals, nonprofits, foundations, and even housing agencies—regularly upgrade and replace their computers before the end of their useful life. Rather than go to waste, these computers can be refurbished and updated for reuse.<sup>101</sup> Refurbished devices can then be made available to housing agencies and assisted residents for free or reduced cost.

With a program to train youth to refurbish these devices, we can impart valuable job skills in the process. For example, Kansas City pays and trains youth residents to refurbish computers and offers “digital literacy” classes through a summer youth employment program.

Advanced Stream has coordinated similar programs in the past and is prepared to immediately re-activate those efforts should a “Plan B 2.0” strategy be adopted by City Council -with the Click!/ISP contracts being renewed.

### **14.3 Bringing Competitive Broadband To the TPU’s Service Areas Not Currently Served By Click!**

The future expansion of the network will likely employ FTTH technology. For example Click! recently rolled out such FTTH technology in a FTTH pilot project in at The Knolls -a new subdivision consisting of 165 homes in University Place.

Additionally, Click! is currently in the process of completing the integration of the Calix AXOS platform with existing back office systems, conducting staff training, and developing sales and marketing plans. Marketing of FTTH service will begin once these activities have been completed.

In the very far reaches of Pierce County, like areas in the southern footprint of TPU’s service area, such as Fredrickson, where running fiber is too expensive, Click! can inexpensively deploy hybrid point-to-multipoint technology, using a combination of frequencies including WiFi and 3.65 GHz. This is done by placing transmitters on towers and beaming signals to dishes at the customer location. This is now becoming more and more common around the world.

As TPU Consultant, Doug Dawson, mentioned recently, *“A hybrid model makes a huge difference in financial performance. I’ve now seen an engineering comparison of the costs of all-fiber and a hybrid network in half a dozen counties and the costs for building a hybrid network are in the range of 20% – 25% of the cost of building fiber to everybody. That cost reductions can result in a business model with a healthy return that creates significant positive cash over time”*.<sup>102</sup>

## **15. Affordable Access**

Click! can be the foundation for curing Tacoma’s digital divide. By embracing the private ISP partners, and leveraging their marketing skills and entrepreneurial expertise, Click! can grow faster and more efficiently.

The ISPs, as private entities, are not encumbered by layers of counterproductive bureaucracy that can impede the swift action required when accepting, or making donations. They are not burdened by concerns about “gifting public funds” etc. Consequently, these ISP are well suited to administer a computer donation, refurbishing, and redistribution program. These important digital equity goals are best accomplished under the current Click! business model.

---

<sup>101</sup> Advanced Stream is prepared to announce such a program, in conjunction with The Boys and Girls Club of South Puget Sound, to provide computers to qualified families.

<sup>102</sup> CCG Doug Dawson <https://potsandpansbyccg.com/tag/hybrid-broadband-model/>

The greater Click!'s profits, the more that can be done to lower prices in support of digital inclusion efforts. There are many potential opportunities for expanding commercial activities and raising additional revenue through Click!. These will be discussed in more detail under section 3.8, "Financial Stability".

Under the current model, Click! offers discounted residential Cable TV services to low income customers.<sup>103</sup> Advanced Stream has its \$14.95 Digital Inclusion package for qualified low-income customers.

Click! can providing the ISPs with a wholesale "Digital Inclusion" package. The ISPs would deliver these services to the end users, without a profit, at the wholesale cost<sup>104</sup>.

Significant resources are expended in delivering retail ISP services to end users. Facilitating monthly payments, coordination Installations, providing customer support, expert troubleshooting, and enforcing acceptable usage policies are some examples of the tasks performed by the ISPs.

Since the ISP partners currently perform these functions, they are in the best position to perform these functions in support of Tacoma's digital inclusion efforts.

### 15.1 Discounted Internet Programs

While the current Click! business model supports low rates, additional efforts can be deployed to bridge the digital divide. Internet rates in Tacoma<sup>105</sup> are almost 50% less than in Seattle, due to the competition that Click brings to the market<sup>106</sup>. Comcast matches the lower rates that Click! Network offers in Tacoma. This competition saves local users an estimated \$20 Million per year.<sup>107</sup>

This is just the beginning of what is possible. There remain significant disparities in internet access and digital literacy skills for those of lower education, low-incomes, seniors, disabled, minorities, and immigrants. The City has significant disadvantaged districts/corridors. City parks could also benefit from low-cost or free wireless access. Coordinated efforts are needed to achieve affordable access to broadband services and to provide needed computers.

With a Digital Equity Action Committee charged with formulating our "Community Broadband Roadmap" for a "Digital Inclusion Program", Click!'s private ISP partners could be contractually obligated to provide and expand their discounted Internet programs. Revenue sharing formulas, to set aside funding for such discounted services could easily be established; similarly, franchise holders, such as Comcast, could also be made to expand the eligibility criteria for its discounted Internet program as part of any future franchise agreement renewal.

### 15.2 "Inclusion Zones" Bring Free or Low-Cost WiFi Service To Prioritized Areas

Under this option, Click! could update the agreements with the wholesale ISP partners and require them to provide some WiFi and cable modem services for free, or at low cost, to prioritized areas, or "inclusion zones", as part of their contracts. Similar requirements which benefit the public, have traditionally been a part of CATV franchises. It would not be difficult to place WiFi requirements on the ISPs.

---

<sup>103</sup> Customers that qualify for TPU's Energy Assistance Program also receive discounted CATV services.

<sup>104</sup> The ISPs should not be profiting from customers on this program. It's their turn to "give back" to society -for the 20 years of success that they have enjoyed by operating over Click! Network.

<sup>105</sup> <http://www.advancedstream.com/content/residential>

<sup>106</sup> <https://www.xfinity.com/locations/washington/seattle/internet-service>

<sup>107</sup> Average of \$20 monthly savings going to approximately 100K Cable modem customers in Tacoma area.

Click! would support this effort by providing the backhaul capacity, with aggregation nodes, allowing access to the Internet over the Click! Gateway.

### 15.3 Street Lights and WiFi

For an example of municipal WiFi, see how Plainville Connecticut made free Internet available over their streetlight fixtures. The WiFi service was added to 123 of the 1,424 new energy-efficient LED fixtures installed on all municipal light posts. These high-tech streetlights sip energy, dim by remote control and are also free WiFi hotspots.<sup>108</sup>

### 15.4 Deploying WiFi and the Digital Inclusion Program

With support from its ISP partners, Click! could easily deploy WiFi and other technologies in addressing Tacoma's digital equity and digital inclusion needs. A City run digital inclusion program would identify "digital inclusion areas" -like low-income areas, multi-dwelling public housing facilities and parks. Then these "inclusion zones" would receive public WiFi access, with state of the art technology utilizing Click! Network.

The ISP partners would support this effort by adding wireless access points, to create a wireless local area network (LAN) with a controller that would operate in conjunction with an API authentication system based on the Tacoma Public Library membership database. Essentially anyone with a Tacoma Public Library card and a device would be able to login with those credentials<sup>109</sup>.

As part of their contracts, the retail ISP partners could be required to provide the management, installation, security, support and enforcement of Click! Network's acceptable use policies<sup>110</sup> for this system -at no cost to the City<sup>111</sup>. Additional corporate sponsorship could even play a role in supporting free WiFi services<sup>112</sup>.

## 16. Net Neutrality For All Customers

With Click! remaining in control of the Internet gateway routers, IP address block and DNS servers, a retail ISP partner cannot speed, slow, or block internet content based upon political views, paid prioritization or other businesses interests

With Advanced Stream's "Plan B 2.0" option, there are no changes in Click's ability to set and adhere to net neutrality principles. This supports Tacoma's strong belief in Net Neutrality – that all lawful internet content be equally accessible, regardless of its subject matter or viewpoint.

---

<sup>108</sup> Bill Leukhardt "Plainville Streetlights To Provide WiFi, Not Just Light"

<sup>109</sup> What Barcelona has done:

<http://datasmart.ash.harvard.edu/news/article/how-smart-city-barcelona-brought-the-internet-of-things-to-life-789>

<sup>110</sup> Click! Network Use Policy <https://www.clickcabletv.com/about/legal-notice/internet-acceptable-use-policy/>

<sup>111</sup> For example, 10% of ISP gross sales could be placed in a non-profit joint venture entity that the ISPs jointly manage and operate to provide this service.

<sup>112</sup> TAYLOR SOPER, GeekWire "Google donates \$344K for free WiFi in Seattle"

<https://www.geekwire.com/2016/google-donates-344k-provide-WiFi-seattle-community-centers-affordable-housing-developments>

## 17. Fostering Competition with Open Access

“Plan B 2.0” preserves Tacoma’s tradition of having an open access network. The public-private partnership with the ISPs has been the foundation of Click! success since its inception. Customers benefit from the competition and better service that open access brings to our local market.

This open access model is a proven strategy for winning new customers. The ISPs have demonstrated their ability to bring additional customers when called upon.

### 17.1 The More The Merrier! Opening up our Open Access Network

By building on the successful open access formula, allowing additional qualified ISPs to join the network, prices can be even lower and customer service all the more amazing. Competition between the ISPs demands that. These new ISPs would bring fresh and exciting ideas and resources to Click! They would support Click! marketing efforts and help take additional market share. We must expand Click!’s wholesale ISP and retail Cable TV customer base.

Think of these ISPs as channel partners. Supporting a channel distribution model is a time proven method of building a business. Increasing the number of channel partners (ISPs),<sup>113</sup> is a win-win for Click!. When an ISP partner signs up a customer, most of these new customers also subscribe to CATV services<sup>114</sup>.

Why limit the network to just 2 or 3 ISP providers? Advanced Stream supports an “All Hands On Deck” approach, with more ISPs promoting our municipal Internet service to potential customers.

It’s a numbers game. With more marketing resources being deployed to acquiring customers for Click!, the wholesale Internet customer and CATV base grows even faster.

Profits from these activities can be reinvested to further network expansion and support the community’s important digital equity initiatives.

## 18. Privacy

The Tacoma City Council passed a resolution in 2017 that protects customer privacy in Tacoma. It prevents the private ISP partners from collecting or selling customers’ personal information without written approval.

With “Plan B 2.0” the City, TPU and Click!’s well established policies for protecting customer privacy continue.<sup>115</sup>

TPU employees are always careful when gathering information to provide needed services and in protecting the public’s privacy. Click! carefully follows the requirements of Section 631 of the Cable Communications Policy Act of 1984<sup>116</sup>. Preserving the current business model insures these practices continues.

Given federal rollbacks of net neutrality and internet privacy protections; and, since private telecom companies can now collect and sell their customers’ private online usage information, a “Plan B 2.0”

---

<sup>113</sup> There were 22,613 ISP customers and 16,010 CATV customer, in Jan 2018

<sup>114</sup> From Click! 2018 RFIQ Attachment -ISP w/CATV Penetration based on total ISP Subs

<sup>115</sup> CANDICE RUUD, [News Tribune April 2017: ISPs can’t sell your personal info](http://www.thenewtribune.com/news/politics-government/article145363804.html)  
<http://www.thenewtribune.com/news/politics-government/article145363804.html>

<sup>116</sup> Click! Customer Privacy Notice <https://www.clickcabletv.com/about/legal-notices/catv-subscriber-agreement/>

strategy of municipal ownership and operation of Internet services protects customers' constitutional rights to free speech and privacy.

To counteract these federal rollbacks of net neutrality and internet privacy, the ACLU recently asked local governments to consider taking a direct role in providing broadband to residents.<sup>117</sup>

Tacoma was a pioneer in the effort to provide municipal access to the Internet. Tacoma was the first municipality to take such action and actually cast off the chains of monopoly.

If the ACLU is recommending other cities follow this path now, we cannot make drastic changes to Click! Network's business model and give up all that has been accomplished. It would be a huge embarrassment for our community if policy makers were to do so.

## 19. Local Participation - Promoting Economic Development And Educational Opportunities

Click! Is an amazing asset that holds tremendous untapped potential for our community. How can Tacoma policymakers seriously consider abandoning Click! now? Especially when so many other municipalities around the country are jumping headlong into developing their own broadband solutions and trying to provide these essential services to their citizens at reduced cost.

### 19.1 Underutilized Dark Fiber -Additional Revenue from Local Governments

Click!'s 180-count fiber network backbone is a broadband superhighway -with tremendous room for expansion and increased utilization. Click! currently utilizes just 12 strands, and more than one-half of the network is unused dark fiber -just waiting to be deployed for our community! Also, Click! Also holds tremendous potential for smart city functionality, such as added public safety services, intelligent traffic and parking systems; and, the many not yet imagined smart city functions - that future developments (especially with the Internet of Things) is sure to bring.

### 19.2 Expanding Usage of I-NET

By expanding usage of I-NET, Click! can gain support from other local governments and public stakeholders - to help by sharing the costs for operating and maintaining this essential community asset.

The City of University Place, for example, could be invited to support Click! by bringing its schools and government offices onto I-NET. When Click! was built, those drops were put in place, so the connections already exist and are ready to be lit. Pierce County could also benefit from utilizing Click! to support their efforts - especially in the southern part of TPU's footprint.

Pierce County recently commissioned a study<sup>118</sup> to evaluate the lack of broadband connectivity in these areas. This study will soon *"provide recommendations on how to expand broadband access in the County with a focus on rural areas such as Frederickson"*<sup>119</sup>

---

<sup>117</sup> Jay Stanley, Senior Policy Analyst, ACLU MARCH 30, 2018: [Public Broadband Can Help Protect the Open Internet and Close the Digital Divide](#)

<sup>118</sup> 2018 Contract for Pierce County Broadband Study:  
<http://stickwithclick.com/images/Contract-for-Pierce-County-Broadband-Study-2018.pdf>

<sup>119</sup> Pierce County: Evaluation of Broadband Connectivity and Access in Pierce County  
<http://stickwithclick.com/images/Evaluation-of-Broadband-Connectivity-and-Access-in-Pierce-County.pdf>

Click! can also benefit by securing other I-NET users within its service area. There are many libraries (all the Pierce County Library System), many K-12 schools and higher education institutions that could utilize the surplus TPU fiber to lower their telecommunications costs.

Click! would benefit from the additional revenue these sources could provide. That revenue would offset the costs for maintaining and operating the telecommunications plant.

Advanced Stream's founder, the author of this report, has close ties to members on the Pierce County Council ; and, is in close contact with them about their goals for improving broadband access.

### 19.3 Gigabit Speeds Bring Economic Growth

Click! Management has plans for delivering symmetrical Gigabit speeds -both over the current DOCSIS platform<sup>120</sup> and over the FTTH roll out<sup>121</sup>. The cost estimates for deploying Gigabit service over Click! have recently been drastically reduced. Deploying Gigabit will result in tremendous economic growth

As reported by Muni NetWorks, these investments improve the productivity of existing businesses and attract new businesses to communities: *"They also create millions of dollars in savings that can be reinvested into local economies. networks improve the productivity of existing businesses and attract new businesses to communities, allow individuals to work from home more effectively, support advanced healthcare and security systems, strengthen local housing markets, and represent long term social investments in the form of better-connected schools and libraries. They also create millions of dollars in savings that can be reinvested into local economies"*.<sup>122</sup>

### 19.4 Becoming a "Gig City"

With the launch of Click! In 1997, Tacoma began promoting itself as "America's most wired city". 20 years ago City policymakers were ahead of their time. They had a clear "vision" of the future. They knew that broadband Internet would become an essential public utility - that broadband and ALL of its benefits could be harnessed and used to improve the lives of the citizens of Tacoma.

Many significant economic development events occurred at the time of Click!'s creation. During this period the University of Washington located its campus in Tacoma. Similarly, seeing broadband speeds, that were unavailable in other communities, many companies relocated their businesses to Tacoma.

The creation and expansion of Click! Network has supported Tacoma's amazing progress. By upgrading Click! now, to become a "Gig City" offering gigabit internet service, Tacoma can bring economic development and educational opportunities to our community for years to come.

The Advanced Stream alternative, of "Plan B 2.0" and becoming a "Gig City", is the best way to support, not only Tacoma's economic development and educational goals, but all 12 of the most important policy goals outlined in this proposal.

Tacoma has the history; hopefully, we have the visionary leaders of today, thinking of tomorrow, who understand that redoubling our efforts and "Plan B 2.0" best serves Tacoma's citizens.

The future of Click! Network is in your hands.

---

<sup>120</sup> Breakthroughs in DOCSIS 3.1 now allow for symmetrical gigabit speeds.

<sup>121</sup> Click! has rolled out FTTH in greenfield areas and future expansion will utilize this technology.

<sup>122</sup> muninetworks.org <https://muninetworks.org/content/municipal-networks-and-economic-development>

## 20. Conclusion

Since Click!'s operational statements are a "disputed issue", wouldn't it be prudent to get the facts straight before throwing in the towel and allowing private sector interest to acquire this precious community asset thru this RFI/Q process?

Even if the City's attorneys are right,<sup>123</sup> and the Courts ultimately determine Click!'s business model is a proper, prudent and legal activity, much time will have been lost. Time is not our friend in this fast moving industry. Click! staff and the private sector ISP partners should immediately turn our attention towards building upon Click!'s success and celebrating Click!'s 20<sup>th</sup> anniversary in conjunction with a membership drive.<sup>124</sup> We must not delay moving forward together in achieving the 12 policy goals.

Time is of the essence in such fast moving technological endeavors. There is a tremendous first mover advantage for whoever introduces gigabit service in the Tacoma market.

Click is ready to go with gigabit now - having already installed the CBR-8 router in the NW section of the network. Click! could turn up gigabit service tomorrow in that area. What are we waiting for? Click! has an opportunity to scoop the competition with a Gigabit Service announcement.

In the time required to settle the Court case, Advanced Stream's Plan B 2.0 could render any issue of losses moot - by making Click! so profitable that there would be no question of ratepayer funds being used by the operation.

We hope policymakers will recognise the wisdom of our proposal and quickly put the ISP partners back to work. Your ISPs stand ready to implement the win-win solution that Plan B 2.0 represents.

## Responses to Appendix A: Responsibility Matrix Clarifications.

Respondent is uncertain by the Responsibility Matrix's usage of the term "CITY" in the column headings, under Operational and Funding Responsibility - we have assumed it to mean the current municipal entity that operates the Click! Network. Which is TPU, or the operational division, Click! Network. All of our responses to the Responsibility Matrix reflect this assumption.

### Ownership

**CPE – Existing:** Respective ISPs will retain their own Internet customers' equipment and Click! will retain its own CATV customers' equipment. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Customer ownership – existing:** Respective ISPs will retain their own Internet customers and Click! will retain its own CATV customers. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**CPE – New:** ISPs will take ownership of new Internet customers' equipment they sign up. Click! will be responsible for new CATV customers' equipment they sign up. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Customer ownership – new:** ISPs will take ownership of new Internet customers they sign up. Click! will be responsible for new CATV customers they sign up. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

### Insurance

**Entry cable, CPE, and in-premises wiring – existing:** The wholesale ISP partners and Click! will be responsible for insuring their own customers' CPE. Click! will be responsible for insuring Entry cable, and in-premises wiring. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Entry cable, CPE, and in-premises wiring – new:** The wholesale ISP partners and Click! will be responsible for insuring their own customers' CPE. Click! will be responsible for insuring Entry cable, and in-premises wiring. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

### Replenishment

**CPE:** The wholesale ISP partners and Click! will be responsible for replenishing their own customers' CPE. Click! will be responsible for replenishing their own customers' CPE. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Subscriber Electronics:** The wholesale ISP partners and Click! will be responsible for replenishing their own customers' subscriber electronics. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

## Taxes

**USF and other federal tariffs and fees:** The wholesale ISP partners and Click! will be responsible for paying their own federal taxes and fees. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Sales:** The wholesale ISP partners and Click! will be responsible for paying their own sales tax. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**PILOT:** The wholesale ISP partners and Click! will be responsible for paying their own PILOT. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Other:** The wholesale ISP partners and Click! will be responsible for paying their own taxes. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

## Outside Plant

**Trouble Ticket processing:** The wholesale ISP partners and Click! will be responsible for their own trouble ticket processing. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Inventory maintenance:** The wholesale ISP partners and Click! Will be responsible for their own inventory management. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

## Network Operations

**Customer installation (on-premises):** Click! will be responsible for installing the coax or fiber lines to and within the customers' homes, the ISP's will be responsible for installing CPE to connect customer to the Internet. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Customer activation and provisioning:** Click! will be responsible for the provisioning system and the ISPs will be responsible for the activation in the provisioning system. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Maintain inventory (active network elements):** The wholesale ISP partners and Click! will be responsible for their own inventory management. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Contract management (customer):** The wholesale ISP partners and Click! will be responsible for maintaining their own customer's contracts. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

## Customer Service

**Billing and invoicing:** The wholesale ISP partners and Click! will be responsible for billing and invoicing their own customers. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Bad debt (customer):** The wholesale ISP partners and Click! will be responsible for their own customer's bad debt. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Collections:** The wholesale ISP partners and Click! will be responsible for their own collections. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Tier 1 support 24x7 (basic customer issues):** The wholesale ISP partners and Click! will be responsible for their own Tier 1 support. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Tier 2 support 24x7 (basic customer issues):** The wholesale ISP partners and Click! will be responsible for their own Tier 2 support. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Prepare and manage SLAs:** To the extent it's an Internet related matter, the wholesale ISP or MSA addresses such issues. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Branding:** The wholesale ISP partners and Click! will be responsible for their own branding. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Marketing:** The wholesale ISP partners and Click! will be responsible for their own marketing. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

## Sales and Marketing

**Sales:** The wholesale ISP partners and Click! will be responsible for their own sales. The ISPs have traditionally promoted the Click! products and brand. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Customer acquisition and retention:** The wholesale ISP partners and Click! will be responsible for their own customer acquisition and retention. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Service Performance Objectives:** The wholesale ISP partners and Click! will be responsible for their own Service Performance Objectives. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Service catalog:** The ISPs and Click! are responsible for their own service catalogs. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Monitor pricing:** To the extent that it relates to Internet service and MSA those entities are responsible for monitoring their own pricing. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Set Pricing (based on contract conditions):** The wholesale ISP partners and Click! will be responsible for their own pricing. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Develop and manage customer contracts:** The wholesale ISP partners and Click! will be responsible for their own customer contracts. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Execute customer contracts:** The wholesale ISP partners and Click! will be responsible for executing their own customer contracts. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Provide Subscription Records:** The wholesale ISP partners and Click! will be responsible for their own subscription records. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Provide subscriber invoice and payment status (payments):** The wholesale ISP partners and Click! will be responsible for their own invoicing and payments. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

## Reporting

**Provide network status information (for tier 1 support):** The wholesale ISP partners and Click! will be responsible for their own network status reporting. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

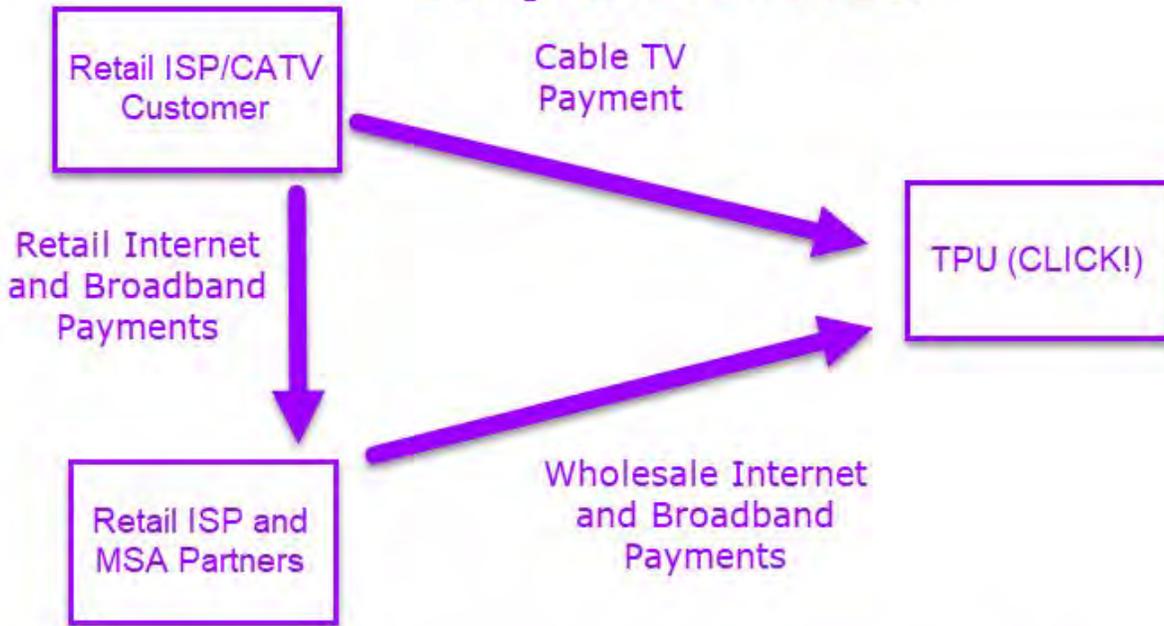

**Provide network status information (for tier 2 support):** The wholesale ISP partners and Click! will be responsible for their own network status reporting. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

**Provide network status information (for tier 3 support):** The wholesale ISP partners and Click! will be responsible for their own network status reporting. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

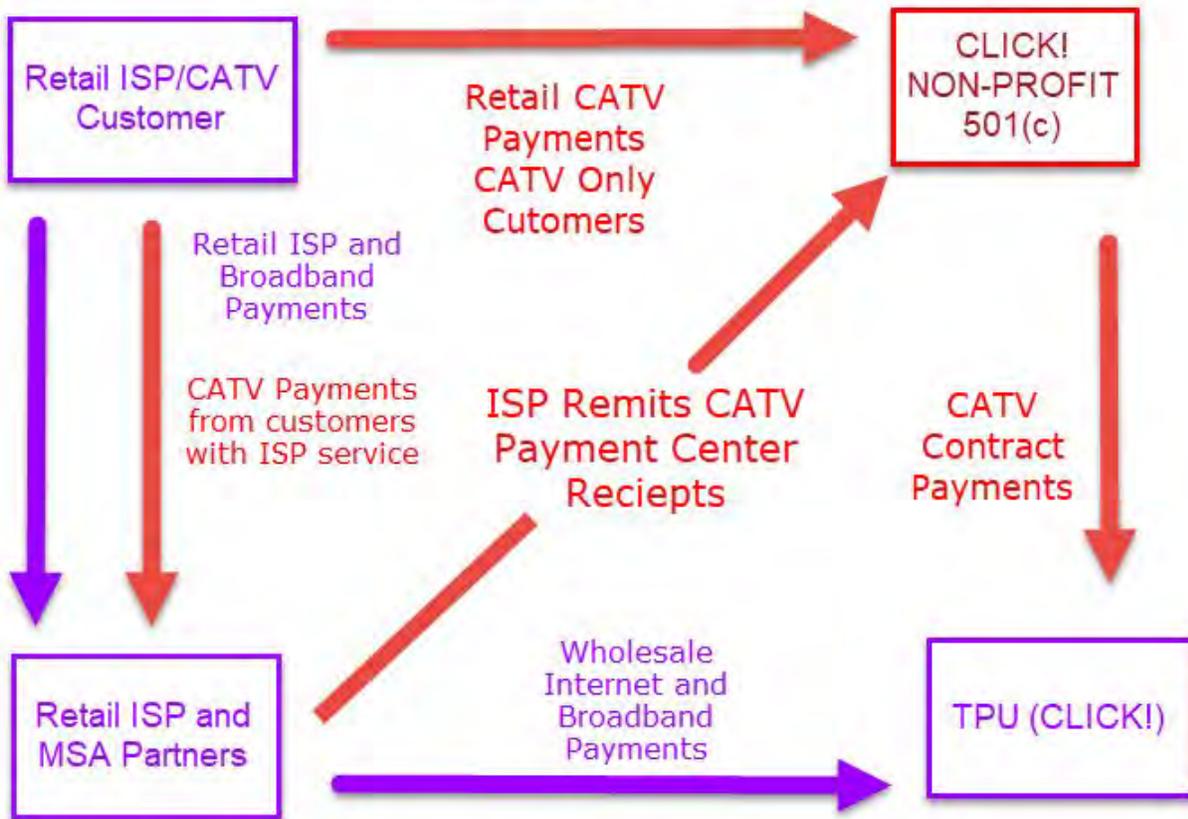

**Provide monthly sales and leads reports:** The wholesale ISP partners and Click! will be responsible for their own sales and leads reporting. In the event circumstances force policy makers to follow the emergency 'pivot plan', the Click! duties would then fall to the new 501 (c) non profit entity, as our proposal contemplates.

EXHIBIT A

# Stay the Course

# Emergency Pivot Alternative

- Exhibit B shows revenue growth and customer growth on a monthly basis.
- Beginning ARUP is \$27 - based on RFI (\$7.3 million in ISP revenue / customer count of 22,650).
- Depreciation and Amortization remains constant with Capital Additions being amortized - offsetting sunk costs which are rolling off.
- Starting Customer TV and ISP Counts are from the RFI material.
- Sales and Admin expenses include the elimination of 1 non-union management FTE.
- ISP ARPU increases by \$2.50 at the beginning of year 1 and by another \$2.50 at beginning of year 2.
- CATV ARPU increased by \$5 after 18 months.
- Assumes constant CATV customers count, with a declining ratio of CATV to ISP customers.

# EXHIBIT 73

CERTIFICATE

I, Charleen Jacobs, do hereby certify that I am the Clerk of the Public Utility Board of the City of Tacoma, and that record and maintain custody of the official records and minutes of the Public Utility Board.

I further certify that the attached is a full, true, and correct copy of the Tacoma Public Utility Board study session and regular meeting minutes of October 26, 2016.

In witness whereof, I have set my hand this 17 day of January 2020.

Charleen Jacobs  
Clerk, Public Utility Board  
Tacoma Public Utilities  
City of Tacoma, Washington

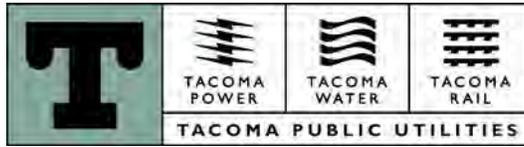

Attachment

State of Washington  
County of Pierce

Subscribed and sworn to before me this 16 day of January 2020.

Deborah D. McLellan  
Notary Public in and for the  
State of Washington, County of Pierce  
My commission expires 10-8-21

APPROVED 11-9-16

MINUTES  
City of Tacoma  
Public Utility Board Meeting  
October 26, 2016  
6:30 p.m.

Mr. Patterson called the Public Utility Board meeting to order at 6:30 p.m. at the Public Utilities Administration Building.

**Present:** Mark Patterson, Monique Trudnowski; Woodrow Jones, Karen Larkin, Bryan Flint

The meeting was quorate.

**Minutes of the Previous Meetings**

Ms. Trudnowski moved that the minutes of the previous meetings be adopted; seconded by Mr. Jones. Voice vote was taken and carried with Mr. Flint abstaining as he was not present for the October 12 meeting. The minutes were declared adopted and made part of the record.

**Recognitions**

There were no recognitions

**Comments from the Public**

There was no public comment.

**Consent Agenda**

There were no items on the consent agenda.

**Regular Agenda**

- D-1 Resolution U-10884 – Award contracts and approve purchases:
1. Award contract to CCI Systems, Inc., for Cisco routers and migration assistant services (\$1,034,100.11 including sales tax and a trade-in credit of \$78,840.48 for old Cisco equipment; net expense \$955,259.63, including sales tax);
  2. Award contract to Avante Solutions, Inc., for the purchase of the IT service management software tool and consulting services for implementation and training (\$525,000, plus sales tax);

3. Increase contract to Regional Disposal Co., for the disposal of solids from the Green River Filtration Facility (\$138,000, sales tax not applicable, plus the option to extend three additional one-year terms for a cumulative total of \$690,000, sales tax not applicable).

Ms. Trudnowski moved to adopt the resolution; seconded by Mr. Jones.

In response to a Board request for additional information on the software in item number two, Johnny Rivera, Power Supervisor, answered that Utility Technology Service (UTS) has adopted an IT Service Management (ISM) framework as this is an industry standard of best practices for delivering IT services by ensuring the right processes, people, and technology are in place to meet business goals. UTS has developed processes and procedures on the ISM framework and are at a milestone in implementation and are ready to plug these processes and procedures into an ISM tool. This approval is to purchase the software product and will help consolidate other tools into a robust toolset.

In response to a Board request for a description of the capabilities and enhancements associated with item number two, Pat Bacon, Telecom Manager, explained that this equipment will serve as a link between cable software and the customer and the key function is to cluster the internet customer by nodes/service groups to optimize bandwidth and the customer experience. The current equipment is at the end of its useful life and can't keep up with demands. This will enable Click! to manage steady growth and faster internet speeds. This is budgeted in the current biennium and is independent of the all-in business plan. In response to a Board inquiry as to why one node is being replace and not four, Mr. Bacon stated that the northwest hub is the most congested and in need of an upgrade.

In response to a Board inquiry on item number three regarding exactly what is being evaluated, Celina Mina, Associate Engineer, answered that Tacoma Water is trying to evaluate what solids are being produced by the filtration plant. Currently, the solids don't have beneficial uses, like Tagro, but are composed of river salts, clays, and treatment materials. The process of optimizing the treatment processes and testing solids to examine different alternatives for removal of solids is under way. Also, work is being done with the University of Washington Tacoma and Environmental Services to treat the solids in a secondary process. In response to a Board inquiry on the contract term, Ms. Mina answered that the previous contracts were for one year. However, because different testing options on the solids are under way, more time is needed so this contract includes options to extend the contract.

Voice vote was taken and carried. The resolution was declared adopted.

- D-2 Motion 16-11 – The Department of Public Utilities 2017/2018 budget, as submitted and filed with the Clerk of the Board, be accepted and approved and the City Council is requested to approve the same as provided by Section 4.12 of the Charter of the City of Tacoma.

Ms. Trudnowski moved to approve the motion; seconded by Mr. Jones.

IN THE SUPERIOR COURT OF THE STATE OF WASHINGTON

IN AND FOR THE COUNTY OF PIERCE

CITY OF TACOMA, a municipal corporation, )

No. 96-2-09938-0

Plaintiff, )

DECLARATION OF STEVEN J. KLEIN  
IN SUPPORT OF CITY'S REPLY

v. )

THE TAXPAYERS AND THE RATEPAYERS  
OF THE CITY OF TACOMA, )

Defendants. )

1. My name is Steve Klein. I am the Superintendent of the Light Division of Tacoma Public Utilities. The purpose of this declaration is to support the City of Tacoma's reply brief on its motion for summary judgment. I am over the age of eighteen, competent to testify in this matter, and make this declaration based upon my own personal knowledge.

2. The City of Tacoma, through its Light Division, plans to construct and operate telecommunications facilities and services to enhance the Light Division's ability to provide highly reliable, cost-effective and convenient electric service to its customers (the "Telecommunications Project"). Such a system would also be capable of carrying other telecommunications services, including cable television service.

DECLARATION OF STEVEN J. KLEIN  
IN SUPPORT OF CITY'S REPLY BRIEF- 1

J:\ET\24624-00.015\2FF33Z.DOC

COPY

1           3.       As my staff has described previously, the City adopted the Bond Ordinance  
2 (Complaint, Ex. 1) in July 1996 for the purpose of partially funding the Telecommunications Project.<sup>1</sup>  
3 The City's purpose in bringing this litigation is to test the validity of the Bond Ordinance, which  
4 provides for the issuance of revenue bonds only. The City is not asking the Court to determine  
5 whether the City could issue any other type of bonds.

6           4.       The Bond Ordinance unequivocally provides for the issuance of revenue bonds rather  
7 than general obligation bonds. The Bond Ordinance expressly states that it provides "for the issuance  
8 and sale of the City's Electric System Revenue Bonds[.]" Complaint, Ex. 1, title page; *see also* id. at  
9 sections 1.2.B ("Bonds" defined to mean revenue bonds); 2.3 (Bonds' only lien is upon net revenues  
10 of electric system); 2.4 (finding that sufficient revenues over and above operation and maintenance  
11 will be available to pay debt service on Bonds); 3.1 and 4.7(a) (reiterating that the type of bond  
12 involved is a revenue bond).

13           5.       The difference between revenue bonds and general obligation bonds is highly  
14 significant. The City's obligation under a revenue bond is limited to funds available from the Electric  
15 System (which includes the Telecommunications Project). Bond holders will buy a bond that says,  
16 "Principal of and interest on this bond are payable solely out of the special fund of the City known as  
17 the Electric System Revenue Bond Fund[.]" Bond Ordinance section 4.7(a). The bond will also  
18 make clear that the City is obligated to set aside only "Revenues of said Electric System" to pay off  
19 the bonds. *Id.* Thus, no general fund dollars are committed and no general obligation is incurred  
20 under the Bond Ordinance. By the same token, revenues from electric customers are retained by the  
21 Light Division and are not available to the General Fund.

22           6.       The only other funding source that is currently contemplated for the  
23 Telecommunications Project is a surplus of approximately \$40 million in the Light Division current  
24

25 \_\_\_\_\_  
26 <sup>1</sup> Declaration of Jon Athow in Support of Motion or Summary Judgment (Nov. 5, 1996),  
paragraph 15.

1 fund. This is the money that I mentioned at a City Council meeting on April 8, 1997.<sup>2</sup> This money is  
2 generated exclusively by Light Division activities, primarily sales of electric power. As I stated, that  
3 \$40 million might otherwise be used to buy down debt. But contrary to the unsupported implication  
4 of Defendants' Response, the money would only be used to buy down Light Division debt, not  
5 general fund or other City debt. Because the Telecommunications Project is an element of the  
6 Electric System, it will enhance the capability and value of the Electric System, and will be owned and  
7 operated by the Light Division, it is an appropriate investment for Light Division surplus.

8 7. The Light Division produced a Telecommunications Study<sup>3</sup> that includes a Business  
9 Plan. The Business Plan was *unanimously* approved by both the Tacoma Public Utility Board and the  
10 Tacoma City Council in April 1997.

11 8. The Business Plan is based upon assumptions that are fully substantiated in light of  
12 current trends in the telecommunications industry. It involved a review of the industry both nationally  
13 and locally. *Id.* at page 1. It was based on input from a wide range of experts. The  
14 Telecommunications Study, including the Business Plan, was prepared by a multidisciplinary group  
15 called the Telecommunications Study Team. This team of approximately twenty people included Jon  
16 Athow, other Light Division staff and outside consultants practicing in the areas of  
17 telecommunications, finance, business planning, marketing and the law.

18 9. The Telecommunications Study also included an economic development study  
19 produced expressly for purposes of analyzing whether the City should proceed with the  
20 Telecommunications Project. *See* Appendix D. Two of the five authors of this economic  
21 development study hold doctorate degrees, and the authors consulted with about 20 other  
22 professionals in the community.

23  
24  
25 <sup>2</sup> My comments are excerpted in the Declaration of Heidi Imhoff dated April 28, 1997.

26 <sup>3</sup> This study, which is contained in a three-ring binder, was submitted as Exhibit D to Jon Athow's declaration dated April 11, 1997.

1           10. Through the Telecommunications Study, the City carefully considered issues similar to  
2 those raised by Defendants' witnesses. *See, e.g.*, chapter on options (fifth section of Study). This  
3 section of the Study analyzes in detail the various options for telecommunications services from  
4 various private providers, considering such factors as types of service offered, current and potential  
5 technology utilized by different providers, projections for future growth and financial risk, investment  
6 profile, etc. This options analysis is thoroughly documented through 73 endnotes. *See also*  
7 Appendix B (Light Division response to TCI letter regarding municipal ownership of  
8 telecommunication and cable systems).

9           11. The members of the Utility Board and the members of the City Council participated  
10 actively in analysis of financial plan issues. After the Telecommunications Study was complete, they  
11 held a three-hour work session on the Telecommunications Project and entertained about two hours  
12 of public testimony and discussion before unanimously voting to proceed with the Project as set forth  
13 in the Study. Discussion was vigorous both at the work session and at the public hearing.

14           12. As Light Division staff explained to the Board and Council, and as the Council itself  
15 found in the Resolution approving the Project,<sup>4</sup> a key purpose of the Telecommunications Project is  
16 to protect and enhance the value of the Light Division's existing electric utility assets by having a  
17 telecommunications system that is sophisticated enough to enable the Light Division to compete  
18 effectively in the rapidly evolving electric industry. To fulfill this important purpose of protecting the  
19 value of existing Light Division *electric* assets, it is not at all necessary that the revenues from the  
20 provision of telecommunications and cable television services cover the entire cost of the  
21 Telecommunications Project.

22           13. The Council and Board were aware when they voted to proceed that revenues from  
23 the provision of telecommunications and cable services might fall short of projections. As Light  
24 Division staff informed the Board and Council, under a "worst case" shortfall, electric rates might

25 \_\_\_\_\_  
26 <sup>4</sup> This resolution as adopted is attached as Exhibit B to Jon Athow's declaration dated April 11,  
1997.

1 have to be increased by as much as 2.5%. This scenario assumed that we incurred all the cost of  
2 building the system but obtained no revenues from provision of cable television service or from  
3 provision of telecommunications service to third parties. This "worst case" scenario is significantly  
4 worse than the scenario that Defendants' experts present.

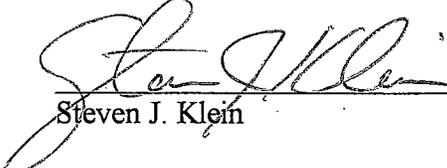

5 14. Light Division staff explained to the City Council our view that even if the  
6 Telecommunications Project's revenues fell short of projections, even to the point of a worst case  
7 scenario (resulting in a 2.5% rate increase), still the City should proceed with the Project in order to  
8 secure the value of the City's electric system assets. I believe that in voting to proceed with the  
9 Project, the Council fully understood and accepted the risk of an electric rate increase.

10 15. Thus, it is not terribly important whether the Telecommunications Project's own  
11 revenues will be sufficient to cover its costs. Similarly, although I believe our Financial Plan is very  
12 sound, including our assumptions regarding interest rates and other factors, whether we used  
13 precisely correct assumptions is not significant.

14 16. The important question is whether Light Division revenues will be sufficient to cover  
15 Telecommunications Project costs, since we are issuing electric system revenue bonds for the Project  
16 and other Project costs will be funded by accumulated Light Division revenues. Obviously, Light  
17 Division revenues are sufficient. Indeed, Light Division revenues are 40 times greater than worst-  
18 case Project costs. Thus there is zero possibility that the Telecommunications Project could  
19 somehow affect the City's general fund and its taxpayers.

20 I swear under the penalty of perjury of the laws of the State of Washington that the foregoing  
21 is true and correct.

22 Dated: May 5, 1997 at Tacoma, Washington.

3 --oOo--

4 (Ms. Kazaryan not present.)

5 STEVEN J. KLEIN,

6 sworn as a witness by the Certified Court Reporter,

7 testified as follows:

8 EXAMINATION

9 BY MR. JURCA:

10 Q. And would you give us your name, please.

11 A. Steven -- that's -e-v-e-n -- middle initial J  
12 for John, J-o-h-n, Klein, K-l-e-i-n.

13 Q. And what's your present residence address?

14 A. 1712 South Sunset Drive, Tacoma, Washington,  
15 but I also own a condo in Queen Anne.

16 Q. Okay. But you spend most of your time at  
17 the --

18 A. Now I do. Now that I'm retired.

19 Q. Okay. I was -- my next question was going to  
20 be are you employed, and is the answer that you're not  
21 because you're retired or --

22 A. Well, it's a little more complicated than  
23 that.

24 Q. Okay.

25 A. I do some consulting work. And one of the

Answers by Steve Klein, Tacoma Power Superintendent During Creation of Click!

2 point-to-point service or Internet service, if you can  
3 get a sense from my personality, I don't do anything  
4 lazily or partially. If we're going to do it, we're  
5 going to do the best job we can.

6 So, once the intent was we're going to move  
7 forward because we can't find anyone that we can  
8 partner with to do all of these things, then we're  
9 going to do them, and we're going to do them well. So  
10 I'll pause there, and basically say that's pretty  
11 much --

12 Q. I appreciate that explanation. I really do.  
13 That's very helpful. Would it be fair to say that --  
14 although I'm -- as with most big projects like this,  
15 there are -- multiple people are involved. Would it be  
16 fair to say that the formation and -- of Click was  
17 really as much your vision as any other individual's?  
18 I mean, were you sort of the --

19 A. True.

20 Q. -- chief visionary?

21 A. I -- I did -- I -- I would think so.

22 Q. Okay.

23 A. I've been called the father of -- of it.

24 Q. Okay.

25 A. But the truth is I'm the kind of leader that

1 you're thinking of this or perhaps you're thinking of  
2 another document called the complaint. This is just a  
3 notice of deposition that describes various topics.  
4 And I'm going to ask you about the topics that you're  
5 here to talk about. You're not sure -- I mean, do I  
6 take --

7 A. The topics look familiar --

8 Q. Okay. All right.

9 A. -- but I -- I don't remember specifically this  
10 document.

11 Q. Okay. I understand from counsel for the City  
12 that you are designated to testify today on two  
13 subjects that are listed here. One is Topic 1, up  
14 through the 2006 time period --

15 A. Okay.

16 Q. -- and the other is Topic 7. Do you -- is --  
17 is it your understanding that you are designated by the  
18 City --

19 A. Yes.

20 Q. -- to testify about those two subjects?

21 A. Yeah.

22 Q. Okay. Now, maybe the easiest way to begin is  
23 to just -- can you describe, again, in a general way,  
24 how did the idea of forming the Click Network come  
25 about?

1           A. It was an evolutionary process. And one of  
2 the triggering things for it was the passage of the  
3 Energy Policy Act of 1992 by Herbert Walker Bush in  
4 October of 1992. I became the superintendent in July  
5 of '93. And that was a very big deal. We had all seen  
6 what happened in the banking and trucking industries  
7 and deregulation, how it opened up competition and  
8 basically changed the way in which those industries  
9 competed and existed.

10           So here we were a monopoly and, on top of  
11 that, a government monopoly. And there was just all  
12 kinds of concerns and fears about what the potential of  
13 that was. And I'm coming in the door as the head of  
14 Tacoma Power, and I'm certainly familiar, as most of  
15 the Tacoma Power people are, with the proud history of  
16 Tacoma Power and all the people before us that had made  
17 some pretty amazing decisions to build major hydro  
18 projects and such that were tremendous assets and  
19 valuable to the citizens of Tacoma.

20           And so I'm coming into that office, and I want  
21 to make sure that I do the right thing and that we  
22 react appropriately to what's on the horizon for change  
23 in our industry. So I got together with the leadership  
24 of the various departments in Tacoma Power. And we  
25 started a strategic planning process where we went

1 through the strengths and weaknesses, analyzed our  
2 competition -- I mean, even to the point where we're  
3 presuming that Costco and the Catholic church will be  
4 selling power, and we'll have to wheel it on our  
5 system. And how would we be able to compete with them,  
6 or should we even attempt to compete? Should we focus  
7 on some other aspect and be the best at that and just  
8 presume we're going to lose that -- that side of it?  
9 But this is a somewhat long story. I'll try to --

10 Q. No, that's --

11 A. -- be patient. But a major theme that came  
12 out of all of this was the fact that the electrical  
13 systems virtually everywhere -- Tacoma Power wasn't  
14 unique -- were not a whole lot different infrastructure  
15 and equipmentwise than what had been in place for a  
16 hundred years.

17 And the joke was that Thomas Edison could walk  
18 into a substation and he would be able to point out the  
19 oil circuit breaker and the transformer. And he would  
20 know everything that was in there. So not a whole lot  
21 of new and sophisticated equipment.

22 But you were beginning to see microprocessors  
23 coming into play, and you begin to see the potential of  
24 that. So, instead of mechanical relays -- which  
25 interestingly, engineers would often visit substations

1           A. So then John starts to put together  
2 preliminary plans for a telecommunication system, and  
3 we begin to formulate all of the ideas that later are  
4 documented in a lot of the going forward documents --  
5 the kind of value streams and the benefits and  
6 efficiencies and so forth. So it gets to the point in  
7 '95, where so far I'm getting thumbs up -- and I'm  
8 skipping a lot of the things we changed in Tacoma  
9 Power, but I need to digress just to tell you one  
10 thing.

11           And I was in charge of this for many years.  
12 Scheduling power -- and this is the same for Puget or  
13 Seattle City Light, Tacoma Power -- when you have  
14 generation in a hydro-based system, sometimes you have  
15 more than you need. Now, with wind, that's also the  
16 case and then solar too. You have more than you need  
17 when you don't need it and then not enough when you  
18 don't. And so you're basically transacting in the  
19 wholesale power markets. And even back then, it was  
20 mainly bilateral, but there was still a market where  
21 you would call amongst parties and trade and sell  
22 energy.

23           And the way it was structured in my career  
24 coming in until I became the superintendent is it was  
25 scheduled day ahead, and the schedule for Friday,

1 Saturday, and Sunday and Monday was done on Thursday.  
2 And so the person that's getting the phone calls about  
3 my power's out or a car hit a thing, he's the same guy  
4 that's following these instructions. So imagine if  
5 he's in a hurry, if it says, you know, if you have any  
6 extras, sell it -- anybody he can find that will buy  
7 it, you know, great. You know, sold it and he's done  
8 with it and doesn't have to worry about it the whole  
9 rest of the weekend.

10 What we decided was that sort of thing was not  
11 sufficient. We weren't optimizing the value of that.  
12 So one of the things we did in this same time frame --  
13 so I'm trying to tell you, it wasn't all just  
14 telecom -- was we went to a 24 hour, seven day a week  
15 power trading operation, with full-time, 12-hour shift  
16 traders. That's -- that's all they did. And we  
17 virtually produced hundreds of millions of dollars in  
18 value. And that's actually where the source of the  
19 cash came from that paid for the -- for the initial  
20 build-out of the Click -- Click Network.

21 Q. This power trading that you just described --

22 A. Yeah.

23 Q. -- that was under the aegis of the power  
24 management --

25 A. Yeah.

1 banking and trucking and all of these sorts of things,  
2 I recognized that you don't want to be seers and try to  
3 do too many things and lose sight of who you are.

4 But on the other hand, the banks recognized  
5 the more relationships they had with you, the less  
6 likely you were to switch for a six pack of Coke, so if  
7 you had your vacation account, your charge card, your,  
8 you know, investments there -- so that was also in the  
9 mind at the time -- loyalty, multiple relationships  
10 with customers, but don't try to do so many things that  
11 you lose focus of why -- why you're there.

12 Q. Um-hum.

13 A. So I wasn't enamored initially with the  
14 telecommunication side of it -- anything that required  
15 a call center related to telecommunications. And so  
16 initially if anybody was reticent about the telecom  
17 things, doing them commercially -- I had nothing  
18 against selling the capacity -- the excess capacity to  
19 generate additional revenue, but I wasn't that enthused  
20 initially about going into them.

21 But during that same time period, as we're  
22 also briefing the city council, they're having a heck  
23 of a problem with the cable -- the incumbent cable  
24 provider who still has the crummy system, refuses to  
25 upgrade it. And they don't come to the table to

1 negotiate the franchise agreement. They can just tell  
2 the -- the city government to jump in the lake. And if  
3 you don't like it, we'll just shut it -- we'll shut it  
4 down.

5           And so, when the Stanford Research Institute  
6 came back and said, you know, you're beloved by this  
7 community; crappy service is provided; you're going to  
8 have excess capacity because once you stick the pipe up  
9 there -- put a little bit bigger pipe is very small  
10 incremental costs and you have the opportunity --  
11 because it's going to take a number of years for this  
12 digital world that you want on the electric side to  
13 actually come to be. Why not generate some revenue on  
14 that in the interim? So that report comes out in '96.

15           I have to digress a little and say that the  
16 deregulation of the electric utility industry and now  
17 law in '92, finally got traction in the four western  
18 states of Washington, Oregon, Idaho, and Montana, with  
19 the four governors calling together in 1995 a special  
20 comprehensive review with people in the energy  
21 industry -- people from all facets, environmentalists,  
22 tribes -- you know, the whole nine yards to come  
23 together for a comprehensive review of what direction  
24 should the Northwest take.

25           And what's interesting at -- at this -- in

1 December of '96, the comprehensive review was  
2 published, and it said that utilities in the Northwest  
3 should all provide retail choice no later than July of  
4 1999.

5 Q. But that -- they were talking about retail  
6 choice for electricity?

7 A. Electricity, yeah.

8 Q. Yeah.

9 A. But understand, if you have this dumb system I  
10 talked about, how is the Catholic church power going to  
11 go through, go to the customer, it's going to be  
12 accounted for, if they suddenly in the middle of the  
13 month switch to somebody -- somebody else, how is all  
14 of this transacted?

15 Those meters on the side of the house are just  
16 spinning plates. The only data you get from them, it  
17 just went a little bit farther from the last time you  
18 read it. In order to differentiate all of these  
19 things, you needed telecommunications and those kind of  
20 digital technologies.

21 So that immediately put even more pressure on  
22 all of us to say we need to move on this because we  
23 don't want to be in a situation where the governor is  
24 demanding we're in, you know, retail wheeling and we're  
25 looking like, you know, industry that won't step aside

1 and, you know, what happens if you don't go with the  
2 flow or you don't get out of the way?

3 Q. Yeah.

4 A. So -- so then John is assigned -- John Athow  
5 is assigned, and he names it the Athena. He was really  
6 enamored with the Greek goddess Athena and the story of  
7 her and her strengths and powers and that sort of  
8 thing. So he puts a group together under my direction  
9 and guidance.

10 And the idea is to take the SRI  
11 recommendations, turn it into a business plan that can  
12 be adopted by the board and the city council, which  
13 they did. The board adopted in March of '97 and the  
14 city council in April of '97. And that was the  
15 go-ahead.

16 Now, I left out, in '95, we went for authority  
17 in the superior court to verify we had the authority to  
18 do it. And that was decided by Judge Grant Anderson, I  
19 think --

20 Q. Yeah, I think that's right.

21 A. -- in '96. And so that -- and I'm sorry I  
22 went through all that, but it kind of puts all those  
23 early pieces -- a lot of stuff was going, but there was  
24 a momentum that wasn't fixated on cable television,  
25 although cable television, once it was a part of the

1 Q. -- study. Is this what you were referring to?

2 A. This is, yes. Yes.

3 Q. Okay. Well, let me ask you this. Can you  
4 describe for us, what was the purpose of -- what was  
5 TPU's purpose in asking Pricewaterhouse to do this  
6 work?

7 A. The telecommunication business plan was passed  
8 unanimously by the city council. Once it was passed  
9 and we hired Deb Stewart, who was well known in the  
10 telecom industry, that suddenly caught the attention of  
11 TCI brass, whereas to date, probably to them, the  
12 little backwater town of Tacoma and something stirring  
13 around and Barbara Wyatt's got alligators, but they've  
14 got bigger fish to try. John Malone and Leo Hendery  
15 were taking over the world. But when they suddenly  
16 realized -- in particular, Leo Hendery, who went to  
17 Bellarmino Prep in Tacoma --

18 Q. I never knew that.

19 A. -- and -- yes. And that's also where Mike  
20 Crowley went, who was a city councilmember. And they  
21 reconnected. At that point, from a unanimous support,  
22 we started getting pushback politically. And it came  
23 in different -- different ways. And so the issue  
24 around Tacoma electric utility subsidizing the Click  
25 Network became a reoccurring theme that came up over

Page 54

1 Q. -- study. Is this what you were referring to?

2 A. This is, yes. Yes.

3 Q. Okay. Well, let me ask you this. Can you

4 describe for us, what was the purpose of -- what was

5 TPU's purpose in asking Pricewaterhouse to do this

6 work?

7 A. The telecommunication business plan was passed

8 unanimously by the city council. Once it was passed

9 and we hired Deb Stewart, who was well known in the

10 telecom industry, that suddenly caught the attention of

11 TCI brass, whereas to date, probably to them, the

12 little backwater town of Tacoma and something stirring

13 around and Barbara Wyatt's got alligators, but they've

14 got bigger fish to try. John Malone and Leo Hendery

15 were taking over the world. But when they suddenly

16 realized -- in particular, Leo Hendery, who went to

17 Bellarmine Prep in Tacoma --

18 Q. I never knew that.

19 A. -- and -- yes. And that's also where Mike

20 Crowley went, who was a city councilmember. And they

21 reconnected. At that point, from a unanimous support,

22 we started getting pushback politically. And it came

23 in different -- different ways. And so the issue

24 around Tacoma electric utility subsidizing the Click

25 Network became a reoccurring theme that came up over

Page 55

1 and over and over and over again.

2 The ones that still stood by their decision

3 and thought Click was great didn't feel it was

4 necessary, but the ones that wanted to create conflict

5 and dissension continued to bring it up to the point

6 where even the people supportive of Click said let's

7 just do it and put this issue to rest.

8 And so Tim Strege, who had been a city

9 councilman years ago at a very young age --

10 Q. Can you spell his last name.

11 A. S-t-r-e-g-e, I believe --

12 Q. Thank you.

13 A. -- Tim Strege. He had been appointed by the

14 mayor as a new public utility board member. So one of

15 the first things he did as he came on to the utility

16 board was not only insist that we do this, he called up

17 Price and set this whole thing up.

18 So it's a little bit of a long answer, but it

19 wasn't a circumstance where I felt the need to do it

20 and I went out and brought them in. It was more or

21 less something imposed. On the other hand, did not

22 fear it. Worked with the people. The report was

23 positive. But that's how it came about.

24 Q. Okay.

25 A. We didn't feel a need to do it. It was --

Page 56

1 more or less, came about as a result of that issue

2 popping up and trying to get resolved. The one side

3 wanted it to come back, oh, yeah, it is subsidized, and

4 the other one wanted to verify once and for all what --

5 so this was the first -- the Virchow Krause was another

6 attempt when that --

7 Q. We'll get to that a little bit later.

8 A. -- when that rose to a head again too. So

9 it's a common theme.

10 Q. Okay.

11 A. Even today.

12 Q. Even today. Okay.

13 A. Yes.

14 Q. And, again, I -- this is not a memory test,

15 but it will -- it's helpful if you can describe

16 about -- what portion of the physical infrastructure

17 had been built out by this time, April of 2000? Was it

18 just getting started, or was it substantially --

19 A. Oh, no, no, no. We had our first Click

20 customer in 1998. And if I recall, by this time, we

21 were in the neighborhood of having the 15,000 customer

22 success --

23 Q. Oh, okay.

24 A. -- basically at the break -- break-even point

25 or slightly better with revenues exceeding based on our

Page 57

1 formulation.

2 Q. Okay. So the system was more than 50 percent

3 built out by this time?

4 A. Yeah. Yeah.

5 Q. Was it substantially more than 50 percent?

6 A. Yes, yes. Yeah.

7 Q. Okay.

8 A. Yeah, because by this time, as I said, Deb

9 Stewart is leaving because the construction -- she --

10 she wanted to build the finest -- she had always wanted

11 to build the finest telecom system you could because

12 she had been managing these mom and pop, crummy systems

13 her whole career. She wanted to build something and

14 build it right.

15 And so -- and she had an illustrious career,

16 so having finished that, she was ready to go off and

17 retire. And Dana's coming in about this time. And she

18 was the one that sat down with the folks from Price

19 Waters and went through them with her staff -- through

20 the details of -- of their operation.

21 Q. Okay. So would you turn to -- I guess it's

22 page 8 of the document. The Bates number at the bottom

23 is 995. And the paragraph right above the heading

24 there that says, "Capitalization of General and

25 Administrative Expenses," that paragraph says, "We

1 and bring the SCADA system up.

2           If you could have some additional capacity and  
3 generate some revenue in the interim, delight your  
4 customers like the banks do and develop relationships,  
5 generate economic development in a community that was a  
6 second or third tier city, particularly when it came to  
7 telecom, and retain large customers that provided  
8 revenue to Tacoma on the electric side -- and the list  
9 goes on and on and on -- these were all of the values  
10 that the Click Network brought to all electric  
11 ratepayers that you can't take out of -- out of  
12 context.

13           Q. For the benefit of our reporter, you used the  
14 term "SCADA." I think that -- that's an acronym,  
15 S-C-A-D-A --

16           A. Supervisory control and data acquisition.

17           Q. Okay. You've already explained at  
18 considerable length -- and explained very well, I  
19 thought -- how the telecommunication -- how the Click  
20 infrastructure was intended to and was beneficial to  
21 the electric utility?

22           A. (Nodding.)

23           Q. And we've talked a little bit about the Price  
24 Coopers recommendation to make an attempt to segregate  
25 Tacoma Power capital and operating costs from Click

Page 74

1 We're going to improve it. Carry out this -- this plan  
 2 and try to generate some additional revenue over the  
 3 time while you build up all of these uses.  
 4         The fact that that didn't occur still does not  
 5 take away from the original legislative principle. And  
 6 that is is that this is the responsibility of the  
 7 ratepayer. And there is an accumulation of years of  
 8 benefits that if I were to sit down and value, you  
 9 could challenge this from the perspective of DaVita,  
 10 the dialysis company that provided tremendous amounts  
 11 of jobs and tax base and economics. I believe that the  
 12 Frank Russell Company would have left a lot earlier  
 13 than they did.  
 14         And that just goes on and on with industries  
 15 and businesses, educational, academic -- all kinds of  
 16 things that would not have gotten a benefit if this --  
 17 and you say, well, what does that have to do with the  
 18 electric ratepayers? If there is commerce occurring in  
 19 a community, then they're consuming electricity. And  
 20 the more electricity that's consumed, basically that  
 21 holds down the overall cost for everybody because it  
 22 covers the fixed cost.  
 23         So I could still present an argument -- and  
 24 that was the theme of this -- that the electric  
 25 ratepayers still benefit. It's more difficult to, you

Page 75

1 know, put value on those sort of things, but an  
 2 economist could come in and do it, and you could argue  
 3 until the cows come home.  
 4         Now, going on forever, at some point, you have  
 5 to deal with the circumstance with either utilizing  
 6 more of the system or changing the tenets of the  
 7 original legislation, but I'm not here to speculate or  
 8 talk about that.  
 9         Q. (By Mr. Jurca) Okay. Thank you.  
 10         MR. JURCA: All right. Let's mark as  
 11 the next exhibit -- let's take -- off the record for a  
 12 moment.  
 13                 (Recess taken.)  
 14         MR. JURCA: Back on the record, and we  
 15 are ready to mark as the next exhibit . . .  
 16                 (Deposition Exhibit 5 was marked for  
 17 identification.)  
 18         MR. JURCA: Okay. This is 5.  
 19         Q. (By Mr. Jurca) Mr. Klein, you have before you  
 20 what's been marked as Exhibit 5. Do you recognize  
 21 that --  
 22         A. Yes.  
 23         Q. -- as a copy of what's sometimes referred to  
 24 as the Virchow Krause report?  
 25         A. Yes.

Page 76

1         Q. And it's dated on the bottom of the front page  
 2 July 23, 2003. I guess I could ask you to describe  
 3 what the purpose of this was, but I guess it's already  
 4 given on the second page under the heading foreword.  
 5 So I'll ask you this. Did Tacoma Power contract with  
 6 Virchow Krause & Company to assess the reasonableness  
 7 of its method of allocating the capital investment and  
 8 operating expenses of Click Network between power and  
 9 commercial applications?  
 10         A. We did so at the request of the local  
 11 politicians.  
 12         Q. And by "local politicians," who do you mean?  
 13         A. It was the case where there was another of the  
 14 rising of the issue to attack Click on the basis of a  
 15 subsidy.  
 16         Q. So was --  
 17         A. My sense -- and this is my sense when I was  
 18 there, and it's fairly accurate -- is the people in  
 19 Click were wonderful. The service was wonderful. It  
 20 was a local utility trying to do and doing good. How  
 21 do you attack something like that? And so basically  
 22 the opposition came up with, well, how do you attack  
 23 it? You make people feel like they're being ripped  
 24 off. And so every so many years, this theme would  
 25 build up again, and here -- here it was again.

Page 77

1         Q. When you refer to the local politicians, are  
 2 you referring to people on the city council?  
 3         A. Yes.  
 4         Q. Okay. Anyone in particular or . . .  
 5         A. I would say, for the most part, the ones that  
 6 were the most negative were Kevin Phelps and Michael  
 7 Crowley. But they were very influential, and so they  
 8 were able to oftentimes get others to -- to join them,  
 9 but they were the two main individuals. And they also  
 10 were -- kept in touch with Leo Hendery and AT&T then  
 11 and that sort of thing.  
 12         Q. So was it your sense that those members of the  
 13 city council that you mentioned somehow caused the  
 14 Tacoma -- the utility board to cause --  
 15         A. Yes.  
 16         Q. -- TPU to enter into this contract?  
 17         A. Um-hum.  
 18         Q. Okay. This sentence that we just looked at a  
 19 moment ago refers to allocating between power and  
 20 commercial applications. I think it's -- I think I  
 21 know what they mean, but for our record here, can you  
 22 tell us what you understood the distinction to be  
 23 between power applications and commercial applications.  
 24         A. They're referring to -- in the commercial,  
 25 those items that had -- have to deal specifically with

5 So I'll ask you this. Did Tacoma Power contract with  
6 Virchow Krause & Company to assess the reasonableness  
7 of its method of allocating the capital investment and  
8 operating expenses of Click Network between power and  
9 commercial applications?

10 A. We did so at the request of the local  
11 politicians.

12 Q. And by "local politicians," who do you mean?

13 A. It was the case where there was another of the  
14 rising of the issue to attack Click on the basis of a  
15 subsidy.

16 Q. So was --

17 A. My sense -- and this is my sense when I was  
18 there, and it's fairly accurate -- is the people in  
19 Click were wonderful. The service was wonderful. It  
20 was a local utility trying to do and doing good. How  
21 do you attack something like that? And so basically  
22 the opposition came up with, well, how do you attack  
23 it? You make people feel like they're being ripped  
24 off. And so every so many years, this theme would  
25 build up again, and here -- here it was again.

1 Q. When you refer to the local politicians, are  
2 you referring to people on the city council?

3 A. Yes.

4 Q. Okay. Anyone in particular or . . .

5 A. I would say, for the most part, the ones that  
6 were the most negative were Kevin Phelps and Michael  
7 Crowley. But they were very influential, and so they  
8 were able to oftentimes get others to -- to join them,  
9 but they were the two main individuals. And they also  
10 were -- kept in touch with Leo Hendery and AT&T then  
11 and that sort of thing.

12 Q. So was it your sense that those members of the  
13 city council that you mentioned somehow caused the  
14 Tacoma -- the utility board to cause --

15 A. Yes.

16 Q. -- TPU to enter into this contract?

17 A. Um-hum.

18 Q. Okay. This sentence that we just looked at a  
19 moment ago refers to allocating between power and  
20 commercial applications. I think it's -- I think I

1 the light department, Tacoma City Light, Tacoma  
2 Power -- all those things -- and TPU.

3 Q. Yeah. Okay. If you turn to page 5 of the  
4 document, the last paragraph under the heading network  
5 overview, says the authorization to build the  
6 telecommunication network was given in April of '97.

7 Do you understand that to be the authorization by --

8 A. City council.

9 Q. The city council. Okay.

10 A. Yeah. The board was in March.

11 Q. Okay. "The stated purpose was to enhance  
12 electric service reliability, reduce operating costs,  
13 and diversify the utilities' revenue base"?

14 A. Yeah.

15 Q. Now, you've already described those?

16 A. Yeah.

17 Q. Okay. And by diversify the utilities' revenue  
18 base, that meant to find other sources of revenue  
19 besides merely from the sale of electricity. Is that  
20 correct?

21 A. True, recognizing that the light division had  
22 quite an asset in terms of poles and substations. And  
23 if you could attach something else to that pole that  
24 you didn't have to put a new pole up and generate some  
25 revenue, you are making money -- additional money

1 these outside firms come in and they preprepare  
2 questions.

3 And a lot of times you're shocked because you  
4 thought they understood. And then you're sitting there  
5 behind the glass thing and you're watching the person  
6 you paid -- I mean, I was -- I don't recall being at  
7 this one, but obviously I probably would have jumped  
8 when I heard it because it's simply not true.

9 Q. Okay. On the next page, it refers to original  
10 cost estimates, and it -- there is an indication of a  
11 June '96 estimate of 45 to 55 million, and then a  
12 little over a year later, it jumps up to 96 million.  
13 Do you know what that is about?

14 A. Yeah, because Leo Hendery gave me a  
15 tongue-lashing in front of the city council on that  
16 that, yeah, are you going to trust a guy that can't  
17 even -- the June 1996 was SRI's estimate. And so they  
18 basically did a cursory consulting view of it. Once we  
19 put John and company together and then --

20 Q. John Athow?

21 A. John Athow.

22 Q. Yeah.

23 A. -- and developed a true sense of all of the  
24 make ready -- because -- I need to emphasize this  
25 enough -- there was a tremendous amount of make ready.

1 And what I mean by that is the electric utility has all  
2 of these poles that they're using for power. And so  
3 they put their power wherever they want on the pole.  
4 If anybody else wants to use it, good luck, you know.

5 And so, in the meantime, any available space  
6 possible, then US West and TCI had all used up. And so  
7 when you come along and now you're going to add the  
8 Click Network -- additional telecom thing, you've got  
9 to now move things so that you have proper separation  
10 and space. So there was -- there was analysis done  
11 that SRI wouldn't have understood or even known to do.  
12 So my point here is, very cursory analysis, SRI. The  
13 96 million was much more thorough and accurate. And  
14 that's the one that --

15 Q. Ahow?

16 A. Yeah.

17 Q. Put it together?

18 A. Yeah.

19 Q. Okay.

20 A. Which, by the way, he passed away in 2004.

21 Q. Okay. Thank you. I meant to ask that, and I  
22 forgot. So thank you.

23 A. Yeah.

SUPERIOR COURT OF WASHINGTON FOR PIERCE COUNTY

EDWARD E. (TED) COATES; MICHAEL CROWLEY; MARK BUBENIK and MARGARET BUBENIK d/b/a Steele Manor Apartments; THOMAS H. OLDFIELD; and INDUSTRIAL CUSTOMERS OF NORTHWEST UTILITIES, an Oregon nonprofit corporation,

Plaintiffs,

v.

CITY OF TACOMA,

Defendant.

NO.

COMPLAINT FOR DECLARATORY, INJUNCTIVE, AND MANDAMUS RELIEF

Plaintiffs allege as follows:

**I. PARTIES**

1.1. Plaintiff Edward E. (Ted) Coates resides in Tacoma, Pierce County, Washington. He is a former Director of Utilities for the City of Tacoma, and is a Tacoma Power electric ratepayer. As an electric utility ratepayer, he has standing to sue for the relief requested in this complaint.

1.2. Plaintiff Michael Crowley resides in Tacoma, Pierce County, Washington. He is a former Mayor of the City of Tacoma and a former member of the Tacoma City Council. He

**EXHIBIT 74 (c)**

# AT&T: Don't Be Like Tacoma

BY JOE ESTRELLA · APR 1, 2001

Almost three years after its launch, the nation's largest municipal overbuild has come up short of expectations, according to a study commissioned by principal rival AT&T Broadband.

An analysis of Tacoma, Wash.'s Click Network found that it failed to reach its expected subscribership, revenue and profit targets, while capital spending grew from an estimated \$55 million in 1997 to \$86.5 million by October 2000.

Conducted by Arthur Andersen LLP, the study compared actual results with estimates contained in a 1997 study commissioned by Tacoma Public Utilities.

The results also mirrored findings contained in the 1997 Coopers & Lybrand study, which found that a municipally owned network would still have 5 percent negative cash flow after 20 years.

AT&T Broadband executives hope to use the latest study to discourage local governments that may be considering overbuilds of their own.

"It [Click] hasn't made a profit, so we thought it made sense to tell the other side of the story," said AT&T Broadband Northwest division executive director of communications Steve Kipp. "We want to show other cities what has happened in Tacoma."

What has happened, according to Arthur Anderson, is that Click had 17,260 subscribers at the end of 2000, compared with 1997 projections of 34,312 customers. At the end of 1999, its revenues totaled \$2.7 million against earlier estimates of \$22.7 million.

An expected profit of \$1.9 million after one year of operation turned out to be a loss of \$15.7 million after three years. Meanwhile, TPU's capital spending plan calls for another outlay of \$36.2 million, pushing the overall cost of the network to \$138 million by the end of next year.

In order to reach its projected subscriber numbers, the study concluded, the Click Network would need to pirate away a significant number of AT&T cable customers while capturing the bulk of the area's nonsubscribers.

"We must be doing something right, or they would be ignoring us," said Click general manager Dana Toulson, adding that the municipal network has penetrated 28 percent of the 63,000 households it passes.

## **CLICK STARTED STRONG**

Evidence of the public's confidence in the local utility surfaced in an early market study by Market Data Research Corp. and Dethman & Associates. A telephone sampling of area households found that 81 percent of respondents supported a municipally owned telecom network, while just 7 percent opposed the idea.

Early on, TPU gave TCI a run for its money. In its first 11 months, Click siphoned off 6,000 TCI customers, growing at a rate of 660 subscribers a month.

But AT&T now argues that the failure of the telecom network to generate any profit was at least an indirect factor in the city's decision to impose a 50-percent surcharge on local electric bills. The city also had to give TPU authority to borrow \$100 million to keep buying power.

Toulson said the study falsely claimed that Click's first full year of operation was 1998, and that it failed to produce a profit.

"It's disingenuous to claim that our first full year was 1998, when we didn't even finish construction until June 2000," she said, adding that the city expects the network to generate an operating profit this year.

Meanwhile, industry sources predicted that the Arthur Andersen study's effect on other jurisdictions is unclear, given that the report will certainly be labeled as self-serving.

Such was the fate of a similar study conducted several years ago at the University of Denver. That study was dismissed as industry propaganda when it reached the conclusion that municipal overbuilds are poor investments.

"We thought that the Denver study would have an impact and it didn't," said Tom Graves, director of the Iowa Cable Telecommunications Association, an industry trade group that has seen its share of municipal overbuilds. "And because it's AT&T, people are going to be suspicious."

Graves said cities might be more inclined to believe other municipalities that have seen their telecom networks become a drain on city coffers.

"We've got them coming up to the capital all the time and saying, 'We're not making any money on these things,'" he said.

Click also offers five Internet-service provider alternatives to AT&T's [Excite@Home](#) Corp. service over its network.

Toulson accused AT&T of obscuring the original purpose of the network-to provide TPU with remote meter-reading capability and better outage control.

Tension between Tacoma and its cable operator date back to the days when the system was owned by Tele-Communications Inc., an MSO not revered locally for its customer service.

Former TCI and AT&T Broadband president Leo J. Hindery, himself a Tacoma product, tried to head off an overbuild by offering a partnership between TCI and the city. But it turned out that cable wasn't what city officials were most interested in selling.

Instead, the city envisioned a network that would offset the effects of pending electric-industry deregulation, which threatened to torpedo Tacoma by allowing its customers to shop for the best possible deal on power.

But AT&T responded to the competitive threat by upgrading to 750-megahertz capacity. For the last year, it has offered high-speed AT&T[@Home](#) service and a cable telephony product throughout the city.

Kipp said some residents subscribe to Click for video and AT&T for telephone service, "so our customers are their customers as well."

As operator of the nation's 19th-largest municipal electric utility-with some 140,000 customers-Tacoma had a lot to lose if it didn't protect its share of the power market.

"But now [AT&T] can't make their argument without ignoring the fact that we're here to serve Tacoma Power Utilities, and that anything we make from cable and Internet service is incremental revenue," Toulson said.

From the beginning, city officials had their own studies to fall back on.

# EXHIBIT 75

## Asset Study

The main purpose of the asset study was to help inform the recommended expense allocations. We have not completed a comprehensive review of the assets at this time to determine whether they should be a Click! or a Power asset. This is an important next step as it would have a material effect on how the power rates are allocated across the customer classes. Adding HFC Asset Base to Tacoma Power's rate model would most likely increase the proportion of rates paid by the Residential customer class since it would be considered Distribution.

The first step in this exercise was to obtain a full listing of the Fiber/Coax system infrastructure and understand how it is currently split between Click! and Tacoma Power. The data was separated into understandable categories in order to facilitate discussion. There are some issues with the data and accounting classifications have changed over time, but overall it was deemed sufficient for this exercise. Below is the breakout that was used:

Row Labels	Historical Cost - Comm.	Historical Cost Pwr.	Book Value - Comm.	Book Value Pwr.
Coax	14,781,385	87,373,426	3,667,421	43,171,879
Fiber	1,995,061	7,458,972	560,397	3,026,195
HTU/Converter-Descrambler_HTU/Converter-Descrambler	17,728,326	1,752,854	4,536,495	-
Capital Connect	5,732,630	5,776,209	3,864,838	2,648,467
Sonet Equipment	5,081,400	2,064,760	1,809,290	523,121
Sonet Construction	3,004,760	4,713,587	1,503,851	2,051,205
MDU	1,460,282	5,267,545	457,035	1,973,418
Head End Equipment	3,557,380	826,517	1,952,574	577,117
Land and Structures_Hub Electronics	5,746,817	6,197,580	1,178,652	930,850
Land and Structures_Hub Labor/Assembly	1,922,189	1,218,434	1,602,467	989,303
Immaterial	7,068,627	9,625,484	1,499,917	1,299,457
<b>Grand Total</b>	<b>68,078,857</b>	<b>132,275,367</b>	<b>22,632,938</b>	<b>57,191,012</b>

Note that overall, there is approximately \$200 million in historical cost and approximately \$80 million in book value of the Fiber/Coax system today. The initial capitalization date was around 1999 and certain parts of the system are still being added today. The "immaterial" classification includes several asset classes, mostly capitalized in the late 1990's or early 2000's.

A more detailed description of the assets by year of capitalization are as follows:

## Strategic Plan Update

Strategic plan updates will be provided via e-mail on a semi-monthly basis. As such, this section of the monthly report will be discontinued beginning with the next issue.

## Technical Operations Update

### Service & Installation

Technician Quality ratings for February were 3.9 for service work and 3.9 for residential and commercial installation quality.

During February, 1,094 jobs were completed by the Service Tech group. These included 448 SRO's, 96 activations of service, 35 reconnects, 14 transfer connects and 13 transfer disconnects, 157 voluntary disconnects, 172 service calls, 93 changes of service, and 66 non-pay disconnects.

Additionally, FTTH trim out work installing 135 smart panel covers at the "Napoleon" were completed and building 5 at "Orchard Street Apartments" had micro ducts installed. Service techs also performed CLI repairs and filter exchanges.

The service technicians have worked 296 consecutive days with no OJI time-loss injuries. A big thank you to our field crews that endured the cold temps and record setting snowfall this winter.

### Network Operations

Temporary fiber splice feed was installed at Schneebeck Hall to support the State of the City speech by Mayor Woodards.

The Fiber Team is currently working a fiber splice project for the Cushman facility. The project includes

the splicing of 8 fiber connections scheduled to connect the location.

On-going UPS battery replacements continue in all areas of the HFC Network and are based on Pass/Fail from the automated status monitoring system.

Annual FCC-required Proof of Performance for HFC network has been scheduled, and construction work has begun on the FTTH outside plant in the Orchard Apartments.

## Broadband Services

A new state-of-the art Cisco Firewall was successfully installed to increase cyber security of the Click! Network.

During February 11 data filters were replaced to improve cable modem service.

EAS system performed flawlessly during most recent required weekly and monthly tests for February.

Discovered issue with Video On Demand (VOD) provider pitching content into the incorrect locations. Working with provider to move content to correct subcategories.

## Technical Administrator

The Splunk Log and Event Management System has captured over 305 million firewall access events Since the system was installed. These events were reviewed and no threats were found. Most current firewall installed between the City and Click Network has been configured and is delivering event data to Splunk.

On-going work supporting the revision and development of the Continuity of Operations Plan (COOP) update.

Development under way for Monthly Click! Network Safety Committee meeting.

---

## Business Operations Update

### Customer Care

Three Customer Care SSRs returned after trying out Customer Services. We are happy to have them back

with Click!. SSRs fielded calls from some customers who had questions about the TiVo Experience 4 upgrade which was pushed out to all TiVo subscribers in February. The agents also worked to upsell TiVo service and equipment with existing customers.

Disconnects returned to a more normal level in February, with a churn rate of 1.59%, down from 2.07% in January. We had fewer non-pay disconnects and lost fewer customers to competitors, although there was an uptick in customers leaving due to cost.

## Sales & Marketing

With respect to Broadband Sales a recent project has been to facilitate an agreement to temporarily use Click! dark fiber to deliver live video feeds from a downtown theater and also from the UPS campus.

	Jan	Feb
Cable TV	14,467	14,441
ISP	21,807	21,739
Phone Calls	5,490	4,949
Call Handling	90%	95%

## Launching Fiber Services

Our team working on fiber service sales and delivery continues to learn and refine the processes. Training on provisioning devices was conducted in February. Installation processes were refined as technicians provided additional input. We anticipate releasing the first few addresses in the Orchard Street Apartments in March and hope to obtain a few video customers, as well as good penetration by our ISP partner Advanced Stream. Additional new construction locations that fit within the fiber build criteria are being solicited for right of entry and service agreements.

## Other Interesting Happenings

A customer report was received of missing VOD assets on the TiVo platform, so time was invested in comparing the assets of both VOD systems. The missing asset was recovered from the provider, and it was determined that there was parity in content between them. Occasionally, however, a glitch causes an asset to be lost or become unavailable. A problem also was seen with the new global search function. It did not seem to be working across VOD. After working with TiVo, it was determined that the primary issue was that we opted for the standard VOD search

capability which relies on the “lowest common denominator” of content. We had considered a custom catalog for VOD search, but decided the cost was not appropriate for us. Therefore, many of our VOD assets are not included in the search catalog because we have many more assets than most of our peer TiVo participants.

We completed the launch of the “talking guide” by adding an accessibility page to our website. A link to that page was placed at the bottom of our homepage as well.

A shout-out is in order for Randi. She has been utilizing a new GLDS tool for a few months to populate census tract data in preparation for our semi-annual FCC broadband reporting. She then produced an error-free upload file. Thank you, Randi, for making that report much easier than usual!

In response to the employee survey results, several staff meetings were held to obtain ideas for solutions to inform our work groups’ action plans. A lot of great feedback and ideas were received. Our thanks go out to everyone who contributed.

## Technical Operations Update

### Service & Installation

September Technician Quality Ratings were 3.9 for service and 3.8 for residential and commercial installation work. We have completed exchanging ISP only filters in NW01 through NW06 and are now focusing our efforts in NW07.

The Grand at 252 Broadway in downtown Tacoma is finally finished and has been released for activations. This complex is one of the largest high rise buildings we have wired; taking eight months to complete. We used 41,000 feet of coax and 41,000 feet of CAT5-E to run 296 strikes into each unit along with running 1,064 outlets specific to the interior of the units. Wi-Fi modems have been installed recently in Salishan moving the BPA/Conservation hot water heater project to approximately 98% complete.

Eight Service Technicians are actively involved in a wide range of educational opportunities including the NWPPA Frontline Leadership course offered by TCC, NCTI Technical Training Certification courses and city provided computer classes. All of our technicians continue to make positive progress in their educational pursuits.

### Converter Inventory Control

After testing the auto staging process, Click! upgraded from TiVo software 3.12 to 3.13. These changes were mainly in the menu structure and a more modern color scheme. This will be the second to last upgrade to the current Encore software platform. This platform will require one more upgrade to version 3.14 which will add features such as voice activated remotes and universal search.

The CIC has also begun testing the next generation of TiVo software called Hydra. This upgrade will

make dramatic changes to the user interface and will take several months to fully test. TiVo, Pace and NCTC are hoping to release Hydra to our customers in Jan 2018. If initial testing goes well, Click! employees, with TiVo in their homes, will be utilized in the Hydra software field trials as well.

The CIC has placed an order for the next generation of TiVo DVR's (main box) called the MG2 or Arris DCX900. This box is the same size as the MG1 but looks slightly different on the outside with rounded corners and a TiVo image on the front. The new unit has full 4K output and can stream up to 2 devices at the same time. You will see these deploying to customers sometime mid to late October 2017.

## Network Operations

During the month of September, the Network Technicians continued to focus on preparing our network for DOCSIS 3.1 by finding and repairing signal leaks on the HFC Network. Their efforts resulted in the repair of 821 leaks.

There were meetings with vendors to look at options to provide better security for our underground backup battery power supplies where we have had several incidents of battery theft. Through these meetings an option is being tested and if successful will have a field trial.

Our FTTH platform for the Knolls is finalized and is ready for customers! All equipment is in place and verified to be functioning as planned.

Testing is ongoing for new nodes to replace our current aging HFC nodes and for the hub optics that are providing the connectivity to the nodes. Working with multiple vendors to find the right nodes and the right optics.

## Engineering

The Harmonic video cloud service connections have been completed. Equipment has been installed in the Headend to test IP signals and the video quality looks very good. This service allows content to access the video streams via an application available on various hand-held devices.

In preparation for the November 8<sup>th</sup> channel launch,

we have configured the satellite receivers to authorize the new channel signals. The new channels that will be available for video subscribers will include Nat Geo WILD, Sundance and the Stadium Channel. Click! is ready for the launch!

The Headend and Data Teams have been working closely with the Harmonic engineers to mount and configure the equipment used for testing the Harmonic CMTS solution. The work is going well and we expect to be finished sometime in October 2017.

## Broadband Engineering

A software based cable modem router solution by Harmonic Inc. is being evaluated in a lab environment. The test will soon be moved to a live field trial. Harmonic technicians are on site working with Steve Merriam and Patrick Jacobs.

Fiber connectivity is close to being established in the Centeris Colocation Center. We are now testing DWDM (dense wave division multiplexing) devices that will be installed to carry wavelength services.

The Broadband Team has completed a circuit for Internet connectivity for The Grand at 252 Broadway in downtown Tacoma. This new connection will service tenants in the new high-rise facility.

## Technical Administrator

The Splunk Log and Event Management system is online and has collected over 14,271,893 auditable events. The Splunk server is currently indexing events at an overall average of 12.54 KB/s and has archived nine months of data so far.

There was one successful Master Technician course examination proctored during the month of September. All six Service and Installation Technicians are currently enrolled in their individual courses and are making positive progress towards completion with two technicians approaching testing dates in October. Click! employees have completed 341 hours of internal training this month towards the overall training goal of 680 hours required.

Progress is on-going in the Asset Management initiative as Functional Locations for the Metro Ethernet Asset Registry have been created. There

have been 80 Functional Locations created so far, and these will be used as locations for the Metro Ethernet assets.

---

## Business Operations Update

### Customer Care

The Sales and Service Reps in Customer Care were busy in September answering the phones, as our call volume continued to be steady with callers coming into the sales queue accounting for 23.4% of the total calls. The Reps also make outbound calls from time to time to accomplish specific tasks. Recently, calls have been made to customers on the early interest list for channels to let them know that Nat Geo WILD will be coming to the lineup, as quite a few customers have requested that channel over time. They have also been assisting in our attempts to recover as many TiVo boxes from disconnecting customers as possible. They have been calling former customers with unreturned TiVo equipment to ask them to please return the boxes to us so we can serve more customers. The Reps have also been working hard to continue driving Tivo penetration rates and have been making calls to customers with DVRs and internet service to make a personal attempt to get all the great benefits of TiVo into more homes.

### Sales

Connect activity remained strong in September with 355 new connect orders placed. We experienced the loss of quite a few bulk service units on the UPS campus; they decided to scale back the services being provided in individual dormitory rooms but retained service in common areas. Residents of dormitory rooms may order individual services if they desire. We gained a new commercial customer with Wingman Brewery signing up for cable TV service. The table below contains customer counts for the Click! services and other metrics.

	August	September
Cable TV	16,349	16,265
TiVo	757	813
ISP	22,829	22,650
Phone Calls	6,331	5,885
Call Handling	90%	89%

## Marketing

The Mobile Movies concluded for the year with the final event on September 2<sup>nd</sup> at the UPS Log Jam event. In September we participated in the remaining outdoor activities with a booth at the Proctor Farmer's Market on the 16<sup>th</sup>, and putting together our own "park" downtown for "Park"ing Day on the 15<sup>th</sup>. Passers-by were able to stop in for a quick game, some Click! information and fun giveaways. Work was completed on our 4<sup>th</sup> quarter campaign, It's TV Season, featuring a bundle of Broadcast, TiVo and 12 mbps internet for \$67. This campaign will roll out in October and November. Click! signed up for a 30 day free preview of HD Net Movies in October, so we hope many customers enjoy this preview and that it drives some new sign-ups for the HD Premium Package.

## Projects

The new telecommunications franchise with the City of Puyallup was approved by the Public Utility Board and the final step will be obtaining a concurring Resolution from Tacoma City Council to complete acceptance of the franchise. Work is underway to construct the fiber tie to the Centeris Data Center, and our technical team will be accompanying Public Utility Board members on tours of the facility in November.

Near the end of last year a decision was made to discontinue our SONET platform at the end of 2017 because the equipment is far past end of life, and replacements are becoming completely unavailable. We have had a number of broadband customers with DS-1 and DS-3 circuits on this platform and our Broadband Accounts Rep has been working with our carrier partners to migrate these customers to an Ethernet solution. Some of the circuits were no longer needed and are being disconnected; some circuits for Rainier Connect Customers are being managed with a SONET to Ethernet conversion technology being deployed by Rainier Connect. Other circuits are being successfully migrated to the Ethernet platform. We anticipate this project to be completed by the end of December.

Job shadowing has been occurring between Customer Care supervision and our remaining WCS staff to ensure a full understanding of all the processes

necessary to support our ISPs and their end users. Training documents have been prepared and the staff is preparing to begin training SSRs in the Customer Care Dept. to support the ISPs. This includes managing the ISP data only and data add on orders, disconnects, trouble issues, and communications with the ISPs and our technical staff, and a number of other duties.

Work has commenced on moving the next planned cable TV rate increase through the approval process. Through the multi-year programming contracts we can anticipate most upcoming increases in license fees and incorporate those increased costs into our budget. Correspondingly, we anticipate the need for rate increases to recover those license fees and plan for the rate increases in the budget also. Our 2017/2018 budget included the rate increase we implemented in March 2017 and it includes an additional 11.3% rate increase to be implemented in 2018. We plan to make this increase effective January 1<sup>st</sup>, as that is when our costs increase. The matter will go before the Public Utility Board study session in early October. Staff will receive information on the new rates in time for customer questions.

---

## Strategic Plan Update

Nothing new to report on the Power ratepayer lawsuit or on Click!'s long term strategic plan at this time. And Union negotiation is ongoing.

# EXHIBIT 75 (d)

## Technical Operations Update

### Service & Installation

Technician Quality ratings were 3.9 in January and 3.8 in February for service work and 3.7 and 3.9, respectively, for residential and commercial installation quality. Customers are impressed and continue to comment on the great customer service experiences received from all Click! staff.

### Job Completion:

	Jobs	SRO	Con-nects	V Disco	SVC	COS	NP
Jan.	1417	689	159	187	162	136	84
Feb.	1324	658	130	188	143	103	74

Techs verified or exchanged the newest ISP only filters in NW08 – NW23 nodes and SE04 – SE11 nodes. They have addressed any intermittent Wi-Fi connectivity issues at the Salishan project. Assistant supervisors led the installation of video and internet outlets in the TPU auditorium and that effort continued into February. We have trained two new contract installers which enabled in-house techs to train with the Network techs performing CLI, fiber splicing and power supply maintenance duties. Service techs have also received other general system maintenance opportunities while training with the Network technicians. In February, We reduced the number of contract installers since in-house staff can handle the current demand for Click! products and services.

We are working with Fleet Services preparing some worn out vehicles for surplus. Several vehicles have been in service for nearly twenty years.

### Network Operations

Network Technicians found and repaired 200 system

leaks with the new CLI platform in January and 410 in February.

Fiber splicing for the Centeris Data Center was completed in January. The fiber connectivity from DTS and DTN to Centeris was also tested for continuity and to make sure total loss was within technical specifications.

Fibers from the SONET dissolution project were reclaimed by re-splicing the fibers to make them contiguous around the backbone so that they can be re-used for future projects.

First quarter FCC Proof of Performance testing has been finished. All tests were completed, passed and documented.

Randy Sherman and Tim Hogan have continued to lead the ongoing SCTE Cable Games preparation by coordinating monthly training sessions through each of the game events to get our technicians ready to compete in the June 27<sup>th</sup> Cable Games.

## Engineering

The router upgrade project was approved and the RFP team began the evaluation phase of the system proposal for a router solution to support the upgrade to Gigabit and DOCSIS 3.1 services.

After testing DWDM data center connectivity in the Click! lab and determining stability of the connection between the DTN and DTS locations feeding the Centeris data center, the network systems will extend the 10 GB Ethernet network core as well as support other circuits of 1, 10 or even 100 GB.

State of the Network: The Click! ISP and Broadband networks can sustain the current customer load without further upgrades. Reliability can be maintained without any major upgrades for up to nine months if cable modem package speeds remain at current levels. Commercial Metro Ethernet network is running at 20% utilization at peak times with high reliability. Software upgrades are planned for the near future to expand the capabilities of the systems and to address software bugs.

### Video Services

Video Services have remained extremely busy. Multiple video channels were rebranded to new service providers. These changes required updates to the video database to accommodate the switch. In addition, preparation was made for the Chiller channel going dark and its removal from the channel lineup. In February, Starz and Encore HD West moves were finalized. CBUT transitioned to CBAT by tuning Dish 14 to Galaxy 19's position.

Video Technicians began the process of testing a new IP video on demand instance for TiVo. Technicians dealt with multiple technical issues including a new streaming capability available with Vu-iT. Technicians also dealt with multiple technical issues including replacing a faulty hard drive on legacy ARRIS VOD platform as well as keeping the HE drawings and databases up to date with all the channel moves.

Headend personnel worked with Marketing to restructure the Arris Video on Demand, migrate the SCALA character generator to a new workstation platform, and the successful movement of several channels to new satellite transponders.

### Broadband

Hong Kim oversaw the upgrade to the Netflix server to ensure continued customer access, as well as participated on the router solution RFP approval team.

Broadband team has begun the finalization of tasks required for the SONET dissolution project. Maintenance work is underway to upgrade the Dantel environmental alarm monitoring system used to monitor the SONET network.

### Technical Administrator

The Splunk Log and Event Management System continues to manage log events from network devices which provides a running history of log events and an auditable trail for review. The system is designed to ingest 2 GB per day and has cataloged and processed over 20 million events since its installation in February of 2017.

UTS PC Support has begun the delivery of replacement workstations and laptops to Click! personnel. There were 31 workstations ordered and will be delivered

during January and early February. Currently work is being done to cleanup active directory to remove old entries and users from the system and a physical inventory of machines will be scheduled in March 2018.

The Technical Administrator has begun creating records for HFC Distribution optical equipment assets in SAP. An individual record will be created for each of the 814 optical devices from each of the four HFC hubs and the Headend. In February, records have been created for the NW, and NE hubs. Work has begun to input data for the SE hub equipment.

### Converter Inventory Control

CIC continues working with TiVo to validate the MSO Early Access of TiVo Experience 4 codename: Hydra.

The TiVo eVUE VOD upgrade was successfully deployed to customers in January. With this successful roll-out, TiVo has asked Click! to evaluate a new upgrade that other organizations have failed to get operational.

CIC has placed an order for replacement TiVo voice remotes from Universal Electronics. A software release is scheduled for May 9<sup>th</sup> that will allow the voice remotes to operate with the TiVo system.

The CIC team is currently utilizing 190 non-functioning DCX – 3425 DVR boxes that are no longer of use as cosmetic spares for the 461 reusable spares inventory. CIC team is focused on churn and continues to work on cleaning efforts in the warehouse.

---

## Business Operations Update

### Customer Care

Our Customer Care unit closed 184 sales in January and 178 sales in February, averaging just over 7 sales per day each month. We know that the video market continues to be challenged by the entry of so many new streaming choices, so many thanks to our Customer Care team who receive the inquiries about our services and tailor services to match the customers' needs.

HD Experience was a promotional package that was offered when the HD Premium Tier was launched. It

bundled the HD Premium tier and an HD DVR for a package price. The package has not been sold for quite a few years and the pricing has not been increased consistently with our general rate increases. In an effort to migrate the customers remaining on this legacy package, Customer Care has been making outbound calls to review these customers' services with them. These are high value customers and our Sales and Service Reps are giving them the personalized service and attention needed to retain them and to fit their packages to their current needs.

Bulk and vacation rate accounts are being audited to ensure accuracy of billings. The reps have maintained calls answered within 30 seconds in the 90% range through February. We are happy to be fully staffed again with the return of employees who had been out for extended periods.

### Sales & Marketing

The January and February campaign offer has been focused on Broadcast, TiVo and 12 Mbps Internet for \$67.67. We also continue to reach out to prior customers who disconnected for what is considered a controllable reason to entice them to come back to Click! We continue to promote our Purple Perks Loyalty Program, and at February month end we had 1,962 members. That's just over 12% of our cable TV subscribers. We are tracking the impact of Purple Perks by calculating the rate at which members disconnect their Click! service and comparing that to the overall disconnect rate. This tracking shows us that members of Purple Perks disconnect at a slower pace than the overall pace. That means we are succeeding at retaining more customers when they join the Club!

	January	February
Cable TV	15,838	15,724
ISP	22,616	22,578
Phone Calls	5,416	4,864
Call Handling	94%	94%

### Business Systems & NSA

Business Systems said a sad good-bye to Trina Morris as she moved on to a new position in Generation. There are several ongoing projects that Business Systems is watching and providing input as needed. One is the paybox project. TPU is in the process of replacing the payboxes, and it is undetermined at this

time whether Click! will move forward with participation in the project. The payboxes will become unavailable to Click! customers once the replacement begins, and once the original scope of work for the project is completed, Click! will assess whether a second scope of work to incorporate Click! customer accounts should be pursued. We know we have a small but consistent group of customers who make their payments in this way. We are happy that our customers have multiple options for making payments, i.e. in person, by phone with an agent, online, by mail and through self-service by phone.

A Click! representative has been participating in a city-wide project to issue an RFP for a new collection agency. That RFP is currently receiving responses, and Click! will also participate on the response evaluation team.

### NSA and Dispatch

The NSA wished Jeff Vincent well as he moved on to a position with UTS. With his departure, it was necessary to evaluate the work assignments for the Network Operations Center Technicians. The Dispatch and NSA groups were merged recently so that the hours of operations supporting both the installation and repair technicians and surveilling the network could be maintained. Both groups are operating out of the NSA work space.

### Strategy Update

CTC Consulting has been hired by the City to conduct an RFI/Q process to solicit proposals for potential partnership arrangements with qualified private or public entities interested in developing a collaborative partnership arrangement for Click! Network. The RFI/Q was published on March 23 and reflects the twelve policy goals developed by the Public Utility Board and City Council. Proposals are due no later than April 27.

A hearing was held on March 2nd to consider a Motion For Partial Summary Judgement filed by the Plaintiffs in the lawsuit involving Click! The Judge ruled in favor of the Plaintiffs at that time. The City is considering what actions it might take in response to that ruling.

# EXHIBIT 75 (e)

## POWER MANAGEMENT

- Tacoma Power became a certified California Independent System Operator (CAISO) Scheduling Coordinator which allows Tacoma Power to transact directly with the CAISO wholesale electric market. We anticipate that this will enable better integration of renewable generation and increase revenue in the future by over a million dollars a year.
- Wholesale electric prices were low, but Tacoma Power sold nearly \$5 million in non-traditional wholesale products, which reduces the need for increasing retail rates.
- Net wholesale power sales in 2018 were 1.8 million MWh, exceeding the budget estimates of 1.4 million MWh. Annual revenue was \$47.1 million compared to budget estimates of \$33 million.
- Power Management acquired over 8 MW of conservation in 2018, more than double the target at a substantially lower cost than budgeted.
- In collaboration with the City of Tacoma's Public Works Division, we completed installation of over 16,000 cobra-head LED street lights. The two-year project saves energy, provides better and safer lighting, and reduces costs for the City.
- Tacoma Power successfully completed its residential solar plan, including better information for customers considering rooftop installations and our second announced Evergreen Options grant for a solar project with Tacoma Housing Authority that will benefit low-income customers.
- Tacoma Power made significant efforts to advance electrification of transportation, including:
  - Development of a special pilot rate for DC Fast charging providers – which will incentivize additional investment in electric vehicle charging in the service territory
  - The construction and opening of DC Fast charging station at the LeMay Car Museum
  - Customer outreach and education efforts including two "Ride and Drive Electric Vehicle Events" and five "EV 101" events
  - Collaboration with Pierce Transit to pilot eight plug-in hybrid electric commuter vans that will charge at TPU campus and reduce fuel expense and maintenance for Pierce Transit.

# Purple Perks FAQ

## What is the Purple Perks Loyalty Club?

It's an exclusive email based program that rewards our best customers with discounts and special offers. Be sure to check your email from Click! Cable TV and watch for special offers.

## How do you join?\*

Join here

## How much does it cost to join?

It is free to join.

## What do members receive?

Members receive quarterly money saving coupons primarily through email including:

- Welcome letter with a \$10 off cable bill coupon emailed to you after joining.
- Birthday card with a \$10 off cable bill coupon emailed during your birthday month.
- Free On Demand movie coupon emailed
- Holiday card with a \$5 off cable bill coupon emailed
- Free month of one premium channel emailed quarterly
- Other giveaways and perks emailed during the year

## How do I redeem the offers?

- Cable bill discount coupons - after coupons are received, fill out and redeem before the end of that quarter:
  - Email completed coupon to [PurplePerks@click-network.com](mailto:PurplePerks@click-network.com)
  - Or, mail completed coupon to: Click! Network, Attn: Purple Perks, 3628 South 35th Street, Tacoma, WA 98409 (can include with your bill.)
- Free premiums – after email is received, call us at 253-441-4100 to activate the free premium before the end of that quarter.

## When do the offers expire?

The Welcome letter \$10 off coupon expires 3 months from the date of receipt. Cable bill discounts and free premiums expire at the end of the quarter they are received. Other perks expiration dates vary. Read your emails carefully for full disclaimers.

# EXHIBIT 77

# PREFACE

The staff of the Federal Communications Commission (FCC) created the National Broadband Plan. To an extraordinary extent, however, the author of this plan is America itself.

The FCC started the process of creating this plan with a Notice of Inquiry in April 2009. Thirty-six public workshops held at the FCC and streamed online, which drew more than 10,000 in-person or online attendees, provided the framework for the ideas contained within the plan. These ideas were then refined based on replies to 31 public notices, which generated some 23,000 comments totaling about 74,000 pages from more than 700 parties. The FCC also received about 1,100 *ex parte* filings totaling some 13,000 pages and nine public hearings were held throughout the country to further clarify the issues addressed in the plan.

The FCC also engaged in significant collaboration and conversations with other government agencies and Congress, since the scope of the plan included many issues outside of the FCC's traditional expertise. Many people from across government contributed expertise and advice along the way, for which the FCC staff is eternally grateful.

The Internet also provided new ways to involve the public. Through an innovative Web presence at [www.broadband.gov](http://www.broadband.gov), the FCC posted more than 130 blog entries and received nearly 1,500 comments in return. The FCC's Twitter feed now has more than 330,000 followers, making it the third most popular government Twitter feed after the White House and the Centers for Disease Control.

The FCC staff digested this extensive record and worked long hours analyzing and debating the record. Every comment cannot be referenced in the plan, but they were all read, considered and valued.

Public comment on the plan does not end here. The record will guide the path forward through the rulemaking process at the FCC, in Congress and across the Executive Branch, as all consider how best to implement the plan's recommendations. The public will continue to have opportunities to provide further input all along this path.

This is America's plan, written by and for Americans. It's now time to act and invest in our nation's future by bringing the power and promise of broadband to us all.

## THE OMNIBUS BROADBAND INITIATIVE (OBI)

# EXECUTIVE SUMMARY

Broadband is the great infrastructure challenge of the early 21st century.

Like electricity a century ago, broadband is a foundation for economic growth, job creation, global competitiveness and a better way of life. It is enabling entire new industries and unlocking vast new possibilities for existing ones. It is changing how we educate children, deliver health care, manage energy, ensure public safety, engage government, and access, organize and disseminate knowledge.

Fueled primarily by private sector investment and innovation, the American broadband ecosystem has evolved rapidly. The number of Americans who have broadband at home has grown from eight million in 2000 to nearly 200 million last year. Increasingly capable fixed and mobile networks allow Americans to access a growing number of valuable applications through innovative devices.

But broadband in America is not all it needs to be. Approximately 100 million Americans do not have broadband at home. Broadband-enabled health information technology (IT) can improve care and lower costs by hundreds of billions of dollars in the coming decades, yet the United States is behind many advanced countries in the adoption of such technology. Broadband can provide teachers with tools that allow students to learn the same course material in half the time, but there is a dearth of easily accessible digital educational content required for such opportunities. A broadband-enabled Smart Grid could increase energy independence and efficiency, but much of the data required to capture these benefits are inaccessible to consumers, businesses and entrepreneurs. And nearly a decade after 9/11, our first responders still lack a nationwide public safety mobile broadband communications network, even though such a network could improve emergency response and homeland security.

## Fulfilling the Congressional Mandate

In early 2009, Congress directed the Federal Communications Commission (FCC) to develop a National Broadband Plan to ensure every American has “access to broadband capability.” Congress also required that this plan include a detailed strategy for achieving affordability and maximizing use of broadband to advance “consumer welfare, civic participation, public safety and homeland security, community development, health care delivery, energy independence and efficiency, education, employee training, private sector investment, entrepreneurial activity, job creation and economic growth, and other national purposes.”

Broadband networks only create value to consumers and businesses when they are used in conjunction with broadband-capable devices to deliver useful applications and content. To fulfill Congress’s mandate, the plan seeks to ensure that the entire broadband ecosystem—networks, devices, content and applications—is healthy. It makes recommendations to the FCC, the Executive Branch, Congress and state and local governments.

## The Plan

Government can influence the broadband ecosystem in four ways:

1. Design policies to ensure robust competition and, as a result maximize consumer welfare, innovation and investment.
2. Ensure efficient allocation and management of assets government controls or influences, such as spectrum, poles, and rights-of-way, to encourage network upgrades and competitive entry.
3. Reform current universal service mechanisms to support deployment of broadband and voice in high-cost areas; and ensure that low-income Americans can afford broadband; and in addition, support efforts to boost adoption and utilization.
4. Reform laws, policies, standards and incentives to maximize the benefits of broadband in sectors government influences significantly, such as public education, health care and government operations.

**1. Establishing competition policies.** Policymakers, including the FCC, have a broad set of tools to protect and encourage competition in the markets that make up the broadband ecosystem: network services, devices, applications and content. The plan contains multiple recommendations that will foster competition across the ecosystem. They include the following:

- **Collect, analyze, benchmark and publish detailed, market-by-market information on broadband pricing and competition,** which will likely have direct impact on competitive behavior (e.g., through benchmarking of pricing across geographic markets). This will also enable the FCC and other agencies to apply appropriate remedies when competition is lacking in specific geographies or market segments.
- **Develop disclosure requirements for broadband service providers** to ensure consumers have the pricing and performance information they need to choose the best broadband

## IN EVERY ERA, AMERICA MUST CONFRONT THE CHALLENGE OF CONNECTING OUR NATION ANEW.

In the 1860s, we connected Americans to a transcontinental railroad that brought cattle from Cheyenne to the stockyards of Chicago. In the 1930s, we connected Americans to an electric grid that improved agriculture and brought industry to the Smoky Mountains of Tennessee and the Great Plains of Nebraska. In the 1950s, we connected Americans to an interstate highway system that fueled jobs on the line in Detroit and in the warehouse in L.A.

Infrastructure networks unite us as a country, bringing together parents and children, buyers and sellers, and citizens and government in ways once unimaginable. Ubiquitous access to infrastructure networks has continually driven American innovation, progress, prosperity and global leadership.

Communications infrastructure plays an integral role in this American story. In the 1920s, '30s, '40s and '50s, telephony, radio and television transformed America, unleashing new opportunities for American innovators to create products and industries, new ways for citizens to engage their elected officials and a new foundation for job growth and international competitiveness.

Private investment was pivotal in building most of these networks, but government actions also played an important role. Treasury bonds and land grants underwrote the railroad,<sup>1</sup> the Rural Electrification Act brought electricity to farms and the federal government funded 90% of the cost of the interstate highways.<sup>2</sup>

In communications, the government stimulated the construction of radio and television facilities across the country by offering huge tracts of the public's airwaves free of charge. It did the same with telephony through a Universal Service Fund, fulfilling the vision of the Communications Act of 1934 "to make available, so far as possible, to all the people of the United States, a rapid, efficient, Nation-wide, and world-wide wire and radio communication service with adequate facilities at reasonable charges."<sup>3</sup>

Today, high-speed Internet is transforming the landscape of America more rapidly and more pervasively than earlier infrastructure networks. Like railroads and highways, broadband accelerates the velocity of commerce, reducing the costs of distance. Like electricity, it creates a platform for America's creativity to lead in developing better ways to solve old problems. Like telephony and broadcasting, it expands our ability to communicate, inform and entertain.

Broadband is *the* great infrastructure challenge of the early 21st century.

But as with electricity and telephony, ubiquitous connections are means, not ends. It is what those connections enable that matters. Broadband is a platform to create today's

high-performance America—an America of universal opportunity and unceasing innovation, an America that can continue to lead the global economy, an America with world-leading, broadband-enabled health care, education, energy, job training, civic engagement, government performance and public safety.

Due in large part to private investment and market-driven innovation, broadband in America has improved considerably in the last decade. More Americans are online at faster speeds than ever before. Yet there are still critical problems that slow the progress of availability, adoption and utilization of broadband.

Recognizing this, one year ago Congress echoed the Communications Act of 1934 and directed the FCC to develop a National Broadband Plan ensuring that every American has "access to broadband capability." Specifically, the statute dictates:

- "The national broadband plan required by this section shall seek to ensure that all people of the United States have access to broadband capability and shall establish benchmarks for meeting that goal. The plan shall also include:*
- *an analysis of the most effective and efficient mechanisms for ensuring broadband access by all people of the United States,*
  - *a detailed strategy for achieving affordability of such service and maximum utilization of broadband infrastructure and service by the public,*
  - *an evaluation of the status of deployment of broadband service, including progress of projects supported by the grants made pursuant to this section, and*
  - *a plan for use of broadband infrastructure and services in advancing consumer welfare, civic participation, public safety and homeland security, community development, health care delivery, energy independence and efficiency, education, worker training, private sector investment, entrepreneurial activity, job creation and economic growth, and other national purposes."*<sup>4</sup>

This is a broad mandate. It calls for broadband networks that reach higher and farther, filling the troubling gaps we face in the deployment of broadband networks, in the adoption of broadband by people and businesses and in the use of broadband to further our national priorities.

Nearly 100 million Americans do not have broadband today.<sup>5</sup> Fourteen million Americans do not have access to broadband infrastructure that can support today's and tomorrow's applications.<sup>6</sup> More than 10 million school-age children<sup>7</sup> do not have home access to this primary research tool used by most students for homework.<sup>8</sup> Jobs increasingly require Internet skills; the share of Americans using high-speed Internet at work grew by 50% between 2003 and 2007,<sup>9</sup> and the number of jobs in information and communications technology is growing 50%

## 17.4 CONCLUSION

This plan is premised on the potential of broadband to improve lives today and for generations.

But broadband alone will not solve America's problems. It cannot guarantee that the United States will lead the world in the 21st century. It cannot promise that the U.S. and other nations will conquer crippling inequality. It cannot ensure that the U.S. bestows the best job, education, health care, public safety and government services on every American.

Broadband is a critical prerequisite, though, to solutions to many of America's problems. It can open up ways for American innovators and entrepreneurs to reassert U.S. leadership in some areas and extend it in others. It can unlock doors of opportunity long closed by geography, income and race. It can enable education beyond the classroom, health care beyond the clinic and participation beyond the town square.

In 1938, President Roosevelt travelled to Gordon Military College in Barnesville, Georgia, to speak at the dedication of a local utility. "Electricity is a modern necessity of life, not a luxury," the President told the audience, "That necessity ought to be found in every village, in every home and on every farm in every part of the wide United States."<sup>47</sup>

He added, "Six years ago, in 1932, there was such talk about the more widespread and the cheaper use of electricity." But words did not matter until the country, "reduced that talk to practical results."<sup>48</sup>

Broadband, too, is a modern necessity of life, not a luxury. It ought to be found in every village, in every home and on every farm in every part of the United States.

There has long been talk of the widespread and affordable use of broadband. This plan is a transition from simple chatter to the difficult but achievable reality of implementation. It is a call to action for governments, businesses and non-profits to replace rhetoric with targeted, challenging actions.

It is time again to reduce talk to practical results.

# THE UNITED STATES HAS A MARKET CONCENTRATION PROBLEM

## REVIEWING CONCENTRATION ESTIMATES IN ANTITRUST MARKETS, 2000-PRESENT

ISSUE BRIEF BY **ADIL ABDELA AND MARSHALL STEINBAUM**<sup>1</sup> | SEPTEMBER 2018

Since the 1970s, America’s antitrust policy regime has been weakening and market power has been on the rise. High market concentration—in which few firms compete in a given market—is one indicator of market power. From 1985 to 2017, the number of mergers completed annually rose from 2,308 to 15,361 (IMAA 2017).

Recently, policymakers, academics, and journalists have questioned whether the ongoing merger wave, and lax antitrust enforcement more generally, is indeed contributing to rising concentration, and in turn, whether concentration really portends a market power crisis in the economy. In this issue brief, we review the estimates of market concentration that have been conducted in a number of industries since 2000 as part of merger retrospectives and other empirical investigations. The result of that survey is clear: market concentration in the U.S. economy is high, according to the thresholds adopted by the antitrust agencies themselves in the Horizontal Merger Guidelines.

By way of background, recent studies of industry concentration conclude that it is both high and rising over time. For example, Grullon, Larkin, and Michaely conclude that concentration increased in 75% of industries from 1997 to 2012. In response to these and similar studies, the antitrust enforcement agencies recently declared that their findings are not relevant to the question of whether market concentration has increased because they study industrial sectors, not antitrust markets. Specifically, they wrote, “The U.S. Department of Justice and Federal Trade Commission find the claims of increasing concentration are unsupported by data for meaningful markets” (DOJ/FTC 2018).

In fact, we find that claims that market concentration is high are well-supported in the data for properly defined antitrust markets. Given the sparsity of studies that document market concentration in a given sector and in antitrust markets within that sector, there is indeed insufficient evidence to conclude that concentration in antitrust markets is rising. But the antitrust enforcement agencies themselves are in the best position to investigate that question, and so we hope they will do so—rather than publicly castigate outside attempts to shed light on the issue.

---

<sup>1</sup> The Roosevelt Institute released an earlier version of this issue brief in April 2018 under the title “Market Concentration and the Importance of Properly Defined Markets.” Here, we update and augment the previous publication in order to respond to policy debates that have arisen since then.

## RECENT CONCERNS ABOUT CONCENTRATION

The Organisation for Economic Co-operation and Development (OECD) held a meeting in June of 2018 on the topic of market concentration, motivated by evidence of a moderate increase in broad measures of concentration in the U.S. and Japan, though not as much in European countries. Part of the OECD’s motivation for holding this meeting was that a range of other indicators suggest that on average market power is increasing. For example, markups and profits have significantly increased in the U.S. and internationally (Diez, Leigh, and Tambunlertchai 2018). Output and productivity growth have weakened. The OECD stated that “it remains unclear precisely what is driving the increase in market power” (OECD 2018).

As noted above, the Department of Justice (DOJ) and the Federal Trade Commission (FTC), responded to the OECD’s concerns by stating that they find the claims of increased concentration unsupported by the data for meaningful markets (DOJ/FTC 2018). They pointed to multiple papers that based their findings of increased industry concentration on data from the U.S. Census Bureau. They claim that such measures of concentration are meaningless for competition analysis because industrial sectors are not relevant antitrust markets. They are not defined by consumer substitution patterns, and are in general much larger than antitrust markets. The example they give is that manufacturers of pencils and wooden blocks would be in the same industrial sector, but those two items cannot substitute for one another in consumption since they have very different uses.

In this issue brief, we first step back to characterize the policy debate by explaining why market definition matters in antitrust analysis and how it came to be that antitrust markets have been allowed to become as concentrated as they are. We then review the other evidence documenting the economy’s market power problem, including how that evidence is inconsistent with the antitrust agencies’ preferred theory for how we got here: that “superfirms” have gained market share thanks to their superior efficiency. Finally, we conclude by characterizing the research and policy agenda going forward, given that the agencies’ account of the evidence is so flawed.

## THE HORIZONTAL MERGER GUIDELINES AND ANTITRUST MARKETS

Section 7 of the Clayton Antitrust Act of 1914 states that a merger is unlawful if “in any line of commerce or in any activity affecting commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly” (DOJ 2010). Since 1968, this statute has been enforced according to the Horizontal Merger Guidelines, which have been updated and reissued several times.

The Horizontal Merger Guidelines, promulgated jointly by the DOJ and the FTC, outline the techniques, practices, and enforcement policy with respect to mergers and acquisitions amongst competitors. In the 1968 guidelines, the main concerns were barriers to entry and concentration ratios. In 1982, the guidelines were updated to include the Herfindahl-Hirschman Index and to entertain the concept of offsetting merger “efficiencies.” At the same time, they raised the level of market concentration that made it likely a merger would receive enforcement scrutiny. In 2010, the thresholds were raised even more. As a result, decades of lax merger review and antitrust enforcement gave way to rampant market power.

Before an analysis of market concentration can occur, the relevant market must first be defined. Antitrust officials determine the “relevant market” as the alternative firms or products available to consumers within the same market as the merging firms. For example, if a firm were to raise its prices after a proposed merger, regulators may examine how easy it would be for consumers to switch to another, more affordable product. When determining which products or firms compete in a given market, the geographical extent of the market is often a crucial dimension. Due to travel costs, for instance, customers are unlikely or unable to travel an exceedingly long distance to buy a product from a different company following a price spike.

The guidelines define an antitrust market in both product and geographic dimensions by using the “hypothetical monopolist test”: would a hypothetical monopolist in the proposed antitrust market be able to raise prices without losing enough customers that it would be self-defeating to do so? If the answer is yes, then the market is defined too broadly and should be narrowed. If a hypothetical monopolist could not increase prices without losing so much business that it wouldn’t be worthwhile, the market is defined too narrowly and should be widened—ideally to include the alternatives to which consumers would switch in this hypothetical. The threshold market definition at which such a price increase would be borderline profitable is considered the extent of the antitrust market, and this procedure for establishing that threshold is known as “critical loss analysis.”

## MEASURING MARKET CONCENTRATION

Once markets are defined, the Herfindahl-Hirschman Index (HHI) is the most common measure used for determining market concentration, including by the Horizontal Merger Guidelines. It is calculated by squaring the market share of each firm in a market and summing them up. Market share can be calculated using revenue, sales, or in some cases, number of products, employment, or hiring. For example, if we have four firms in a market with market shares of 35%, 30%, 20%, and 15%, the HHI would be  $35^2 + 30^2 + 20^2 + 15^2 = 2750$ . The index ranges from 1 (perfect competition) to 10000 (a monopoly).

According to the Horizontal Merger Guidelines, a market with an HHI above 2500 is considered highly concentrated. Furthermore, the guidelines state “mergers resulting in highly concentrated markets that involve an increase in the HHI of more than 200 points will be presumed to be likely to enhance market power” (DOJ 2010). Before 2010, the guidelines were more strict. The guidelines considered a highly concentrated market to be one with an HHI above 1800, and a post-merger HHI increase of 100 to be considered potential for enhanced market power.

The Obama administration believed it should loosen the guidelines, since under the old guidelines, too many mergers that exceeded the thresholds went unchallenged. The idea would be that with more leeway for borderline-competitive mergers, enforcement resources could be directed at a greater share of mergers that are presumptively problematic, and hence fewer mergers in violation of the guidelines’ thresholds would go unchallenged. However, the effect has been to simply ratchet up the egregiousness of the mergers being considered, since industry has unsurprisingly interpreted the change in policy as reflecting a greater tolerance for concentration. Therefore, despite the higher thresholds, the merger wave has not been held back, but rather accelerated.

## **THE FALLACY OF THE AGENCIES’ RESPONSE**

The figures reported at the start of this issue brief, from the paper by Grullon et al., refer to industry concentration levels. The authors calculated industry concentrations by summing the squared ratios of firms’ sales to total industry sales and found industry concentrations to be high and increasing over time in most industries. Industry concentration is not the same as market concentration in a relevant antitrust market; however, it can be an indicator of increasing concentrations for antitrust markets within industries. A relevant antitrust market includes the options available to consumers, workers, or other counterparties to the merging firms. That is usually fewer than all the firms in a given industry, as the agencies pointed out in their statement to the OECD. Thus, the market concentration of a properly defined antitrust market within specific industries will normally be much higher than the concentration of each industry overall.

The logical assumption one should make about relevant markets is that the more narrow one defines it, the less firms there would be, and therefore, the concentration would be higher. In the agencies’ response, they use a study that looks at concentrations across the SIC 4-digit level. They use the manufacturing industry as an example as it is split into four groups, one of them being drug manufacturing. They argue that because drugs aren’t close substitutes for one another, the product market is too broad and therefore the concentration calculated has no merit.

The following example in the pharmaceutical industry shows that a narrow relevant market leads to calculating a higher market concentration. A study of the sector by Torrey Partners stated that “it is readily apparent that the generic pharmaceutical segment is not highly concentrated,” but they defined the industry at the global level, looking at revenue of companies that sell generic drugs and calculated the HHI to be 210 (Lefkowitz 2016). One cannot get a prescription from one’s doctor to buy a drug from a different country, so the market should be defined at the country level at least. More importantly, though, the product market should not be defined using all generic drugs in the same market. A consumer cannot substitute their diabetic medication with an antidepressant in the way they might be able to substitute one fast food item for another. Instead, the pharmaceutical industry would have its markets defined by specific drugs.

In the failed attempt by the DOJ to block the Pfizer-Warner merger in 2000, the DOJ lawyers pointed out that the HHI for specific drug markets would increase by a substantial amount. For example, over the counter pediculicides would see an HHI increase from 2,223 to 4,024. Pfizer’s Aricept had 98% of the Alzheimer’s treatment market, with Warner’s Cognex being their only competition (FTC 2000). With better-defined markets, antitrust officials can block anti-competitive mergers—and, in the case of the pharmaceutical industry at least, protect Americans’ access to affordable medication. In this example, we see the DOJ acknowledge that the pharmaceutical industry is highly concentrated when using the relevant market definition.

In their statement to the OECD, the agencies argue that reliable data is limited except for the banking and airlines sectors. They cite studies that show that there is not a rise in concentration in either industry. The study on airlines concentration from the U.S. Government Accountability Office (GAO) shows that concentration for airport routes did not rise by much from 2007 to 2012, but markets have been highly concentrated throughout the period (GAO 2014). The most recent banking study they cited also showed that concentration did not rise by much, from 2000 to 2010, in metropolitan, micropolitan, and rural areas. However, micropolitan and rural areas were highly concentrated throughout the time period (Adams 2012).

## **INADEQUATE ENFORCEMENT OF THE GUIDELINES**

Market definition is one of the most crucial tasks in antitrust enforcement, and in sectors where the antitrust agencies have reviewed many mergers, they tend to have established rules of thumb about the appropriate market definition. For example, in mergers between hospitals, they might conclude that the relevant market for a given merger is a 20-mile radius around hospitals owned by the merging parties. What that means is that when

patients consider which hospital to go to, they generally choose from the options within that radius. The point of the exercise undertaken in this issue brief is that when you look at the studies that have made an attempt to define antitrust markets, the average concentration they report for whatever market definition they come up with tends to be high.

As shown in the table below, nearly all of the markets reviewed are highly concentrated across the different industries where market definition has been undertaken. The internet search engine market is composed of companies looking to advertise their products by purchasing ads and listings using search services. It was highly concentrated with an HHI of 5105 in 2010, with Google, Microsoft, and Yahoo sharing over 96% of the revenue. Just two years later, the HHI grew to 5506, following the Search Alliance made by Microsoft and Yahoo (Noam 2016). The study defined the relevant market using revenue from ads at the national level and calculated market share by using search volume. The Search Alliance was a deal that enabled Microsoft to bypass acquiring Yahoo by instead powering Yahoo's search engine in exchange for listings and ads on Bing, Microsoft's search engine. The DOJ shut down a potential Google-Yahoo pact a year prior in fear of the highly concentrated search engine market becoming even more so. However, they did not challenge the Search Alliance in court, even though the guidelines would suggest that they would do so, given that the market was already highly concentrated. To have an online presence, companies must now either choose between signing up for Google Adwords or Microsoft's Bing Ads.

There is also a huge, growing concern about user privacy. Following the adoption of the broadband privacy rule in 2016, Internet Service Providers (ISPs) had been prohibited from selling users' browser history without their consent. President Trump signed a bill rolling back restrictions and allowing ISPs to sell one's search history without user consent. Meanwhile, the search engines themselves (Google and Bing) have never had any restrictions in how they can sell our search data to third parties, other than the FTC's mild warning that they must comply with their own terms of use (which few consumers bother to actually read, and in any case, they are written to be as opaque as possible and universally favorable to providers).

In our current duopoly—in which two companies dominate the market for online advertisements—we have no other choice than to accept that whatever we search on Google or Bing can be sold to whomever without our knowledge. In a competitive search engine industry, we would be able to instead use a competitor's service to avoid this practice, possibly discouraging Google, Microsoft, or the ISPs from continuing to invade our privacy.

The Whirlpool acquisition of Maytag in 2006 led to the refrigerator industry’s already high HHI growing from 2244 in 2007 to 2484 in 2008 (Taylor 2013). That study defined the relevant market as sales of each type of home appliance at the national level. The effects of a merger higher up the supply chain—in this case, at the manufacturing level—can still directly affect final consumers and must be considered. Appliance retailers (and other retailers in a similar situation) can face a price increase from their supplier as they will have fewer sourcing options. Before the acquisition, the top four companies within the industry had a 98% share of the market. At the time, the standard for enforcement was lower than it is today. Yet, even with a lower standard, antitrust regulators did not challenge the merger, and it turned out to have increased prices (Ashenfelter, Weinberg, and Hosken 2011).

## **PROPER MARKET DEFINITION CAN STRENGTHEN ANTITRUST POLICY**

The health insurance industry has had many large mergers in the past two decades. When analyzing a potential merger between two large insurance agencies, it would be wrong to define the market at the national level. At the national level, there are many insurance companies and the HHI would be low, so any merger would probably not increase the calculated HHI significantly. But health insurance is regulated at the state level, so insurance regulators have to approve policies offered in their state. Therefore, the proper geographic market definition in health insurance is, at the very widest, the state level. It may even be at the local level, since many insurers specialize still further, marketing to local communities or employers. One study looked at health insurance premiums offered by 800 employers in 139 geographical areas. It calculated the average HHI to be 2984 in 2006 (Daffny 2012), revealing that the health insurance industry is highly concentrated.

The Aetna-Humana merger was successfully blocked by the DOJ in 2016. The market here was defined as Medicare Advantage plans at the county level. It was found that the post-merger HHI would have surpassed 5000 for 75% of the counties. In 70% of the counties, the HHI would have increased by over 1000. In 70 counties, where Aetna and Humana are the only two Medicare Advantage plan providers in the market, the merger would have created a monopoly (DOJ 2017). Aetna’s lawyers argued that the Medicare and Medicare Advantage plans should be in the same market. However, Medicare Advantage plans are run by private companies and provide extensive coverage. In exchange for out-of-pocket limits and supplemental benefits, seniors can choose to pay monthly premiums and give up network flexibility by choosing Medicare Advantage over Original Medicare. This difference is the reason why the DOJ decided to define each plan in different markets.

## WHY HIGH CONCENTRATION THROUGHOUT THE ECONOMY MATTERS

The debate over proper market definition and whether concentration in the U.S. economy is, in fact, high should be understood in light of its larger significance: Does the economy currently suffer from a market power problem, and is that problem related to or caused by high measured concentration?

Other research finds that concentrated markets deter healthy competition, leading to low investment by companies who don't need to keep up with competitors (Gutierrez and Philippon 2017). It is also one cause of labor market monopsony—where employers have the discretion to set wages and working conditions on their own terms, without fearing that their workers could check their power by finding another job (Azar, Marinescu, and Steinbaum 2017; Dube and Kaplan 2010; Webber 2016). High market concentration makes it difficult for small businesses to compete or for new businesses to enter the market, since suppliers and customers will be difficult to pry away from incumbents. Moreover, such barriers to entry themselves give rise to concentration that sustains itself in an uncompetitive equilibrium. There's good reason to believe that market concentration and other uncompetitive market structures cause rising inequality and declining labor mobility and entrepreneurship (Konczal and Steinbaum 2016). Industrial concentration also correlates with rising profits and declining returns to productive factors (Barkai 2017). Finally, while no direct link has been shown between concentration (and market power more generally) and the slowdown in aggregate productivity growth, it is nonetheless the case that at the same time that market power has risen to crisis levels in the overall economy, productivity growth has been in decline (Fernald 2015; Syverson 2016).

In their statement to the OECD, after pointing out that industrial sectors are not antitrust markets, the agencies go on to credit interpretations of rising concentration premised on technological transformation, which implies that the reallocation of production to larger firms with greater market share is increasingly efficient. This is the so-called “superfirm” hypothesis, advanced by Autor et al. (2017), among others.

That interpretation is inconsistent with the evidence about both declining productivity growth and rising markups in aggregate and at the individual firm level. If more efficient firms were systematically gaining market share, it is difficult to imagine how, at the same time, productivity growth in aggregate has been declining. Moreover, the means by which more efficient firms would presumably attract a larger share of commerce is by beating the actual or potential competition through their ability to charge lower prices. And yet, the markups they charge are increasing—meaning that their cost advantage, if one exists,

is more likely driven by the ability to monopsonize input markets rather than by coming up with more efficient ways to convert those inputs into output.

It is therefore premature to excuse the economy's concentration problem with reference to superfirms.

## CONCLUSION

If the federal antitrust enforcement agencies do not make significant changes to the enforcement of antitrust policy, first by acknowledging that many markets are highly concentrated, fewer and fewer firms will continue to expand their dominance. Market concentration and market power lead to stagnant wages, fewer new businesses, and a weakened supply chain. As a result, many participants in the economy feel their fate is out of their own hands.

The start of any policy to rectify the economy's market power problem must be a recognition by antitrust enforcers that it exists. Here, we have gathered all the [available literature](#) to show that, at the very least, antitrust markets are highly concentrated per the Horizontal Merger Guidelines. It's time for the agencies to stop ignoring the problem or going out of their way to deny it exists. Instead, they and the rest of the antitrust policy community ought to be putting forward solutions for how to rectify the problems that lax antitrust enforcement has created, and the agencies themselves should be investigating the empirical questions brought forward in this ongoing debate.

# EXHIBIT 78 (a)

---

# Horizontal Merger Guidelines

U.S. Department of Justice  
and the  
Federal Trade Commission

Issued: August 19, 2010

# 1. Overview

These Guidelines outline the principal analytical techniques, practices, and the enforcement policy of the Department of Justice and the Federal Trade Commission (the “Agencies”) with respect to mergers and acquisitions involving actual or potential competitors (“horizontal mergers”) under the federal antitrust laws.<sup>1</sup> The relevant statutory provisions include Section 7 of the Clayton Act, 15 U.S.C. § 18, Sections 1 and 2 of the Sherman Act, 15 U.S.C. §§ 1, 2, and Section 5 of the Federal Trade Commission Act, 15 U.S.C. § 45. Most particularly, Section 7 of the Clayton Act prohibits mergers if “in any line of commerce or in any activity affecting commerce in any section of the country, the effect of such acquisition may be substantially to lessen competition, or to tend to create a monopoly.”

The Agencies seek to identify and challenge competitively harmful mergers while avoiding unnecessary interference with mergers that are either competitively beneficial or neutral. Most merger analysis is necessarily predictive, requiring an assessment of what will likely happen if a merger proceeds as compared to what will likely happen if it does not. Given this inherent need for prediction, these Guidelines reflect the congressional intent that merger enforcement should interdict competitive problems in their incipiency and that certainty about anticompetitive effect is seldom possible and not required for a merger to be illegal.

These Guidelines describe the principal analytical techniques and the main types of evidence on which the Agencies usually rely to predict whether a horizontal merger may substantially lessen competition. They are not intended to describe how the Agencies analyze cases other than horizontal mergers. These Guidelines are intended to assist the business community and antitrust practitioners by increasing the transparency of the analytical process underlying the Agencies’ enforcement decisions. They may also assist the courts in developing an appropriate framework for interpreting and applying the antitrust laws in the horizontal merger context.

These Guidelines should be read with the awareness that merger analysis does not consist of uniform application of a single methodology. Rather, it is a fact-specific process through which the Agencies, guided by their extensive experience, apply a range of analytical tools to the reasonably available and reliable evidence to evaluate competitive concerns in a limited period of time. Where these Guidelines provide examples, they are illustrative and do not exhaust the applications of the relevant principle.<sup>2</sup>

---

<sup>1</sup> These Guidelines replace the Horizontal Merger Guidelines issued in 1992, revised in 1997. They reflect the ongoing accumulation of experience at the Agencies. The Commentary on the Horizontal Merger Guidelines issued by the Agencies in 2006 remains a valuable supplement to these Guidelines. These Guidelines may be revised from time to time as necessary to reflect significant changes in enforcement policy, to clarify existing policy, or to reflect new learning. These Guidelines do not cover vertical or other types of non-horizontal acquisitions.

<sup>2</sup> These Guidelines are not intended to describe how the Agencies will conduct the litigation of cases they decide to bring. Although relevant in that context, these Guidelines neither dictate nor exhaust the range of evidence the Agencies may introduce in litigation.

### 5.3 Market Concentration

Market concentration is often one useful indicator of likely competitive effects of a merger. In evaluating market concentration, the Agencies consider both the post-merger level of market concentration and the change in concentration resulting from a merger. Market shares may not fully reflect the competitive significance of firms in the market or the impact of a merger. They are used in conjunction with other evidence of competitive effects. See Sections 6 and 7.

In analyzing mergers between an incumbent and a recent or potential entrant, to the extent the Agencies use the change in concentration to evaluate competitive effects, they will do so using projected market shares. A merger between an incumbent and a potential entrant can raise significant competitive concerns. The lessening of competition resulting from such a merger is more likely to be substantial, the larger is the market share of the incumbent, the greater is the competitive significance of the potential entrant, and the greater is the competitive threat posed by this potential entrant relative to others.

The Agencies give more weight to market concentration when market shares have been stable over time, especially in the face of historical changes in relative prices or costs. If a firm has retained its market share even after its price has increased relative to those of its rivals, that firm already faces limited competitive constraints, making it less likely that its remaining rivals will replace the competition lost if one of that firm's important rivals is eliminated due to a merger. By contrast, even a highly concentrated market can be very competitive if market shares fluctuate substantially over short periods of time in response to changes in competitive offerings. However, if competition by one of the merging firms has significantly contributed to these fluctuations, perhaps because it has acted as a maverick, the Agencies will consider whether the merger will enhance market power by combining that firm with one of its significant rivals.

The Agencies may measure market concentration using the number of significant competitors in the market. This measure is most useful when there is a gap in market share between significant competitors and smaller rivals or when it is difficult to measure revenues in the relevant market. The Agencies also may consider the combined market share of the merging firms as an indicator of the extent to which others in the market may not be able readily to replace competition between the merging firms that is lost through the merger.

The Agencies often calculate the Herfindahl-Hirschman Index ("HHI") of market concentration. The HHI is calculated by summing the squares of the individual firms' market shares,<sup>9</sup> and thus gives proportionately greater weight to the larger market shares. When using the HHI, the Agencies

---

<sup>9</sup> For example, a market consisting of four firms with market shares of thirty percent, thirty percent, twenty percent, and twenty percent has an HHI of 2600 ( $30^2 + 30^2 + 20^2 + 20^2 = 2600$ ). The HHI ranges from 10,000 (in the case of a pure monopoly) to a number approaching zero (in the case of an atomistic market). Although it is desirable to include all firms in the calculation, lack of information about firms with small shares is not critical because such firms do not affect the HHI significantly.

consider both the post-merger level of the HHI and the increase in the HHI resulting from the merger. The increase in the HHI is equal to twice the product of the market shares of the merging firms.<sup>10</sup>

Based on their experience, the Agencies generally classify markets into three types:

- Unconcentrated Markets: HHI below 1500
- Moderately Concentrated Markets: HHI between 1500 and 2500
- Highly Concentrated Markets: HHI above 2500

The Agencies employ the following general standards for the relevant markets they have defined:

- *Small Change in Concentration*: Mergers involving an increase in the HHI of less than 100 points are unlikely to have adverse competitive effects and ordinarily require no further analysis.
- *Unconcentrated Markets*: Mergers resulting in unconcentrated markets are unlikely to have adverse competitive effects and ordinarily require no further analysis.
- *Moderately Concentrated Markets*: Mergers resulting in moderately concentrated markets that involve an increase in the HHI of more than 100 points potentially raise significant competitive concerns and often warrant scrutiny.
- *Highly Concentrated Markets*: Mergers resulting in highly concentrated markets that involve an increase in the HHI of between 100 points and 200 points potentially raise significant competitive concerns and often warrant scrutiny. Mergers resulting in highly concentrated markets that involve an increase in the HHI of more than 200 points will be presumed to be likely to enhance market power. The presumption may be rebutted by persuasive evidence showing that the merger is unlikely to enhance market power.

The purpose of these thresholds is not to provide a rigid screen to separate competitively benign mergers from anticompetitive ones, although high levels of concentration do raise concerns. Rather, they provide one way to identify some mergers unlikely to raise competitive concerns and some others for which it is particularly important to examine whether other competitive factors confirm, reinforce, or counteract the potentially harmful effects of increased concentration. The higher the post-merger HHI and the increase in the HHI, the greater are the Agencies' potential competitive concerns and the greater is the likelihood that the Agencies will request additional information to conduct their analysis.

---

<sup>10</sup> For example, the merger of firms with shares of five percent and ten percent of the market would increase the HHI by 100 ( $5 \times 10 \times 2 = 100$ ).

## **6. Unilateral Effects**

The elimination of competition between two firms that results from their merger may alone constitute a substantial lessening of competition. Such unilateral effects are most apparent in a merger to monopoly in a relevant market, but are by no means limited to that case. Whether cognizable efficiencies resulting from the merger are likely to reduce or reverse adverse unilateral effects is addressed in Section 10.

Several common types of unilateral effects are discussed in this section. Section 6.1 discusses unilateral price effects in markets with differentiated products. Section 6.2 discusses unilateral effects in markets where sellers negotiate with buyers or prices are determined through auctions. Section 6.3 discusses unilateral effects relating to reductions in output or capacity in markets for relatively homogeneous products. Section 6.4 discusses unilateral effects arising from diminished innovation or reduced product variety. These effects do not exhaust the types of possible unilateral effects; for example, exclusionary unilateral effects also can arise.

A merger may result in different unilateral effects along different dimensions of competition. For example, a merger may increase prices in the short term but not raise longer-term concerns about innovation, either because rivals will provide sufficient innovation competition or because the merger will generate cognizable research and development efficiencies. See Section 10.

### **6.1 Pricing of Differentiated Products**

In differentiated product industries, some products can be very close substitutes and compete strongly with each other, while other products are more distant substitutes and compete less strongly. For example, one high-end product may compete much more directly with another high-end product than with any low-end product.

A merger between firms selling differentiated products may diminish competition by enabling the merged firm to profit by unilaterally raising the price of one or both products above the pre-merger level. Some of the sales lost due to the price rise will merely be diverted to the product of the merger partner and, depending on relative margins, capturing such sales loss through merger may make the price increase profitable even though it would not have been profitable prior to the merger.

The extent of direct competition between the products sold by the merging parties is central to the evaluation of unilateral price effects. Unilateral price effects are greater, the more the buyers of products sold by one merging firm consider products sold by the other merging firm to be their next choice. The Agencies consider any reasonably available and reliable information to evaluate the extent of direct competition between the products sold by the merging firms. This includes documentary and testimonial evidence, win/loss reports and evidence from discount approval processes, customer switching patterns, and customer surveys. The types of evidence relied on often overlap substantially with the types of evidence of customer substitution relevant to the hypothetical monopolist test. See Section 4.1.1.

Substantial unilateral price elevation post-merger for a product formerly sold by one of the merging firms normally requires that a significant fraction of the customers purchasing that product view

A merger is unlikely to generate substantial unilateral price increases if non-merging parties offer very close substitutes for the products offered by the merging firms. In some cases, non-merging firms may be able to reposition their products to offer close substitutes for the products offered by the merging firms. Repositioning is a supply-side response that is evaluated much like entry, with consideration given to timeliness, likelihood, and sufficiency. See Section 9. The Agencies consider whether repositioning would be sufficient to deter or counteract what otherwise would be significant anticompetitive unilateral effects from a differentiated products merger.

## **6.2 Bargaining and Auctions**

In many industries, especially those involving intermediate goods and services, buyers and sellers negotiate to determine prices and other terms of trade. In that process, buyers commonly negotiate with more than one seller, and may play sellers off against one another. Some highly structured forms of such competition are known as auctions. Negotiations often combine aspects of an auction with aspects of one-on-one negotiation, although pure auctions are sometimes used in government procurement and elsewhere.

A merger between two competing sellers prevents buyers from playing those sellers off against each other in negotiations. This alone can significantly enhance the ability and incentive of the merged entity to obtain a result more favorable to it, and less favorable to the buyer, than the merging firms would have offered separately absent the merger. The Agencies analyze unilateral effects of this type using similar approaches to those described in Section 6.1.

Anticompetitive unilateral effects in these settings are likely in proportion to the frequency or probability with which, prior to the merger, one of the merging sellers had been the runner-up when the other won the business. These effects also are likely to be greater, the greater advantage the runner-up merging firm has over other suppliers in meeting customers' needs. These effects also tend to be greater, the more profitable were the pre-merger winning bids. All of these factors are likely to be small if there are many equally placed bidders.

The mechanisms of these anticompetitive unilateral effects, and the indicia of their likelihood, differ somewhat according to the bargaining practices used, the auction format, and the sellers' information about one another's costs and about buyers' preferences. For example, when the merging sellers are likely to know which buyers they are best and second best placed to serve, any anticompetitive unilateral effects are apt to be targeted at those buyers; when sellers are less well informed, such effects are more apt to be spread over a broader class of buyers.

## **6.3 Capacity and Output for Homogeneous Products**

In markets involving relatively undifferentiated products, the Agencies may evaluate whether the merged firm will find it profitable unilaterally to suppress output and elevate the market price. A firm may leave capacity idle, refrain from building or obtaining capacity that would have been obtained absent the merger, or eliminate pre-existing production capabilities. A firm may also divert the use of capacity away from one relevant market and into another so as to raise the price in the former market. The competitive analyses of these alternative modes of output suppression may differ.

complementary capabilities that cannot be otherwise combined or for some other merger-specific reason. See Section 10.

The Agencies also consider whether a merger is likely to give the merged firm an incentive to cease offering one of the relevant products sold by the merging parties. Reductions in variety following a merger may or may not be anticompetitive. Mergers can lead to the efficient consolidation of products when variety offers little in value to customers. In other cases, a merger may increase variety by encouraging the merged firm to reposition its products to be more differentiated from one another.

If the merged firm would withdraw a product that a significant number of customers strongly prefer to those products that would remain available, this can constitute a harm to customers over and above any effects on the price or quality of any given product. If there is evidence of such an effect, the Agencies may inquire whether the reduction in variety is largely due to a loss of competitive incentives attributable to the merger. An anticompetitive incentive to eliminate a product as a result of the merger is greater and more likely, the larger is the share of profits from that product coming at the expense of profits from products sold by the merger partner. Where a merger substantially reduces competition by bringing two close substitute products under common ownership, and one of those products is eliminated, the merger will often also lead to a price increase on the remaining product, but that is not a necessary condition for anticompetitive effect.

*Example 21:* Firm A sells a high-end product at a premium price. Firm B sells a mid-range product at a lower price, serving customers who are more price sensitive. Several other firms have low-end products. Firms A and B together have a large share of the relevant market. Firm A proposes to acquire Firm B and discontinue Firm B's product. Firm A expects to retain most of Firm B's customers. Firm A may not find it profitable to raise the price of its high-end product after the merger, because doing so would reduce its ability to retain Firm B's more price-sensitive customers. The Agencies may conclude that the withdrawal of Firm B's product results from a loss of competition and materially harms customers.

## **7. Coordinated Effects**

A merger may diminish competition by enabling or encouraging post-merger coordinated interaction among firms in the relevant market that harms customers. Coordinated interaction involves conduct by multiple firms that is profitable for each of them only as a result of the accommodating reactions of the others. These reactions can blunt a firm's incentive to offer customers better deals by undercutting the extent to which such a move would win business away from rivals. They also can enhance a firm's incentive to raise prices, by assuaging the fear that such a move would lose customers to rivals.

Coordinated interaction includes a range of conduct. Coordinated interaction can involve the explicit negotiation of a common understanding of how firms will compete or refrain from competing. Such conduct typically would itself violate the antitrust laws. Coordinated interaction also can involve a similar common understanding that is not explicitly negotiated but would be enforced by the detection and punishment of deviations that would undermine the coordinated interaction.

Coordinated interaction alternatively can involve parallel accommodating conduct not pursuant to a prior understanding. Parallel accommodating conduct includes situations in which each rival's response to competitive moves made by others is individually rational, and not motivated by

retaliation or deterrence nor intended to sustain an agreed-upon market outcome, but nevertheless emboldens price increases and weakens competitive incentives to reduce prices or offer customers better terms. Coordinated interaction includes conduct not otherwise condemned by the antitrust laws.

The ability of rival firms to engage in coordinated conduct depends on the strength and predictability of rivals' responses to a price change or other competitive initiative. Under some circumstances, a merger can result in market concentration sufficient to strengthen such responses or enable multiple firms in the market to predict them more confidently, thereby affecting the competitive incentives of multiple firms in the market, not just the merged firm.

## **7.1 Impact of Merger on Coordinated Interaction**

The Agencies examine whether a merger is likely to change the manner in which market participants interact, inducing substantially more coordinated interaction. The Agencies seek to identify how a merger might significantly weaken competitive incentives through an increase in the strength, extent, or likelihood of coordinated conduct. There are, however, numerous forms of coordination, and the risk that a merger will induce adverse coordinated effects may not be susceptible to quantification or detailed proof. Therefore, the Agencies evaluate the risk of coordinated effects using measures of market concentration (see Section 5) in conjunction with an assessment of whether a market is vulnerable to coordinated conduct. See Section 7.2. The analysis in Section 7.2 applies to moderately and highly concentrated markets, as unconcentrated markets are unlikely to be vulnerable to coordinated conduct.

Pursuant to the Clayton Act's incipency standard, the Agencies may challenge mergers that in their judgment pose a real danger of harm through coordinated effects, even without specific evidence showing precisely how the coordination likely would take place. The Agencies are likely to challenge a merger if the following three conditions are all met: (1) the merger would significantly increase concentration and lead to a moderately or highly concentrated market; (2) that market shows signs of vulnerability to coordinated conduct (see Section 7.2); and (3) the Agencies have a credible basis on which to conclude that the merger may enhance that vulnerability. An acquisition eliminating a maverick firm (see Section 2.1.5) in a market vulnerable to coordinated conduct is likely to cause adverse coordinated effects.

## **7.2 Evidence a Market is Vulnerable to Coordinated Conduct**

The Agencies presume that market conditions are conducive to coordinated interaction if firms representing a substantial share in the relevant market appear to have previously engaged in express collusion affecting the relevant market, unless competitive conditions in the market have since changed significantly. Previous express collusion in another geographic market will have the same weight if the salient characteristics of that other market at the time of the collusion are comparable to those in the relevant market. Failed previous attempts at collusion in the relevant market suggest that successful collusion was difficult pre-merger but not so difficult as to deter attempts, and a merger may tend to make success more likely. Previous collusion or attempted collusion in another product market may also be given substantial weight if the salient characteristics of that other market at the time of the collusion are closely comparable to those in the relevant market.

A market typically is more vulnerable to coordinated conduct if each competitively important firm's significant competitive initiatives can be promptly and confidently observed by that firm's rivals. This is more likely to be the case if the terms offered to customers are relatively transparent. Price transparency can be greater for relatively homogeneous products. Even if terms of dealing are not transparent, transparency regarding the identities of the firms serving particular customers can give rise to coordination, e.g., through customer or territorial allocation. Regular monitoring by suppliers of one another's prices or customers can indicate that the terms offered to customers are relatively transparent.

A market typically is more vulnerable to coordinated conduct if a firm's prospective competitive reward from attracting customers away from its rivals will be significantly diminished by likely responses of those rivals. This is more likely to be the case, the stronger and faster are the responses the firm anticipates from its rivals. The firm is more likely to anticipate strong responses if there are few significant competitors, if products in the relevant market are relatively homogeneous, if customers find it relatively easy to switch between suppliers, or if suppliers use meeting-competition clauses.

A firm is more likely to be deterred from making competitive initiatives by whatever responses occur if sales are small and frequent rather than via occasional large and long-term contracts or if relatively few customers will switch to it before rivals are able to respond. A firm is less likely to be deterred by whatever responses occur if the firm has little stake in the status quo. For example, a firm with a small market share that can quickly and dramatically expand, constrained neither by limits on production nor by customer reluctance to switch providers or to entrust business to a historically small provider, is unlikely to be deterred. Firms are also less likely to be deterred by whatever responses occur if competition in the relevant market is marked by leapfrogging technological innovation, so that responses by competitors leave the gains from successful innovation largely intact.

A market is more apt to be vulnerable to coordinated conduct if the firm initiating a price increase will lose relatively few customers after rivals respond to the increase. Similarly, a market is more apt to be vulnerable to coordinated conduct if a firm that first offers a lower price or improved product to customers will retain relatively few customers thus attracted away from its rivals after those rivals respond.

The Agencies regard coordinated interaction as more likely, the more the participants stand to gain from successful coordination. Coordination generally is more profitable, the lower is the market elasticity of demand.

Coordinated conduct can harm customers even if not all firms in the relevant market engage in the coordination, but significant harm normally is likely only if a substantial part of the market is subject to such conduct. The prospect of harm depends on the collective market power, in the relevant market, of firms whose incentives to compete are substantially weakened by coordinated conduct. This collective market power is greater, the lower is the market elasticity of demand. This collective market power is diminished by the presence of other market participants with small market shares and little stake in the outcome resulting from the coordinated conduct, if these firms can rapidly expand their sales in the relevant market.

# EXHIBIT 79

# EXHIBIT 12

3628 South 35<sup>th</sup> Street  
Tacoma, Washington 98409-3192

TACOMA PUBLIC UTILITIES

August 11, 2017

Michael Mirra, Executive Director  
Tacoma Housing Authority  
902 South L Street  
Tacoma, WA, 98405-4037

Dear Mr. Mirra:

Subject: Letter Agreement Regarding Water Heater Demand Response Project

This Letter Agreement (“Letter Agreement”) memorializes and specifies the circumstances, terms, and conditions of an agreement between the City of Tacoma, Department of Public Utilities, Light Division d.b.a. Tacoma Power (“Tacoma Power”) and the Tacoma Housing Authority (“THA”), pertaining to the water heater demand response project occurring at Salishan Phase 1 located at 1724 East 44th Street, Tacoma, WA.

## Recitals

- Water Heater Demand Response Project: Tacoma Power and the Bonneville Power Administration are researching the demand response (DR) effectiveness of the Consumer Technology Association (CTA) 2045 modular communication port in residential water heaters. In compliance with the Seventh Power Plan issued by the Northwest Power and Conservation Council, BPA is seeking new conservation opportunities and ways to increase the cost-effectiveness and reliability of demand response. The result of this Water Heater Demand Response Project will determine whether the CTA 2045 modular communications port will be integrated into production water heaters and incorporated into utility demand response programs nationwide.
- Location of the project: BPA is seeking to test up to 600 water heaters across the region; Tacoma Power will test approximately 90 electric resistance water heaters within the service territory. Tacoma Housing Authority has agreed to host these test water heaters at the Salishan housing development located on East 44<sup>th</sup> St., Tacoma.
- Common interest between THA and Tacoma Power: Both Tacoma Power and THA share an interest in installing energy efficient equipment in the Salishan housing development homes in order to reduce water heating costs for their tenants and a common interest in researching and documenting new products and methods to save energy.

- Coordination: BPA will negotiate production of and a price for an electric resistance water heater manufactured by AO Smith. These water heaters as well as heat pump water heaters manufactured by AO Smith and others will be used in the project. The water heaters will be made available for purchase by THA by AO Smith during the early summer of 2017. The price THA pays for these water heaters will be at or below \$350 as negotiated by BPA and AO Smith. Tacoma Power will coordinate with THA on delivery to THA of the CTA-2045 communications modules and module installation instructions. Tacoma Power will coordinate with Click! to design and install a project specific WIFI network for data transfer back to BPA. Neither THA nor their participating tenants will have access to this WIFI network. THA will purchase and install the water heaters and all code required peripherals. Project communications modules will be installed and a WIFI hook up established at time of water heater installation.
- Project timeline and costs: The Water Heater Demand Response Project is scheduled from July 2017 through August 2018. All costs for replacement and installation of electric water heaters will be borne by the THA. Communications modules and WIFI will be provided by BPA and Tacoma Power. The AO Smith PXNT-50 water heater carries an EF 95 efficiency rating and 10 year manufacturer's warrantee. BPA will negotiate the cost of the AO Smith PXNT-50 water heaters to be comparable to the existing EF 92, 6 year warrantee water heaters currently installed at Salishan Phase 1. In consideration for costs associated with the water heaters, communication module installation, and working with tenants in relation to the program, THA will receive the payments specified in Section 8 below.

**Now, therefore,** in consideration of the mutual benefits to be realized hereunder, Tacoma Housing Authority and Tacoma Power agree as follows:

### **Term**

The Term of this Letter Agreement will commence on the last date the Parties have signed this Letter Agreement below and will expire on December 31, 2018, unless mutually extended by both parties.

### **Tacoma Housing Authority Responsibilities**

1. Water heaters: THA shall be responsible for purchase and installation of AO Smith PXNT-50 water heaters in identified duplex and triplex housing in Phase 1 of the Salishan housing development. THA shall install communication ports and modules on the water heaters during installation and establish a WIFI connection with the WIFI set up by Tacoma Power. Water heaters will be priced at or below \$350 each for this project.

2. Communications devices: Tacoma Power shall provide port adapters that will be affixed to the communications port upon water heater installation by the THA. A UCM communications device will connect to the water heater via the port adapter. The UCM device will receive radio signal commands during the project and control the function of the water heater during specified demand response "events." Upon installation, THA will record the unique MAC address found on each UCM device, the physical address and tenant information for each installation and provide them to Tacoma Power. The UCM communication devices will sync with the dedicated WIFI network built for this project to report data back to Tacoma Power on a daily basis.
3. Coordination of Access during Project: Tacoma Power staff shall be granted reasonable access to the project homes for the purpose of troubleshooting WIFI connection, communication issues and retrieval and replacement of faulty UCM modules. When access is required for the aforementioned reasons, THA will coordinate access needs between Tacoma Power and tenants.
4. Financial responsibility for installation of water heaters: THA accepts financial responsibility for the purchase and installation of the replacement water heaters in each project home. THA further consents to the installation of the following monitoring equipment: a communications port to receive a designated UCM communications module. In addition, a WIFI router will be deployed in or near each project home to facilitate transfer of data back to Tacoma Power. THA expressly acknowledges and agrees that, for the term of this Agreement and the Water Heaters Demand Response Project, the monitoring equipment identified above shall remain the property of Tacoma Power and/or the Bonneville Power Administration and shall not be considered fixtures of the project homes except as provided for in this Letter Agreement even though said equipment shall be attached to real property within the homes. THA acknowledges and agrees that it shall have no, and shall not exercise any, lien or other rights in the monitoring equipment during the term of this Agreement. If THA exercises any rights as a mortgagor or lien holder, THA acknowledges and agrees that it has no lien or other interests in the monitoring equipment and said systems and equipment shall be removed by Tacoma Power.

### **Tacoma Power Responsibilities**

5. Communications hardware and WIFI network: Tacoma Power shall provide port adapters and UCM communication devices for installation on water heaters as they are installed by the THA. A dedicated WIFI network will be designed and installed by Tacoma Power for this project. Tacoma Power will bear all cost for installation, operation and decommissioning of this network.
6. Removal of Study Equipment: At the conclusion of the Water Heater Demand Response Project, Tacoma Power will coordinate with THA and occupants for the removal of monitoring and WIFI equipment.

7. Homeowner Training: Tacoma Power will provide an orientation and/or written information to occupants on the purpose and potential hot water impacts of this project. Occupants will be given specific instructions on how they may “opt out” of specific demand response events.
8. Payment: Tacoma Power will pay Tacoma Housing Authority for homes they enroll and retain through the duration of the project. For each home enrolled in the project by August 21, 2017, Tacoma Power will pay THA \$50 at the beginning of the project. For each initially enrolled home that remains in the project at the end of demand response events (approximately one year), Tacoma Power will pay THA an additional \$200.

### **No Warranties or Guarantees**

**Tacoma Power makes no implied or express warranties regarding the Water Heater Demand Response Project, any contractor, the water heaters, monitoring equipment or WIFI equipment and specifically disclaims any and all warranties including warranty of merchantability or fitness for a particular purpose.** Tacoma Power is a coordinator and sponsor of the Water Heater Demand Response Project only. Tacoma Power does not make any representations, promises, or guarantees with respect to the water heaters, energy consumption, and/or energy savings resulting from any installed equipment or water heating systems.

### **Hold Harmless / Indemnity**

THA agrees and acknowledges that Tacoma Power is not the manufacturer or installer of the water heaters or monitoring systems and THA agrees to hold Tacoma Power harmless from any damage, loss, personal injury, property damage, or demands arising from or related in any way from said water heaters, monitors, or related systems or the functioning and/or operation of said water heaters, monitors or related systems.

Tacoma Power shall indemnify, fully release, and hold harmless, THA, its officers, directors, and employees, from and against any all claims, demands, damages, or liability for personal injuries, property damage, or loss of life or property resulting from or in any way connected to the negligence of Tacoma Power and its employees or agents.

THA shall indemnify, fully release, and hold harmless, Tacoma Power, its officers, directors, and employees, from and against any and all claims, demands, damages, or liability for personal injuries, property damage, or loss of life or property resulting from or in any way connected to the negligence of THA and its employees or agents.

We request the concurrence by Tacoma Housing Authority by affixing the appropriate signature where indicated below. Thank you.

Sincerely,

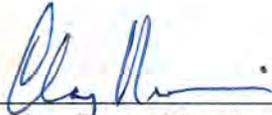

Clay Norris  
Tacoma Power – Power Manager

# EXHIBIT 80

Section 405 amends the G. I. bill of rights by adding to the readjustment allowance under title V, an additional weekly allowance of \$5 for each of not more than three dependents. Thus, the maximum weekly amount payable under Title V of the G. I. bill of rights would be \$35. Dependents would include unmarried children under 18 or children of any age if because of mental defects they are incapable of self-support, wives, and parents incapable of self-support and dependent on the veteran. The limitation on readjustment allowances of 52 weeks is changed to an amount, in any 2 consecutive years, equal to 52 times the weekly benefit.

Section 501 authorizes the Federal Works Administrator to make, from funds appropriated for that purpose, loans or advances to the States and their subdivisions, to aid in the making of investigations and studies, surveys, designs, plans, specifications, or the like preliminary to the construction of public works funds appropriated for this purpose are to be allotted, 90 percent in the proportion which the population of each State bears to the total population of all the States, and 10 percent in accordance with the discretion of the Federal Works Administrator, except that no State may be allotted less than one-half of 1 percent of the total available funds. Advances are to be repaid if and when the construction of the public works so planned is undertaken.

Section 601 contains definitions. Most of these are routine. The following are important:

A week of unemployment is any 7 consecutive calendar days in which a person has remuneration of less than \$3.

Dependents include unmarried children under 18 dependent on an individual, the wife of an individual dependent on him, and dependent parents incapable of self-support.

Employment means any service performed as a civilian after December 31, 1940, by an employee for his employer and includes civilian service outside of the United States for a United States war contractor by a person who was on September 16 a citizen of or resident in the United States. Governmental service and maritime service is also included. Excluded is service for a foreign government, domestic service, or service for a member of the person's family.

Weekly wages are defined as one-thirteenth of the wages in that quarter of the calendar year preceding the beginning of the benefit year in which wages were highest. This is the usual wage base under State compensation laws.

Section 602 authorizes the necessary appropriations.

Section 603 provides that the act except as otherwise specified becomes effective immediately and terminates 24 months after the termination of hostilities. Termination of hostilities means termination of hostilities of the wars in which the United States is now engaged as declared by a Presidential proclamation or concurrent resolution of the Congress.

Section 604 specifies that if any provision of the act is held invalid the remainder of the act is not to be affected.

Section 605 terminates the present Office of War Mobilization when the Director created by the act takes office, and transfers the records, property, and unexpended appropriations from the present Office of War Mobilization to the new Office of War Mobilization and Reconversion.

Section 606 continues the orders, policies, procedures, and directives prescribed by the present Director of War Mobilization until superseded by the new Director.

Section 607 specifies that no alien shall be employed in any capacity in the administration of this act unless he has served honorably in the armed forces of the United States.

Section 608 titles the act as the War Mobilization and Reconversion Act of 1944.

## Recognition of Italy as a Full and Equal Ally

### EXTENSION OF REMARKS

OF

## HON. VITO MARCANTONIO

OF NEW YORK

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 24, 1944

Mr. MARCANTONIO. Mr. Speaker, under leave to extend my remarks in the RECORD, I include herein a statement by Mr. Joseph Salerno, New England regional director of the C. I. O. Political Action Committee, in support of the recognition of Italy as a full and equal ally:

The working people of Italian descent in America urge our country's recognition of Italy as a full and equal ally among the United Nations for total victory against the evil forces of Hitler and Mussolini.

Full recognition would inspire and encourage millions of Italians to take their proper place among the foes of nezi-ism, fascism, and reaction. The present policy of hit-and-miss support has caused disillusionment and humiliation, which hamper the destruction of fascism, and give comfort and aid to our common enemy.

We believe that Italy's status should be made clear by the United Nations, so there can be a real start toward reconstruction. Are we or are we not friends of the Italian people? For 2 years they have shown their friendship for us.

We suggested that Mussolini should be kicked out. He was kicked out. We advised breaking relations with the Nazis. Relations were broken. We hoped Italian troops would fight with our troops against the Axis.

Not only the troops, but the Italian people at home have been fighting on our side. Long before our troops arrived, the anti-Fascists of Milan, Turin, Bari, Genoa and other industrial cities in the north of Italy were fighting in the streets against the Nazis and Fascists. They are our real friends. What are we waiting for?

The Italians have been in a no-man's land—not knowing whether they were considered friends or enemies by our country. First, the rate of exchange for the Italian lire has been set at 100 to the \$1. That makes the lire almost valueless. In contrast, the French franc was set at 50 francs to the \$1. Why this difference in treatment?

The low rate of exchange for Italy has resulted in skyrocketing prices, which the workers have to pay for food and other necessities of life. Inflation has brought on black markets, which are forcing the cost of food even higher. Food is a weapon during the period of reconstruction to wipe out the last vestiges of fascism.

Recognition will help the Italian people to do their full share in the war of liberation to free the soil of Italy from Nazi tyranny. It will be a source of inspiration and encouragement for the Italian people to fight harder against the common enemy, and thereby spare the lives of thousands of United Nations soldiers who are now fighting on Italian soil.

A resolution introduced to Congress by Congressman VITO MARCANTONIO is now before the Committee on Foreign Affairs, requesting the President to establish friendly diplomatic relations with Italy.

In his resolution Congressman MARCANTONIO points out that the President has pledged the Italian people the right to a free and democratic government of their own choosing. The present Bonomi Government is composed of anti-Fascist and democratic

forces, reflecting the will of the majority of the American people.

The resolution requests our President to recognize the present Italian Government and make Italy a full and equal ally, entitled to lend-lease and a proper role among the United Nations, as the means of releasing untold energies of both liberated and occupied areas of Italy, to give their fullest support to crushing the Axis.

Action is imperative. Delay works in favor of the enemies of democracy.

## Congressional Review of Regulations

### EXTENSION OF REMARKS

OF

## HON. ERRETT P. SCRIVNER

OF KANSAS

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 24, 1944

Mr. SCRIVNER. Mr. Speaker, pursuant to permission granted to extend my remarks in the RECORD, I wish to insert an editorial from the trans-Atlantic edition of the London Daily Mail, of August 9, 1944, apropos a subject which we debated in the House on August 17:

#### THE NEGATION OF DEMOCRACY

Somebody forgot to lay three groups of regulations relating to the N. F. S. before Parliament. So they were printed, issued, and brought into force.

As Mr. Herbert Morrison explained, it was all a mistake, and, of course, it is accepted as such. It may well be that no individual has suffered and no harm been done.

But here is a first-class illustration of the dangers of delegated legislation.

It shows how easy it is for the people to be shackled by new laws without anybody being the wiser.

In such conditions the civil servant becomes the lawmaker and the lawgiver, and there is no check upon him. This is the negation of democracy.

Delegated legislation is defended on the score that the minister may always be called to account. What does that amount to?

In this case Mr. Morrison takes nominal responsibility but it is passed to the department, which has had a shake-up.

## Tacoma and the Power Fight

### EXTENSION OF REMARKS

OF

## HON. HENRY M. JACKSON

OF WASHINGTON

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 24, 1944

Mr. JACKSON. Mr. Speaker, the following article by Senator HOMER T. BONE is an excellent history of the public power fight in the State of Washington. Senator BONE points out the invaluable aid rendered by my colleague, Congressman MAGNUSON, in this long struggle:

#### TACOMA AND THE POWER FIGHT

(By Senator HOMER T. BONE)

Up to 1906 Tacoma had for many years—in fact, practically from the beginning—in 1889 owned the city distribution system. It did not produce its own power, but bought power from the Baker outfit which had built and

owned the Snoqualmie Falls hydro development. Subsequently the Puget Sound Power & Light Co. bought out the Baker-Snoqualmie plant. For several years prior to 1908 there had been agitation in Tacoma for the city to build its own generating plant. Stone and Webster interests fought this proposal bitterly, and the two leading papers in the city of Tacoma, the News and the Ledger, owned by Sam Perkins, were the most bitter enemies of this proposal. George Wright had been mayor of Tacoma about this time and was very active in promoting the building of a municipal generating plant on the Nisqually River, about 35 miles east of Tacoma. Many prominent citizens joined with Mayor Wright in urging this. Some of these men were prominent in the Tacoma Chamber of Commerce, which was badly split on the issue. Tacoma had never given Stone and Webster interests a franchise to serve domestic customers in Tacoma, and the city at all times maintained a monopoly of the domestic and commercial power load, the latter covering store lighting and the like. The private company, however, did have a franchise to serve industrial customers within the city limits.

In 1926 a charter revision commission was elected by the people of Tacoma for the purpose of revising the city charter. I was elected to that commission, receiving many thousands more votes than anyone else who had been a candidate, and without objection was made chairman of the charter revision commission. Naturally, I made every effort to see that the revised (and present) city charter which was the outgrowth of the work of this commission, contained suitable provisions respecting franchises for private utilities. I wrote, and had incorporated into the new charter, a provision authorizing a referendum on any franchise which might be granted a private utility. Shortly after the adoption of this charter, by vote of the people, the franchise of Stone and Webster to serve industrial customers expired and the city council refused to renew it. At that time the private company was only serving something like 30 customers in the city, and it surrendered these to the city. I recall that one big mill, which had a 10-year power contract with the private company, cut over to the city lines about this time, and saved \$1,200 a month on its power bill, or \$14,400 per year. One of the officers of the company told me this was more than the taxes they paid on their big plant. So much for that angle.

Proponents of the idea of the city generating its own power were successful in having the issue presented to the people in the November election in 1908. When this issue was squarely presented to the people of Tacoma for their vote, the News and the Ledger opened fire on the proposal, which was supported by the Tacoma Times (Scripps). As a youngster, I participated in this fight, making many speeches which, fortunately, have not been preserved, since they were examples of immaturity which would not have been of much use to students of oratory. What they lacked in polish and persuasiveness, they probably made up in vigor. At that time I saved every statement appearing in the Tacoma papers, and I have enshrined these in huge scrap books.

One of the arguments was that if the city built the Nisqually, 32,000-horsepower plant, it would prove to be a white elephant and the city would be glad to sell it for 50 cents on the dollar in a few years. Every friend of the Nisqually project was assailed in the papers as an enemy of decency and good government, and it was the bitterness of the attack, and the unfairness of the arguments, that there and then tied me to the power fight. Many of the articles opposing the project assailed the patriotism of those promoting it. A great number of the men who were fighting for this little Nisqually plant

were sons of Union veterans, who had offered their lives in the struggle to preserve the Union, and it seemed to me a lousy and vicious argument to assail men of this type, especially since the arguments were in behalf of a private company whose only concern was to gouge all the profit it could out of the people. As a side light—and I would not care to be quoted on it, although you can make such use of it as you desire—you are free to call attention to the fact that I probably would never have been in the power fight if it had not been for these bitter and nasty arguments directed against the patriotism, honor, and decency of men who merely wanted to have Tacoma own its own generating system.

Tacoma built the little Nisqually plant and it was finished by 1912. Its transmission lines ran through the intervening countryside, which was dotted with many farms. These farmers figured they should have some of this cheap power that Tacoma was going to enjoy, so they came to the city council and said they wanted to form some farmer mutual power companies and build their own baby transmission lines to serve themselves, and asked for permission to put transformers on this high-tension line and to step down the current so it could be used on their farm systems. In 1911, 1 year before the Nisqually plant was finished, some of us went to the legislature of that year and secured the introduction of a bill which authorized cities owning their own power plants to sell surplus power outside their corporate limits. In the meantime, two or three communities of farmers south and east of Tacoma had organized cooperative mutual power companies, and they stood ready to buy power off the Tacoma heavy transmission lines. The Stone and Webster outfit, keenly aware of what this might mean, tried to block this bill in the legislature, but it passed.

The next session of the legislature, in 1913, witnessed a piece of manipulation which really started the State-wide power fight. A member of the house of representatives by the name of Heiny, a Tacoma lawyer, introduced a bill dealing with irrigation, and tucked away in this bill was a provision consisting of two lines which repealed a section of law, which happened to be the law allowing cities to sell surplus power outside. I talked with many members of the legislature subsequently to the passage of this irrigation act and found that all of them thought this repealer sentence had to do with irrigation law.

In the meantime, the former companies had organized, and were ready to do business, but when the Nisqually plant was finished, they found the right of Tacoma to sell off its transmission lines had been denied by repeal of the authorizing statute. Now the reason for this situation, in a legal sense, arose out of the fact that cities operate under express grants of law, and may not exercise any power unless it is specifically granted. In the absence of a specific grant of power to sell outside, the city attorney of Tacoma and the city council believed they could not lawfully put transformers on this Nisqually heavy-duty line and sell power off the line outside the corporate limits of Tacoma. So the former companies were compelled to bring their baby lines to the edge of the city limits under great expense and buy power within the corporate limits of Tacoma. It is interesting to note that at this time the private company was not serving this area at all, and would only agree to serve it in case the farmers were willing to pay up to 20 cents per kilowatt hour for current—an outrageous figure. The city of Tacoma was generous, and allowed at least one of these companies to put cross arms on the heavy transmission poles and string its wires underneath the heavy transmission cables to the city, so that it would bring its wires into the city

limits. The city, which bought material at wholesale, was willing to sell these farmer companies wire and hardware at wholesale to help them get started. Within a few years, 7 or 8 of these farmer mutual companies were organized and doing business within Pierce County, a record not duplicated anywhere in the United States. The latest of these companies, and probably the largest of them, was the Peninsula Light Co., operating on the Gig Harbor Peninsula. I organized this company and represented it for a number of years before coming to the Senate. It started business in 1925. The rates of these farm companies were fixed by mutual members at prices as low, and sometimes lower, than those prevailing in the city of Tacoma. Tacoma was proving herself to be a good neighbor to the farmers who were purchasing a lot of stuff in Tacoma.

The Stone & Webster outfit threatened to enjoin the city against selling to the Peninsula Light Co. at Gig Harbor for the reasons I have noted. I assured the representatives of the private company that I would welcome a suit of that kind, and that if they brought such a suit I intended to organize all the farmers in Pierce County and march them to Olympia in a great demonstration, to inquire of the State authorities as to who owned the State of Washington—its people, or a Boston corporation. The private company refrained from filing an injunction suit, and the city of Tacoma put in a transformer at Springfield and proceeded to sell to the Peninsula Light Co.

As I recall it, the first of the bills to again reinstate the provision of the 1911 act authorizing the sales outside was introduced in the legislature about 1915. It failed. Such a proposal again failed in 1917, in 1919, and in 1921. In 1923 I determined to make one real fight of it in the legislature, and so I filed for the legislature in what was known as the "silk stocking" district of Tacoma, and was elected by an enormous majority to the house. In the session of 1923, I introduced what was known as the "Bone bill," which authorized cities to sell surplus power outside their corporate limits. By this time, and after many speeches by me and others on the question of power, the public power forces were pretty well organized. J. D. Ross, Kenneth Harlan, a relative of the late Justice Harlan of the Supreme Court; J. C. Unger, Charles Heighton, Fred Chamberlain, and others too numerous to mention, all banded together to force the issue. The bill was whipped in the legislature. Dissatisfied with this, I rewrote the provisions of the bill and prepared an initiative measure (No. 52) on which we secured, as I recall, around 80,000 signatures. It went on the ballot and was the subject of a bitter political fight in the general election of 1924. The power companies, according to most careful observations, spent an estimated \$1,000,000 in the State fighting that bill.

In our State that became the era of the "canned editorial." All the power companies combined to fight the bill, and set up a propaganda bureau and prepared these canned editorials for the editors of weekly newspapers who were each given a full-page ad, which they could run at political rates, if they ran the editorial and the cartoon which accompanied it. I used a clipping service then, as I do now, and I recall clipping 100 editorials appearing on the same day in weekly newspapers, which were identical. Many editors told me personally that they had to eat regularly, and these full-page ads at political rates helped provide sustenance for the family of the editor and keep his youngsters in school.

The Bone bill was defeated by a 75,000 majority. In that campaign Charles Heighton accompanied me in a State-wide speaking tour with some very colorful experiences,

which I have described to you in my looser moments. Arthur Cross, prominent lawyer of Aberdeen, joined in the fight, and many more prominent Grangers in the State took part. It was this fight which lined up the Grange solidly behind public power—a position from which it has never retreated.

It is interesting to go back to the prophecy made about Tacoma's Nisqually plant. From 1914 on, Tacoma provided the cheapest light and power rates in the United States as a result of its venture into the generating business. Today it stands No. 1 in the Union.

Seattle faced this problem in the step-by-step building of the great Skagit enterprise. When that great development is finished, it will be one of the outstanding producers of the country. When these plants are paid off, they will be an enormous asset of incalculable value to the cities owning them. Tacoma has long since paid off all the bonds of the Nisqually plant, and it has been an enormous producer of revenue. It laid the financial foundation for the great Cushman development and the later development of the Nisqually River which will raise the capacity of that river to 90,000 kilowatts.

After the defeat in 1924, the public power forces did not abandon the fight, but continued it. My own personal contribution was to leave my law business in Tacoma in 1925-26 and in subsequent years, and go about the State at frequent intervals, making speeches on the power question in order to solidify public power sentiment. In 1932, when the Democrats carried the State, I decided the time had come to settle this issue, and so I rewrote the old Bone bill, and took it down to Olympia, in December of 1932. This time, and in light of the New Deal victory, I decided we should abandon the stupid subterfuge raised in the proposal to allow the sale of surplus power, and make sales of power outside a public use. Cities engaged in the power business are regarded by repeated decisions of our Supreme Court as enterprisers engaged in a private business. Since the legislature can give cities such powers as it pleases, it was my view that the legislature could authorize cities to engage in public business outside their corporate limits. This meant that if a city was exhausting its potential power, it could condemn other power sites on the basis that they were for a public use. Otherwise, they would sometime have had to cut off outside users who were merely getting surplus power.

This principle of law is well understood by any lawyer familiar with municipal corporation law. The fight in the legislature was handled by a few staunch friends of public power—in the house, largely by WARREN MAGNUSON, a young lawyer who later became prosecuting attorney of King County, and subsequently a Member of the Congress of the United States, now candidate for the post of United States Senator.

Nearly every friend of public power went to Olympia to support the then Bone bill in its new dress. With the aid of the friends of public power, this bill passed, and the power companies promptly got out a referendum on it and held up its execution until 1934, when the people adopted it by a large majority.

In the meantime, and in 1929, the Washington State Grange officials came to me and asked me to prepare a power bill which would authorize farm communities to go into the power business. Three lawyers joined in this effort, i. e., Jim Bradford, former corporation counsel of Seattle, a very brilliant and able lawyer, and a judge who subsequently became a member of the State public service commission. The three of us prepared this bill, now known as the Grange Power Law. It was submitted to the legislature in the 1929 session by an initiative to the legislature. The terms of this bill are too well known to require comment. The legislature refused to

pass it, and it went on the ballot in the general election of 1930 and was adopted and is now a law of the State. It was this bill which was amended by Paul Coughlin, Jack Cluck, Ed Henry, and others, into the form of a legal proposal now known as Referendum No. 25. Referendum No. 25 simply allows all utility districts to unite under certain conditions and acquire an entire power system.

In these early fights the Grange played a prominent part. Such old war horses as Fred Chamberlain, and the Nelson brothers, J. C. Unger, Kenneth Harlan, Arthur Cross, J. D. Ross, and many others participated. Senator Dill took part in the fight for the Bone bill in 1924, the Grange power fight of 1930, and the Bone bill fight of 1934. Senator Dill never backed away from any of these fights, but went headlong into them and the people of the State owe a debt of gratitude to him.

There was an organized body, small and determined, in Spokane, Walla Walla, and Yakima. "The Lady from Yakima"—Ina Williams, served in the legislature and poured her energies into these power fights up to the time of her unfortunate death. Ned Blythe, now postmaster at Vancouver, was another soldier. Cotterill of Kent led the fight in his section. The forces of public power were scattered, but determined. After 1932, the fight was out in the open, and many new faces and new forces have come into the picture. Public utility districts became a great factor and sent representatives to Washington to aid in securing passage of a northwest power bill, creating a new Columbia River Authority. You are familiar with the names of these energetic workers.

This, in brief, is a sketchy outline of the long power fight in the State of Washington. All the pioneers in this fight cannot be mentioned for lack of space and lapse of memory.

I helped to frame the first direct primary law of our State back in 1907. I also participated in drafting the initiative and referendum laws of the State, and in these operations Fred Chamberlain took an active part. In 1919 the progressives of the State organized what was known as the Triple Alliance, made up of railway brotherhoods, American Federation of Labor and the Grange. Lucy Case and others were very active. These pioneers laid the foundation of the democratic system of our State. Some day someone will write a history of this period. The Triple Alliance was created to bring organized political support to progressive candidates on all tickets. It was not a political party.

### No Alien Patents Sold

#### EXTENSION OF REMARKS

OF

### HON. JOHN J. COCHRAN

OF MISSOURI

IN THE HOUSE OF REPRESENTATIVES

Thursday, August 24, 1944

Mr. COCHRAN. Mr. Speaker, during the discussion of the surplus property bill, the gentleman from California [Mr. VOORHIS] offered an amendment concerning patents.

In the colloquy that followed I stated the Alien Property Custodian had already disposed of some of the patents and Mr. VOORHIS agreed he had. This morning I received a letter from the Chief of the Patents Division of the Office of the Alien Property Custodian. It shows both Mr. VOORHIS and myself were

wrong when we agreed some patents had been sold. The letter as well as part of the report referred to follows:

OFFICE OF ALIEN PROPERTY CUSTODIAN,  
Washington, August 23, 1944.

HON. JOHN J. COCHRAN,  
House of Representatives,  
Washington, D. C.

MY DEAR CONGRESSMAN: I noticed in the CONGRESSIONAL RECORD of August 22, 1944, on pages 7201 and 7202, a discussion between you and Mr. VOORHIS concerning disposition of patents by the Alien Property Custodian. I was particularly interested in your statement, with which Mr. VOORHIS agreed, that the Alien Property Custodian has "already sold a lot of patents."

I am enclosing a copy of the annual report of this Office for the period from March 11, 1942, to June 30, 1943. I call your attention particularly to the discussion of the disposition of patents beginning at the bottom of page 73 of this report and to the statement on page 74 that "no patents are sold." This was a statement of the policy of the Office of Alien Property Custodian at the time of the annual report, and it continues to be the policy of this Office. The present policy for administration of patents on a basis of licensing rather than sale by this Office was outlined in general terms shortly after the appointment of Leo T. Crowley as Custodian. On April 27, 1942, Mr. Crowley testified before the Senate Committee on Patents:

"In order to secure the maximum utilization of patents which may come into our possession, we propose to make them freely available to American industry. We cannot, at this time, state exactly the terms under which they will be available. . . . In general, however, no patents will be sold at this time." (Hearings before the Committee on Patents, U. S. Senate, 77th Cong., 2d sess., on S. 2803 and S. 2491.)

We have followed a policy of issuing non-exclusive licenses to American citizens under seized enemy patents, and have now licensed more than 8,000 patents for use by American industry. In every case, title to the patent is retained by the Custodian.

Up to this time, except in rare instances, the Custodian has not even sold the stock of corporations which hold patents. One corporation which we sold has a few patents. Another American company, of which we sold 50 percent of the stock, owned certain patents, which, however, were already exclusively licensed to the American owner of the other 50 percent of the stock. The only disposition of patents actually vested by the Alien Property Custodian has been the transfer to an American individual of certain patents formerly owned by French nationals which he had a valid and outstanding option to buy, and the purchase price of which he paid to the Custodian.

I am sure that your statement in the Record was based on a misunderstanding of the facts, and I wish to give you a correct statement.

Sincerely yours,

HOWLAND H. SARGEANT,  
Chief, Division of Patent Administration.

The treatment of patents by the Custodian differs markedly from the policies adopted with respect to other types of vested properties. The objectives to be accomplished, however, are the same. In the case of patents, as with other productive resources, the program adopted is designed to make the most effective utilization of these resources during the period of war and in the post-war economy within our system of private enterprise. The program is designed to bring into industrial use as quickly as possible those inventions and processes covered by vested patents and patent applications which

**Tacoma and the Power Fight**  

---

**EXTENSION OF REMARKS**  
**OF**  
**HON. HENRY M. JACKSON**  
**OF WASHINGTON**

**IN THE HOUSE OF REPRESENTATIVES**

*Thursday, August 24, 1944*

Mr. JACKSON. Mr. Speaker, the following article by Senator HOMER T. BONE is an excellent history of the public power fight in the State of Washington. Senator BONE points out the invaluable aid rendered by my colleague, Congressman MAGNUSON, in this long struggle:

**TACOMA AND THE POWER FIGHT**  
**(By Senator HOMER T. BONE)**

Up to 1908 Tacoma had for many years—in fact, practically from the beginning—in 1889 owned the city distribution system. It did not produce its own power, but bought power from the Baker outfit which had built and

owned the Snoqualmie Falls hydro development. Subsequently the Puget Sound Power & Light Co. bought out the Baker-Snoqualmie plant. For several years prior to 1908 there had been agitation in Tacoma for the city to build its own generating plant. Stone and Webster interests fought this proposal bitterly, and the two leading papers in the city of Tacoma, the News and the Ledger, owned by Sam Perkins, were the most bitter enemies of this proposal. George Wright had been mayor of Tacoma about this time and was very active in promoting the building of a municipal generating plant on the Nisqually River, about 35 miles east of Tacoma. Many prominent citizens joined with Mayor Wright in urging this. Some of these men were prominent in the Tacoma Chamber of Commerce, which was badly split on the issue. Tacoma had never given Stone and Webster interests a franchise to serve domestic customers in Tacoma, and the city at all times maintained a monopoly of the domestic and commercial power load, the latter covering store lighting and the like. The private company, however, did have a franchise to serve industrial customers within the city limits.

In 1926 a charter revision commission was elected by the people of Tacoma for the purpose of revising the city charter. I was elected to that commission, receiving many thousands more votes than anyone else who had been a candidate, and without objection was made chairman of the charter revision commission. Naturally, I made every effort to see that the revised (and present) city charter which was the outgrowth of the work of this commission, contained suitable provisions respecting franchises for private utilities. I wrote, and had incorporated into the new charter, a provision authorizing a referendum on any franchise which might be granted a private utility. Shortly after the adoption of this charter, by vote of the people, the franchise of Stone and Webster to serve industrial customers expired and the city council refused to renew it. At that time the private company was only serving something like 30 customers in the city, and it surrendered these to the city. I recall that one big mill, which had a 10-year power contract with the private company, cut over to the city lines about this time, and saved \$1,200 a month on its power bill, or \$14,400 per year. One of the officers of the company told me this was more than the taxes they paid on their big plant. So much for that angle.

Proponents of the idea of the city generating its own power were successful in having the issue presented to the people in the November election in 1908. When this issue was squarely presented to the people of Tacoma for their vote, the News and the Ledger opened fire on the proposal, which was supported by the Tacoma Times (Scripps). As a youngster, I participated in this fight, making many speeches which, fortunately, have not been preserved, since they were examples of immaturity which would not have been of much use to students of oratory. What they lacked in polish and persuasiveness, they probably made up in vigor. At that time I saved every statement appearing in the Tacoma papers, and I have enshrined these in huge scrap books.

One of the arguments was that if the city built the Nisqually, 32,000-horsepower plant, it would prove to be a white elephant and the city would be glad to sell it for 50 cents on the dollar in a few years. Every friend of the Nisqually project was assailed in the papers as an enemy of decency and good government, and it was the bitterness of the attack, and the unfairness of the arguments, that there and then tied me to the power fight. Many of the articles opposing the project assailed the patriotism of those promoting it. A great number of the men who were fighting for this little Nisqually plant were sons of Union veterans, who had offered their lives in the struggle to preserve the Union, and it seemed to me a lousy and vicious argument to assail men of this type, especially since the arguments were in behalf of a private company whose only concern was to gouge all the profit it could out of the people. As a side light—and I would not care to be quoted on it, although you can make such use of it as you desire—you are free to call attention to the fact that I probably would never have been in the power fight if it had not been for these bitter and nasty arguments directed against the patriotism, honor, and decency of men who merely wanted to have Tacoma own its own generating system.

Tacoma built the little Nisqually plant and it was finished by 1912. Its transmission lines ran through the intervening countryside, which was dotted with many farms. These farmers figured they should have some of this cheap power that Tacoma was going to enjoy, so they came to the city council and said they wanted to form some farmer mutual power companies and build their own baby transmission lines to serve themselves, and asked for permission to put transformers on this high-tension line and to step down the current so it could be used on their farm systems. In 1911, 1 year before the Nisqually plant was finished, some of us went to the legislature of that year and secured the introduction of a bill which authorized cities owning their own power plants to sell surplus power outside their corporate limits. In the meantime, two or three communities of farmers south and east of Tacoma had organized cooperative mutual power companies, and they stood ready to buy power off the Tacoma heavy transmission lines. The Stone and Webster outfit, keenly aware of what this might mean, tried to block this bill in the legislature, but it passed.

The next session of the legislature, in 1913, witnessed a piece of manipulation which really started the State-wide power fight. A member of the house of representatives by the name of Heinly, a Tacoma lawyer, introduced a bill dealing with irrigation, and tucked away in this bill was a provision consisting of two lines which repealed a section of law, which happened to be the law allowing cities to sell surplus power outside. I talked with many members of the legislature subsequently to the passage of this irrigation act and found that all of them thought this repealer sentence had to do with irrigation law.

In the meantime, the former companies had organized, and were ready to do business, but when the Nisqually plant was finished, they found the right of Tacoma to sell off its transmission lines had been denied by repeal of the authorizing statute. Now the reason for this situation, in a legal sense, arose out of the fact that cities operate under express grants of law, and may not exercise any power unless it is specifically granted. In the absence of a specific grant of power to sell outside, the city attorney of Tacoma and the city council believed they could not lawfully put transformers on this Nisqually heavy-duty line and sell power off the line outside the corporate limits of Tacoma. So the former companies were compelled to bring their baby lines to the edge of the city limits under great expense and buy power within the corporate limits of Tacoma. It is interesting to note that at this time the private company was not serving this area at all, and would only agree to serve it in case the farmers were willing to pay up to 20 cents per kilowatt hour for current—an outrageous figure. The city of Tacoma was generous, and allowed at least one of these companies to put cross arms on the heavy transmission poles and string its wires underneath the heavy transmission cables to the city, so that it would bring its wires into the city

limits. The city, which bought material at wholesale, was willing to sell these farmer companies wire and hardware at wholesale to help them get started. Within a few years, 7 or 8 of these farmer mutual companies were organized and doing business within Pierce County, a record not duplicated anywhere in the United States. The latest of these companies, and probably the largest of them, was the Peninsula Light Co., operating on the Gig Harbor Peninsula. I organized this company and represented it for a number of years before coming to the Senate. It started business in 1925. The rates of these farm companies were fixed by mutual members at prices as low, and sometimes lower, than those prevailing in the city of Tacoma. Tacoma was proving herself to be a good neighbor to the farmers who were purchasing a lot of stuff in Tacoma.

The Stone & Webster outfit threatened to enjoin the city against selling to the Peninsula Light Co. at Gig Harbor for the reasons I have noted. I assured the representatives of the private company that I would welcome a suit of that kind, and that if they brought such a suit I intended to organize all the farmers in Pierce County and march them to Olympia in a great demonstration, to inquire of the State authorities as to who owned the State of Washington—its people, or a Boston corporation. The private company refrained from filing an injunction suit, and the city of Tacoma put in a transformer at Springfield and proceeded to sell to the Peninsula Light Co.

As I recall it, the first of the bills to again reinstate the provision of the 1911 act authorizing the sales outside was introduced in the legislature about 1915. It failed. Such a proposal again failed in 1917, in 1919, and in 1921. In 1923 I determined to make one real fight of it in the legislature, and so I filed for the legislature in what was known as the "silk stocking" district of Tacoma, and was elected by an enormous majority to the house. In the session of 1923, I introduced what was known as the "Bone bill," which authorized cities to sell surplus power outside their corporate limits. By this time, and after many speeches by me and others on the question of power, the public power forces were pretty well organized. J. D. Ross, Kenneth Harlan, a relative of the late Justice Harlan of the Supreme Court; J. C. Unger, Charles Heighton, Fred Chamberlain, and others too numerous to mention, all banded together to force the issue. The bill was whipped in the legislature. Dissatisfied with this, I rewrote the provisions of the bill and prepared an initiative measure (No. 52) on which we secured, as I recall, around 80,000 signatures. It went on the ballot and was the subject of a bitter political fight in the general election of 1924. The power companies, according to most careful observations, spent an estimated \$1,000,000 in the State fighting that bill.

In our State that became the era of the "canned editorial." All the power companies combined to fight the bill, and set up a propaganda bureau and prepared these canned editorials for the editors of weekly newspapers who were each given a full-page ad, which they could run at political rates, if they ran the editorial and the cartoon which accompanied it. I used a clipping service then, as I do now, and I recall clipping 100 editorials appearing on the same day in weekly newspapers, which were identical. Many editors told me personally that they had to eat regularly, and these full-page ads at political rates helped provide sustenance for the family of the editor and keep his youngsters in school.

The Bone bill was defeated by a 75,000 majority. In that campaign Charles Heighton accompanied me in a State-wide speaking tour with some very colorful experiences,

which I have described to you in my looser moments. Arthur Cross, prominent lawyer of Aberdeen, joined in the fight, and many more prominent Grangers in the State took part. It was this fight which lined up the Grange solidly behind public power—a position from which it has never retreated.

It is interesting to go back to the prophecy made about Tacoma's Nisqually plant. From 1914 on, Tacoma provided the cheapest light and power rates in the United States as a result of its venture into the generating business. Today it stands No. 1 in the Union.

Seattle faced this problem in the step-by-step building of the great Skagit enterprise. When that great development is finished, it will be one of the outstanding producers of the country. When these plants are paid off, they will be an enormous asset of incalculable value to the cities owning them. Tacoma has long since paid off all the bonds of the Nisqually plant, and it has been an enormous producer of revenue. It laid the financial foundation for the great Cushman development and the later development of the Nisqually River which will raise the capacity of that river to 90,000 kilowatts.

After the defeat in 1924, the public power forces did not abandon the fight, but continued it. My own personal contribution was to leave my law business in Tacoma in 1925-26 and in subsequent years, and go about the State at frequent intervals, making speeches on the power question in order to solidify public power sentiment. In 1932, when the Democrats carried the State, I decided the time had come to settle this issue, and so I rewrote the old Bone bill, and took it down to Olympia, in December of 1932. This time, and in light of the New Deal victory, I decided we should abandon the stupid subterfuge raised in the proposal to allow the sale of surplus power, and make sales of power outside a public use. Cities engaged in the power business are regarded by repeated decisions of our Supreme Court as enterprisers engaged in a private business. Since the legislature can give cities such powers as it pleases, it was my view that the legislature could authorize cities to engage in public business outside their corporate limits. This meant that if a city was exhausting its potential power, it could condemn other power sites on the basis that they were for a public use. Otherwise, they would sometime have had to cut off outside users who were merely getting surplus power.

This principle of law is well understood by any lawyer familiar with municipal corporation law. The fight in the legislature was handled by a few staunch friends of public power—in the house, largely by WARREN MAGNUSON, a young lawyer who later became prosecuting attorney of King County, and subsequently a Member of the Congress of the United States, now candidate for the post of United States Senator.

Nearly every friend of public power went to Olympia to support the then Bone bill in its new dress. With the aid of the friends of public power, this bill passed, and the power companies promptly got out a referendum on it and held up its execution until 1934, when the people adopted it by a large majority.

In the meantime, and in 1929, the Washington State Grange officials came to me and asked me to prepare a power bill which would authorize farm communities to go into the power business. Three lawyers joined in this effort, i. e., Jim Bradford, former corporation counsel of Seattle, a very brilliant and able lawyer, and a judge who subsequently became a member of the State public service commission. The three of us prepared this

bill, now known as the Grange Power Law. It was submitted to the legislature in the 1929 session by an initiative to the legislature. The terms of this bill are too well known to require comment. The legislature refused to

pass it, and it went on the ballot in the general election of 1930 and was adopted and is now a law of the State. It was this bill which was amended by Paul Coughlin, Jack Cluck, Ed Henry, and others, into the form of a legal proposal now known as Referendum No. 25. Referendum No. 25 simply allows all utility districts to unite under certain conditions and acquire an entire power system.

In these early fights the Grange played a prominent part. Such old war horses as Fred Chamberlain, and the Nelson brothers, J. C. Unger, Kenneth Harlan, Arthur Cross, J. D. Ross, and many others participated. Senator Dill took part in the fight for the Bone bill in 1924, the Grange power fight of 1930, and the Bone bill fight of 1934. Senator Dill never backed away from any of these fights, but went headlong into them and the people of the State owe a debt of gratitude to him.

There was an organized body, small and determined, in Spokane, Walla Walla, and Yakima. "The Lady from Yakima"—Ina Williams, served in the legislature and poured her energies into these power fights up to the time of her unfortunate death. Ned Blythe, now postmaster at Vancouver, was another soldier. Cotterill of Kent led the fight in his section. The forces of public power were scattered, but determined. After 1932, the fight was out in the open, and many new faces and new forces have come into the picture. Public utility districts became a great factor and sent representatives to Washington to aid in securing passage of a northwest power bill, creating a new Columbia River Authority. You are familiar with the names of these energetic workers.

THE NAMES OF THESE PIONEERS WERE  
This, in brief, is a sketchy outline of the long power fight in the State of Washington. All the pioneers in this fight cannot be mentioned for lack of space and lapse of memory.

I helped to frame the first direct primary law of our State back in 1907. I also participated in drafting the initiative and referendum laws of the State, and in these operations Fred Chamberlain took an active part. In 1919 the progressives of the State organized what was known as the Triple Alliance, made up of railway brotherhoods, American Federation of Labor and the Grange. Lucy Case and others were very active. These pioneers laid the foundation of the democratic system of our State. Some day someone will write a history of this period. The Triple Alliance was created to bring organized political support to progressive candidates on all tickets. It was not a political party.

# EXHIBIT 80 (a)

Thorne interview.

July 1, 1926, about 10 A. M. Thorne called me up and asked me to come down to his office to have a talk with him. I went down and he said he wanted to talk over a matter that was not exactly political. That he was "wondering" if some way not be arrived at whereby this power fight might not be "adjusted" ( so to speak) by coming to an agreement with the power people relative to future fights. That they did not want to have this battle go on all the time. That he was interested in my future--wanted me to achieve success in a financial way---that the future was in my hands to help myself---that I was the outstanding man in the public ownership fight--that I was the leader so to speak of the public ownership movement in the state and that if I would take the initiative in suggesting some sort of a movement to stop the fight all would be well. Did not say that I could make a piece of money but hinted at it in a vague sort of way--said that he was not suggesting that I take money to quit, but that (intimation) I could make connections that would be profitable for me. Asked if I would "meet" with the power people and have a conference with them. Asked who I would be willing to meet and talk things over with. I told him that I knew Brockett better than any of them--that I was personally fond of Brockett and would be willing to "talk to him". I asked him if he was aware that Aberdeen had just voted two million for a power plant and he said he was not. I told him that it was formerly the law that cities could sell power outside and that when I introduced the Bone bill in the legislature the power people had yelled as tho I had introduced a bill to make women common property. That they yelled "Bolshevism" and that I resented this howl about what appeared eminently fair to me. He said that he could not discuss the merits of the matter but wanted me to talk over things as he had suggested that I do with Pierce/during the power fight in 1924. That no fight was on now and that I did not betray anyone now. I mentioned Gig Harbor and asked him if they intended to enjoin the city and that I intended to go into another fight if they did. He did not know anything about this phase of the situation. (NOTE---I refused to talk to Pierce during the 1924 fight altho Thorne asked me to do it--told him I could not talk to the power people when I was fighting them)

I left Thorne's office with the agreement that I would "talk" to Brockett. I think that I "got his goat" in a way by saying that I would keep sealed lips as to what was said in this conference. He came back bu saying that it was not a case of "sealed lips" but "just a business mat ter". Did not seem to like my suggestion dou tless because it implied a disposition on my part to regard it as a case of trying to "pull me off" by possible bribery.

The power crowd are BADLY frightened. They would not keep at Thorne (knowing my regard for the man) unless the situation was dark for them. The Aberdeen fight evidently has "put the fat into the fire" and something must be done to stem this tide toward public ownership. This is the background of this matter. It follows <sup>closely</sup> on my interview with Mayor Tennant and other councilmen ---Walters, Silver, Davisson, et al, relative to the Gig Harbor situation and my threat to start another power fight.

What shall I do? Shall I "see" Brockett and listen to another proposal to accept money and quit the fight. Of what avail--all this struggle to achieve the thing nearest my heart--the winning of the battle for the people---if I quit now. Their offer of \$7500 in the street car matter was an insult. How cheap they think men are. The S.O.B's. I ~~if~~ <sup>mistrust</sup> Tennant and Walters. The scum. God give me strength to carry on. I would rather put over this power fight than be Governor.

The Gig Harbor mess is a hard nut for them. Dam them. They have met up with a different situation than enjoining Ross at Renton. The Gig Harbor fight means another million for them to spend. Dam them. How can Justice win with this gang in the saddle?

---

*7/3/26 - Thorne phoned this morning - Brockett will be here in about a week and will see me.*

IN SUPPORT OF PLAINTIFF'  
ANDERSON'S MOTION FOR  
PARTIAL SUMMARY JUDGMENT -  
PART THREE**

THOMAS McCARTHY and CHRISTOPHER  
T. ANDERSON,  
Plaintiffs,

v.

CITY OF TACOMA,  
Defendant.

**EXHIBIT 80 (b)**

Tuesday July 13th, 1926

During the morning Norwood Brockett called over the long distance and told me that he would come over and asked what hour would best suit. I told him of the Port Com meeting at 2 P.M. and arranged for him to call after or about 4 P. M. When I came back about 4 or 4.30 P. M. he was waiting. Went into private office and sat down and started to talk to me. Began by saying that I had said to him in former interview (at Tacoma Hotel) that if he ever had any work that did not require me to quit my fight for public ownership etc., I would be glad to take it on. " Now I have a piece of work that I want you to do that is not connected with your fight and will not tie your hands" "I want a man to help me with my "public relations" work---to get about the state and find out the people hate Stone Webster and also to look after some bus work. There is a reason why we are disliked and I want to know why. You can help. I would want the greater portion of your time at a good salary. I know that you are making money and that we must pay well. " Etc.,

After palavering around I told him that I could not take on such work---that it would forever tie my hands and make me shut my mouth. He said that no one would know it. I told him that ~~he would~~ he would recall the Bellingham story about Bone being "found out" by the electricians as having worked for Stone Webster. He said that this made him mad---that the old man (Lenard) did not send it out but knew of its going out to be used at Bellingham by Lebel and others. That Lebel went to Seifert with the story and Seifert run it. I told him that this made me mad as hell---that I could be ~~disbarred~~ ~~disbarred~~ for revealing my clients secrets and that he could not expect me to put my head into another noose. That when I was done I would be DONE and not have anything to say..

The Gig Harbor matter came up. Wanted to know if his outfit would sell at wholesale if that would satisfy me. I told him I did not care how the people over there got their current so long as they distributed it themselves. He suggested that they buy these lines. I did not ~~warm~~ warm up on this matter save to tell him that this was the last place Tacoma could serve and that they were taking on a fight over a small matter---that the cost of another fight would offset the profits from Gig Harbor a thousand years. He admitted this but talked of "principle". I asked him

if he thought that this "principle" was a complete monopoly for the power companies. He said he believed in "competition" and I asked him how this was to be obtained if there was none. When he left, he agreed to see me in a few days and tell me of the determination on the Gig Harbor situation. Don't want another power fight in the legislature. Asked who the people disliked. I told him of being at a meeting of a number of prominent men where Doran and Whiting and Aston were discussed. He asked if "poor old Wooding was criticised". Told him that I would hesitate to tell what was said about Doran--that it was too hot to tell to a gentlemen. That Aston was also regarded as a fixer and regarded with contempt. That he was regarded as a mighty smooth piece of legal machinery.

(I hope to God I have spiked Doran's gun and get him fired). I told him that Doran was universally despised by most men with whom I came in contact--that he was a drawback to the company.

Brockett started out his conversation by telling me that I was the "uncrowned King of the municipal ownership forces---of the enemies of Stone Webster". That something ought to be done and it seemed to him that it could be done, to end this warfare and get "together" on some common ground. That <sup>there</sup> ~~was~~ was "room for both the cities and the private companies". He asked me if I did not believe that there was room for both ---that there should be competition. I admitted that I believed in competition. But I told him that his people were ~~being~~ trying to kill off all competition. And this was what sent me on the warpath.

He said that if there was another power fight he would never hire a job lot of men like in the last one. He mentioned the Benidetti incident as nearly getting him into trouble and the class of men hired as willing to do anything. I asked him if Beeler was with him and he said "no". I told him that I thought that Beeler had "gone over" to him in that fight. Admitted that Beneditt was his man. Said the ~~best~~ <sup>only</sup> thing he regretted was his speech about my radicalism and the story about my having been their attorney. I asked him how he expected me to ever do any work for them with the experience of the Bellingham story from Leonard's office staring me in the face. That would kill any chance of my ever having anything to do with them again. Seemed to get under his hide. It was their mistake.

**EXHIBIT 80 (c)**

Sunday June 13, 1926

At home in the afternoon about 2:30 P.M. George ~~K~~ Vanderveer called me over the phone- -wanted to come out to "talk over a matter of business" with me. Blanche and Manny at Mort Millers where I afterward went for dinner about 3:30 P. M.

Vanderveer came out alone. Said he was attempting to sell the TR&P to city for a price (bed-rock) of \$3,600,000----that it had a rate value of \$6,700,000. Was willing to cut his commission one third- with me----another man in on it. Also that I would be "taken care of on the side to a still greater extent. Wanted me to express myself then on the matter but was willing that I should "mull it over in my mind" and let him know later on. I to help put the sale over. I told him that I would "think it over" and he asked me( right at the outset) to keep it in strict confidence, which I agreed to do.

Wanted me to come out and see Sullivan (Dick) as he called him- Harvard man-- Irishman- - quite a philosopher, he said. I told him I had a dinner engagement and could not go then but would see him later.

# EXHIBIT 81

respective governing bodies of any such city or town and of any such public utility district desiring to cooperate in the joint ownership, maintenance and operation of electric utility properties pursuant to the authority contained in RCW 35.92.280 through 35.92.310, shall by mutual agreement provide for such joint ownership, maintenance and operation. Such agreement shall prescribe the rights and property interest which the parties thereto shall have in such electric utility properties, which property interest may be either divided or undivided and shall further provide for the rights of the parties thereto in the ownership and disposition of the power and energy produced by such electric utility properties, and for the operation and management thereof.

**35.92.300** ————**Financing.** Any city or town and any public utility district cooperating under the provisions of RCW 35.92.280 through 35.92.310 may, without an election or other proceedings under any existing law, contribute money and property, both real and personal, to any joint undertaking pursuant hereto, and may issue and sell revenue bonds to pay its respective share of the costs of acquisition and construction of such electric utility properties. Such bonds shall be issued under the provisions of applicable laws authorizing the issuance of revenue bonds for the acquisition and construction of electric public utility properties by cities, towns and public utility districts, as the case may be.

**35.92.310** ————**Authority granted is additional power.** The authority and power granted by RCW 35.92.280 through 35.92.310 is an additional grant of power to cities, towns, and public utility districts to acquire and operate electric public utilities, and the provisions hereof shall be construed liberally to effectuate the authority herein conferred, and no restriction or limitation prescribed in any other law shall prohibit the cities, towns and public utility districts of this state from exercising the authority herein conferred: *Provided*, That nothing in RCW 35.92.280 through 35.92.310 shall authorize any public utility district or city cooperating under the provisions of RCW 35.92.280 through 35.92.310 to condemn any property owned or operated by any privately owned utility.

## Chapter 35.94

### SALE OR LEASE OF MUNICIPAL UTILITIES

**35.94.010** **Authority to sell or let.** A city may lease for any term of years or sell and convey any public utility works, plant, or system owned by it or any part thereof, together with all or any equipment and appurtenances thereof.

**35.94.020 Procedure.** The legislative authority of the city, if it deems it advisable to lease or sell such works, plant, or system, or any part thereof, shall adopt a resolution stating whether it desires to lease or sell. If it desires to lease, the resolution shall state the general terms and conditions of the lease, but not the rent. If it desires to sell the general terms of sale shall be stated but not the price. The resolution shall direct the city clerk, or other proper official, to publish the resolution not less than once a week for four weeks in the official newspaper of the city if there is one, or if not, then in any newspaper published in the city, or if there is none, then in any newspaper published in the county in which the city is located, together with a notice calling for sealed bids to be filed with the clerk or other proper official not later than a certain time, accompanied by a certified check payable to the order of the city, for such amount as the resolution shall require, or a deposit of a like sum in money. Each bid shall state that the bidder agrees that if his bid is accepted and he fails to comply therewith within the time hereinafter specified, the check or deposit shall be forfeited to the city. If bids for a lease are called for, bidders shall bid the amount to be paid as the rent for each year of the term of the lease. If bids for a sale are called for, the bids shall state the price offered. The legislative authority of the city may reject any or all bids and accept any bid which it deems best. At the first meeting of the legislative authority of the city held after the expiration of the time fixed for receiving bids, or at some later meeting, the bids shall be considered. In order for such legislative authority to declare it advisable to accept any bid it shall be necessary for two-thirds of all the members elected to such legislative authority to vote in favor of a resolution making the declaration. If the resolution is adopted it shall be necessary, in order that such bid be accepted, to enact an ordinance accepting it and directing the execution of a lease or conveyance by the mayor and city clerk or other proper official. Such ordinance shall not take effect until it has been submitted to the voters of the city for their approval or rejection at the next general election or at a special election called for that purpose, and a majority of the voters voting thereon have approved it. If approved it shall take effect as soon as the result of the vote is proclaimed by the mayor. If it is so submitted and fails of approval, it shall be rejected and annulled. The mayor shall proclaim the vote as soon as it is properly certified.

**35.94.030 Execution of lease or conveyance.** Upon the taking effect of the ordinance the mayor and the city clerk or other proper official shall execute, in the name and on behalf of the city, the lease or conveyance directed thereby. The lessee or grantee shall accept and execute the instrument within ten days after notice of

its execution by the city or forfeit to the city, the amount of the check or deposit accompanying his bid: *Provided*, That if litigation in good faith is instituted within ten days to determine the rights of the parties, no forfeiture shall take place unless the lessee or grantee fails for five days after the termination of the litigation in favor of the city to accept and execute the lease or conveyance.

## Chapter 35.98

### CONSTRUCTION

**35.98.010 Continuation of existing law.** The provisions of this title insofar as they are substantially the same as statutory provisions repealed by this chapter, and relating to the same subject matter, shall be construed as restatements and continuations, and not as new enactments.

**35.98.020 Title, chapter, section headings not part of law.** Title headings, chapter headings, and section or subsection headings, as used in this title do not constitute any part of the law.

**35.98.030 Invalidity of part of title not to affect remainder.** If any provision, section, or chapter of this title or its application to any person or circumstance is held invalid, the remainder of the provision, section, chapter, or title, or the application thereof to other persons or circumstances is not affected.

**35.98.040 Repeals and saving.** The following acts or parts of acts are repealed:

- (1) Chapter 56, Laws of 1963;
- (2) Chapter 57, Laws of 1963;
- (3) Chapter 72, Laws of 1963;
- (4) Chapter 115, Laws of 1963;
- (5) Chapter 119, Laws of 1963;
- (6) Section 1, chapter 127, Laws of 1963;
- (7) Chapter 130, Laws of 1963;
- (8) Chapter 131, Laws of 1963;
- (9) Chapter 155, Laws of 1963;
- (10) Chapter 170, Laws of 1963;
- (11) Chapter 184, Laws of 1963;
- (12) Chapter 191, Laws of 1963;
- (13) Sections 12, 13, 14, 15, and 16, chapter 200, Laws of 1963;
- (14) Chapter 222, Laws of 1963;
- (15) Chapter 231, Laws of 1963;
- (16) Chapter 33, Laws of 1961;
- (17) Chapter 46, Laws of 1961;
- (18) Chapter 51, Laws of 1961;

Exceptions.

Limited to  
one motion.

making the affidavit has been given notice, and before the Judge presiding has made any order or ruling involving discretion, but the arrangement of the calendar, the setting of an action, motion or proceeding down for hearing or trial, the arraignment of the accused in a criminal action or the fixing of bail, shall not be construed as a ruling or order involving discretion within the meaning of this proviso; and in any event, in counties where there is but one resident Judge, such motion and affidavit shall be filed not later than the day on which the case is called to be set for trial: *And provided further*, That notwithstanding the filing of such motion and affidavit, if the parties shall, by stipulation in writing agree, such Judge may hear argument and rule upon any preliminary motions, demurrers, or other matter thereafter presented: *And provided, further*, That no party or attorney shall be permitted to make more than one such application in any action or proceeding under this act.

Passed the House March 12, 1941.

Passed the Senate March 12, 1941.

Approved by the Governor March 21, 1941.

---

## CHAPTER 149.

[H. B. 205.]

### CODE COMMITTEE.

AN ACT to make uniform and perpetual the citations of laws of this state for all compilations and codifications thereof and declaring an emergency.

*Be it enacted by the Legislature of the State of Washington:*

Code Com-  
mittee  
created.

SECTION 1. The State Law Librarian, the Law Librarian of the University of Washington, and the Executive Secretary of the Judicial Council are

hereby created a Committee to perform the duties prescribed in this act.

SEC. 2. The said Committee shall, after collaboration with the publishers of the existing codes, determine upon and adopt a complete recompilation of the laws of this state in force of a general and permanent nature, and shall adopt a uniform and perpetual system for the numbering of the sections thereof.

Duties.

To compile uniform system.

SEC. 3. Hereafter the Secretary of State shall certify only the codes or compilations published with the section numbering adopted by the Committee.

Certificate of Secretary of State.

The code or codes, when so certified by the Secretary of State, shall be deemed and held to be official, as heretofore, and shall be prima facie evidence of the laws contained therein.

SEC. 4. The Legislature shall amend or repeal laws by code numbers. Laws amended shall refer to code numbers, and germane matter shall be incorporated in existing laws to prevent conflict and obey constitutional mandate.

Repeals and amendments by number.

SEC. 5. This act is necessary for the immediate preservation of the public peace, health and safety and the support of the state government and its existing public institutions and shall take effect immediately.

Effective immediately.

Passed the House February 13, 1941.

Passed the Senate March 5, 1941.

Approved by the Governor March 21, 1941.

Treasurer  
to handle  
funds.

of the County Treasurer of the county in which any Rural County Library District is created under this act to receive and disburse all district revenues and to collect all taxes levied under this act.

Public  
corporation.

A rural County Library District shall be a public corporation with such powers as are necessary to carry out its functions and for taxation purposes shall have the power vested in municipal corporations for such purposes.

Effective  
immediately.

SEC. 2. This act is necessary for the immediate support of the state government and the existing public institutions of the state and shall take effect immediately.

Passed the House February 27, 1943.

Passed the Senate March 9, 1943.

Approved by the Governor March 22, 1943.

---

## CHAPTER 252.

[ S. B. 47. ]

### CODIFICATION OF STATUTES RELATING TO COUNTIES.

AN ACT relating to the codification of constitutional and statutory provisions relating to counties and county officers, and to the statutory law of the state in general; providing for the continuous revision and codification of statutes of a general and permanent nature; amending section 5, chapter 149, Laws of 1941; and further amending chapter 149, Laws of 1941 (sections 152-36 to 152-39, Rem. Supp. 1941), by adding thereto three (3) new sections to be known as sections 6, 7 and 8; making appropriation and declaring an emergency.

*Be it enacted by the Legislature of the State of Washington:*

Amendments.

SECTION 1. Section 5, chapter 149, Laws of 1941, is amended to read as follows:

Continuing  
committee.

Section 5. The Committee shall be a continuing Code Committee with full power of revision and codification of the laws above referred to, and shall

have the power and duty to assign code numbers to such general laws as shall hereafter be passed at any legislative session; and the said Committee shall certify to the Secretary of State the numbers given to the sections which the Committee has determined shall be incorporated in such code.

Assign code numbers.

SEC. 2. Chapter 149, Laws of 1941 (sections 152-36 to 152-39, Rem. Supp. 1941), is amended by adding thereto a new section to be known as section 6 and to read as follows:

Amendments.

Section 6. The said Committee shall have authority to employ and fix the compensation of an experienced attorney to make continuous studies of the statutes for the purpose of revising and simplifying the same, reconciling conflicting provisions, and eliminating obsolete statutes. The Committee shall also have authority to provide adequate clerical assistance and supplies, and to incur expenses incident to the work of said Committee. The duties to be performed under this paragraph shall be subject to the direction and supervision of the Committee. All vouchers for payments or expenditures of the Committee of every kind shall be approved by the Committee or by such member or members thereof as the Committee shall designate.

Committee to employ attorney.

Clerks and supplies.

Approve vouchers.

SEC. 3. Chapter 149, Laws of 1941 (sections 152-36 to 152-39, Rem. Supp. 1941), is amended by adding thereto a new section to be known as section 7 and to read as follows:

Amendments.

Section 7. The Committee shall not adopt any numbering system unless the owner thereof, whether the said system be patented or otherwise, shall first have filed in the office of the Secretary of State a written agreement, running to the State of Washington, and enforceable by any interested person, to the effect that said numbering system, if adopted, shall be available to, and may be used without charge or compensation, by any person who may at any

Agreement for free use.

time hereafter elect to publish the laws of this state, either in whole or in part.

Amendment  
by adding  
new section.

SEC. 4. Chapter 149, Laws of 1941 (sections 152-36 to 152-39, Rem. Supp. 1941), is amended by adding thereto a new section to be known as section 8 and to read as follows:

Collaboration  
by request.

Section 8. If requested by the Committee, any department or official of the government of the State of Washington shall collaborate with the Committee in the revision and recompilation of the laws relating to or affecting such department official.

Collaborate  
on county  
code.

SEC. 5. The said Committee as part of its activities in collaboration with a committee of county officials (to be appointed by the Governor for that purpose, the number of which shall be at the discretion of the Governor, and the services of whom on such Committee are hereby declared to be official county business) shall cause to be prepared a compilation of all the constitutional and statutory provisions with respect to counties and county officers together with recommendations as to any revisions, amendments and additions which in the judgment of the Committee should be made to existing statutory provisions with respect to counties and county officers. Said constitutional provisions together with the statutory provisions in substance and form as recommended by said Committee shall be submitted to the 1945 legislature in such form that the legislature upon adoption thereof may cause the same to be printed in pamphlet form for the use of various county officials.

Appropriation.

SEC. 6. There is hereby appropriated out of any money in the general fund not otherwise appropriated the sum of forty thousand dollars (\$40,000) or so much thereof as may be necessary, to be used in carrying out the provisions of this act.

Effective  
immediately.

SEC. 7. This act is necessary for the immediate preservation of the public peace, health and safety, and the support of the state government and its ex-

## CHAPTER 233.

[ H. B. 276. ]

## CODE COMMISSION.

AN ACT relating to the compilation and codification of the statutory laws of the state, amending section 5, chapter 149, Laws of 1941, as amended by section 1, chapter 252, Laws of 1943, amending section 5, chapter 252, Laws of 1943, making an appropriation, and declaring an emergency.

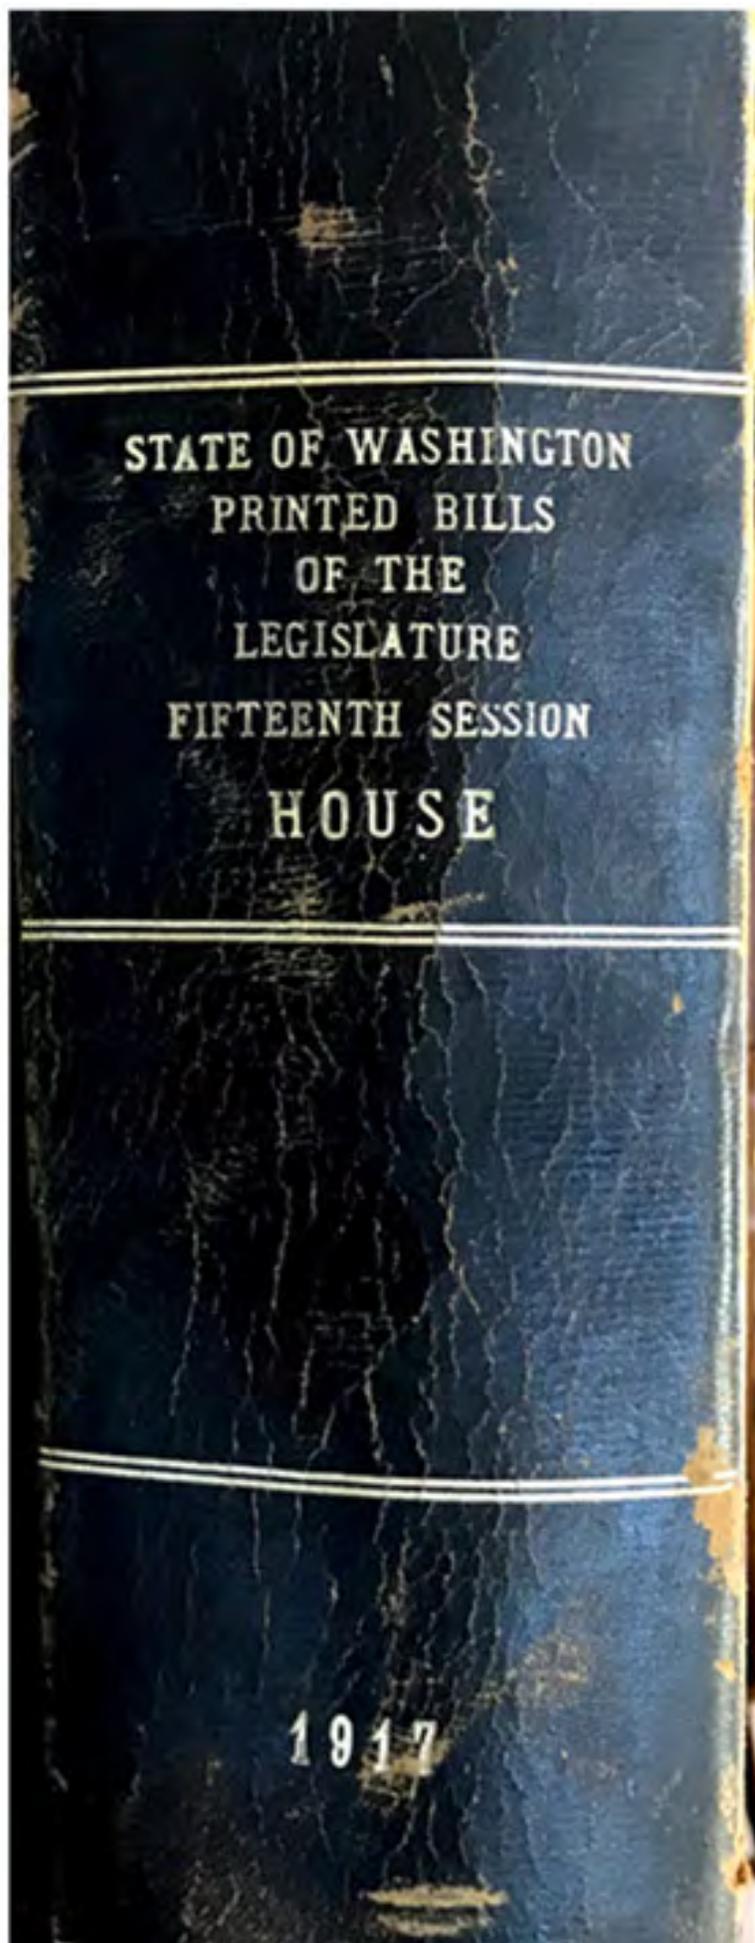

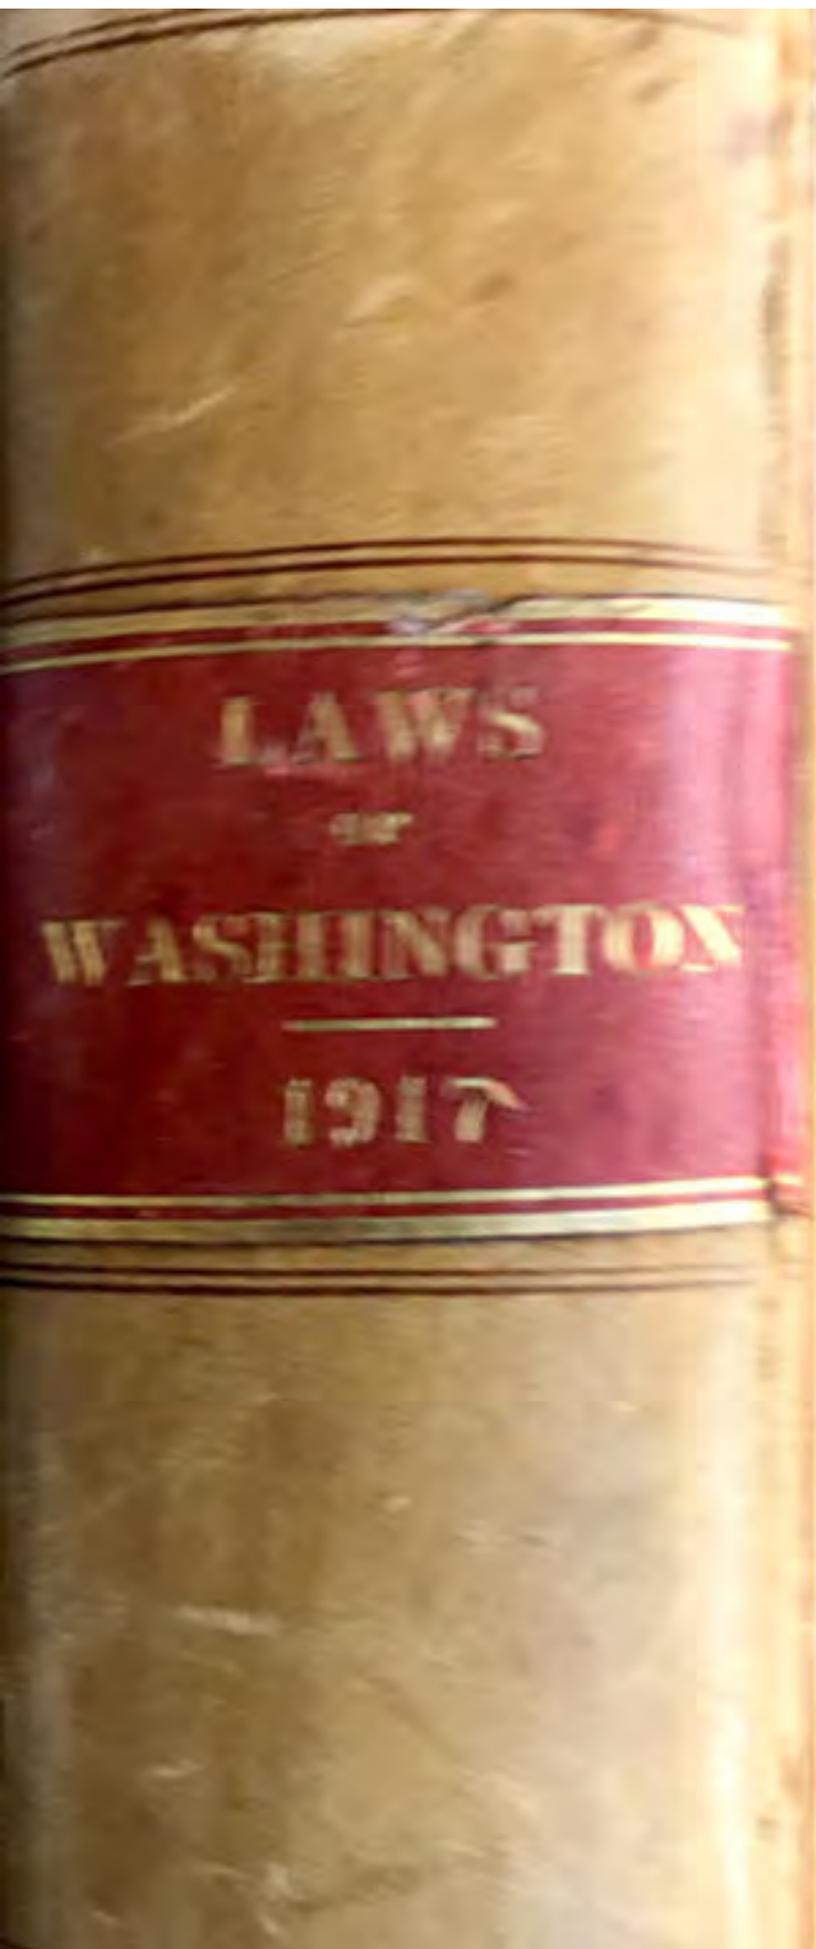

*Be it enacted by the Legislature of the State of Washington:*

SECTION 1. Section 5, chapter 149, Laws of 1941, as amended by section 1, chapter 252, Laws of 1943 (section 152-40, Remington's Revised Statutes, 1943 Supplement, also Pierce's Perpetual Code 430-9), is amended to read as follows: Amendment.

Section 5. The Committee shall be a continuing Code Committee with full power of codification of the laws above referred to, and shall have the power and duty to assign code numbers to such general laws as shall hereafter be passed at any legislative session; and the said Committee shall certify to the Secretary of State the numbers given to the sections which the Committee has determined shall be incorporated in such code. In addition, the Committee shall propose and submit to the Legislature changes and revisions of the above referred to laws, and shall submit by mail at least ninety (90) days prior to the opening of the 1947 legislative session, a copy of the proposed code and a copy of all such proposed changes and revisions to each and every judge of the Supreme Court and the Superior Courts of the State of Washington, to each member of the Legislature elected for the 1947 session, to the State Bar Association and to the various local bar associations of every county or city in the State of Washington, and to the various prosecuting attorneys of the State of Washington. Continuing code committee.

Recom-  
mendations.

Copies of  
proposals  
distributed.

**EXHIBIT 81 (b)**

# House Bill No. 337

STATE OF WASHINGTON, FIFTEENTH REGULAR SESSION.

Read first time February 16, 1917, ordered printed, and referred to Committee on Public Utilities.

## AN ACT

Authorizing cities and towns to lease or sell any municipally-owned water works, gas works, electric light and power plants, steam plants, street railway plants and lines, telegraph and telephone lines and plants and any other municipally-owned public utility, or public utility system similar or dissimilar in character.

Be it enacted by the Legislature of the State of Washington:

SECTION 1. It is and shall be lawful for any city or town in this state now or hereafter owning any water works, gas works, electric light and power plant, steam plant, street railway line, street railway plant, telephone or telegraph plant and lines, or any system embracing all or any one or more of such works or plants or any similar or dissimilar utility or system, to lease for any term of years or to sell and convey the same or any part thereof, with the equipment and appurtenances, in the manner hereinafter prescribed.

Sec. 2. The legislative authority of such city or town, if it deems it advisable to lease or sell such works, plant or system or any part of the same, or any similar or dissimilar utility or system, shall adopt a resolution stating whether it desires to lease or sell the same. If it desires to lease, the resolution shall state the general terms and conditions of such lease, but not the rent. If it desires to sell, the general terms of sale shall be stated, but not the price. The resolution shall direct the city or town clerk, or other proper official, to publish such resolution not less than once a week for four weeks in the official newspaper of the city or town if there be such an official newspaper, or if there be none then in any newspaper published in such city or town, or if there be none then in any newspaper published in the county in which such city or town is located, together with a notice calling for sealed bids to be filed with such clerk or other proper official not later than a certain time, accompanied by a certified check payable to the order of such city or town, for such amount as the resolution shall require, or a deposit of a like sum in money. Each bid shall state that the bidder agrees that if his bid be accepted and he fails to comply therewith

## CHAPTER 137.

[H. B. 237.]

### SALE OR LEASE OF PUBLIC UTILITIES OWNED BY CITIES OR TOWNS.

AN ACT authorizing cities and towns to lease or sell any municipally-owned water works, gas works, electric light and power plants, steam plants, street railway plants and lines, telegraph and telephone lines and plants and any other municipally-owned public utility, or public utility system similar or dissimilar in character.

*Be it enacted by the Legislature of the State of Washington:*

SECTION 1. It is and shall be lawful for any city or town in this state now or hereafter owning any water works, gas works, electric light and power plant, steam plant, street railway line, street railway plant, telephone or telegraph plant and lines, or any system embracing all or any one or more of such works or plants or any similar or dissimilar utility or system, to lease for any term of years or to sell and convey the same or any part thereof, with the equipment and appurtenances, in the manner hereinafter prescribed.

Authority granted.

SEC. 2. The legislative authority of such city or town, if it deems it advisable to lease or sell such works, plant or system or any part of the same, or any similar or dissimilar utility or system, shall adopt a resolution stating whether it desires to lease or sell the same. If it

Resolutions proposing sale or lease.

deeds or instruments of conveyance; and any such sale or agreement of sale heretofore made or attempted to be made as aforesaid may be completed by the proper officers of such city or town with the same effect as if all the proceedings heretofore had and taken were had and taken after the passage of this act. [L. '07, p. 167, § 3.]

“Act” in this section refers to §§ 9509—9511.

### § 9512. Sale or Lease of Public Utilities.

It is and shall be lawful for any city or town in this state now or hereafter owning any water works, gasworks, electric light and power plant, steam plant, street railway line, street railway plant, telephone or telegraph plant and lines, or any system embracing all or any one or more of such works or plants or any similar or dissimilar utility or system, to lease for any term of years or to sell and convey the same or any part thereof, with the equipment and appurtenances, in the manner hereinafter prescribed. [L. '17, p. 573, § 1.]

### § 9513. Resolutions Proposing Sale or Lease—Notice—Bids—Referendum.

The legislative authority of such city or town, if it deems it advisable to lease or sell such works, plant or system or any part of the same, or any similar or dissimilar utility or system, shall adopt a resolution stating whether it desires to lease or sell the same. If it desires to lease, the resolution shall state the general terms and conditions of such lease, but not the rent. If it desires to sell the general terms of sale shall be stated, but not the price. The resolution shall direct the city or town clerk, or other proper official, to publish such resolution not less than once a week for four weeks in the official newspaper of the city or town if there be such an official newspaper, or if there be none then in any newspaper published in such city or town, or if there be none then in any newspaper published in the county in which such city or town is located, together with a notice calling for sealed bids to be filed with such clerk or other proper official not later than a certain time, accompanied by a certified check payable to the order of such city or town, for such amount as the resolution shall require, or a deposit of a like sum in money. Each bid shall state that the bidder agrees that if his bid be accepted and he fails to comply therewith within the time hereinafter specified, such check or deposit shall be forfeited to the city or town. If bids for a lease be called for bidders shall bid the amount to be paid as the rent for each year of the term of the lease. If bids for a sale and conveyance be called for the bids shall state the price offered. The legislative authority of the city or town shall have the right to reject any or all bids and to accept any bid which it deems best. At the first meeting of the legislative authority of the city or town held after the expiration of the time fixed for receiving bids, or at some later meeting if such legislative authority so decides, the bids shall be considered. In order for such legislative authority to declare it advisable to accept any bid it shall be necessary for two-thirds of all the members elected to such legislative authority to vote in favor of a resolution making such declaration. If such resolution be so adopted it shall be necessary, in order that such bid be accepted, to enact an ordinance accepting such bid and directing

the execution of a lease or conveyance by the mayor and city clerk or other proper official. Such ordinance shall not take effect until it shall have been submitted to the voters of such city or town for their approval or rejection at the next general election or at a special election called for that purpose, and a majority of the voters voting thereon shall have approved such ordinance. If approved it shall take effect as soon as the result of such vote be proclaimed by the mayor. If it be so submitted and fail to receive the approval of a majority of the voters voting thereon, it shall be rejected and annulled. It shall be the duty of the mayor to proclaim such vote as soon as it shall be properly certified. [L. '17, p. 573, § 2.]

**§ 9514. Execution of Lease or Conveyance—Acceptance.**

Upon the taking effect of any such ordinance the mayor and the city clerk or other proper official shall execute, in the name and on behalf of the city or town, the lease or conveyance directed by such ordinance. The lessee or grantee shall accept and execute the same within ten days after notice of its execution by the city or town or forfeit to the city or town the amount of the check or special deposit accompanying the bid of such lessee or grantee: Provided, that if litigation in good faith be instituted within such ten days to determine the rights of the parties, no forfeiture shall take place unless such lessee or grantee fail for five days after the termination of such litigation in favor of the city or town to accept and execute such lease or conveyance. [L. '17, p. 575, § 3.]

CHAPTER XXXI.

LOCAL IMPROVEMENT BONDS.

**§ 9515. [8018.] Bonds for Local Improvements Authorized.**

Whenever any city shall have power and authority vested in it by its charter or by any law of the state to order or cause the whole or any part of the streets, lanes, alleys, squares or public places of such city to be graded, regraded, planked, replanked, graveled, regraveled, piled, repiled, paved, repaved, macadamized, remacadamized, capped, recapped or to order or cause sidewalks, sewers, manholes, culverts, curbs, gutters, water-mains, or crosswalks to be constructed or to order or cause to be made any local improvements whatever, and to levy and collect assessments upon the property benefited thereby or abutting, adjoining, contiguous or approximate thereto, to defray the whole or any portion of the cost and expense of any such improvement, the proper authorities of such city may, in their discretion, provide for the payment of the cost and expense of such improvement by bonds of the district which shall include the property liable to assessment for the payment of the cost and expense of such improvement according to the charter of such city, issued to the contractor, or by the proceeds of such bonds to be issued and sold as hereinafter provided. [L. '99, p. 234, § 1.]

It was considered that this chapter supersedes L. '93, p. 231, §§ 1—5, except § 3, Bal. Code, §§ 1185—1189, as regards street improvement bonds, and except as expressly applied in later enactments: See *infra*, §§ 9529—9531 and notes.

See, also, note to § 9522.

Bonds for public utilities: See *supra*, § 9490, and notes.

# EXHIBIT 81 (d)

December 1, 1946

Chapter 252, Laws of 1943, as amended by Chapter 233, Laws of 1945, provides that the Code Committee shall propose and submit to the legislature changes and revisions of the general and permanent laws of the state and shall supply each legislator, judge and bar association with a copy thereof.

The revision work is completed and it was hoped that all this material could be sent out as soon as the November election disclosed who were to become the legislators but our inability to get paper for the 300 sets has necessitated an unavoidable delay. However, in order to give the maximum time, preceding the next legislative session, for examination of the work done it has been decided to make two volumes and to now send out Volume 2, which is already completed. Volume 1 will contain Titles 1-45 inclusive and Volume 2 contains Titles 46-91 inclusive.

Along with Volume 2 are enclosed reviser's notes covering the titles contained therein. The first column of figures indicates the section numbers of the proposed code. The second column of figures indicates the section or sections of Remington's Revised Statutes from which each new code section is derived. **The third column contains the catch-line of each section as set forth in the revision itself, together with the reviser's explanation in parenthesis of the major changes made in the course of revision.** There is also enclosed in the front of Volume 2 a complete list of titles covering both volumes.

Volume 1 will be sent out just as soon as it can be run off, assembled and bound.

Respectfully submitted,

Chapter	
80.01	Regulations - General.
80.02	Securities.
80.03	Transfers of property.
80.04	Affiliated interests.
80.05	Investigation of public service companies.
80.06	Regulatory fees.
80.07	Gas, electrical and water companies.
80.08	Electric franchises and rights-of-way.
80.09	Telephone and telegraph companies.
80.10	Municipal utilities.
80.11	Municipal street railway bonds.
80.12	Sale or lease of municipal utilities.

PREFATORY NOTE - By chapter 267, Laws of 1945, the department of public service was divided into two independent departments, viz: The department of public utilities and the department of transportation. It has therefore been necessary to segregate the body of public service law into two titles, one covering public utility companies and the other transportation and allied companies.

The public service law contained a number of statutes of general application. As to these it has been necessary to a great extent to duplicate the two titles. Reference is made particularly to chapters 2, 3, 4 and 5 of each title. Many sections of the public service law were of specific application to particular types of companies. As to these the task of segregation has been simple. A third category consisted of sections containing intermingled provisions applicable to one or more companies of both types. As to these we faced the difficult task of re-writing, in order to cull out of a section that relating to utilities and that relating to transportation and set out the rewritten sections in their proper titles.

80.11.12 A contract of extension shall not lessen or impair the validity of any bonds of an issue for which the time of payment shall be extended in whole or in part, except as to the date of payment as specified in the contract.

CHAPTER 80.12  
SALE OR LEASE OF MUNICIPAL UTILITIES

Sections

- 80.12.01 Authority to sell or let.
- 80.12.02 Procedure.
- 80.12.03 Execution of lease or conveyance.

80.12.01 A city may lease for any term of years or sell and convey any public utility works, plant, or system owned by it or any part thereof, together with all or any equipment and appurtenances thereof.

80.12.02 The legislative authority of the city, if it deems it advisable to lease or sell such works, plant, or system, or any part thereof, shall adopt a resolution stating whether it desires to lease or sell. If it desires to lease, the resolution shall state the general terms and conditions of the lease, but not the rent. If it desires to sell the general terms of sale shall be stated, but not the price. The resolution shall direct the city clerk, or other proper official, to publish the resolution not less than once a week for four weeks in the official newspaper of the city if there is one, or if not, then in any newspaper published in the city, or if there is none, then in any newspaper published in the county in which the city is located, together with a notice calling for sealed bids to be filed with the clerk or other proper official not later than a certain time, accompanied by a certified check payable to the order of the city, for such amount as the resolution shall require, or a deposit of a like sum in money. Each bid shall state that the bidder agrees that if his bid is accepted and he fails to comply therewith within the time hereinafter specified, the check or deposit shall be forfeited to the city. If bids for a lease are called for, bidders shall bid the amount to be paid as the rent for each year of the term of the lease. If bids for a sale are called for, the bids shall state the price offered. The legislative authority of the city may reject any or all bids and accept any bid which it deems best. At the first meeting of the legislative authority of the city held after the expiration of the time fixed for receiving bids, or at some later meeting, the bids shall be considered. In order for such legislative authority to declare it advisable to accept any bid it shall be necessary for two-thirds of all the members elected to such legislative authority to vote in favor of a resolution making the declaration. If the resolution is adopted it shall be necessary, in order that such bid be accepted, to enact an ordinance accepting it and directing the execution of a lease or conveyance by the mayor and city clerk or other proper official. Such ordinance shall not take effect until it has been submitted to the voters of the city for their approval or rejection at the next general election or at a special election called for that purpose, and a majority of the voters voting thereon have approved it. If approved it shall take effect as soon as the result of the vote is proclaimed by the mayor. If it is so submitted and fails of approval, it shall be rejected and annulled. The mayor shall proclaim the vote as soon as it is properly certified.

80.12.03 Upon the taking effect of the ordinance the mayor and the city clerk or other proper official shall execute, in the name and on behalf of the city, the lease or conveyance directed thereby. The lessee or grantee shall

To: Tacoma City Council,  
Subject: "Stop The Surplus" Click! is not Surplus~! FW: Resolution  
Declaring Certain City Property Surplus

Good Morning Council Members,

Is there any truth to a silly rumor, that City Council is considering a "Surplus" resolution, to skirt the law and sell-off Click! Network?

Click! Network is not "Surplus." You cannot "privatize" it like that. It's so crazy!

Please see attached, a typical "Surplus Resolution," from Duvall, WA. A good example of how Washington State law works.

Cities can NOT simply sell ***municipal utility*** property without a vote of the people. [RCW 35.94.020](#)

Unless, City Council declares the utility property "surplus," a vote of the people is required.

If the utility property is *declared "surplus"*, then Council must holding a "***public hearing***," pass a "***surplus resolution***" and then a "***bidding***" process is required.

This is usually done for things that are actually "Surplus," like old desks, chairs or outdated computers, *see* the attached Duvall surplus resolution for example.

"Surplus" is stuff that no longer **serves its intended purpose**. (*see* the nice hay rake and weed-wacker there, in Duvall!).

Otherwise the law requires a "vote of the people" to dump such property.

Click! is not "surplus." It is a state of the art Fiber Optic Gigabit Municipal Broadband System, bringing broadband to our community.

Cities across America can only dream about having such a system.

Selling or Leasing Click! is different than leasing Cheney Stadium, (Mayor Woodards' example for why it is OK to lease/sell Click!).

A Baseball stadium is not a "utility property," it is a luxury. Ticket and hot dogs prices don't need City Council regulation.

Click!'s system is an **essential** municipal utility property. The public needs low broadband rates, and oversight of those rate by City Council.

Don't toss Click! Network to the wolves.

Preserve City Council's oversight of rates! Protect our municipal broadband system from privatization.

Click! is now profitable, with over \$4 Million positive cash flow this year. Those profits keep electric rates lower for everyone.

Click!'s Gigabit Fiber service is now operating and has been expanding for over a year now.

I have offered to pay for an upgrade, to make Gigabit available everywhere on Click!

Let your ISP partners get back to work. Advanced Stream can easily add 10K more customers.

Public broadband networks belong to the people. The people have a right to vote over "you" selling or leasing "our" Click!.

Save Click!. Keep our broadband rates low. Let's bring Gigabit to all of our community!

Please vote to "Stop The Surplus."  
Thanks,

Mitch

Subject: RE: Resolution Declaring Certain City Property Surplus

Hi Mitch,

Attached is the surplus resolution.

Thank you,  
Alana McCoy  
Project Manager  
City of Duvall

**CITY OF DUVALL  
WASHINGTON**

**RESOLUTION NO. 19-17**

---

**A RESOLUTION OF THE CITY COUNCIL OF THE CITY  
OF DUVALL, WASHINGTON, DECLARING CERTAIN  
CITY PROPERTY SURPLUS**

WHEREAS, the City from time to time has assets that become surplus to its needs; and

WHEREAS, the City has utility related items requiring disposal and per RCW 35.94.040 the City shall host a public hearing prior to disposal of the utility items; and

WHEREAS, the City Council has the authority to dispose of surplus property pursuant to RCW 35A.11.010;

NOW, THEREFORE, THE CITY COUNCIL OF THE CITY OF DUVALL,  
WASHINGTON, DO RESOLVE AS FOLLOWS:

Section 1. Surplus of Certain City Property. The City Council hereby declares that this property, listed in the attached Exhibit "A", is surplus to the needs of the City and disposal thereof will be for the common benefit.

Section 2. Disposal Method. The property listed in the attached Exhibit "A" may be disposed of to the general public by means of direct sales, sealed bid, trade-in, or auction, as determined to be in the best interests of the City by the Public Works Director. Property that is deemed of no value will be recycled or disposed of responsibly.

1<sup>st</sup> PASSED BY THE CITY COUNCIL AT A REGULAR MEETING THEREOF ON THE  
DAY OF October, 2019.

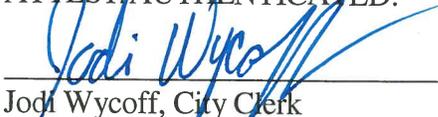

CITY OF DUVALL

  
Mayor Amy Ockerlander

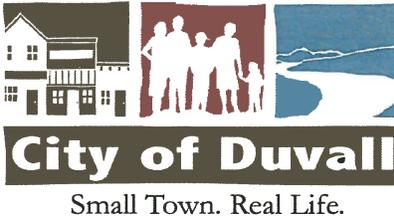

Approved as to form:

  
Rachel Turpin, City Attorney

ATTEST/AUTHENTICATED:

  
Jodi Wycoff, City Clerk

## Welcome to Click! Network, a division of Tacoma Power.

Tacoma Power was created by the local community more than 100 years ago to meet their needs for electricity. It was their belief that public ownership and local control resulted in higher quality services. Click! Network shares that same belief, which is why when Tacoma Power originally planned to build a fiber-optic network to control its substations, we made the decision to expand the network so that we could offer a wider range of telecommunications services that would benefit our customers and the communities we serve.

Today, Click! Network offers local residents and businesses more choices than ever for cable TV, high-speed Internet, and broadband services. And by doing so, we're creating new options for existing area businesses and attracting new businesses to our community.

Thank you for taking the time to visit the Click! Network Web site. If you have any questions, please [click here](#) or call us at (253) 502-8900. Our staff will be happy to assist you.

Sincerely,  
Cyndi Wikstrom  
General Manager,  
Click! Network

## Welcome to Click! Network, a division of Tacoma Power.

Tacoma Power was created by the local community more than 100 years ago to meet their needs for electricity. It was their belief that public ownership and local control resulted in higher quality services. Click! Network shares that same belief, which is why when Tacoma Power originally planned to build a fiber-optic network to control its substations, we made the decision to expand the network so that we could offer a wider range of telecommunications services that would benefit our customers and the communities we serve.

Today, Click! Network offers local residents and businesses more choices than ever for cable TV, high-speed Internet, and broadband services. And by doing so, we're creating new options for existing area businesses and attracting new businesses to our community.

Thank you for taking the time to visit the Click! Network Web site. If you have any questions, please [click here](#) or call us at (253) 502-8900. Our staff will be happy to assist you.

Sincerely,

Cyndi Wikstrom

General Manager,

Click! Network

## Welcome to Click! Network

Click! Network is provided by Tacoma Power. Tacoma Power was created by citizens more than 100 years ago to meet community needs for electricity. They believed that public ownership and local control resulted in higher quality services. Click! Network evolved through similar foresight. Tacoma Power originally planned to build a fiber-optic network to control its substations. Further review indicated that expanding the network and offering a wide range of telecommunications services would benefit our customers and our community.

Click! Network offers residents and businesses in the city limits of Tacoma, WA more choices for cable TV, high-speed Internet and broadband services. It creates new options for existing Tacoma area businesses and attracts new businesses to our community. We think the possibilities for the network are just beginning to emerge.

Plaintiffs,

v.

CITY OF TACOMA,

Defendant.

No.: 17-2-08907-4

[PROPOSED]  
CR 54(B) FINDINGS AND ENTRY  
OF JUDGMENT ON THE CLAIMS  
REGARDING THE APPLICATION  
OF RES JUDICATA, COLLATERAL  
ESTOPPEL, RCW 43.09.210, AND  
TACOMA CITY CHARTER

**CLERK'S ACTION REQUIRED**

THIS COURT having entered an order on March 2, 2018 entitled "Order Granting  
Plaintiffs' Motion for Partial Summary Judgment and Denying Defendant's Motion to  
Strike" (hereinafter, the "Order") and the Defendant, the City of Tacoma (the "City"),  
having moved at a hearing on March 30, 2018 for the Court to make findings and a

CR 54(B) FINDINGS AND ENTRY OF  
JUDGMENT ON THE CLAIMS REGARDING THE  
APPLICATION OF RES JUDICATA,  
COLLATERAL ESTOPPEL, RCW 43.09.210, AND  
TACOMA CITY CHARTER - 1

501130898 v3

1 judgment in compliance with Civil Rule 54(b) so as to permit the immediate appeal of the  
2 Order; now therefore,

3 CIVIL RULE 54(B) FINDINGS

4 In compliance with Civil Rule 54(b), the Court hereby rules that there is no just  
5 reason for delay in entry of the Order as a final and appealable Judgment on the following  
6 claims and rulings: (1) the City's affirmative defenses of res judicata and collateral  
7 estoppel and the Court's ruling that they should be rejected as a matter of law; (2) the  
8 Plaintiff's claim that the relationship between Click! Network ("Click") and Tacoma  
9 Power is governed and limited by RCW 43.09.210; (3) the Plaintiff's claim that the  
10 relationship between Click and Tacoma Power is governed and limited by Tacoma City  
11 Charter § 4.5; and (4) the Court's ruling that "Tacoma Power electric utility revenues and  
12 funds may not lawfully be used to pay for Click! Network expenses or capital  
13 improvements that are attributable or properly allocable to commercial  
14 telecommunications service rather than electric utility service."

15 The Court hereby makes the following findings in support of the ruling that there  
16 is no just reason for delay in entry of the Order as a final and appealable Judgment on said  
17 claims and rulings. These findings are based upon the Declaration of Kari L. Vander  
18 Stoep In Support of Civil Rule 54(b) Findings and Order, as well as the prior filings and  
19 proceedings in this matter, and are as follows:

20 1. With the entry of the Order regarding the City's affirmative defenses and  
21 the applicability of RCW 43.09.210 and Tacoma City Charter § 4.5, crucial legal issues  
22 have been decided in the case. A reversal on one or more of these issues would be  
23 dispositive and would save the Court and the parties from having to use extensive  
24 resources to resolve the remaining issues in the case. That is, if the appellate court

25 CR 54(B) FINDINGS AND ENTRY OF  
JUDGMENT ON THE CLAIMS REGARDING THE  
APPLICATION OF RES JUDICATA,  
COLLATERAL ESTOPPEL, RCW 43.09.210, AND  
TACOMA CITY CHARTER - 2

501130898 v3

K&L GATES LLP  
925 FOURTH AVENUE SUITE 2900  
SEATTLE, WASHINGTON 98104-1158  
TELEPHONE: (206) 623-7580  
FACSIMILE: (206) 623-7022

1 determines that res judicata or collateral estoppel applies, the Plaintiffs have no case and  
2 the matter will be dismissed. Likewise, if the appellate court determines that RCW  
3 43.09.210 and Tacoma City Charter § 4.5 do not apply to the relationship between  
4 Tacoma Power and Click, that would likely lead to the dismissal of the case or at least a  
5 significant change in the relevant remaining issues or claims.

6         2.       The legality of the City's funding of Click is a matter of great public  
7 interest and concern to all of the taxpayers and electric ratepayers of the City. If it is  
8 determined on appeal that Click's funding is not legal, then the City will need to deal with  
9 how and whether to fund and operate Click going forward. The City will also have to  
10 determine how to pay for any past expenditures that are determined to be unlawful, which  
11 Plaintiffs estimate at over \$21 million.

12         3.       With the potential imposition of interest, the City is faced with having to  
13 pay many thousands of dollars more in interest if it has to wait until all of the remaining  
14 claims and issues in the case are decided before being permitted to appeal the crucial  
15 claims regarding res judicata, collateral estoppel, and the applicability of RCW 43.09.210  
16 and Tacoma City Charter § 4.5.

17         4.       There are likely to be disputed issues in determining the proper allocation  
18 of expenses and revenues between Click and Tacoma Power over several years.  
19 Resolution of these issues will involve considerable discovery time and trial/hearing time.

20         5.       Finally, it is unlikely that the need for an appeal would be mooted by future  
21 developments in the Superior Court. The Order sets up a trial or further motion practice to  
22 determine a damages figure from zero up to or beyond the \$21 million Plaintiffs reference  
23 in their Complaint. If the damages are relatively small, Plaintiffs will have an incentive to  
24 appeal, and if the damages are large, the City will have an incentive to appeal. In either

25 CR 54(B) FINDINGS AND ENTRY OF  
JUDGMENT ON THE CLAIMS REGARDING THE  
APPLICATION OF RES JUDICATA,  
COLLATERAL ESTOPPEL, RCW 43.09.210, AND  
TACOMA CITY CHARTER - 3

501130898 v3

K&L GATES LLP  
925 FOURTH AVENUE SUITE 2900

TELEPHONE: (206) 623-7580  
FACSIMILE: (206) 623-7022

1 case it is likely that the dispositive issues in the Order will be appealed regardless of  
2 future developments in the Superior Court.

3 6. Any one of the five preceding reasons is a compelling ground for this Court  
4 to enter the Civil Rule 54(b) findings. In combination, they constitute overwhelming  
5 grounds for it to do so.

6 7. Because the resolution of these issues has important implications for the  
7 remainder of the case, there is good cause to stay enforcement of this Judgment and to  
8 delay further proceedings in this Court pending the outcome of the appeal.

9 8. Given the magnitude of the issues in dispute and the ultimate outcome's  
10 effect on the City, Tacoma Power, and Click customers, the Court should also stay  
11 enforcement of the judgment on its Order until the City's appeal has run its course. If the  
12 City were forced to promptly shut down Click, there would be an immediate negative  
13 impact on Click's customer base, which includes elderly, low-income, governmental, and  
14 student users who would suddenly be without service. In addition, Click would lose all of  
15 its customers, employees, and goodwill, all of which have significant value and play an  
16 important role in the request for information, proposals, or qualifications process the City  
17 is currently undertaking to find a third party partner for future operation of Click. Even if  
18 the Order were later reversed after the conclusion of all proceedings in this Court, much of  
19 Click's value will be irrevocably lost.

20 NOW, THEREFORE, IT IS HEREBY ORDERED, ADJUDGED, AND  
21 DECREED that there is no just reason for delay in regard to the entry of the March 2,  
22 2018 Order as a final and appealable Judgment regarding the claims, determinations, and  
23 rulings set forth above in the Findings section of this order. The effect of this order is that  
24 the Order and those claims are immediately appealable upon the entry of this order.

25 CR 54(B) FINDINGS AND ENTRY OF  
JUDGMENT ON THE CLAIMS REGARDING THE  
APPLICATION OF RES JUDICATA,  
COLLATERAL ESTOPPEL, RCW 43.09.210, AND  
TACOMA CITY CHARTER - 4

City of Tacoma  
Office of the City Clerk

## CERTIFICATE OF CITY CLERK

I, Doris Sorum, City Clerk of the City of Tacoma, Washington, do hereby certify that the attached is a full, true and correct copy of Substitute Ordinance No. 26141 passed by the City Council on October 28, 1997.

Dated this 21<sup>st</sup> day of January 2020.

  
Doris Sorum, City Clerk  
City of Tacoma, Washington

**SUBSTITUTE  
ORDINANCE NO. 26141**

1 AN ORDINANCE amending the Light Division biennial budget for 1997/1998 by  
2 adding thereto and authorizing the appropriation of the sum of  
3 \$69,411,000, which includes a construction contingency, or so much  
4 thereof as may be necessary for the Light Division's  
5 Telecommunications Project and declaring a fiscal emergency to allow  
6 this amendment.

7 BE IT ORDAINED BY THE CITY OF TACOMA:

8 Section 1. That the biennial budget for the Light Division for the years  
9 1997/1998 be and the same is hereby amended by adding thereto and authorizing  
10 the appropriation of the sum of \$69,411,000, which includes a 5% construction  
11 contingency, or so much thereof as may be necessary to design, build, and  
12 operate the Telecommunications Project.

13 Section 2. That at the time the 1997/1998 biennial budget for the Light  
14 Division was approved and adopted, the Telecommunications Project was not  
15 sufficiently developed to include in the budget authorization. Since that time the  
16 Project was approved to proceed and permanent Project funding is now  
17 necessary. Therefore, pursuant to RCW 35.34.150, this situation is declared to  
18 create a fiscal emergency necessitating this additional budget authorization in the  
19 estimated amount of \$69,411,000, which includes a 5% construction contingency.

20 Section 3. That the City Council reserves its legislative and other authority  
21 as appropriate to determine the conditions under which the Telecommunications  
22 Project will be implemented and operated, including but not limited to modification  
23 of the Business Plan for the Telecommunications Project and such other action as  
24 deemed necessary or desirable in the judgment of the City Council, and that

Contact Person (for questions):		Phone/Extension
3. Steven J. Klein, Light Superintendent		502-8203

4. Preparation of an Ordinance is requested for the City Council meeting of Tuesday, September 30, 1997.

5. Summary Title/Recommendation: (A concise sentence, as it will appear on the Council Agenda)

Additional appropriation of \$66,758,641 to the Department of Public Utilities Light Division 1997/1998 budget appropriation.

6. Background Information/General Discussion: (Why is this request necessary? Are there legal requirements? What are the viable alternatives? Who has been involved in the process?)

To administer, construct and operate a telecommunications system for the Department of Public Utilities Light Division.

At the time the Light Division's current biennial budget was adopted by the Public Utility Board and City Council, the telecommunications project was not sufficiently developed to include in the budget authorization. Now that the construction plan has been refined and firm construction bids received, it is necessary to amend the Light Division's budget to provide the necessary authorization to expend funds to build the telecommunications infrastructure.

7. Financial Impact: (Future impact on the budget.)

Additional appropriation of \$66,758,641 to the Department of Public Utilities Light Division 1997/1998 budget appropriation.

8. List all material available as backup information for the request and indicate where filed:

Source Documents/Backup Material	Location of Document
Letter to the Public Utility Board and City Council from Mark Crisson, dated September 19, 1997	Attached

MEMORANDUM

To: Rick Rosenblatt, City Clerk  
From: Mark L. Bubenik, Chief Assistant City Attorney  
Date: September 25, 1997  
Subject: Requests for Council Agenda

A handwritten signature in blue ink, likely belonging to Mark L. Bubenik, positioned over the 'From' line of the memorandum.

Please place the following proposed resolution(s)/ordinance(s) on the agenda for the October 14, 1997 Council meeting:

- U-9310 Authorize award of contracts for construction of the Light Division Telecommunications System
- U-9311 Authorize approval to amend the Light Division's budget by approximately \$66,758,000 to fund the Light Division's Telecommunications System

## RESOLUTION NO. U-9311

1  
2  
3 WHEREAS at the time the Light Division's current biennial budget was  
4 adopted, the Telecommunications Project was not sufficiently developed to be  
5 included in the 1997-1998 Biennial Budget authorization, and it is now  
6 appropriate that an additional appropriation of \$66,758,641 be added to the  
7 Light Division's 1997/1998 budget appropriation to pay for this Project's  
8 expenditures, and  
9

10  
11 WHEREAS a proposed ordinance has been prepared to authorize said  
12 budget increase, and a copy of the ordinance and explanatory letter by the  
13 Director of Utilities have been provided to the Board and City Council and  
14 filed with the Clerk, and it is in the best public interest to approve the same;  
15 Now, therefore,  
16

17 BE IT RESOLVED BY THE PUBLIC UTILITY BOARD OF THE CITY OF TACOMA:

18 That the said proposed ordinance for the revised budget appropriation  
19 for the Telecommunications Project is approved, and the Council is requested  
20 to concur by enacting an ordinance in substantially the same form and content  
21 as referred to and to be approved by the City Attorney.  
22

23 That the Board also approves and authorizes an alternative budget  
24 amendment option to be enacted by the City Council that includes a  
25  
26  
27  
28

Tacoma, Washington 98409-3192

TACOMA POWER

October 19, 2015

ALSO SENT VIA E-MAIL

Chuck Prater  
Net-Venture, Inc.  
2516 Holgate Street  
Tacoma, WA 98402

Subject: Net-Venture Contract and Operations Status

Dear Chuck,

This letter is intended to memorialize Click!'s current understandings based on assurances you gave me during our meeting on October 9, 2015. I requested that meeting to address the recent changes in Net-Venture's operations related to its joint venture arrangement with Rainier Connect.

In particular, I wanted to confirm the current status of Net-Venture's operational functions as they relate to its contractual obligations under its ISP Advantage Agreement with Click!. I also wanted to clear up some apparently conflicting information Click! has received regarding those functions over the past few weeks.

As we discussed during our October 9th meeting, the relationship between Net-Venture and Rainier Connect remains unclear to Click!. Without the benefit of reviewing your Joint Operating Agreement with Rainier Connect, Click! needs additional clarity regarding which ISP is performing which operational functions and pursuant to which contract. Some, but not all, of Click!'s concerns regarding that joint venture relationship have been addressed by you and Brian via your written responses to the key operational matters our attorney outlined in his September 25, 2015 letter.

While I anticipate you and Brian will soon provide responses to the remaining identified operational matters, some of the initial responses provided created further questions that required immediate clarification. The primary purpose of our October 9th meeting was to obtain that clarification. That is, to enable me to determine if Net-Venture is still operating as an independent business entity and whether it is still capable of performing per the terms and conditions of its contract with Click!.

Because the contractual obligations found in each of Click!'s ISP Advantage Agreements are specific to the particular ISP involved, mixing performance obligations between one or more ISPs under those separate contracts is problematic. Of particular concern is the impact such mixed operations are having, or may have, on Net-Venture's compliance with certain requirements in its Agreement with Click!. For example, Net-Venture's duty to maintain an independent local point of presence, the distinction between "outsourcing" versus "consolidating" operational functions for purposes of ISP certification and

its separate and distinct contractual responsibilities (e.g. indemnification, etc.) relative to technical support and installation services offered or performed in connection with our Agreement, etc.

During our October 9th meeting, you acknowledged these concerns and assured me that Net-Venture intends to honor its continuing duties and responsibilities under our ISP Advantage Agreement. You also acknowledged that Net-Venture is required to independently perform under that Agreement and assured me that Net-Venture is currently meeting all of its contractual obligations and will continue to do so for the foreseeable future. You explained that certain prior statements and notices by Net-Venture, which appear to conflict with these assurances, were incorrect. For example, the notice to Net-Venture's customers you and Brian jointly issued in August stated, "Net-Venture is becoming Rainier Connect." You reassured me that Rainier Connect is not performing, and will not perform, any operational functions that are the separate and independent responsibility of Net-Venture per its contract with Click!

Based on your assurances and explanations on October 9th, I have re-evaluated the information you and Brian previously provided regarding joint venture activities. In reliance on these assurances, I will not consider the operational changes entailed by those activities to be breaches of Net-Venture's ISP Advantage Agreement – at least with respect to changes Click! has been informed of to date. However, please note that Click! has not waived, is not waiving, and does not intend to waive, any of its rights or remedies under that Agreement. Click! expressly reserves all such rights and remedies and is prepared to exercise them in the event of a further change in circumstances.

In the interest of accurately informing our respective customers, I encourage you and Brian to update your notice to Net-Venture's customers. It would help minimize possible customer and public confusion regarding the actual current circumstances. If Net-Venture's official address and contact information has recently changed, I also ask that you formally notify Click! of updated Notice information per Section 16.c. in our Agreement.

I believe I have accurately described the topics and substance of our meeting discussion on October 9th. If anything needs to be corrected or further clarified, please do so immediately in writing so that I may further evaluate our contractual relationship as needed. Otherwise, I and Click! will proceed in strict reliance on the facts and circumstances outlined above.

Please note it remains of vital importance to Click! that Net-Venture and Rainier Connect continue to clarify the contractual and operational status of their joint venture. Thus, I reiterate my expectation above that you and Brian will provide additional information to address the key operational matters outlined in our attorney's September 25, 2015 letter (i.e. beyond your initial email responses on October 2, 2015). I look forward to receiving your further responses as soon as possible.

Sincerely,

Tenzin Gyaltsen  
General Manager

**King County**

**Metropolitan King County Council  
Budget and Fiscal Management Committee**

**STAFF REPORT**

<b>Agenda Item:</b>	33	<b>Name:</b>	Patrick Hamacher
<b>Proposed No.:</b>	2016-0521	<b>Date:</b>	November 1-3, 2016

**SUBJECT**

This ordinance would set the costs for a franchise application and authorize the Executive to charge reasonable compensation for use of the County's Rights of Way (ROW) by utility companies.

**SUMMARY**

Proposed Ordinance 2016-0521 would authorize the Executive to begin charging utility companies for the right to construct its facilities and to remain in the ROW. These charges would be similar to rent in that they will be assessed based upon the value of the land and the portion of the ROW occupied by the utility.

This ordinance also increases the application fee and the construction permit fee for a franchise, as well as establishes an administrative fee in the same manner prescribed by Proposed Ordinance 2016-0495. **If this ordinance moves forward, Proposed Ordinance 2016-0495 would not be needed.**

**BACKGROUND**

Revised Code of Washington (RCW) 36.55.010 authorizes the county to "grant franchises ...to use the right-of-way of county roads...for the construction and maintenance of waterworks, gas pipes, telephone, telegraph and electric lines sewers and other such facilities."

RCW 80.32.010 authorizes the County Council to grant and prescribe terms and conditions for the construction, maintenance and operation of electrical lines for the transmission of electrical power upon, over, along or across county streets and roads.

King County currently grants franchises to public and private utility companies that authorize the utility companies to use the ROW of county roads to provide utility service within King County and elsewhere. The County charges an application fee for these franchise applicants, but does not currently charge any additional compensation for the value use of the ROW. This ordinance would authorize the Executive to begin charging a fee for that valuable use of the County's ROW.

# Utility Right-of-Way Franchise Application Instructions

## FRANCHISE REQUIRED

A franchise approved by the King County Council is required in order to use the county rights-of-way for the construction and maintenance of waterworks, gas pipes, telephone, telegraph and electric lines, sewers, cable television, petroleum products, and other such public and private utilities. A franchise may be granted for a limited time, not to exceed 50 years.

## UTILITY FRANCHISE APPLICATION PROCESS

### Step 1: Application

#### A. When is an application submitted?

An application is required for the following circumstances:

- For a new franchise or a renewal of an existing franchise;
- For a short-term extension of an existing franchise that is about to expire; or
- To transfer or otherwise modify an existing franchise

Application materials are submitted to the Clerk of the Council at the King County Courthouse, 516 Third Avenue, Room 1200, Seattle, WA 98104

#### B. What is submitted with an application?

- Completed application form. Fill out and sign the application form.
- Area Description. A complete and accurate description of the area of unincorporated King County in which the Utility requests access to County road rights-of-way for its facilities. A map is not sufficient without an accompanying description, in an electronic format using Microsoft Word (if available).
- Map. A map showing the proposed franchise area in unincorporated King County, in an electronic format that is GIS compatible (if available).
  - If the proposed franchise area is not fully occupied by the utility, it may submit a map indicating the location of all its facilities in the proposed franchise area, in an electronic format that is GIS compatible (if available).

Questions about the application process? Call the Real Estate Services Section at (206) 477-9350

**▲ The Third Avenue entrance to the King County Courthouse reopened Dec. 16, 2019.**

## Utility right-of-way franchise

In accordance with state law, a franchise approved by the King County Council is required in order to use County road rights-of-way for the construction and maintenance of waterworks, gas pipes, telephone, telegraph and electric lines, sewers, cable TV, petroleum product pipelines, and other such public and private utilities.

## Franchise Application - new, renewal, amendment, or transfer

- [Franchise Application Instructions](#)
- [Franchise Application](#)

## Questions about the application process?

Call the Real Estate Services Section at 206-477-9350 or email [Franchise.FMD@kingcounty.gov](mailto:Franchise.FMD@kingcounty.gov).

## Instructions and costs

### Step 1: Application

#### A. When is an application submitted?

An application is required for the following circumstances:

- For a new franchise or a renewal of an existing franchise
- For a short-term extension of an existing franchise that is about to expire
- To transfer or otherwise modify an existing franchise

Application materials are submitted to the Clerk of the Council at the King County Courthouse, 516 Third Ave., Suite 1200, Seattle, WA 98104, or [Clerk.Council@kingcounty.gov](mailto:Clerk.Council@kingcounty.gov).

#### B. What is submitted with an application?

- Completed application form. Fill out and sign the application form.
- Area Description. A complete and accurate description of the area of unincorporated King County in which the Utility requests access to County road rights-of-way for its facilities. A map is not sufficient without an accompanying description, in an electronic format using Microsoft Word (if available).

IN THE SUPERIOR COURT OF WASHINGTON  
FOR PIERCE COUNTY

CITY OF TACOMA, a municipal corporation,  
Plaintiff,  
v.  
THE TAXPAYERS AND RATEPAYERS OF  
THE CITY OF TACOMA,  
Defendants.

No. 96 2 09938 0  
COMPLAINT FOR DECLARATORY  
JUDGMENT

The plaintiff, City of Tacoma, Washington ("City"), alleges the following in support of its complaint for declaratory judgment:

INTRODUCTION

1. The City plans to issue bonds in part for the purposes of constructing and operating a telecommunications system consisting of a hybrid fiber coaxial network (the "Telecommunications System"). The Telecommunications System will enhance and augment electrical utility service that the City provides to customers through the Light Division of its Department of Public Utilities. The City may utilize the Telecommunications System to provide cable television service to customers in the Light Division service area. The City may also lease Telecommunications System facilities or capacity to providers of telecommunications services.

1 and other applicable provisions of law, to construct a Telecommunications System for the purpose of  
2 furnishing electric service to customers in the Light Division service area and controlling the use,  
3 distribution and price of such service.

4 16. The City is authorized by RCW 35.41.030, 35.92.100, and 35.92.105 to finance such a  
5 Telecommunications System by the issuance of the Revenue Bonds.

6 17. The City is authorized by law, including without limitation RCW 35.22.570 and  
7 35.22.900, and *Issaquah v. TelePrompter Corp.*, 93 Wn. 2d 567 (1980), to utilize such a system for  
8 the provision of cable television service and/or to lease facilities and capacity to telecommunications  
9 providers.

10 18. The City is further authorized to provide telecommunications services by the  
11 Telecommunications Act of 1996, Pub. L. No. 104-104, § 253, 110 Stat. 70 (1996), through the  
12 Act's preemption of any legal requirement that has the effect of preventing any entity from providing  
13 any interstate or intrastate telecommunications services.

#### 14 **REQUEST FOR RELIEF**

15 The City requests the following relief:

16 1. An order determining that this action may be maintained as a class action pursuant to  
17 CR 23(b)(2) and certifying the creation of a defendant class comprised of all ratepayers of the Light  
18 Division.

19 2. Appointment of Harold E. Nielsen, Jr., as the representative of all City taxpayers and  
20 Light Division ratepayers, except any taxpayers and ratepayers who intervene in this action.

21 3. Allowance of a reasonable attorney's fees and costs in this action to the attorney who  
22 shall represent Nielsen.

23 4. Prescription of the form of notice to be given to Taxpayers and Ratepayers of the  
24 pendency of this action and of their right to intervene, and the manner of giving such notice.

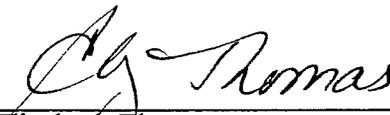

25 5. A judgment declaring that:

- a. The Court has jurisdiction over the subject matter and parties in this action.
- b. The Bond Ordinance was properly enacted.
- c. The City has authority under the laws of the State of Washington and the United States to utilize the Telecommunications System to provide cable television service in the Light Division service area.
- d. The City has authority under the laws of the State of Washington and the United States to lease Telecommunications System facilities and capacity to telecommunications providers.
- e. The City has authority under the laws of the State of Washington and the United States to issue the Bonds for the purposes set for in paragraphs (c) and (d) above and in the manner set forth in the Bond Ordinance.

**ORDINANCE NO. 25930**

AN ORDINANCE of the City of Tacoma, Washington establishing a telecommunications system as part of the Light Division, supplementing Ordinance No. 23514 and providing for the issuance and sale of the City's Electric System Revenue Bonds in the aggregate principal amount of not to exceed \$1,000,000 to provide part of the funds necessary for the acquisition, construction and installation of additions and improvements to the telecommunications system.

WHEREAS, the City of Tacoma (the "City") owns and operates an electric utility system (the "Electric System"); and

WHEREAS, the Ordinance provides that the City may create a separate system as part of the Electric System and pledge that the income of such separate system be paid into the Revenue Fund; and

WHEREAS, RCW 35A.11.020 authorizes the City to operate and supply utility and municipal services commonly or conveniently rendered by cities or towns; and

WHEREAS, RCW 35.92.050 authorizes cities to construct and operate works and facilities for the purpose of furnishing any persons with electricity and other means of power and to regulate and control the use thereof or lease any equipment or accessories necessary and convenient for the use thereof; and

WHEREAS, the Utility Board and the Council have determined that it is in the best interest of the City that it install a telecommunications system among all of its Electric System substations in order to improve communications for automatic substation control; and

WHEREAS, the City has determined that it is prudent and economical to provide additional capacity on such telecommunications system to provide the Electric System with sufficient capacity to perform or enhance such functions as automated meter reading and billing, appliance control, and load shaping; and

ARTICLE II  
FINDINGS; ESTABLISHMENT OF THE TELECOMMUNICATIONS PROJECT AS A  
SEPARATE SYSTEM; AND ADOPTION OF PLAN AND SYSTEM

Section 2.1. Establishment of Telecommunication System. The City hereby creates a separate system of the City's Light Division to be known as the telecommunications system (the "Telecommunications System"). The public interest, welfare, convenience and necessity require the creation of the Telecommunications System, contemplated by the plan adopted by Section 2.2 hereof, for the purposes set forth in Exhibit A. The City hereby covenants that all revenues received from the Telecommunications System shall be deposited into the Revenue Fund.

Section 2.2. Adoption of Plan; Estimated Cost. The City hereby specifies and adopts the plan set forth in Exhibit A for the acquisition, construction and implementation of the Telecommunications System (the "Telecommunications Project"). The City may modify details of the foregoing plan when deemed necessary or desirable in the judgment of the City. The estimated cost of the Telecommunications Project, including funds necessary for the payment of all costs of issuing the Bonds, is expected to be approximately \$40,000,000.

Section 2.3. Findings of Parity. The Council hereby finds and determines as required by Section 5.2 of the Ordinance as follows:

A. The Bonds will be issued for financing capital improvements to the Electric System.

B. At the time of issuance and delivery of the Bonds, there will be no deficiency in the Bond Fund and no Event of Default shall have occurred.

C. At the time of issuance and delivery of the Bonds, there will be on file with the City Clerk the certificate of the Director of Finance required by Section 5.2(B)(1) or Section 5.2(C) of the Ordinance.

## EXHIBIT A

### TELECOMMUNICATIONS PROJECT

The Telecommunications Project will include some or all of the following elements:

#### Infrastructure improvements

Construct a hybrid fiber coax ("HFC") telecommunications infrastructure consisting of fiber optic rings and branches connecting nodes throughout the Light Division service area. This telecommunications system will be asymmetrically two-way capable. It will interconnect all Light Division substations. Connections may also be made with Light Division customers and with other providers of telecommunications infrastructure and services. This telecommunications system will have 500 channels. It will utilize existing Light Division rights-of-way.

#### Functions to be performed by infrastructure improvements

Through construction of the HFC telecommunications system, the Light Division's Telecommunications System will be capable of performing some or all of the following functions:

- conventional substation communications functions
- automated meter reading (electric and water)
- automated billing (electric and water)
- automated bill payment (electric and water)
- demand side management (DSM) functions, such as automated load (*e.g.* water heater) control
- provision of information to customers that is relevant to their energy and water purchasing decisions (*e.g.* information on time-of-use or "green" power rates)
- distribution automation
- remote turn on/turn off for electric and water customers
- city government communications functions
- CATV service
- transport of signals for service providers offering telecommunications services (*e.g.* Personal Communications Service (PCS), video on demand, high speed data, as well as conventional wired and wireless telecommunications services)
- Internet access service

**I. INTRODUCTION**

The City of Tacoma (the "City") brought this declaratory judgment class action under RCW 7.24 and 7.25 and CR 23(B)(2) to confirm its authority to issue bonds for the purpose of constructing and operating a telecommunications system consisting of a hybrid fiber coaxial network (the "Telecommunications System"). On July 23, 1996, the Tacoma City Council adopted Ordinance No. 25930, which authorized the sale of Electric System revenue bonds (the "Revenue Bonds") in order to finance the first phase of constructing and operating the Telecommunications System. The City will utilize the Telecommunications System to enhance electric service to customers of its Light Division. The City may also utilize a portion of the Telecommunications System to provide cable television service to customers in the Light Division service area, and lease Telecommunications System facilities or capacity to providers of telecommunications services.

**II. RELIEF REQUESTED**

The City requests that the Court enter judgment declaring that:

1. The Court has jurisdiction over the subject matter and parties in this action.
2. Tacoma City Ordinance No. 25930 (the "Bond Ordinance") was properly enacted.
3. The City has authority under the laws of the State of Washington and the United States to provide cable television service in the Light Division service area.
4. The City has authority under the laws of the State of Washington and the United States to lease telecommunications facilities and capacity to telecommunications providers.
5. The City has authority under the laws of the State of Washington and the United States to issue the Bonds for the purposes set for in paragraphs (3) and (4) above and in the manner set forth in the Bond Ordinance.

**III. STATEMENT OF ISSUES**

1. Whether the City has authority under state law to provide cable television service.
2. Whether the City has authority under federal and state law to lease telecommunications facilities and capacity to telecommunications providers.

**IV. EVIDENCE RELIED UPON**

The City believes that the following facts are undisputed in every material respect. These facts are contained in the Declaration of Jon Athow in Support of the City's Motion for Summary Judgment ("Athow Decl.").

Plaintiff, the City of Tacoma, is a municipal corporation and a city of the first class of the State of Washington. The Defendants herein are taxpayers of the City of Tacoma and ratepayers of its electrical utility, which is known as the Light Division of the Department of Public Utilities (the "Light Division"). Harold E. Nielsen, Jr., the taxpayer and ratepayer representative, is a resident and taxpayer of the City and a customer of the Light Division. The City currently owns and operates, through its Light Division, an electric utility (the "Electric System") for the purpose of providing electricity and other energy services throughout the City and other portions of Pierce County.

The Telecommunications System will be used to improve the speed and capability of the existing real-time communications among certain Electric System substations, and to extend such real-time communications to the remaining substations. In addition, the Telecommunications System may be used to enhance such existing energy services as demand management, identification of outages, meter reading, billing and payment, and resource dispatch. The Telecommunications System may be used to perform similar functions for the City's provision of water service. The City's authority to issue the Revenue Bonds to finance the purposes discussed in this paragraph is not at issue.

1 The City may also utilize a portion of the Telecommunications System to provide cable  
2 television service to customers within the Light Division service area, and to lease facilities or  
3 capacity to providers of video-on-demand, data transport, telephony, and other telecommunications  
4 services. By providing cable television service and/or leasing facilities or capacity to  
5 telecommunications providers, the City can ensure a range of choices for consumers, provide public  
6 interest television programming, and improve the availability of competitively priced  
7 telecommunications services.

8 The City also estimates that by providing cable television service and/or leasing facilities or  
9 capacity, it could generate substantial revenue to help offset the costs of constructing and operating  
10 the Telecommunications System. Because the infrastructure for the telemetry improvements designed  
11 to meet Electric System needs represents a substantial portion of the costs of the Telecommunications  
12 System, the relative cost of these additional revenue-producing capabilities is low.<sup>1</sup>

13 The Tacoma City Council enacted Ordinance No. 25930 (the "Bond Ordinance") on July 23,  
14 1996, at a regular meeting.<sup>2</sup> The Bond Ordinance provides for the construction and operation of a  
15 Telecommunications System within the Light Division and for the issuance and sale of Electric  
16 System revenue bonds in the aggregate principal amount of \$1,000,000.

## 17 V. ARGUMENT

### 18 A. Summary Judgment Standard

19 Summary judgment is appropriate to dispose of actions or parts thereof when no genuine  
20 issues of material fact exist or when only a question of law exists. CR 56(c). "The burden is on the  
21 moving party to demonstrate that there is no issue as to a material fact." *Scott v. Pacific West*  
22 *Mountain Resort*, 119 Wn. 2d 484, 502-03 (1992). If the party seeking summary judgment  
23 successfully carries its initial burden, the burden shifts to the non-moving party to establish the

24 <sup>1</sup> Declaration of Jon Athow in Support of Motion for Summary Judgment ("Athow Decl."), ¶ 10.

25 <sup>2</sup> A true and correct copy of the Bond Ordinance is attached as Exhibit C to Mr. Athow's Declaration.

1 existence of the facts on which it has the burden of proof at trial. *Young v. Key Pharmaceuticals,*  
2 *Inc.*, 112 Wn. 2d 216, 225 (1989). The non-moving party must respond with specific facts and  
3 cannot rely on bare allegations contained in his or her pleadings. *Baldwin v. Sisters of Providence,*  
4 112 Wn. 2d 127, 132 (1989). Conclusory statements or argumentative assertions raised in affidavits  
5 are insufficient to raise an issue of fact and do not preclude summary judgment. *Grimwood v.*  
6 *University of Puget Sound, Inc.*, 110 Wn. 2d 355, 359-60 (1988).

7 In the instant case, there are no issues of material fact. The facts bearing on the City's  
8 authority to provide cable television service and to lease telecommunications facilities and capacity to  
9 telecommunications providers are undisputed. Only questions of law remain. The case should  
10 therefore be resolved on summary judgment.

11 **B. The City Has Authority Under Washington Statutes To Construct and Operate the**  
12 **Entire Telecommunications System and To Lease Portions of the System's Capacity or**  
13 **Facilities.**

14 1. A Charter City Has Broad Powers.

15 The Washington Constitution grants broad powers to first-class charter cities such as Tacoma.  
16 It states, "Any city containing a population of ten thousand inhabitants, or more, shall be permitted to  
17 frame a charter for its own government, consistent with and subject to the Constitution and laws of  
18 this state . . . ." Wash. Const. art XI, § 10. Under Chapter 35 RCW, a charter city has "all the  
19 powers which are conferred upon incorporated cities and towns by this title or other laws of the state,  
20 and all such powers as are usually exercised by municipal corporations of like character and degree."  
21 RCW 35.22.570. In addition to this "omnibus" grant of power, RCW 35.22.900 provides that grants  
22 of power to first-class cities must be liberally construed to carry out the objectives of chapter 35.22  
23 RCW. *See also Citizens for Financially Responsible Government v. City of Spokane*, 99 Wn. 339,  
24 343 (1983).

25 In light of these constitutional and statutory provisions, the Washington Supreme Court has  
26 held that "the only limitation on the power of cities of the first class is that their action cannot

1 contravene any constitutional provision or any legislative enactment. . . . [A] city of the first class has  
2 as broad legislative powers as the state, except when restricted by enactments of the state legislature."  
3 *Winkenwerder v. City of Yakima*, 52 Wn. 2d 617, 622 (1958).

4 2. A City Has Even Broader Powers When It Is Operating a Utility.

5 The powers of a city under Washington law are especially broad when the city is performing a  
6 proprietary, as distinguished from a governmental, function. In *Tacoma v. Taxpayers*, 108 Wn.2d  
7 679 (1987), the Washington Supreme Court stated that while municipal authority must be narrowly  
8 construed when the function is governmental, "when the Legislature authorizes a municipality to  
9 engage in a business, it may exercise its business powers much in the same way as a private individual.  
10 . . . We have viewed the Legislature as implicitly authorizing a municipality to make all contracts, and  
11 to engage in any undertaking necessary to make its municipal electric utility system efficient and  
12 beneficial to the public." *Id.* at 694-95. *See also Hite v. Public Utility Dist. No. 2*, 112 Wn.2d 456,  
13 459 (1989) ("It is clear that in the production and sale of electricity, a municipal corporation acts in  
14 its proprietary capacity. . . . In that capacity, a municipal corporation acts as the proprietor of a  
15 business enterprise for the private advantage of the city and may exercise its business powers in much  
16 the same way as a private individual or corporation." ).<sup>3</sup>

17 In addition, the courts have recognized many instances in which public utility districts, which  
18 are municipal corporations with more limited powers than cities, may engage in activities that are  
19 incidental to their expressly authorized functions of providing electric or other utility service. *See,*  
20 *e.g., Puget Power and Light Co. v. Public Utility District No. 1 of Chelan County*, 17 Wn. App. 861  
21 (1977) (involving public utility district's provision of recreational facilities); *Snohomish County*  
22 *Public Utility District No. 1 v. Broadview Television Co.*, 91 Wn.2d 3, 8 (1978) (upholding district's

23  
24  
25 <sup>3</sup> *Hite and Taxpayers* made clear that the holding in *Chemical Bank v. Washington Public Power Supply*  
26 *System*, 99 Wn.2d 772 (1983), does not detract from the broad authority that cities enjoy when acting in a proprietary  
capacity.

1 authority to lease pole attachments even though activity is "only incidental to the accomplishment of  
2 the district's primary purpose, the distribution and sale of electricity").

3 3. The City Has Authority Under Washington Statutes To Provide Telecommunications  
4 Services.

5 The City's statutory powers include the authority to provide telecommunications services.  
6 First, the City, as a first class charter city having code city powers as well, has all powers not denied  
7 by law, "including operating and supplying of utilities and municipal services commonly or  
8 conveniently rendered by cities or towns." RCW 35A.11.020. Tacoma may conveniently render  
9 telecommunications services because the Light Division has an existing citywide electric system of  
10 connections to customers' homes, because it has existing billing relationships with customers, and  
11 because it can provide services economically. Second, there is no express statutory prohibition  
12 against city provision of municipal telecommunications services. *Winkenwerder, supra*. To the  
13 contrary, the Legislature has acknowledged that cities provide communications services through  
14 enacting a statute providing for the burying of city-owned communications facilities. RCW  
15 35.96.030. Finally, the Legislature has determined that competitive markets for telecommunications  
16 services serve the public interest. RCW 80.36.300; *In re Electric Lightwave, Inc.*, 123 Wn.2d 530,  
17 538-39 (1994) (noting that "it is the state's policy to promote diversity in the supply of  
18 telecommunications services and products in telecommunications markets throughout the state").  
19 The City's provision of telecommunications services will make the market more competitive, thus  
20 furthering the public interest recognized by the Legislature.

21 4. Washington Case Law Recognizes the City's Authority To Provide  
22 Telecommunications Services.

23 The Washington Supreme Court in *Issaquah v. Teleprompter Corp.*, 93 Wn. 2d 567 (1980),  
24 recognized the power of a code city under RCW 35A.11.020 to utilize its telecommunications system  
25 to provide telecommunications services, including cable television service. The Court held in  
26 *Teleprompter* that a city was authorized by statute to operate a cable television system under the

1 broad authority of RCW 35A.11.020 because there was "no general law which conflicts with the  
2 city's authority under the optional municipal code to operate such a system." *Id.* At 575. First class  
3 charter cities such as Tacoma have all the powers granted to code cities. RCW 35.22.570. Thus,  
4 under *Teleprompter* the City is clearly authorized to use its Telecommunications System to offer  
5 cable television service.

6 Tacoma's authority is not limited to the provision of cable television service.  
7 *Teleprompter* provides no basis for distinguishing cable television from other telecommunications  
8 services. The Washington Legislature views cable television as a telecommunications service. *See*,  
9 *e.g.*, RCW 80.04.010 (defining "telecommunications" as "the transmission of information by wire,  
10 radio, *optical cable*, electromagnetic, or other similar means) (emphasis added); RCW 80.36.370  
11 (exempting cable television from the Washington Utilities and Transportation Commission's  
12 regulation of telecommunications services). Thus, *Teleprompter* clarifies the authority for Tacoma to  
13 provide telecommunications services.

14 5. The City Has Authority To Lease City-Owned Telecommunications Facilities

15 The City has authority under its charter and under state law to lease excess capacity and  
16 facilities of its Telecommunications System to other telecommunications providers. Tacoma's Charter  
17 expressly permits the City to lease City property. Tacoma, Wash., Code § 9.1. Under state law, a  
18 first class city has the power to:

19 control the finances and property of the corporation, and to acquire, by purchase and  
20 otherwise, such lands and other property as may be necessary for any part of the  
21 corporate uses provided for by its charter, and to dispose of any such property as the  
interests of the corporation may, from time to time, require.

22 RCW 22.280(3). The Washington Supreme Court has upheld the authority of cities to lease  
23 municipal property to private parties as long as the lease does not interfere with public use.  
24 *Winkenwerder, supra* at 624. Cities are specifically authorized to lease surplus utility property and  
25 equipment. Ch. 35.94 RCW.

1 C. Federal Law Requires that the City Be Allowed To Provide Telecommunications  
2 Service.

3 The City's authority to provide telecommunications services must be recognized under the  
4 Telecommunications Act of 1996, Pub. L. No. 104-104, § 253, 110 Stat. 70 (1996) (the "Act"), as a  
5 consequence of the Act's prohibition against barriers to the entry of any entity into the  
6 telecommunications market. Federal law can preempt state utility regulation. *Public Utility District*  
7 *No. 1 of Pend Oreille County v. Federal Power Commission*, 308 F.2d 318 (D.C. Cir. 1962) (holding  
8 that the Federal Power Act preempted Washington statute purporting to limit city's ability to  
9 condemn property for power plant). The *Pend Oreille* court found that preemption was required  
10 merely by implication of a federal law. Here, the case for preemption is far stronger because the Act  
11 expressly preempts state interference in the telecommunications market. Section 253 of the Act  
12 states, "No state or local statute or regulation, or other state or local legal requirement, may prohibit  
13 or have the effect of prohibiting the ability of *any entity* to provide *any* interstate or intrastate  
14 telecommunications service." Telecommunications Act of 1996, Pub. L. No. 104-104, § 253, 110  
15 Stat. 70 (1996) (emphasis added). There is no language in either the statute or its legislative history  
16 exempting cities from the law's application. To the contrary, a House Committee Report states that  
17 Section 253 "is intended to remove all barriers to entry in the provision of telecommunications  
18 services." House Rep. No. 104-458. A state law precluding telecommunications services constitutes  
19 a legal requirement. Thus, any Washington law that would prohibit Tacoma from providing  
20 telecommunications service is expressly preempted by the Act.

21 In addition, the thrust of the Telecommunications Act is to encourage the availability and  
22 affordability of telecommunications services. *See, e.g.*, Section 254, requiring various mechanisms to  
23 promote universal service. Tacoma is well positioned to make telecommunications services available  
24 to the public at a competitive price, thereby furthering this federal policy.

25  
26

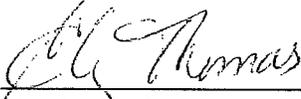

**VI. CONCLUSION**

Under its broad powers as a first-class charter city, the City has authority to use a portion of its Telecommunications System to provide cable television service and to lease a portion of its Telecommunications System facilities or capacity to other telecommunications service providers. Federal law expressly bars any requirement that would undercut this authority. Because there is no dispute over the material facts underlying its authority, the City is therefore entitled to judgment as a matter of law.

DATED this 5<sup>th</sup> day of November, 1996.

Respectfully submitted,

PRESTON GATES & ELLIS

No. 96-2-09938-0

DECLARATION OF JON ATHOW IN  
SUPPORT OF MOTION FOR  
SUMMARY JUDGMENT

1. My name is Jon Athow. I am over the age of eighteen, competent to testify in this matter, and make this declaration based upon my own personal knowledge. I am employed by the Light Division of the City of Tacoma. My title is Telecommunications Project Manager. My responsibilities include planning for the creation and operation of a telecommunications system for the Light Division. I have been employed by the Light Division for three years. Prior to joining the Light Division, I was a Navigator in the United States Navy and a machine vision/artificial intelligence software developer with an industrial controls manufacturing company. I received a Bachelor of Science degree in Electrical Engineering from M.I.T., the Massachusetts Institute of Technology. A copy of my current resume is attached as Exhibit A.

DECLARATION OF JON ATHOW IN SUPPORT OF MOTION  
FOR SUMMARY JUDGMENT - 1

1           2.     The Light Division relies upon telecommunications facilities and services for a wide  
2 range of purposes including dispatching its generating resources, determining whether to make  
3 purchases and sales on the spot market, maintaining appropriate levels of power in its distribution  
4 system, ensuring that power is constantly and instantly available to meet customer demand, ensuring  
5 the safe operation of its transmission system, coordinating the activities of its field crews and  
6 identifying promptly any outages or other system problems. The Light Division has designed and  
7 built, and operates, limited telecommunications systems in support of these missions that include fiber  
8 optics loops, point to point microwave, telephone systems including internal T1, and mobile radio.

9           3.     Additional telecommunications facilities and services would enhance the Light  
10 Division's ability to provide highly reliable, cost-effective and convenient electric service to its  
11 customers. A sophisticated telecommunications system would enable many operation improvements,  
12 including:

- 13           •     Distribution Automation, to monitor and control system components such as  
14                 transformers, switches, and capacitors, to provide dynamic load control and  
15                 Voltage/VAR control, and to support increased reliability
- 16           •     Transmission and Distribution Availability and monitoring for posting to other service  
17                 providers
- 18           •     Outage handling, including improved outage locating abilities and the reduction of  
19                 outages through fault detection, fault isolation, and predictive maintenance
- 20           •     Automated meter reading
- 21           •     Data exchange with utility field personnel and vendors
- 22           •     Substation monitoring as a means of determining substation upgrades or deferrals
- 23           •     Dispatch of third-party generation

24           4.     A sophisticated telecommunications system would also enable many service  
25 improvements, including:

- 1 • Aggregated Customer Billing for customers with multiple locations
- 2 • Market pricing/availability, including the provision of competitive energy market
- 3 options
- 4 • Interactive utility customer service communication
- 5 • Remote connect and disconnect
- 6 • Data networking with commercial/industrial customers to facilitate electrical system
- 7 response to customer real-time process requirements
- 8 • Power quality monitoring
- 9 • Customer usage management via two-way communication permitting the customer
- 10 and utility to manage electricity consumption via time of use pricing, real-time pricing,
- 11 or direct load control
- 12 • Interactive communications for demand-side management and load management
- 13 through flexible pricing
- 14 • Provision of energy usage information to customers
- 15 • Automated bill payment

16 5. The expectations of today's electrical customers have grown enormously. Customers  
17 today demand options in their power supplies, have little tolerance for even momentary outages or  
18 power quality problems, and have come to expect high levels of customer service.

19 6. An advanced telecommunications system not only is a key element in meeting the  
20 expectations of today's energy customers, but also is being designed to meet the needs of tomorrow's  
21 energy customers.

22 7. The Light Division has carefully analyzed what telecommunications facilities it would  
23 need in order to meet the current and anticipated needs of the electric system. It retained SRI  
24 International as a consultant to evaluate and report on options. With SRI International, the Light  
25 Division reviewed the existing telecommunications infrastructure, emerging telecommunications  
26

1 options, and ways to meet Light Division needs. A copy of SRI International's Telecommunications  
2 Strategy Assessment - Final Report Summary is attached as Exhibit B. The Summary was received  
3 by the City but does not necessarily represent the position of the City.

4 8. The Light Division determined that a broadband, two-way system based on fiber  
5 optics in conjunction with other technologies would be the best long-term approach for meeting its  
6 needs.

7 9. The Light Division has also evaluated the possibility of designing a system that is  
8 capable of carrying other telecommunications services, including cable television service, as well as  
9 meeting Electric System needs.

10 10. The telecommunications infrastructure designed to meet current and future Electric  
11 System needs represents a substantial portion of the costs of this more capable Telecommunications  
12 System.

13 11. By providing cable television service and/or leasing facilities or capacity to  
14 telecommunications providers, the Light Division can ensure a range of choices for consumers,  
15 provide more educational and other public interest television programming, and improve the  
16 availability of competitively priced telecommunications services. Such services could be provided  
17 efficiently because of the lower cost of capital and the fact that the Light Division already has a drop  
18 to every home.

19 12. Regardless of whether the Light Division's new communications system were designed  
20 to allow for the provision of cable television service, it would have excess, or spare, capacity until the  
21 time when anticipated future electric system needs are fully realized.

22 13. In order to defray costs and encourage the provision of advanced telecommunications  
23 services to its customers, the Light Division would lease facilities or transport would be made  
24 available on a competitively neutral, non-discriminatory basis.

25  
26  
**DECLARATION OF JON ATHOW IN SUPPORT OF MOTION  
FOR SUMMARY JUDGMENT - 4**

**EXHIBIT 88 (c)**

CERTIFICATE OF DELIVERY

On this day I delivered a true and accurate copy of the document to which this certificate is affixed to Puget Sound Courier for delivery to the attorneys of record for plaintiff-defendant. I certify under penalty of perjury under the laws of the state of Washington that the foregoing is true and correct.

Dated 12/3/96 at Tacoma, Washington

Jennifer Watson

SUPERIOR COURT OF WASHINGTON FOR PIERCE COUNTY

CITY OF TACOMA, a municipal corporation,

Plaintiff,

v.

THE TAXPAYERS AND RATEPAYERS OF THE CITY OF TACOMA,

Defendants.

NO. 96-2-09938-0

DEFENDANTS' RESPONSIVE MEMORANDUM IN OPPOSITION TO CITY OF TACOMA'S MOTION FOR SUMMARY JUDGMENT

COME NOW the Defendants, The Taxpayers and The Ratepayers of the City of Tacoma, by and through their attorneys of record, Thompson, Krilich, La Porte, Tucci & West, P.S., and submit their Responsive Memorandum in Opposition to The City of Tacoma's Motion for Summary Judgment. This response is supported by the records and files herein and the Affidavit of Heidi E. Imhof and Defendants' Motion to Strike the Declaration of Jon Athow.

Plaintiff's Motion for Summary Judgment should be denied because the Plaintiff's have failed to meet their burden, as many issues of material fact exist.

The City of Tacoma has based their entire motion on the Declaration of Jon Athow who is not an authorized spokesperson for either the City of Tacoma or the City Light Division. Further, Mr. Athow's Declaration is wrought with conclusory statements, argumentative

COPY  
17710

1 assertions, hearsay, speculation, and inadmissible opinion testimony. The City further asserts  
2 that it's authority to issue revenue bonds to finance the project which is the subject of this  
3 lawsuit is not at issue. The City's authority to proceed with this project is the subject of this  
4 lawsuit and it's authority to issue revenue bonds is the essence of the project itself. Summary  
5 judgment is not proper in this case.  
6

7 Not only is summary judgment improper, but this declaratory action is untimely. The  
8 City has asked for a declaratory judgment granting the City authority to proceed with a project  
9 that has not even been put to paper. There is no business plan or proposal for the  
10 telecommunications project. (Deposition of Steve Klein, Page 11, Line 20 - Page 12, Line 5).  
11 The City has no financial plan for the project. (Deposition of Steve Klein, Page 12, Lines 8-  
12 14). Any estimate on the cost would be speculation. (Deposition of Jon Athow, Page 18, Lines  
13 5-8). In addition, the City admitted that it was a definite possibility that some of the funds  
14 could come from general obligation bonds. (Deposition of Steve Klein, Page 15, Lines 7-10  
15 and Page 16, Lines 2-4).  
16

17 The City has filed a Complaint for Declaratory Judgment and has asked this court for  
18 a judgment declaring that:  
19

- 20 1) This court has jurisdiction over the subject matter and the parties in this action;  
21 2) The City properly enacted the \$1,000,000.00 bond ordinance to pay for the  
22 telecommunications project;  
23 3) The City has authority to provide cable television service in the Light Division  
24 service area;  
25  
26

1                    1. Bond Ordinance No. 25930 was improperly enacted.

2                    Under the Tacoma City Charter, Article IV, Section 4.2, provides in relevant part that:

3                    The City may purchase, acquire, or construct any public utility  
4                    system, or part thereof, or make any additions and betterments  
5                    thereto or extensions thereof, without submitting the proposition  
6                    to the voters, provided no general indebtedness is incurred by  
7                    the City. **If such indebtedness is to be incurred, approval by  
8                    the electors, in the manner provided by state law, shall be  
9                    required.**

10                   (Emphasis added).

11                   In this case, although there is no feasibility plan, no business plan, and no financial plan,  
12                   the spokesperson for Tacoma City Light admitted that some of the funds necessary for the  
13                   telecommunications project could come from general obligation bonds. (Deposition of Steve  
14                   Klein, Page 15, Lines 7-10, Page 16, Lines 2-4).

15                   Under the Tacoma City Charter, the City Council does not have authority to enact an  
16                   ordinance for an undefined project which could and probably will submit the ratepayers and  
17                   taxpayers to debt without voter approval.

18                   The City has not specifically defined how the new telecommunication system would be  
19                   an addition and betterment or an extension of the current public utilities system. In order to  
20                   issue any bond either by ordinance or by voter approval, public utilities must meet the  
21                   aforementioned threshold burden. As set forth in the Plaintiff's Answers to Defendants' First  
22                   Set of Interrogatories and the depositions of Mr. Athow and Mr. Klein, there is no plan for the  
23                   new telecommunication system.

1 The fact of the matter is, this new telecommunications system project is in its conceptual  
2 stages and a summary judgment is inappropriate at this time. In fact, the declaratory action  
3 brought by the City is most probably untimely, because there is no plan or system to evaluate  
4 the City's authority therein.  
5

6 **2. The City has no telecommunications system from which to determine any**  
7 **authority.**

8 The City has asked this court to declare that it generally has the authority to provide  
9 cable television services to its ratepayers and to lease the telecommunication facilities to any  
10 other telecommunication provider of the City's choice. The City has yet to define its  
11 hypothetical telecommunication system and the public utility employees presumably in charge  
12 of defining the project have no definite idea what the telecommunication system would entail.  
13 The Superintendent of City Light states that the project is still in its conceptual stages and  
14 nothing has been fully defined. (Deposition of Steve Klein, Page 16, Lines 6-10).  
15

16 It became quite apparent through discovery, that no one in the public utilities department  
17 had any definite answer with regard to Tacoma City Light's telecommunications project. Steve  
18 Klein, the Superintendent of Tacoma City Light assigned Jon Athow as telecommunications  
19 project manager, to examine all issues from marketing to technology.  
20

21 (Deposition of Steve Klein, Page 18, Lines 19-21). Mr. Athow, as the project manager, did not  
22 even know if his business plan would include a marketing plan. (Deposition of Jon Athow,  
23 Page 51, Lines 16-17). Clearly Mr. Athow has no appreciation for the business management  
24 or operations of City Light's hypothetical telecommunications project.  
25

1 Mr. Athow himself has no idea how much the telecommunications project is going to  
2 cost. (Deposition of Jon Athow, Page 18, Lines 5-8). Mr. Athow speculated that the project  
3 could cost \$40,000,000.00, but he adopted that hearsay figure from an independent consulting  
4 firm. (Deposition of Jon Athow, Page 19, Lines 3-9). It is unclear to the Defendants how an  
5 independent consulting firm could have come up with a cost figure for a project that has yet to  
6 be defined.

7  
8 Beginning on Page 8, Line 7 of the Plaintiff's Memorandum in Support of City of  
9 Tacoma's Motion for Summary Judgment, the City states that "Tacoma may conveniently render  
10 telecommunication services". Part of the basis for the City's assertion is that the City can  
11 provide telecommunication services economically. The City has submitted absolutely no proof  
12 that the City of Tacoma can conveniently render telecommunication services or that those  
13 services would be economical. There is no plan, there is no budget, and there is no projection  
14 for what these services could cost the ratepayer. (Deposition of Jon Athow, Page 8, Lines 6-12,  
15 Page 18, Lines 5-8; Deposition of Mark Peace, Page 19, Line 25, and Page 20, Lines 1-22;  
16 Deposition of Steven Klein, Page 12, Lines 17-25).

17  
18 The uncertainty and lack of information by Tacoma City Light was further emphasized  
19 in a December 2, 1996 newspaper article in the Tacoma News Tribune. In the article, council  
20 member Baarsma was quoted as stating that the public utilities has already made a proposal to  
21 the council and that the project would be built in 6-9 months after a contract was in place.  
22 According to the defendants' discovery, there is no proposal, no budget, no projections of  
23

1 ratepayer costs and no contract discussions. (Plaintiff's Answers to Defendants' Request for  
2 Production Nos. 2, 3 and 4).

3  
4 The City has not met their burden of showing that no issues of material fact exist  
5 regarding their authority to utilize a telecommunications system to provide cable t.v. service or  
6 to lease the capacity to a telecommunication provider of their choice. There has been no  
7 telecommunication system defined by the City and it would therefore be inappropriate for this  
8 court to state that the City has authority to proceed into the unknown. There is clearly an issue  
9 of material fact regarding the City's definition of the telecommunication system project.  
10 Namely, there is no project plan at this time.

11  
12 The City asserts that the powers of a city when performing in a proprietary function are  
13 especially broad. As cited by the Plaintiffs, Washington law authorizes a municipality to engage  
14 in business when the undertaking is "necessary to make its municipal electric utility system  
15 efficient and beneficial to the public." Tacoma vs. Taxpayers, 108 Wn. 2d 679, 694-95 (1987).  
16 Washington law clearly did not authorize a municipality to engage in uninformed business  
17 decisions and particularly engaging in a new business venture without any plan, feasibility study  
18 or financial plan.

19  
20 The cases cited by the Plaintiff on Page 7 of its Memorandum are distinguishable from  
21 this case. In the four cases cited by the Plaintiff, Tacoma vs. Taxpayers, Height vs. Public  
22 Utility Dist. No. 2, Puget Power & Light Co. vs. Public Utility Dist. No. 1, and Public Utility  
23 District No. 1 vs. Broadview Television Co., the courts all considered activities that the  
24 municipality engaged in for the benefit of the public or the ratepayers. In this case, the Plaintiff  
25

1 has fallen far short of showing that this new improved telecommunication system would in fact  
2 benefit the ratepayers. The City doesn't even know the full extent its new improved  
3 telecommunication system and therefore it would be improbable that they could determine how  
4 it would benefit the ratepayers. There is presently no plan or system to evaluate whether it will  
5 benefit the ratepayers.  
6

7 The City's summary judgment motion should be denied because the City does not  
8 presently have a telecommunication system that could provide cable television to its ratepayers  
9 nor does the City have a telecommunication system that can be leased to other  
10 telecommunication providers. Summary judgment is improper in this case and most probably  
11 this declaratory judgment action is improper at this time. The City must first show that the new  
12 telecommunication system is a necessary addition and betterment or extension of the current  
13 public utilities system.  
14

15 **3. The City has no authority to issue bonds for a project that has not been**  
16 **specifically defined.**

17 As set forth above in Section 1, the Tacoma City Charter has it's own set of checks and  
18 balances. The City cannot place the ratepayers and taxpayers into debt without voter approval.  
19 The City has not done the legwork to define the telecommunication system project in order to  
20 determine that the ratepayers and taxpayers would not be subject to indebtedness as a result of  
21 this project. The City does not have authority under the Tacoma City Ordinance to issue bonds  
22 under the current set of facts and the City's Motion for Summary Judgment should be denied.

## CONCLUSION

In response to a summary judgment motion, the opposing party does not need to submit affidavits or responding materials unless the moveant meets its burden. Hash vs. Children's Orthopaedic Hospital & Medical Ctr., 110 Wn. 2d 9912, 757 P.2d 507 (1988). However, if the non-moving party submits affidavits, the court generally will be more lenient in examining the affidavits presented by the non-moveant. Public Utility Dist. No. 1 vs. WPPSS, 104 Wn. 2d 353, 705 P.2d 1195 (1985).

In ruling on a motion for summary judgment, the court must consider all of the material evidence and all inferences must be made in light most favorable to the non-moving party and, if reasonable minds might reach different conclusions, the summary judgment motion should be denied. Scott vs. Pacific West Mountain Resort, 119 Wn. 2d 484, 834 P.2d 6 (1992), Atlantic Mutual Ins. Co. vs. Roffey, Inc., 73 Wash. App. 858 (1994).

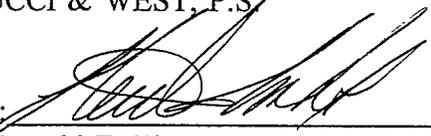

The City has prematurely brought this declaratory action with the court requesting preliminary authority to use a portion of its hypothetical telecommunication system to provide cable television service and to lease a portion of its facilities to other telecommunication service providers. At this point, the telecommunication system has not been planned and it is therefore unknown whether the system would even have the capacity to provide cable television services as well as the capacity to lease facilities to other telecommunication service providers. It certainly may be prudent to determine whether the City has authority to provide the aforementioned services however, the City's first and only obligation is to the ratepayers of its

1 electric utility and to engage only in undertakings necessary to make the electric utility system  
2 efficient and beneficial to the ratepayers.

3  
4 The City has yet to show that the new telecommunication system idea is an addition and  
5 betterment or an extension of the current public utility system. The City cannot meet this  
6 burden by conclusory statements and speculation. The Plaintiff's Motion for Summary  
7 Judgment should be denied.

8 RESPECTFULLY SUBMITTED this 3<sup>rd</sup> day of December, 1996.

ORDER GRANTING CITY OF  
TACOMA'S MOTION FOR  
SUMMARY JUDGMENT

This matter came on this day for hearing before the undersigned upon the City of Tacoma's ("City's") Motion for Summary Judgment. Plaintiff City of Tacoma appeared through its counsel, Elizabeth Thomas. Defendants Taxpayers and Ratepayers of the City of Tacoma appeared through their counsel, Ronald E. Thompson.

Counsel for the parties have drawn the Court's attention to the following documents: Summons, Complaint for Declaratory Judgment; Acceptance of Service; City of Tacoma's Motion for Summary Judgment; Memorandum in Support of Motion for Summary Judgment; Declaration of Jon Athow in Support of Motion for Summary Judgment; Defendants' Responsive Memorandum in Opposition to City of Tacoma's Motion for Summary Judgment; and City of Tacoma's Reply Brief.

Based on these documents, the Court finds that there is no genuine issue as to any material fact and that the facts set forth in the Declaration of Jon Athow are true.

Having considered the documents identified by the parties, the arguments of counsel and the record herein, the Court concludes that the following order should be entered.

- 1. The Court has jurisdiction over the subject matter and parties in this action.
- 2. Tacoma City Ordinance No. 25930 (the "Bond Ordinance") was properly enacted.
- 3. The City has authority under the laws of the State of Washington and the United States to provide cable television service in the Light Division service area.
- 4. The City has authority under the laws of the State of Washington and the United States to lease telecommunications facilities and capacity to telecommunications providers.
- 5. ~~The City has authority under the laws of the State of Washington and the United States to issue the Bonds for the purposes set for in paragraphs (3) and (4) above and in the manner set forth in the Bond Ordinance.~~

DONE IN OPEN COURT this 13 day of December, 1996.

TACOMA, WASH. WEST INC., P.S.~~

## I. INTRODUCTION

The City of Tacoma (the "City") brought this declaratory judgment class action under RCW 7.24 and 7.25 and CR 23(B)(2) to confirm its authority to issue bonds for the purposes of constructing and operating a telecommunications system consisting of a hybrid fiber coaxial network (the "Telecommunications System").

On December 13, 1996, this Court ruled on four of the City's five requested declarations. The Court held that (1) the Court has jurisdiction over the subject matter and parties in this action; (2) Tacoma Ordinance No. 25930 (the "Bond Ordinance"), which provides for the issuance and sale of Electric System revenue bonds in the aggregate principal amount of \$1,000,000 (the "Bonds") in order to finance the first phase of constructing and operating the Telecommunications System, was properly enacted; (3) the City has authority under the laws of the State of Washington and the United

MEMORANDUM IN SUPPORT OF CITY OF TACOMA'S  
MOTION FOR SUMMARY JUDGMENT - 1

PRESTON GATES & ELLIS LLP  
5000 COLUMBIA CENTER  
701 FIFTH AVENUE  
SEATTLE, WASHINGTON 98104-7078  
TELEPHONE: (206) 623-7580  
FACSIMILE: (206) 623-7022

1 States to provide cable television service in the service area of the Light Division of the City's  
2 Department of Public Utilities (the "Light Division"); and (4) the City has authority under the laws of  
3 the State of Washington and the United States to lease telecommunications facilities and capacity to  
4 telecommunications providers. See Order Granting City of Tacoma's Motion for Summary Judgment  
5 dated December 13, 1996 (the "Order").

6 Only one issue remains: Whether the City has authority to issue revenue bonds to finance the  
7 first phase of construction and operation of the Telecommunications System. The City is entitled to  
8 summary judgment on this final issue. Issuing the bonds is a legislative act subject to review only for  
9 such deficiencies as fraud, bad faith, or ultra vires actions. Through the Order, the Court has already  
10 determined that construction and operation of the Telecommunications System is not ultra vires. No  
11 facts relation to fraud, bad faith, etc. have bee alleged.

## 12 II. RELIEF REQUESTED

13 The City requests that the Court enter judgment declaring that:

- 14 1. The City has authority under the laws of the State of Washington to issue revenue  
15 bonds for the purposes of financing a telecommunications system to provide cable  
16 television service in the Light Division Service area and lease telecommunications  
17 facilities and capacity to telecommunications providers.

## 18 III. STATEMENT OF ISSUE

- 19 1. Whether the City may issue revenue bonds under the properly enacted Bond  
20 Ordinance for the purposes of providing cable television service and leasing telecommunications  
21 facilities and capacity pursuant to the authority confirmed by this Court's previous Order.

## 22 IV. EVIDENCE RELIED UPON

23 The City believes that the following facts are undisputed in every material respect. These  
24 facts are contained in the Declaration of Jon Athow in Support of Motion for Summary Judgment,  
25  
26

1 dated November 5, 1996 ("First Athow Decl.") and the Second Declaration of Jon Athow in Support  
2 of Motion for Summary Judgment dated April 11, 1997 ("Second Athow Decl.").

3 Plaintiff, the City of Tacoma, is a municipal corporation and a city of the first class of the  
4 State of Washington. The Defendants are taxpayers of the City and ratepayers of its electrical utility,  
5 the Light Division. Harold E. Nielsen, Jr., the taxpayer and ratepayer representative, is a resident and  
6 taxpayer of the City and a customer of the Light Division. The City currently owns and operates,  
7 through its Light Division, an electric utility (the "Electric System") for the purpose of providing  
8 electricity and other energy services throughout the City and other portions of Pierce County.

9 On July 23, 1996, the Tacoma City Council adopted Ordinance No. 25930 (the "Bond  
10 Ordinance"). The Bond Ordinance provides for the issuance and sale of Electric System revenue  
11 bonds in the aggregate principal amount of \$1,000,000 (the "Bonds") in order to finance the first  
12 phase of constructing and operating the Telecommunications System. The Telecommunications  
13 System will be used to improve the speed and capability of the existing real-time communications  
14 among certain Electric System substations, and to extend such real-time communications to the  
15 remaining substations. In addition, the Telecommunications System may be used to enhance such  
16 existing energy services as demand management, identification of outages, meter reading, billing and  
17 payment, and resource dispatch. The Telecommunications System may be used to perform similar  
18 functions for the City's provision of water service.

19 The City may also utilize a portion of the Telecommunications System to provide cable  
20 television service to customers within the Light Division service area, and to lease facilities or  
21 capacity to providers of video-on-demand, data transport, telephony, and other telecommunications  
22 services. This Court's previous Order determined that the City has the authority to engage in these  
23 activities, and that the Bond Ordinance was properly enacted.

24 The Light Division, with the assistance of numerous experts, has prepared a comprehensive  
25 Telecommunications Study. The City has recently adopted resolutions approving this Study and  
26

1 authorizing the Light Division to proceed with implementation. See Exhibits A, B, and C to Second  
2 Athow Decl. (Public Utility Board Resolution No. Substitute U-9258; City Council Substitute  
3 Resolution No. 33668; and Public Utility Board Amended Substitute Resolution No. U-9258.) The  
4 City Council acted unanimously after substantial public participation.

5 The Telecommunications Study incorporates a comprehensive business plan outlining the  
6 proposed services, operations, organizational structure and finances of the Telecommunications  
7 System. See Exhibit D to Second Athow Decl. (Telecommunications Study notebook), eleventh  
8 through sixteenth tabs. The chief concern raised by defendants' opposition on the previous summary  
9 judgment motion was the absence of such a plan. That objection has now been fully met.

## 10 V. ARGUMENT

### 11 A. Summary Judgment Standard

12 Summary judgment is appropriate to resolve actions or parts thereof when no genuine issues  
13 of material fact exist or when only a question of law exists. CR 56(c). "The burden is on the moving  
14 party to demonstrate that there is no issue as to a material fact." *Scott v. Pacific West Mountain*  
15 *Resort*, 119 Wn. 2d 484, 502-03 (1992). If the party seeking summary judgment successfully carries  
16 its initial burden, the burden shifts to the non-moving party to establish the existence of the facts on  
17 which it has the burden of proof at trial. *Young v. Key Pharmaceuticals, Inc.*, 112 Wn. 2d 216, 225  
18 (1989). The non-moving party must respond with specific facts and cannot rely on bare allegations.  
19 *Baldwin v. Sisters of Providence*, 112 Wn. 2d 127, 132 (1989). Conclusory statements or  
20 argumentative assertions are insufficient to raise an issue of fact. *Grimwood v. University of Puget*  
21 *Sound, Inc.*, 110 Wn. 2d 355, 359-60 (1988).

1 In the instant case, there are no issues of material fact relating to the City's authority to issue  
2 bonds. The City's authority to provide cable television service and to lease telecommunications  
3 facilities and capacity to telecommunications providers has already been confirmed. Only questions of  
4 law remain. The case should therefore be resolved on summary judgment.

5 **B. The City's Plans for the Telecommunications System Are Not Subject to Judicial**  
6 **Review in the Absence of Bad Faith, Fraud or Ultra Vires Actions.**

7 Judicial review of the legislative actions of Washington municipalities is extremely limited.  
8 The leading case on the question of judicial review of municipal legislative actions is *Blade v. La*  
9 *Conner*, 167 Wn. 403 (1932). In *Blade*, as in the instant case, a taxpayer sought to enjoin a town  
10 from issuing bonds for purposes of a utility project. *Blade* involved the acquisition of a water plant.  
11 In considering whether the town had authority to issue the bonds. The court declined to consider  
12 whether the plant could supply an adequate amount of water. As the court explained, "It is well  
13 settled that a court of equity will not review the action of the legislative authority of a municipality as  
14 to such matters as rest within its discretion unless fraud or bad faith are shown, or unless the action  
15 taken is clearly ultra vires." *Id.* at 407.

16  
17 In *City of Bremerton v. Kitsap County Sewer District*, 71 Wn. 2d 689 (1967), the court  
18 refused to consider claims remarkably similar to the defendant's suggestion here that proposed utility  
19 facilities may not be needed. *Bremerton* involved a sewer district's claim that installation of municipal  
20 water mains was illegal because there was no need for such mains. *Id.* at 704. Citing *Blade*, the  
21 court stated that its role was to determine only whether the city had authority to regulate and control  
22  
23  
24  
25  
26

1 the use, distribution and price of its water service. *Id.*<sup>1</sup> Because this Court has already confirmed  
2 Tacoma's authority to develop the Telecommunications System no further inquiry is warranted.

3 The sole question on this motion for summary judgment is whether the City has authority to  
4 issue bonds to finance an activity that is indisputably within its municipal powers: construction and  
5 operation of the Telecommunications System. Thus, no claim of ultra vires action can be sustained.  
6 Moreover, there has been no showing of bad faith or fraud. The City's actions are entitled to a  
7 presumption of good faith a defendants have the burden of proving otherwise. *Blade*, 167 Wash. At  
8 408. Therefore the Court must defer to the City's judgment on the desirability of constructing and  
9 operating the Telecommunications System and the means of doing so.  
10

11 **C. The City Has Authority Under Washington Statute To Issue Bonds for the**  
12 **Telecommunications System.**

13 Washington first-class cities may issue bonds for *any* lawful corporate purpose, RCW  
14 35.22.280(4). This Court has already determined that construction and operation of the  
15 Telecommunications System is a lawful corporate purpose of the City. *See* Order. Thus, the City  
16 may issue the Bonds to finance construction and operation of the Telecommunications System.  
17 Accordingly, this Court must find that the City has the authority to issue the Bonds for the purpose of  
18 financing construction and operation of the Telecommunications System.

19 **VI. CONCLUSION**

20 As this Court has determined, the City has authority to provide cable television service in the  
21 Light Division service area; and to lease telecommunications facilities and capacity to  
22

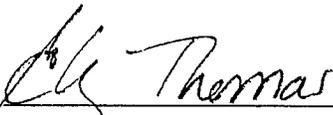

23 <sup>1</sup> *Accord Rowan v. Convention Center*, 78 Wn. App. 322, 329 (1995) (if municipal corporation's  
24 actions come within purpose and object of enabling statute and no express limitations apply, court  
25 leaves choice of means used in operating corporation to discretion of municipal authorities, and  
26 judicial review is limited to whether action is arbitrary, capricious or unreasonable); *Public Util. Dist.  
No. 1 v. City of Newport*, 38 Wn. 2d 221, 226 (1951) (desirability of city's operation of electrical  
distribution system that duplicated system of public utility district was "a problem for the  
legislature—not the courts.").

1 telecommunications providers. Thus development of the Telecommunications System is a lawful  
2 corporate purpose of the municipality. The only remaining issue is whether the City may issue  
3 revenue bonds to construct the Telecommunications System. Because the City may issue bonds for  
4 any lawful municipal purpose, it may issue bonds to finance the Telecommunications System. The  
5 Defendants have not alleged bad faith or fraud on the part of the City. The City is entitled to  
6 judgment as a matter of law that it has authority to issue bonds for the purpose of financing  
7 construction and operation of the Telecommunications System.

8 DATED this 11th day of April, 1997.

MEMORANDUM IN SUPPORT OF CITY  
OF TACOMA'S MOTION FOR  
SUMMARY JUDGMENT

~~RECEIVED~~

~~APR 14 1997~~

~~THOMPSON, KRILICH, LAPORTE  
TACOMA, WASH. WEST INC., P.S.~~

## I. INTRODUCTION

The City of Tacoma (the "City") brought this declaratory judgment class action under RCW 7.24 and 7.25 and CR 23(B)(2) to confirm its authority to issue bonds for the purposes of constructing and operating a telecommunications system consisting of a hybrid fiber coaxial network (the "Telecommunications System").

On December 13, 1996, this Court ruled on four of the City's five requested declarations. The Court held that (1) the Court has jurisdiction over the subject matter and parties in this action; (2) Tacoma Ordinance No. 25930 (the "Bond Ordinance"), which provides for the issuance and sale of Electric System revenue bonds in the aggregate principal amount of \$1,000,000 (the "Bonds") in order to finance the first phase of constructing and operating the Telecommunications System, was properly enacted; (3) the City has authority under the laws of the State of Washington and the United

PRESTON GATES & ELLIS LLP  
5000 COLUMBIA CENTER  
701 FIFTH AVENUE  
SEATTLE, WASHINGTON 98104-7078  
TELEPHONE: (206) 623-7580  
FACSIMILE: (206) 623-7022

1 States to provide cable television service in the service area of the Light Division of the City's  
2 Department of Public Utilities (the "Light Division"); and (4) the City has authority under the laws of  
3 the State of Washington and the United States to lease telecommunications facilities and capacity to  
4 telecommunications providers. See Order Granting City of Tacoma's Motion for Summary Judgment  
5 dated December 13, 1996 (the "Order").

6 Only one issue remains: Whether the City has authority to issue revenue bonds to finance the  
7 first phase of construction and operation of the Telecommunications System. The City is entitled to  
8 summary judgment on this final issue. Issuing the bonds is a legislative act subject to review only for  
9 such deficiencies as fraud, bad faith, or ultra vires actions. Through the Order, the Court has already  
10 determined that construction and operation of the Telecommunications System is not ultra vires. No  
11 facts relation to fraud, bad faith, etc. have bee alleged.

## 12 II. RELIEF REQUESTED

13 The City requests that the Court enter judgment declaring that:

- 14 1. The City has authority under the laws of the State of Washington to issue revenue  
15 bonds for the purposes of financing a telecommunications system to provide cable  
16 television service in the Light Division Service area and lease telecommunications  
17 facilities and capacity to telecommunications providers.

## 18 III. STATEMENT OF ISSUE

- 19 1. Whether the City may issue revenue bonds under the properly enacted Bond  
20 Ordinance for the purposes of providing cable television service and leasing telecommunications  
21 facilities and capacity pursuant to the authority confirmed by this Court's previous Order.

## 22 IV. EVIDENCE RELIED UPON

23 The City believes that the following facts are undisputed in every material respect. These  
24 facts are contained in the Declaration of Jon Athow in Support of Motion for Summary Judgment,  
25  
26

1 dated November 5, 1996 ("First Athow Decl.") and the Second Declaration of Jon Athow in Support  
2 of Motion for Summary Judgment dated April 11, 1997 ("Second Athow Decl.").

3 Plaintiff, the City of Tacoma, is a municipal corporation and a city of the first class of the  
4 State of Washington. The Defendants are taxpayers of the City and ratepayers of its electrical utility,  
5 the Light Division. Harold E. Nielsen, Jr., the taxpayer and ratepayer representative, is a resident and  
6 taxpayer of the City and a customer of the Light Division. The City currently owns and operates,  
7 through its Light Division, an electric utility (the "Electric System") for the purpose of providing  
8 electricity and other energy services throughout the City and other portions of Pierce County.

9 On July 23, 1996, the Tacoma City Council adopted Ordinance No. 25930 (the "Bond  
10 Ordinance"). The Bond Ordinance provides for the issuance and sale of Electric System revenue  
11 bonds in the aggregate principal amount of \$1,000,000 (the "Bonds") in order to finance the first  
12 phase of constructing and operating the Telecommunications System. The Telecommunications  
13 System will be used to improve the speed and capability of the existing real-time communications  
14 among certain Electric System substations, and to extend such real-time communications to the  
15 remaining substations. In addition, the Telecommunications System may be used to enhance such  
16 existing energy services as demand management, identification of outages, meter reading, billing and  
17 payment, and resource dispatch. The Telecommunications System may be used to perform similar  
18 functions for the City's provision of water service.

19 The City may also utilize a portion of the Telecommunications System to provide cable  
20 television service to customers within the Light Division service area, and to lease facilities or  
21 capacity to providers of video-on-demand, data transport, telephony, and other telecommunications  
22 services. This Court's previous Order determined that the City has the authority to engage in these  
23 activities, and that the Bond Ordinance was properly enacted.

24 The Light Division, with the assistance of numerous experts, has prepared a comprehensive  
25 Telecommunications Study. The City has recently adopted resolutions approving this Study and  
26

1 authorizing the Light Division to proceed with implementation. See Exhibits A, B, and C to Second  
2 Athow Decl. (Public Utility Board Resolution No. Substitute U-9258; City Council Substitute  
3 Resolution No. 33668; and Public Utility Board Amended Substitute Resolution No. U-9258.) The  
4 City Council acted unanimously after substantial public participation.

5 The Telecommunications Study incorporates a comprehensive business plan outlining the  
6 proposed services, operations, organizational structure and finances of the Telecommunications  
7 System. See Exhibit D to Second Athow Decl. (Telecommunications Study notebook), eleventh  
8 through sixteenth tabs. The chief concern raised by defendants' opposition on the previous summary  
9 judgment motion was the absence of such a plan. That objection has now been fully met.

## 10 V. ARGUMENT

### 11 A. Summary Judgment Standard

12 Summary judgment is appropriate to resolve actions or parts thereof when no genuine issues  
13 of material fact exist or when only a question of law exists. CR 56(c). "The burden is on the moving  
14 party to demonstrate that there is no issue as to a material fact." *Scott v. Pacific West Mountain*  
15 *Resort*, 119 Wn. 2d 484, 502-03 (1992). If the party seeking summary judgment successfully carries  
16 its initial burden, the burden shifts to the non-moving party to establish the existence of the facts on  
17 which it has the burden of proof at trial. *Young v. Key Pharmaceuticals, Inc.*, 112 Wn. 2d 216, 225  
18 (1989). The non-moving party must respond with specific facts and cannot rely on bare allegations.  
19 *Baldwin v. Sisters of Providence*, 112 Wn. 2d 127, 132 (1989). Conclusory statements or  
20 argumentative assertions are insufficient to raise an issue of fact. *Grimwood v. University of Puget*  
21 *Sound, Inc.*, 110 Wn. 2d 355, 359-60 (1988).

1 In the instant case, there are no issues of material fact relating to the City's authority to issue  
2 bonds. The City's authority to provide cable television service and to lease telecommunications  
3 facilities and capacity to telecommunications providers has already been confirmed. Only questions of  
4 law remain. The case should therefore be resolved on summary judgment.

5 **B. The City's Plans for the Telecommunications System Are Not Subject to Judicial**  
6 **Review in the Absence of Bad Faith, Fraud or Ultra Vires Actions.**

7 Judicial review of the legislative actions of Washington municipalities is extremely limited.  
8 The leading case on the question of judicial review of municipal legislative actions is *Blade v. La*  
9 *Conner*, 167 Wn. 403 (1932). In *Blade*, as in the instant case, a taxpayer sought to enjoin a town  
10 from issuing bonds for purposes of a utility project. *Blade* involved the acquisition of a water plant.  
11 In considering whether the town had authority to issue the bonds. The court declined to consider  
12 whether the plant could supply an adequate amount of water. As the court explained, "It is well  
13 settled that a court of equity will not review the action of the legislative authority of a municipality as  
14 to such matters as rest within its discretion unless fraud or bad faith are shown, or unless the action  
15 taken is clearly ultra vires." *Id.* at 407.

16  
17 In *City of Bremerton v. Kitsap County Sewer District*, 71 Wn. 2d 689 (1967), the court  
18 refused to consider claims remarkably similar to the defendant's suggestion here that proposed utility  
19 facilities may not be needed. *Bremerton* involved a sewer district's claim that installation of municipal  
20 water mains was illegal because there was no need for such mains. *Id.* at 704. Citing *Blade*, the  
21 court stated that its role was to determine only whether the city had authority to regulate and control  
22  
23  
24  
25  
26

1 the use, distribution and price of its water service. *Id.*<sup>1</sup> Because this Court has already confirmed  
2 Tacoma's authority to develop the Telecommunications System no further inquiry is warranted.

3 The sole question on this motion for summary judgment is whether the City has authority to  
4 issue bonds to finance an activity that is indisputably within its municipal powers: construction and  
5 operation of the Telecommunications System. Thus, no claim of ultra vires action can be sustained.  
6 Moreover, there has been no showing of bad faith or fraud. The City's actions are entitled to a  
7 presumption of good faith a defendants have the burden of proving otherwise. *Blade*, 167 Wash. At  
8 408. Therefore the Court must defer to the City's judgment on the desirability of constructing and  
9 operating the Telecommunications System and the means of doing so.  
10

11 **C. The City Has Authority Under Washington Statute To Issue Bonds for the**  
12 **Telecommunications System.**

13 Washington first-class cities may issue bonds for *any* lawful corporate purpose, RCW  
14 35.22.280(4). This Court has already determined that construction and operation of the  
15 Telecommunications System is a lawful corporate purpose of the City. *See Order*. Thus, the City  
16 may issue the Bonds to finance construction and operation of the Telecommunications System.  
17 Accordingly, this Court must find that the City has the authority to issue the Bonds for the purpose of  
18 financing construction and operation of the Telecommunications System.

19 **VI. CONCLUSION**

20 As this Court has determined, the City has authority to provide cable television service in the  
21 Light Division service area; and to lease telecommunications facilities and capacity to  
22

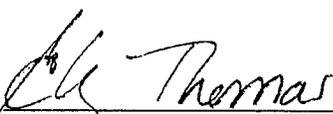

23 <sup>1</sup> *Accord Rowan v. Convention Center*, 78 Wn. App. 322, 329 (1995) (if municipal corporation's  
24 actions come within purpose and object of enabling statute and no express limitations apply, court  
25 leaves choice of means used in operating corporation to discretion of municipal authorities, and  
26 judicial review is limited to whether action is arbitrary, capricious or unreasonable); *Public Util. Dist.  
No. 1 v. City of Newport*, 38 Wn. 2d 221, 226 (1951) (desirability of city's operation of electrical  
distribution system that duplicated system of public utility district was "a problem for the  
legislature—not the courts.").

1 telecommunications providers. Thus development of the Telecommunications System is a lawful  
2 corporate purpose of the municipality. The only remaining issue is whether the City may issue  
3 revenue bonds to construct the Telecommunications System. Because the City may issue bonds for  
4 any lawful municipal purpose, it may issue bonds to finance the Telecommunications System. The  
5 Defendants have not alleged bad faith or fraud on the part of the City. The City is entitled to  
6 judgment as a matter of law that it has authority to issue bonds for the purpose of financing  
7 construction and operation of the Telecommunications System.

SECOND DECLARATION OF JON  
ATHOW IN SUPPORT OF MOTION FOR  
SUMMARY JUDGMENT

~~RECEIVED~~

~~APR 14 1997~~

~~THOMPSON, KRILICH, LAPORTE  
ATTORNEYS AT LAW~~

1. My name is Jon Athow. I am over the age of eighteen, competent to testify in this matter, and make this declaration based upon my own personal knowledge. I am employed by the Light Division of the City of Tacoma. My title is Telecommunications Project Manager. My responsibilities include planning for the creation and operation of a telecommunications system for the Light Division. I have been employed by the Light Division for three years.

2. The City of Tacoma, through its Light Division, is considering constructing and operating telecommunications facilities and services to enhance the Light Division's ability to provide highly reliable, cost-effective and convenient electric service to its customers. Such a system would also be capable of carrying other telecommunications services, including cable television service.

1           3.       The Light Division produced a Business Plan for the telecommunications system as a  
2 key element of its Telecommunications Study.

3           4.       The Telecommunications Study was unanimously approved by the Tacoma Public  
4 Utility Board on March 26, 1997. A copy of the Board's Substitute Resolution No. U-9258  
5 approving the Business Plan is attached as Exhibit A.

6           5.       On April 8, 1997 the Tacoma City Council held a public hearing on the proposed  
7 development of the telecommunications system and on the Business Plan. Public testimony was taken  
8 and the Council debated the matter for over two hours. Earlier the same day, the Council had  
9 conducted a three-hour workshop.

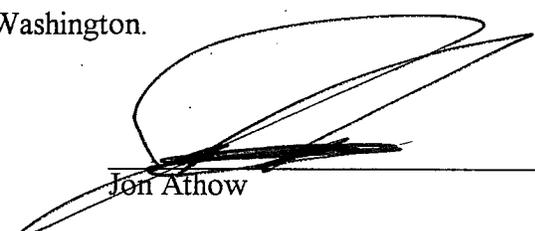

10          6.       The Telecommunications Study was unanimously approved by the Tacoma City  
11 Council on April 8, 1997. A copy of City Council Substitute Resolution No. 33668 approving the  
12 Telecommunications Study and authorizing implementation is attached as Exhibit B.

13          7.       On April 9, 1997 the Public Utility Board adopted Amended Substitute Resolution No  
14 U-9258 to conform the language of its resolution to City Council Substitute Resolution No. 33668.  
15 A copy of this Board Resolution is attached as Exhibit C.

16          8.       The Telecommunications Study is attached as Exhibit D. The Business Plan is  
17 comprised of all material contained behind the eleventh through sixteenth tabs.

18           I swear under the penalty of perjury of the laws of the State of Washington that the foregoing  
19 is true and correct.

20           Dated: April 11, 1997 at Tacoma, Washington.

WHEREAS the City Council and Public Utility Board will continue to be involved in the future decision-making on this proposal including construction contracts and debt financing approvals, quarterly reviews on-the project direction during the startup period, approval of agreements for use of City rights-of-way for telecommunications purposes which agreements will (to the extent required by law or City Council) treat the Light Division substantially similar to other franchises that the City grants for similar businesses, and

WHEREAS the City Council hereby finds and determines that the Light Division's proposal for a broad band telecommunications system is in the best interests of the City, will serve a public purpose, and should be approved and implemented; Now, therefore,

**BE IT RESOLVED BY THE COUNCIL OF THE CITY OF TACOMA:**

That the Council hereby finds and determines that the City Light Division's broad band telecommunications proposal is in the best interests of the City, will serve a public purpose and that the said Business Plan is sufficient and adequate, therefore, the Council hereby approves the Light Division's proposal including the Business Plan and the Department of Public Utilities, Light Division is hereby authorized to proceed to implement said proposal for a broad band telecommunications system, and

That the proposed broad band telecommunications system shall be owned, operated and controlled by the City of Tacoma Department of Public Utilities Light Division with the Public Utility Board providing oversight and approval of business and third party agreements, as appropriate under the City Charter, Tacoma Municipal Code and other applicable laws, and the City Council shall continue to be involved in the major policy decisions including

## RESOLUTION NO.

1  
2 WHEREAS the City of Tacoma, Department of Public Utilities,  
3 Light Division desires to: (1) develop a state-of-the-art fiber optic system  
4 to support enhanced electric system control, reliability and efficiency;  
5 (2) develop capability to meet the expanding telecommunications  
6 requirements in an evolving competitive electric market, the most critical of  
7 which is real-time, two-way interactive communications with individual  
8 energy consumers, (3) create greater revenue diversification through new  
9 business lines (i.e. internet transport, cable TV, etc.), (4) enhance  
10 traditional products and service, and (5) maximize return on Light Division  
11 assets, and

12 WHEREAS these desired capabilities can be provided with a broad  
13 band telecommunications system for all of the Light Division's service area,  
14 and

15 WHEREAS a broad band telecommunications system will have  
16 available capacity for future Light Division needs and will also have the  
17 capacity to provide Telecommunications services for data transport, high  
18 speed internet access, full cable television service, and other uses, and

19 WHEREAS the Light Division has retained consultants to review  
20 and analyze the feasibility of a broad band telecommunications systems for  
21 the Light Division's service area, and a business plan has been prepared  
22 for this purpose (copies are on file with the Clerk), and

23 WHEREAS the cost of constructing, installing and commencing to  
24 operate a broad band telecommunications system will be approximately  
25 \$65 million dollars, but the benefits to the Light Division, the City and the  
26 Light Division customers are projected to exceed and justify the initial cost,  
27 and

RATEPAYERS OF THE CITY OF  
TACOMA,

Defendants.

NO. 96-2-09938-0

**DEFENDANT'S RESPONSIVE  
MEMORANDUM IN OPPOSITION  
TO CITY OF TACOMA'S MOTION  
FOR SUMMARY JUDGMENT**

**Hearing Date: May 9, 1997**

**COMES NOW** the defendants, The Taxpayers and the Ratepayers of the City of Tacoma, by and through their attorneys of record, Heidi Imhof and Ronald E. Thompson, of the law offices of Thompson, Krilich, La Porte, Tucci & West, P.S., and submit their responsive memorandum in opposition to the City of Tacoma's Motion for Summary Judgment.

This response is supported by the records and files herein, the declaration of W. Cary Deaton, CPA, the declaration of Thomas G. Pagano, CPA, CVA, Declaration of Heidi Imhof authenticating excerpts from the April 8, 1997 City Council meeting and Article IV, Section 4.2 of the Tacoma City Charter and Verbatim Report of Proceedings dated December 13, 1996.

DEFENDANT'S RESPONSIVE MEMORANDUM IN

1 Plaintiff's motion for summary judgment should be denied because the plaintiffs have  
2 failed to meet their burden by demonstrating that there is no issue of material fact regarding  
3 the City's authority to issue bonds to finance the proposed telecommunications system  
4 project.

5 The City of Tacoma has based their entire motion on the simple proposition that  
6 because the Court has determined that the City has the authority to venture into the  
7 telecommunications area in the general sense, that it thereby may issue bonds to finance  
8 the construction and operation of their telecommunications project. What the City has failed  
9 to recognize is that the Tacoma City Charter places specific restrictions on the issuance of  
10 bonds and the financing of projects. Article IV, Section 4.2 of the Tacoma City Charter,  
11 requires that expenditures that are utilized for an addition to or betterment of any public utility  
12 must be submitted to a vote of the electorate when a general indebtedness may be incurred.  
13 (Declaration of Imhof regarding excerpts from Tacoma City Charter)  
14

15 The City has submitted nothing but a generalized financial plan with no degree of  
16 certainty whatsoever. Upon analysis by qualified experts in the field, W. Cary Deaton, CPA,  
17 and Tom Pagano, CPA, CVA, it was determined that the City's estimate of debt service on  
18 the revenue bonds based on today's interest rate are more than \$10,000,000 below true  
19 projections. In addition, the profits are overstated by \$154,468,000 over the 20 year  
20 projections. (Declaration of Pagano) In addition, the City had made absolutely no provisions  
21 for the payment of interest or the return of Tacoma City Light's initial \$30,000,000.00  
22 contribution to the project.  
23  
24

25 At the April 8, 1997 City Council meeting, Mr. Steve Klein, City Light Superintendent,

26  
DEFENDANT'S RESPONSIVE MEMORANDUM IN  
OPPOSITION TO CITY OF TACOMA'S MOTION  
FOR SUMMARY JUDGMENT- 2

heil13605\Response.sj

THOMPSON, KRILICH, LA PORTE,  
TUCCI & WEST, P.S.  
ATTORNEYS AT LAW

TACOMA, WASHINGTON 98402 5416

1 stated that the money that the City was investing in this project was being done to obtain the  
2 highest yield or return on investment for the ratepayers and taxpayers. However, the  
3 financial plan does not allow for any return on investment. Further, Mr. Klein stated that the  
4 money was being invested into the telecommunications system instead of buying down debt.  
5 (Declaration of Imhof excerpting April 8, 1997 City Council meeting) Isn't this another way  
6 of saying they are borrowing from Peter to pay Paul? The City is not paying down debt that  
7 would otherwise be done but for the funds being transferred to the telecommunications  
8 project. The City is still burdened with the cost of debt that could have been reduced or  
9 eliminated, but for the telecommunications project.  
10

11 Also, completely absent from Tacoma City Light's plan is an analysis of the risks to  
12 the taxpayers and ratepayers of Tacoma. It is the expert opinion of Mr. Pagano and Mr.  
13 Deaton that the business plan is based on invalid assumptions and cannot be supported  
14 under the AICPA guidelines or current events in the industry. The proposal represents a  
15 great financial risk and will cause a general indebtedness to the taxpayers and ratepayers  
16 of Tacoma that could only be paid by increasing the rates charged to the ratepayers for  
17 utilities or borrowing from the general fund.  
18

19 If the City were allowed to issue bonds to finance this project, they would be acting  
20 ultra virus. Under the Tacoma City Charter, the expenditure of funds and issuance of bonds  
21 in the cases like these must go to a vote of the people. When the proposed "revenue"  
22 bonds cannot be paid off with the revenues from non-utility services such as cable television  
23 and telephony services, the ratepayers and taxpayers in the city of Tacoma will have to pay  
24 the tab. They will pay the tab by paying increased utility rates or borrowing from the general  
25

fund.

1 Tacoma City Light's telecommunications project has many of the same characteristics  
2 as the WPPSS nuclear power plan construction project. In WPPSS, the plans to construct  
3 the nuclear power plants and the power needs did not proceed as projected and the  
4 revenues bonds could not be paid off. Similarly in this case, if the telecommunication project  
5 does not proceed exactly as projected by Tacoma City Light, the bond debt will not be able  
6 to be serviced with the revenues from the telecommunication project and the ratepayers and  
7 taxpayers would be burdened with that debt. The risk of debt is just too high for the City to  
8 be entering into this project without voter approval.

9  
10  
11 The municipal bond issue is extremely important. The credit rating of cable  
12 companies is normally substandard and risky, and the city of Tacoma has not even  
13 considered the affect of a lower credit rating for their municipal bonds. (Declaration of W.  
14 Cary Deaton) The City of Tacoma has been proceeding full speed ahead with this project  
15 with a blind eye towards the legality of issuing bonds on this project. Mr. Steve Klein, City  
16 Light Superintendent, still doesn't know how much the project will cost or where exactly the  
17 money is coming from or what it is being spent on. (Excerpts from City Council meeting  
18 dated 4/8/97)

19  
20 If and when this telecommunications system is finished, only 3% of the revenues to  
21 pay for the system will come from utility services. This project cannot be paid for without  
22 cable television and internet services. Yet, on page three (3) of the City's own motion they  
23 state only that they "may . . . provide cable television service."

24  
25 Even with providing cable television services, the City's financial plan is seriously

26  
DEFENDANT'S RESPONSIVE MEMORANDUM IN  
OPPOSITION TO CITY OF TACOMA'S MOTION  
FOR SUMMARY JUDGMENT- 4

hei\13605\Response.sj

THOMPSON, KRILICH, LA PORTE,  
TUCCI & WEST, P.S.

1 flawed in its income projections to the tune of an overstatement of \$154,468,000 in the 20  
2 year plan. (Declaration of W. Cary Deaton) In addition, the debt service payments  
3 contemplated on the revenue bonds are at least \$10,000,000 short. (Declaration of W. Cary  
4 Deaton) The City's projections ignore current trends with regard to technology, regulations  
5 and competition. This is not a classroom exercise, this is reality and the fact of the matter  
6 is that this telecommunications project will backfire and the ratepayers will be stuck with the  
7 debt if the City is allowed to issue bonds based on their "dreamland" financial plan. Although  
8 the City Council voted to enter into the telecommunications project, they did so with  
9 reservation about the financing.  
10

11 The Court has already determined that the City has the authority to generally enter  
12 into the field of telecommunications, but it does not necessarily follow that the City has  
13 authority to issue revenue bonds for the project. To issue revenue bonds there must be a  
14 degree of certainty that those revenues will be received to service the bond debt. In this  
15 case, there is absolutely no degree of certainty that there will be enough revenue to service  
16 the bonds. That certainty is not present. This court has not and cannot determine on  
17 summary judgment that the City has authority to issue bonds when they will, in all likelihood,  
18 generally in debt the ratepayers and taxpayers of Tacoma. The bond issuance must go to  
19 a vote of the people. The Tacoma City Charter, Article IV, § 4.2 provides for such a vote  
20 and the charter should be followed. If the charter provisions are not followed, the City would  
21 be exceeding its authority to issue the revenue bonds; the City would be acting ultra vires.  
22 Based on the Declaration of W. Cary Deaton, CPA, the Declaration of Thomas G. Pagano,  
23 CPA, CVA, the Tacoma City Charter, and the excerpts from the April 8, 1997 City Council  
24  
25

meeting, the plaintiff's motion for summary judgment should be denied.

I.

**SUMMARY JUDGMENT LAW**

In ruling on a motion for summary judgment the court's function is to determine whether a genuine issue of material fact exists, not to resolve factual issues on their merits. Balise v. Underwood, 62 Wn.2d 195, 381 P.2d 966 (1963). The summary judgment procedure may not be used to try an issue of fact. Thomas v. C.J. Montag & Sons, Inc., 54 Wn.2d 20, 337 P.2d 1052 (1959).

In ruling on a motion for summary judgment, the court must consider all of the material evidence and all inferences from the evidence most favorably to the non-moving part and, when so considered, if reasonable persons might reach different conclusions, the motion should be denied. Scott v. Pacific West Mountain Resort, 119 Wn.2d 484, 834 P.2d 6 (1992); Wood v. Seattle, 57 Wn.2d 469, 358 P.2d 140 (1960). A corollary to this principle is that even though evidentiary facts are not in dispute, if different inferences or conclusions may be drawn from them as to ultimate facts such as intent, knowledge, good faith, or negligence, summary judgment is not warranted. Preston v. Duncan, 55 Wn.2d 678, 349 P.2d 605 (1960); Money Savers Pharmacy, Inc. v. Koffler Stores (Western) Ltd., 37 Wn. App. 602, 682 P.2d 960 (1984).

Washington Civil Procedure Deskbook, Volume III, Chapter 56.6(6)(a), pages 56-23-24, F. Ross Boundy and Diana V. Blakney (Wash. St. Bar Assoc. 1992).

The non moving party is not required to submit responsive pleadings. "A genuine issue as to the credibility of the movant's evidence requires denial of a motion for summary judgment." Balise v. Underwood, 62 Wn.2d 195, 381 P.2d 966 (1963); Gingrich v. Unigard Security Insurance, 57 Wn. App. 424, 788 P.2d 1096 (1990). Courts have also denied summary judgment "when complicated questions or important public issues are to be resolved. 10A C. Wright, A. Miller & M. Kane, Federal Practice and Procedure § 2739 (2d ed. 1983)." Washington Civil Procedure Deskbook, Volume III, § 56.6(5)(b), page 56-22.

DEFENDANT'S RESPONSIVE MEMORANDUM IN  
OPPOSITION TO CITY OF TACOMA'S MOTION  
FOR SUMMARY JUDGMENT- 6

hei13605\Response.sj

THOMPSON, KRILICH, LA PORTE,  
TUCCI & WEST, P.S.  
ATTORNEYS AT LAW  
524 TACOMA AVE. SO.  
TACOMA, WASHINGTON 98402-5116

1 On review, appellate courts have been reluctant to sustain an entry of summary  
2 judgment where there is a potential for factual dispute or significant disputed inferences from  
3 those facts.

4 In this case, not only do we have a factual dispute regarding the financial forecasts  
5 and projections in the City of Tacoma's telecommunications plan, but there is also a dispute  
6 as to the validity of the business financial plan itself with respect to its noncompliance with  
7 the generally accepted accounting procedures published by the American Institute of  
8 Certified Public Accountants for the standards in forecasts and projections of financial  
9 business plans.

10 When considering all of the material evidence and all inferences from the evidence  
11 in a light most favorable to the defense, a reasonable person could conclude that the City  
12 would be exceeding its authority if a \$1,000,000 revenue bond was issued to fund a  
13 \$67,000,000 project when the financial plan for that project has been determined by experts  
14 in the field to fall \$154,468,000 short in total income projections over a 20 year period.  
15 Reasonable minds could conclude that there would not be the revenue funds available to  
16 service the debt and that the City and therefore the taxpayers and ratepayers would then be  
17 burdened with the debt. Therefore, the City's motion for summary judgment should be  
18 denied.  
19  
20

## 21 II.

### 22 ARGUMENT

23 Based on an expert review of Tacoma City Light's business financial plan for the  
24 telecommunication project, there are serious questions as to the validity of that financial plan.  
25  
26

DEFENDANT'S RESPONSIVE MEMORANDUM IN  
OPPOSITION TO CITY OF TACOMA'S MOTION  
FOR SUMMARY JUDGMENT- 7

heil136051Response.sj

THOMPSON, KRILICH, LA PORTE,  
TUCCI & WEST, P.S.  
ATTORNEYS AT LAW  
524 TACOMA AVE. SO.  
TACOMA, WASHINGTON 98402-5416

1 (Declaration of W. Cary Deaton, CPA; Declaration of Thomas G. Pagano, CPA, CVA) Filed  
2 herewith and incorporated by reference into this memorandum are the declarations of W.  
3 Cary Deaton, CPA, and Thomas G. Pagano, CPA, CVA. Mr. Deaton and Mr. Pagano each  
4 analyzed two different areas of the City's Telecommunications Plan.

5 **A. THERE ARE ISSUES OF FACT RE: FINANCING OF TACOMA CITY LIGHT'S**  
6 **PROJECTED FINANCIAL STATEMENTS**

7 Mr. Deaton primarily focused on the debt service of the bonds, the financing for the  
8 project, and the pro-forma cash budget. Throughout Mr. Deaton's declaration, he sets forth  
9 many issues of fact with regard to the inadequacy of the financial plan prepared by the City.  
10 He states that generally accepted accounting procedures were not followed in the City's  
11 financial plan. (Declaration of W. Cary Deaton)

12 Based on Mr. Deaton's preliminary review of the City's financial plan, the projections  
13 by the City were based on invalid assumptions that cannot be substantiated in the light of  
14 current events. (Declaration of W. Cary Deaton) Mr. Deaton estimated that the projected  
15 debt service on the proposed revenue bonds is understated by \$10,000,000.00 and that no  
16 return on investment has been provided for the \$30,000,000.00 to be invested by the City.  
17 (Declaration of W. Cary Deaton) Mr. Deaton concluded that the shortfalls in the City's plan  
18 will cause a general indebtedness to the City and the ratepayers and taxpayers will be  
19 funding this loss through increased utility rates or borrowing from the general fund.  
20 (Declaration of W. Cary Deaton)

21  
22  
23 **B. THERE ARE ISSUE OF FACT RE: THE SALES AND EXPENSE PORTION OF**  
24 **THE TACOMA CITY LIGHT'S PROJECTED FINANCIAL STATEMENTS**

25 Mr. Pagano primarily focused on only five (5) line items in the City's Pro-Forma

1 Income Statement. After analysis, he concluded that the City's projected profits should be  
2 reduced by approximately \$154,468,000 over the 20 year projections. (Declaration of  
3 Thomas G. Pagano) This is a 41.7% decrease in operating profits. (Declaration of Thomas  
4 G. Pagano)

5 Mr. Pagano's declaration sets forth a detailed explanation of the analysis and  
6 conclusions reached when reviewing the City's financial plan. Mr. Pagano's declaration is  
7 hereby incorporated in this memorandum by reference. Mr. Pagano analyzed the City's pro-  
8 forma income statement based on the current market and regulations in the industry.  
9 (Declaration of Thomas G. Pagano) Based on his analysis he concluded that the City's pro-  
10 forma income statement was seriously flawed from the feasibility perspective. First, the City  
11 overstated the number of cable TV subscribers which would result in a \$62,444,000.00  
12 decrease in revenue based on the current market. Second, the City overstated projected  
13 revenues from telephone and data transport by 25% based on imminent FCC regulations.  
14 Third, the City overstated residential data transport revenues by a total of \$33,595,000 based  
15 on the prevailing costs of such services in the local market. Finally, the City underestimated  
16 its marketing costs by \$15,761,000 based on the current marketing costs for other  
17 companies in the industry.  
18  
19

20 The bottom line is that the City will not be able to achieve the projected revenues as  
21 set forth in their pro-forma income statement. (Declaration of Thomas G. Pagano) Mr.  
22 Pagano concluded that if the City's revenue projections were not met, the City would not be  
23 able to service the revenue bond debt and the debt would have to be paid either out of the  
24 City's general fund or by an increase in the utility rates to the ratepayers and taxpayers of  
25

26 DEFENDANT'S RESPONSIVE MEMORANDUM IN  
OPPOSITION TO CITY OF TACOMA'S MOTION  
FOR SUMMARY JUDGMENT- 9

heil13605\Response.sj

THOMPSON, KRILICH, LA PORTE,  
TUCCI & WEST, P.S.  
ATTORNEYS AT LAW  
524 TACOMA AVE. SO.

1 Further, if the City decides not to enter into the cable television service industry, there  
2 is absolutely no possibility whatsoever that this project could be paid for from the utility  
3 revenues. (Declaration of Thomas G. Pagano, CPA, CVA)

4 **III.**

5 **CONCLUSION**

6 The City argues that it has the sole authority to determine whether the  
7 telecommunications project is in the best interests of the ratepayers. The issue before this  
8 court on summary judgment is whether the City has authority to issue revenue bonds for the  
9 project as set for in the City's financial plan.

10  
11 **QUESTION:** Under the Tacoma City Charter, does the City have authority to issue  
12 bonds for a project without a vote of the people when the financial feasibility of the  
13 project is not certain?

14 **ANSWER:** No.

15 The City's motion for summary judgment should be denied. The City's financial plan  
16 is not feasible. The City has overstated their expected operating profit by 41.7% or  
17 \$154,468,000. This project will generally in debt the City and the issuance of bonds must  
18 go to a vote of the people pursuant to Article IV, § 4.2 of the Tacoma City Charter.

19 Under the City's financial plan, if the revenues projected are not achieved, the City will  
20 be in a state of general indebtedness and the debt would be serviced either from the general  
21 fund or the ratepayers and taxpayers of Tacoma will be funding this loss through increased  
22 utility rates. (Declaration of W. Cary Deaton, CPA; Declaration of Thomas G. Pagano, CPA,  
23 CVA)

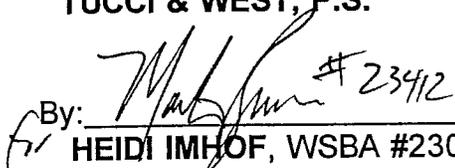

24 The cable television service and the telephony services are not incidental to the City's  
25

1 telecommunication upgrades, they are essential. If the City cannot or do not achieve the  
2 income projected for these services in their financial plan, the telecommunications project  
3 will not pay for itself. The City and its taxpayers/ratepayers will not be getting the highest  
4 yield or return on their money. The upgrades that the City is making to the current system  
5 will only generate at most 3% of the total funds necessary to pay for the project from utility  
6 services. The remaining funds must be generated by non utility services such as cable  
7 television and data transportation. The City does not have a feasible financial plan for  
8 obtaining the necessary income from these non utility services. Based upon an expert  
9 analysis, the City has overestimated their operating income by 41.7% or \$154,468,000.00,  
10 after analyzing only five (5) line items in the City's pro-forma income statement. We can only  
11 speculate as to the impact of subjecting the remaining fifteen (15) line items to the same  
12 scrutiny. There are clearly issues of fact regarding whether or not the City would be  
13 exceeding its authority by issuing revenue bonds based on the current financial plan.  
14

15 The City cannot be allowed to issue a \$1,000,000.00 revenue bond to fund a project  
16 that will cost many millions more without an adequate degree of certainty that there will be  
17 revenues available to pay the debt. By issuing such bonds, the City would be exceeding its  
18 authority; the City would be acting ultra-vires.

No. 96 2 09938 0

CITY OF TACOMA'S REPLY BRIEF

I. INTRODUCTION

The City of Tacoma (the "City") has moved for summary judgment on the fifth of five issues brought in this action:<sup>1</sup> Whether the City has authority to issue revenue bonds to finance the first phase of construction and operation of a telecommunications system consisting of a hybrid fiber coaxial network (the "Telecommunications System"). In its Motion on this final issue, the City

<sup>1</sup> On December 13, 1996, this Court ruled on four of the City's five requested declarations. The Court held that (1) the Court has jurisdiction over the subject matter and parties in this action; (2) Tacoma Ordinance No. 25930 (the "Bond Ordinance"), which provides for the issuance and sale of Electric System revenue bonds in the aggregate principal amount of \$1,000,000 (the "Bonds") in order to finance the first phase of constructing and operating the Telecommunications System, was properly enacted; (3) the City has authority under the laws of the State of Washington and the United States to provide cable television service in the service area of the Light Division of the City's Department of Public Utilities (the "Light Division"); and (4) the City has authority under the laws of the State of Washington and the United States to lease telecommunications facilities and capacity to telecommunications providers. See Order Granting City of Tacoma's Motion for Summary Judgment dated December 13, 1996 (the "Order").

1 explained how issuing the bonds is a legislative act subject to review only for such deficiencies as  
2 fraud, bad faith, or ultra vires actions. The City noted that no facts relating to fraud, bad faith, etc.,  
3 have been alleged and that through the Order, the Court has already determined that construction and  
4 operation of the Telecommunications System is not ultra vires.

5 Defendants' responsive brief did not take issue with any of these points. Nor did their brief  
6 attempt to show facts sufficient to satisfy the stringent legal standard for review of legislative acts.  
7 Defendants' sole legal argument is that the Tacoma City Charter (the "Charter") requires a public  
8 vote authorizing issuance of the Bonds. However, the Charter does not require a vote of the people  
9 under the facts of this case because no such vote is required for the issuance of *revenue* bonds.

10 Defendants' brief also argues extensively that revenues from the Telecommunications System  
11 may be inadequate to cover debt service on the Bonds. This factual argument is simply not material  
12 to the question of the City's authority to issue the Bonds, and therefore cannot raise a "genuine issue  
13 as to any *material* fact[.]" CR 56 (emphasis supplied). Moreover, the issue is outside of the scope of  
14 the Court's review.

## 15 II. STATEMENT OF ISSUES

16 1. Whether a Tacoma City Charter provision that requires a vote of the people to  
17 authorize certain general obligation bonds should be read to require such a vote for the issuance of  
18 Electric System revenue bonds for the first phase of the Telecommunications Project.

19 2. Whether the adequacy of revenues from the Telecommunications System is material to  
20 whether the Tacoma City Council acted within its legislative discretion in approving the Bond  
21 Ordinance and determining to proceed with the Telecommunications Project.

## 22 III. STATEMENT OF FACTS

23 For purposes of this Motion for Summary Judgment, the City accepts Defendants' truly  
24 factual statements. However, the Court should not consider Defendants' unsupported conclusions or  
25  
26

1 the statements of their experts that are beyond the scope of their expertise.<sup>2</sup> Many of Defendants'  
2 unsupported conclusions are belied by admissible evidence. For example, the brief makes an  
3 inflammatory and irrelevant reference to the Washington Public Power Supply System,<sup>3</sup> claiming that  
4 the Tacoma general fund and City taxpayers will be burdened with debt if Light Division revenues fail  
5 to cover debt service on the Bonds.

6 Defendants' have alleged no specific facts in support of their conclusion that the  
7 Telecommunications Project could become an obligation of the general fund. The Bond Ordinance  
8 expressly states that it provides "for the issuance and sale of the City's Electric System Revenue  
9 Bonds[.]" Complaint, Ex. 1, title page; *see also* id. at sections 1.2.B ("Bonds" defined to mean  
10 revenue bonds); 2.3 (Bonds' only lien is upon net revenues of electric system); 2.4 (finding that  
11 sufficient revenues over and above operation and maintenance will be available to pay debt service on  
12 Bonds); 3.1 and 4.7(a) (reiterating that the type of bond involved is a revenue bond).

13 The difference between revenue bonds and general obligation bonds is highly significant. The  
14 City's obligation under a revenue bond is limited to funds available from the Electric System (which  
15 includes the Telecommunications Project). Bond holders will buy a bond that says, "Principal of and  
16 interest on this bond are payable solely out of the special fund of the City known as the Electric  
17 System Revenue Bond Fund[.]" Bond Ordinance section 4.7(a). The bond will also make clear that  
18 the City is obligated to set aside only "Revenues of said Electric System" to pay off the bonds. *Id.*  
19 Thus, no general fund dollars are committed and no general obligation is incurred under the Bond  
20 Ordinance. By the same token, revenues from electric customers are retained by the Light Division  
21  
22

---

23 <sup>2</sup> Defendants' submission of a declaration from Mr. Pagano fails to comply with the rules for disclosure of  
24 experts. Defendants have not identified Mr. Pagano as a witness, despite the fact that the cutoff for disclosure of  
25 witnesses was in November 1996. The City was not aware that he had been retained prior to receiving Defendants  
26 response on this motion, and have had no opportunity to conduct discovery. Yet in order to put this matter before the  
Court expeditiously, the City is not seeking discovery at this time.

<sup>3</sup> *See* Defendants' Responsive Memorandum in Opposition to City of Tacoma's Motion for Summary Judgment  
("Defendants' Response") at 4.

1 and are not available to the General Fund. In sum, there is no exposure to the City general fund or  
2 City taxpayers.

3 In a similarly unsupported and unsupportable allegation, Defendants claim that the City has  
4 failed to fully consider the legality of the issuance of the Bonds. *See* Defendants' Response at 4.  
5 However, the whole purpose of this action is to ensure full consideration of whether the Bonds are  
6 legal prior to proceeding with the Telecommunications System.<sup>4</sup>

7 Defendants also assert that the City's financial projections ignore current trends with regard to  
8 technology, regulations and competition. *See* Defendants' Response at 5. This argument is  
9 immaterial for reasons detailed below. Moreover, the Telecommunications Study was prepared by a  
10 team of experts who devoted considerable attention to trends in the telecommunications industry.  
11 *See* Klein Decl. at Paragraphs 7-11. Defendants allege without benefit of supporting authority that  
12 the Tacoma City Council ("City Council") had reservations about financing the Telecommunications  
13 System. *See* Defendants' Response at 5. However, it is an undisputed fact that the City Council  
14 unanimously adopted the Resolution authorizing the City to proceed with the Telecommunications  
15 System.<sup>5</sup>

#### 16 IV. ARGUMENT

##### 17 A. To Defeat a Motion for Summary Judgment, Defendants Must Present Admissible 18 Evidence To Establish the Existence of an Issue of Material Fact.

19 Summary judgment is appropriate to resolve actions or parts thereof when no genuine issues  
20 of material fact exist or when only a question of law exists. CR 56(c). "The burden is on the moving  
21 party to demonstrate that there is no issue as to a material fact." *Scott v. Pacific West Mountain*  
22 *Resort*, 119 Wn. 2d 484, 502-03 (1992). If the party seeking summary judgment successfully carries  
23 its initial burden, the burden shifts to the non-moving party to establish the existence of the facts on

24 <sup>4</sup> The City's approach to this Telecommunications Project, seeking confirmation of its authority from this Court  
25 before proceeding, is markedly different from the course of events involving WPPSS. There, no declaration of  
26 authority was sought before construction began.

<sup>5</sup> Second Declaratoin of Jon Athow in Support of Motion for Summary Judgment dated April 11, 1997,  
("Second Athow Decl."), paragraph 6.

1 which it has the burden of proof at trial. *Young v. Key Pharmaceuticals, Inc.*, 112 Wn. 2d 216, 225  
2 (1989). The non-moving party must respond with specific facts and cannot rely on bare allegations.  
3 *Baldwin v. Sisters of Providence*, 112 Wn. 2d 127, 132 (1989). Conclusory statements or  
4 argumentative assertions are insufficient to raise an issue of fact. *Grimwood v. University of Puget*  
5 *Sound, Inc.*, 110 Wn. 2d 355, 359-60 (1988).

6 Defendants have presented no admissible evidence demonstrating the existence of an issue of  
7 material fact regarding the City's authority to issue the Bonds. Instead, they rely on unsupported  
8 conclusions and opinions of experts testifying beyond the scope of their expertise and on immaterial  
9 issues. Therefore, they have failed to make the showing necessary to defeat this summary judgment  
10 motion.

11 **B. Defendants Have Implicitly Accepted the City's Argument that the City's Plans for the**  
12 **Telecommunications System Are Not Subject to Judicial Review in the Absence of Bad**  
13 **Faith, Fraud or Ultra Vires Actions.**

14 Judicial review of the legislative actions of Washington municipalities is extremely limited.  
15 *See* City's Memorandum in Support of City of Tacoma's Motion for Summary Judgment at 2; *Blade*  
16 *v. La Conner*, 167 Wn. 403, 407 (1932) (holding court will not review action of municipal legislative  
17 authority as to such matters as rest within its discretion unless fraud or bad faith are shown, or unless  
18 action is clearly ultra vires). Defendants have conceded this point, as their Response does not dispute  
19 the City's description of the scope of review.

20 Defendants have merely contended that issuing the Bonds is financially risky.<sup>6</sup> They have not  
21 alleged fraud or bad faith. Defendants have not alleged that any action is ultra vires, aside from the

---

22 <sup>6</sup> Even if financial risk were material or within the scope of review, in enacting the Bond Ordinance, the City  
23 Council stated that "the City has determined that it is prudent and economical to provide additional capacity on [its]  
24 telecommunications system to provide the Electric System with sufficient capacity to perform and enhance such  
25 functions as automated meter reading and billing, appliance control, and load shaping . . . ." and found that sufficient  
26 revenues over and above operation and maintenance will be available to pay debt service on the Bonds. Ordinance at  
page 1 and section 2.4. Such City Council findings are presumed valid as long as they are reasonable. *Lenci v. City of*  
*Seattle*, 63 Wn. 664, 668 (1964). Defendants have provided no specific facts to overcome the presumption that the  
Council's determination was reasonable. By contrast, there is admissible evidence that the Council was aware of  
potential risks and was willing to accept them. Klein Del., paragraph 14.

1 asserted failure to comply with the Charter provision. Therefore, they have implicitly admitted that  
2 the City has authority to issue the Bonds if their Charter argument fails.

3  
4 **C. Charter Section 4.2 Is Irrelevant Because the Question of Whether the City May**  
5 **Finance the Telecommunications System with General Obligation Bonds Is Not Before**  
6 **the Court.**

7 Defendants claim that under the Tacoma City Charter, a vote of the people is required in order  
8 to incur general indebtedness for the Telecommunications Project. This may be true, but the  
9 argument is wholly misplaced. Under the Charter, no vote of the people is required for utility system  
10 acquisitions unless “general indebtedness is incurred by the city.”<sup>7</sup> The Bonds are revenue bonds.  
11 Under Washington law, the principal and interest on revenue bonds is payable only from specified  
12 municipal revenues, and such bonds “shall not constitute . . . a general obligation” of the municipal  
13 corporation. RCW 39.46.150. Therefore, no amount of argument over the assumptions and  
14 conclusions of the financial plan can convert the bonds at issue in this case from revenue bonds into  
15 general obligation bonds. No matter how poorly the Telecommunications Project might perform,  
16 holders of the Bonds would have no claim upon the general fund. Poor performance could not  
17 convert the Bonds from revenue bonds into general obligation bonds. Accordingly, no vote of the  
18 people is required for issuance of the Bonds.

19 The City could have chosen to issue general obligation bonds for the Telecommunications  
20 System. However, at this time, it has elected to issue only revenue bonds. If the City in the future  
21 wished to issue general obligations bonds as a funding source for the Telecommunications System,  
22 the Charter provision might apply. However, concerns about general obligation bonds at this point  
23 are purely speculative.

24 <sup>7</sup> The Charter provision upon which Defendants rely is Section 4.2 It provides:

25 The city may purchase, acquire, or construct any public utility system, or part thereof, or make any  
26 additions and betterments thereto or extensions thereof, without submitting the proposition to the voters,  
provided no general indebtedness is incurred by the city. If such indebtedness is to be incurred, approval by  
the electors, in the manner provided by state law, shall be required.

IV. CONCLUSION

This Court has already ruled that the City has authority to construct and operate a telecommunications system for purposes of enhancing electrical service and for providing telecommunications services and leasing telecommunications facilities and capacity. This Court's role is not to second-guess the City Council's and Public Utility Board's carefully considered decisions about whether and how the Telecommunications System should be developed. The only question before the Court is whether the City can issue revenue bonds to finance activities that, according to the Court, it is authorized to carry on. Defendants' sole legal argument, that the City must obtain a vote of the people for such bonds, fails because revenue bonds are not a "general obligation." Defendants' remaining factual arguments are either unsupported by admissible evidence or do not address the standard under which the Court must review legislative acts. Therefore, the Court should grant the City's Motion for Summary Judgment.

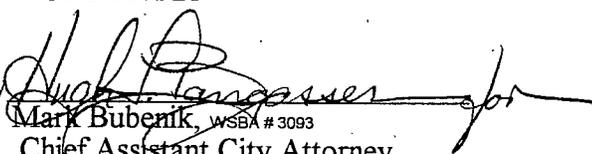

DATED this 5th day of May, 1997.

Respectfully submitted,

PRESTON GATES & ELLIS

DECLARATION OF STEVEN J. KLEIN  
IN SUPPORT OF CITY'S REPLY

v. )

THE TAXPAYERS AND THE RATEPAYERS )  
OF THE CITY OF TACOMA, )

Defendants. )

1. My name is Steve Klein. I am the Superintendent of the Light Division of Tacoma Public Utilities. The purpose of this declaration is to support the City of Tacoma's reply brief on its motion for summary judgment. I am over the age of eighteen, competent to testify in this matter, and make this declaration based upon my own personal knowledge.

2. The City of Tacoma, through its Light Division, plans to construct and operate telecommunications facilities and services to enhance the Light Division's ability to provide highly reliable, cost-effective and convenient electric service to its customers (the "Telecommunications Project"). Such a system would also be capable of carrying other telecommunications services, including cable television service.

DECLARATION OF STEVEN J. KLEIN  
IN SUPPORT OF CITY'S REPLY BRIEF- 1

J:\ET\24624-00.015\2FF33Z.DOC

COPY

1           3.       As my staff has described previously, the City adopted the Bond Ordinance  
2 (Complaint, Ex. 1) in July 1996 for the purpose of partially funding the Telecommunications Project.<sup>1</sup>  
3 The City's purpose in bringing this litigation is to test the validity of the Bond Ordinance, which  
4 provides for the issuance of revenue bonds only. The City is not asking the Court to determine  
5 whether the City could issue any other type of bonds.

6           4.       The Bond Ordinance unequivocally provides for the issuance of revenue bonds rather  
7 than general obligation bonds. The Bond Ordinance expressly states that it provides "for the issuance  
8 and sale of the City's Electric System Revenue Bonds[.]" Complaint, Ex. 1, title page; *see also* id. at  
9 sections 1.2.B ("Bonds" defined to mean revenue bonds); 2.3 (Bonds' only lien is upon net revenues  
10 of electric system); 2.4 (finding that sufficient revenues over and above operation and maintenance  
11 will be available to pay debt service on Bonds); 3.1 and 4.7(a) (reiterating that the type of bond  
12 involved is a revenue bond).

13           5.       The difference between revenue bonds and general obligation bonds is highly  
14 significant. The City's obligation under a revenue bond is limited to funds available from the Electric  
15 System (which includes the Telecommunications Project). Bond holders will buy a bond that says,  
16 "Principal of and interest on this bond are payable solely out of the special fund of the City known as  
17 the Electric System Revenue Bond Fund[.]" Bond Ordinance section 4.7(a). The bond will also  
18 make clear that the City is obligated to set aside only "Revenues of said Electric System" to pay off  
19 the bonds. *Id.* Thus, no general fund dollars are committed and no general obligation is incurred  
20 under the Bond Ordinance. By the same token, revenues from electric customers are retained by the  
21 Light Division and are not available to the General Fund.

22           6.       The only other funding source that is currently contemplated for the  
23 Telecommunications Project is a surplus of approximately \$40 million in the Light Division current  
24

25 \_\_\_\_\_  
26 <sup>1</sup> Declaration of Jon Athow in Support of Motion or Summary Judgment (Nov. 5, 1996),  
paragraph 15.

1 fund. This is the money that I mentioned at a City Council meeting on April 8, 1997.<sup>2</sup> This money is  
2 generated exclusively by Light Division activities, primarily sales of electric power. As I stated, that  
3 \$40 million might otherwise be used to buy down debt. But contrary to the unsupported implication  
4 of Defendants' Response, the money would only be used to buy down Light Division debt, not  
5 general fund or other City debt. Because the Telecommunications Project is an element of the  
6 Electric System, it will enhance the capability and value of the Electric System, and will be owned and  
7 operated by the Light Division, it is an appropriate investment for Light Division surplus.

8 7. The Light Division produced a Telecommunications Study<sup>3</sup> that includes a Business  
9 Plan. The Business Plan was *unanimously* approved by both the Tacoma Public Utility Board and the  
10 Tacoma City Council in April 1997.

11 8. The Business Plan is based upon assumptions that are fully substantiated in light of  
12 current trends in the telecommunications industry. It involved a review of the industry both nationally  
13 and locally. *Id.* at page 1. It was based on input from a wide range of experts. The  
14 Telecommunications Study, including the Business Plan, was prepared by a multidisciplinary group  
15 called the Telecommunications Study Team. This team of approximately twenty people included Jon  
16 Athow, other Light Division staff and outside consultants practicing in the areas of  
17 telecommunications, finance, business planning, marketing and the law.

18 9. The Telecommunications Study also included an economic development study  
19 produced expressly for purposes of analyzing whether the City should proceed with the  
20 Telecommunications Project. *See* Appendix D. Two of the five authors of this economic  
21 development study hold doctorate degrees, and the authors consulted with about 20 other  
22 professionals in the community.

23  
24  
25 <sup>2</sup> My comments are excerpted in the Declaration of Heidi Imhoff dated April 28, 1997.

26 <sup>3</sup> This study, which is contained in a three-ring binder, was submitted as Exhibit D to Jon Athow's declaration dated April 11, 1997.

1           10. Through the Telecommunications Study, the City carefully considered issues similar to  
2 those raised by Defendants' witnesses. *See, e.g.*, chapter on options (fifth section of Study). This  
3 section of the Study analyzes in detail the various options for telecommunications services from  
4 various private providers, considering such factors as types of service offered, current and potential  
5 technology utilized by different providers, projections for future growth and financial risk, investment  
6 profile, etc. This options analysis is thoroughly documented through 73 endnotes. *See also*  
7 Appendix B (Light Division response to TCI letter regarding municipal ownership of  
8 telecommunication and cable systems).

9           11. The members of the Utility Board and the members of the City Council participated  
10 actively in analysis of financial plan issues. After the Telecommunications Study was complete, they  
11 held a three-hour work session on the Telecommunications Project and entertained about two hours  
12 of public testimony and discussion before unanimously voting to proceed with the Project as set forth  
13 in the Study. Discussion was vigorous both at the work session and at the public hearing.

14           12. As Light Division staff explained to the Board and Council, and as the Council itself  
15 found in the Resolution approving the Project,<sup>4</sup> a key purpose of the Telecommunications Project is  
16 to protect and enhance the value of the Light Division's existing electric utility assets by having a  
17 telecommunications system that is sophisticated enough to enable the Light Division to compete  
18 effectively in the rapidly evolving electric industry. To fulfill this important purpose of protecting the  
19 value of existing Light Division *electric* assets, it is not at all necessary that the revenues from the  
20 provision of telecommunications and cable television services cover the entire cost of the  
21 Telecommunications Project.

22           13. The Council and Board were aware when they voted to proceed that revenues from  
23 the provision of telecommunications and cable services might fall short of projections. As Light  
24 Division staff informed the Board and Council, under a "worst case" shortfall, electric rates might

25 \_\_\_\_\_  
26 <sup>4</sup> This resolution as adopted is attached as Exhibit B to Jon Athow's declaration dated April 11,  
1997.

1 have to be increased by as much as 2.5%. This scenario assumed that we incurred all the cost of  
2 building the system but obtained no revenues from provision of cable television service or from  
3 provision of telecommunications service to third parties. This "worst case" scenario is significantly  
4 worse than the scenario that Defendants' experts present.

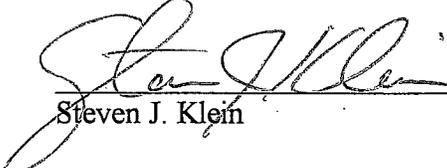

5 14. Light Division staff explained to the City Council our view that even if the  
6 Telecommunications Project's revenues fell short of projections, even to the point of a worst case  
7 scenario (resulting in a 2.5% rate increase), still the City should proceed with the Project in order to  
8 secure the value of the City's electric system assets. I believe that in voting to proceed with the  
9 Project, the Council fully understood and accepted the risk of an electric rate increase.

10 15. Thus, it is not terribly important whether the Telecommunications Project's own  
11 revenues will be sufficient to cover its costs. Similarly, although I believe our Financial Plan is very  
12 sound, including our assumptions regarding interest rates and other factors, whether we used  
13 precisely correct assumptions is not significant.

14 16. The important question is whether Light Division revenues will be sufficient to cover  
15 Telecommunications Project costs, since we are issuing electric system revenue bonds for the Project  
16 and other Project costs will be funded by accumulated Light Division revenues. Obviously, Light  
17 Division revenues are sufficient. Indeed, Light Division revenues are 40 times greater than worst-  
18 case Project costs. Thus there is zero possibility that the Telecommunications Project could  
19 somehow affect the City's general fund and its taxpayers.

20 I swear under the penalty of perjury of the laws of the State of Washington that the foregoing  
21 is true and correct.

22 Dated: May 5, 1997 at Tacoma, Washington.

IN THE SUPERIOR COURT OF WASHINGTON  
FOR PIERCE COUNTY

CITY OF TACOMA, a municipal corporation,  
Plaintiff,  
v.  
THE TAXPAYERS AND RATEPAYERS OF  
THE CITY OF TACOMA,  
Defendants.

No. 96 2 09938 0

~~(PROPOSED)~~  
ORDER GRANTING CITY OF  
TACOMA'S MOTION FOR  
SUMMARY JUDGMENT

This matter came on this day for hearing before the undersigned upon the City of Tacoma's ("City's") Motion for Summary Judgment. Plaintiff City of Tacoma appeared through its counsel, Elizabeth Thomas. Defendants Taxpayers and Ratepayers of the City of Tacoma appeared through their counsel, Ronald E. Thompson.

Counsel for the parties have drawn the Court's attention to the following documents: Summons, Complaint for Declaratory Judgment; Acceptance of Service; City of Tacoma's Motion for Summary Judgment; Memorandum in Support of Motion for Summary Judgment; Second Declaration of Jon Athow in Support of Motion for Summary Judgment; Defendants' Responsive Memorandum in Opposition to City of Tacoma's Motion for Summary Judgment; Declarations of Heidi Imhoff, Thomas Pagano, and Cary Deaton; City of Tacoma's Reply Brief; and Declaration of Steven J. Klein.

ORDER GRANTING CITY OF TACOMA'S  
MOTION FOR SUMMARY JUDGMENT - 1

J:\NET\24624-00.0152FP2XX.DOC

PRESTON GATES & ELLIS

1/11 however the court is making no finding as to the financial feasibility of the Project or as to the legality of any future bond issues. 11/6

1 Based on these documents, the Court finds that there is no genuine issue as to any material  
2 fact and that the facts set forth in the Declaration of Jon Athow <sup>and Steven J. Klein</sup> are true. M

3 Having considered the documents identified by the parties, the arguments of counsel and the  
4 record herein, the Court concludes that the following order should be entered.

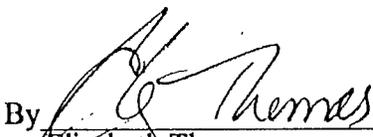

5 The City has authority under the laws of the State of Washington and the United States to  
6 <sup>B 1 million of revenue</sup> issue the Bonds for the purposes set forth in paragraphs (3) and (4) in this Court's Order dated  
7 December 13, 1996 and in the manner set forth in the Bond Ordinance.

8 DONE IN OPEN COURT this 9<sup>th</sup> day of May, 1997.

**L INTRODUCTION**

The City of Tacoma (the "City") brought this declaratory judgment class action under RCW 7.24 and 7.25 and CR 23(B)(2) to confirm its authority to issue bonds for the purpose of constructing and operating a telecommunications system consisting of a hybrid fiber coaxial network (the "Telecommunications System"). On July 23, 1996, the Tacoma City Council (the "City Council") adopted Ordinance No. 25930 (the "Bond Ordinance"), which authorized the sale of Electric System revenue bonds (the "Bonds") in order to finance the first phase of constructing and operating the Telecommunications System. The City will use the Telecommunications System to enhance electric service provided to customers of its Light Division. The City may also utilize a portion of the Telecommunications System to provide cable television service to customers in the Light Division service area, and may lease Telecommunications System facilities or capacity to providers of telecommunications services. On November 5, 1996, the City requested that this Court enter summary judgment declaring that:

1. The Court has jurisdiction over the subject matter and parties in this action.
2. The Bond Ordinance was properly enacted.
3. The City has authority under the laws of the State of Washington and the United States to provide cable television service in the Light Division service area.
4. The City has authority under the laws of the State of Washington and the United States to lease telecommunications facilities and capacity to telecommunications providers.
5. The City has authority under the laws of the State of Washington and the United States to issue the Bonds for the purposes set for in paragraphs (3) and (4) above and in the manner set forth in the Bond Ordinance.

In its Motion for Summary Judgment, the City argued that the only limitation under Washington law on the broad powers of a charter city is that its actions may not contravene the state constitution or statutes. The City asserted that a municipal utility has authority to engage in any undertaking necessary to make its system more efficient, as well as to undertake acts incidental to its primary function of providing utility service. The City also contended that Washington statutes and case law specifically provide municipal authority to offer telecommunications services and to lease city-owned telecommunications facilities. Finally, the City stated that the federal Telecommunications Act of 1996 requires that the state permit municipal cities to provide telecommunications services.

The Defendants did not take issue with any of these points in their responsive brief dated December 3, 1996. The Defendants' sole arguments against the City's Motion are that (1) the issues raised in the City's Summary Judgment Motion are not ripe for review by this Court; (2) the City has no authority to issue general obligation bonds to finance the Telecommunications System; and (3) the City has not demonstrated that it can conveniently provide telecommunications services to customers in the Light Division service area.

The issues presented by the City in its Summary Judgment Motion are ripe for review because the purpose of RCW 7.25 is to provide judicial review of the financing authority for municipal projects before such projects have been undertaken. The issue raised by the Defendants of whether the City has authority to issue general obligation bonds for the Telecommunications System is not before the Court and is purely speculative, because the City has no plans at this time to issue such bonds. Finally, the City has demonstrated through findings of the City Council and other evidence that it can conveniently provide telecommunications services to customers in the Light Division service area.

## II STATEMENT OF ISSUES

1. Whether issues raised by the City in its Summary Judgment Motion concerning the City's authority to provide cable television service and lease telecommunications facilities and capacity, and to issue bonds for such purposes, are ripe for review by this Court.

2. Whether the City's authority to issue general obligation bonds to finance the Telecommunications System is before this Court.

3. Whether the City has satisfactorily demonstrated that it can conveniently provide telecommunications services to customers of the Light Division service area.

## III ARGUMENT

### A. The Issues Raised by the City are Ripe for Review.

Defendants assert that this action is untimely because the City does not have a business plan or written proposal for its Telecommunications System. Defendants' Responsive Memorandum in Opposition to Motion for Summary Judgment at 2. Defendants appear to misunderstand the purpose of RCW Chapters 7.24 and 7.25, which permit a declaratory judgment action to test the validity of a bond ordinance as soon as the ordinance has been enacted. The purpose of these chapters is to settle the issue of municipal authority at the early stages of a project or to remove an uncertainty (RCW 7.24.050) in order to avoid jeopardizing the integrity of municipal finance.

The Washington courts have recognized that by providing for such actions, the statute designates municipal bonding controversies ripe as soon as a bond ordinance has been passed. As the Washington Supreme Court stated in *City of Spokane v. Taxpayers*, 111 Wn.2d 91 (1988):

Under RCW 7.25, a city may initiate a declaratory judgment action against its taxpayers in order to determine the validity of a bond issue. This would appear to be a determination that such actions would constitute a judicable controversy.

111 Wn.2d at 95 (internal citations omitted). If controversies over the validity of bonds were not ripe upon adoption of a bond ordinance, the purpose of RCW 7.25 would be defeated; a city would have

CITY OF TACOMA'S REPLY BRIEF - 4

C:\LAIR24624-00.01\REPLY.DOC

PRESTON GATES & ELLIS  
3000 COLUMBIA CENTER  
701 FIFTH AVENUE  
SEATTLE, WASHINGTON 98104-7078  
TELEPHONE: (206) 623-7500  
FACSIMILE: (206) 623-7022

1 to begin spending bond proceeds, at its peril, risking enormous dislocation if there were a later  
2 determination that the city lacked authority for the project that had been financed with the bonds.  
3 Thus, there is no merit to the Defendants' claim that the issues raised by the City are not ripe. All of  
4 the issues in the City's Summary Judgment motion revolve around the City's authority to issue the  
5 Bonds for the subject project.

6 **B. The Question of Whether the City May Finance the Telecommunications System with**  
7 **General Obligation Bonds Is Not Before the Court.**

8 Defendants claim that under the Tacoma City Charter, a vote of the people is required in order  
9 to incur general indebtedness. While this statement is accurate, Defendants' argument is wholly  
10 misplaced because the Bonds in issue are not "general indebtedness," which refers to general  
11 obligation bonds. Rather, they are revenue bonds. Under Washington law, the principal and interest  
12 on revenue bonds is payable only from specified municipal revenues, and such bonds "shall not  
13 constitute . . . a general obligation" of the municipal corporation. RCW 39.46.150.

14 Arguments relating to general obligation bonds are speculative because no general obligation  
15 bonds have been issued and perhaps none will be issued. Defendants note that Steve Klein,  
16 Superintendent of Tacoma City Light, acknowledged in his deposition that some of the funds for the  
17 Telecommunications System could come from general obligation bonds. Defendants' Responsive  
18 Memorandum at 2. However, a complete reading of the transcript of Mr. Klein's deposition shows  
19 that general obligation bonds are but one of a long list of potential funding sources for the  
20 Telecommunications System. Deposition of Steve Klein at 14-16 (copy attached as Exhibit A).  
21 Other sources include surplus cash of the Light Division, future revenues, revenue bonds, and a line  
22 of credit. *Id.* Mr. Klein stated, "At this point with the project not fully defined it's difficult to also  
23 proceed and to try to define how it might be funded, if in fact the project proceeds," *Id.* at 16.

24 If the City in the future were to choose general obligations bonds as a funding source for the  
25 Telecommunications System, the Charter provision might apply. However, at the moment only the  
26

FACSIMILE: (206) 623-7022

1 revenue bonds specifically authorized by the Bond Ordinance are at issue. Therefore, concerns about  
2 general obligation bonds at this point are simply speculative.

3 **C. The City Has Adequately Demonstrated its Ability To Conveniently Provide**  
4 **Telecommunications Services to Customers in the Light Division Service Area.**

5 The Defendants assert that the City has submitted no proof that it can conveniently render  
6 telecommunications services. Defendants' Responsive Memorandum at 6. However, in enacting the  
7 Bond Ordinance, the City Council stated that "the City has determined that it is prudent and  
8 economical to provide additional capacity on [its] telecommunications system to provide the Electric  
9 System with sufficient capacity to perform and enhance such functions as automated meter reading  
10 and billing, appliance control, and load shaping . . . ." Ordinance at 1. Such City Council findings are  
11 presumed valid as long as they are reasonable. *Lenci v. City of Seattle*, 63 Wn. 664, 668 (1964).<sup>1</sup>

12 The City has offered additional evidence of its ability to conveniently provide  
13 telecommunications services to customers in the Light Division service area. Jon Athow,<sup>2</sup>  
14 Telecommunications Project Manager for the Light Division, stated that the infrastructure for a  
15 telecommunications system designed to meet the needs of the Electric System represents a substantial  
16 portion of the costs of a system that also includes the additional telecommunications capacity and  
17 facilities that the City is considering. Deposition of Jon Athow at 28-30. In addition, Mr. Athow has  
18 stated that the City could provide such services efficiently because its good credit rating gives it  
19 access to relatively inexpensive capital. *Id.* at 31. This evidence is sufficient to demonstrate the  
20 City's ability to conveniently provide telecommunications services to customers within the Light  
21 Division service area.

22  
23  
24 <sup>1</sup> See also *Homes Unlimited, Inc. v. City of Seattle*, 90 Wn.2d 154, 158 (1978); *City of Spokane v. Carlson*, 73 Wn.2d  
76, 80 (1968).

25 <sup>2</sup> The Defendants contend that Mr. Athow is not an authorized spokesperson for either the City or the Light Division.  
26 Defendants' Responsive Memorandum at 1. Mr. Athow is authorized to serve as a spokesperson on matters within the  
scope of his employment as project manager for the Telecommunications System.

24  
25  
26

Each of the issues presented by the City in its Summary Judgment Motion is ripe for review because the issues concern the City's authority to issue bonds for the first phase of construction and operation of a telecommunications system. The whole purpose of RCW 7.25 is to provide judicial review of the financing authority for municipal projects at the outset rather than after the projects are underway. In contending that the City lacks authority to issue general obligation bonds to finance the Telecommunications System, the Defendants raise a speculative issue that is not presently before the Court. Finally, the City has provided sufficient evidence, based upon City Council findings and the testimony of Jon Athow, of its ability to conveniently provide telecommunications services to customers in the Light Division service area. Therefore, this Court should grant the City's Motion for Summary Judgment.

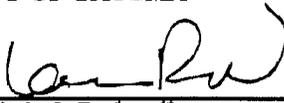

DATED this 9<sup>th</sup> day of December, 1996.

Respectfully submitted,

PRESTON GATES & ELLIS

responsibilities with reference to the control of animals. Such contract(s) shall provide, among other things, that said society or agency (agencies) shall faithfully operate said pounds, shall pay all expenses in connection therewith, shall receive all licenses, fines, penalties and proceeds of every nature connected therewith, and such other sums as may be legally appropriate therefor, subject only to accounting as provided by law. The Council is further authorized, notwithstanding the provisions hereof, to determine that the City shall operate its own city pounds or detention facility and otherwise regulate and control animals within its corporate limits. Any contract entered into pursuant to the authority hereof shall be subject to cancellation by the City for good cause.

(Amendment approved by vote of the people September 18, 1973)

### **Administrative Organization<sup>12</sup>**

**Section 3.11** – Within the framework established by this charter, the administrative service of the City government shall be divided into such offices, departments, and divisions as provided by ordinance upon recommendation of the City Manager. Such ordinance shall be known as the “Administrative Code.”

**Section 3.12** – The City Council may remove any appointed member of any City board, commission, or board of trustees, for cause, after notice and public hearing, if that member is found to have knowingly violated the oath of office under this charter (Section 6.4) or has committed any acts specified in state law as grounds for the recall and discharge of an elective public officer. The City Council, in its discretion, may allow a hearings examiner to hear such a matter. Recommendation of a hearings examiner shall be subject to review by the City Council. The City Council’s final decision shall be based on the evidence in the record. A record of the proceedings shall be made.

(Amendments approved by vote of the people November 2, 2004, and November 4, 2014)

**Section 3.13** – There shall be a Landmarks Preservation Commission, composed of members with such powers and duties as are provided by ordinance. The members shall be residents of the City of Tacoma and be appointed and confirmed by the City Council.

(Amendment approved by vote of the people November 4, 2014)

## **Article IV**

### **PUBLIC UTILITIES<sup>13</sup>**

#### **General Powers Respecting Utilities**

**Section 4.1** – The City shall possess all the powers granted to cities by state law to construct, condemn and purchase, purchase, acquire, add to, maintain, and operate, either within or outside its corporate limits, including, but not by way of limitation, public utilities for supplying water, light, heat, power, transportation, and sewage and refuse collection, treatment, and disposal services or any of them, to the municipality and the inhabitants thereof; and also to sell and deliver any of the utility services above mentioned outside its corporate limits, to the extent permitted by state law.

#### **Power to Acquire and Finance**

**Section 4.2** – The City may purchase, acquire, or construct any public utility system, or part thereof, or make any additions and betterments thereto or extensions thereof, without submitting the proposition to the voters, provided no general indebtedness is incurred by the City. If such indebtedness is to be incurred, approval by the electors, in the manner provided by state law, shall be required.

---

<sup>12</sup> See TMC Chapter 1.06

<sup>13</sup> See TMC Title 12 - Utilities

## **Rates**

**Section 4.3** – The City shall have the power, subject to limitations imposed by state law and this charter, to fix and from time to time, revise such rates and charges as it may deem advisable for supplying such utility services the City may provide. The rates and charges for services to City departments and other public agencies shall not be less than the regular rates and charges fixed for similar services to consumers generally. The rates and charges for services to consumers outside the corporate limits of the city may be greater but shall not be less than the rates and charges for similar service to consumers within the corporate limits of the city.

## **Diversion of Utility Funds**

**Section 4.4** – The Council may by ordinance impose upon any of the City-operated utilities for the benefit of the general fund of the City, a reasonable gross earnings tax which shall not be disproportionate to the amount of taxes the utility or utilities would pay if privately owned and operated, and which shall not exceed eight percent; and shall charge to, and cause to be paid by, each such utility, a just and proper proportion of the cost and expenses of all other departments or offices of the City rendering services thereto or in behalf thereof.

**Section 4.5** – The revenue of utilities owned and operated by the City shall never be used for any purposes other than the necessary operating expenses thereof, including the aforesaid gross earnings tax, interest on and redemption of the outstanding debt thereof, the making of additions and betterments thereto and extensions thereof, and the reduction of rates and charges for supplying utility services to consumers. The funds of any utility shall not be used to make loans to or purchase the bonds of any other utility, department, or agency of the City.

## **Disposal of Utility Properties**

**Section 4.6** – The City shall never sell, lease, or dispose of any utility system, or parts thereof essential to continued effective utility service, unless and until such disposal is approved by a majority vote of the electors voting thereon at a municipal election in the manner provided in this charter and in the laws of this state.

## **Franchises for Water or Electric Utilities**

**Section 4.7** – The legislative power of the City is forever prohibited from granting any franchise, right or privilege to sell or supply water or electricity within the City of Tacoma to the City or to any of its inhabitants as long as the City owns a plant or plants for such purposes and is engaged in the public duty of supplying water or electricity; provided, however, this section shall not prohibit issuance of temporary permits authorized by the Council upon the recommendation of the Utility Board of the City of Tacoma for the furnishing of utility service to inhabitants of the City where it is shown that, because of peculiar physical circumstances or conditions, the City cannot reasonably serve said inhabitants.

(Amendment approved by vote of the people September 18, 1973)

## **The Public Utility Board**

**Section 4.8** – There is hereby created a Public Utility Board to be composed of five members, appointed by the Mayor and confirmed by the City Council, for five-year terms; provided, that in the appointment of the first Board, on the first day of the month next following the taking of office by the first Council under this charter, one member shall be appointed for a term of one year, one for a term of two years, one for a term of three years, one for a term of four years, and one for a term of five years, and at the expiration of each of the terms so provided for, a successor shall be appointed for a term of five years. Vacancies shall be filled for the unexpired term in the same manner as provided for regular appointments.

(Amendment approved by vote of the people November 2, 2004)

**Section 4.9** – Members of the Board shall have the same qualifications as provided in this charter for Council Members. Members shall be entitled to reimbursement for expenses incurred in carrying out their official duties, other than those incident to attending board meetings held within the City of Tacoma.

(Amendment approved by vote of the people November 4, 2014)

**Powers and Duties of the Public Utility Board**

**Section 4.10** – The Public Utility Board, subject only to the limitations imposed by this charter and the laws of this state, shall have full power to construct, condemn and purchase, acquire, add to, maintain, and operate the electric, water, and belt line railway utility systems.

**Section 4.11** – All matters relating to system expansion and the making of additions and betterments thereto or extensions thereof, the incurring of indebtedness, the issuance of bonds, and the fixing of rates and charges for utility services under the jurisdiction of the Board shall be initiated by the Board, subject to approval by the Council, and executed by the Board; provided, that all rates and charges for utility services shall be reviewed and revised or reenacted by the Board and Council at intervals not exceeding five years and beginning with the year 1954.

**Section 4.12** – The Board shall submit an annual budget to the Council for approval, in the manner prescribed by state law.

**Section 4.13** – The Board shall select from its own membership a chair, vice-chair, and secretary and shall determine its own rules and order of business. The time and place of all meetings shall be publicly announced, and all meetings shall be open to the public and a permanent record of proceedings maintained.<sup>14</sup>

(Amendment approved by vote of the people November 4, 2014)

**Section 4.14** – The Board shall maintain such billing, cost and general accounting records as maybe necessary for effective utility management or required by state law. Expenditure documents shall be subject to pre-audit by the central fiscal agency of City government. The City Treasurer shall be responsible for receipt, custody, and disbursement of all utility funds. The Board shall submit such financial and other reports as may be required by the Council.

**Section 4.15** – The Board shall have authority to secure the services of consulting engineers, accountants, special counsel, and other experts. At intervals not exceeding ten years the Council shall, at the expense of the utilities involved, cause a general management survey to be made of all utilities under the jurisdiction of the board by a competent management consulting or industrial engineering firm, the report and recommendations of which shall be made public; provided, that the first such survey shall be made within three years of the effective date of this charter.

**Section 4.16** – Insofar as is permitted by state law, the Board shall have the same authority, and be governed by the same limitations, in respect to the purchase of materials, supplies, and equipment and awarding of contracts for all improvements for Department of Public Utilities' purposes as does the Council and City Manager for general government purposes.

**Section 4.17** – The Department of Public Utilities shall use the services of the City's General Government finance department, purchasing agent, law department, human resources/personnel department, and other City departments, offices, and agencies, except as otherwise directed by the City Council.

(Amendment approved by vote of the people November 3, 1992)

---

<sup>14</sup> Chapter 42.30 RCW establishes the rules of procedure for Board meetings pursuant to the Open Public Meetings Act.

### **Administrative Organization**

**Section 4.18** – The Board shall appoint, subject to confirmation by the City Council, a Director of Utilities who shall:

- (a) Be selected on the basis of executive and administrative qualifications;
- (b) Be appointed for an indefinite period and subject to removal by the Board;
- (c) Serve as the chief executive officer of the Department of Public Utilities, responsible directly to the Board, subject to review and reconfirmation as follows:

The Board shall review the Director's performance annually, and every two years shall, by an affirmative vote of at least three members of the Board in a public meeting, vote on whether to reconfirm the appointment, subject to reconfirmation by the City Council. The first review and vote on whether to reconfirm the Director shall be in 2015.

(Amendment approved by vote of the people November 4, 2014)

**Section 4.19** – Except for purposes of inquiry, the Board and its members shall deal with officers and employees of the Department of Public Utilities only through the Director.

**Section 4.20** – Insofar as is possible and administratively feasible, each utility shall be operated as a separate entity. Where common services are provided, a fair proportion of the cost of such services shall be assessed against each utility served.

**Section 4.21** – Subject to confirmation by the Board, the Director of Utilities shall appoint a properly qualified superintendent for each utility system under the Director's administrative control.

(Amendment approved by vote of the people November 4, 2014)

**Section 4.22** – There shall be such other officers and employees in the Department of Public Utilities as the Board may determine, who shall be appointed and removed by the Director of Utilities subject to the provisions of this charter relating to municipal personnel. These employees shall be entitled to participation in the general employee retirement system and to enjoy such other employee welfare benefits as may be provided for municipal employees. Within the limitations of the annual budget and salary ordinance, the salaries and wages of employees in the Department shall be determined by the Board.

### **Location and Relocation of Utility Works**

**Section 4.23** – The Board shall have authority to place poles, wires, vaults, mains, pipes, tracks and other works necessary to any utility operated by the Board in the public streets, alleys, and places of the city. Before any such works are commenced, plans and specifications showing the exact location thereof shall be submitted to the City Manager for approval. Whenever it shall be necessary by reason of the grading, re-grading, widening, or other improvement of any public street or alley to move or readjust the works of any utility, the Board shall cause such works to be so moved or readjusted and the expense thereof shall be charged against such fund as may be agreed upon by the Director of Utilities and the City Manager or as determined by the City Council. Upon placing the works of a utility in any public street, alley, or place, the Board, at the expense of the utility involved, shall cause the surface of such street or alley to be replaced as near as may be to its previous condition. Whenever the Board and the City Manager are unable to reach an accord concerning the moving, readjusting or installation of any utility, works or improvements, or the distribution of the expenses thereof, the matter shall be referred to the City Council, whose finding and determination shall be conclusive.

# EXHIBIT 90

April 20 2018 3:16 PM

Honorable Susan K. Serko

I. RELIEF REQUESTED.....1

II. STATEMENT OF FACTS .....2

III. STATEMENT OF ISSUES .....4

IV. LEGAL ARGUMENT AND AUTHORITY.....5

    A. Legal Standard .....5

    B. Using Tacoma’s general fund to reimburse the electric utility would violate Washington law as interpreted by this Court and in binding appellate decisions.....5

        1. Using the general fund to reimburse Tacoma Power for subsidies to Click would violate the accountancy act as interpreted by the Court in granting Plaintiffs’ Motion for Summary Judgment.....5

        2. Binding precedent prevents the use of general funds to satisfy an obligation payable only from a special fund dedicated to the support of a proprietary function. ....6

    C. Tacoma’s Department of Public Utilities is contractually forbidden from committing general City funds to pay any liabilities associated with Click.....10

    D. Requiring payment from any source other than the Click! sub-fund would be unfair to Tacoma’s taxpayers.....12

    E. The nature of the mandamus remedy sought by Plaintiffs requires that any reimbursement of the electric utility come from Click and not from the general fund. ....12

        1. So long as Tacoma Power is in fact ordered to have the electric utility reimbursed for its prior subsidies to Click, Plaintiffs lack standing to challenge the source from which reimbursement is made .....12

        3. Even if Plaintiffs had standing to argue for one source of reimbursement over another, this Court lacks power to issue a writ of mandamus ordering the City to use the general fund for such reimbursement.....14

V. CONCLUSION.....16

1 to contradict their own theory of the case simply because they may believe the City would  
2 be better able to pay a judgment than an entity they have continually derided as in the red.

3 In addition, under long-established case law, using general funds to pay Click's  
4 obligations would impermissibly impose an un-voted tax burden on Tacoma's citizens by  
5 forcing them to pay debts associated with a proprietary function. Also forbidding such a  
6 result is the very contractual agreement—between Tacoma Public Utilities and the City's  
7 general government—that allows Click to operate.

8 Moreover, while Plaintiffs can argue for mandamus ordering reimbursement, as  
9 long as *some* reimbursement is ordered (which it should not be), they lack standing to  
10 question the source from which it is ordered to be made. This is because Plaintiffs' prayer  
11 for relief in their underlying complaint alleged that reimbursement from either Click or  
12 from Tacoma's general fund would be equally acceptable. And in any case, mandamus  
13 relief cannot lie against the City, which has no clear mandatory duty to pay Click's  
14 expenses.

15 Thus, Tacoma respectfully asks this Court to enter partial summary judgment  
16 holding that any reimbursement to Tacoma Power would not come from Tacoma's  
17 general fund, but rather would be payable, if at all, from only Click revenues and assets.

## 18 II. STATEMENT OF FACTS

19 Click is a business unit of Tacoma Power. Decl. of Chris Robinson in Supp. of  
20 Def.'s Mot. for Partial Summ. J. on the Nature of Mandamus Relief ("Robinson Decl."),  
21 ¶¶ 2, 3, 6. Click uses excess capacity on Tacoma Power's telecommunications system (the  
22 "System") to provide cable television to electric ratepayers as well as internet access to  
23 ISPs that pay Click to use its System.<sup>2</sup> *Id.* ¶ 6. Tacoma City Ordinance 25930, which  
24

---

25 <sup>2</sup> Similar to cable television, only electric ratepayers can buy retail internet access from the ISPs that use the System. Robinson Decl., ¶ 6.

1 established the System underlying Click, provided that (1) “all revenues received from the  
2 Telecommunications System shall be deposited into the Revenue Fund [now referred to as  
3 the Power Fund]”; and that (2) construction of the System would be financed with bonds  
4 payable only from the Power Fund. Decl. of Doris Sorum in Supp. of Def.’s Mot. for  
5 Partial Summ. J. on the Nature of Mandamus Relief (“Sorum Decl.”), ¶ 3, Ex. A; Decl. of  
6 Andy Cherullo in Supp. of Def.’s Mot. for Partial Summ. J. on the Nature of Mandamus  
7 Relief (“Cherullo Decl.”), ¶ 7. In accordance with Ordinance 25930, all revenues and  
8 expenses related to Click operations and the underlying System are deposited in and  
9 drawn from the Power Fund. Cherullo Decl., ¶ 11. In addition, on October 28, 1997, the  
10 Tacoma City Council enacted Ordinance 26141, which amended Tacoma Power’s budget  
11 to appropriate additional funds from the Power Fund to construct the System. Sorum  
12 Decl., ¶ 4, Ex. B. That Ordinance expressly provided that “nothing in this ordinance shall  
13 in any way be construed to authorize the incurring of general indebtedness by the City in  
14 respect to the Telecommunications Project.” *Id.*, Ex. B at 2.

15         While Tacoma Power operates the City’s electric utility and uses the Power Fund  
16 to account for the revenues, expenditures, taxes, assets, depreciation, and other financial  
17 and accounting transactions, the City’s general government maintains a wholly separate  
18 “general fund” that receives tax revenue and is used to fund general obligations of  
19 Tacoma. Cherullo Decl., ¶ 5. No revenues from the System or from Click operations are  
20 deposited into the City’s general funds, other than as payment of generally applicable  
21 taxes or franchise fees. Cherullo Decl., ¶ 11. Similarly, no City general funds are used to  
22 fund the System or Click, other than as fair compensation in exchange for Click services  
23 provided to the City. *Id.*

24         Like other cable operators in Tacoma, Click is authorized to offer cable television  
25 service only by virtue of a franchise-like agreement between Click and the City. Robinson

1 Decl., ¶ 10, Ex. A. This agreement contains provisions that limit Click’s ability to use  
2 monies from the City’s general fund and that prevent Click from seeking monies from the  
3 City for liabilities related to the “construction, operation[,] or maintenance” of the System.  
4 *See id.*, Ex. A at p. 58, § 12.3.A.

5 Click, and the underlying System, still have significant value for Tacoma Power.  
6 Robinson Decl., ¶ 7. The City is currently pursuing a Request for  
7 Information/Qualifications to find a qualified partner to utilize the valuable System assets,  
8 including Click. *Id.* ¶ 8. The reason for doing this is to create a future where Click is  
9 generating revenue. *Id.* It is anticipated that, in accordance with Ordinance 25930, the  
10 proceeds from any resulting partnership will go into the Power Fund, rather than the  
11 City’s general fund. *See id.*

12 Throughout this litigation, Plaintiffs have requested that the Court require “TPU or  
13 the City to cause Click *or* the City’s general fund to reimburse the Tacoma Power electric  
14 utility for previous subsidies of or payments for Click expenses or capital improvements.”  
15 Compl. for Declaratory, Injunctive, and Mandamus Relief (6/22/2017), at pp. 9, 10-11  
16 (emphasis added); Pls.’ Mot. for Partial Summ. J. Granting Declaratory Relief  
17 (12/28/2017) at 1 (“If the City wants to provide such telecommunications service to its  
18 citizens, it can certainly do so, but it must use Click’s own revenues *or* general  
19 government funds to pay for Click’s capital and O&M (operation and maintenance)  
20 expenses, rather than imposing that burden on electric utility ratepayers.” (emphasis  
21 added)).

### 22 III. STATEMENT OF ISSUES

23 Where (i) this Court held in the Order that only certain funds may be used to pay  
24 the expenses of Click; (ii) settled precedent and contractual agreements prohibit the use of  
25 general funds to pay for the same; and (iii) there are no disputed issues of fact material to

1 resolution of this Motion, should the Court hold as a matter of law that Tacoma Power’s  
2 electric utility will be reimbursed only, if at all, from Click’s own funds and not from  
3 Tacoma’s general fund?

4 **IV. LEGAL ARGUMENT AND AUTHORITY**

5 **A. Legal Standard**

6 A court should grant summary judgment if the factual record “show[s] that there is  
7 no genuine issue as to any material fact and that the moving party is entitled to judgment  
8 as a matter of law.” CR 56(c). On summary judgment, a court may limit the sources from  
9 which a claim for payment can be satisfied. *See, e.g., Am. Air Filter Co. v. Wash. Pub.*  
10 *Power Supply Sys.*, 58 Wn. App. 313, 319, 792 P.2d 1275 (1990) (contractor’s damages  
11 for early termination from construction project were payable only from municipal  
12 corporation’s construction fund, which was specifically earmarked for covering  
13 construction costs, and from no other fund).

14 **B. Using Tacoma’s general fund to reimburse the electric utility would  
15 violate Washington law as interpreted by this Court and in binding  
16 appellate decisions.**

- 17 1. Using the general fund to reimburse Tacoma Power for subsidies to Click  
18 would violate the accountancy act as interpreted by the Court in granting  
19 Plaintiffs’ Motion for Summary Judgment.

20 This Court’s March 2, 2018, Order held that “Tacoma Power electric utility  
21 revenues and funds may not lawfully be used to pay for Click! Network expenses or  
22 capital improvements that are attributable or properly allocable to commercial  
23 telecommunications service rather than electric utility service.” Order at 4. This holding  
24 required the adoption of Plaintiffs’ argument that Click’s “sub-fund” within the Power  
25 Fund is “separate” from Tacoma Power’s Power Fund for purposes of the accountancy act  
and Charter §4.5. *See Pls.’ Reply in Supp. of Mot. for Part. Summ. J. (2/26/2018) at 9-10*

1 (arguing that Click is not “part of” Tacoma Power and that Click’s “telecom revenues and  
2 expenses are accounted for separately from those of the electric utility”).

3 It follows that if Click and the electrical utility are legally “separate,” then Click  
4 and the City’s general fund are even more “separate,” making it inappropriate to use the  
5 City’s general fund to pay Click’s obligations. The relationship between Click and the  
6 City is governed by arm’s-length agreements, just like any other cable television  
7 franchisee. In addition, Click revenues and expenses are completely separate from the  
8 City’s general fund, except for generally applicable taxes and franchise fees from Click  
9 and payment by the City for Click’s services, *see* Cherullo Decl., ¶ 11—exceptions that  
10 prove the rule.

11 After having won partial summary judgment with the argument that the  
12 accountancy act specifically requires reimbursement because Click and Tacoma Power are  
13 legally separate, Plaintiffs cannot now be heard to argue that Click and the City general  
14 government are somehow not just as separate. *See* Order at 4 (noting that the unlawfully  
15 subsidized expenses “are attributable or properly allocable to commercial  
16 telecommunications service” but mentioning no basis for such expenses to be “attributable  
17 or properly allocable” to taxpayers). Thus, if reimbursement is required (which it should  
18 not be) as between Click and Tacoma Power, that reimbursement must come from Click  
19 itself, rather than the City’s general fund.

20 2. Binding precedent prevents the use of general funds to satisfy an obligation  
21 payable only from a special fund dedicated to the support of a proprietary  
22 function.

23 Any order requiring Tacoma Power’s electric utility services to be reimbursed  
24 from Tacoma’s general fund would impermissibly burden Tacoma taxpayers in violation  
25 of a black letter principal of Washington law: A city may not dip into taxpayer funds to

1 cover operating losses arising from its operation of a proprietary service, such as Click.<sup>3</sup>  
2 *Cf., e.g.,* Wash. Const. Art. 8, § 6; Art. 7, § 1. “[W]here the cost of the utility and the  
3 expense of maintenance and operations is to be paid exclusively from a special fund  
4 created from the gross earnings or revenues of the utility,” *City of Seattle v. Puget Sound*  
5 *Power & Light Co.*, 15 F.2d 794, 796 (9th Cir. 1926), a party is “not entitled to a general  
6 decree against the city, payable from its general funds,” *Id.* at 797.<sup>4</sup>

7 For example, in *Asia v. City of Seattle*, 119 Wash. 674, 675, 206 P. 366 (1922), a  
8 group of Seattle taxpayers sued to enjoin Seattle’s use of its general fund to pay for the  
9 operation of a streetcar system. Seattle had bought the streetcar system from Puget Sound  
10 Light & Power Company, and Seattle’s City Council had declared by ordinance that the  
11 revenues of operating the system would be sufficient to cover the expenses of operating  
12 and maintaining it and of paying bonds used to fund the purchase. *Id.* at 675-76. The City  
13 Council was wrong; the system’s liabilities exceeded its revenues. *Id.* at 676. The city  
14 overdrew its street railway fund, and “to help meet this overdraft, the city definitely and  
15 specifically borrowed . . . from its general fund . . . .” *Id.* Said the Washington Supreme  
16 Court:

17 The question then is, [m]ay the city voluntarily or involuntarily encroach  
18 upon its general fund, *or otherwise place upon the taxpayers* the burden

19 <sup>3</sup> Plaintiffs conceded that Click serves a proprietary function for its customers. Pls.’ Reply in Supp. of Mot.  
20 for Part. Summ. J. (2/26/2018) at 9 (calling Click a “proprietary business”).

21 <sup>4</sup> Moreover, unlike the *Okeson* line of cases on which Plaintiffs relied in their Motion for Partial Summary  
22 Judgment, there is no basis to require reimbursement of utility customers from the general City fund. In the  
23 *Okeson* cases, the plaintiffs obtained reimbursement from Seattle’s general fund because the courts found  
24 that utility ratepayers were being improperly asked to fund a public good that the government should have  
25 been paying for with taxpayer monies. Here, in contrast, Plaintiffs do not—and cannot—assert that utility  
revenues have been used to subsidize something that should have been the general fund’s responsibility. *See*  
Pls.’ Reply in Supp. of Mot. for Part. Summ. J. (2/26/2018) at 9 (calling Click a “proprietary business”).  
Moreover, there is no claim here that Tacoma Power ratepayers have been asked to fund an unconstitutional  
tax disguised as a regulatory fee. *See Okeson v. City of Seattle*, 150 Wn.2d 540, 78 P.3d 1279 (2003)  
 (“*Okeson I*”).

1 of meeting deficits *of any kind* incurred by reason of the carrying out of  
2 the plan of purchase *or the operation and maintenance* of the system  
thereunder?

3 *Id.* at 676 (emphasis added). The Court held that “by the ordinance providing for the  
4 acquisition and operation of the street railway system[,] no general indebtedness was  
5 created,” *id.* at 679, and that an injunction should issue to prevent the use of general funds  
6 to subsidize the failing proprietary venture. The Court explained:

7  
8 We are not now concerned with questions other than the one before us,  
9 and are not called upon to advise the city how, if at all, it may solve the  
10 very serious problem which has arisen from what has proven to be the  
11 erroneous judgment of its legislative body [about the profitability of the  
12 streetcar system] . . . [W]hen it is proposed that any general indebtedness  
13 be incurred for such a purpose as is here considered, the matter must be  
submitted to the voters, and if not so submitted . . . , by no action of the  
city or its officials can the burden be shifted to the shoulders of the  
taxpayers who have had no opportunity to say whether they will or will  
not accept the hazard.

14 *Id.* at 680.

15 The *Asia* case is squarely on point with the situation here: Just as in *Asia*, the City,  
16 namely, TPU, anticipated that the revenues of a proprietary service it hoped to offer would  
17 cover the expenses of operating and maintaining that service. Robinson Decl., ¶ 7. Just as  
18 in *Asia*, Tacoma’s forecast turned out to be incorrect. *Id.* Just as in *Asia*, claimants for  
19 expenses owed in connection with operating the service are urging that the City should  
20 use general funds to pay the excess expenses. Compl. for Declaratory, Injunctive, and  
21 Mandamus Relief (6/22/2017), at pp. 9, 10-11. Just as in *Asia*, where the Court stated that  
22 general indebtedness could not be incurred without voters’ consent, Ordinance No. 26141,  
23 which appropriated Power Fund monies for the construction of the System for Click,  
24 specifically provided that the City was not incurring “general indebtedness . . . in respect  
25 to the Telecommunications Project.” Sorum Decl., ¶ 4, Ex. B.

1           And just as in *Asia*—where Washington’s Supreme Court held that Seattle should  
2 be enjoined from using tax money to pay proprietary debt—this Court should deny any  
3 request by Plaintiffs that the Court order Tacoma to use taxpayer money to reimburse the  
4 electric utility. To rule otherwise would be to impermissibly burden Tacoma’s taxpayers  
5 in violation of aged but still on point controlling authority. *See also Puget Sound Power &*  
6 *Light Co.*, 15 F.2d at 797 (holding that the private company from which Seattle purchased  
7 the streetcar system at issue in *Asia* “was not entitled to a general decree against the city,  
8 payable from its general funds” after the revenue fund that payment was to be made from  
9 was emptied due to failure of streetcar system to be profitable).

10           Indeed, it is even clearer here than in *Asia* or *Puget Sound Light & Power* that  
11 payment from the City’s general fund must not be permitted.

12           First, the streetcar service at issue in *Asia* was presumably available for all  
13 Seattle’s residents and visitors to use, for a nominal fee, whereas Click benefits only  
14 people who are (1) Tacoma Power customers, (2) living in an area where Click is  
15 available, and (3) also Click subscribers. Robinson Decl., ¶ 6. If taxpayer funds cannot be  
16 used to support the operation of a streetcar system available for everyone to use, such  
17 funds certainly cannot be used to pay obligations of a broadband service that is only  
18 available to subscribers, and only then, to subscribers in certain areas. *See id.* (stating that  
19 not all of Tacoma Power’s customers have Click available in their area).

20           Second, in *Asia*, it was “beyond cavil that the city council was in error when . . . it  
21 declared that in its judgment . . . the gross revenues . . . would be sufficient to meet all  
22 expenses,” 119 Wash. at 675-76, and that the operation was all but insolvent, such that  
23 any monies used for its support would be “permanently diverted from the [general] fund  
24 to which they belong,” *id.* at 679-80. Here, in contrast, Click, and the underlying System,  
25 still have significant value for Tacoma Power. Robinson Decl., ¶ 7. The City is currently

1 seeking a strategic partner to manage these valuable assets, which would generate  
2 substantial proceeds, which presumably will go to the Power Fund, that could be used to  
3 reimburse the electric utility. *Id.* at ¶ 8.

4 Third, cases such as *Puget Sound Power & Light Co.* involved the holders of debt  
5 from a city's proprietary operation, usually in the form of a bond or warrant, seeking  
6 payment from the general fund. Such cases uniformly hold that "mandamus will not lie to  
7 compel the city or its treasurer to pay this class of warrants out of the city's general fund."  
8 *Quaker City Nat'l Bank v. City of Tacoma*, 27 Wash. 259, 262-63, 67 P. 710 (1902). If the  
9 holder of a debt or equity interest in payment from the City cannot reach the City's  
10 general fund, it strains credulity to think that Plaintiffs, who have no debt or equity  
11 interest, but only a vague interest in seeking reimbursement on behalf of a utility that  
12 allegedly overcharged them for electricity (while several of them were themselves  
13 working for or on behalf of Tacoma Power), can assert a remedy against the general fund.  
14 *Accord State ex rel. Rand v. City of Seattle*, 13 Wn.2d 107, 124-25, 124 P.2d 207 (1942)  
15 ("[T]he general fund of the city cannot be reached by mandamus proceedings against the  
16 city . . . to pay obligations of this character, where there is no showing that any of the  
17 moneys from the special funds have been diverted to the city's general fund.").

18 **C. Tacoma's Department of Public Utilities is contractually forbidden from**  
19 **committing general City funds to pay any liabilities associated with Click.**

20 As mentioned above, Click operates pursuant to a "franchise-like" agreement  
21 between TPU and the City. *See* Robinson Decl. Ex. A ("Agreement"). The Agreement  
22 uses the term "Operator" to refer to TPU in its capacity as operator of Click. Agreement at  
23 p. 7, § 1.31. The Agreement expressly provides that Click is forbidden to obligate general  
24 City Funds for the construction, operation, or maintenance of Click:

25 Operator . . . agrees to release the city from and against any and all  
liability *and responsibility* in or arising out of the construction,

1 operation[,] or maintenance of the Cable System, and . . . agrees not to sue  
2 or seek any money damages from City in connection with the above  
mentioned matters.

3 *Id.* at p. 58, § 12.3.B.

4 Not only is Click forbidden from committing City general funds, but to the extent  
5 the general funds are burdened, Click can be required to account to the City's general  
6 fund. In Section 8.7 of the Agreement, TPU and the City agreed that

7 To the extent permitted by law, during any period where the Cable System  
8 is wholly owned by the municipality, in lieu of liquidated damages, or an  
9 indemnity, the City may require Operator to compensate the General Fund  
for losses occasioned by Operator's activities.

10 *Id.* at p. 45, § 8.7. This provision requires exactly the same thing that Plaintiffs'  
11 interpretation of the accountancy act would require: Click may be called on to reimburse  
12 Tacoma's general government for any amounts paid by the general fund to cover losses  
13 due to Click's activities.

14 Similarly, Section 12.3(B) of the Agreement provides that:

15 Operator agrees to indemnify and hold harmless the City, its trustees,  
16 elected and appointed officers, agents, and employees, from and against  
17 any and all claims, demands, or causes of action of whatsoever kind or  
18 nature, and the resulting losses, costs, expenses, reasonable attorneys' fees,  
19 liabilities, damages, orders, judgments, or decrees, sustained by the City or  
20 any third party arising out of, or by reason of, or resulting from or of the  
acts, errors, or omissions of Operator, or its agents, independent  
contractors or employees related to or in any way arising out of the  
construction, operation, repair or existence of the Cable System.

21 *Id.* at p. 58, § 12.3.B. It is clear that this provision of the Agreement, which was adopted  
22 by ordinance of the City Council, was intended to protect the general government from  
23 any liability for costs of operation of Click. And again, the unavoidable consequence of  
24 this provision is that ultimately Click, and not the City's general fund, must foot the bill.  
25 Thus, even if this Court orders reimbursement out of the general fund, this Agreement will

1 require the City and TPU, doing business as Click, to effectively undo that reimbursement  
2 by causing Click to reimburse the general fund. This Court should avoid ordering the city  
3 to engage in an empty act that will generate such needless hassle. *See SEIU Healthcare*  
4 *775NW v. Gregoire*, 168 Wn.2d 593, 604, 229 P.3d 774 (2010) (“[W]e do not issue writs  
5 of mandamus to compel useless or vain acts or acts that have no operative effect . . .”).  
6 Instead, the Court should rule as a matter of law that any reimbursement of Tacoma  
7 Power’s electricity operations be made only from Click and not from the general fund.

8 **D. Requiring payment from any source other than the Click! sub-fund would**  
9 **be unfair to Tacoma’s taxpayers.**

10 The holding reached in this Court’s Order granting Plaintiffs’ summary judgment  
11 embodies the principle that Click must bear its own expenses rather than allowing those  
12 expenses to be imposed on people who do not pay for Click’s services. Under Plaintiffs’  
13 logic, doing that would be unfair. It would be an absurd result to hold that Tacoma  
14 Power’s electric-ratepaying customers cannot be required to subsidize Click (whose users  
15 are a subset of Tacoma Power’s ratepayers), but that Tacoma’s taxpaying citizenry—  
16 many of whom may not have any contractual relationship with Tacoma Power  
17 whatsoever—can be required to do so.

18 In addition, to the extent that some of Tacoma’s taxpayers are also Tacoma Power  
19 ratepayers, requiring the use of general city funds to reimburse Tacoma Power would  
20 essentially require many ratepayers to fund the remedy for their own injury.

21 **E. The nature of the mandamus remedy sought by Plaintiffs requires that**  
22 **any reimbursement of the electric utility come from Click and not from**  
23 **the general fund.**

- 24 1. So long as Tacoma Power is in fact ordered to have the electric utility  
25 reimbursed for its prior subsidies to Click, Plaintiffs lack standing to  
challenge the source from which reimbursement is made

Plaintiffs’ Complaint in this matter sought, *inter alia*, mandamus relief

1 [o]rdering TPU *or* the City to cause Click *or* the City's general fund to  
2 reimburse the Tacoma Power electric utility for previous subsidies of or  
3 payments for Click expenses or capital improvements attributable or  
4 properly allocable to commercial telecommunication services rather than  
5 electric utility service, in an amount to be proven at trial . . . .

6 Compl. at 10-11 (emphasis added). "The word 'or' is a function word indicating  
7 alternatives." *Affordable Cabs, Inc. v. Dep't of Emp't*, 124 Wn. App. 361, 369, 101 P.3d  
8 440 (2004) (citing *In re Marriage of Caven*, 136 Wn.2d 800, 807, 966 P.2d 1247 (1998)  
9 (grammatically, the word "or" is "a coordinating particle signifying an alternative")).  
10 Plaintiffs' Complaint thus asserts that any injury due to past subsidies of Click from  
11 electric revenues (as opposed to ongoing or future subsidies, for which Plaintiffs seek an  
12 injunction) can be fully redressed by reimbursement to the electric utility *either* from  
13 Click *or* from the City's general fund.

14 Where, as here, a complaint provides for selection from among alternatives in its  
15 prayer for relief, either alternative will fully redress the Plaintiff's injury. *Cf. CPL*  
16 *(Delaware) LLC v. Conley*, 110 Wn. App. 786, 795, 40 P.3d 679 (2002) ("Because we  
17 find that the assumption of the risk doctrine resolves CPL's request for relief, we need not  
18 reach Quad C's alternative argument.").

19 Where a plaintiff asserts alternative bases for relief and does not withdraw one, the  
20 Court has discretion to choose which alternative will be awarded. For example, in *Mason-*  
21 *Walsh-Atkinson-Kier Co. v. Case*, 2 Wn.2d 33, 34-35, 97 P.2d 165 (1939), the plaintiff  
22 sued to recover a refund for gas taxes that it paid when buying the gas but that it was not  
23 required to pay, since its trucks were not operated on state highways. The plaintiff's  
24 prayer for relief sought either (1) an order requiring state officials to approve the  
25 plaintiff's previously filed refund claim, or in the alternative, (2) judgment against the  
state for the amount of the refund. *Id.* at 35-36. After determining that the plaintiff was in

1 fact entitled to the refund, the Court held that “[t]he prayer for relief being in the  
2 alternative, it will be for the trial court to determine in what form it shall be accorded.” *Id.*  
3 at 46. Thus, when a court chooses from among alternative remedies, the plaintiff cannot  
4 question the election. *See also Stryken v. Panell*, 66 Wn. App. 566, 571, 832 P.2d 890  
5 (1992) (“Because Stryken elected to plead for an equitable remedy as well as a legal  
6 remedy, he is now bound by the trial court’s election between the remedies prayed for in  
7 the complaint.”).

8 Because, according to Plaintiffs’ own pleading, either source of reimbursement  
9 will fully redress any injury to them due to past unlawful subsidies, they lack standing to  
10 dispute which of the two sources is used for any reimbursement. *Cf. City of Tacoma v.*  
11 *Taxpayers of Tacoma*, 108 Wn.2d 679, 686, 743 P.2d 793 (1987) (“Because WNG merely  
12 objects to the reasoning by which the trial court invalidated the ordinance [that WNG  
13 wanted to invalidate], WNG cannot be considered ‘aggrieved,’ and therefore does not  
14 have standing to appeal.”).

15 And as argued above, both Washington law and the logic necessarily flowing from  
16 this Court’s Order require that the electric utility be reimbursed by Click and not by  
17 Tacoma’s general fund. Put simply, Plaintiffs have identified two alternatives that are  
18 equally acceptable to them, while there is only one of these alternatives that is legally or  
19 logically acceptable. Thus, the Court should forbid any reimbursement out of the general  
20 fund.

21 3. Even if Plaintiffs had standing to argue for one source of reimbursement  
22 over another, this Court lacks power to issue a writ of mandamus ordering  
23 the City to use the general fund for such reimbursement.

24 Mandamus is an extraordinary remedy appropriate *only* where a state  
25 official is under a mandatory ministerial duty to perform an act required  
by law as part of that official's duties. The mandate must specify the  
precise thing to be done or prohibited. And the mandate must define the

1 duty with such particularity as to leave nothing to the exercise of  
2 discretion or judgment.

3 *Freeman v. Gregoire*, 171 Wn.2d 316, 323, 256 P.3d 264 (2011) (emphasis added). Here,  
4 the arguments that Plaintiffs advanced in support of their summary judgment motion  
5 provide an arguable basis for this Court to hold that Tacoma Power’s officials have a  
6 “mandatory duty” to cause Click to reimburse the electric utility. However, Plaintiffs  
7 cannot identify any basis on which Tacoma’s *general government* has a “mandatory  
8 ministerial duty” to cause the Tacoma Power electric utility to be reimbursed from  
9 taxpayer funds for expenses that the electric utility paid on Click’s behalf. *See id.* at 326  
10 (line item in transportation budget appropriating money from the “motor vehicle account”  
11 to fund a valuation of I-90 center lanes for HOV transit did not, for purposes of mandamus  
12 analysis, create a duty on Department of Transportation to expend the appropriated funds);  
13 *Rand* 13 Wn.2d at 124-25 (1942) (“[T]he general fund of the city cannot be reached by  
14 mandamus proceedings against the city . . . to pay obligations of this character” where  
15 there is no showing that the city incurred or intended to incur general indebtedness). Far  
16 from the City having a mandatory duty to pay for Click’s liabilities, the contractual  
17 provisions discussed above establish that such payment is prohibited.

18 Moreover, Plaintiffs’ request for mandamus clearly frames the reimbursement  
19 source in “either/or” terms. To let Plaintiffs instead argue that their request for mandamus  
20 is broader would violate the “well-established principle that a writ of mandamus cannot be  
21 more specific than the petition” by “exceeding the scope” of the relief requested. *SEIU*  
22 *Healthcare 775NW v. Gregoire*, 168 Wn.2d 593, 604, 229 P.3d 774 (2010). Thus, even if  
23 Plaintiffs had standing to argue for one source of reimbursement over another, the fact that  
24 they are seeking a writ of mandamus means that one of the sources of reimbursement is  
25 necessarily off the table.

V. CONCLUSION

For the foregoing reasons, Tacoma respectfully asks the Court to summarily  
adjudge that any reimbursement of Tacoma Power’s electric utility be made by Click  
alone and not from Tacoma’s general fund.

Dated this 20th day of April, 2018

Attorneys for Defendant

# EXHIBIT 96

Here, for example, is Mr. Moynihan on the perspective in which such progress toward common justice as has already been made should be viewed:

"The fact is that with respect to Negro Americans we have seen incredible progress since, roughly, the *Brown v. Board of Education* decision of 1954 and President Eisenhower's subsequent decision to send Federal troops to Little Rock, thus commencing the second Reconstruction. . . . Yet it was only after that effort had begun, and had been under way for some time, that it became possible to see the true horror of the situation white America had forced on black America and the deep disabilities that came about in consequence. The first to see this, of course, were the blacks themselves. . . . Large numbers of middle-class, educated blacks, especially young ones, have come to see American society as hateful and illegitimate, lacking any true claim on their allegiance. Well they might."

Mr. Moynihan, however, does not regard this perception of injustice or the feelings which flow from it as the main source of the trouble or as the appropriate target for administration heavy-fire:

"The essence of the Negro problem in America at this time is that despite great national commitments, and great progress, a large mass of the black population remains poor, disorganized, and discriminated against."

Mr. Moynihan's recommendations included "dissolving" this Negro lower class—"the low income, marginally employed, poorly educated, disorganized slum dwellers." Had he used another verb such as "assisting" or "saving" or "helping" (which is what that section of his memo describes) he might have got a little more credit for what he said. But one can hardly be sure of that, since so many accounts of his argument have stood his principal thesis regarding the black lower class on its head.

We have in mind Mr. Moynihan's observation that "like such groups everywhere," this group is "unstable and essentially violent," and his conclusion: "This fact of lower class violence has nothing to do with race. It is purely a matter of social class." We have added the emphasis because this, unaccountably, is the part of Mr. Moynihan's memo that appears to have caused the most trouble, suggesting to some that, despite the explicit confirmation of the responsibility of racism for the black slum-dweller's plight that runs through this memo, Mr. Moynihan does not think race has anything to do with that plight. The (widely missed) point is that in characterizing black slum violence as a manifestation of class attitudes rather than racial ones, as an outgrowth of class conditions rather than characteristics of race, Mr. Moynihan was making what has always been regarded as the indispensable liberal and/or enlightened argument in these matters. It is generally applauded by Mr. Moynihan's critics when it is otherwise stated as the fact that black slum-dwellers tend to violent behavior because they are poor and misused, not because they are black. That racial discrimination ("centuries of barbarism") accounts for their poverty and misuse is stated with such clarity in Mr. Moynihan's memo that it seems incredible for his point about race-versus-class to have got so distorted in the retelling.

At the outset we remarked there were several things to be said about this memo; but setting its arguments straight seemed to come first. We mean to get around to a second aspect of this whole affair—namely, the manner in which these leaked documents have been promoted and transformed in such a way as to suggest that we are present at a public hanging. But that—and a great deal of head-scratching over the merits and dangers of the leak—will come later.

#### DEATH OF FORMER SENATOR HOMER T. BONE

Mr. MAGNUSON. Mr. President, with a sense of great sorrow I announce to the Senate the passing yesterday of a former distinguished Member of this body, Homer T. Bone of the State of Washington. He was 87 years old. He served here for two terms with great distinction. I am sure those who served with him would agree with me that he was one of the most brilliant men ever to grace this body.

He was a determined advocate of the development of power through the use of natural resources, particularly hydroelectric development. Out in the Pacific Northwest we considered him to be the father of public power, and also the Rural Electrification Administration.

Mr. President, untold millions of people have benefited by his early leadership in this field. I recall an incident many years ago in which he participated. I was a member of my State legislature in 1933. The late Senator Bone had been a member of the State legislature prior to that time. He had fought long and valiantly to reduce power rates in the State of Washington and in the entire Pacific Northwest, through the development of public power, which led to the great powerplant of Seattle City Light, and many other city powerplants throughout the country. He ran into a sort of roadblock in those days with the private power people. It became a considerable political fight, although it is not any more. Private and public power in the Pacific Northwest now work together aided by what is known as the Bonneville Power Administration.

Homer T. Bone had been trying to have passed in the State legislature what was known as the Bone power bill. My colleagues will remember that the city of Seattle was served by a municipal powerplant. Outside the city limits service came from a private power group. In those days the city limits of Seattle were at 85th Street. All of that area has grown up, but that was the city limit. It was found that the people on the city side were paying one-half the amount for city light as compared to those who lived on the other side.

The bill that was introduced caused more furor in our part of the country than anything I have ever known. It would allow the Seattle City Light Co. to service people outside the city limits. The bill was passed. I was in the legislature when it was passed and I had the privilege of managing the bill on the floor of the house. From thereon we had lower power rates, and we have in our area now a combination of public and private power interest.

As far as I am concerned he was the father of public power developed by our great natural resources in the Pacific Northwest. He left the Senate in 1944. He had had a mishap in which he had fallen down and broken his hip and some other bone troubles and he did not want to campaign again for the Senate that year. He often said he did not want to go out on the campaign trail with crutches. He was a great friend of Franklin D. Roose-

velt. Roosevelt was persuaded, because of his brilliant mind and brilliant career, to recommend him for the Ninth Circuit Court of Appeals. He was made a judge. He served with great distinction on the circuit court of appeals for over 10 years. He retired from the circuit court and continued to live at the site of the court in San Francisco where he participated in many decisions. He was called in on numerous cases and worked until almost 3 or 4 years ago. However, he had persistent trouble with bone problems and decided to retire completely and go back to his hometown in Tacoma.

Among other things, he wrote some great decisions on the circuit court of appeals, so lawyers tell me. They were masterpieces in the law. My colleague and I would agree that he was one of the most articulate men we ever knew. He was brief and to the point, and his speeches and opinions were brilliant. One did not have to guess about any of his meanings. He meant what he said and he said it clearly with almost classic use of English. He was a close personal friend of mine for over 40 years. As a matter of fact, I succeeded Homer Bone in the Senate. I agree with his many friends who have also lost a friend and a great American.

His sole survivor is his son, Homer T. Bone, Jr. He has a brother-in-law in Tacoma, John Coffee, who served in the other body with distinction for many years.

There are many Senators who served with Homer T. Bone and who would probably believe we have located a new or popular issue with our rhetoric in the so-called military-industrial complex. Homer T. Bone was known here during the period of World War II for calling attention to those who profited during the course of World War II from military contracts and industry. It was his voice that first called attention to some of the abuses that can occur during a large and great war, as occurred in World War II.

We will all miss him but all remember Homer T. Bone.

I yield to my colleague from Washington.

Mr. JACKSON. Mr. President, I wish to associate myself with the fine remarks made by my senior colleague in connection with the passing of Senator Homer T. Bone.

He was indeed one of the most colorful persons in public life in the Pacific Northwest in the 1920's, the 1930's, and the 1940's.

He was a person of singular purpose. He made it a point to take on one issue and stay with that issue year in and year out. This was especially true of the public power program. But his interests transcended that particular program.

After he came to the Senate, it would be my guess that one of the accomplishments in which he took greatest pride was the passage of legislation that made possible the National Cancer Institute. My distinguished senior colleague (Mr. MAGNUSON) was a cosponsor of that particular measure in the House of Representatives at the time.

Senator Bone was a man of great in-

March 13, 1970

CONGRESSIONAL RECORD — SENATE

tegrity and, as my colleague has mentioned, he was extremely articulate. He was a most effective advocate. He was a loyal friend. He was a man who could be depended upon.

He distinguished himself during the period of his service on the circuit court of appeals from 1944 to 1956.

He leaves a son, Homer T. Bone, Jr., and a grandson, Gregory Scott Bone, both of California; and a brother-in-law and a sister-in-law, Mr. and Mrs. John M. Coffee, of Tacoma, Wash. Mr. Coffee was formerly a U.S. Representative from Washington.

I convey to them my deepest sympathy in the passing of a great public figure and an outstanding jurist.

Mr. MAGNUSON. I thank my colleague.

Mr. MANSFIELD. Mr. President, will the Senator yield?

Mr. MAGNUSON. I yield to the distinguished majority leader.

Mr. MANSFIELD. Mr. President, I want to join both Senators from Washington in expressing my sorrow on the passing of a former colleague of this body, Senator Homer T. Bone. Senator Bone used to come to Montana quite often in company with Senator Murray, and it was a joy and a pleasure to listen to him and to visit with him and to be the beneficiary of his wise advice and counsel.

There comes a time for all of us, and even though it may be anticipated and expected, it nevertheless comes as shock when the time comes for someone close to pass on.

As a Member of this body from a sister State of the Northwest, I want to join Senators MAGNUSON and JACKSON in expressing my feelings, and I am sure the feelings of the people of the country as a whole, in the passing of a man who made his mark in this body and in the country.

I propose reduction, termination or restructuring of 57 programs which are obsolete, low priority or in need of basic reform. These program changes would save a total of \$2.5 billion in the fiscal year 1971. Of this amount, \$1.1 billion saving require Congressional action—roughly the equivalent of the amount by which the 1971 budget is in surplus.

No government program should be permitted to have a life of its own, immune from periodic review of its effectiveness and its place in our list of national priorities.

Too often in the past, "sacred cows" that have outlived their usefulness or need drastic revamping have been perpetuated because of the influence of special interest groups. Others have hung on because they were "too small" to be worthy of attention.

At a time when every dollar of government spending must be scrutinized, we cannot afford to let mere inertia drain away our resources.

Some of these programs are the objects of great affection by the groups they benefit. But when they no longer serve the general public interest, they must be repealed or reformed.

No program should be too small to escape scrutiny, a small item may be termed a "drop in the bucket" of a \$200.8 billion budget, but these drops have a way of adding up. Every dollar was sent to the Treasury by some taxpayer who has a right to demand that it be well spent.

As an extreme example, the government since 1897 has had a special board of tea-tasters. At one time in the dim past, there may have been good reason to single out tea for such special taste tests; but that reason no longer exists. Nevertheless, a separate tea-tasting board has gone right along, at the taxpayer's expense, because nobody up to now took the trouble to take a hard look at why it was in existence. The general attitude was: It did not cost much, it provided a few jobs, so why upset the teacart?

That attitude should have no place in this government. The taxpayer's dollar deserves to be treated with more respect.

Mr. MANSFIELD subsequently said: Mr. President, I ask unanimous consent that the bill introduced by the Senator from Delaware (Mr. WILLIAMS) be re-

**CLICK! BUSINESS TRANSACTION AGREEMENT**

THIS CLICK! BUSINESS TRANSACTION AGREEMENT, dated as of \_\_\_\_\_, 2019, is by and between the **City of Tacoma, Department of Public Utilities, Light Division**, a municipal corporation of the State of Washington (d/b/a and hereinafter referred to as “**Tacoma Power**”), and **Mashell, Inc., d/b/a Rainier Connect**, a Washington corporation, and its designated operating subsidiary, **Rainier Connect North, LLC**, a Washington limited liability company (hereinafter collectively referred to as “**Rainier**”). Tacoma Power and Rainier shall each individually be referred to as a “**Party**” and together constitute the “**Parties**”.

**W I T N E S S E T H:**

WHEREAS, Tacoma Power owns a hybrid fiber-coaxial network consisting of fiber optic cable and coaxial cable and related network facilities (the “**Tacoma Power Network**”);

WHEREAS, Click! Network, a business unit of Tacoma Power, currently uses a portion of the Tacoma Power Network (the “**Tacoma Power Commercial System**”) to provide cable television services to residents and businesses; to serve as a wholesale provider to internet service providers that provide broadband data services for residential and business customers; and provide Metro Ethernet circuits to businesses within its service area in competition with other providers (the “**Click! Business**”);

WHEREAS, desiring to reduce operational costs while maximizing the community benefits of continuing operation of and investment in the Tacoma Power Commercial System, the City of Tacoma and Tacoma Public Utilities adopted twelve (12) policy goals and issued a Request for Information and Qualifications (“**RFI/Q**”) seeking interest from public or private entities to take over operational control of the Tacoma Power Commercial System and the delivery of services to the community under terms and conditions consistent with the 12 policy goals;

WHEREAS, Mashell, Inc. was selected as a result of the competitive RFI/Q process;

WHEREAS, Tacoma Power and Mashell, Inc. have negotiated the terms of this Agreement and the Exhibits in order to effectuate the transfer of operational control of the Tacoma Power Commercial System through, among other things, an Indefeasible Right of Use Agreement, and the sale of Related Surplus Assets connected with the Click! Business, as more particularly set forth herein (the “**Transaction**”);

WHEREAS, Mashell, Inc. has formed an operating subsidiary, Rainier Connect North, LLC, which it has designated to enter into the Transaction with Tacoma Power;

WHEREAS, Tacoma Power is willing to enter into the Transaction with Rainier Connect North, LLC provided that Mashell, Inc. guarantees the performance of Rainier Connect North, LLC;

WHEREAS, Mashell, Inc. is willing to guarantee the performance of Rainier Connect North, LLC; and

WHEREAS, the Parties have mutually agreed to cooperate to ensure a smooth and seamless transition of the Click! Business as set forth in the Transition Plan attached hereto as Exhibit A.

NOW, THEREFORE, in consideration of the promises and the mutual representations, warranties, covenants and undertakings contained herein, and for other good and valuable consideration, the receipt and sufficiency of which are hereby acknowledged, the Parties hereto, intending to be legally bound, agree as follows:

## ARTICLE I

### DEFINITIONS AND TERMS

Section 1.1 Certain Definitions. As used in this Agreement, the following terms have the meanings set forth below:

“Click! Business” has the meaning set forth in the Recitals.

“Advanced Subscriber Payments” has the meaning set forth in Section 2.6(a).

“Affiliate” means, with respect to any Person, any other Person directly or indirectly controlling, controlled by, or under common control with, such Person as of the date on which, or at any time during the period for which, the determination of affiliation is being made. For purposes of this definition, the term “control” means the possession, directly or indirectly, of the power to direct or cause the direction of the management policies of such Person, whether through equity interest, board membership, LLC interest, contract, charter, statute, regulation, or otherwise.

“Agreement” means this Click! Business Transaction Agreement.

“Ancillary Agreements” means the Indefeasible Right of Use Agreement and other instruments and other agreements and Transfer of Operational Control documents required to be delivered pursuant to this Agreement, including any Bill of Sale and Assignment and Assumption Agreement.

“Assumed Liabilities” has the meaning set forth in Section 2.4.

“Bill of Sale” means an agreement in form and substance reasonably acceptable to Tacoma Power and Rainier, transferring the tangible personal property included in the Related Surplus Assets.

“Business Day” means any day other than Saturday or a legal holiday as defined by RCW 1.16.050.

“Click! Marks” has the meaning set forth in Section 5.9.

“Consideration” has the meaning set forth in Section 2.6(a).

“Customer Proprietary Information” means, to the extent contained in the billing system that is used to bill existing customers of the Click! Business, that portion of the non-technical, non-public information that is owned by Tacoma Power as of the Transfer of Operational Control Date, is used in the Click! Business as of the Transfer of Operational Control Date, and comprises personal information of an existing customer of the Click! Business that was provided by such customer in connection with provision of services to that customer and all information about such customer’s subscription and account, including, without limitation, such customer’s name, mailing address, email address, telephone number, category of subscription services, and billing and payment information which Tacoma Power is not prohibited by law or contract from transferring to Operator.

“Excluded Liabilities” has the meaning set forth in Section 2.4.

“Employees” means all employees employed by Tacoma Power in connection with the Click! Business and any replacement of such employees between the date hereof and Transfer of Operational Control Date.

“Encumbrance” means any lien, pledge, charge, security interest, option, right of first refusal, mortgage, easement, right-of-way, lease, sublease, license, sublicense, adverse claim, title defect, encroachment, other survey defect, or other encumbrance of any kind, including, with respect to real property, any covenant or restriction relating thereto. For purposes of this Agreement, a Person shall be deemed to own subject to an Encumbrance any asset that it has acquired or holds subject to the interest of a vendor or lessor under any conditional sale agreement, capital lease or other title retention agreement relating to such asset.

“Environmental Law” means any Law (including common law), Governmental Authorization or agreement with any Government Entity or third party relating to (i) the protection of the environment or human health and safety (including air, surface water, ground water, drinking water supply, and surface or subsurface land or structures), (ii) the exposure to, or the use, storage, recycling, treatment, generation, transportation, processing, handling, labeling, management, release or disposal of, any Hazardous Substance or (iii) noise, odor or electromagnetic emissions.

“Equipment” has the meaning set forth in Section 2.2(a)(i).

“Excluded Assets” has the meaning set forth in Section 2.3.

“Excluded Taxes” means any Taxes imposed with respect to the Tacoma Power Commercial System, Click! Business, or any Related Surplus Assets related thereto or any income or gain derived with respect thereto, in each case. For the avoidance of doubt, Excluded Taxes shall include any income Tax liability payable by Tacoma Power or its subsidiaries in respect of the Transaction.

“FCC” means the Federal Communications Commission.

“Franchise” means, with respect to the Click! Business, each franchise granted by a Government Entity authorizing the construction, upgrade, maintenance or operation of any part of the Tacoma Power Commercial System that is part of the Click! Business.

“Funding Commitment Letters” has the meaning set forth in Section 6.3(1).

“Governmental Authorizations” means, with respect to the Click! Business, all licenses (including cable television relay service, business radio and other licenses issued by the FCC or any other Government Entity), permits (including construction permits), certificates, consents, Franchises (including similar authorizations or permits), other actions by, and notices, filings, registrations, qualifications, declarations and designations with, and other authorizations and approvals primarily related to the Click! Business and issued by or obtained from a Government Entity.

“Government Entity” means any federal, state or local court, administrative body or other governmental or quasi-governmental entity with competent jurisdiction.

“Inventory” has the meaning set forth in Section 2.2(a)(ii).

“Law” means any law, statute, ordinance, rule, regulation, code, order, judgment, injunction or decree enacted, issued, promulgated, enforced or entered by a Government Entity.

“Liabilities” means any and all indebtedness, losses, claims, charges, demands, actions, damages, obligations, payments, costs and expenses, sums of money, bonds, indemnities and similar obligations, covenants, contracts, controversies, omissions, make whole agreements and similar obligations, and other liabilities, including all contractual obligations, whether due or to become due, fixed, contingent or absolute, inchoate or otherwise, matured or unmatured, liquidated or unliquidated, accrued or not accrued, asserted or not asserted, known or unknown, determined, determinable or otherwise, whenever or however arising, including, those arising under any Law, principles of common law (including out of any contract or tort based on negligence or strict liability) action, threatened or contemplated action (including the costs and expenses of demands, assessments, judgments, settlements and compromises relating thereto and attorneys’ fees and any and all costs and expenses (including allocated costs of in-house counsel and other personnel), whatsoever reasonably incurred in investigating, preparing or defending against any such actions or threatened or contemplated actions), order or consent decree of any Government Entity or any award of any arbitrator or mediator of any kind, and those arising under any contract, commitment or undertaking, whether or not the same would be required to be recorded or reflected in financial statements or disclosed in the notes thereto.

“Material Adverse Effect” means (i) a material adverse effect on the Related Surplus Assets, or (ii) a material impairment or delay of Tacoma Power’s ability to effect the Transfer of Operational Control or to perform its obligations under this Agreement or any Ancillary Agreement to which it is a party; provided, however, that Material Adverse Effect shall not include the effect of any event change, circumstance or development arising out of or attributable to: (A) any change in Law or accounting standards or interpretations thereof that is of general application; (B) any change in general economic or business conditions or industry-wide or financial market conditions generally; (C) any adverse effect as a result of the execution or

announcement of this Agreement, the Ancillary Agreements, the Transaction or the transactions contemplated by the Ancillary Agreements; or (D) any loss of Subscribers.

“Ordinary Course” or “Ordinary Course of Business” means with respect to the Click! Business, the conduct of such Click! Business as a going concern in accordance with Tacoma Power’s normal day-to-day customs, practices and procedures.

“Person” means an individual, a corporation, a partnership, an association, a limited liability company or other entity or organization.

“Purchase Price” has the meaning set forth in Section 2.6(a).

“Records” has the meaning set forth in Section 2.2(a)(vii).

“Related Surplus Assets” has the meaning set forth in Section 2.2(a).

“Subscriber” means, with respect to the Click! Business, a customer who has been installed and who currently subscribes to at least the lowest level of cable service offered by such Click! Business.

“Tacoma Power” has the meaning set forth in the Preamble.

“Tacoma Power Commercial System” has the meaning set forth in the Recitals.

“Taxes” means all taxes, fees, levies, imposts, duties, charges or withholdings of any nature (including, without limitation, gross receipts taxes, leasehold excise taxes and franchises, license and/or permit fees) together with any penalties, fines, assessments or interest thereon, imposed by any federal, state or local government, regulatory body or other public taxing authority of competent jurisdiction.

“Tax Law” means the Internal Revenue Code, final, temporary or proposed Treasury regulations, published pronouncements of the U.S. Treasury Department or U.S. Internal Revenue Service, court decisions or other relevant binding legal authority (and similar provisions, pronouncements, decisions and other authorities of state, local and foreign Law).

“Tax Return” shall mean any report, return or other information (including any attached schedules or any amendments to such report, return or other information) required to be supplied to or filed with a Government Entity with respect to any Tax, including an information return, claim for refund, amended return, declaration or estimated Tax returns in connection with the determination, assessment, collection or administration of any income Tax.

“Transaction” has the meaning set forth in the Recitals.

“Transfer of Operational Control” means pursuant to Section 2.1 of this Agreement, the assumption by Rainier of all operational control over the Tacoma Power Commercial System pursuant to the IRU Agreement.

“Transfer of Operational Control Date” means the Effective Date of the IRU Agreement.

“Transferred Authorizations” has the meaning set forth in Section 2.2(a)(v).

“Transferred Contracts” has the meaning set forth in Section 2.2(a)(iv).

“Updated Asset Schedules” has the meaning set forth in Section 2.2(b).

“Updated IRU Exhibits” has the meaning set forth in Section 5.6(b).

“Vehicles” has the meaning set forth in Section 2.2(a)(iii).

Section 1.2 Other Interpretive Provisions. Unless the express context otherwise requires:

(a) the words “hereof,” “herein,” and “hereunder” and words of similar import, when used in this Agreement, shall refer to this Agreement as a whole and not to any particular provision of this Agreement;

(b) the terms defined in the singular have a comparable meaning when used in the plural, and vice versa;

(c) the terms “Dollars” and “\$” mean United States Dollars;

(d) unless the context otherwise requires, references herein to a specific Section, Subsection, Recital, Schedule or Exhibit shall refer, respectively, to Sections, Subsections, Recitals, Schedules or Exhibits of this Agreement;

(e) wherever the word “include,” “includes,” or “including” is used in this Agreement, it shall be deemed to be followed by the words “without limitation”;

(f) references herein to any gender include each other gender;

(g) references herein to any Person include such Person’s heirs, executors, personal representatives, administrators, successors and assigns; provided, however, that nothing contained in this clause (g) is intended to authorize any assignment or transfer not otherwise permitted by this Agreement;

(h) references herein to a Person in a particular capacity or capacities exclude such Person in any other capacity;

(i) references herein to any contract or agreement (including this Agreement) mean such contract or agreement as amended, supplemented or modified from time to time in accordance with the terms thereof;

(j) with respect to the determination of any period of time, the word “from” means “from and including” and the words “to” and “until” each means “to but excluding”;

(k) references herein to any Law or any license mean such Law or license as amended, modified, codified, reenacted, supplemented or superseded in whole or in part, and in effect from time to time; and

(l) references herein to any Law shall be deemed also to refer to all rules and regulations promulgated thereunder, unless the context requires otherwise.

## ARTICLE II

### TRANSFER OF OPERATIONAL CONTROL OF TACOMA POWER COMMERCIAL SYSTEM AND PURCHASE AND SALE OF RELATED SURPLUS ASSETS

Section 2.1 Transfer of Operational Control. The Transfer of Operational Control shall take place on the last Business Day of the calendar month in which the conditions set forth in Article VI (other than those conditions that by their nature are to be satisfied at the Transfer of Operational Control but subject to the fulfillment or waiver of those conditions) have been satisfied or waived, unless such conditions have not been so satisfied or waived by the fifth Business Day preceding the last Business Day of such calendar month, in which case the Transfer of Operational Control shall take place on the last Business Day of the next calendar month or at such other time, date or place as the Parties hereto may mutually agree in writing.

#### Section 2.2 Purchase and Sale of Related Surplus Assets.

(a) On the terms and subject to the conditions set forth herein, at the Transfer of Operational Control Date, Tacoma Power shall sell, convey, transfer, assign and deliver to Rainier, and Rainier shall purchase from Tacoma Power, the Related Surplus Assets, free and clear of all Encumbrances. The “Related Surplus Assets” are comprised of:

(i) All spare customer equipment, and other tangible personal property and assets of Tacoma Power relating to the Click! Business, as set forth on Schedule 2.2(a)(i) (collectively, the “**Equipment**”);

(ii) All fiber optic cabling, coaxial cabling, supplies, tools and inventories of Tacoma Power relating to the Click! Business (the “**Inventory**”), as set forth on Schedule 2.2(a)(i);

(iii) All vehicles of Tacoma Power relating to the Click! Business (the “**Vehicles**”), as set forth on Schedule 2.2(a)(i);

(iv) All rights of Tacoma Power under those Contracts listed on Schedule 2.2(a)(iv) (collectively, the “**Transferred Contracts**”);

(v) All Governmental Authorizations listed on Schedule 2.2(a)(v) (the “**Transferred Authorizations**”);

(vi) Click! Business Subscriber deposits and Advanced Subscriber Payments;

(vii) Copies of all Customer Proprietary Information reasonably requested by Rainier on or before the tenth (10th) Business Day prior to the Transfer of Operational Control (the “**Records**”); and

(viii) All defenses, claims, deposits, prepayments, refunds, causes of action, credits, warranties (including manufacturer’s warranties), rights of recovery, rights of set off and rights of recoupment relating to any right, property or asset included in the Related Surplus Assets, or against any party under the Transferred Contracts.

(b) Updated Asset Schedules. On the tenth (10th) Business Day prior to the Transfer of Operational Control, Tacoma Power shall deliver to Rainier revised Schedules 2.2(a)(i), 2.2(a)(iv) and 2.2(a)(v), which shall set forth lists of assets of the type required to be disclosed thereon and relating to the Click! Business that Tacoma Power owns or has the right to own as of such date, including any assets acquired by Tacoma Power after the date hereof (the “Updated Asset Schedules”) and a statement indicating the value of the Advanced Subscriber Payments as defined in Section 2.6(a). No later than five (5) Business Days prior to the Transfer of Operational Control Date, Rainier shall notify Tacoma Power whether it accepts or requires revisions to the Updated Asset Schedules or the statement of Advanced Subscriber Payments. If Rainier accepts the Updated Asset Schedules and Advanced Subscriber Payments as delivered by Tacoma Power, then the Updated Asset Schedules shall amend, in their entirety, the corresponding schedules attached to this Agreement as of the date hereof, and the Consideration shall be calculated using the stated value of the Advanced Subscriber Payments.

Section 2.3 Excluded Assets. Notwithstanding anything herein to the contrary, from and after the Transfer of Operational Control, Tacoma Power shall retain, and there shall be excluded from the sale, conveyance, assignment or transfer to Rainier hereunder, all assets of Tacoma Power that are not Related Surplus Assets (the “**Excluded Assets**”).

Section 2.4 Assumption of Liabilities. At the Transfer of Operational Control, Rainier shall assume and discharge or perform when due all of the Liabilities that accrue after the Transfer of Operational Control with respect to operation of the Click! Business pursuant to the IRU Agreement and ownership of the Related Surplus Assets (the “**Assumed Liabilities**”). With respect to operation of the Tacoma Power Commercial System and ownership of the Related Surplus Assets, any Liabilities that accrue before the Transfer of Operational Control shall not be assumed by Rainier (“**Excluded Liabilities**”). The determination of the Excluded Liabilities and the Assumed Liabilities shall be prorated between Tacoma Power and Rainier as of 11:59 p.m. of the Transfer of Operational Control Date, the proration to be made and paid, insofar as feasible, on the Transfer of Operational Control Date, with a final settlement no later than sixty (60) days after the Transfer of Operational Control Date.

Section 2.5 Excluded Liabilities. Tacoma Power shall retain and be responsible for all Excluded Liabilities. Notwithstanding anything to the contrary in this Agreement, Rainier shall not assume, and Rainier shall have no Liability for, any Liability of Tacoma Power that is not expressly assumed by Rainier pursuant to Section 2.4.

Section 2.6 Purchase Price. The aggregate amount to be paid to Tacoma Power by Rainier hereunder shall be the agreed price for the Related Surplus Assets as set forth in

Schedule 2.2 (“Purchase Price”), less the amount of the pro-rated advanced Subscriber payments for services to be rendered after the Transfer of Operational Control received by Tacoma Power as of the 10th (tenth) Business Day (“Advanced Subscriber Payments”) prior to the Transfer of Operational Control (the “Consideration”). On the terms and subject to the conditions set forth herein, in consideration of the sale and delivery of the Related Surplus Assets, at the Transfer of Operational Control, Rainier shall:

- (i) assume the Assumed Liabilities; and
- (ii) pay the Consideration by wire transfer of immediately available funds; and
- (iii) execute the Ancillary Agreements.

Section 2.7 Allocation of Revenues and Prepaid Expenses. Operation of the Click! Business and the Tacoma Power Commercial System, and the revenues, expenses and liabilities attributable thereto through 11:59 p.m. on the Transfer of Operational Control Date shall be for the account of Tacoma Power. Revenues and any prepaid or deferred items, shall be prorated between Tacoma Power and Rainier as of 11:59 p.m. of the Transfer of Operational Control Date, the proration to be made and paid within ninety (90) days after the Transfer of Operational Control Date.

Section 2.8 Deliveries by Rainier. At the Transfer of Operational Control, Rainier shall deliver to Tacoma Power:

- (a) the Consideration plus the first monthly installment of the IRU Fee required by Section 5 of the IRU Agreement, by wire transfer of immediately available funds to an account which has been designated by Tacoma Power at least two Business Days prior to the Transfer of Operational Control Date;
- (b) a duly executed counterpart of one or more Assignment and Assumption Agreements;
- (c) the certificate to be delivered pursuant to Section 6.3(m);
- (d) duly executed counterparts of such other customary instruments of transfer, assumptions, filings or documents, in form and substance reasonably satisfactory to Rainier and Tacoma Power, as may be reasonably required to give effect to this Agreement;
- (e) Copies of the performance assurances and funding commitments required by Section 12 of the IRU Agreement and Section 6.3(l) of this Agreement;
- (f) the certification required by Sections 6.3(e) of this Agreement;
- (g) the certification required by Section 6.3(f) of this Agreement;
- (h) a list of the names of all Persons with an ownership interest of Five Percent (5%) or greater in Rainier Connect North, LLC;

- (i) a duly executed counterpart of each Ancillary Agreement; and
- (j) copies of the approvals for the transfers of each of the Franchises from the jurisdictions in which Tacoma Power has Franchises for the Click! Business, or copies of the Franchises Rainier Connect North, LLC has entered into to serve such jurisdictions, as required by Section 6.3(k).

Section 2.9 Deliveries by Tacoma Power. At the Transfer of Operational Control, Tacoma Power shall deliver to Rainier:

- (a) a duly executed counterpart of one or more Bills of Sale;
- (b) a duly executed counterpart of one or more Assignment and Assumption Agreements;
- (c) the Records that are Related Surplus Assets;
- (d) the certificate to be delivered pursuant to Section 6.2(d);
- (e) duly executed counterparts of such other customary instruments of transfer, assumptions, filings or documents, in form and substance reasonably satisfactory to Rainier and Tacoma Power, as may be reasonably required to give effect to this Agreement; and
- (f) a duly executed counterpart of each Ancillary Agreement.

### ARTICLE III

#### REPRESENTATIONS AND WARRANTIES OF TACOMA POWER

Tacoma Power represents and warrants to Rainier that as of the date hereof and as of the Transfer of Operational Control:

Section 3.1 Organization and Qualification. Tacoma Power is a Division of Tacoma Public Utilities, a Department of the City of Tacoma, a municipal corporation duly organized, validly existing and in good standing under the laws of the State of Washington and the City of Tacoma.

Section 3.2 Municipal Authorization.

(a) Tacoma Power has full municipal power and authority to execute and deliver this Agreement and to perform its obligations hereunder. The execution, delivery and performance by Tacoma Power of this Agreement and the Ancillary Agreements have been duly and validly authorized by the Tacoma Public Utility Board and the Tacoma City Council, and no additional authorization or consent is required in connection with the execution, delivery and performance by Tacoma Power of this Agreement. Notwithstanding the foregoing, the Parties are aware of the pending litigation set forth in Section 6.1(d). In the event that, prior to Transfer of Operational Control, a court of competent jurisdiction in any of the matters set forth in Section 6.1(d), issues an order nullifying or invalidating the IRU Agreement or restraining or enjoining

either Party from executing the IRU Agreement or exercising any rights accruing to either party under the IRU Agreement, either Party shall have the right to terminate this Agreement, which shall be Party's sole remedy. Alternatively, the Parties may suspend the obligations under this Agreement for such period of time and upon such conditions as the Parties may mutually agree.

(b) Tacoma Power has or prior to the Transfer of Operational Control will have full municipal power and authority to execute and deliver each Ancillary Agreement or Transfer of Operational Control document to which it is (or will be) a party and to perform its obligations thereunder. The execution, delivery and performance by Tacoma Power of each Ancillary Agreement to which it is (or will be) a party has been or prior to the Transfer of Operational Control will have been duly and validly authorized by the Tacoma Public Utility Board and the Tacoma City Council, and no additional authorization or consent will be required in connection with the execution, delivery and performance by Tacoma Power of the Ancillary Agreements or Transfer of Operational Control documents to which Tacoma Power will be a party or signatory.

Section 3.3 Non-Contravention. The execution, delivery and performance by Tacoma Power of this Agreement and the Ancillary Agreements, and the consummation of the transactions contemplated hereby and thereby, do not and will not violate any provision of Tacoma Power's charter.

Section 3.4 Binding Effect. This Agreement and each of the Ancillary Agreements will constitute, when executed and delivered by Tacoma Power and by Rainier and the other parties thereto, a valid and legally binding obligation of Tacoma Power, enforceable against Tacoma Power in accordance with their respective terms. Each of the unexecuted Ancillary Agreements to be entered into on or prior to the Transfer of Operational Control Date, when executed and delivered by Tacoma Power and by Rainier and the other parties thereto, will constitute a valid and legally binding obligation of Tacoma Power, enforceable against Tacoma Power in accordance with its terms.

Section 3.5 Assets. At the Transfer of Operational Control (after giving effect to the Transaction), Rainier will have good and marketable title to the Related Surplus Assets free and clear of any Encumbrances, other than those created by Rainier or its Affiliates.

Section 3.6 Finders' Fees. There is no investment banker, broker, finder or other intermediary that has been retained by or is authorized to act on behalf of Tacoma Power who might be entitled to any fee or commission in connection with the Transaction.

Section 3.7 No Default. Other than the litigation referenced in Section 6.1(d), there is no action, suit, proceeding, or investigation at law or in equity before or by any court, public board or body pending against or affecting the Party, challenging or affecting the performance of the Party's obligations hereunder.

Section 3.8 Condition of Related Surplus Assets. NOTWITHSTANDING ANY EXAMINATION OR INSPECTION MADE BY RAINIER AND WHETHER OR NOT ANY PATENT OR LATENT DEFECT OR CONDITION WAS REVEALED OR DISCOVERED THEREBY, THE RELATED SURPLUS ASSETS ARE CONVEYED TO

RAINIER UNDER THIS AGREEMENT IN THEIR “AS IS” CONDITION WITH ALL FAULTS AS OF THE EFFECTIVE DATE. EXCEPT AS SET FORTH IN THIS AGREEMENT, TACOMA POWER MAKES NO WARRANTY TO RAINIER OR ANY OTHER ENTITY, WHETHER EXPRESS, IMPLIED OR STATUTORY, AS TO THE INSTALLATION, DESCRIPTION, QUALITY, MERCHANTABILITY, USEFUL LIFE, FUTURE ECONOMIC VIABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF RELATED SURPLUS ASSETS, OR AS TO ANY OTHER MATTER, ALL OF WHICH WARRANTIES ARE HEREBY EXPRESSLY EXCLUDED AND DISCLAIMED.

Section 3.9 No Other Representations or Warranties. Except for the representations and warranties contained in this Article III, neither Tacoma Power nor any other Person makes any other express or implied representation or warranty on behalf of Tacoma Power.

## ARTICLE IV

### REPRESENTATIONS AND WARRANTIES OF RAINIER

Rainier represents and warrants to Tacoma Power that as of the date hereof and as of the Transfer of Operational Control:

Section 4.1 Organization and Qualification.

(a) Rainier is a limited liability company duly organized, validly existing and in good standing under the laws of the State of Washington. Rainier has all requisite power and authority to own and operate its assets and to carry on its business as currently conducted.

Section 4.2 Corporate Authorization.

(a) Rainier has full corporate power and authority to execute and deliver this Agreement and to perform its obligations hereunder. The execution, delivery and performance by Rainier of this Agreement have been duly and validly authorized and no additional authorization or consent is required in connection with the execution, delivery and performance by Rainier of this Agreement.

(b) Rainier has or prior to the Transfer of Operational Control will have full power and authority to execute and deliver each of the Ancillary Agreements to which it will be a party and to perform its obligations thereunder. The execution, delivery and performance by Rainier of each of the Ancillary Agreements to which it will be a party has been or prior to the Transfer of Operational Control will have been duly and validly authorized and no additional authorization or consent will be required in connection with the execution, delivery and performance by Rainier of any of the Ancillary Agreements to which it will be a party.

Section 4.3 Consents and Approvals. No consent, approval, waiver, authorization, notice or filing is required to be obtained by Rainier, or to be given by Rainier, or made by Rainier with, any Person in connection with the execution, delivery and performance by Rainier of this Agreement and the Ancillary Agreements to which it is a party, other than the

consents, approvals, waivers, authorizations, notices or filings the failure of which to obtain, give or make would not, individually or in the aggregate, reasonably be expected to have a material impairment or delay of Rainier's ability to effect the Transfer of Operational Control or to perform its obligations under this Agreement or any Ancillary Agreement to which it is a party.

Section 4.4 Non-Contravention. Rainier is not a party to any contract, agreement or other instrument or condition which materially restricts, limits or in any manner materially adversely affects the transactions contemplated hereby. The execution, delivery and performance of this Agreement and the Ancillary Agreements contemplated hereby by Rainier do not violate any provision of law applicable to Rainier or conflict with, result in the termination or breach of any term, condition or provision of, or constitute a material default under, the governing corporate formation documents of Rainier, or of any contract, lease agreement or other instrument.

Section 4.5 Binding Effect. This Agreement and each of the Ancillary Agreements will constitute, when executed and delivered by Rainier and by Tacoma Power and the other parties thereto, a valid and legally binding obligation of Rainier, enforceable against Rainier in accordance with their respective terms.

Section 4.6 Finders' Fees. There is no investment banker, broker, finder or other intermediary that has been retained by or is authorized to act on behalf of Rainier or any Affiliate of Rainier who might be entitled to any fee or commission in connection with the Transaction.

Section 4.7 No Default. Other than the litigation referenced in Section 6.1(d), there is no action, suit, proceeding, or investigation at law or in equity before or by any court, public board or body pending against or affecting the Party, challenging or affecting the performance of the Party's obligations hereunder.

Section 4.8 Acceptance of Surplus Related Assets. RAINIER ACCEPTS THE SURPLUS RELATED ASSETS "AS IS" AND WITH ALL FAULTS. RAINIER HEREBY WAIVES AND RELEASES ANY CLAIM OR ACTION AGAINST TACOMA POWER IN RESPECT OF OR RELATED TO THE CONDITION OF THE RELATED SURPLUS ASSETS, INCLUDING ANY DEFECTS OR ADVERSE CONDITIONS NOT DISCOVERED OR OTHERWISE KNOWN BY RAINIER AS OF THE EFFECTIVE DATE

Section 4.9 No Other Representations or Warranties. Except for the representations and warranties contained in this Article IV, neither Rainier nor any other Person makes any other express or implied representation or warranty on behalf of Rainier.

## ARTICLE V

### COVENANTS

Section 5.1 Access and Information. From the date hereof until the Transfer of Operational Control subject to applicable Laws, Tacoma Power shall (i) afford Rainier and its authorized representatives reasonable access, during regular business hours, upon reasonable advance notice, to the Employees, the Tacoma Power Commercial System, and the Related

Surplus Assets, and (ii) furnish, or cause to be furnished, to Rainier any financial and operating data and other information with respect to the Click! Business or in furtherance of this Transaction as Rainier from time to time reasonably requests.

Section 5.2 Conduct of Business. Except with respect to the actions consistent with the contemplated Transfer of Operational Control, during the period from the date hereof to the Transfer of Operational Control, Tacoma Power shall conduct the operations of and maintain the Tacoma Power Commercial System in the Ordinary Course of Business and in accordance with applicable material Laws (including, fulfilling installation requests) and use its commercially reasonable efforts to preserve the Click! Business and its relationship with its customers, suppliers, and creditors.

Section 5.3 Commercially Reasonable Efforts. Tacoma Power and Rainier shall cooperate and use their respective commercially reasonable efforts to fulfill as promptly as practicable the conditions precedent to the other Party's obligations hereunder and shall use their respective commercially reasonable efforts to fulfill as promptly as practicable the conditions precedent to their obligations hereunder to the extent they have the ability to control the satisfaction of such obligations. Without limiting the generality of the foregoing, Tacoma Power and Rainier shall (i) make all filings and submissions required by Laws, and promptly file any additional information requested as soon as practicable after receipt of such request therefor and promptly file any other information that is necessary, proper or advisable to permit consummation of the Transaction; ; and (ii) use commercially reasonable efforts to perform the tasks set forth in the Transition Plan.

(a) Each of the Parties hereto agrees to execute and deliver such other documents, certificates, agreements and other writings and to take such other commercially reasonable actions as may be necessary or desirable in order to evidence, consummate or implement expeditiously the transactions contemplated by this Agreement and to vest in Rainier good and marketable title to the Related Surplus Assets to the same extent as held by Tacoma Power, free and clear of all Encumbrances.

(b) In furtherance and not in limitation of the foregoing, each of Rainier and Tacoma Power agrees to make as promptly as practicable, (i) appropriate filings with the FCC, and (ii) all other necessary filings with other Government Entities relating to the Transaction, and to use commercially reasonable efforts to cause the receipt of approvals under such other Laws or from such authorities or third parties as soon as practicable.

(c) Each of Tacoma Power and Rainier shall give (or shall cause their respective Affiliates to give) any notices to third parties, and use, and cause their respective Affiliates to use, commercially reasonable efforts to obtain any third party (excluding Government Entities) consents related to or required in connection with the Transaction.

Section 5.4 Compensation and Benefits; Employees.

(a) Compensation and Benefits. The Parties hereto hereby acknowledge and agree that no provision of this Agreement shall be construed to create any right to any compensation or benefits whatsoever on the part of any Employee or other future, present or former

employee of Tacoma Power. Nothing in this Section 5.4 or elsewhere in this Agreement shall be deemed to make any employee of the Parties or their respective Affiliates a third party beneficiary of this Section 5.4 or any rights relating hereto.

(b) Employees. None of the provisions contained in this Agreement shall be interpreted as obligating Rainier to make an offer of employment to any of the Employees, provided, however, that Rainier agrees to make a good faith commitment to consider the existing Employees for employment when filling vacancies associated with its operations pursuant to the IRU Agreement. Rainier will evaluate each Employee for employment based on its own hiring criteria. In the event that Rainier does extend an offer of employment to an Employee, such offer will contain Rainier's standard terms and conditions of employment.

Section 5.5 Tax Matters.

Notwithstanding any provision in this Agreement to the contrary, to the extent any of the following apply, any real property excise or transfer tax, sales tax, use tax, or other similar tax imposed on the transactions contemplated by this Agreement shall be borne by Rainier Connect North, LLC.

Section 5.6 IRU Agreement The IRU Agreement attached as Exhibit 5.6 hereto includes the IRU Agreement and Exhibits, including near final drafts of Exhibits A2.1, A2.2, A2.3, A2.4, and A7.

(b) Updated IRU Agreement Exhibits. On the tenth (10th) Business Day prior to the Transfer of Operational Control, Tacoma Power shall deliver to Rainier revised IRU Exhibits A2.1, A2.2, A2.3, A2.4, and A7 which shall set forth lists of assets of the type required to be disclosed thereon and relating to the Tacoma Power Commercial System as of such date, including any changes to the Tacoma Power Commercial System assets after the date hereof (the "Updated IRU Exhibits"). No later than five (5) Business Days prior to the Transfer of Operational Control Date, Rainier shall notify Tacoma Power whether it accepts or requires revisions to the Updated IRU Exhibits. If Rainier accepts the Updated IRU Exhibits as delivered by Tacoma Power, then the Updated IRU Exhibits shall amend, in their entirety, the corresponding exhibits attached to the IRU Agreement as of the date hereof.

(c) As of the Transfer of Operational Control Date, Rainier and Tacoma Power shall each execute and deliver the IRU Agreement substantially in the form attached hereto as Exhibit 5.6, including any Updated IRU Exhibits.

Section 5.7 Post-Transfer of Operational Control Consents. Subsequent to the Transfer of Operational Control, Tacoma Power and Rainier shall continue to use commercially reasonable efforts to obtain in writing as promptly as possible any consent, authorization or approval necessary or commercially advisable in connection with the Transaction which was not obtained on or before the Transfer of Operational Control in form and substance reasonably satisfactory to Rainier.

Section 5.8 Environmental Matters If at any time prior to the Transfer of Operational Control, any material environmental investigation, study, audit, test, review or other

analysis in relation to any Related Surplus Asset is conducted, Tacoma Power shall (a) promptly notify Rainier thereof and (b) subject to applicable Law, keep Rainier informed as to the progress of any such proceeding.

Section 5.9 Name of Business To the extent that the names, marks, logos or indicia of Click! Business, (the “**Click! Marks**”), are incorporated in or on the Related Surplus Assets, Rainier may continue to use the Click! Marks pursuant to the terms of the license set forth in Exhibit P to the IRU Agreement. Rainier acknowledges and agrees that except as expressly set forth in Exhibit P to the IRU Agreement, it shall have no rights in and to any trade names, trademarks, service marks, Internet domain names or logos owned by Tacoma Power or any trade names, trademarks, service marks, Internet domain names or logos confusingly similar thereto.

## ARTICLE VI

### CONDITIONS TO TRANSFER OF OPERATIONAL CONTROL

Section 6.1 Conditions to the Obligations of Rainier and Tacoma Power. The obligations of the Parties hereto to effect the Transfer of Operational Control are subject to the satisfaction (or waiver by both parties) prior to the Transfer of Operational Control of the following conditions:

(a) No Prohibition. No Law shall be in effect prohibiting the Transaction.

(b) Consents and Approvals. All Governmental Authorizations (other than Franchises) that are set forth on Schedule 6.1(b) hereto shall have been obtained, in each case in form and substance reasonably satisfactory to both parties.

(c) No Default. Other than the litigation referenced in Section 6.1(d), there is no action, suit, proceeding, or investigation at law or in equity before or by any court, public board or body pending against or affecting the Party, challenging the validity or enforceability of this Agreement or any other documents relating hereto or the performance of the Party’s obligations hereunder.

(d) The pending litigation is: Edward E. (Ted) Coates, et al. v. City of Tacoma (Wa. Sup. Ct, Case No. 17-2-08907); Mitchell Shook v. City of Tacoma (U.S. Dist. Ct, Wa. W. Dist., Case No. 3:19cv05794BHS); Mitchell Shook v. City of Tacoma; Thomas McCarthy and Christopher T. Anderson v. City of Tacoma (Wa. Sup. Ct., Case No 19-2-07135-0); Darrel Bowman v City of Tacoma (Wa. Sup. Ct., Case No. 19-2-11506-3); Mitchell Shook v City of Tacoma (Wa. Sup. Ct., Case No. 19-2-11760-1); City of Tacoma v. Comcast Cable Communications, LLC; Comcast Cable Communications Management, LLC (Wa. Sup. Ct., Case No. 19-2006715-8).

Section 6.2 Conditions to the Obligation of Rainier. The obligation of Rainier to effect the Transfer of Operational Control is subject to the satisfaction (or waiver by Rainier) prior to the Transfer of Operational Control of the following conditions:

(a) Representations and Warranties. The representations and warranties of Tacoma Power in Article III that are qualified as to materiality or Material Adverse Effect shall be true and correct and all other representations and warranties of Tacoma Power in Article III not so qualified shall be true and correct in all material respects, in each case, at the time made and as of the Transfer of Operational Control Date as if made at and as of such time (except, in each case, to the extent expressly made as of an earlier date, in which case as of such earlier date).

(b) Covenants. Each of the covenants and agreements of Tacoma Power to be performed on or prior to the Transfer of Operational Control shall have been duly performed in all material respects.

(c) Ancillary Agreements. Tacoma Power shall have executed and delivered the Ancillary Agreements to which it is a party.

(d) Certificate. Rainier shall have received a certificate, signed on behalf of Tacoma Power by a duly authorized officer of Tacoma Power, dated the Transfer of Operational Control Date, to the effect that the conditions set forth in this Section 6.2 have been satisfied.

(e) No Encumbrances. As of the Transfer of Operational Control, there shall be no Encumbrances on any of the Related Surplus Assets, other than Encumbrances that, individually or in the aggregate, would not reasonably be expected to have a Material Adverse Effect.

(f) No Material Adverse Change. Since the date of this Agreement, no event or condition has occurred that, individually or in the aggregate, has had or would reasonably be expected to have a Material Adverse Effect

(g) Rainier shall have received a certificate, signed on behalf of Tacoma Power by a duly authorized officer of Tacoma Power, dated the Transfer of Operational Control Date, to the effect that the Rainier's privacy policy and net neutrality policy are in compliance with the requirements of Exhibits J and K of the IRU Agreement, respectively.

Section 6.3 Conditions to the Obligation of Tacoma Power. The obligation of Tacoma Power to effect the Transfer of Operational Control is subject to the satisfaction (or waiver by Tacoma Power) prior to the Transfer of Operational Control of the following conditions:

(a) Representations and Warranties. The representations and warranties of Rainier in Article IV that are qualified by materiality or material adverse effect shall be true and correct and all other representations and warranties of Rainier in Article IV not so qualified shall be true and correct at the time made and as of the Transfer of Operational Control Date as if made at and as of such time (except, in each case, to the extent expressly made as of an earlier date, in which case as of such earlier date).

(b) Covenants. Each of the covenants and agreements of Rainier to be performed on or prior to the Transfer of Operational Control shall have been duly performed in all material respects.

(c) Ancillary Agreements. Rainier shall have executed and delivered the Ancillary Agreements to which it is a party.

(d) Published Rates and Services. Rainier shall have published its rates and services on its website as required by Exhibits G to the IRU Agreement.

(e) Lifeline Certification. Rainier shall have provided Tacoma Power with a signed certification attesting that it is a certified Lifeline provider and that it will offer the federal Lifeline subsidy as required by Exhibit H to the IRU Agreement..

(f) Reduced-Cost Service. Rainier shall have provided Tacoma Power with a signed certification that it will offer the substantially reduced-cost service contemplated by Exhibit H to the IRU Agreement.

(g) Local Office. Rainier shall have established a local office in the City of Tacoma and posted the address on its website as required by Exhibit I to the IRU Agreement

(h) Customer Privacy. Rainier shall have conspicuously published its privacy policy on its website as required by Exhibit J to the IRU Agreement.

(i) Net Neutrality. Rainier's net neutrality policy shall be conspicuously posted on its website as required by Exhibit K to the IRU Agreement

(j) Open Access Program. Rainier shall have provided Tacoma Power with a copy of its Open Access Program as required by Exhibit L to the IRU Agreement.

(k) Franchises. Rainier shall have either obtained approval for the transfer of each of the Franchises from the jurisdictions in which Tacoma Power has Franchises for the Click! Business as of the date of this Agreement, or will have entered into its own Franchises to serve such jurisdictions.

(l) Funding Commitment Letter(s). In order to demonstrate its ability to meet its obligations under this IRU Agreement, Rainier shall have delivered funding commitment letter(s), in a form reasonably acceptable to Tacoma Power, in the amount of four million five hundred thousand Dollars (\$4,500,000) covering the first three (3) years of the Initial Term ("Funding Commitment Letter(s)").

(m) Certificate. Tacoma Power shall have received a certificate, signed on behalf of Rainier by a duly authorized officer of Rainier, dated the Transfer of Operational Control Date, to the effect that the conditions set forth in this Section 6.3 have been satisfied.

## ARTICLE VII

### TERMINATION AND DEFAULT

Section 7.1 Termination by Mutual Consent. This Agreement may be terminated at any time prior to the Transfer of Operational Control by mutual written agreement of Tacoma Power and Rainier.

Section 7.2 Termination by Either Rainier or Tacoma Power. This Agreement may be terminated at any time prior to the Transfer of Operational Control by Rainier or Tacoma Power, by giving written notice of termination to the other Party, if (a) the Transfer of Operational Control shall not have occurred on or before 180 days from the date of this Agreement so long as the Party proposing to terminate has not breached in any material respect any of its representations, warranties, covenants or other agreements under this Agreement, in any manner that shall have proximately contributed to the failure of the Transfer of Operational Control to so occur, or (b) pursuant to Section 7.3 hereof, or (c) pursuant to Section 3.2(a).

Section 7.3 Material Breaches. A Party shall be deemed to be in default under this Agreement only if such Party has materially breached or failed to perform its obligations hereunder, and non-material breaches or failures shall not be grounds for declaring a Party to be in default, postponing the Transfer of Operational Control, or terminating this Agreement. For purposes of this Agreement, a Party's failure or refusal to execute any of the Ancillary Agreements shall constitute a material breach.

(b) If Tacoma Power or Rainier believes the other to be in default hereunder, the Party believing a default has occurred shall provide the other with written notice specifying in reasonable detail the nature of such default. If the default has not been cured by the earlier of: (a) the Transfer of Operational Control Date, or (b) within ten (10) business days after delivery of that notice (or such additional reasonable time as the circumstances may warrant provided the Party in default undertakes diligent, good faith efforts to cure the default within such ten (10) day period and continues such efforts thereafter), then the Party giving such notice may terminate this Agreement and/or exercise the remedies available to such Party pursuant to this Agreement.

Section 7.4 Effect of Termination.

(a) In the event of the termination of this Agreement in accordance with this Article VII, this Agreement shall thereafter become void and have no effect, and no Party hereto shall have any Liability to the other Party hereto or their respective Affiliates, except that nothing in this Section 7.4 shall relieve any Party from liability for any willful breach of this Agreement that arose prior to such termination.

**ARTICLE VIII**

**MISCELLANEOUS**

Section 8.1 Notices. All notices, requests, demands, approvals, consents and other communications hereunder shall be in writing and shall be deemed to have been duly given and made if served by personal delivery upon the Party for whom it is intended or on the third day following mailing, postage prepaid, certified mail, return receipt requested to the Person at the address set forth below:

**Tacoma Power:**

Tacoma Public Utilities

3628 South 35th Street  
Tacoma, WA 98409  
Attention: TPU Contract Administrator

**With a copy to:**

City of Tacoma  
747 Market Street  
Tacoma, WA 98402  
Attention: City Attorney

**Rainier:**

Rainier Connect North, LLC  
104 Washington Ave. N.  
P.O. Box 639  
Eatonville, WA 98328  
Attn: Manager

**With a copy to:**

Richard A. Finnigan  
2112 Black Lake Blvd. SW  
Olympia, WA 98512

Either Party may change the address to which notices shall be sent by notice to the other Party by providing thirty (30) days' written notice of the change of address.

Section 8.2 Amendment; Waiver. Any provision of this Agreement may be amended, waived or suspended if, and only if, such amendment or waiver is in writing and signed, in the case of an amendment, by Rainier and Tacoma Power, or in the case of a waiver, by the Party against whom the waiver is to be effective. No failure or delay by any Party in exercising any right, power or privilege hereunder shall operate as a waiver thereof nor shall any single or partial exercise thereof preclude any other or further exercise thereof or the exercise of any other right, power or privilege. The rights and remedies herein provided shall be cumulative and not exclusive of any rights or remedies provided by Law except as otherwise specifically provided in Article VII.

Section 8.3 No Assignment or Benefit to Third Parties. This Agreement shall be binding upon and inure to the benefit of the Parties hereto and their respective successors. No Party to this Agreement may assign any of its rights or transfer or delegate any of its obligations under this Agreement, and this Agreement may not be assigned to any third parties.

Section 8.4 Entire Agreement. This Agreement (including all Schedules and Exhibits) executed as of the date hereof contain the entire agreement between the parties hereto with respect to the subject matter hereof and thereof and supersede all prior agreements and understandings, oral or written, with respect to such matters, including but not limited to the Letter

of Intent that was executed on April 2, 2019 by and between Tacoma Power and Mashell Telecom Inc.

Section 8.5 Publicity. Notwithstanding anything to the contrary contained herein, no press release or similar public announcement or communication shall be made or caused to be made relating to this Agreement and the Transaction unless specifically approved in advance by both parties hereto, except that a Party hereto may issue any press release or make any public announcement or communication relating to this Agreement and the Transaction that may be required by any applicable Law (including any listing requirement) without such approval if, to the extent practicable, such Party has used commercially reasonable efforts to obtain the approval of the other Party before issuing such press release or making such public announcement or communication.

Section 8.6 Expenses. Except as otherwise expressly provided in this Agreement, whether or not the Transfer of Operational Control occurs, all costs and expenses incurred in connection with this Agreement and the transactions contemplated hereby shall be borne by the Party incurring such costs and expenses.

Section 8.7 Bulk Sales. Tacoma Power and Rainier agree to waive compliance with Article 6 of the Uniform Commercial Code as adopted in each of the jurisdictions in which any of the Related Surplus Assets are located to the extent that such Article is applicable to the transactions contemplated hereby.

Section 8.8 Governing Law. Any action related to this Agreement shall be governed the laws of the State of Washington (except that body of law controlling conflict of laws) and the United Nations Convention on the International Sale of Goods will not apply. Any suit or proceeding arising out of or relating to this Agreement will be brought in the applicable federal or state court located in Pierce County, Washington, and each Party irrevocably submits to the jurisdiction and venue of such courts.

Section 8.9 Counterparts. This Agreement may be executed in one or more counterparts, each of which shall be deemed an original, and all of which shall constitute one and the same Agreement.

Section 8.10 Headings. The heading references herein and the table of contents hereof are for convenience purposes only, and shall not be deemed to limit or affect any of the provisions hereof.

Section 8.11 Severability. The provisions of this Agreement shall be deemed severable and the invalidity or unenforceability of any provision shall not affect the validity or enforceability of the other provisions hereof. If any provision of this Agreement, or the application thereof to any Person or any circumstance, is invalid or unenforceable, (a) a suitable and equitable provision shall be substituted therefor in order to carry out, so far as may be valid and enforceable, the intent and purpose of such invalid or unenforceable provision and (b) the remainder of this Agreement and the application of such provision to other Persons or circumstances shall not be affected by such invalidity or unenforceability, nor shall such invalidity or unenforceability affect the validity or enforceability of such provision, or the application thereof, in any other jurisdiction.

Section 8.12 Confidentiality.

(a) Definition. “**Confidential Information**” means information concerning a Party’s (or its Affiliates’) products, plans, methods, processes, business opportunities, vendors, customers, finances, personnel and other information related to the business of such Party and the terms of this Agreement. “Confidential Information” does not include any information which: (a) the receiving Party rightfully knew before the disclosing Party disclosed it to the receiving Party; (b) has become publicly known through no wrongful act of the receiving Party; or (c) the receiving Party developed independently and without the use of any Confidential Information, as evidenced by appropriate documentation.

(b) Nondisclosure. All Confidential Information remains the property of the disclosing Party, and no license or other right in any Confidential Information is granted hereby. The receiving Party shall not disclose any Confidential Information to any third party or otherwise, and shall take all reasonable precautions to prevent its unauthorized dissemination, during the pendency of this Agreement. The receiving Party shall limit its internal distribution of Confidential Information to its employees and agents who have a need to know, and shall take steps to ensure that dissemination is so limited. The receiving Party shall not use any Confidential Information for its own benefit or for the benefit of anyone other than the disclosing Party. Upon disclosing Party’s written request, the receiving Party shall return to the disclosing Party all Confidential Information in the receiving Party’s custody or control. All information disclosing Party provides is provided “AS IS” and without any warranty, express, implied or otherwise, regarding its accuracy or performance.

(c) Confidential or Proprietary Records Must be Marked. If Rainier provides Tacoma Power with records that Rainier considers confidential or proprietary, Rainier must mark all applicable pages of said record(s) as “Confidential” or “Proprietary.” If Rainier fails to so mark record(s), then (1) Tacoma Power, upon request, may release said record(s) without the need to satisfy the notice requirements above; and (2) Rainier expressly waives its right to allege any kind of civil action or claim against Tacoma Power pertaining to the release of said record(s).

(d) Public Disclosure. This Agreement and documents provided to Tacoma Power by Rainier hereunder are deemed public records subject to disclosure under the Washington State Public Records Act, Chapter 42.56 RCW (“**Public Records Act**”). Thus, Tacoma Power may be required, upon request, to disclose this Agreement and documents related to it unless an exemption under the Public Records Act or other laws applies. In the event Tacoma Power receives a request for such disclosure, determines in its legal judgment that no applicable exemption to disclosure applies, and Rainier has complied with the requirements herein to mark all content considered to be confidential or proprietary, Tacoma Power agrees to provide Rainier ten (10) days’ written notice of impending release. Should legal action thereafter be initiated by Rainier to enjoin or otherwise prevent such release, all expense of any such litigation shall be borne by Rainier, including any damages, attorneys’ fees or costs awarded by reason of having opposed disclosure. Tacoma Power shall not be liable for any release where notice was provided and Rainier took no action to oppose the release of information. Notice of any proposed release of information pursuant to Chapter 42.56 RCW, shall be provided to Rainier according to the “Notices” provision herein.

Section 8.13 Time of Essence. Time is of the essence in this agreement and each provision hereof in which time of performance is established.

Section 8.14 No Gratuities. Tacoma Power shall not offer or give any Rainier employee or agent any gratuity, payment, or other personal benefit or inducement with a view toward securing business from Rainier or influencing the terms, conditions, or performance of this Agreement or any statement of work or purchase order.

Section 8.15 Further Assurances. In connection with this Agreement and the transactions contemplated hereby, each Party will execute and deliver any additional documents and instruments and perform any additional acts that may be commercially reasonable, necessary, or appropriate, or reasonably requested by the other Party, to effectuate and perform the Parties' obligations under this Agreement and the transactions contemplated hereby.

Section 8.16 Non-Discrimination. Rainier agrees to take all steps necessary to comply with all federal, state, and Tacoma City laws and policies regarding non-discrimination and equal employment opportunities. Rainier shall not discriminate in any employment action because of race, religion, creed, color, national origin or ancestry, sex, gender identity, sexual orientation, age, marital status, familial status, veteran or military status, the presence of any sensory, mental or physical disability or the use of a trained dog guide or service animal by a disabled person. In the event of non-compliance by Rainier with any of the non-discrimination provisions of this Agreement, Tacoma Power shall be deemed to have cause to terminate this Agreement, in whole or in part.

Section 8.17 Relationship of the Parties. The relationship between the Parties will not be that of partners, agents, or joint venture parties for one another, and nothing contained in this Agreement will be deemed to constitute a partnership or agency agreement between them for any purposes, including, but not limited to, tax purposes. No employment relationship is created by this Agreement. Neither Party will make any commitment, by contract or otherwise, binding upon the other or represent that it has any authority to do so. In performing any of their obligations hereunder, each Party will be an independent contractor or independent Party and shall use its discretion in discharging its contractual obligations at its own risk.

Section 8.18 Conflict of Interest. No officer, employee, or agent of Tacoma Power, nor any member of the immediate family of any such officer, employee, or agent as defined by City ordinance, shall have any personal financial interest, direct or indirect, in this Agreement, either in fact or in appearance. Rainier shall comply with all federal, state, and City conflict of interest laws, statutes, and regulations. Rainier represents that it presently has no interest and shall not acquire any interest, direct or indirect, in the program to which this Agreement pertains which would conflict in any manner or degree with the performance of Rainier's services and obligations hereunder. Rainier further covenants that, in performance of this Agreement, no person having any such interest shall be employed. Rainier also agrees that its violation of the City's Code of Ethics contained in Chapter 1.46 of the Tacoma Municipal Code shall constitute a breach of this Agreement subjecting this Agreement to termination.

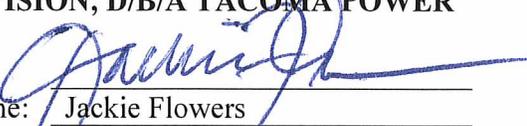

Section 8.19 Representation. Both Parties acknowledge that they have each been represented by counsel and this Agreement and every provision hereof has been freely and fairly

negotiated. All provisions of this Agreement will be interpreted according to their fair meaning and will not be strictly construed against any Party.

## INDEFEASIBLE RIGHT OF USE AGREEMENT

**THIS INDEFEASIBLE RIGHT OF USE AGREEMENT (“IRU Agreement”)** is by and between the **City of Tacoma, Department of Public Utilities, Light Division**, a municipal corporation of the State of Washington (d/b/a and hereinafter referred to as “**Tacoma Power**”), and **Rainier Connect North, LLC**, a Washington limited liability company (hereinafter referred to as “**Operator**”). Tacoma Power and Operator shall each individually be referred to as a “**Party**” and together constitute the “**Parties.**”

**WHEREAS**, Tacoma Power owns the Tacoma Power Commercial System, as defined below;

**WHEREAS**, Operator wishes to obtain access to and use the Tacoma Power Commercial System; and

**WHEREAS**, subject to the terms and conditions set forth in this IRU Agreement and Exhibits, Tacoma Power is willing to grant Operator the right to use the Tacoma Power Commercial System.

**NOW THEREFORE**, in consideration of the mutual promises set forth below, the Parties hereby agree as follows:

### 1. DEFINITIONS

Unless otherwise defined in this IRU Agreement, capitalized terms used in this IRU Agreement, all Exhibits, and amendments thereto shall have the meaning set forth below:

(a) “**Affiliate**” means, with respect to any Person, any other Person directly or indirectly controlling, controlled by, or under common control with, such Person as of the date on which, or at any time during the period for which, the determination of affiliation is being made. For purposes of this definition, the term “control” means the possession, directly or indirectly, of the power to direct or cause the direction of the management policies of such Person, whether through equity interest, board membership, LLC interest, contract, charter, statute, regulation or otherwise.

(b) “**After-Installed Assets**” means any asset used or useful in the ongoing operation of the Tacoma Power Commercial System installed in or used in the operation of the Tacoma Power Commercial System, any extension, expansion, improvement or addition to, replacement of, upgrade or overbuild of the Tacoma Power Commercial System made after the Effective Date of this IRU Agreement within the Tacoma Power Commercial Service Area. The term does not include any assets of Operator or any of its Affiliates located outside the Tacoma Power Commercial Service Area even if such assets are used to provide Shared Network Services or fiber Operator installs within the Tacoma Power Commercial Service Area to connect its network to the Tacoma Power Commercial System..

(c) “**Annual Report**” is defined in Section 6(c) of this IRU Agreement.

- (d) “**Annual Reporting Date**” means July 1.
- (e) “**Applicable Standards**” is defined in Exhibit D to this Agreement.
- (f) “**Business Day**” means any day other than Saturday or a legal holiday as defined by RCW 1.16.050.
- (g) “**Capital Expenditures**” is defined in Exhibit F to this IRU Agreement.
- (h) “**Capital Expenditures Minimum**” is defined in Exhibit F to this IRU Agreement.
- (i) “**Capital Expenditures Period**” is defined in Exhibit F to this IRU Agreement.
- (j) “**Catch-Up Capital Expenditures**” is defined in Exhibit F to this IRU Agreement.
- (k) “**Catch-Up Period**” is defined in Exhibit F to this IRU Agreement.
- (l) “**Change of Control**” and “**Change of Working Control**” are defined in Exhibit N to this IRU Agreement.
- (m) “**Chronic Failure**” is defined in Exhibit C to this IRU Agreement.
- (n) “**City**” means the City of Tacoma, Washington.
- (o) “**Click! Network**” means the business unit of Tacoma Power providing services over the Tacoma Power Commercial System prior to the Effective Date.
- (p) “**Compliance Evaluation**” is defined in Section 4(c) of this IRU Agreement.
- (q) “**Confidential Information**” is defined in Section 32(a) of this IRU Agreement.
- (r) “**Consumer Price Index Increase**” means the increase in the Consumer Price Index for All Urban Consumers (“**CPI-U**”) of the Seattle-Tacoma-Bellevue area, as computed and published by the U.S. Bureau of Labor Statistics. The increase shall be calculated using the annual percentage change as defined as the average of the 12 most recently published months of the Consumer Price Index. In the event that the U.S. Bureau of Labor Statistics ceases publishing such data during the Term, Tacoma Power may designate a different commercially reputable source that regularly computes and publishes the Consumer Price Index.
- (s) “**Controversy**” is defined in Section 21(a) of this IRU Agreement.
- (t) “**Credit**” is defined in Exhibit F to this IRU Agreement.
- (u) “**Critical Routes**” is defined in Exhibit B to this IRU Agreement.
- (v) “**Default**” is defined in Section 20(b) of this IRU Agreement.

- (w) “**Due Date**” is defined in Section 5(c) of this IRU Agreement.
- (x) “**Effective Date**” means \_\_\_\_\_.
- (y) “**Escalation List**” is defined in Exhibit C to this IRU Agreement.
- (z) “**ETC**” is defined in Exhibit H to this IRU Agreement.
- (aa) “**Exhibits**” means the exhibits attached hereto, and any amendments, modifications and supplements to these Exhibits.
- (bb) “**Facilities-Based Entity**” is defined in Exhibit N to this IRU Agreement.
- (cc) “**Fault**” is defined in Exhibit C to this IRU Agreement.
- (dd) “**FCC**” is defined in Exhibit H to this IRU Agreement.
- (ee) “**Fiber Maintenance**” is defined in Exhibit B to this IRU Agreement.
- (ff) “**Fiber System**” is defined in Exhibit C to this IRU Agreement.
- (gg) “**Fiber Unavailability**” is defined in Exhibit C to this IRU Agreement.
- (hh) “**Final Period**” is defined in Exhibit F to this IRU Agreement.
- (ii) “**Final Period Minimum**” is defined in Exhibit F to this IRU Agreement.
- (jj) “**Force Majeure Event**” is defined in Section 31(a) of this IRU Agreement.
- (kk) “**Gigabit Service**” is defined in Exhibit E to this IRU Agreement.
- (ll) “**Hub Sites**” are locations where Tacoma Power Commercial Equipment is installed and in service as listed in Exhibit A3.
- (mm) “**Initial Period**” is defined in Exhibit F to this Agreement.
- (nn) “**Initial Period Minimum**” is defined in Exhibit F to this Agreement.
- (oo) “**Indefeasible Right of Use**” or “**IRU**” is defined in Section 2(a) of this IRU Agreement.
- (pp) “**IRU Fee**” is defined in Section 5(a) of this IRU Agreement.
- (qq) “**Maintenance**” is defined in Exhibit D to this IRU Agreement.
- (rr) “**MTTR**” is defined in Exhibit C to this IRU Agreement.
- (ss) “**Non-Critical Route**” is defined in Exhibit B to this IRU Agreement.

- (tt) “**Non-Renewal Notice Window**” is defined in Section 4(c) of this IRU Agreement.
- (uu) “**Normal Business Hours**” is defined in Exhibit I to this IRU Agreement.
- (vv) “**Normal Operating Conditions**” is defined in Exhibit I to this IRU Agreement.
- (ww) “**Open Access Program**” is defined in Exhibit L to this IRU Agreement.
- (xx) “**Operator Network**” means the communications network owned by Operator or its Affiliates outside of the Tacoma Power Commercial Service Area.
- (yy) “**Person**” means an individual, a corporation, a partnership, an association, a limited liability company or other entity or organization.
- (zz) “**Post-Termination Period**” is defined in Exhibit O to this IRU Agreement.
- (aaa) “**Public Records Act**” is defined in Section 32(d) of this IRU Agreement.
- (bbb) “**Renewal Terms**” is defined in Section 4(b) of this IRU Agreement.
- (ccc) “**Reserved Capacity**” is defined in Section 9(a) of this IRU Agreement.
- (ddd) “**Respond**” is defined in Exhibit C to this IRU Agreement.
- (eee) “**Scheduled Maintenance**” is defined in Exhibit C to this IRU Agreement.
- (fff) “**Senior Representative**” is defined in Section 24 of this IRU Agreement.
- (ggg) “**Shared Network Services**” means centralized services utilizing (a) information technology assets and related rights and/or (b) network and related physical assets, in each case that are owned and operated by Operator or any of its Affiliates and used to support both the operation and use of the Operator Network and the operation and use of the Tacoma Power Commercial System by Operator in accordance with the terms of this IRU Agreement.
- (hhh) “**Successor Operator**” is defined in Exhibit O to this IRU Agreement.
- (iii) “**Shortfall**” is defined in Exhibit F to this IRU Agreement.
- (jjj) “**Tacoma Power Commercial Coax**” means the coaxial cable, conduit housing only coaxial cable, conduit installed for service drops (whether or not currently housing coaxial cable), and coaxial cable service drops installed in the Tacoma Power Commercial Service Area, as of the Effective Date, as identified in Exhibit A2.2 to this IRU Agreement.
- (kkk) “**Tacoma Power Commercial Equipment**” means the equipment installed in the rights-of-way and in Hub Sites as of the Effective Date, as shown in Exhibits A2.2, A2.3 and A2.4.

(lll) “**Tacoma Power Commercial Fiber**” means the specific strands of fiber identified and designated for the use of Operator in Exhibit A2.1 to this IRU Agreement and conduit housing such fiber on Non-Critical Routes as identified in Exhibit A2.2 of this IRU Agreement.

(mmm) “**Tacoma Power Commercial Service Area**” means the service area of Click! Network as of the Effective Date as shown in Exhibit A1.

(nnn) “**Tacoma Power Commercial System**” means Tacoma Power Commercial Coax, Tacoma Power Commercial Fiber, Tacoma Power Commercial Equipment and After-Installed Assets.

(ooo) “**Tacoma Power Management**” is defined in Section 17(c) of this IRU Agreement.

(ppp) “**Tacoma Power Service Area**” is defined in Exhibit A1 to this IRU Agreement.

(qqq) “**Taxes**” shall mean all taxes, fees, levies, imposts, duties, charges or withholdings of any nature (including, without limitation, gross receipts taxes, leasehold excise taxes, and franchises, license and/or permit fees) together with any penalties, fines, assessments or interest thereon, imposed upon the Tacoma Power Commercial System by any federal, state or local government, regulatory body or other public taxing authority of competent jurisdiction.

(rrr) “**Term**” is defined in Section 4(b) of this IRU Agreement.

(sss) “**Transfer**” is defined in Exhibit N to this IRU Agreement.

(ttt) “**Unauthorized Transfer**” is defined in Exhibit N to this IRU Agreement.

(uuu) “**Underlying Rights**” is defined in Section 7(a) of this IRU Agreement.

(vvv) “**Unscheduled Maintenance**” is defined in Exhibit C to this IRU Agreement.

(www) “**Upgrade**” is defined in Exhibit E to this IRU Agreement.

(xxx) “**Use Restrictions**” is defined in Section 7(c) of this IRU Agreement.

(yyy) “**Utility Fiber**” is defined in Exhibit B to this IRU Agreement.

## 2. INDEFEASIBLE RIGHT OF USE

(a) **IRU.** This IRU Agreement sets forth the terms and conditions under which Tacoma Power agrees to grant an indefeasible right of use to Operator and Operator agrees to use the **Tacoma Power Commercial System** comprised of the following (the “**IRU**”):

- (1) Tacoma Power Commercial Fiber,
- (2) Tacoma Power Commercial Coax,

- (3) Tacoma Power Commercial Equipment, and
- (4) After-Installed Assets.

(b) In connection with the IRU, Tacoma Power grants Operator a non-exclusive license to use space in the Hub Sites, subject to the terms of Exhibit A3, and a non-exclusive license to use spare conduit space, subject to the terms of Exhibit A4.

(c) In connection with the IRU, Tacoma Power will assign IPv4 addresses to Operator from CIDR 131.191.0.0/17 and 192.173.160.0/20. The IP addresses assigned by Tacoma Power to Operator are dedicated to Operator usage for customers on the Tacoma Power Commercial System and are not shared with others or used on other networks. Tacoma Power reserves certain IP addresses for Tacoma Power's use. Operator shall have exclusive responsibility to advertise above referenced CIDR objects to the public Internet, and allocate Tacoma Power reserved CIDRs. The IP addresses assigned to Operator by Tacoma Power will continue to be proprietary to Tacoma Power. Upon termination of the IRU Agreement, Operator must return Tacoma Power-assigned IP addresses. Operator must also return the IP addresses in the event that Operator has used such addresses in violation of this IRU Agreement or the IP Acceptable Use Policy in Exhibit A5. Operator may return the IP addresses at any time upon notice to Tacoma Power.

(d) In connection with the IRU, Tacoma Power grants Operator a non-exclusive license to use space in the headend site, subject to the terms of Exhibit A6 (Headend License). Further, Tacoma Power sells, conveys, transfers, assigns and delivers to Operator, and Operator purchases from Tacoma Power, the headend equipment installed in above-mentioned headend site and listed in Exhibit A6.2 ("Headend Equipment"), free and clear of all encumbrances, and in an "as is" condition with all faults and without warranties of any kind.

(e) In connection with the IRU, Tacoma Power also sells, conveys, transfers, assigns and delivers to Operator, and Operator purchases from Tacoma Power, the customer premises equipment installed in Click! Business customer premises and listed in Exhibit A7 ("Installed Customer Premises Equipment"), free and clear of all encumbrances, and in an "as is" condition with all faults and without warranties of any kind.

(f) Except for the Tacoma Power Commercial Equipment, the Headend Equipment, and the Installed Customer Premises Equipment, Tacoma Power is not supplying nor is Tacoma Power obligated to supply to Operator any optronics or electronics or optical or electrical equipment or other facilities under this IRU Agreement, all of which are the sole responsibility of Operator, nor is Tacoma Power responsible for performing any work in connection with Operator's use of the Tacoma Power Commercial System other than as specified in this IRU Agreement.

### 3. OWNERSHIP OF AFTER-INSTALLED ASSETS

(a) **Ownership.** The Parties agree as follows: (i) Operator intends to finance acquisition of After-Installed Assets in whole or in part through capital lease financing in which the After-Installed Assets are initially the property of the lender. Operator agrees that any After-Installed Assets that it constructs, replaces or upgrades as part of the Tacoma Power Commercial System within the Tacoma Power Commercial Service Area during the Term shall, upon completion of the construction, replacement or upgrade and acquisition of title by Operator pursuant to the terms of the capital lease financing agreement, become the property of Tacoma Power. Operator agrees that it will provide any documents or other evidence of transfer of title to Tacoma Power as may be reasonably required to effect the transfer of ownership. (ii) Operator may, in the alternative, finance After-Installed Assets through conventional bank financing. In that case, Operator agrees that with respect to these After-Installed Assets, Operator will request permission from the lender to transfer ownership to Tacoma Power subject to the security interest of the lender. If lender does not grant such permission, Operator shall transfer ownership of the After-Installed Assets upon removal of the security interest of the lender. (iii) Operator shall give a copy to the City of any notice from the lender of Operator's default under any financing agreement encumbering any After-Installed Assets as soon as practicable, but no later than five (5) days of Operator's receipt of such notice; provided further that, Operator shall upon knowledge of lender's transfer of any such financing agreements, immediately provide notice to the City of such transfer.

(b) Operator will own any asset it acquires during the Term of this IRU Agreement that is not an After-Installed Asset.

### 4. TERM

(a) **Initial Term.** This IRU Agreement commences as of the Effective Date and remains in full force and effect for a term (i) expiring twenty (20) years from the Effective Date of this IRU Agreement (the "**Initial Term**"), unless earlier terminated pursuant to the terms of this IRU Agreement.

(b) **Renewals.** This IRU Agreement may be renewed upon the same terms and conditions for up to two additional terms of ten (10) years each (each a "**Renewal Term**") according to the process set forth in (c) below. The "**Term**" shall be inclusive of the Initial Term and any Renewal Terms.

(c) **Procedure.** In order to terminate this IRU Agreement, Operator must send Tacoma Power a notice of non-renewal no greater than twenty-four (24) and no less than eighteen (18) months prior to the expiration of the Initial Term or, if already renewed, of the first Renewal Term ("**Non-Renewal Notice Window**"). If Operator sends no notice of non-renewal during the Non-Renewal Notice Window, Operator agrees to give Tacoma Power full access to information and facilities sufficient for Tacoma Power to determine Operator's compliance with this IRU Agreement during the Term then concluding ("**Compliance Evaluation**"). Tacoma Power shall complete the Compliance Evaluation no later than twelve (12) months prior to expiration of the then-current Term,

and promptly provide a copy of the Compliance Evaluation to Operator, along with a Notice of Default, if warranted, with respect to any and all Defaults of this IRU Agreement, then existing. In the event that the Parties are unable to resolve all Defaults pursuant to Section 24, or if Operator does not invoke Section 24, Operator must cure such Defaults no later than six (6) months prior to the expiration of the then-current Term. In the event that Operator cannot or will not cure such Defaults to Tacoma Power's satisfaction within such period, Tacoma Power may elect not to renew this IRU Agreement by giving a notice of termination in writing and this IRU Agreement shall terminate at the end of the then-current Term; provided that such notice of termination may only be given by Tacoma Power after completing the process in Section 21(g).

## 5. PAYMENT TERMS

(a) **IRU Fee.** Operator agrees to pay to Tacoma Power an annual fee (“**IRU Fee**”) in accordance with the following amounts:

First Year of the Term:	\$2,500,000
Second Year of the Term:	\$2,625,000
Third Year of the Term:	\$2,750,000
Fourth Year of the Term:	\$2,875,000
Fifth Year of the Term:	\$3,000,000

Each subsequent year of the Term following the Fifth Year, the IRU Fee shall be adjusted on the anniversary of the Effective Date to reflect the Consumer Price Index Increase. If there is no Consumer Price Index Increase (i.e., there is deflation during the relevant period), there shall be no reduction in the IRU Fee from the prior year.

(b) **Schedule.** Commencing on the Effective Date, Operator shall pay the IRU Fee, together with any applicable leasehold excise taxes, to Tacoma Power on a monthly basis in twelve (12) equal instalments in each of the first three (3) years of the Term, and on a quarterly basis in four (4) equal instalments for each year of the Term thereafter. Invoices for any other amounts due to Tacoma Power under this IRU Agreement or the Exhibits (for example, for splicing services performed by Tacoma Power for Operator pursuant to **Exhibit B**) will be sent separately from time to time.

(c) **Due Date.** Unless otherwise specifically stated elsewhere, Operator will tender payment for the IRU Fee in advance on the fifteenth (15th) day of the month for the installment period in which the IRU Fee payment is due. Any other amounts due to Tacoma Power under this IRU Agreement or the Exhibits shall be paid within thirty (30) days of the date that Operator receives the invoice (“**Due Date**”).

(d) **Late Payment Fee.** A late payment fee of Ten Percent (10%) per annum shall apply to all undisputed fees received after the Due Date.

(e) **Disputed Billing.** In the event Operator disputes any billing by Tacoma Power, Operator will (a) pay all charges not disputed, and (b) notify Tacoma Power of the dispute in writing, providing the invoice number and an explanation of the issue in dispute, within thirty (30) days of receipt of the disputed invoice. Tacoma Power will

advise Operator of the results of the completed investigation and will make any adjustments mutually agreed to by the Parties. If the Parties are unable to resolve the billing dispute within such 30-day period, the Parties will attempt to resolve the dispute pursuant to Section 24 (Senior Representatives - Dispute Resolution). Payment will not prejudice Operator's right to dispute charges, so long as they are disputed in the manner specified in this Section. If both Parties agree that a disputed amount is a legitimate charge or the charge is determined to be legitimate under Section 24, Operator will pay such amount within ten (10) days of such determination. Pending resolution of the issues(s), Operator's non-payment of the disputed items shall not constitute Default by Operator and shall not entitle Tacoma Power to exercise any rights it may otherwise have to suspend or delay its obligations under this IRU Agreement or pursue any right or remedy it may have under this IRU Agreement, at law or in equity.

(f) **Taxes and Accounting.** Operator shall pay before delinquency all applicable leasehold excise, gross earnings, business and occupation and other applicable Taxes, assessments, licenses and charges on its use and operations of the Tacoma Power Commercial System for which an exemption is not available. If leasehold excise tax is applicable, Operator shall remit the amount of leasehold excise tax then due and owing concurrent with its payment of the IRU Fee to Tacoma Power. Operator is responsible for the payment of all charges and Taxes applicable to the services performed under this IRU Agreement, and Operator agrees to comply with all applicable laws regarding the reporting of income, maintenance of records and all other requirements and obligations imposed pursuant to applicable law. If Tacoma Power is assessed, made liable or responsible in any manner for such charges or Taxes, Operator holds Tacoma Power harmless from such costs, including attorneys' fees.

(g) **Tax Exemption.** When applicable, for any request of exemption from Taxes, Operator will furnish Tacoma Power a valid and properly executed tax exemption/resale certificate(s), including copies of such supporting documentation as may be reasonably requested by Tacoma Power for purposes of compliance with its legal obligations to taxing and regulatory authorities. Tacoma Power will not bill Operator for any Taxes covered by an exemption/resale certificate or any Taxes relating to or arising out of Tacoma Power's indemnification obligations herein.

(h) **Audits.** Operator and Tacoma Power agree to make reasonable efforts to cooperate with each other and coordinate their mutual efforts concerning audits, or other such inquiries, filings, reports, etc., as may relate solely to activities or transactions arising from or under this IRU Agreement, which may be required or initiated by Operator or Tacoma Power as a result of an inquiry or audit from any duly authorized governmental authority relating to Taxes.

## 6. CONTRACT ADMINISTRATION

(a) **Single Point of Contact.** To facilitate the timely and compliant performance of the obligations in this IRU agreement and Exhibits, the Parties shall each appoint a representative that shall serve as the primary contact person and contract administrator.

(b) **Authorities of the TPU Contract Administrator.** The TPU Contract Administrator shall have the authority to administer this IRU Agreement and Exhibits with respect to the rights, duties and obligations of Tacoma Power, including but not limited to the following:

- (1) Determine the form of certifications and reports required by this IRU Agreement and the Exhibits.
- (2) Investigate Controversies and Defaults, and issue Notices of Default and Compliance Evaluations.
- (3) Accept and review reports and certifications for completeness.
- (4) Schedule and attend status review meetings.
- (5) Order tests and verification procedures to be performed as required by this IRU Agreement.
- (6) Develop and sign off on compliance plans.
- (7) Make determinations to assess or waive liquidated damages.
- (8) Make a determination if a Tacoma Power Force Majeure Event has occurred.

(c) **Annual Report.** Each year on the Annual Reporting Date, Operator shall provide a report to Tacoma Power and the City of Tacoma City Council of its operations, the status of the Tacoma Power Commercial System and the state of the 12 policy goals adopted by the Utility Board and City Council (“**Annual Report**”). The Annual Report shall include, at a minimum, the annual reports and certifications specified by the Exhibits and listed for convenience in the checklist in **Exhibit R**.

(d) **Liquidated Damages.** Unless otherwise specified in this IRU Agreement or Exhibits, Operator shall submit the Annual Report on the Annual Reporting Date. In the event that Operator fails to timely provide the Annual Report required by Section 6(c), Operator shall pay Tacoma Power liquidated damages in the amount of Two Thousand Five Hundred Dollars (\$2,500.00) per day until it has provided such Annual Report.

(e) **Status Review Meetings.** In addition to any other obligations to meet set forth in this IRU Agreement, on a periodic basis to be mutually agreed by the Parties, but not less than once annually, Operator and Tacoma Power will meet to review Operator’s operations, the status of the Tacoma Power Commercial System and the state of the commitments to the 12 policy goals adopted by the Tacoma City Council as embodied in various Exhibits to this IRU Agreement.

## 7. TACOMA POWER UNDERLYING RIGHTS

(a) **Securing Underlying Rights.** Tacoma Power represents that it has secured (or will have secured by the commencement of operations by Operator) with respect to the Tacoma Power Commercial System, all rights, licenses, contracts, permits, authorizations, franchises, rights of way, easements, collocation agreements, leases and other approvals that are necessary for Tacoma Power to obtain, in order to permit Tacoma Power to own and maintain the Tacoma Power Commercial System in accordance with this IRU Agreement and to convey the IRU to Operator to utilize the Tacoma Power Commercial System under this IRU Agreement (the “**Underlying Rights**”).

(b) **Continuing Underlying Rights Obligation.** Tacoma Power will cause the Underlying Rights to remain effective through the Term and will, at its sole cost, exercise any renewal rights thereunder, and acquire any and all extensions, additions or replacements as are necessary to cause the Underlying Rights to continue through the Term.

(c) **Use Restrictions.** It is expressly understood that the Underlying Rights may contain limitations, restrictions or reservations which must be adhered to by Tacoma Power (collectively, “**Use Restrictions**”). Tacoma Power therefore agrees to notify Operator in writing of any Use Restriction that applies to the Tacoma Power Commercial System as soon as practicable once that Use Restriction is applied, expressly specifying the practical ramifications of the Use Restriction, the part of the Tacoma Power Commercial System impacted by the Use Restriction, the name of the third party imposing the Use Restriction and whether Operator will be entitled to attempt to resolve the issue directly with such third party and any other information necessary for a complete assessment of the impact of the Use Restriction, including supporting documentation relating thereto. As of the Effective Date, there are no Use Restrictions.

## 8. OPERATOR REQUIRED RIGHTS

(a) Except as provided in Section 7, Operator at its sole cost and expense, shall obtain and maintain any and all necessary easements, licenses and building access agreements, as well as all governmental permits, licenses, easements, franchises and approvals that may lawfully be required by federal, state or local law, statute, regulation or ordinance, including a City of Tacoma business license, and shall continuously comply with all such laws, statutes, regulations or ordinances as may now or in the future be applicable to: (1) its operation or use of the Tacoma Power Commercial System; (2) Operator’s connection, installation, maintenance and operation of Tacoma Power Commercial Equipment; and (3) Operator’s other rights and obligations under this Agreement.

## 9. ACCESS AND USE OF TACOMA POWER COMMERCIAL SYSTEM

(a) **Reserved Capacity.** Notwithstanding anything to the contrary herein, Tacoma Power hereby reserves for its own use the capacity on the Tacoma Power Commercial System defined herein as “Reserved Capacity” until such time as Tacoma Power, in its

sole discretion, determines that the Reserved Capacity is no longer needed as evidenced by a surplus declaration duly authorized by the City, or successor authority. The “**Reserved Capacity**” shall be defined as the optical spectrum wavelengths, bandwidth or future technological capacity that is used for the transmission of meter data directly between Tacoma Power and customers with Stark meters within the Tacoma Power Utility Service Area and shall not include any tangible Tacoma Power Commercial System facilities subject to the IRU.

(b) **Interconnection.** Subject to and in accordance with this IRU Agreement, the Exhibits and the Underlying Rights, Operator may connect, including the right to cross-connect, the Tacoma Power Commercial System to other telecommunications systems or facilities including its own network at any points of Operator’s choosing (if so required by Operator).

(c) **Permitted Use of Tacoma Power Commercial System.** Operator may use the Tacoma Power Commercial System only in accordance with the terms of this IRU Agreement and the Exhibits. Operator shall be responsible for all acts or omissions of any third party using the Tacoma Power Commercial System through Operator, as if such acts or omissions were those of Operator directly.

(d) **Compliance.** The Parties agree to cooperate with and support each other in complying with any requirements applicable to the IRU by any governmental or regulatory agency or authority, or Tacoma Power of an Underlying Right. The Parties agree to execute such further instruments as may be necessary or appropriate to carry out the intent of this IRU Agreement with respect to such compliance.

(e) **No Liens.** Tacoma Power shall not cause or permit the portion of the Tacoma Power Commercial System on any Route(s) or any of Operator’s rights under this IRU Agreement to become subject to any liens. If Tacoma Power breaches its obligations under this Section, it will immediately notify Operator in writing, and Tacoma Power will promptly take all steps needed to cause such lien to be discharged and released of record without cost to Operator. Operator shall not cause or permit any of the Tacoma Power Commercial System under this IRU Agreement to become subject to any liens, security interest or any encumbrance of any kind; provided that, After-Installed Assets may be subject to a lien or other security interest as provided in Section 3(a). If Operator breaches its obligations under this Section, it will immediately notify Tacoma Power in writing, and promptly take all steps needed to cause such lien to be discharged and released of record without cost to Tacoma Power.

## 10. MAINTENANCE RESPONSIBILITIES

(a) **Safeguarding Tacoma Power’s Use of Critical Utility Fiber.** The Parties agree that Tacoma Power shall have responsibility for Maintenance of Tacoma Power Commercial Fiber on Critical Routes as described in **Exhibit B** hereto.

(b) **Service Level Agreement.** The Parties agree that the Service Level Agreement in **Exhibit C** hereto shall apply to Tacoma Power’s Maintenance obligations.

(c) **Operator Maintenance.** The Parties agree that Operator shall have responsibility for Maintenance of the Tacoma Power Commercial System, as described in **Exhibit D** hereto.

**11. ADDITIONAL CONDITIONS RELATED TO USE OF THE TACOMA POWER COMMERCIAL SYSTEM**

(a) **Tacoma Power Commercial System Upgrades.** Operator agrees to make Tacoma Power Commercial System upgrades in accordance with the terms of **Exhibit E** hereto.

(b) **Capital Expenditures Commitment.** Operator agrees to make Capital Expenditures to the physical assets of the Tacoma Power Commercial System as specified in **Exhibit F** hereto.

(c) **Equitable Access.** Operator agrees to the equitable access commitments in **Exhibit G** hereto.

(d) **Affordable Access.** Operator agrees to the affordable access commitments in **Exhibit H** hereto.

(e) **Customer Service Commitments.** Operator agrees to the customer service commitments in **Exhibit I** hereto.

(f) **Customer Privacy.** Operator agrees to the customer privacy commitments in **Exhibit J** hereto.

(g) **Net Neutrality.** Operator agrees to the net neutrality commitments in **Exhibit K** hereto.

(h) **Open Access to Telecommunications Assets.** Operator agrees to the open access commitments in **Exhibit L** hereto.

(i) **Economic Development and Educational Opportunities.** Operator agrees to the economic development and educational opportunities commitments in **Exhibit M** hereto.

(j) **Preserve Competition Among Providers.** Operator agrees to certain restrictions on Transfers as more fully detailed in **Exhibit N** hereto.

(k) **Continuity of Services.** The obligations and rights of the Parties with respect to the transition of the Tacoma Power Commercial System upon the termination of this IRU Agreement are contained in **Exhibit O** hereto and Section 21(f) (Survival of Certain Provisions) of this IRU Agreement.

(l) **Labor Relations.** Operator agrees that, pursuant to Section 7 of the National Labor Relations Act (29 U.S.C. § 157), all employees used in the operation of the Tacoma Power Commercial System shall have the right to self-organization, to form,

join, or assist labor organizations, to bargain collectively through representatives of their own choosing and to engage in other concerted activities for the purpose of collective bargaining or other mutual aid and to engage in other activities protected under 29 U.S.C. § 157.

(m) **Intellectual Property.** Tacoma Power grants to Operator a personal, limited, non-transferable, non-exclusive, royalty-free license set forth in **Exhibit P** to use certain “Click!” trademarks for marketing, advertising and branding purposes in connection with its use of the Tacoma Power Commercial System.

## 12. PERFORMANCE ASSURANCES AND PERFORMANCE GUARANTEE

(a) **Annual Financial Assurances.** Operator shall submit to Tacoma Power, as of the Effective Date, and on an annual basis on the Annual Reporting Date, a report in a form reasonably acceptable to Tacoma Power, demonstrating Operator’s financial health and Operator’s ability to pay the IRU Fee and all other ongoing financial obligations associated with this IRU Agreement. The report shall include the information described in **Exhibit S**.

(b) **Performance Guarantee.** As of the Effective Date, Operator shall cause Mashell, Inc. to deliver a performance guarantee, in the form of **Exhibit T**, unconditionally guaranteeing the timely and full performance of any and all obligations of Operator under this IRU Agreement for the Term.

## 13. RELOCATION

(a) Tacoma Power will give Operator at least ninety (90) days’ prior written notice (or longer if Tacoma Power becomes aware sooner) of any relocation of any portion of the Tacoma Power Commercial System in the event Tacoma Power becomes aware of the need of such relocation. If Tacoma Power becomes aware of the need of a relocation less than ninety (90) days in advance of the scheduled date for such relocation, then Tacoma Power shall provide Operator with as much advance notice as is reasonably practicable under the circumstances. Operator will cooperate in good faith with Tacoma Power to facilitate such relocation, provided that such relocation is required by a governmental agency or third party acting pursuant to condemnation or similar authority.

(b) Responsibility for performing the relocation and any costs and expenses incurred in connection with any such relocation, shall be borne by the Party that has responsibility for Maintenance as provided in **Exhibits B, C and D** hereto.

## 14. POST-TRANSITION SERVICES

(a) In the event that Operator requires support services (“**Post-Transition Services**”) after the Transfer of Operational Control Date, it shall provide Tacoma Power written notice of the services it requires, and, subject to meeting the conditions in this Section, Operator and Tacoma Power shall within a reasonable time thereafter enter into a services agreement for the Post-Transition Services requested (“**Agreement for Post-Transition Services**”). The Agreement for Post-Transition Services shall be on Tacoma

Power's standard terms and conditions and will also describe in detail the service, project scope, fees and term for the Post-Transition Services. Tacoma Power's obligation to enter into an Agreement for Post-Transition Services and to provide Post-Transition Services is expressly contingent on Tacoma Power having adequate staffing and resources to provide the Transition Services requested, as determined by Tacoma Power in its sole discretion. Operator agrees to use its reasonable efforts to reduce or eliminate its dependency on the Post-Transition Services as soon as is reasonably practicable. Operator's right to request Post-Transition Services shall expire on the first (1st) anniversary of the Effective Date.

## 15. REPRESENTATIONS & WARRANTIES OF BOTH PARTIES

(a) **General Warranties.** Each Party, with respect to this IRU Agreement: (i) has taken all corporate and/or governmental action necessary for the authorization, execution and delivery of such agreements and to make such agreements legal, valid and binding; (ii) has no agreement or understanding with any third party that interferes with or will interfere with its performance of the Party's obligations under such agreements; and (iii) is not interfering with any other party's rights or contracts, or violating the terms of any agreements with other parties, by entering into and/or performing under the terms of this IRU Agreement.

(b) **Compliance with Laws.** Each Party's performance under this IRU Agreement shall be in compliance with all applicable federal, state and local laws and government rules and regulations.

(c) **No Default.** Other than the litigation referenced in Section 15(e), there is no action, suit, proceeding, or investigation at law or in equity before or by any court, public board or body pending against or affecting the Party, challenging the validity or enforceability of this IRU Agreement or any other documents relating hereto or the performance of the Party's obligations hereunder.

(d) **Non-Infringement.** Each Party represents, warrants and covenants to the other Party that it shall perform its responsibilities under this IRU Agreement in a manner that does not infringe, or constitute an infringement or misappropriation of, any intellectual property rights of any third party.

(e) **Pending Litigation.** Edward E. (Ted) Coates, et al. v. City of Tacoma (Wa. Sup. Ct, Case No. 17-2-08907); Mitchell Shook v. City of Tacoma (U.S. Dist. Ct, Wa. W. Dist., Case No. 3:19cv05794BHS); Mitchell Shook v. City of Tacoma; Thomas McCarthy and Christopher T. Anderson v. City of Tacoma (Wa. Sup. Ct., Case No 19-2-07135-0); Darrel Bowman v City of Tacoma (Wa. Sup. Ct., Case No. 19-2-11506-3); Mitchell Shook v City of Tacoma (Wa. Sup. Ct., Case No. 19-2-11760-1); City of Tacoma v. Comcast Cable Communications, LLC; Comcast Cable Communications Management, LLC (Wa. Sup. Ct., Case No. 19-2006715-8).

## 16. ADDITIONAL REPRESENTATIONS & WARRANTIES OF OPERATOR

Operator hereby represents and warrants to Tacoma Power as follows:

(a) Operator is a limited liability company organized and existing under the laws of the State of Washington, is duly qualified to transact business and is in good standing in the State of Washington;

(b) Prior to the execution and delivery of this IRU Agreement, Operator has had ample opportunity and access to the Tacoma Power Commercial System, Tacoma Power employees and related information, and has fully examined the condition of the Tacoma Power Commercial System; and

(c) Operator has the financial, technical and legal capability to perform its obligations under this IRU Agreement and the Exhibits.

**17. NO WARRANTIES AS TO CONDITION OF TACOMA POWER COMMERCIAL SYSTEM**

(a) NOTWITHSTANDING ANY EXAMINATION OR INSPECTION MADE BY OPERATOR AND WHETHER OR NOT ANY PATENT OR LATENT DEFECT OR CONDITION WAS REVEALED OR DISCOVERED THEREBY, OPERATOR UNDERSTANDS IT IS OBTAINING USE OF THE TACOMA POWER COMMERCIAL SYSTEM UNDER THIS IRU AGREEMENT “AS IS” IN ITS CONDITION AS OF THE EFFECTIVE DATE. OPERATOR HEREBY WAIVES AND RELEASES ANY CLAIM OR ACTION AGAINST TACOMA POWER IN RESPECT OF OR RELATED TO THE CONDITION OF THE SYSTEM ASSETS, INCLUDING ANY DEFECTS OR ADVERSE CONDITIONS NOT DISCOVERED OR OTHERWISE KNOWN BY OPERATOR AS OF THE EFFECTIVE DATE.

(b) EXCEPT AS SET FORTH IN THIS IRU AGREEMENT, TACOMA POWER MAKES NO WARRANTY TO OPERATOR OR ANY OTHER ENTITY, WHETHER EXPRESS, IMPLIED OR STATUTORY, AS TO THE INSTALLATION, DESCRIPTION, QUALITY, MERCHANTABILITY, USEFUL LIFE, FUTURE ECONOMIC VIABILITY OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY FIBERS, THE TACOMA POWER COMMERCIAL SYSTEM, OR ANY EQUIPMENT, GOODS, OR SERVICE PROVIDED HEREUNDER OR DESCRIBED HEREIN, OR AS TO ANY OTHER MATTER, ALL OF WHICH WARRANTIES ARE HEREBY EXPRESSLY EXCLUDED AND DISCLAIMED.

(c) Tacoma Power Management has disclosed all known defects to the best of its knowledge. “**Tacoma Power Management**” shall mean and refer to the Tacoma Power Superintendent.

**18. INDEMNIFICATION**

(a) Operator shall indemnify, defend and hold harmless Tacoma Power, its officials, officers, agents, employees and volunteers, from any and all claims, demands, damages, lawsuits, liabilities, losses, liens, expenses and costs arising out of the subject matter of this IRU Agreement; provided that this provision shall not apply to the extent that damage or injury results from the sole negligence of Tacoma Power, or its officers, agents or employees. This indemnification shall extend to and include attorneys’ fees and

the cost of establishing the right of indemnification hereunder in favor of Tacoma Power. This indemnification shall survive the termination of this IRU Agreement.

(b) Operator specifically assumes potential liability for actions brought by its own employees against Tacoma Power and, solely for the purpose of this indemnification and defense, Operator specifically waives any immunity under the state industrial insurance law, Title 51 RCW. OPERATOR RECOGNIZES THAT THIS WAIVER WAS THE SUBJECT OF MUTUAL NEGOTIATION.

## 19. LIMITATION OF LIABILITY

(a) **DIRECT DAMAGES ONLY.** IN NO EVENT WILL EITHER PARTY BE LIABLE TO THE OTHER PARTY (OR ANY INDIVIDUAL OR ENTITY CLAIMING THROUGH SUCH PARTY) FOR ANY INDIRECT, SPECIAL, INCIDENTAL, PUNITIVE, OR CONSEQUENTIAL DAMAGES OF ANY KIND OR NATURE WHATSOEVER, INCLUDING BUT NOT LIMITED TO ANY LOST PROFITS, LOST REVENUES, LOST SAVINGS, LOSS OF DATA OR HARM TO BUSINESS.

(b) **CAP ON LIABILITY.** IN NO EVENT SHALL TACOMA POWER'S LIABILITY TO OPERATOR FOR THE BREACH OF THIS IRU AGREEMENT OR CLAIMS RELATED TO OR CONNECTED IN ANY WAY WITH THIS IRU AGREEMENT, EXCEED, IN THE AGGREGATE, THE LESSER OF (I) DIRECT DAMAGES; OR (II) THE IRU FEES PAID PRIOR TO THE BREACH OF THIS IRU AGREEMENT.

(c) **NO LIMIT.** IN NO EVENT SHALL THIS SECTION (I) LIMIT ANY INDEMNIFICATION OBLIGATIONS FOR CLAIMS BASED ON DAMAGE CAUSED THROUGH WILLFUL MISCONDUCT OR GROSS NEGLIGENCE OR (II) SERVE AS A LIMITATION ON ANY INSURANCE EITHER PARTY IS REQUIRED UNDER THIS IRU AGREEMENT TO PROVIDE FOR.

## 20. INSURANCE

Operator will maintain insurance coverages in the amounts and in the manner specified in the City of Tacoma Insurance Requirements. The City of Tacoma Insurance Requirements documents are attached hereto as **Exhibit Q**.

## 21. DEFAULT AND TERMINATION

(a) **Communication and Discussion.** The Parties are fully committed to working with each other throughout the Term of this IRU Agreement, and agree to communicate regularly with each other at all times so as to avoid or minimize disputes, differences of opinion or controversies (each a "**Controversy**") arising in connection with this IRU Agreement. The Parties agree to act in good faith to prevent and resolve potential sources of conflict before they escalate into a Controversy and shall attempt to resolve Controversies arising in connection with this IRU Agreement through good faith discussions between the contract administrators of both Parties to arrive at an agreeable resolution. In the event that the contract administrators are unable to resolve a

Controversy after at least one discussion and the Controversy is alleged to be a default of an obligation under this IRU Agreement, the Party asserting the default may issue a Notice of Default as provided for in this IRU Agreement.

(b) **Defaults.** If either Party fails to perform an obligation under this IRU Agreement or an Exhibit (“**Default**”), the other Party may consider the non-performing Party to be in Default unless the Default is excused by a Force Majeure Event.

(c) **Notice of Default.** Unless otherwise provided in this IRU Agreement, or an exhibit thereto, the non-defaulting Party may assert a Default claim by giving the defaulting Party a written and detailed notice of default (“**Notice of Default**”). Unless the defaulting party timely submits a written request for dispute resolution pursuant to Section 24 of this IRU Agreement, the defaulting Party will have thirty (30) days after receipt of the Notice of Default to either (i) cure such Default and provide written evidence of such cure; or (ii) submit a proposed compliance plan to correct the Default, if the defaulting Party believes in good faith that it will not be able to cure said Default within such timeframe; provided that, the time period to cure or submit a proposed compliance plan shall be limited to ten (10) days for a Notice of Default alleging a failure to timely provide a report or certification listed on **Exhibit R**. The contents of the compliance plan shall specify the steps that the defaulting Party will take to correct the Default and bring itself into compliance with its obligations and the time period over which the correction will occur. The non-defaulting Party will review the proposed compliance plan and the Parties will work in good faith to mutually agree on its final contents and timeframe for implementation within a further thirty (30) days from receipt by the non-defaulting Party. The non-defaulting Party must act reasonably in determining whether a cure plan is acceptable and must make good faith and collaborative efforts to agree upon a mutually acceptable cure plan. The defaulting Party will begin implementing the cure plan immediately after receipt of notice by the other Party that it approves the cure plan. In the event that the Parties are unable to mutually agree upon a compliance plan, either Party may invoke the dispute resolution procedures in Section 24 of this IRU Agreement.

(d) **Action on Failure to Cure.** Subject to the provisions of Section 24 of this IRU Agreement, upon the failure by the defaulting Party to cure any Default within the time specified in paragraph (c), the non-defaulting Party may, except as may be otherwise provided in this IRU Agreement: (i) assess liquidated damages as provided in this IRU Agreement, (ii) pursue any other remedies it may have under this IRU Agreement, applicable law or in equity relating to such Default; and (iii) suspend or delay performance of its obligations under this IRU Agreement.

(e) **Compensation for Prior Performance.** Notwithstanding the foregoing, no termination of this IRU Agreement shall affect the rights or obligations of any Party hereto with respect to any payment hereunder for performance rendered, refunds, or set-offs accruing or due prior to the effective date of termination.

(f) **Survival of Certain Provisions.** The expiration or termination of this IRU Agreement, including due to non-renewal, will not affect the rights or obligations of

either Party hereto with respect to matters or claims arising or accruing prior to or as of expiration of this IRU Agreement, or pursuant to any other provisions of this IRU Agreement that, by their sense and context, are intended to survive the expiration or termination of this IRU Agreement, including but not limited to Indemnification, Limitation of Liability, Taxes, Confidentiality and Continuity of Service Commitments (**Exhibit O**).

(g) **Termination.** In the event that the Parties are unable to resolve a Default pursuant to the provisions of Section 24 and the Default is one for which termination is a remedy under this IRU Agreement, the non-defaulting Party may give notice of its intent to terminate this IRU Agreement upon a date set forth in the notice which date shall be no less than one hundred eighty (180) days following the date of receipt of the notice; provided that:

(1) Tacoma Power, shall prior to giving notice of intent to terminate complete the following process:

(i) The Public Utility Board shall determine if termination of this IRU Agreement is, in the opinion of the Board, warranted. The Public Utility Board may consider such facts and circumstances that are relevant to the Default when determining whether or not to terminate this IRU Agreement.

(ii) If the Public Utility Board determines that termination is warranted, such determination shall not be final until the City Council concurs in the decision of the Public Utility Board. The Parties acknowledge that a decision to terminate this IRU Agreement is not a land use decision subject to appeal pursuant to the Land Use Petition Act (Chapter 36.70C RCW).

(2) Any notice of termination given by Operator shall be signed by its manager.

(h) **Uncured Default.** In the event that any Default remains uncured one hundred eighty (180) days after a Notice of Default has been issued, and the uncured status is not excused as a Force Majeure Event, or because the Parties are engaged in arbitration, dispute resolution, implementation of a compliance plan or other mutually agreed resolution of the Default, the non-defaulting Party shall have the right to give notice to terminate this IRU Agreement pursuant to Section 21(g) of this IRU Agreement.

## 22. LIQUIDATED DAMAGES

(a) **Liquidated Damages as a Remedy.** The Parties explicitly represent that it will be impractical and/or difficult to ascertain or quantify the amount of damages which may be incurred by Tacoma Power as a result of the failure by Operator to comply, or maintain compliance, with certain provisions of this IRU Agreement or the Exhibits as enumerated therein, and further acknowledge and agree that Tacoma Power will be damaged as a result of such non-compliance. Therefore, Tacoma Power and Operator

agree that the liquidated damages set forth in the enumerated provisions of this Agreement and the Exhibits are reasonable estimates of the damages resulting from non-compliance of those provisions of this IRU Agreement or Exhibit.

(b) **Exclusive Remedy.** If a Party exercises its right to impose liquidated damages, such damages shall be the Party's sole and exclusive remedy for recovery of the loss resulting from such non-compliance. Nothing in this subsection is intended to preclude the Party from exercising any other right or remedy with respect to other losses not compensated by liquidated damages.

(c) **Adjustment.** The Parties agree that all liquidated damages specified herein shall be adjusted annually on the anniversary of the Effective Date to reflect the Consumer Price Index Increase. If there is no Consumer Price Index Increase (i.e., there is deflation during the relevant period), there shall be no reduction in the liquidated damages from the prior year.

(d) **Assessment of Liquidated Damages.** The Parties agree that liquidated damages may be assessed as a remedy only in the event that the Party in Default has failed to cure in conformance with Section 21(c) of this IRU Agreement or the Parties have been unable to resolve the Default pursuant to the dispute resolution provisions of Section 24 of this IRU Agreement. In the event that liquidated damages are assessed as a remedy under this IRU Agreement against a defaulting Party in connection with a Default pursuant to this IRU Agreement, the non-defaulting Party shall send the defaulting Party an invoice specifying the amounts assessed and the time period subject to assessment of liquidated damages, which may not include any period prior to delivery of the Notice of Default that is the subject of assessment of liquidated damages

## 23. SPECIFIC PERFORMANCE

In recognition that the IRU cannot be readily obtained in the open market, and a suitable Successor Operator may not be readily available, and therefore, that the Parties will be irreparably injured if this IRU Agreement cannot be specifically enforced, each Party shall be entitled, in addition to bringing suit at law or equity for monetary or other damages, to obtain specific performance to order implementation of the IRU contemplated by this IRU Agreement. In any action to enforce the provisions of this IRU Agreement, the Parties both hereby irrevocably and forever waive the defense that there is an adequate remedy at law and hereby irrevocably agree that the other Party shall have the right to obtain specific performance of the obligations contemplated by this IRU Agreement.

## 24. DISPUTE RESOLUTION

In the event that a Party has issued a Notice of Default and the defaulting Party disputes that it is in Default, such defaulting Party shall, within ten calendar days of receipt of said notice, submit to the other Party a written request for dispute resolution. Upon receipt of a timely request for dispute resolution, the cure period in the Notice of Default is tolled. Each Party shall designate a senior representative ("**Senior Representative**") and the

Senior Representatives for the Parties shall meet as soon as conveniently possible, but in no case later than thirty (30) days after such a request is made, to attempt to resolve the Controversy. Prior to any meetings between the Senior Representatives, the Parties will exchange relevant information that will assist the Parties in resolving the dispute. If the dispute cannot be resolved through dispute resolution within a reasonable time, not to exceed thirty (30) days, then the Parties shall be free to, (i) assess liquidated damages as provided in this IRU Agreement, (ii) pursue any other remedies it may have under this IRU Agreement, applicable law or in equity relating to such Default; and (iii) suspend or delay performance of its obligations under this IRU Agreement.

## **25. GOVERNING LAWS**

Any action related to this IRU Agreement shall be governed the laws of the State of Washington (except that body of law controlling conflict of laws) and the United Nations Convention on the International Sale of Goods will not apply. Any suit or proceeding arising out of or relating to this IRU Agreement will be brought in the applicable federal or state court located in Pierce County, Washington, and each Party irrevocably submits to the jurisdiction and venue of such courts.

## **26. RELATIONSHIP OF THE PARTIES**

The relationship between the Parties will not be that of partners, agents or joint venture parties for one another, and nothing contained in this IRU Agreement will be deemed to constitute a partnership or agency agreement between them for any purposes, including, but not limited to, tax purposes. No employment relationship is created by this Agreement. Neither Party will make any commitment, by contract or otherwise, binding upon the other or represent that it has any authority to do so. In performing any of their obligations hereunder, each Party will be an independent contractor or independent Party and shall use its discretion in discharging its contractual obligations at its own risk.

## **27. NOTICES**

Except for routine operational communications (which may be delivered personally or by mail or transmitted by electronic mail), all notices and invoices required hereunder shall be in writing and shall be considered properly delivered when personally delivered, or on the third day following mailing, postage prepaid, certified mail, return receipt requested to the Parties at the following addresses:

### **Tacoma Power:**

Tacoma Public Utilities  
3628 South 35th Street  
Tacoma, WA 98409  
Telephone: (253) 502 8600

Attention: TPU Contract Administrator

**With a copy to:**

City of Tacoma  
747 Market Street  
Tacoma, WA 98402  
Telephone: (253) 591-5000

Attention: City Attorney

**Operator:**

Rainier Connect North, LLC  
P.O. Box 639  
104 Washington Ave. N.  
Eatonville, WA 98328  
Attn: Manager (for all communications except invoices)  
Attn: Accounts Payable (for invoices)

**With a copy to:**

Richard A. Finnigan  
2112 Black Lake Blvd. SW  
Olympia, WA 98512

Either Party may change the address to which notices shall be sent by notice to the other Party by providing thirty (30) days' written notice of the change of address.

**28. NO WAIVER**

No failure, forbearance, neglect or delay by a Party in regard to enforcing this IRU Agreement or exercising any rights contained in this IRU Agreement, in whole or in part, will affect or limit such Party's right to strictly enforce same, and no such failure, forbearance, neglect or delay will constitute or be implied as a waiver of any right to enforce same in the future.

**29. ASSIGNMENTS & TRANSFERS**

(a) In addition to the limitations on its transfer and assignment rights set forth in **Exhibit N**, Operator will not mortgage, pledge, hypothecate, grant a security interest in or deed of trust or charge of any kind upon, its interest under this IRU Agreement or the Tacoma Power Commercial System, or, except as provided in Section 3(a), any portion thereof including After-Installed Assets, without the prior written consent of Tacoma Power.

(b) Nothing in this Agreement will in any manner prohibit Tacoma Power from (i) selling, assigning, transferring or conveying (including as security) all or any part of its interest in the Tacoma Power Commercial System, or (ii) selling, assigning, transferring

or conveying this IRU Agreement. In the event Tacoma Power sells, assigns, transfers or conveys its entire ownership in the Tacoma Power Commercial System, Tacoma Power will be relieved of and released from all further obligations under this IRU Agreement other than pending claims not assumed by the successor; provided that this IRU Agreement shall be binding upon such successor.

(c) The covenants, conditions and agreements contained in this IRU Agreement will inure to the benefit of and be binding upon Tacoma Power and its successors and assigns, and will be binding upon Operator, its successors and assigns, and inure to the benefit of Operator, and only such assigns of Operator to whom the assignment by Operator has been consented to by Tacoma Power as provided in this Section and **Exhibit N**.

### **30. SUBCONTRACTING**

(a) Any delegation or subcontracting by Tacoma Power will not operate to relieve Tacoma Power of its responsibilities and obligations under this IRU Agreement.

(b) Any delegation or subcontracting by Operator will not operate to relieve Operator of its responsibilities and obligations under this IRU Agreement.

### **31. FORCE MAJEURE EVENT**

(a) **Performance Excused by Force Majeure Event.** Neither Party will be deemed in violation of any provision of this IRU Agreement if it is prevented from performing any of the obligations under this IRU Agreement (excluding payment obligations) in whole or in part by reason of any event or circumstance, or combination of events or circumstances, arising after the Effective Date and beyond the reasonable control of, and not the result of the negligent or intentional actions or omissions of, or caused by, the Party that seeks to excuse, in whole or in part, that Party's performance of this IRU Agreement and its obligations hereunder, and that is unavoidable or could not be prevented or overcome by the reasonable efforts and due diligence, (a "**Force Majeure Event**"). In such event, subject to Section 30(b), the non-performing Party shall be excused from further performance of the obligation(s) so affected for as long as such circumstances prevail and such Party continues to use reasonable efforts to recommence performance whenever and to whatever extent possible without delay. In the event of a Force Majeure Event, unless otherwise specified in an applicable Exhibit, the non-performing Party's performance obligation shall be extended on a day by day basis. Events that may give rise to a Force Majeure Event may include acts of God, natural disasters, extreme weather and storms, lightning, floods, fires, earthquakes or other natural occurrences; civil disturbances; strikes or other labor unrest (unless they only concern the Party claiming Force Majeure); catastrophic power failures; terrorist activity, riots, war, nuclear or other civil or military emergencies; acts of legislative, judicial, executive or administrative authorities; or any other circumstances that are not within the reasonable control of, or the result of the negligence of, the claiming Party, and which, by the exercise of due diligence, the claiming Party is unable to overcome or avoid or cause to be avoided. A Force Majeure Event shall not, however, include actions of a government authority with respect to a Party's compliance with applicable laws,

franchises, authorizations or permits; any failure by a Party to obtain or maintain any franchise, authorization or permit it is required to obtain or maintain; and any act, omission, delay, default or failure (financial or otherwise) of a subcontractor to a Party.

(b) **Notification.** In the event of a Force Majeure Event, the Party who first becomes aware of the event shall promptly give written notice to the other Party of such event. When either Party becomes aware of the end of the Force Majeure event, it shall give prompt written notice to the other Party.

## 32. CONFIDENTIALITY

(a) **Definition.** “**Confidential Information**” means information concerning a Party’s (or its Affiliates’) products, plans, methods, processes, business opportunities, vendors, customers, finances, personnel and other information related to the business of such Party and the terms of this IRU Agreement. “Confidential Information” does not include any information which: (a) the receiving Party rightfully knew before the disclosing Party disclosed it to the receiving Party; (b) has become publicly known through no wrongful act of the receiving Party; or (c) the receiving Party developed independently and without the use of any Confidential Information, as evidenced by appropriate documentation.

(b) **Nondisclosure.** All Confidential Information remains the property of the disclosing Party, and no license or other right in any Confidential Information is granted hereby. The receiving Party shall not disclose any Confidential Information to any third party or otherwise, and shall take all reasonable precautions to prevent its unauthorized dissemination, both during and after the Term of this IRU Agreement. The receiving Party shall limit its internal distribution of Confidential Information to its employees and agents who have a need to know, and shall take steps to ensure that dissemination is so limited. The receiving Party shall not use any Confidential Information for its own benefit or for the benefit of anyone other than the disclosing Party. Upon disclosing Party’s written request, the receiving Party shall return to the disclosing Party all Confidential Information in the receiving Party’s custody or control. All information disclosing Party provides is provided “AS IS” and without any warranty, express, implied or otherwise, regarding its accuracy or performance.

(c) **Confidential or Proprietary Records Must be Marked.** If Operator provides Tacoma Power with records that Operator considers confidential or proprietary, Operator must mark all applicable pages of said record(s) as “Confidential” or “Proprietary.” If Operator fails to so mark record(s), then (1) Tacoma Power, upon request, may release said record(s) without the need to satisfy the notice requirements above; and (2) Operator expressly waives its right to allege any kind of civil action or claim against Tacoma Power pertaining to the release of said record(s).

(d) **Public Disclosure.** This IRU Agreement and documents provided to Tacoma Power by Operator hereunder are deemed public records subject to disclosure under the Washington State Public Records Act, Chapter 42.56 RCW (“**Public Records Act**”). Thus, Tacoma Power may be required, upon request, to disclose this IRU Agreement and documents related to it unless an exemption under the Public Records Act or other laws

applies. In the event Tacoma Power receives a request for such disclosure, determines in its legal judgment that no applicable exemption to disclosure applies, and Operator has complied with the requirements herein to mark all content considered to be confidential or proprietary, Tacoma Power agrees to provide Operator ten (10) days' written notice of impending release. Should legal action thereafter be initiated by Operator to enjoin or otherwise prevent such release, all expense of any such litigation shall be borne by Operator, including any damages, attorneys' fees or costs awarded by reason of having opposed disclosure. Tacoma Power shall not be liable for any release where notice was provided and Operator took no action to oppose the release of information. Notice of any proposed release of information pursuant to Chapter 42.56 RCW, shall be provided to Operator according to the "Notices" provision herein.

**33. NO PUBLICITY**

Except as specifically authorized in **Exhibit P** of this IRU Agreement, neither Party will issue any press releases or announcements, or any marketing, advertising or other promotional materials, related to this IRU Agreement or referencing or implying the other Party or its trade names, trademarks or service marks, without the prior written approval of the other Party.

**34. TIME IS OF THE ESSENCE**

TIME IS OF THE ESSENCE IN THIS AGREEMENT AND EACH PROVISION HEREOF IN WHICH TIME OF PERFORMANCE IS ESTABLISHED.

**35. NO THIRD PARTY BENEFICIARIES**

Each of Tacoma Power and Operator agrees that (a) their respective representations, warranties, covenants and agreements set forth herein are solely for the benefit of the other Party hereto, in accordance with and subject to the terms of this Agreement, and (b) this Agreement is not intended to, and does not, confer upon any Person other than the Parties hereto any rights or remedies hereunder, including the right to rely upon the representations and warranties set forth herein.

**36. EXHIBITS**

The Exhibits listed below are hereby incorporated into this IRU Agreement and made a part hereof. In interpreting this IRU Agreement and resolving any ambiguities, the language in the Exhibits takes precedence over language in this IRU Agreement.

Exhibit A – Tacoma Power Commercial System

Exhibit A1 – Service Areas Map

Exhibit A2 – System Assets

Exhibit A2.1 Fiber Schedule

- Exhibit A2.2 Node Maps
- Exhibit A2.3 Equipment Shown in Node Maps (BOM)
- Exhibit A2.4 Equipment in Hub Sites
- Exhibit A3 – Hub Sites License
  - Exhibit A3.1 Hub Site Drawings
  - Exhibit A3.2 Ancillary Systems
- Exhibit A4 – Conduit Space License
  - Exhibit A4.1 – Excluded Conduit (Downtown)
  - Exhibit A4.2 – Excluded Conduit (South)
- Exhibit A5 – IP Acceptable Use Policy
- Exhibit A6 – Headend License
  - Exhibit A6.1 Headend Site Drawing
  - Exhibit A6.2 Headend Equipment
- Exhibit A7 – Installed Customer Premises Equipment
- Exhibit B – Safeguarding Tacoma Power’s Use of the Fiber System
  - Exhibit B1 Critical Routes
  - Exhibit B2 Non-Critical Routes
- Exhibit C – Service Level Agreement
- Exhibit D – Access to and Maintenance of Tacoma Power Commercial System by Operator
  - Exhibit D1 – Access Process
    - Exhibit D1.1 – Pole Attachment Request Form
- Exhibit E – Tacoma Power Commercial System Upgrades
- Exhibit F – Capital Expenditures Commitment
- Exhibit G – Equitable Access

Exhibit N – Preserve Competition Among Providers

Exhibit O – Continuity of Services Commitment

Exhibit P – Trademark License

Exhibit P1- Marks

Exhibit P2 – Guidelines

Exhibit Q – City of Tacoma Insurance Requirements

Exhibit R – Checklist of Report and Certification Requirements

Exhibit S – Annual Financial Report

Exhibit T – Form of Guarantee

### **37. NO GRATUITIES**

Tacoma Power shall not offer or give any Operator employee or agent any gratuity, payment or other personal benefit or inducement with a view toward securing business from Operator or influencing the terms, conditions or performance of this IRU Agreement or any statement of work or purchase order.

### **38. FURTHER ASSURANCES**

In connection with this IRU Agreement and the transactions contemplated hereby, each Party will execute and deliver any additional documents and instruments and perform any additional acts that may be commercially reasonable, necessary or appropriate, or reasonably requested by the other Party, to effectuate and perform the Parties' obligations under this IRU Agreement and the transactions contemplated hereby.

### **39. RECORDS RETENTION**

Operator shall establish and maintain records in accordance with requirements prescribed by Tacoma Power, with respect to all matters related to the performance of this IRU

Agreement. Except as otherwise authorized by Tacoma Power, Operator shall retain such records in perpetuity.

**40. NON-DISCRIMINATION**

Operator agrees to take all steps necessary to comply with all federal, state and Tacoma City laws and policies regarding non-discrimination and equal employment opportunities. Operator shall not discriminate in any employment action because of race, religion, creed, color, national origin or ancestry, sex, gender identity, sexual orientation, age, marital status, familial status, veteran or military status, the presence of any sensory, mental or physical disability or the use of a trained dog guide or service animal by a disabled person. In the event of non-compliance by Operator with any of the non-discrimination provisions of this IRU Agreement, Tacoma Power shall be deemed to have cause to terminate this IRU Agreement, in whole or in part.

**41. CONFLICT OF INTEREST**

No officer, employee or agent of Tacoma Power, nor any member of the immediate family of any such officer, employee or agent as defined by City ordinance, shall have any personal financial interest, direct or indirect, in this IRU Agreement, either in fact or in appearance. Operator shall comply with all federal, state and City conflict of interest laws, statutes and regulations. Operator represents that it presently has no interest and shall not acquire any interest, direct or indirect, in the program to which this IRU Agreement pertains which would conflict in any manner or degree with the performance of Operator's services and obligations hereunder. Operator further covenants that, in performance of this IRU Agreement, no person having any such interest shall be employed. Operator also agrees that its violation of the City's Code of Ethics contained in Chapter 1.46 of the Tacoma Municipal Code shall constitute a breach of this IRU Agreement subjecting this IRU Agreement to termination.

**42. ENTIRE AGREEMENT**

This IRU Agreement, including the Exhibits hereto, contains all the terms, conditions and obligations of the Parties with respect to the grant of the IRU and related matters contemplated in this IRU Agreement, and supersedes any and all other agreements and representations whether oral or in writing relative to the subject matter of this IRU Agreement, including but not limited to the Letter of Intent that was executed on April 2, 2019 by and between Tacoma Power and Mashell Telecom Inc.

**43. INTERPRETATION**

Both Parties acknowledge that they have each been represented by counsel and this IRU Agreement and every provision hereof has been freely and fairly negotiated. All provisions of this IRU Agreement will be interpreted according to their fair meaning and will not be strictly construed against any Party.

**44. MISCELLANEOUS**

- (a) Except as otherwise expressly provided, the rights and remedies set forth in this IRU Agreement are in addition to, and cumulative of, all other rights and remedies at law or equity.
- (b) The headings in this IRU Agreement are strictly for convenience and do not amplify or limit any of the terms, provisions or conditions hereof.
- (c) In the event any provision of this IRU Agreement is held invalid, illegal or unenforceable, in whole or in part, neither the validity of the remaining part of such provision nor the validity of the remaining provisions of this IRU Agreement will be in any way affected. The Parties will cooperate in trying to replace the invalid, illegal or unenforceable provision with a valid provision that attempts to achieve the same result.
- (d) This IRU Agreement may be amended only by a written instrument executed by the Parties.
- (e) This IRU Agreement may be executed in multiple counterparts, all of which taken together constitute one and the same instrument.

**[SIGNATURE PAGES TO FOLLOW]**

**IN WITNESS WHEREOF**, each Party has caused this IRU Agreement to be executed by its duly authorized representative as of the date indicated below, and effective as of the Effective Date.

## EXHIBIT A3

### HUB SITES LICENSE

#### Section 1: Locations subject to License:

##### SW Hub – 4102 South 74<sup>th</sup> Street, Tacoma WA 98409

4,446 Sq. Ft fenced area.  
800 Sq. Ft building with HVAC system and generator backup power.

##### SE Hub – 6301 East “N” Street, Tacoma WA 98404

2,783 Sq. Ft fenced area.  
800 Sq. Ft building with HVAC system and generator backup power.

##### NW Hub – 2402 Pearl Street, Tacoma WA 98406

13,363 Sq. Ft fenced area.  
800 Sq. Ft building with HVAC system and generator backup power.

##### NE Hub – 2431 Alexander Ave E., Fife WA 98424

2,175 Sq. Ft fenced area.  
800 Sq. Ft building with HVAC system and generator backup power.

##### DTS Hub – 2422 Commerce Street, Tacoma WA 98402

15,912 Sq. Ft fenced area.  
1080 Sq. Ft building with HVAC system and generator backup power.

##### DTN Hub – 1111 South Altheimer & S. Tacoma Way, 98405

7,024 Sq. Ft fenced area.  
882 Sq. Ft building with HVAC system and generator backup power.

#### Section 2: Access and Permitted Use

(a) Operator shall have independent, 24-hour access from the nearest public right-of-way over Tacoma Power’s real property to each of the six secured Hub Site locations and buildings listed in Section 1 above. The Hub Site locations are located adjacent to Tacoma Power’s substations and can be entered through a locked gate without entering the substations. The Hub Site buildings are accessed through a locked card key access door. Operator employees and contractors will need authorization from Tacoma Power to obtain card keys for access.

(b) Operator may use parking within the fenced area of a Hub Site location if it is available. Operator may also use off-street parking on Tacoma Power real property immediately outside the fenced area if available to temporarily park vehicles when accessing the Hub Site locations.

(c) Operator shall use the Hub Sites solely for the purpose of maintaining and utilizing existing Tacoma Power Commercial Fiber, Tacoma Power Commercial Coax, and Tacoma Power Commercial Equipment and other personal property made available to Operator, for the installation, maintenance and use of After-Installed Assets pursuant to the terms of this Exhibit and the IRU Agreement, and to fulfil its maintenance obligations under Section 3 below. These Hub Sites shall not be used for storage of materials or tools or decommissioned or failed equipment or for co-location of third-party equipment.

(d) Operator shall have use of all existing racks in the Hub Site, other than those reserved for the City of Tacoma Institutional Network and Tacoma Power. Racks reserved for City of Tacoma Institutional Network and for Tacoma Power, as well as the numbered racks available for Operator's use, are identified for each Hub Site on **Exhibit A3.1**. Operator may add racks within each of the Hub Sites in the open areas shown in **Exhibit A3.1**. Each Party shall have joint use of the Hub Sites and shall use appropriate lockable racks for housing of equipment it uses or install a secure cage. In either event, each Party shall be responsible for the security of the equipment it uses only.

(e) Operator shall not interfere, or allow the operation of Tacoma Power Commercial Equipment it uses to interfere, with Tacoma Power or any other occupants of the Hub Sites.

### **Section 3: Maintenance Responsibilities**

(a) Tacoma Power shall be responsible for maintaining, at its cost, the Hub Site exterior fence, the grounds of the fenced area, the structural elements of the buildings, and the exterior and roof of buildings as well as the electrical and any plumbing systems serving the building, the secured access system, security cameras and door and fire alarms which are monitored by Tacoma Power's contract security team.

(b) Operator shall not make physical alterations to the structural elements of the fences or buildings or alter the external paint color scheme without the prior written consent from Tacoma Power.

(c) Operator shall be responsible for maintaining according to manufacturers' specifications, and replacing, at its cost, the following ancillary systems and equipment at the Hub Sites:

(i) HVAC sufficient to maintain an ambient temperature of 65° F and relative noncondensing humidity. Operator's maintenance will include recorded periodic HVAC inspection, filter replacement, equipment repair or replacement as needed.

(ii) Fire suppression system, either sprinkler system or other system that conforms to local, state, and federal laws and regulations.

(iii) Backup batteries, power supplies, or emergency generation to support all users of the Hub Site, including Tacoma Power and the City of Tacoma Institutional Network. Operator will be responsible for ongoing fueling, operations, maintenance, monitoring, repair, and replacement of this equipment. If Operator needs to perform upgrades to back up power equipment outside of any Hub Site building requiring more space than currently utilized within the Hub Site location, it will notify Tacoma Power. The Parties will work together to accommodate a solution that is both secure and accessible to Operator.

**Exhibit A3.2** lists the existing ancillary systems and equipment at the Hub Sites.

(a) Operator shall be responsible for general maintenance within the Hub Site buildings including lighting and bulb replacement, janitorial services, waste removal and sweeping, mopping, and polishing of floors to maintain cleanliness. Operator shall further be responsible for replacing or repairing, to the reasonable satisfaction of Tacoma Power, any damage caused to the Hub Sites arising from the activities of Operator.

#### **Section 4: Commercial Power**

(a) The Hub Sites have the power feeds depicted in **Exhibit A3.1**.

(b) Operator shall be responsible for the cost of commercial power for the Hub Site buildings and equipment pursuant to a separate power service contract with Tacoma Power. If Operator needs additional power or any changes to existing power feeds at any Hub Site, such requests shall be made pursuant to that separate power service contract.

#### **Section 5: Term.**

This license is coterminous with the IRU Agreement. Upon the termination of the license, any and all improvements made by Operator (including any replacements of ancillary systems and equipment) shall become the property of Tacoma Power.

**Section 6: Defaults.** Failure to comply with this Exhibit A3 is a Default.

**EXHIBIT A4**  
**CONDUIT SPACE LICENSE**

Capitalized terms used herein but not defined shall have the meanings assigned to them in the IRU Agreement.

**BACKGROUND**

- A. Tacoma Power is the owner of existing conduit located on real property and within public rights-of-way which is occupied in whole or in part by the Tacoma Power Commercial System or which is unoccupied but located within the Tacoma Power Commercial Service Area, all as depicted in Exhibit A2.2 to the IRU Agreement (“Conduit System”).
- B. Pursuant to the IRU Agreement, Operator has been granted an IRU in those portions of the Conduit System that are specified in the definitions of Tacoma Power Commercial Coax and the Tacoma Power Commercial Fiber.
- C. In connection with the grant of the IRU described in the IRU Agreement, Tacoma Power is willing to provide Operator with a non-exclusive license to occupy and use the unoccupied space in the portions of the Conduit System on Critical Routes, except for those portions of the Conduit System described in **Exhibits A4.1** and **A4.2** hereto (“Excluded Conduit”) for the purposes described hereinbelow (“Licensed Conduit Space”).

**ARTICLE 1**

**LICENSE**

1.1 Tacoma Power grants Operator a non-exclusive license (“License”) to occupy and make use of the Licensed Conduit Space in order to install After-Installed Assets and otherwise to fulfill its obligations set forth in the IRU Agreement. A separate license shall be required for Operator to occupy or use the Licensed Conduit Space for any purpose not specifically contemplated by this License or the IRU Agreement.

1.2 It is understood and agreed that Tacoma Power shall maintain legal title to the Conduit System, subject to the License granted herein in the Licensed Conduit Space, and the terms of the IRU Agreement. This License is not intended to nor shall it be interpreted to create or vest in Operator any leasehold, easement, or any other property rights or interests in the Licensed Conduit Space, the Conduit System, or any part thereof.

## **ARTICLE 2**

### **TERM**

2.1 This License is coterminous with the IRU Agreement. Upon the termination of this License, all rights of Operator to use the Licensed Conduit Space, or any part thereof, shall cease except to the extent allowed during the Post-Termination Period pursuant to the Continuity of Services Commitments in Exhibit O to the IRU Agreement.

## **ARTICLE 3**

### **LICENSED CONDUIT SPACE ACCESS AND USE**

3.1 Access to Licensed Conduit Space for installation and maintenance of any After-Installed Assets placed in Licensed Conduit Space is governed by the terms and conditions set forth in Exhibits B, C and D of the IRU Agreement.

3.2 Operator agrees to use the Licensed Conduit Space only in a manner consistent with the Underlying Rights and Use Restrictions, and that its rights shall in all respects be subject to the terms and conditions of the Underlying Rights and Use Restrictions. Operator agrees not to cause or allow to be caused any default under the Underlying Rights or Use Restrictions.

3.3 Operator shall not use the Licensed Conduit Space in a way that interferes in any way with or adversely affects the use of the fibers or cable of any other person using the Conduit System. Operator acknowledges that the Conduit System includes or will include other participants, including Tacoma Power and other owners and users of telecommunication systems.

3.4 Operator shall be responsible for the proper design of its cable and other equipment that occupies the Licensed Conduit Space.

3.5 Except as provided in Section 7 of the IRU Agreement, Operator at its sole cost and expense, shall obtain and maintain any and all necessary easements, licenses, and building access agreements, as well as all governmental permits, licenses, easements, franchises and approvals that may lawfully be required by federal, state or local law, statute, regulation or ordinance and shall continuously comply with all such laws, statutes, regulations, or ordinances as may now or in the future be applicable to (1) its use of the Licensed Conduit Space; and (2) Operator's other rights and obligations under this License.

3.6 Tacoma Power's right to relocate all or any portion of the Conduit System, or any of the facilities used or required in providing Operator with this License, shall be governed by Section 13 of the IRU Agreement.

## **ARTICLE 4**

### **LICENSED CONDUIT SPACE**

4.1 Operator may not transfer or assign all or any part of its interest in this License or in the Licensed Conduit Space, in whole or in part, except in connection with the transfer or assignment of the IRU Agreement and subject to the requirements of Section 29 of the IRU Agreement.

## **ARTICLE 5**

### **DEFAULTS**

5.1 Failure to comply with this Exhibit A4 is a Default.

## **ARTICLE 6**

### **NO WARRANTIES**

6.1 NOTWITHSTANDING ANY EXAMINATION OR INSPECTION MADE BY OPERATOR AND WHETHER OR NOT ANY PATENT OR LATENT DEFECT OR CONDITION WAS REVEALED OR DISCOVERED THEREBY, OPERATOR UNDERSTANDS IT IS OBTAINING USE OF THE LICENSED CONDUIT SPACE UNDER THIS LICENSE "AS IS" IN ITS CONDITION AS OF THE EFFECTIVE DATE. OPERATOR HEREBY WAIVES AND RELEASES ANY CLAIM OR ACTION AGAINST TACOMA POWER IN RESPECT OF OR RELATED TO THE CONDITION OF THE CONDUIT SYSTEM, INCLUDING ANY DEFECTS OR ADVERSE CONDITIONS NOT DISCOVERED OR OTHERWISE KNOWN BY OPERATOR AS OF THE EFFECTIVE DATE.

6.2 TACOMA POWER MAKES NO WARRANTY TO OPERATOR OR ANY OTHER ENTITY, WHETHER EXPRESS, IMPLIED, OR STATUTORY, AS TO THE INSTALLATION, DESCRIPTION, QUALITY, MERCHANTABILITY, USEFUL LIFE, FUTURE ECONOMIC VIABILITY, OR FITNESS FOR ANY PARTICULAR PURPOSE OF ANY LICENSED CONDUIT SPACE, OR AS TO ANY OTHER MATTER, ALL OF WHICH WARRANTIES ARE HEREBY EXPRESSLY EXCLUDED AND DISCLAIMED.

## **EXHIBIT A5 IP ACCEPTABLE USE POLICY**

### **Prohibited End User Activity**

Operator will use commercially reasonable efforts to create, maintain, publish and enforce a Customer Acceptable Use Policy for any of its customers who are permitted to use the IP addresses. Operator's Customer Acceptable Use Policy will require (i) end users connect systems to the Tacoma Power Commercial Network are free from viruses and other malware, (ii) end users will not use the assigned IP addresses to send unsolicited bulk or commercial messages, (iii) end users do not engage in activity that will improperly restrict or inhibit any other end user's normal use of the services, (iv) end users do not resell, share, or otherwise distribute the service or any portion thereof to any third party outside the physical location where the service is provided, (v) end users do not provide Internet access to others through a dial up connection, hosting of shell accounts over the Internet, distribution through wireless services, providing e-mail or news services, or news feeds, (vi) end users do not run programs or servers, which provide network services to others via the Tacoma Power Commercial Network, and (vii) end users do not host multi-user interactive services such as Web Hosting, E-mail hosting, or game servers or forums, etc.

### **Prohibited Use or Inquiries**

Operator will receive and respond to incoming abuse or network inquiries associated with the IP addresses assigned under the IRU. Incoming abuse or network inquiry may be delivered to Operator by e-mail or by other means and inquiries may include but not be limited to:

1. Copyright infringement allegations
2. Spam allegations
2. Non-impacting but potentially malicious activity (for example, port scanning or botnet participation)
3. Network impacting activity
4. Subpoena / warrant information requests

Operator will daily monitor for incoming abuse or network inquiries. Operator will respond to any incoming abuse allegations with a system of escalation for each subscriber beginning with a warning, then continuing to blockings (soft disconnects) and culminating with disconnection of service for end users who are not complying with the corrective actions requested by Operator.

Subpoena/warrant information requests will be completed and returned to the requesting agency by Operator under the Operator's standard procedures acceptable to receipt of such documents, but will be returned no later than in the time allotted by the requesting agency (provided the proper documents have been submitted in the proper form and manner).

Operator will assume all responsibility for loss of use or interruption of use of Tacoma Public Utilities or City of Tacoma's Class B IP Address range arising out of Operator's use of the IP addresses assigned under the IRU Agreement under Section 2(c) of the IRU Agreement.

**Return of IP Addresses**

Use of the assigned IP addresses is coterminous with the IRU Agreement, unless use of IP addresses is terminated early pursuant to Section 2(c) of the IRU Agreement. The IP Acceptable Use obligations contained in this Exhibit will terminate upon return to and receipt by Tacoma Power of all of the IP addresses assigned under the IRU Agreement.

**Defaults.**

Failure to comply with this Exhibit A5 is a Default.

**EXHIBIT A6  
HEADEND LICENSE**

**ARTICLE I**

**DEFINITIONS**

1.1 Definitions. Capitalized terms not otherwise defined in the text of this Exhibit will have the meanings ascribed to them in the IRU Agreement.

**ARTICLE II**

**TERM**

2.1 Term. The term of the license granted by this Exhibit (the "Term") shall commence on the Effective Date and continue for a period of five (5) years, unless earlier terminated by either Party in accordance with the terms of this Exhibit.

**ARTICLE III**

**LICENSE TO USE HEADEND SITE**

3.1 Headend Site. During the Term, TACOMA POWER grants OPERATOR a license to use and occupy the 1412 Sq. Ft building located at 3628 S. 35th St., Tacoma, WA 98409 and rooftop access to satellite dishes depicted in **Exhibit A6.1** hereto ("Headend Site") solely for the purpose of operating and maintaining the Headend Equipment listed in **Exhibit A6.2**, subject to the terms and conditions of this Exhibit.

3.2 OPERATOR shall have 24-hour access to the Headend Site in accordance with the standard access and security policies and procedures established by TACOMA POWER.

3.3 OPERATOR shall have use of all existing space in the Headend Site, except for Comm Shop Room separated and designated for use by TACOMA POWER. The Headend Site shall not be used for storage of tools, supplies or decommissioned or failed equipment.

3.4 Maintenance Responsibilities

3.4.1 TACOMA POWER shall be responsible for maintaining, at its cost, the exterior of the Headend Site as well as security cameras and doors and fire alarms which are monitored by TACOMA POWER's contract security team.

3.4.2 TACOMA POWER shall be responsible for maintaining backup batteries, power supplies, or emergency generation to support all users of the Headend Site. TACOMA POWER will be responsible for ongoing fueling, operations, maintenance, monitoring, repair, and replacement of this power equipment, including any upgrades to back up power equipment.

3.4.3 OPERATOR shall not make physical alterations to the structural elements of the Headend Site or alter the external paint color scheme.

3.4.4 OPERATOR shall be responsible for maintaining, at its cost, the following at the Headend Site:

- (i) HVAC sufficient to maintain an ambient temperature of 65° F and relative noncondensing humidity.
- (ii) Fire suppression system, either sprinkler system or other system that conforms to local, state, and federal laws and regulations.

3.5 OPERATOR's maintenance of the Headend Site will include recorded periodic HVAC inspection, filter replacement, equipment repair or replacement as needed.

3.6 OPERATOR's maintenance of the Headend Site will include general maintenance of floors such as sweeping, mopping and polishing to maintain cleanliness.

### 3.7 Default and Termination

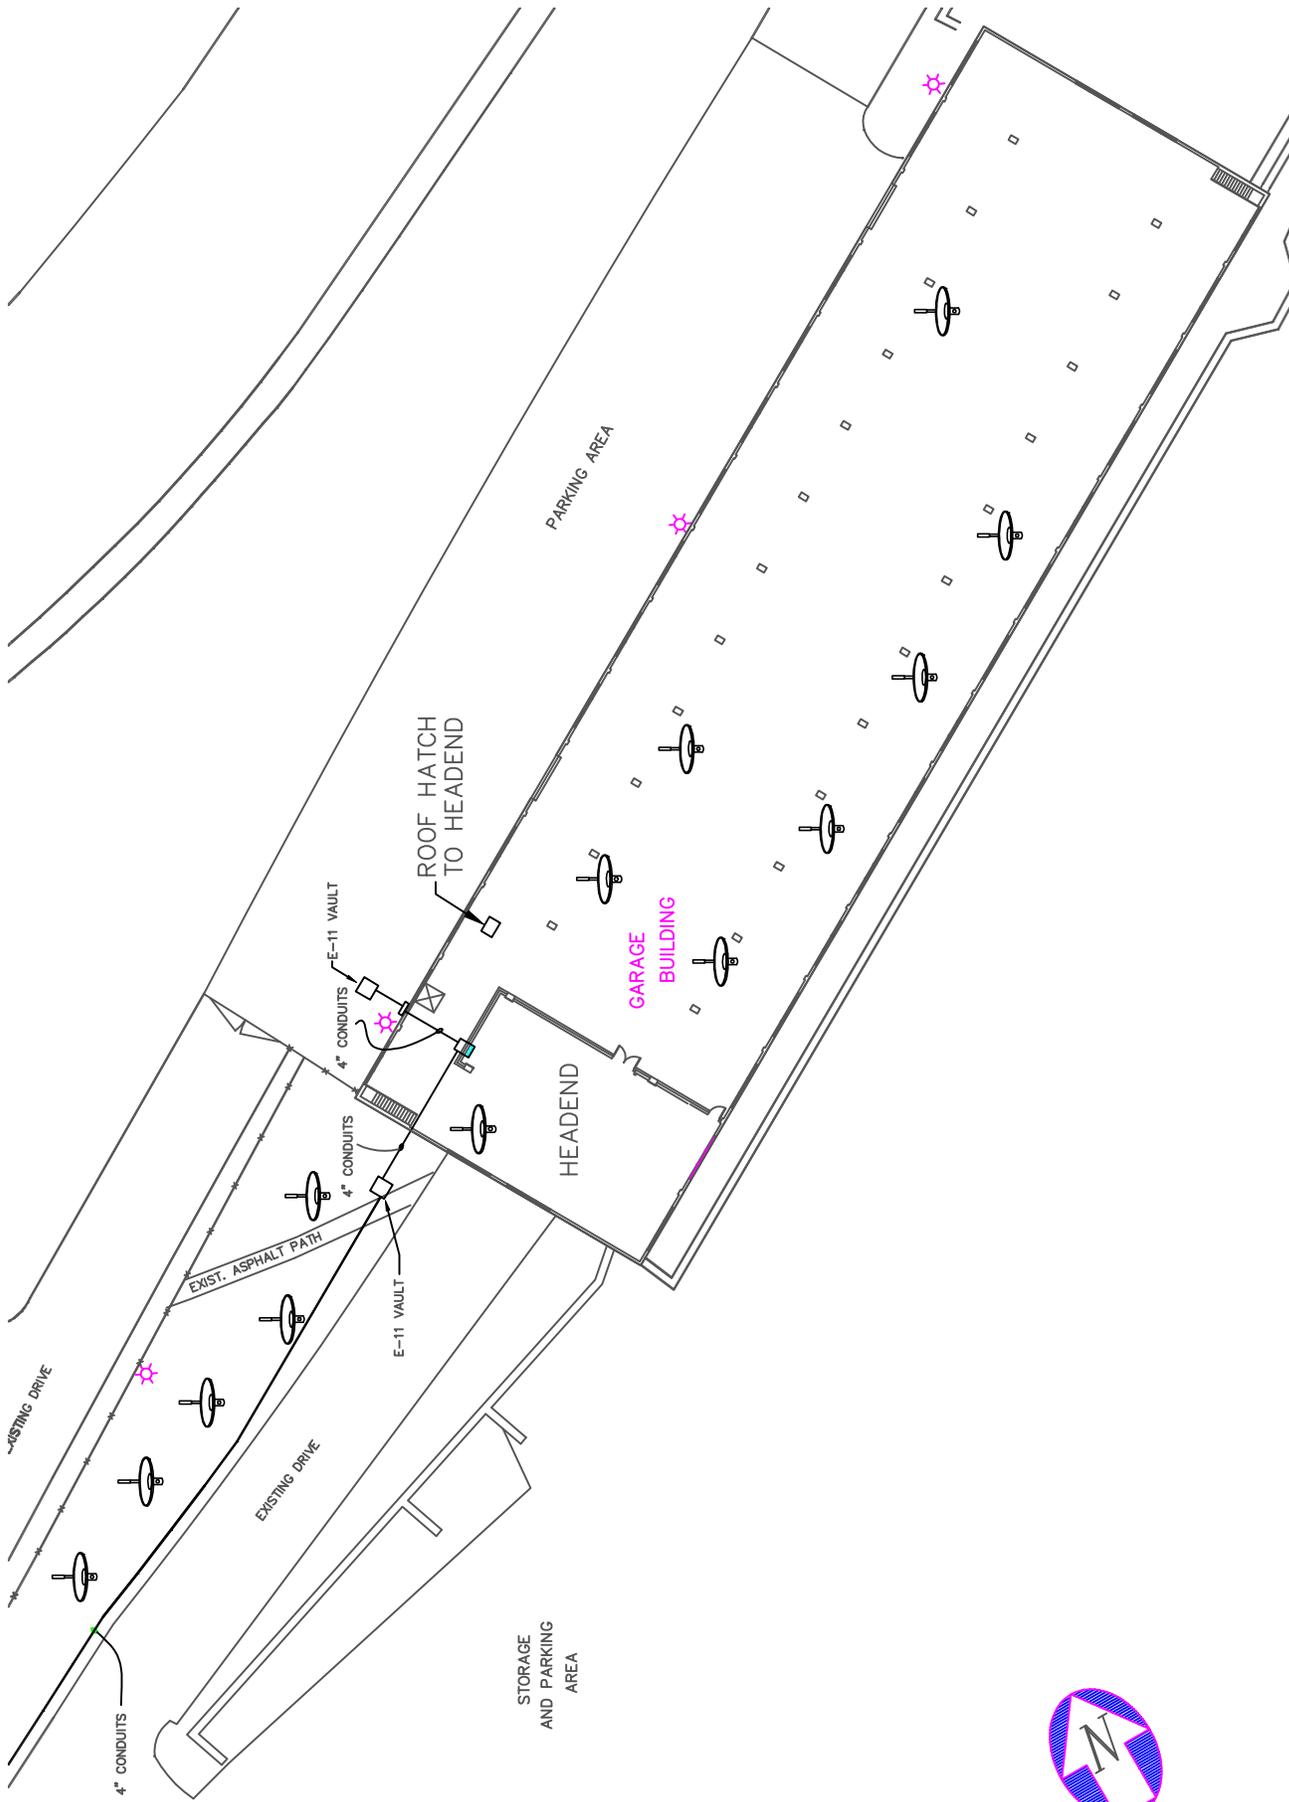

3.7.1 Events of Default. Failure to comply with this Exhibit is a Default.

3.7.2 Action on Failure to Cure. Upon the failure by the defaulting Party to cure any Default, the non-defaulting Party may: (i) pursue any remedies it may have under the IRU Agreement or applicable law or in equity relating to such Default; and (ii) terminate the license granted by this Exhibit.

3.7.3 Termination by Operator. OPERATOR may terminate the license granted by this Exhibit upon thirty (30) calendar days' written notice to TACOMA POWER.

3.8 Removal of Headend Equipment. Upon termination of the license granted by this Exhibit for any reason, OPERATOR shall safely remove all Headend Equipment (excluding racks, enclosures and satellite dishes) and leave the Headend Site clear of any debris or damage, reasonable wear and tear excepted.

**EXHIBIT B**  
**SAFEGUARDING TACOMA POWER'S USE OF CRITICAL UTILITY FIBER**

**1. DEFINITIONS**

(a) "Critical Route" means any route of Tacoma Power Commercial Fiber that includes Utility Fiber in the same sheath or fiber bundle anywhere along the route and any route of Tacoma Power Commercial Coax that includes Utility Fiber in the same conduit. Critical Routes as of the Effective Date are provided in **Exhibit B1**.

(b) For the purposes of Exhibits B and C, "Fiber Maintenance" means any activities undertaken to maintain the fiber in working order and to make use of the fiber, including but not limited to regular patrol of the fiber; maintenance of a "Call-Before-You-Dig" program and all required and related locates; maintenance of sign posts along the Tacoma Power Commercial System with the number of the local "Call-Before-You-Dig" organization; infrastructure repair; splicing; emergency restoration; pole transfers; road projects and overhead-underground conversions; cable restoration; reattachment; moves; make-ready compliance; route-relocation; and other standard processes undertaken by communications infrastructure owners. The term includes replacement of Tacoma Power Commercial Fiber only under the limited circumstances described in Sections 6 and 7 of Exhibit C.

(c) "Non-Critical Route" means a route of the Tacoma Power Commercial Fiber that does not share a fiber bundle or sheath with Utility Fiber at any point along the route and any route of Tacoma Power Commercial Coax that does not include Utility Fiber in the same conduit. Non-Critical Routes as of the Effective Date are identified in **Exhibit B2**.

(d) "Utility Fiber" means the fiber in the Fiber System that provides substantial and essential support for Tacoma Power's communications functions and assets as an electrical power utility, and includes both dark and lit fibers.

**2. MAINTENANCE OF TACOMA POWER COMMERCIAL FIBER ON CRITICAL ROUTES.**

(a) The Parties agree that Operator shall not have access to the Tacoma Power Commercial Fiber or After-Installed Assets in conduit on Critical Routes except as provided in this **Exhibit B**.

(b) With respect to any components of the Tacoma Power Commercial Fiber on Critical Routes, Operator will not provide Fiber Maintenance. Rather, solely Tacoma Power, at its cost (except as provided herein), will provide all Fiber Maintenance during the Term in accordance with the Service Level Agreement attached hereto as Exhibit C.

(c) In the event that Tacoma Power ceases using Utility Fiber on a Critical Route and wants to re-designate the route, the Parties agree to negotiate in good faith to develop a plan for expanding Operator's access to the Tacoma Power Commercial Fiber and reducing Tacoma Power's Fiber Maintenance obligations.

(d) All other rights and obligations with respect to the Tacoma Power Commercial System maintenance on Critical Routes are addressed in **Exhibit D**.

### **3. SPLICING SERVICES FOR TACOMA POWER COMMERCIAL FIBER IN THE SAME SHEATH OR FIBER BUNDLE WITH UTILITY FIBER/SERVICES FOR REMOVAL OR REPLACEMENT OF FIBER/COAX CABLE IN CONDUIT ON CRITICAL ROUTES**

(a) Operator shall not access splice panels or fiber access points for Tacoma Power Commercial Fiber on Critical Routes. Rather, Tacoma Power will provide qualified staff to Operator upon request to provide splicing services and services for removal or replacement of fiber/coax cable in conduit on Critical Routes.

(b) If Operator chooses to build new splicing access points for its own use for Tacoma Power Commercial Fiber on Critical Routes so as to separate Tacoma Power Commercial Fiber access points from Tacoma Power Utility Fiber access points, Tacoma Power will provide qualified staff to provide this construction service to Operator upon request.

(c) All requests for splicing services pursuant to this Section 3 shall be in writing and provide at least ten (10) Business Days' notice of the desired service date. Services will be performed at a time of mutual agreement between Tacoma Power and Operator.

(d) Operator will be invoiced for splicing services based on the price schedule in Section 5 of this Exhibit and shall pay invoices within thirty (30) days of receipt.

### **4. WORK IN ENERGIZED VAULTS**

(a) For safety and regulatory compliance reasons, only qualified Tacoma Power staff may access Tacoma Power Commercial Fiber splice cases that are contained within energized vaults (estimated as approximately 4% of total access points in the Tacoma Power Commercial System). In the event that Operator needs to access assets in energized vaults, Tacoma Power will provide qualified staff to provide access services to Operator upon request.

(b) All requests for access pursuant to this Section 4 shall be in writing and provide at least five (5) Business Days' notice of the desired access date. Access will be provided at a time of mutual agreement between Tacoma Power and Operator.

(c) Operator will be invoiced for access services based on the price schedule in Section 5 of this Exhibit and shall pay invoices within thirty (30) days of receipt.

### **5. TACOMA POWER'S PRICE SCHEDULE**

The rates described below are for work performed in 2019. All amounts listed below are calculated using Tacoma Power's 2019 SAP loaded rates with equipment and materials. The Parties recognize and agree that Tacoma Power may adjust the below amounts periodically to reflect future changes in Tacoma Power's SAP loaded rates with equipment and materials, or any future methodology commonly used by Tacoma Power for calculation of loaded rates with equipment and materials. Operator will be provided thirty (30) days' written notice of any such changes.

Work Item	Description	Measured By	Cost
<b>1. Fusion Fiber Splicing (Existing Splice Case)</b>	Labor, materials and equipment required for fusion splicing, including dress and storage of unspliced fibers within the splice tray. A minimum of 24 fiber splices will be performed at each location. Provide electronic documentation and analysis of each splice. Includes installation of splice cases and storage loops with snowshoes, grounding and bonding of all equipment. Encapsulate and flash test as required. Support and secure per manufacture's specifications.	Per fiber splice, tested and documented	\$37.00
<b>2. Fusion Fiber Splicing (Mid-Entry, Create Splice Case)</b>	All labor, materials and equipment costs necessary to de-lash and re-lash system up to 1000', retrieve fiber storage, prepare mid-entry case, fusion splicing, including dress and storage of unspliced fibers within the splice tray. A minimum of 24 fiber splices will be performed at each location. Provide electronic documentation and analysis of each splice. Includes installation of splice cases and storage loops with snowshoes, grounding and bonding of all equipment. Encapsulate and flash test as required. Support and secure per manufacture's specifications. Includes all safety measures and traffic control.	Per fiber splice, tested and documented	\$77.00

Work Item	Description	Measured By	Cost
<b>3. Fusion Fiber Splicing (at Hub Site and Headend Buildings)</b>	All costs associated with the labor, materials and equipment necessary for fusion splicing to be performed at hub and headend locations, including dress and storage of unspliced fibers within the splice tray. A minimum of 96 fiber splices will be performed at each location. Provide electronic documentation and analysis of each splice. Includes installation of splice cases and storage loops, grounding and bonding of all equipment. Encapsulate and flash test as required. Support and secure per manufacturer's specifications.	Per fiber splice, tested and documented	\$16.00
<b>4. Access Management – Access Energized Power Vaults</b>	All costs for labor, materials and equipment to provide escorted access to Tacoma Power energized vaults in the downtown business network. This unit includes a composite crew of Wire and HFC personnel, who would perform work.	Time and Materials (Per hour, five-Person Crew)	\$541.00
<b>5. Remove or Replace Fiber/Coax Cable in Shared Critical Route Conduit</b>	All costs for labor and equipment to remove existing cables or pull new customer provided cables in existing critical route shared conduits. This unit includes a composite crew of HFC personnel, who would perform work on behalf of partner.	Time and Equipment (Per hour, four-Person Crew)	\$365.00

## 6. REMEDIES FOR NON-COMPLIANCE

(a) Operator's sole remedy for any violation of Section 2 of this Exhibit by Tacoma Power is limited to the liquidated damages specified in the Service Level Agreement (Exhibit C).

(b) In the event that Tacoma Power discovers a Default of an obligation in this Exhibit by Operator that poses an imminent public safety concern or threat to the safety of Tacoma Power operations, Tacoma Power may take corrective action to address the Default without prior notice to Operator, and invoice Operator for the cost of such corrective action.

(c) In the event that Operator commits repeated Defaults of this Exhibit, Tacoma Power shall have the right to give notice to terminate this IRU Agreement pursuant to Section 21(g) of this IRU Agreement.

**EXHIBIT B1**  
**MAP OF CRITICAL ROUTES AS OF EFFECTIVE DATE**

*[CONTENT ON ACCOMPANYING USB DRIVE]*

**EXHIBIT B2**  
**BOOK OF NON-CRITICAL ROUTES AS OF EFFECTIVE DATE**

*[CONTENT ON ACCOMPANYING USB DRIVE]*

**EXHIBIT C**  
**SERVICE LEVEL AGREEMENT (“SLA”)**

**Section 1**      Fiber Maintenance

a) Tacoma Power will perform all Fiber Maintenance for Tacoma Power Commercial Fiber on Critical Routes, including Scheduled Maintenance and Unscheduled Maintenance, as defined herein. Operator shall have access to the Tacoma Power Commercial Fiber, consistent with the IRU Agreement and Exhibits, during the performance of any Scheduled Maintenance or Unscheduled Maintenance so long as this requirement does not interfere with Tacoma Power’s ability to perform its obligations under this SLA.

b) Planned, non-emergency and routine Maintenance ("**Scheduled Maintenance**") will be performed at the times determined by Tacoma Power in its sole discretion, except if it is reasonably expected to produce any signal discontinuity for Tacoma Power Commercial Fiber, in which case the schedule shall be coordinated with Operator pursuant to Section 4 below.

c) Tacoma Power will perform unplanned, emergency or non-routine Maintenance, demand call-out, and repair ("**Unscheduled Maintenance**") for Tacoma Power Commercial Fiber on the Critical Routes, subject to the terms of this SLA. Unscheduled Maintenance includes the following activities:

- i. Respond to troubleshooting requests from Operator.
- ii. Respond to any notification from Operator or notification from any third party of a Fault (as defined below) on the Critical Routes, or any event imminently likely to cause a Fault on Critical Routes or demand maintenance requested by Operator.
- iii. Respond to any potential service-affecting situation to prevent any Fault on Critical Routes.
- iv. Operator shall immediately report the need for Unscheduled Maintenance to Tacoma Power in accordance with procedures promulgated by Tacoma Power from time to time. Tacoma Power shall log the time of Operator’s report, verify the problem and dispatch personnel to take corrective action in accordance with this SLA.

**Section 2**      Time to Respond

a) Tacoma Power personnel shall dispatch maintenance and repair personnel to handle and repair problems detected in the Tacoma Power Commercial Fiber on Critical Routes: (i) upon notification by Operator to Tacoma Power, or (ii) upon notification by a third party. Tacoma Power’s Fiber Maintenance services shall be available for dispatch twenty-four (24) hours a day, seven (7) days a week. Tacoma Power shall acknowledge receipt of a notification under (i) or (ii) by telephone (“Respond”) as soon as possible but in no event shall the annual Mean Time to Respond ("**MTTR**") for Unscheduled Maintenance activity be more than one (1) hour, unless delayed by a Force Majeure Event, including electrical restoration or the establishment of a safe work zone for telecommunication work to commence, or other circumstances beyond the reasonable control of Tacoma Power.

b) Hourly Updates. In all cases of Unscheduled Maintenance, Tacoma Power shall provide Operator with hourly updates of the progress of the Unscheduled Maintenance until the Unscheduled Maintenance is complete.

### **Section 3**      Cooperation and Coordination

a) Tacoma Power shall provide Operator with a contact/escalation list (“**Escalation List**”) to aid in trouble reporting and resolution. The current Escalation List shall be made available to Operator and may be revised by Tacoma Power from time to time by written notice. In performing Maintenance, Tacoma Power shall take workmanlike care to prevent impairment to the signal continuity and performance of the Tacoma Power Commercial Fiber. The precautions to be taken by Tacoma Power shall include notifications to Operator when there may be service-affecting Fiber Maintenance. In addition, Tacoma Power shall reasonably cooperate with Operator in sharing information and analyzing the impairments regarding the Tacoma Power Commercial Fiber. If any Fiber Maintenance requires a reconfiguration involving fibers, electronic equipment, or regeneration or other facilities that are Tacoma Power Commercial System facilities that are the Maintenance responsibility of Operator, then Operator shall, at Tacoma Power’s reasonable request, make such personnel of Operator available as may be necessary to accomplish such Maintenance, which personnel shall coordinate and cooperate with Tacoma Power in performing such Fiber Maintenance

### **Section 4**      Maintenance Window

a) For any Scheduled Maintenance which is reasonably expected to produce any signal discontinuity, Tacoma Power and Operator must coordinate to determine the appropriate time for that Scheduled Maintenance. Generally, this work should be scheduled after 11:00 p.m. and before 6:00 a.m. local time and on certain weekends (the “Maintenance Window”). Scheduled Maintenance scheduled to be performed during a Maintenance Window must be completed by the end of the Maintenance Window. If any Scheduled Maintenance goes beyond the end of the Maintenance Window and the Tacoma Power Commercial Fiber is unavailable, a period of Fiber Unavailability as defined in Section 10 shall commence and Operator may be entitled to liquidated damages under Section

b) Tacoma Power and Operator shall agree upon a detailed Maintenance Window calendar. Major system work, such as fiber rolls and hot cuts, shall be scheduled for Maintenance Window weekends. The intent is to avoid jeopardy work on high-traffic holidays.

c) Tacoma Power shall notify Operator of any Scheduled Maintenance to be performed during a Maintenance Window. If Scheduled Maintenance is cancelled or delayed for whatever reason as previously notified, Tacoma Power shall notify Operator at its earliest opportunity but no later than one (1) hour after such cancellation or delay.

### **Section 5**      Testing and Restoration of the Tacoma Power Commercial Fiber

a) Tacoma Power shall respond to any failure, interruption, impairment in the operation of, or unavailability of the Tacoma Power Commercial Fiber on Critical Routes. (“**Fault**”) as quickly as possible following commencement of the Fault (allowing for delays caused by Force Majeure Events and other circumstances beyond the reasonable control of Tacoma Power) in accordance with the procedures set forth in Section 2. A Fault commences

upon the earlier of (i) Operator's notification to Tacoma Power or (ii) when indicated by network control information actually or reasonably known to Tacoma Power. Each Fault terminates upon restoration of the Tacoma Power Commercial Fiber as evidenced by appropriate splicing tests by Tacoma Power and confirmed by Operator as to network functionality and availability.

b) Tacoma Power shall maintain sufficient capability to teleconference with Operator during Unscheduled Maintenance in order to provide hourly communications during the restoration process. When correcting or repairing fiber optic cable discontinuity or damage, including but not limited to an event of Unscheduled Maintenance, Tacoma Power shall use commercially reasonable efforts to repair traffic-affecting discontinuity or damage of the affected Tacoma Power Commercial Fiber within six (6) hours of learning of discontinuity or damage after power restoration has been completed and the work site has been made safe. In order to accomplish such objective, it is acknowledged that the repairs so effected may be temporary in nature. In such event, within twenty-four (24) hours after completion of any such Unscheduled Maintenance, Tacoma Power shall commence its planning for permanent repair and thereafter promptly notify Operator of such plans, and shall implement such permanent repair within an appropriate time thereafter. Restoration of Tacoma Power Commercial Fiber on fiber strands not immediately required for service shall be completed on a mutually agreed-upon schedule.

c) During restoration, Tacoma Power and Operator agree to work together to restore all traffic as quickly as possible.

d) In performing permanent repairs, Tacoma Power shall comply with industry standards (ANSI/TIA/EIA-568 B.3) and when possible Operator's standard splicing specifications. Tacoma Power shall provide to Operator any modifications to these specifications as may be necessary or appropriate in any particular instance for Operator's approval, which approval shall not be unreasonably withheld.

e) Tacoma Power's representatives that are responsible for initial restoration of a cut fiber optic cable shall carry on their vehicles the typical appropriate equipment that would enable a temporary splice, with the objective of restoring operating capability in as little time as possible. Tacoma Power shall maintain and supply an inventory of spare fiber optic cable in storage facilities supplied and maintained by Tacoma Power at strategic locations to facilitate timely restoration.

f) Upon permanent restoration, Tacoma Power shall perform appropriate testing on the Tacoma Power Commercial Fiber in accordance with Tacoma Power's then current preventative maintenance procedures, which shall not substantially deviate from standard industry practice.

## **Section 6**     Fiber Replacement

a) In the event that all or any part of the Tacoma Power Commercial Fiber on a Critical Route is required by Operator to be replaced, such replacement shall be made as soon as reasonably practical by Tacoma Power using fiber to be provided by Operator and credited toward Operator's Capital Expenditures. Operator must light at least ninety percent (90%) of available fiber in the relevant Tacoma Power Commercial Fiber Backbone, Service Ring or Service Drop, as applicable, before being entitled to make any request to Tacoma Power to install replacement fiber hereunder.

**Section 7**      Chronic Failure

a)      In the event a portion of the Tacoma Power Commercial Fiber on a Critical Route suffers from a Fault (i) lasting more than 48 hours in the aggregate during any calendar month, (ii) lasting more than 24 hours consecutively in any three of the past 12 consecutive calendar months, or (iii) occurring on two or more separate occasions of more than 12 hours each in the aggregate in any calendar month, such a Fault will be considered a chronic failure (“**Chronic Failure**”). In the event of a Chronic Failure, at Operator’s written request, Tacoma Power shall present a remediation plan to Operator to address the Chronic Failure. Following the parties’ mutual agreement of a plan to solve the Chronic Failure, Tacoma Power shall implement and complete, if capable of completion, the plan within thirty (30) days. In the event that Tacoma Power Commercial Fiber requires replacement under the agreed remediation plan, Tacoma Power will replace the fiber using fiber to be provided by Operator and credited toward Operator’s Capital Expenditures. Operator must light all available dark fiber available in the affected Tacoma Power Commercial Fiber Backbone, Service Ring or Service Drop, as applicable, before being entitled to make any request to Tacoma Power to present or implement a remediation plan hereunder.

**Section 8**      Notifications and Liquidated Damages

a)      Notifications required of Tacoma Power by Section 2 shall be provided to the Operator NOC. Operator shall be entitled to liquidated damages in accordance with the following table for each failure of Tacoma Power to Respond as set forth below:

Service Level Failure	Amount
Notification	\$120/initial failure to Respond
Response	\$120 for each hour in excess of the annual MTTR of 1 hour

**Section 9**      Fiber Availability

a)      Fiber Availability Commitment. Tacoma Power shall use commercially reasonable efforts to maintain availability of the Tacoma Power Commercial Fiber one hundred percent (100%) of the time. Fiber Unavailability shall exist when unavailability of Tacoma Power Commercial Fiber causes disruption in service (“**Fiber Unavailability**”). Fiber Unavailability duration is measured from the time Tacoma Power detects Fiber Unavailability or Tacoma Power or Operator opens a trouble ticket until the time Operator confirms that the Fiber Unavailability has been remediated, which confirmation shall be prompt. Tacoma Power shall have a 12-hour grace period from the detection by Tacoma Power or opening of a trouble ticket before liquidated damages apply. Beginning with the 13<sup>th</sup> hour of Fiber Unavailability, every hour of Fiber Unavailability shall result in liquidated damages of One Hundred and Twenty (\$120) per hour per route, owed by Tacoma Power to Operator. Fiber Unavailability payments shall be capped 720 hours per Fiber Unavailability event. To claim payment, Operator must provide Tacoma Power with a written request

before the sixth (6th) Business Day of the month following the month in which Fiber Unavailability occurred.

b) Terrestrial Fiber Commitment. Tacoma Power commits to maintain attenuation levels not to exceed an overall end to end dB loss as set out in industry standards (See, ANSI/TIA/EIA-568 B.3). End to end dB loss shall be calculated by adding together the loss from each of the segments on the Tacoma Power System.

c) Liquidated Damages Unavailable in Some Circumstances. Liquidated damages shall not be available to Operator under this Exhibit in circumstances where the issue arises from (a) the acts or omissions of Operator or its employees, contractors, agents or end-users; (b) the failure, malfunction, or limitation of throughput of equipment, network, software, applications or systems not owned or directly controlled by Tacoma Power; (c) circumstances or causes beyond the control of TPU, such as Force Majeure Events and third-party attacks on the Tacoma Power Commercial Fiber; (d) Scheduled Maintenance performed within the Maintenance Window for that Scheduled Maintenance; or (e) Unscheduled Maintenance when Tacoma Power Responds as set out in this Agreement.

**EXHIBIT D**  
**ACCESS TO AND MAINTENANCE OF TACOMA POWER COMMERCIAL SYSTEM**  
**BY OPERATOR**

The terms and conditions of this Exhibit D shall govern Operator's maintenance obligations and access rights with regards to the Tacoma Power Commercial System to the extent not already addressed in Exhibits A, B and C. Capitalized terms used herein but not defined herein shall have the meanings assigned to them in Exhibit A, B, C, or the IRU Agreement.

**1. GENERAL**

(a) For the purposes of this Exhibit D, "Maintenance" means any activities undertaken to maintain the Tacoma Power Commercial System in working order and to make use of the Tacoma Power Commercial System, including but not limited to regular patrol of the Tacoma Power Commercial System; maintenance of a "Call-Before-You-Dig" program and all required and related locates; maintenance of sign posts along the Tacoma Power Commercial System with the number of the local "Call-Before-You-Dig" organization; infrastructure repair; splicing; emergency restoration; pole transfers; replacement; road projects and overhead-underground conversions; cable restoration; reattachment; moves; make-ready compliance; route-relocation; and other standard processes undertaken by communications infrastructure owners. The term excludes Fiber Maintenance as defined in Exhibit B which is to be performed exclusively by Tacoma Power pursuant to Exhibits B and C.

(b) Maintenance Costs. All of the Maintenance shall be performed by Operator and all Maintenance costs shall be borne by Operator, except those Fiber Maintenance activities (and costs responsibility) reserved for Tacoma Power pursuant to Exhibits B and C.

(b) Energy Costs. Operator's use of energy provided by Tacoma Power is not included in this IRU Agreement. Operator shall, notwithstanding the City's joint use of the Hub Sites, procure and pay for such energy under separate agreement consistent with Tacoma Power's standard commercial pricing.

(c) Compliance with Applicable Standards. In connection with the performance of the Maintenance and any other work and in the operation of equipment pursuant to this IRU Agreement, Operator shall comply and shall ensure that the equipment, the Maintenance and any other work, and all of Operator's suppliers and contractors (of any tier) comply with all Applicable Standards. "**Applicable Standards**" has the meaning in the then-current Master Pole Attachment Agreement between Tacoma Power and Operator.

(d) Cooperation. To the extent permitted by applicable law, Tacoma Power will work with Operator to support efficient and expeditious applications for permits, consistent with City of Tacoma policy and practices and with the appropriate franchise agreement(s) to be separately negotiated. To the extent permitted by applicable law, Tacoma Power will also work with Operator to efficiently and expeditiously issue permits, consistent with Tacoma Power's policy and practices and with the then-current Master Pole Attachment Agreement between Tacoma Power and Operator. The commitments in this paragraph are not intended to imply, predetermine or assure any particular outcome of the City's or Tacoma Power's processing of any applications for permits by Operator. Further, nothing in this paragraph is intended or shall be construed to

require that the City exercise its discretionary authority under its regulatory ordinances to further a project permit application, nor does this paragraph bind the City of Tacoma to do so.

(e) During the first thirty-six (36) months following the Effective Date of the IRU Agreement, the technical teams for the Parties will meet on a monthly basis for purposes of sharing information, data, and plans regarding upcoming construction and upgrades, so as to enable the Parties to plan accordingly based on shared expectations. The Parties anticipate that these monthly meetings will serve to provide predictability and enable the Parties to facilitate supporting the needs of the other, as well as to plan appropriately for staffing and other upcoming efforts. Following the first thirty-six (36) months (or at another time of mutual agreement), the meetings will be held on a quarterly rather than monthly basis.

(f) Monthly Reporting. On or before the fifteenth (15th) day of each month, following the Effective Date, Operator shall provide Tacoma Power with a report including as-built drawings indicating construction type, routes, and strand count for any new construction, upgrades, or other efforts on both Critical Routes and Non-Critical Routes over the previous calendar month. The data shall be provided in .DWG format, or such successor format as may be designated from time to time by Tacoma Power in its reasonable discretion.

(g) Inspection Rights. In order to determine Operator's compliance with this Exhibit, Tacoma Power shall have the right to visually inspect any part of the Tacoma Power Commercial System at any time with or without notice to Operator.

## **2. MAINTENANCE OF TACOMA POWER COMMERCIAL SYSTEM COMPONENTS**

(a) Except as may be otherwise agreed to in writing by the Parties, Operator will be responsible for performing all Maintenance on the Tacoma Power Commercial Coax as needed. This includes Tacoma Power Commercial Coax on Critical Routes and Non-Critical Routes. These tasks may include RF level measurements, noise measurements, and industry standard troubleshooting or regular maintenance tasks. If needed, Operator shall repair or replace active or passive Tacoma Power Commercial Coax components when necessary to eliminate service impairment or outages. Performance of Maintenance must comply with the standards and procedures set forth in the then-applicable Master Pole Attachment Agreement between Tacoma Power and Operator.

(b) Except as provided in **Exhibit B and C**, Operator will be responsible for performing all Maintenance of Tacoma Power Commercial Fiber. This includes any Tacoma Power Commercial Fiber on Non-Critical Routes and any Tacoma Power Commercial Fiber not in the same sheath or bundle with Utility Fiber on Critical Routes.

(c) Operator will be responsible for all Maintenance of all After-Installed Assets, except to the extent covered by Exhibits B and C.

(d) Operator must hold a Master Pole Attachment Agreement with Tacoma Power during the Term of this IRU Agreement.

## **3. INSTALLATION OF NEW FIBER**

(a) Operator may not overlash or delash fiber to the Tacoma Power Commercial System or attach new fiber optic plant to Tacoma Power poles within the Tacoma Power Commercial Service Area without the prior written consent of Tacoma Power. To request consent, Operator must

follow the procedure in its then-current Master Pole Attachment Agreement with Tacoma Power, and additionally submit the supplemental form in **Exhibit D-1**.

(b) Operator may not overlash or delash fiber to any portions of the Tacoma Power Commercial Fiber installed on poles not owned by Tacoma Power without the prior written consent of Tacoma Power and the pole owner.

(c) Operator is solely responsible for obtaining permits to make any attachments to poles not owned solely by Tacoma Power, notwithstanding the fact that Tacoma Power may have power or communications facilities on the same poles.

#### **4. REMEDIES FOR NON-COMPLIANCE**

(a) In the event that Tacoma Power discovers a Default of an obligation in this Exhibit by Operator that poses an imminent public safety concern or threat to the safety of Tacoma Power operations, Tacoma Power may take corrective action to address the Default without prior notice to Operator, and invoice Operator for the cost of such corrective action.

(b) In the event that Operator commits repeated Defaults of this Exhibit, Tacoma Power shall have the right to (i) assume responsibility for the performance of the obligations of this Exhibit indefinitely at Operator's cost; or (ii) give notice to terminate this IRU Agreement pursuant to Section 21(g) of the IRU Agreement.

## EXHIBIT D1

### PROCESS FOR OVERLASHING, DELASHING OR ATTACHING NEW CABLES WITHIN THE TACOMA POWER COMMERCIAL SYSTEM

Prior to any Overlash, Delash or attachment of new Cables to those Tacoma Power poles which are part of the Tacoma Power Commercial System and subject to the IRU Agreement (“IRU”), Operator must have a current Master Pole Attachment Agreement (“MPAA”) with Tacoma Power and submit an IRU Pole Attachment Request to Tacoma Power. IRU Pole Attachment Requests shall be in the format shown in **Exhibit D1.1**. Capitalized terms used herein but not defined shall have the meanings assigned to them in the MPAA.

Any Overlash, Delash or attachment of new Cables to Tacoma Power poles subject to the IRU shall be governed by the terms of Operator’s then current MPAA and all Addendums thereto **except as follows**:

**Make Ready Work:** Make Ready Work shall be performed by Tacoma Power or Tacoma Power’s contractor at no charge to Operator.

**Review and Approval:** Tacoma Power’s review and approval process will begin upon Operator’s submission of a complete IRU Pole Attachment Request.

**Inventory:** IRU Pole Attachment Requests do not require the submission of Attachment inventories.

**Photographs:** IRU Pole Attachment Requests do not require the submission of photographs.

**Fees:** IRU Pole Attachment Requests are not governed by the Fees provision of Operator’s then current MPAA. Only the Application Fees, actual costs for engineering review and field inspections and any additional charges for electricity supplied by Tacoma Power will be charged.

**Tags:** Attachments approved pursuant to an IRU Pole Attachment request must be identified by a tag approved by Tacoma Power confirming the Attachment is subject to this IRU.

**Billing:** Overlash, Delash or attachment of new Cables to Tacoma Power poles subject to this IRU are not subject to the Billing provision of Operator’s then current MPAA. Only Application, engineering review and field inspection fees will be billed.

**Liability, Indemnification and Exculpation:** To the extent there is any conflict or inconsistency between the sections of Operator’s then current MPAA entitled **Liability, Indemnification and Exculpation** the terms of the IRU are controlling over Overlash, Delash or attachment of new Cables to those Tacoma Power poles subject to the IRU.

**Worker’s Compensation, Insurance and Bonds:** To the extent there is any conflict or inconsistency between the sections of Operator’s then current MPAA entitled **Worker’s Compensation, Insurance and Bonds** the terms of this IRU are controlling over Overlash, Delash or attachment of new Cables to those Tacoma Power poles subject to this IRU.

**EXHIBIT D1.1**

**IRU POLE ATTACHMENT REQUEST FORM**

**Exhibit D1.1**  
**IRU Pole Attachment Request**  
**Form Instructions**

<b>1</b>	IRU agreement between Tacoma Power and Rainier Connect (Operator) must be fully executed before request will be processed.
<b>2</b>	If utilizing sub-contractors, Rainier Connect must provide a letter authorizing sub-contractors to perform work on their behalf.
<b>3</b>	All shaded areas are REQUIRED to be completed. Failure to provide complete information can result on a delay to process your request and/or denial to attach. No approval, survey or review work will be performed until a complete and accurate request has been submitted.
<b>4</b>	If Electrical Services will be required, make sure to include request on "Electrical Services Information" field.
<b>5</b>	Application for communication enclosures and/or miscellaneous equipment must include specification sheet(s) including weight, dimensions, and configuration of equipment.
<b>6</b>	Proposed attached method means: NEW DIRECT, OVERLASH, REMOVAL, or OTHER.
<b>7</b>	Proposed attachment height must be specific and in feet and inches. <b>Approximate height is not acceptable.</b>
<b>8</b>	Attachments must meet all applicable requirements of the NESC and Tacoma Power Construction Standards including but not limited to the following clearances: Support Clearances - Communication cables to supply cables: 40" - Between communication cables and CenturyLink attachment: 12" - Between communication cables and any other communication cable: 6" Span Clearances - Communication cables to supply cables: 30" - Between communication cables: 4"
<b>9</b>	Two full sets of the request must be mailed to Tacoma Power. An electronic copy must also be emailed to pwrjointutilities@cityoftacoma.org. The request sets must contain the following documents: - Filled in and signed Application (Tab 1) - Filled in Detail Pole Attachment Data (Tab 2) - Legible map(s) of all poles on route and pole height block (Tab 3 example). Streets must be clearly identified and labeled. Map(s) must include existing pole attachments and attachment heights, and any required make-ready for each pole on the application. - Existing attachments must be listed in order from top to bottom and include attachment heights in feet and inches. - Existing attachments must include Attachee name or assigned cable identification tag number. (see Tacoma Power Standard, C-OH-1060, for a current list of tag assignments.)
<b>10</b>	Construction needs to be completed within 180 days unless a permit extension is granted by Tacoma Power.
<b>11</b>	A final construction inspection by Tacoma Power is required.

1. Tacoma Power Pole Number, can be up to 5 digits, obtained from TPU.
2. Rainier Connect's Pole Number, if applicable.
3. List drawing number of Rainier Connect's map that shows this pole.
4. Enter proposed attachment method from key below.
5. Enter appropriate letters from key below.
6. Enter proposed attachment specifications (if design tension unknown, 60% of Rated breaking strength (RBS) will be used)
7. Enter the number of down guys that will be attached after construction.
8. Enter Yes or No if you will be attaching to an existing TPU anchor.
9. Make Ready work that Rainier Connect has identified.
10. Enter specific height of proposed attachment. Approximate height is NOT acceptable.
11. If removing an existing attachment, include the original TPU issued permit number.

**Proposed Attachment Method:**

- NEW = New Direct Attachment
- OVL = Overlapping (overlapping onto an existing wire/cable owned by the company)
- REM = Removal
- OOO = Other

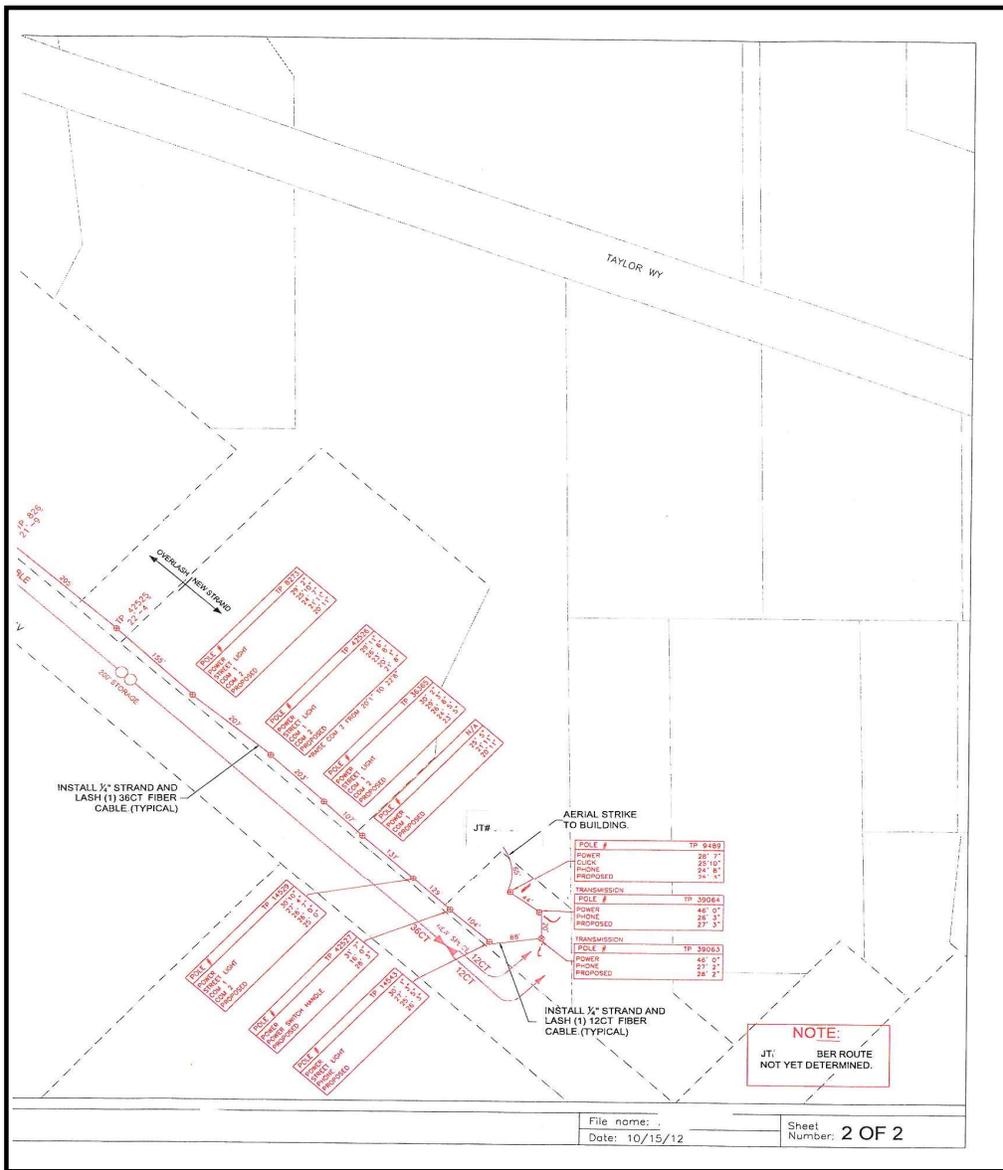

**Attachment Type Key:**

- A. Amplifier
- B. Enclosure
- C. Slack Box
- D. Splice Box
- E. Power Supply
- F. Risers
- G. Other (please specify)

Exhibit D1.1 - IRU Pole Attachment Request Form

**EXHIBIT E**  
**TACOMA POWER COMMERCIAL SYSTEM UPGRADES**

**1. SERVICE COMMITMENTS—CONTINUITY**

- (a) For a period of six (6) months following the Effective Date, Operator commits to offer residential broadband internet access services at speeds similar to those available on the Tacoma Power Commercial System immediately prior to the Effective Date. Nothing in this commitment is meant to prevent Operator from offering faster speeds.
- (b) For a period of six (6) months following the Effective Date, Operator commits to offer residential cable services similar to those available on the Tacoma Power Commercial System immediately prior to the Effective Date.
- (c) Nothing in this Exhibit or the IRU Agreement is intended to prevent Operator from offering the services described in Section 1(a) or (b) for a longer period.
- (d) Except as provided in this Exhibit and in Exhibit H (Affordable Access to Telecommunications Services), nothing in this IRU Agreement or the Exhibits limits or controls Operator's authority to determine the types of services it will to offer the public via the Tacoma Power Commercial System; provided that Operator complies with the service-related requirements of the IRU Agreement and the Exhibits, including Exhibits G through L.

**2. TACOMA POWER COMMERCIAL SYSTEM UPGRADE TO DOCSIS 3.1**

(a) **DOCSIS 3.1.** Operator agrees to make such capital expenditures and upgrades as are necessary to migrate the Tacoma Power Commercial System to DOCSIS 3.1 and to make gigabit speed internet service available as described in items 1 and 2 below (the "Upgrade"), which expenditures shall count towards Operator's Capital Expenditures Minimum to the extent they fall within the definition of Capital Expenditure in Exhibit F.

1. Operator will ensure availability of a 1000/10 Mbps service (the "Gigabit Service") at a passing, as evidenced by speed test results at peak usage time measured at the tap at the passing location. The DOCSIS 3.1 upgrade engineering and design shall be completed by the first anniversary of the Effective Date. The Gigabit Service shall be available at 40% of passings by the second anniversary of the Effective Date, and 100% of passings by the third anniversary of the Effective Date.
2. Operator will provide DOCSIS 3.1 modems to all new customers and replace customer modems with DOCSIS 3.1 modems for all existing customers who upgrade to services that require DOCSIS 3.1. Any new or replacement modems will be provided at Operator's terms and fees in effect at the time of provisioning.

(b) Operator further agrees to make available the upgraded services contemplated by this Section in accordance with the equity principles enumerated in Exhibit G.

### 3. TACOMA POWER COMMERCIAL SYSTEM UPGRADE PLAN AND VERIFICATION

(a) **Quarterly Reports.** Operator shall provide quarterly reports on the status of the Upgrade.

(b) **Annual Certification.** Operator shall provide a certification to Tacoma Power within thirty (30) days after each period identified in Section 2(a)(1) above, signed by one of its corporate officers certifying compliance with the Upgrade requirement for the reporting period and cumulatively as of the date of the certification.

(c) **Verification Procedure.** Tacoma Power may perform tests to confirm compliance with Section 2(a)(1) above. Operator will facilitate and enable Tacoma Power to test the Tacoma Power Commercial System once a month at up to five test points chosen by Tacoma Power. Tacoma Power will conduct such speed tests with results measured at the node at peak and other usage times, at its discretion with prior notice to Operator.

### 4. OBLIGATION TO MAKE FUTURE UPGRADES

(a) Operator shall upgrade the Tacoma Power Commercial System as new broadband technologies are developed for traditional cable television networks utilizing hybrid fiber/coaxial architecture. Operator will upgrade the Tacoma Power Commercial System to keep pace and parity with the hybrid fiber/coaxial networks operated by the cable broadband providers in the Seattle-Tacoma metropolitan area. As of the Effective Date of this IRU Agreement, those networks are operated by Comcast Cable and Wave Broadband. Future, upgraded network architectures for cable broadband networks that are currently hybrid fiber/coaxial may include newer versions of DOCSIS, deeper fiber architecture such as a node plus 0 cascade depth, increased upstream and downstream cable system capacity, or fiber-to-the-premises. Nothing in the foregoing language is meant to imply that Operator is limited to using a hybrid fiber/coaxial network throughout the Term of this IRU Agreement.

(b) As the networks currently operated by Comcast and Wave in the Seattle-Tacoma metropolitan area are upgraded to new technologies, Operator shall upgrade the Tacoma Power Commercial System to the same technologies or to similar technologies capable of delivering equivalent services.

(c) The upgrade commitments in this Exhibit assume that the Tacoma Power Commercial System will remain a wireline network architecture with the same number of homes passed as of the Effective Date (approximately one hundred and fifteen thousand (115,000)) or larger numbers of homes passed by the physical plant within the Tacoma Power Commercial Service Area throughout the Term. However, should Operator determine that there are new technologies available for future upgrades that would require a smaller wireline network footprint in order to maintain a system that meets the requirements of this Section for delivering services to the Tacoma Power Commercial Service Area, Operator may submit a written proposal to Tacoma Power for its evaluation. Tacoma Power shall have no obligation to accept such proposal.

(d) Any such upgrades that qualify as Capital Expenditures shall be part of and not in addition to the Capital Expenditures Minimum set out in Exhibit F.

## **5. REPORTING ON FUTURE UPGRADES AND VERIFICATION**

(a) On the first Annual Reporting Date following completion of the Upgrade as specified in Operator's final annual certification submitted pursuant to Section 3(b), and on each Annual Reporting Date thereafter, Operator shall submit a report to Tacoma Power on the status and capabilities of the Tacoma Power Commercial System. Based on publicly available information, Operator shall include a comparison to service as provided by wireline broadband providers in the Seattle-Tacoma metropolitan region.

(b) Beginning in the seventh year of the Term of the IRU Agreement, Tacoma Power shall have the right to perform a technical audit and test the Tacoma Power Commercial System to determine whether its capabilities meet the requirements of Section 4. Testing may include, but is not limited to, a review of network configurations and diagrams, site visits, and network testing at random locations in the field. Such technical audits shall take place no more frequently than once every three (3) years. This requirement shall not limit the verification that Tacoma Power may perform under Section 3(c).

## **6. REMEDIES FOR FAILURE TO TIMELY UPGRADE TACOMA POWER COMMERCIAL SYSTEM OR REPORT**

(a) Failure to timely provide the certification required in Section 3(b) is a Default. Liquidated damages in the amount of Two Hundred and Fifty Dollars (\$250) per day shall accrue from the date of receipt of a Notice of Default until the Default is cured.

(b) In the event that Operator does not cure or resolve a Default of a requirement contained in Section 2 within the timeframes established pursuant to Section 21(c) or 24 of this IRU Agreement, liquidated damages in the amount of Seven Hundred Fifty Dollars (\$750) per day will accrue until the Default is cured.

(c) If Tacoma Power provides a Notice of Default to Operator related to the requirements in Section 4, any cure, including the submittal of a compliance plan, shall not relieve Operator from its obligations in Section 4.

**EXHIBIT F**  
**CAPITAL EXPENDITURES COMMITMENT**

**1. CAPITAL EXPENDITURES MINIMUM**

(a) Operator shall make such Capital Expenditures (as defined below) to the physical assets of the Tacoma Power Commercial System on an ongoing basis, as are customary to maintain the Tacoma Power Commercial System and its associated services in a technological state comparable to that of other providers of cable/broadband services in the Seattle, Washington metropolitan area as described in Exhibit E.

(b) In no event shall Operator make Capital Expenditures in any full calendar year (“**Capital Expenditures Period**”) during the Term of the IRU Agreement totaling less than One Million Five Hundred Thousand Dollars (\$1,500,000.00), as may be adjusted pursuant to Section 1(e) below (“**Capital Expenditures Minimum**”).

(c) During the period from the Effective Date until December 31, 2019 (“**Initial Period**”), Operator’s Capital Expenditures commitment shall be the amount determined by multiplying the number of days in the Initial Period by Four Thousand One Hundred and Ten Dollars (\$4,110) (“**Initial Period Minimum**”).

(d) During the period from January 1 of the last year of the IRU Agreement until the date the IRU Agreement expires (“**Final Period**”), Operator’s Capital Expenditures commitment shall be the amount determined by multiplying the number of days in the Final Period by the amount calculated by dividing the Capital Expenditures Minimum applicable in the immediately prior Capital Expenditure Period by 365 days (“**Final Period Minimum**”).

(e) Tacoma Power may adjust the Capital Expenditure Minimum once during each Capital Expenditure Period based on changes in the Consumer Price Index.

**2. CALCULATING AND REPORTING QUALIFYING CAPITAL EXPENDITURES**

(a) In order to count towards the Capital Expenditures Minimum, including the Initial Period Minimum and the Final Period Minimum, an outlay must be a “Capital Expenditure”. The term includes, but is not limited to, expenditures on upgrades of coaxial cable to optical fiber, upgrades in system capacity, reallocation of system capacity from downstream to upstream, system extensions, upgrades of equipment and other materials to enable or support successive generations of DOCSIS, and expenditures on upgrades to fiber-to-the-premises. To qualify, any improvements made due to an expenditure must become physical assets of the Tacoma Power Commercial System owned by Tacoma Power upon installation, subject to the IRU Agreement. The term does not include: (i) any funds spent by Operator on physical assets that do not become part of the Tacoma Power Commercial System; (ii) expenditures on physical assets (whether they become part of the Tacoma Power Commercial System or not) that are *not* related to provision of wireline services. For example, expenditures on wireless communications facilities, including wireless facility attachments to enable deployment of small cell, and

distributed antenna systems, will not be Capital Expenditures. Labor costs may be included if directly attributable to capital and not operations.

(b) Operator shall, on each Annual Reporting Date, submit to Tacoma Power a report on Capital Expenditures, with descriptions and dollar amounts, it has made since the most recent such report, or in the case of the first such annual report, in the Initial Period. The report shall identify if Capital Expenditures include any Credits (as defined below) from any prior Capital Expenditure Period. The report shall include Operator's supporting documentation necessary to demonstrate compliance for the reported Capital Expenditures, including the following:

1. Invoices for all contracted labor, with accompanying certification by Operator management that the claimed labor costs were directly attributable to Capital Expenditures, not operating expenses;
2. Work orders for internal labor associated with capital upgrades, with accompanying certification by Operator management that the claimed labor costs were directly attributable to Capital Expenditures, not operating expenses;
3. Bills of sale and inventory documentation for all materials and equipment purchased as part of Operator's Capital Expenditures obligation; and
4. As-built maps documenting outside plant construction and upgrades.

(c) For the Final Period, the report shall be submitted to Tacoma Power within sixty (60) days after the IRU Agreement expires or terminates.

(d) For any period in which After-Installed Assets are subject to financing arrangements described in Section 3 of the IRU Agreement, the report on Capital Expenditures shall also include a current status report on the ownership interests in and liens to which the After-Installed Assets are subject.

### **3. CREDITS AND SHORTFALLS**

(a) If the report submitted pursuant to Section 2(b) demonstrates that Operator's Capital Expenditures were in excess of the Capital Expenditures Minimum (or if applicable, the Initial Period Minimum), the difference shall be considered a "Credit" and shall be credited toward the Capital Expenditures for the Capital Expenditures Period or Periods that follow (including the Final Period).

(b) If the report submitted pursuant to Section 2(b) demonstrates that Operator's Capital Expenditures (including any Credits from prior Capital Expenditure Periods, including the Initial Period) were less than the Capital Expenditure Minimum (or if applicable, the Final Period Minimum), the difference shall be considered a "Shortfall" and Tacoma Power shall have the remedy described in Section 5 below.

#### 4. AUDIT RIGHTS

(a) Tacoma Power shall have the right no more than once every three (3) years to audit those Operator's books, records, and finances that relate to the IRU Agreement, upon reasonable notice to Operator and during normal business hours, in order to determine Operator's compliance with the Capital Expenditures Minimum.

#### 5. REMEDIES FOR NON-COMPLIANCE

(a) If Operator submits a report, other than the report for the Final Period, showing a Shortfall, it will have an additional twelve (12) month period following the end of the Capital Expenditure Period showing the Shortfall ("**Catch-Up Period**") in which to make Capital Expenditures to be credited towards the Shortfall ("**Catch-Up Capital Expenditures**"). At the end of the Catch-Up Period, Operator shall submit a report on the Catch-Up Capital Expenditures in the same form as the annual report described in Section 2. If the report shows Operator has failed to make Catch-Up Capital Expenditures equivalent to the Shortfall during the Catch-Up Period, Operator will remit a payment, along with the report in the amount of the Shortfall, less the Catch-Up Expenditures, if any.

(b) If Operator submits a report for the Final Period showing a Shortfall, Operator will remit a payment, along with the report in the amount of the Shortfall.

(c) A late fee in the amount of Twelve Percent (12%) per annum shall be due and payable in the event that Operator has not paid the Shortfall within thirty (30) days after its due date.

**EXHIBIT G**  
**EQUITABLE ACCESS**

**1. EQUITY IN PRICING AND SERVICE LEVELS.**

(a) Operator agrees to offer like services at like prices to residential customers throughout the Tacoma Power Commercial Service Area.

(b) The Upgrade contemplated by Exhibit E hereto, as well as subsequent upgrades pursuant to Section 4 of Exhibit E, will be undertaken on a ubiquitous basis to 100% of the Tacoma Power Commercial System.

(b) Operator's goal is to roll out all upgrades in an equitable manner to ensure that neighborhoods with different levels of household income, neighborhoods with different mixes of race or ethnicity, and different council districts within the City of Tacoma all benefit from the upgrades on comparable deployment schedules.

**2. EQUITY IN ACCESS TO SERVICE.**

(a) Operator agrees that it will not decline service to any customer in good standing and that its services will be available on an equitable basis throughout the Tacoma Power Commercial Service Area. Consistent with its existing practices, Operator shall reinstate service for delinquent customers so long as they pay outstanding balances including late fees, if any, and remain current.

**3. EQUITY COMMITMENTS.**

(a) Operator will actively work to eliminate racial and socioeconomic disparities as it upgrades the Tacoma Power Commercial System across the Tacoma Power Commercial Service Area and beyond.

(b) Operator commits to purposeful citizen outreach and engagement with diverse community partners to better understand the needs of historically underserved populations. Through this, Operator will provide access based on the best available technology to serve the unique needs of any particular area or population.

(c) Operator will work with community partners and businesses from all parts of the Tacoma Power Commercial Service Area to promote and track equity and inclusion of services within Tacoma, Washington and throughout the region. This will allow Operator to quantify measurable improvements as they relate to broadband and telecommunication access in the community.

(d) As it does in its other service areas, Operator will provide guidance, education, and assistance to any subscriber requesting such assistance to help achieve equitable service outcomes as it relates to broadband and telecommunications offerings.

(e) Operator commits to being transparent and collaborative with individuals and community groups, holding itself accountable for measurable improvements and outcomes as it relates to equitable penetration of telecommunications and broadband services in the Tacoma Power Commercial Service Area.

**4. PUBLICATION OF RATES AND SERVICES**

(a) Operator shall publish its rates and services for residential customers on its website. This obligation shall not apply to enterprise customers.

## **5. ANNUAL CERTIFICATION.**

(a) Operator shall provide annually to Tacoma Power, on the Annual Reporting Date, a certification signed by a corporate officer certifying that it has complied with the requirements of Sections 1 and 2 of this Exhibit G. Such certification shall also include report on activities that Operator has undertaken pursuant to this Exhibit G, including its specific efforts to meet the obligations contained in Section 3(a)-(e) of this Exhibit.

## **6. REMEDIES FOR NON-COMPLIANCE**

(a) Failure of Operator to publish its rates and services on its website as required by Section 4 of this Exhibit is a Default. Liquidated damages in the amount of Two Hundred and Fifty Dollars (\$250) per day shall accrue from the date of receipt of Notice of Default until the Default is cured; provided that, the liquidated damages amount shall increase to five hundred dollars (\$500) per day if the Default is not cured within ninety (90) days following the date of receipt of the Notice of Default.

(b) In the event that Tacoma Power provides a Notice of Default to Operator related to the requirements contained in Section 1 or 2 of this Exhibit, any cure, including submittal of a compliance plan pursuant to Section 21(c) of this IRU Agreement, shall include rebates or refunds to customers who have overpaid and periodic reporting on compliance plan implementation.

(c) In the event that Operator does not cure or resolve a Default of a requirement contained in Section 1 or 2 of this Exhibit within the timeframes established pursuant to Sections 21(c) or 24 of this IRU Agreement, liquidated damages will accrue until the Default is cured and maintained for three consecutive months. Liquidated damages of Ten Thousand Dollars (\$10,000) will accrue for the first month, increasing by Five Thousand Dollars (\$5,000) each month thereafter until compliance is maintained for three consecutive months; provided that no liquidated damages will accrue or be payable for the three consecutive months of compliance. Operator agrees that, until compliance is maintained for three (3) consecutive months, it will provide Tacoma Power with a monthly report setting forth its efforts to implement the compliance plan together with a certification as to the status of its compliance.

**EXHIBIT H**  
**AFFORDABLE ACCESS TO TELECOMMUNICATIONS SERVICES**

**1. LIFELINE**

(a) Operator represents that it is designated by the State of Washington or the Federal Communications Commission (“FCC”) as an eligible telecommunications carrier (“ETC”) and meets the program requirements to serve as a Lifeline services provider as of the Effective Date of the IRU Agreement and that it will maintain such ETC designation and participate in Lifeline or any available successor program, subject to the rules of the FCC, throughout the Term of this IRU Agreement.

(b) Operator shall offer the federal Lifeline subsidy to those customers within the Tacoma Power Commercial Service Area that qualify for the Lifeline subsidy according to the rules and policies of the FCC.

(c) In furtherance of the requirements in this Section 1, Operator agrees to: (i) publish the availability of its Lifeline program on its website; (ii) provide to Tacoma Power a copy of its redacted FCC Form 481, the Carrier Annual Reporting Data Collection Form (or comparable reports if modified by FCC in future) on the Annual Reporting Date each year and its FCC Form 555, the Annual Lifeline Eligible Telecommunications Carrier Certification Form; (iii) provide Tacoma Power with a certification annually on the Annual Reporting Date, certifying that it is in compliance with Section 1(b), and including a report of the annual aggregate statistics regarding customer enrollment in the Lifeline program served by the Tacoma Power Commercial System; and (iv) manage its Lifeline program in good faith at all times.

**2. REDUCED-COST BROADBAND PROGRAM**

(a) For the Term of the IRU Agreement, Operator shall offer a substantially reduced-cost broadband internet access service, at or above the FCC definition of broadband (as established periodically in FCC Broadband Deployment Reports, or similar reports) to households that are eligible for Tacoma Power’s electric service low-income program and shall periodically evaluate the offering of higher speed service at the reduced-cost service rate. Operator has represented that its initial program will consist of 30/10 (30 megabits download and 10 megabits upload). This plan may change over time.

(b) In furtherance of the requirements in this Section 2, Operator agrees to: (i) publish the availability of its reduced-cost broadband service on its website, in a manner that prominently advertises the service where Operator’s other services and pricing for the Tacoma Power Commercial System are advertised; (ii) establish a verification process for applicants that is non-onerous to customers; (iii) provide Tacoma Power with a certification signed by a corporate officer on an annual basis on the Annual Reporting Date, certifying that it is offering reduced-cost service, and including a report of the annual aggregate statistics regarding customer enrollment in the program; and (iv) manage its program in good faith at all times.

**3. FREE BROADBAND SERVICE TO QUALIFYING ENTITIES**

(a) Operator shall provide free broadband internet access service (either wired or Wi-Fi service at Operator’s option) to at least 30 locations passed by the Tacoma Power Commercial System within the Tacoma Power Commercial Service Area, that provide services to low-income

members of the community, as a means of facilitating broadband internet access for those who cannot access it elsewhere.

(b) Tacoma Power shall determine which categories of locations qualify for such free service and communicate the categories in writing to Operator. Within ninety (90) days thereafter, Operator must have the program in place so that qualifying entities can submit requests to Operator for processing and approval by both parties.

(c) Operator and Tacoma Power will try cooperatively to process and approve or deny requests within thirty (30) days of receipt.

(d) Operator shall provide the service contemplated in Section 3(a) within a reasonable time period, not to exceed thirty (30) days, following approval, unless the parties mutually agree to a longer period.

(e) Operator shall be excused from meeting the thirty (30) location target if there is insufficient demand from qualifying entities.

(f) In furtherance of the requirements in this Section 3, Operator agrees to: (i) publish the availability of its program on its website; (ii) provide Tacoma Power with a certification signed by a corporate officer on an annual basis on the Annual Reporting Date, certifying that it is offering the service, and including a report listing the locations receiving service under the program; and (iii) manage its program in good faith at all times.

**EXHIBIT I**  
**CUSTOMER SERVICE COMMITMENTS**

**1. CUSTOMER SERVICE CONTACTS**

(a) Operator agrees to maintain a local or toll-free telephone line for taking customer calls and will provide other forms of customer contact that will be available twenty-four (24) hours per day, seven (7) days per week, including on holidays. During hours and days during which most similar businesses in Tacoma are open to serve customers, which currently includes Saturday mornings (“**Normal Business Hours**”), company representatives will be available to respond to customer inquiries. After Normal Business Hours, Operator may make provision for electronic response pending opportunity the following day for a response by a company representative. A company representative will respond to inquiries received after Normal Business Hours on the next business day.

(b) Under normal operating conditions that are within the control of Operator (“**Normal Operating Conditions**”), calls and other forms of customer contacts will be answered by a company representative within thirty (30) seconds after the connection is made. If the call or contact is transferred, the transfer time will not exceed thirty (30) seconds. These standards will be met at least ninety percent (90%) of the time, measured quarterly. Under Normal Operating Conditions, customers will receive a busy signal no more than three percent (3%) of the time. Normal Operating Conditions include special promotions and normal system maintenance and upgrades, but do not include natural disasters, civil disturbances, power outages, telephone network outages, and severe or unusual weather conditions.

**2. SERVICE CALLS**

(a) Operator will schedule appointments for installations and other service calls either at a specific time or, at a maximum, during a four-hour time block during normal business hours. Operator may also schedule service calls outside of normal business hours for the convenience of the customer. Operator will not cancel an appointment with a customer after the close of business on the business day prior to the scheduled appointment. If the service technician is running late and will not meet the specified appointment time, Operator will contact the customer and reschedule the appointment at the convenience of the subscriber.

(b) Standard installations that are located up to One Hundred and Twenty Five (125) feet from the existing distribution system will be performed within seven (7) days after an order has been accepted.

(c) Except during an event of Force Majeure, Operator will begin working on a service interruption no later than twenty-four (24) hours after being notified of the problem. Working is meant to denote that Operator has begun to address the matter.

(d) These standards concerning installations, outages and service calls will be met under normal operating conditions at least ninety-five percent (95%) of the time, measured quarterly.

**3. BILLING PRACTICES**

Thirty days advance notice will be given to subscribers of any changes in rates or services if the change is within the control of Operator. Refunds will be issued no later than either the customer's next billing cycle or thirty (30) days following resolution of the request, whichever is

earlier, or upon the return of equipment when service is terminated. Credits will be issued no later than the billing cycle following the determination that a credit is warranted.

#### **4. PHYSICAL PRESENCE**

Operator will maintain a physical presence in the City of Tacoma, including a store that will be open during all Normal Business Hours, where consumers can transact business in person with Operator staff-persons. The address of Operator's store shall be posted on its website. Operator will maintain some of its customer service staff in Tacoma.

#### **5. QUARTERLY REPORTS**

(a) Operator will provide Tacoma Power a report on its compliance with these customer service standards on a quarterly basis within thirty (30) days of the end of each calendar quarter.

(b) After the first three (3) years of the Term, if Operator has been in compliance, then future reporting shall be reduced to an annual basis. If reports are required annually, such report shall be submitted on the Annual Reporting Date, and in the event of a Default, Section 7(b) shall not apply; instead Section 6 of the IRU Agreement shall apply.

#### **6. ANNUAL CERTIFICATION**

Operator shall annually submit to Tacoma Power, on the Annual Reporting Date, a certification signed by a corporate officer certifying Operator's compliance with Section 4 of this Exhibit.

#### **7. REMEDIES FOR NON-COMPLIANCE**

(a) In the event that Operator does not cure or resolve a Default of a requirement of Section 4 of this Exhibit within the timeframes established pursuant to Sections 21(c) or 24 of this IRU Agreement, liquidated damages in the amount of Two Hundred and Fifty Dollars (\$250) per day will accrue until the Default is cured.

(b) Failure of Operator to timely submit any report required by Section 5 to Tacoma Power is a Default. Liquidated damages in the amount of Two Hundred and Fifty Dollars (\$250) per day shall accrue from the date of receipt of a Notice of Default until the Default is cured.

(c) In the event that Tacoma Power provides a Notice of Default related to the submittal of a report pursuant to Section 5 which demonstrates that Operator has failed to meet any of the customer service standards contained in this Exhibit, any cure, including submittal of a compliance plan shall include a requirement that Operator report to Tacoma Power, on a monthly basis, until such compliance plan is completely implemented and Operator is in compliance with all of the customer service standards in this Exhibit for three (3) consecutive months.

#### **8. SCOPE OF OBLIGATIONS**

(a) For the avoidance of doubt, the obligations in this Exhibit are the minimum obligations that may be imposed on Operator by Tacoma Power pursuant to this IRU Agreement with respect to customer service. Operator must also comply with any other obligations it may have with respect to customer service, including but not limited to, obligations in any franchise agreements or in municipal, state or federal laws or regulations, as they exist as of the Effective Date, or as they may be adopted or amended in the future.

(b) Nothing in this Exhibit should be construed to prevent or prohibit: (i) the City of Tacoma, acting in its capacity as a franchising authority, and Operator from agreeing to customer service

requirements that exceed the standards set forth in this Exhibit; (ii) the City of Tacoma, acting in its capacity as a franchising authority, from enforcing pre-existing customer service requirements that exceed the standards set forth in this Exhibit; (iii) the City of Tacoma, acting in its capacity as a franchising authority, from enacting or enforcing any consumer protection law; or (iv) the establishment or enforcement of any ordinance or regulation by the City of Tacoma concerning customer service that imposes customer service requirements that exceed, or address matters not addressed by, the standards set forth in this Exhibit.

**EXHIBIT J  
CUSTOMER PRIVACY**

**1. PRIVACY**

(a) Consistent with its existing policy and practice, Operator agrees to comply with City Council Resolution No. 39702 regarding privacy, a copy of which is attached hereto as **Exhibit J1**. This Resolution prohibits Internet Service Providers that serve as retail broadband data providers on the Tacoma Power Commercial System from collecting or selling personal information from a customer's use of the Internet without express written approval.

(b) Operator agrees to implement compliance with Resolution No. 39702 into its own broadband data service offerings delivered using the Tacoma Power Commercial System.

(c) Operator agrees to implement compliance with Resolution No. 39702 into any agreements it enters into with Internet Service Providers that serve as retail broadband data service providers on the Tacoma Power Commercial System.

**2. PUBLICATION OF POLICY AND ANNUAL CERTIFICATION**

(a) Operator shall conspicuously publish its privacy policy on its website.

(b) This privacy policy shall not limit subscribers' rights to seek judicial remedies.

(c) Operator shall annually submit to Tacoma Power, on the Annual Reporting Date, a certification signed by a corporate officer certifying Operator's compliance with this Exhibit. The annual certification shall include a copy of Operator's privacy policy.

**3. REMEDIES FOR NON-COMPLIANCE**

(a) In the event that Operator does not cure or resolve a Default of the requirement to conspicuously publish its privacy policy on its website within the timeframes established pursuant to Sections 21(c) or 24 of this IRU Agreement, liquidated damages will accrue in the amount of Five Hundred Dollars (\$500) per day, until such time as the Default is cured.

(c) In the event that Operator does not cure or resolve a Default of the requirement in Section 1(b) of this Exhibit within the timeframes established pursuant to Sections 21(c) or 24, liquidated damages in the amount of Seven Hundred Fifty Dollars (\$750) per day will accrue until the Default is cured by posting on its website a privacy policy compliant with Section 1(b) of this Exhibit.

**4. SCOPE OF OBLIGATIONS**

(a) For the avoidance of doubt, the obligations in this Exhibit are the minimum obligations that may be imposed on Operator by Tacoma Power pursuant to this IRU Agreement with respect to customer privacy. Operator must also comply with any other obligations it may have with respect to customer privacy, including but not limited to, obligations in any franchise agreements or in municipal, state or federal laws or regulations, as they exist as of the Effective Date, or as they may be adopted or amended in the future.

(b) Nothing in this Exhibit should be construed to prevent or prohibit: (i) the City of Tacoma, acting in its capacity as a franchising authority, and Operator from agreeing to customer privacy requirements that exceed the standards set forth in this Exhibit; (ii) the City of Tacoma, acting in

its capacity as a franchising authority, from enforcing pre-existing customer privacy requirements that exceed the standards set forth in this Exhibit; (iii) the City of Tacoma, acting in its capacity as a franchising authority, from enacting or enforcing any consumer privacy law; or (iv) the establishment or enforcement of any ordinance or regulation by the City of Tacoma concerning customer privacy that imposes customer privacy requirements that exceed, or address matters not addressed by the standards set forth in this Exhibit.

**EXHIBIT J1**  
**COUNCIL RESOLUTION REGARDING CUSTOMER PRIVACY**

RESOLUTION NO. 39702

BY REQUEST OF MAYOR STRICKLAND AND COUNCIL MEMBERS CAMPBELL, IBSEN, AND MELLO

A RESOLUTION relating to protecting the privacy and security of Click Network! internet users.

WHEREAS, in 1997, the City, through its electrical utility, embarked on an effort to construct and operate a state-of-the-art telecommunication system for the benefit of its electric utility and electric utility customers, and

WHEREAS the telecommunications system (“Click! Network”) was constructed and has been in continuous operation since 1999, and WHEREAS Click! Network has entered into agreements with private internet service providers (“ISPs”) to use the Click! Network to provide internet services to approximately 25,000 retail customers, and

WHEREAS Click! Network and the ISPs have the ability to collect personal information resulting from their customers’ use of the internet, including (a) financial information; (b) health information; (c) information pertaining to children; (d) social security numbers; (e) precise geolocation information; (f) content of communications; (g) call detail information; and (h) web browsing history, application usage history, and the functional equivalents of either, from the users of their services, and

WHEREAS, in 2016, the United State Federal Communications Commission (“FCC”) proposed rules that would have required Click! Network and the ISPs to receive permission from their customers prior to collecting and selling such personal information, and

WHEREAS, on April 3, 2017, President Trump signed a United States congressional resolution that overturned the FCC internet privacy protections related to Click! Network and the ISPs collecting and selling personal information resulting from internet use, and

WHEREAS the Washington State Legislature has proposed legislation (“HB 2200 and SB 5919”) that would institute similar protections included in the prior FCC internet privacy rules; however, it is unlikely that such protections will be enacted into law before the current legislative session ends, and

WHEREAS protecting the privacy and security of Click! Network customers is of vital concern to the City Council, and the City Council desires that the Tacoma Public Utility Board (“Board”) prohibit Click! Network and its ISPs from collecting or selling their customers’ personal information without prior written permission, or refusing to serve customers who do not approve the collection or sale of their personal information;

Now, Therefore, BE IT RESOLVED BY THE COUNCIL OF THE CITY OF TACOMA:

Section 1. That the City Council hereby requests that the Tacoma Public Utility Board (“Board”) prohibit internet service providers (including Click! Network pursuant to an “All-In” Retail Business Plan) who have entered into agreements with Tacoma Power to use Click! Network from collecting or selling personal information from a customer resulting from the customer’s use of the internet without express written approval from the customer.

Section 2. That the City Council hereby requests that the Board prohibit its internet service providers (including Click! Network pursuant to an “All-In” Retail Business Plan) from refusing to provide services to a customer on the grounds that the customer has not approved the collection or sale of the customer’s personal information.

Section 3. That the City Council hereby requests that in the event that Click! Network is sold or leased, the prohibitions as set forth in Sections 1 and 2 above be included as condition of the sale or lease.

Section 4. That the prohibitions requested in this resolution shall remain in effect until such time as either the federal government or the state of Washington enacts the same or broader privacy and security protections for internet users.

## **EXHIBIT K NET NEUTRALITY**

### **1. NET NEUTRALITY**

(a) Consistent with its longtime policy and practice, Operator shall operate the Tacoma Power Commercial System on a net neutral basis. Specifically, Operator commits to operate the Tacoma Power Commercial System consistent with the following principles:

(i) **Transparency:** Operator will fully and publicly disclose accurate information about its services, including technical characteristics, performance characteristics, and network management practices, so consumers can make informed choices.

(ii) **No throttling:** Operator shall not impair or degrade lawful Internet traffic on the basis of Internet content, application, or service or use of a non-harmful device, subject to reasonable network management.

(iii) **No blocking:** Subject to reasonable network management, Operator shall not block lawful content, websites, resources, applications, services, or non-harmful devices.

(iv) **No discrimination against lawful network traffic:** All lawful traffic, including encrypted traffic, will receive similar treatment. No traffic will receive preferential treatment based on affiliation, the identity of the end user, the content of the information, the provider of content, or the type of service being provided.

(v) **No paid prioritization:** Operator shall not engage in paid prioritization. Paid Prioritization refers to the management of a network to directly or indirectly favor some traffic over other traffic, including through use of techniques such as traffic shaping, prioritization, resource reservation, or other forms of preferential traffic management either in exchange for monetary or other consideration from a third party, or to benefit an affiliated entity.

(vi) **Reasonable network management** is any practice that has a primarily technical network management justification, but does not include other business practices. A network management practice is reasonable if it is primarily used for and tailored to achieving a legitimate network management purpose, taking into account the particular network architecture and technology of the service.

(b) In furtherance of the requirements in Section 1(a), Operator agrees to conspicuously post and continuously maintain on its website a copy of its net neutrality policy.

### **2. ANNUAL CERTIFICATION AND PERIODIC TESTING**

(a) On an annual basis, Operator shall by the Annual Reporting Date, provide the Tacoma Power Contract Administrator with a certification signed by a corporate officer certifying Operator's ongoing compliance with Section 1. Such certification shall include a copy of the policy posted on Operator's website.

(b) To confirm that Operator is operating the Tacoma Power Commercial System in compliance with Section 1, Tacoma Power may periodically test the Tacoma Power Commercial System for compliance.

(i) Tacoma Power Commercial Tacoma Power may use any testing tool to monitor net neutrality compliance, including but not limited to online tools, network scanners, and local servers; provided that, the Parties may mutually agree to use of a specific testing tool or methodology to monitor net neutrality compliance. At Tacoma Power's request, Operator will provide network documentation and configuration data to prove that it is not throttling, slowing, promoting, or otherwise treating specific traffic in ways that are impermissible under Operator's net neutrality obligations. Tacoma Power may also make unscheduled site visits to conduct on-site testing up to four times per year and Operator will grant access and opportunity to test on those occasions.

(ii) Tacoma Power may change its technical approach to net neutrality testing and verification in its sole discretion based on technological changes and changes in the use of broadband services.

### **3. REMEDIES FOR NON-COMPLIANCE**

(a) Failure of Operator to conspicuously post its net neutrality policy on its website is a Default. Liquidated damages in the amount of Five Hundred Dollars (\$500) per day shall accrue from the date of receipt of Notice of Default until the Default is cured.

(b) In the event that Tacoma Power provides a Notice of Default to Operator alleging that the tests required in Section 2(b) of this Exhibit K revealed that the Tacoma Power Commercial System is not being operated in compliance with Section 1, any such Notice of Default shall include a copy of the tests showing the Default with full documentation as how the tests were conducted, including, but not limited to, date, time of day, location and methodology. In the event that, (i) Tacoma Power implements a testing tool or methodology not mutually agreed to by the Parties to monitor net neutrality compliance, which test results in a determination that Operator is not in compliance with Section 1 of this Exhibit K, (ii) Tacoma Power issues a Notice of Default based upon such determination, and (iii) the Operator seeks dispute resolution pursuant to Section 24 of the IRU Agreement and disputes the accuracy or reliability of the results of application of such test results, Operator may request that a neutral third party with knowledge and experience regarding the subject of the Dispute, conduct a review of the tests conducted by Tacoma Power and provide a report regarding the accuracy and reliability of the test results, and such other matters as the Parties deem relevant to the review. This report and the conclusions contained therein shall be presumptively conclusive as to this Disputed issue. The independent third party shall be mutually agreed to by the Parties and the parties shall equally bear the costs of such neutral third party. If the Parties are unable to mutually agree to the selection of the neutral third party within a reasonable period of time, the Parties shall each select a neutral third party who collectively shall select a third neutral third party to conduct the review and issue the report.

(c) In the event that Operator does not cure a Default of a requirement contained in Section 1 of this Exhibit within the timeframes established pursuant to Section 21(c) of this IRU Agreement or, the Parties are unable to determine pursuant to Section 24 of this IRU Agreement that there is no Default, Tacoma Power shall have the right to perform testing on the Tacoma Power Commercial System for compliance with Section 1 at any frequency it chooses. Operator shall bear the costs of such tests if the tests demonstrate it is in default.

(d) Test results obtained pursuant to Section 3(c) will be evaluated on a weekly basis and, if applicable, liquidated damages will accrue as follows:

(i) During the first week following the timeframes established pursuant to Sections 21(c) or 24 of this IRU Agreement, if testing on the Tacoma Power Commercial System reveals that the Tacoma Power Commercial System is not in compliance with Section 1, liquidated damages will accrue in the amount of Ten Thousand Dollars (\$10,000).

(ii) If testing on the Tacoma Power Commercial System during the second week following the timeframes established pursuant to Sections 21(c) or 24 of this IRU Agreement reveals that the Tacoma Power Commercial System is still not in compliance with Section 1, liquidated damages will accrue in the amount of Fifteen Thousand Dollars (\$15,000).

(iii) The aforementioned liquidated damages will accrue at an increased rate of Five Thousand Dollars (\$5,000) per week for every week thereafter where tests reveal the Tacoma Power Commercial System is still not in compliance with Section 1, until such time as Operator has achieved compliance and remains in compliance for twelve (12) consecutive weeks; provided that no liquidated damages will accrue or be payable for the twelve (12) consecutive weeks of compliance.

(d) If in the judgment of Tacoma Power the severity of the breach of Section 1 so warrants, Tacoma Power may perform a technical audit to review the Tacoma Power Commercial System at Operator's cost, in addition to or as an alternative to compliance testing.

#### **4. SCOPE OF OBLIGATIONS**

(a) For the avoidance of doubt, the obligations in this Exhibit are the minimum obligations that may be imposed on Operator by Tacoma Power pursuant to this IRU Agreement with respect to net neutrality. Operator must also comply with any other obligations it may have with respect to net neutrality, including but not limited to, obligations in any franchise agreements or in municipal, state or federal laws or regulations, as they exist as of the Effective Date, or as they may be adopted or amended in the future.

(b) Nothing in this Exhibit should be construed to prevent or prohibit: (i) the City of Tacoma, acting in its capacity as a franchising authority, and Operator from agreeing to net neutrality requirements that exceed the standards set forth in this Exhibit; (ii) the City of Tacoma, acting in its capacity as a franchising authority, from enforcing pre-existing net neutrality requirements that exceed the standards set forth in this Exhibit; (iii) the City of Tacoma, acting in its capacity as a franchising authority, from enacting or enforcing any net neutrality law; or (iv) the establishment or enforcement of any ordinance or regulation by the City of Tacoma concerning net neutrality that imposes net neutrality requirements that exceed, or address matters not addressed by the standards set forth in this Exhibit.

**EXHIBIT L**  
**OPEN ACCESS TO TELECOMMUNICATIONS ASSETS**

**1. OPEN ACCESS PROGRAM**

(a) Operator shall provide wholesale services over the Tacoma Power Commercial System to other telecommunications providers (but not to Operator's Affiliates except with the prior written approval of Tacoma Power) consistent with its practices and policies in other geographic areas in which it provides wholesale services, to the extent appropriate ("**Open Access Program**"). All terms and conditions of the Open Access Program shall be determined by the Operator.

(b) In furtherance of the requirements in Section 1(a), Operator agrees to conspicuously post and continuously maintain on its website a copy of its Open Access Program.

**2. ANNUAL REPORT**

(a) Operator shall provide Tacoma Power with a copy of its Open Access Program on an annual basis on the Annual Reporting Date.

**3. REMEDIES FOR NON-COMPLIANCE**

(a) Failure of Operator to maintain its Open Access Program posted on its website is a Default. Liquidated damages in the amount of Two Hundred and Fifty Dollars (\$250) per day shall accrue from the date of receipt of Notice of Default until the Default is cured.

**EXHIBIT M**  
**ECONOMIC DEVELOPMENT AND EDUCATIONAL OPPORTUNITIES**

**1. INTERNSHIP PROGRAM**

Operator agrees to develop an internship program to provide work opportunity and training for students and residents of Tacoma, Washington, including veterans.

**2. BUSINESS DEVELOPMENT**

Operator will work directly with Tacoma Power to assist the Tacoma's economic development department to support efforts to attract businesses to Tacoma and to provide marketing information about Operator's commercial service offerings that can be provided to businesses considering locating in Tacoma.

**3. TIMING**

(a) Operator shall implement the internship program contemplated by Section 1 of this Exhibit within twenty-four (24) months of the Effective Date of this IRU Agreement. Operator shall provide notice to Tacoma Power when it has established and implemented the program required by Section 1, together with a copy of the program summary.

(b) Operator shall continue to offer the internship program, or a similar program, during the Term of the IRU Agreement. If Operator ceases to offer an internship program, it must provide written notice to Tacoma Power within thirty (30) days of cessation.

**4. ANNUAL REPORT**

(a) Operator shall annually submit to Tacoma Power, on the Annual Reporting Date, a report detailing the activities that Operator has undertaken to comply with this Exhibit since the most recent such report, or in the case of the first such annual report, since the Effective Date of this IRU Agreement.

**5. REMEDIES FOR NON-COMPLIANCE**

(a) Failure to timely provide any notice required by Section 3 is a Default. Liquidated damages in the amount of Two Hundred and Fifty Dollars (\$250) per day shall accrue from the date of receipt of Notice of Default until the Default is cured.

(b) In the event that Operator fails to develop and implement the internship program as required by Section 1 of this Exhibit by the deadline in Section 3(a), Operator shall pay Ten Thousand Dollars (\$10,000) annually beginning on the Annual Reporting Date immediately following the deadline in Section 3(a). The payment shall be made either to Tacoma Power to be placed in a Tacoma Power program for workplace training or to another internship program as directed and chosen by Tacoma Power. Payments shall continue to be due annually until such time as Operator establishes an internship program in compliance with this Exhibit.

(c) In the event that Operator establishes a program and then ceases to implement it as required by Section 1 of this Exhibit, Operator shall pay Ten Thousand Dollars (\$10,000) annually beginning on the Annual Reporting Date following Operator's cessation of the program. The payment shall be made either to Tacoma Power to be placed in a Tacoma Power program for workplace training or to another internship program as directed and chosen by Tacoma Power.

Payments shall continue to be due annually until such time as Operator re-establishes an internship program in compliance with this Exhibit.

**EXHIBIT N**  
**PRESERVE COMPETITION AMONG PROVIDERS**

**1. RESTRICTIONS ON TRANSFERS**

(a) Operator represents and warrants that as of the Effective Date, it is a Washington limited liability company that is a wholly owned subsidiary of Mashell, Inc., a Washington corporation.

(b) Operator acknowledges Tacoma Power's goal of preserving and promoting competition in the local telecommunications industry. To that end, Rainier covenants that it will not sell, grant, assign, delegate, or otherwise transfer (whether voluntarily, by operation of law or otherwise) any of its rights or obligations under this IRU Agreement to any entity (a "Transfer") without the prior written consent of Tacoma Power. Any Change of Control or Change of Working Control shall be deemed a Transfer for the purposes of this provision. A "Change of Control" means the sale of all or substantially all the assets of Operator; any merger, consolidation or acquisition of Operator with, by or into another corporation, entity or person; or any change in the ownership of more than fifty percent (50%) of the voting rights in Operator through one or more related transactions. A "Change of Working Control" means any change in the possession, direct or indirect, of the power to direct or cause the direction of the management and policies of Operator, whether through the ownership of voting securities, by contract or otherwise. Notwithstanding the foregoing, written consent shall not be required for transfer of ownership made by testamentary provisions or the laws of descent.

(c) Further, Operator agrees not to sell, grant, assign, delegate, or otherwise transfer its rights or obligations under the IRU Agreement to any Facilities-Based Entity that has residential broadband or data service market share of twenty-five percent (25%) or more of the Tacoma Power Commercial Service Area. A "Facilities-Based Entity" means an entity that provides residential services primarily via wireline fiber and/or coaxial cable facilities.

**2. ANNUAL OWNERSHIP REPORT & CERTIFICATION**

(a) Operator agrees to provide to Tacoma Power, annually on the Annual Reporting Date, a current list of the names of all persons and entities with voting rights and ownership interests of Five Percent (5%) or greater in Operator.

(b) Operator agrees to provide to Tacoma Power, annually on the Annual Reporting Date, a certification signed by a corporate officer certifying that Working Control of Operator has not changed without Tacoma Power's consent.

**3. TRANSFER REQUESTS**

(a) Operator may request Tacoma Power's consent to a Transfer no less than six (6) months prior to the proposed effective date of the Transfer.

(b) Consent to the Transfer may be withheld by Tacoma Power in the event that Tacoma Power determines after an evaluation of the request for consent, that the Transfer would violate any of the 12 policy goals adopted by the Tacoma Public Utilities Utility Board and City of Tacoma Council regarding Tacoma Power Commercial, or the entity will not have adequate legal, technical, and/or financial capacity to perform Operator's obligations under this IRU Agreement.

(c) Any consent to a Transfer to a new legal entity granted by Tacoma Power shall be conditioned on the new legal entity entering into a written acceptance, in form and content approved by the City Attorney, agreeing that all acts and omissions of Operator with respect to the IRU Agreement occurring prior to the Transfer will continue to be deemed to be those of the new entity and committing to comply with all the terms of this IRU Agreement. Operator shall not be relieved of its obligations under the IRU Agreement unless and until Tacoma Power receives such written acceptance.

#### **4. REMEDIES FOR NON-COMPLIANCE**

(a) Any attempted or purported assignment, delegation or other transfer not in conformance with this Exhibit (“Unauthorized Transfer”) shall be voidable at Tacoma Power’s option provided that Tacoma Power provides notice of voidance within six (6) months from the date Tacoma Power has actual notice of the Unauthorized Transfer. Subject to the foregoing, the IRU Agreement shall be binding on the Parties’ successors and assigns.

(c) In the event of an Unauthorized Transfer, the IRU Fee due and payable by Operator shall be doubled, effective the date the Unauthorized Transfer and continuing until such time as Tacoma Power voids the Unauthorized Transfer pursuant to Section 4(a). If Tacoma Power elects not void the Transfer, at the end of the six (6) month period, the IRU Fee due and payable going forward shall no longer be doubled.

**EXHIBIT O**  
**CONTINUITY OF SERVICES COMMITMENT**

**1. COOPERATION**

(a) In the event that the IRU Agreement between the Parties is terminated for any reason (including expiration), the parties will cooperate in good faith to transition the Tacoma Power Commercial System to Tacoma Power or to an entity of Tacoma Power's choosing (the "Successor Operator") in accordance with the following principles

(i) Continue the provision of services and minimize disruption to Tacoma Power Commercial System customers;

(ii) Preserve the value of the Tacoma Power Commercial System as a going concern;

(iii) Protect the physical integrity of the Tacoma Power Commercial System; and

(iv) Complete the transition within no more than six (6) months (the "**Post-Termination Period**").

**2. RIGHT OF USE**

(a) During the Post-Termination Period, Tacoma Power shall have an unrestricted right of access to and use of any equipment and other assets and inventory in use to support operations of the Tacoma Power Commercial System and Associated Property, so as to enable continuity of services and seamless migration to the Successor Operator. This right of access and use shall not include physical access to the Operator Network.

(b) During the Post-Termination Period, Operator will continue to operate the Tacoma Power Commercial System in accordance with the requirements of the IRU Agreement, except as those requirements may be modified consistent with this Exhibit, the Continuity of Services Plan, and as directed by Tacoma Power as necessary to effect the seamless transition to the Successor Operator.

**3. ACCESS TO DATA, PERSONNEL AND RECORDS**

(a) During the Post-Termination Period, Operator shall provide Tacoma Power with access to personnel and all records and information necessary for Tacoma Power to transition operation of the Tacoma Power Commercial System in a seamless manner, including customer accounts and customer data, and maps and data regarding the Tacoma Power Commercial System and its use.

(b) During the Post-Termination Period, Operator shall fully cooperate in the assignment of customer contracts, content and services contracts, and any other third-party arrangements necessary to effect the seamless transition.

**4. REVENUES AND EXPENSES**

(a) During the Post-Termination Period, Operator shall be responsible for all operating expenses and shall be entitled to all of the revenues generated by the Tacoma Power Commercial System, subject to Section 4(c) below.

(b) During the Post-Termination Period, Operator shall have no obligation to pay the IRU Fee or make Capital Expenditures.

(c) During the Post Termination Period, Operator shall pay to Tacoma Power five percent (5%) of its gross revenue generated from its operations on the Tacoma Power Commercial System. "Gross Revenues" means all revenues derived from operation of the Tacoma Power Commercial System.....

#### **5. PERFORMANCE GUARANTEE**

(a) During the Post-Termination Period, the Performance Guarantee provided by Operator pursuant to the IRU Agreement shall be maintained in full force and effect and may be relied upon by Tacoma Power if Operator fails to comply with the obligations in this Exhibit or any related agreements.

#### **6. DEVELOPMENT OF CONTINUITY OF SERVICES PLAN**

(a) On the second Annual Reporting Date following the Effective Date of the IRU Agreement, Operator will submit to Tacoma Power for its review and approval a Continuity of Services Plan to replace the Continuity of Services Commitment contained in this Exhibit. The plan shall at a minimum: (1) require the Parties to exercise best efforts and cooperation to effect an orderly and efficient transition to the Successor Operator; (2) identify the major components of the transition, including but not limited to: (i) separation of the Tacoma Power Commercial System from the Operator Network; (ii) network operations and management; (iii) accounting and recordkeeping; and (iv) regulatory compliance; and (3) specify the anticipated timeframe and sequence for transferring customers, contracts, equipment and responsibilities for each component of operations described in the Continuity of Services Plan.

(b) The Parties agree to review the Continuity of Services Plan in good faith no more frequently than once every three (3) years during the Term, but no less frequently than every five (5) years during the Term and make any necessary revisions.

#### **7. OPERATOR'S CONTINUED RETAIL OPERATIONS**

(a) Tacoma Power understands that Operator will be serving customers currently served by Net-Venture and Mashell Telecom, Inc. under their existing ISP Advantage Agreements with Tacoma Power. In the event that the IRU Agreement between the Parties is terminated for any reason (including expiration) and Tacoma Power takes over operation of the Tacoma Power Commercial System, or transfers the Tacoma Power Commercial System to a Successor Operator, Tacoma Power or the Successor Operator shall be obligated to have an Open Access Program as described in Exhibit L to the IRU Agreement.

**EXHIBIT P**  
**TRADEMARK LICENSE AGREEMENT**

THIS AGREEMENT, effective as of \_\_\_\_\_, 20\_\_ is by and between **City of Tacoma, Department of Public Utilities, Light Division**, a municipal corporation of the state of Washington, (“Licensor”) and Rainier Connect North, LLC, a Washington limited liability company (“Licensee”). The parties hereto are hereinafter collectively referred to as the “Parties.” Capitalized terms used herein and not defined shall have the meanings assigned to them in the IRU Agreement.

WHEREAS, Licensor is the owner of two (2) Washington state trademarks, one for “Click! Cable TV” and symbol (Washington trademark registration number 53233 under trademark classifications 35 and 38) and one for “Click! Cable TV” (Washington trademark registration number 54077 under trademark classification 41), shown in **Exhibit P1** hereto (collectively the “Marks”);

WHEREAS, Licensor has used the Marks in connection with the marketing and operation of its retail and wholesale communications business (“Click! Business”) but intends to cease operations and transfer control of the assets related to the Click! Business, including but not limited to the Tacoma Power Commercial System, to Licensee as of the Effective Date of this IRU Agreement;

WHEREAS, Licensee desires to use the Marks in connection with the use of the Tacoma Power Commercial System in the manner and subject to the terms and conditions set forth in this Agreement and the IRU Agreement; and

NOW, THEREFORE, In consideration of the premises and the mutual covenants and agreement of the Parties set forth herein and other good and valuable consideration, the sufficiency of which is hereby mutually acknowledged, the Parties agree as follows:

1. GRANT OF LICENSE. Licensor grants to Licensee an exclusive, royalty-free non-transferable license to use the Marks in connection with the Tacoma Power Commercial System, throughout the Tacoma Power Commercial Service Area depicted in IRU Agreement, Exhibit A1.

2. USE OF THE MARKS. Licensee shall comply with the following requirements when using the Marks:

2.1 The use must be accompanied by the following text:

All rights reserved. [Insert Mark] is a trademark of City of Tacoma.

2.2 The use must comply with the applicable provisions of the guidelines set forth in **Exhibit P2** attached hereto.

3. NO ASSIGNMENT. This license to use the Marks may not be assigned or otherwise transferred by Licensee, under any circumstances, without the prior, express, written

consent of Licensor. Licensor does not grant, and nothing in this Agreement shall be construed as granting, to Licensee the right to license, sublicense, or authorize others to use the Marks.

#### 4. OWNERSHIP.

4.1 Licensee acknowledges that the Marks are valid, are the exclusive property of Licensor, and can lawfully be used only with the express license or consent of Licensor. Licensee shall not at any time do, or cause to be done, any act or thing contesting or in any way impairing or intending to impair the validity of the Marks and/or Licensor's exclusive rights, title, and interest in and to the Marks.

4.2 Licensee shall not register or apply to register the Marks, either alone or in combination with any other word(s) and/or design(s), in any country, state, or jurisdiction. Licensee shall not in any manner represent that it owns the Marks, and Licensee hereby acknowledges that its use of the Marks shall not convey any rights, title, or interest in or to said Marks in Licensee's favor, but that all use of the Marks by Licensee shall inure to the benefit of Licensor.

4.3 Licensee shall be responsible for all costs associated with maintaining the registration of the Marks, including all fees charged by the Washington Secretary of State associated with renewing the Marks. Licensee shall provide copies of all filings and correspondence related to the Marks to Licensor.

#### 5. TERM AND TERMINATION.

5.1 Unless sooner terminated under the provisions of Section 5.2 below, or by mutual agreement of the Parties in writing, this Agreement shall continue so long as the IRU Agreement is in full force and effect. In the event that the IRU Agreement is terminated, by either Party and for any reason, this Agreement shall automatically terminate.

5.2 If Licensee fails to comply with any of the provisions of this Agreement, Licensor may terminate this Agreement by express written notice to Licensee; provided, however, that if Licensee, within 60 days after Licensor's notice, cures or otherwise corrects such violation or noncompliance to Licensor's reasonable satisfaction, said termination notice shall be of no further force or effect and this Agreement shall be reinstated under all the terms and conditions as existed before the notice of termination.

5.3 Upon termination of this Agreement, Licensee shall permanently discontinue all use of the Marks and refrain from using any other service mark, trademark, trade name, corporate name, or any other designation confusingly similar to any one or all of the Marks.

#### 6. INDEMNITY.

6.1 Licensee shall indemnify and defend Licensor against any loss or losses incurred through claims, actions, or lawsuits by third parties against Licensor involving or arising from the use of the Marks by Licensee, and shall hold Licensor harmless for

any damages, attorney fees, or other costs that Licensor may be required to pay as a result of any such claims, actions, or lawsuits being asserted against Licensor.

6.2 If Licensee brings to Licensor's attention an unauthorized third party use of the Marks, Licensor shall take steps to abate such use at Licensor's expense if Licensor, after investigation and evaluation of such unauthorized use, concludes that such use constitutes an infringement of its rights and that there is a reasonable probability of success in taking action to abate such infringement.

7. NOTICES.

Except for routine operational communications, which may be delivered personally or transmitted by electronic mail all notices required hereunder shall be in writing and shall be considered properly delivered when received if personally delivered, or on the third day following mailing, postage prepaid, certified mail, return receipt requested to the Parties at the following addresses:

**Licensor:**

**EXHIBIT P2  
GUIDELINES**

**Click! is the cable TV service satisfaction leader.** A division of Tacoma Power, Click! Network is a local company dedicated to local needs. Through Click! Cable TV, we deliver all the cable channel variety you want, better customer service from conscientious local experts and simple, straightforward plans.

We give local residents the best possible blend of reliability, accountability and value for their dollar.

**CLICK!, THE BRAND**

In our ongoing efforts to demonstrate the inherent value that Click! has to offer, we have focused on reshaping our brand. In doing so, we have created a strategy that will allow us to build our awareness and our customer base. We have always focused on quality and service and will continue to do so. The cornerstone to this new strategy is to adequately and accurately deliver this message to our customers, both new and existing. We are truly a local company that can deliver programming that is on par with the big cable companies and can offer unique regional programming they cannot. Not only can we deliver a quality product, but we can deliver it at a lower price point. We are THE local choice for cable, in quality, service and price.

In order to solidify this message to our customers, we are adding new layers to the Click! brand. The first step is creating the branded service Click! Cable TV. This provides clear messaging about who and what Click! is, and is the first step in a series of branded services and ultimately an umbrella brand for Click! The road map below will provide insight into where Click!, the brand, is headed.

**DIVISION OF PUBLIC UTILITY**

**CURRENTLY IN USE.**  
**MAINTAIN FOR B2B-LEVEL CORRESPONDENCE AND "CORPORATE"-LEVEL COMMUNICATIONS**

**POTENTIAL UMBRELLA BRAND FOR SERVICES**

**STEP 2. SUITE OF SERVICES**  
 BUILD OUT A BRANDED UMBRELLA BRAND THAT COVERS THE SUITE OF SERVICES.  
 THIS UMBRELLA BRAND WILL ALLOW FOR EFFORTS THAT ARE FOCUSED AROUND POTENTIAL BUNDLED SERVICE OFFERINGS AND SOLUTIONS.

**STEP 1. THE "SHORTCUT"**

BUILD OUT BRANDED SERVICE LINE FIRST WITH CLICK! CABLE TV AS THE LEAD SERVICE OFFERING.

THIS PROVIDES THE "SHORTCUT" TO THE "WHO" AND "WHAT" WE ARE. FIRMLY ESTABLISH THE "CLICK!" BRAND PRESENCE.

**BRANDED SERVICE IMMEDIATE NEED**

**POSSIBLE FUTURE BRANDED SERVICES**

**CLICK! NETWORK CORPORATE IDENTITY**

The identity shown below represents the corporate identity of Click! Network. The Click! Network corporate identity (shown here in positive and reverse) should be the first choice for any company wide communications such as business papers, fax forms, payroll, etc. If space is limited, alternate versions (shown on pages C.3 and C.4) may be used.

**SPECIFICATIONS**

**CLICK! NETWORK CORPORATE IDENTITY**

**Size**

This is the preferred version of the Click! Network corporate identity. It can be used at any size 1" in width or greater.

**Clear space**

A clear space should be maintained around the identity. The size of this area depends on the size of the identity in a given application. A distance equal to the width of the top of the "exclamation point" (indicated by "x"—see diagram) should be maintained on all sides.

**Color**

The Click! Network corporate identity uses PMS 2593 and black. This identity should be used only on white or very light backgrounds. When the identity appears on a colored background, the one-color version should be used (see page C.3).

**CLICK! NETWORK CORPORATE IDENTITY, REVERSED**

When the Click! Network corporate identity appears on a black or very dark background, the reversed version should be used for maximum readability.

**CLICK! NETWORK CORPORATE IDENTITY**

When the Click! Network corporate identity appears on a photograph or on a colored field, or when printing limitations make it necessary, the one-color version should be used. The one-color identity can be used in either black or white (no other colors), whichever provides the higher contrast against the background.

**CLICK! NETWORK**  
T A C O M A P O W E R

**CLICK! NETWORK**  
T A C O M A P O W E R

**CLICK! NETWORK**  
T A C O M A P O W E R

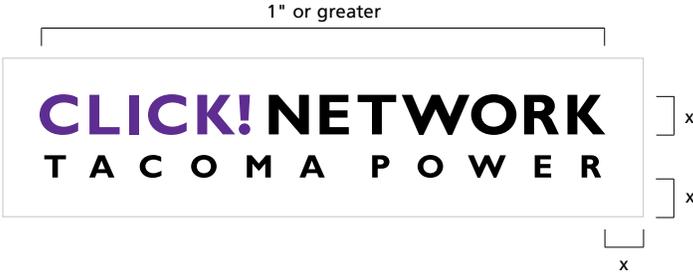

**SPECIFICATIONS**

**ONE-COLOR CLICK! NETWORK CORPORATE IDENTITY**

Note that when the Click! Network corporate identity appears in only one color, all artwork is solid color (there are no halftones).

**HORIZONTAL CLICK! NETWORK CORPORATE IDENTITY (LOGOTYPE ONLY)**

In situations where the primary Click! Network corporate identity will not work, the horizontal configuration may be used, either on its own or in conjunction with the logo mark (see page C.7).

**SPECIFICATIONS**

**Size**  
This identity may be used at any size 1" in width or greater.

**Clear space**  
Maintain a clear space equal to the height of the "Click! Network" logotype (indicated by "x"—see diagram) on all sides.

**Color**  
This identity uses PMS 2593 and black. It should be used only on white or very light backgrounds. When it appears on a black or very dark background, the reversed version should be used for maximum readability. When the identity appears on a colored background, the one-color version should be used.

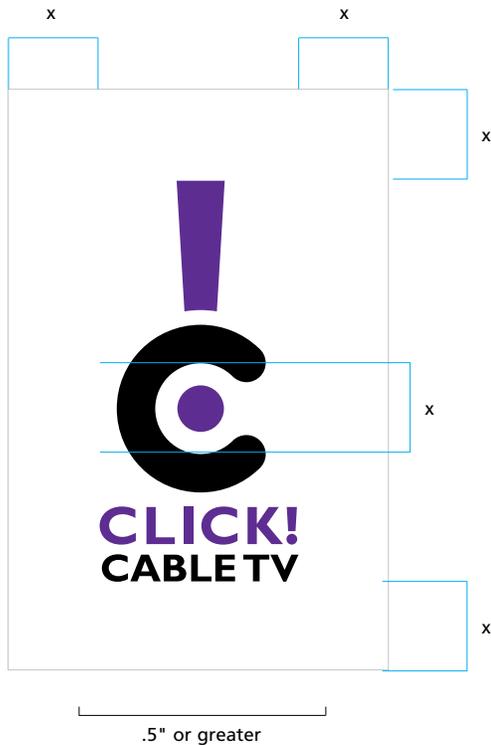

**Introducing our new branded  
service: Click! Cable TV**

## CLICK! CABLE TV IDENTITY

The identity shown below represents the core brand of Click! Cable TV. All offers and product lines within Click! Cable TV should use this identity.

The Click! Cable TV identity in positive and reverse should be the first choice for any given application. The one-color identity is the second choice.

### SPECIFICATIONS

#### CLICK! CABLE TV IDENTITY

##### Size

This is the preferred version of the Click! Cable TV identity. It can be used at any size .5" in width or greater.

##### Clear space

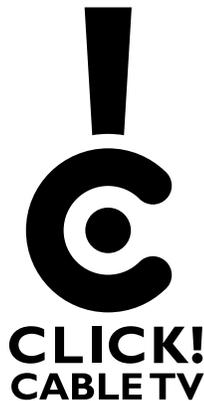

A clear space should be maintained around the identity. The size of this area depends on the size of the identity in a given application. A distance equal to the height of the center negative space of the "C" (indicated by "x"—see diagram) should be maintained on all sides.

##### Color

The Click! Cable TV identity uses PMS 2593 and black. This identity should be used only on white or very light backgrounds. When the identity appears on a colored background, the one-color version should be used.

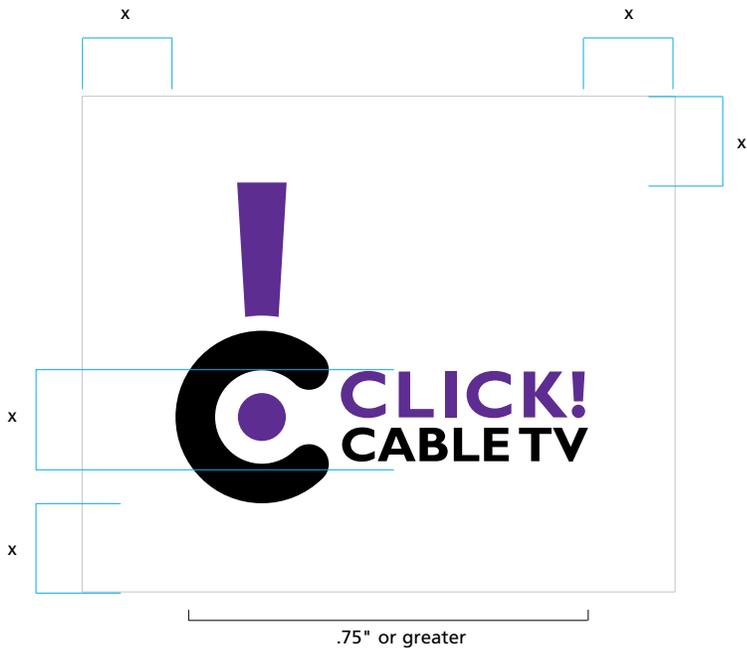

#### CLICK! CABLE TV IDENTITY, REVERSED

When the Click! Cable TV identity appears on a black or very dark background, the reversed version should be used for maximum readability.

## CLICK! CABLE TV IDENTITY

The horizontal Click! Cable TV identity (shown here in positive and reverse) is an alternative to the preferred vertical version.

## SPECIFICATIONS

### CLICK! CABLE TV IDENTITY

#### Size

This is the horizontal version of the Click! Cable TV identity. It can be used at any size .75" in width or greater.

#### Clear space

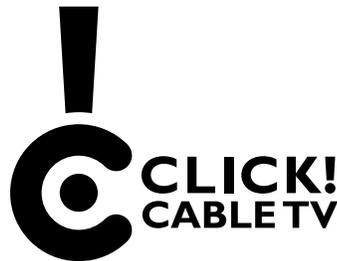

A clear space should be maintained around the identity. The size of this area depends on the size of the identity in a given application. A distance equal to the height of the center negative space of the "C" (indicated by "x"—see diagram) should be maintained on all sides.

#### Color

The Click! Cable TV identity uses PMS 2593 and black. This identity should be used only on white or very light backgrounds. When the identity appears on a colored background, the one-color version should be used.

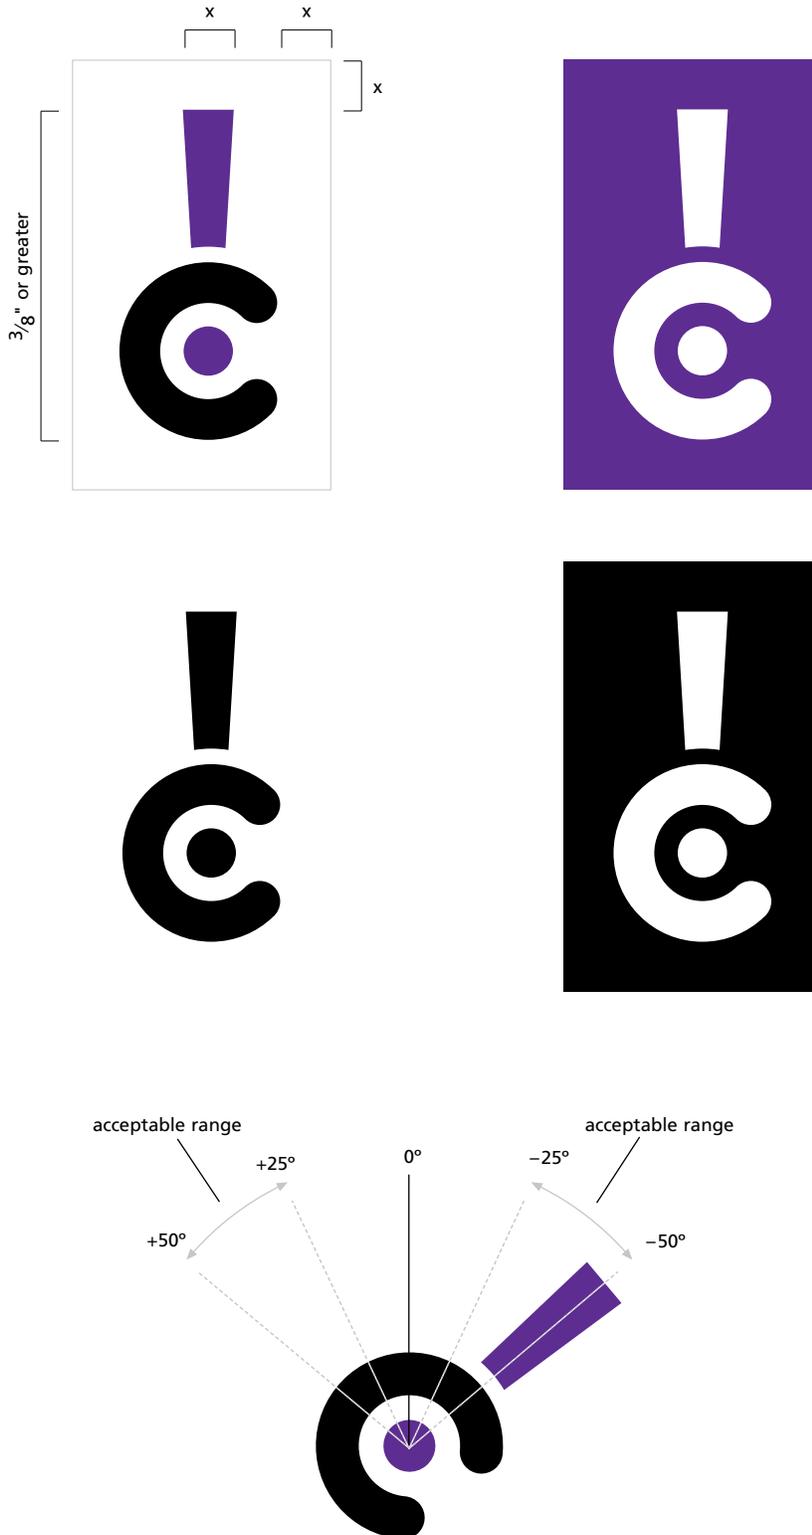

### CLICK! INTERNET IDENTITY, REVERSED

When the Click! Cable TV identity appears on a black or very dark background, the reversed version should be used for maximum readability.

## CLICK! LOGO—MARK ONLY

The Click! logo mark may be separated from the logotype for the purpose of creating engaging artwork, animations, or for layout considerations. Because the logo mark does not incorporate the name of the company, it is important that it be accompanied by either the full Click! Network identity (page C.6), the logotype (page C.4) or one of the branded services identities somewhere in the layout.

### SPECIFICATIONS

#### Size

The Click! logo mark may be used at any size  $\frac{3}{8}$ " in height or greater.

#### Clear space

Maintain a clear space equal to the top of the "exclamation point" (indicated by "x"—see diagram) on all sides.

#### Color

This identity uses PMS 2593 and black. It should be used only on white or very light backgrounds. When it appears on a black or very dark background, the reversed version should be used for maximum readability. When the identity appears on a colored background, the one-color version should be used.

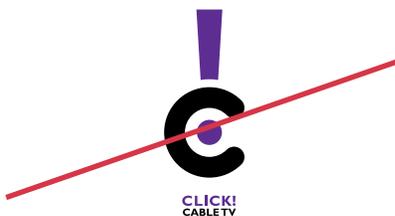

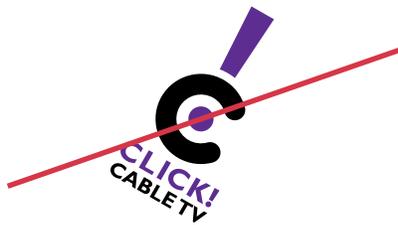

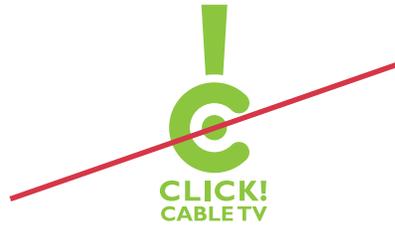

#### Rotation

The Click! logo mark may be rotated to create interesting and engaging layouts, or for animations, but it is important to follow these guidelines when doing so:

1. When the rotated mark appears on its own (not part of a series or animation), the rotation angle should fall between  $\pm 25^\circ$  and  $\pm 50^\circ$  (see diagram).
2. When rotated and cropped, the logo mark should maintain enough of its original form to be recognized easily. (See business cards, page C.19, for an example.)
3. When animated, or used in a series, the mark may be rotated to any angle.

## UNACCEPTABLE USES OF CLICK! NETWORK IDENTITIES

The different Click! Network identities allow for a wide variety of uses. However, to present a consistent image of Click! Network, Click! Cable TV and Tacoma Public Utilities, it is important to use the identities properly. Below are some examples of unacceptable use of the identities. If you have any questions about proper use, please contact the Graphics section.

### SPECIFICATIONS

#### Incorrect scaling

The identities should never be stretched vertically or horizontally.

#### Incorrect background

The color versions of the Click! Network identities should never appear on fields of color. When an identity must appear on a colored background, use the one-color version.

#### Incorrect color

The Click! Network identities should only appear in the color configurations shown previously. Never substitute other colors for any part of the identity.

#### Incorrect rotation

Do not rotate the Click! Network identities (logo mark and logotype together).

#### Incorrect configuration

The Click! Network identities should only appear in the configurations shown previously.

## POSITIONING LINE

The positioning statement is a key element in establishing Click! Cable TV as a competent local choice. When used in tandem with the Click! Cable TV identity, and Click! offers, it provides an additional layer of reinforcement in the consumer's mind to choose Click!.

# Your local choice.

Preferred color PMS Cool Gray 11. Positioning line minimum size is 7 pt. or .75".

# Your local choice.

Alternate color PMS 2593.

# Your local choice.

Alternate color black.

# Your local choice.

Alternate color white.

## SPECIFICATIONS

### POSITIONING LINE

#### Size

There is no specific point size for the positioning line as it will vary per the communication material created. There is a minimum point size of 7 pt.

#### Clear space

There is no specific clear space dedicated to the positioning line, but it should follow any recommended clear space requirements for the Click! Cable TV identity or third party logos.

#### Color

The positioning can be used in multiple color options depending on the communication material created. The preferred color is PMS Cool Gray 11 or 75% tint of black on a white background.

The alternate colors for the positioning line are PMS 2593 and black. These colors should only be used when the positioning line is not in close proximity to a Click! branded service logo, such as Click! Cable TV. Additionally, these colors should be used only on white or very light backgrounds. When it appears on a black or very dark background, the reversed version should be used for maximum readability.

#### Size relationship

The positioning line has a size relationship that maps to the size of the Click! branded service logo as illustrated to the left. It should never be larger than the cap height of "CLICK!" when used in close proximity of the logo. When it is used separately, it has no set maximum size. In all cases the minimum size for the positioning line always applies.

C.10

# COLOR

The color palette for the Click! brand is focused on delivering maximum impact through owning the color purple. The primary color is PMS 2593 or the Click! purple blend. These colors should be used whenever possible to help build equity into the brand. There is a secondary palette that can be used for accent colors.

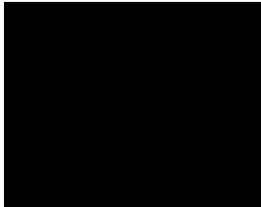

## PRIMARY PALETTE

**Click! Purple**

# BRAND ELEMENTS

## CLICK! CABLE TV SUPPORTING GRAPHICS

There are several elements that are used to create the Click! Cable TV brand presence. These elements include a Mt. Rainier illustration, vibrant purple blend of color, a cable, and distinctive typographic treatments. These elements provide a flexible canvas in which to create compelling, offer-centric advertisements and communication materials with strong continuity.

### SPECIFICATIONS

#### CLICK! PURPLE BLEND

The Click! purple blend is one of the key supporting graphics. It provides a strong backdrop for messaging, and a cohesive visual bond between all Click! communications. The strength of the new Click! purple should be leveraged whenever possible.

#### MT. RAINIER ILLUSTRATION

The Mt. Rainier illustration is an optional supporting graphic. This element provides an additional visual layer that ties back to the local community and region. It should only appear in a subtle fashion and never conflict with the primary messaging or offer. It should be used as a layer on top of the Click! purple blend. The layer setting is set to "Screen" and has a transparency of 60-80%.

#### CLICK! CABLE ILLUSTRATION

The Click! cable graphic is an optional supporting graphic. This element provides a strong visual link to the cable industry vertical, while also functioning as a layout tool. The cable provides a clean break between the purple background and the signoff area for other key elements such as the positioning line or logo.

The cable has a black shadow set to 65% with a blur of .1 inch.

An alternate graphic with the cable is the "cable box" graphic. This graphic creates a clean area for the logo. The graphic should bleed off the left or right side of the page or screen. If this is not possible it may bleed off from the top of the page or screen. The cable box has a rounded corner of 0.15 inch and a black shadow set to 65% with a blur with a range of .1 -.07 inch.

# TYPOGRAPHY

Integrity, accountability and accessibility are the values inherent in the Tacoma Public Utilities brand. We want to project these qualities in our printed and electronic materials.

We are using Frutiger and Bembo—two classic, timeless, and easy-to-read type families—to establish hierarchy, to allow flexibility, and to maintain consistency in the presentation of information. To acquire the brand fonts, contact the Graphics section.

## PRIMARY TYPE FAMILY: FRUTIGER

Use the typefaces in this family for headlines and short amounts of body copy. They may also be used for captions and for text callouts.

<p>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z 1 2 3 4 5 6 7 8 9 0</p>	<p><b>Frutiger Light</b> Use this typeface for large headlines. Do not use it for large blocks of text or in very small point sizes.</p>
<p>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z 1 2 3 4 5 6 7 8 9 0</p>	<p><b>Frutiger Roman</b> Use this typeface for short headlines and for caption text. Use this typeface or Frutiger Bold in signage applications.</p>
<p><i>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z 1 2 3 4 5 6 7 8 9 0</i></p>	<p><b>Frutiger Italic</b> Use this typeface to stress certain words in headline or caption text.</p>
<p><b>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z 1 2 3 4 5 6 7 8 9 0</b></p>	<p><b>Frutiger Bold</b> Use this typeface for caption titles, text callouts, and small-type headlines. Do not use this weight of Frutiger for large-type headlines or for body text. Use this typeface or Frutiger Roman in signage applications.</p>
<p><b>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z 1 2 3 4 5 6 7 8 9 0</b></p>	<p><b>Frutiger Black</b> Use this typeface for special situations when the Bold weight is not heavy enough (for instance, when printing limitations require a heavier weight).</p>

**SECONDARY TYPE FAMILY: BEMBO**

Use the typefaces in this family to change typographic emphasis—for example, to differentiate between headlines and body copy. Bembo, a serif type family, is more suitable for large blocks of text, but it may be used for headlines or captions when Frutiger would be unsuitable.

<p>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z 1 2 3 4 5 6 7 8 9 0</p>	<p><b>Bembo Regular</b> Use this typeface mainly for large blocks of text.</p>
<p><i>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z 1 2 3 4 5 6 7 8 9 0</i></p>	<p><b>Bembo Italic, Old Style Figures</b> Use this typeface to separate and differentiate lines within body copy.</p>
<p>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z 1 2 3 4 5 6 7 8 9 0</p>	<p><b>Bembo Small Caps</b> Use small capitals for text callouts and for headlines when Frutiger doesn't produce the desired visual effect.</p>
<p>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z 1 2 3 4 5 6 7 8 9 0</p>	<p><b>Bembo Semibold, Old Style Figures</b> Use this typeface for caption headlines or small-type headlines when Frutiger doesn't produce the desired effect. Generally, this typeface should be used at small point sizes.</p>
<p><b>A B C D E F G H I J K L M N O P Q R S T U V W X Y Z a b c d e f g h i j k l m n o p q r s t u v w x y z 1 2 3 4 5 6 7 8 9 0</b></p>	<p><b>Bembo Bold, Old Style Figures</b> Use this typeface for special situations when the Semibold weight is not heavy enough (for instance, when printing limitations require a heavier weight).</p>

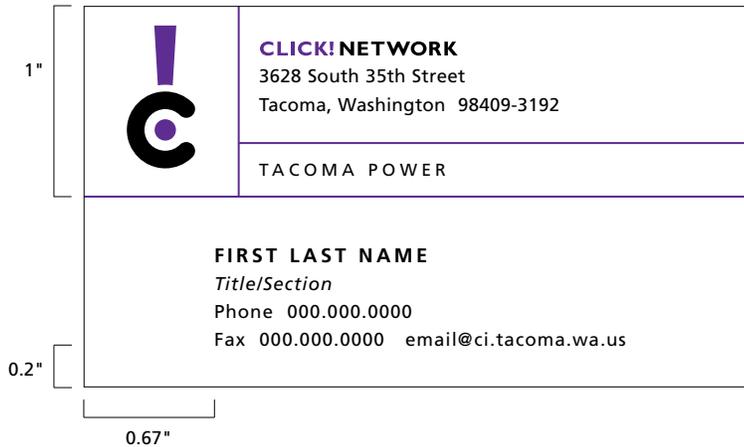

## CLICK! NETWORK CORPORATE BUSINESS CARDS

To order Click! Network business cards, contact the Graphics section.

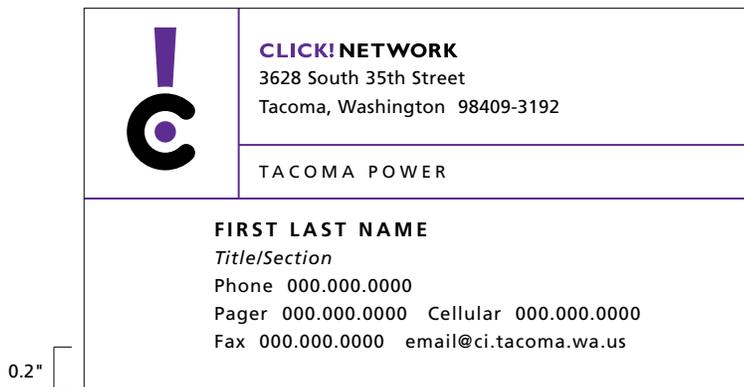

The address block will include the Click! Network logotype, appropriate street address, city, state, ZIP code and the "Tacoma Power" sign-off.

The employee block will include employee name, title and/or section (where applicable), telephone and fax numbers, and e-mail address. If necessary, up to two additional contact numbers can be listed.

# CLICK! NETWORK CORPORATE STANDARD LETTER FORMAT

Customers will see our identity most frequently on stationery, which means how each document is formatted becomes a critical part of our identity program. Please use this format when typing your correspondence, and follow the same format on all pages.

## SPECIFICATIONS

**Typing standards**  
 Font: Times New Roman or equivalent serif typeface  
 Alignment: flush left, ragged right  
 Point size: 11  
 Line spacing: single-spaced (11-point leading)  
 Upper and lower case

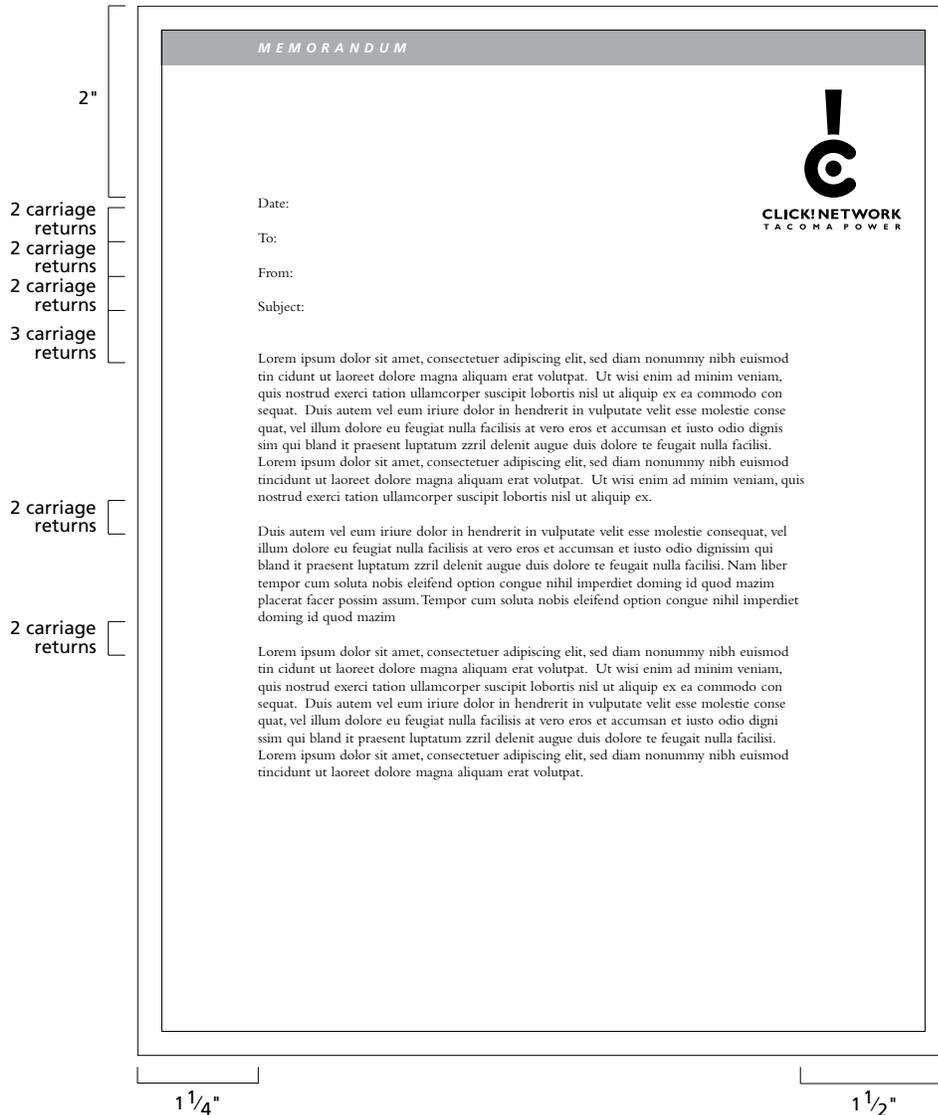

**Position**  
 Left margin: 1 1/4"  
 Right margin: 1 1/2"  
 Top margin: 2"  
 Bottom margin: 1"

**Personalized correspondence**  
 Employees may personalize letters by entering name, position, and phone number, following these guidelines:  
 Alignment: flush left  
 Left margin: 1 1/8"  
 Position: 2 returns after date

**Additional pages**  
 For correspondence longer than one page, use blank sheets of the same stock used for the first page. After page 1, top margin becomes 1 1/4".

## CLICK! NETWORK MEMORANDUM AND STANDARD MEMO FORMAT

Memos should be set on the one-color Click! Network corporate memorandum form shown below. Margins and type specifications for body text on these forms should be consistent with the Click! Network corporate standard letter format shown on page C.21, with the exceptions noted below. A digital Microsoft Word version of this document is also available. Contact the Graphics section.

### SPECIFICATIONS

#### Gray bar

Bar across top of page is a 60% screen of black and should be printed at no less than 80 lpi.

#### Position

Margin guides are the same as for the Click! Network corporate standard letter format, shown on page C.21. Use the format shown at left for the "Date" through "Subject" lines.

#### Typing standards

Typing standards for body text are the same as for the Click! Network corporate standard letter format, shown on page C.21.

# CLICK! NETWORK CORPORATE FAX TRANSMITTAL COVER SHEET

This form should be used to send official Click! Network fax messages. It should be filled out by hand; there is room at the bottom to include comments or notes.

**MORE NEW CHANNELS**  
Sure, there are lots of channels out there, but we have the ones you want. We've recently added loads of new channels including Superstation WGN—home of Lou Piniella and the Chicago Cubs. And for the kids, Boomerang has everything from Huckleberry Hound to Super Friends.

**MORE HD PROGRAMMING**  
Just get a new HD TV? Then you've probably noticed that your favorite sports programs, movies and nature programs look amazing. Want more? Well, look no further. We have all the top HD channels including ESPN, HD Net and Discovery HD Theater.

**MORE FREE ON-DEMAND**  
No time to watch your favorite TV shows? No problem. We have hours of FREE on-demand programming. The kids will love PBS Kids Sprout, while you can check out free programming from CNN, HGTV or The Speed Channel. Best of all, we're adding new content all the time.

**MORE FROM YOUR LOCAL CABLE COMPANY.**  
How can we give you more than the other guys? It's simple—we're local and have been since we opened our doors nearly 10 years ago. That means we don't care about what people in New York or Peoria want to watch. We spend all our time thinking about Tacoma, University Place, Fircrest, Fife and Lakewood. It also means when you pay your bill, your money stays right here, so we can continue to provide you the kind of programming and services you've been asking for.

Say goodbye to operator #63115 in who-knows-where and get more by making a local call to Click! And, because we're neighbors, we'll give you free installation on two outlets and get you connected in just a few days.

## CLICK! CABLE TV POLO SHIRT

Applications for promotional products need to adhere to graphic standards. For assistance, contact the Click! Marketing Department or Community/Media Services.

### SPECIFICATIONS

Recommended polo shirt fabric is purple colored, dark enough to allow clear contrast against for the white Click! logo. Artwork should be reproduced in embroidery. Refer to this drawing when positioning artwork.

ACTUAL SIZE

The Operator shall obtain and maintain the minimum insurance set forth below. By requiring such minimum insurance, the City of Tacoma (City) shall not be deemed or construed to have assessed the risk that may be applicable to Operator under this IRU Agreement. Operator shall assess its own risks and, if it deems appropriate and /or prudent, maintain greater limits and/or broader coverage.

**1. GENERAL REQUIREMENTS**

The following General Requirements apply to Operator performing services or activities pursuant to the terms of this IRU Agreement. Operator acknowledges and agrees to the following insurance requirements applicable to Operator:

- 1.1. City reserves the right to approve or reject the insurance provided based upon the insurer, terms and coverage, the Certificate of Insurance, and/or endorsements.
- 1.2. The insurance must be written by companies licensed in the State of Washington pursuant to RCW 48 with an (A-) VII or higher in the A.M. Best's Key Rating Guide [www.ambest.com](http://www.ambest.com).
- 1.3. Operator shall keep this insurance in force during the entire term of the IRU Agreement and for thirty (30) calendar days after completion of all work required by the IRU Agreement, unless otherwise provided herein.
- 1.4. Policies of Insurance, *such as Commercial General Liability or Commercial Auto Liability or Excess Liability*, required under this IRU Agreement that name City as Additional Insured shall:
  - 1.4.1. Be considered primary and non-contributory for all claims.
  - 1.4.2. Contain a "Severability of Insureds", "Separation of Interest", or "Cross Liability" provision and a "Waiver of Subrogation" clause in favor of City.
- 1.5. A Waiver of Subrogation in favor of City for General Liability and Automobile Liability.
- 1.6. Insurance limits shown below may be written with an excess policy that follows the form of an underlying primary liability policy or an excess policy providing the required limit.
- 1.7. Insurance policy(ies) shall be written on an "occurrence" form, except for Cyber/Privacy and Security.
- 1.8. If coverage is approved and purchased on a "Claims-Made" basis, Operator warrants continuation of coverage, either through policy renewals or by the purchase of an extended reporting period endorsement as set forth below.
- 1.9. Operator shall provide City notice of any cancellation or non-renewal of this required insurance within 30 calendar days.
- 1.10. Operator shall not allow any insurance to be cancelled or lapse during any term of this IRU Agreement, otherwise it shall constitute a material breach of the IRU Agreement, upon which City may, after giving thirty (30) business days' notice to Operator to correct the breach, immediately terminate the IRU Agreement or, at its discretion, procure or renew such insurance and pay any and all premiums in connection therewith; with any sums so expended to be repaid to City by Operator upon demand, or at the sole discretion of City, offset against funds due Operator from City.

- 1.11. Operator shall be responsible for all premiums, deductibles and self-insured retentions. All deductibles and self-insured retained limits shall be shown on the Certificates of Insurance. Any deductible or self-insured retained limits in excess of Ten Thousand Dollars (\$10,000) must be approved by City Risk Management Division.
- 1.12. Insurance coverages specified in this IRU Agreement are not intended and will not be interpreted to limit the responsibility or liability of Operator.
- 1.13. City reserves the right to review insurance requirements and request that reasonable adjustments be made.
- 1.14. City, including its officers, elected officials, employees, and agents, shall be named as additional insured(s) by endorsement for all liability insurance policies set forth below. No specific person or department should be identified as the additional insured.
- 1.15. Operator shall deliver a Certificate of Insurance for each policy of insurance meeting the requirements set forth herein when Operator delivers the signed IRU Agreement to City. Operator shall deliver copies of any applicable Additional Insured, Waiver of Subrogation, and primary and non-contributory endorsements.
- 1.16. Failure by City to identify a deficiency in the insurance documentation provided by Operator or failure of City to demand verification of coverage or compliance by Operator with these insurance requirements shall not be construed as a waiver of Operator's obligation to maintain such insurance.

**2. SUBCONTRACTORS**

It is Contractor's responsibility to ensure that each subcontractor obtain and maintain adequate liability insurance coverage. Contractor shall provide evidence of such insurance upon City's request.

**3. REQUIRED INSURANCE AND LIMITS**

The insurance policies shall provide the minimum coverages and limits set forth below. Providing coverage in these stated minimum limits shall not be construed to relieve Operator from liability in excess of such limits.

**3.1. Commercial General Liability (CGL) Insurance**

The CGL insurance policy must provide limits not less than One Million Dollars (\$1,000,000) each occurrence and Two Million Dollars (\$2,000,000) annual aggregate.

The CGL policy shall be written on an Insurance Services Office (ISO) form CG 00 01 (04-13) or its equivalent. The CGL policy shall be endorsed to include:

- 3.1.1 Contractual Liability-Railroad using ISO form CG 24 17 (10-01) or equivalent if Operator is performing work within fifty (50) feet of a City railroad right of way.
- 3.1.2 City as additional insured using ISO form endorsements CG 20 10 (04-13) and CG 20 37 (04-13) or equivalent for ongoing and completed operations, or using ISO form endorsement CG 20 26 (04-13) or equivalent for Facility Use Agreements. Neither additional insured provisions within an insurance policy form, nor blanket additional insured endorsements will be accepted in lieu of the endorsements specified herein.

**3.2 Commercial Automobile Liability (CAL) Insurance**

Operator shall obtain and keep in force during the term of the IRU Agreement, a policy of CAL

## Exhibit Q

# CITY OF TACOMA INSURANCE REQUIREMENTS

---

insurance coverage, providing bodily injury and property damage coverage for owned (if any), non-owned, hired, or leased vehicles.

Operator must also maintain an MCS 90 endorsement or equivalent and a CA 9948 endorsement or equivalent if "Pollutants" are to be transported. CAL policies must provide limits not less than One Million Dollars (\$1,000,000) each accident for bodily injury and property damage. Must use ISO form CA 0001 or equivalent.

### 3.3 Workers' Compensation

Operator shall comply with Workers' Compensation coverage as required by the Industrial Insurance laws of the State of Washington.

### 3.4 Employers' Liability (EL) (Stop-Gap) Insurance

Operator shall maintain EL coverage with limits not less than One Million Dollars (\$1,000,000) each employee, One Million Dollars (\$1,000,000) each accident, and One Million Dollars (\$1,000,000) policy limit.

### 3.5 Excess or Umbrella Liability (UL) Insurance

Operator shall provide Excess or UL coverage at limits of not less than Ten Million Dollars (\$10,000,000) per occurrence and in the aggregate. This coverage shall apply, at a minimum, in excess of primary underlying Commercial General Liability and Automobile Liability if required herein.

### 3.6 Employee Theft (ET) Insurance

Operator shall maintain an Employee Dishonesty policy with a limit not less than One Million Dollars (\$1,000,000) per occurrence. Such policy shall include City as Loss Payee.

### 3.7 Cyber/Privacy and Security (CP&S) Insurance

Operator shall maintain CP&S insurance with coverage of not less than One Million Dollars (\$1,000,000) per claim and Two Million Dollars (\$2,000,000) general aggregate that includes, but is not limited to, coverage for first party costs and third-party claims. Coverage shall include loss resulting from data security/privacy breach, unauthorized access, denial of service attacks, introduction of virus and malicious code, network security failure, dissemination or destruction of electronic data, business interruptions, privacy law violation, and disclosure of non-public, personal and confidential information, and failure to disclose breaches as required law or contract. Coverage shall include notifications and other expenses incurred in remedying a privacy breach as well as costs to investigate and restore data. Coverage shall also include communications liability (e.g., infringement of copyrights, title, slogan, trademark, trade name, trade dress, service mark, or service name in the policy holders covered material).

### 3.8 Commercial Property (CP) Insurance

Operator shall provide CP for loss or damage to any and all equipment owned by City while in the care, custody, or control of Operator, or its agents. The coverage shall be provided on an ISO special form Causes of Loss form or equivalent and shall provide full replacement cost coverage. The deductible shall not exceed Two Thousand Five Hundred Dollars (\$2,500). Operator shall be responsible for paying the deductible for the applicable coverage.

**EXHIBIT R**  
**Reports and Certifications**

To comply with Section 6(c) of the IRU Agreement, Operator shall submit the following reports and certifications to Tacoma Power on an annual basis.

<b>Policy Goal</b>	<b>Report</b>	<b>Source</b>
Continued public ownership of the infrastructure assets	Cert. of requisite portion of DOCSIS 3.1 upgrade (first three years only)	Ex. E, Section 3(b)
	Status/capabilities of the Tacoma Power Commercial System (post-upgrade)	Ex. E, Section 5(a)
Maintain financial stability of the telecommunications business operations	Capital Expenditures report	Ex. F, Section 2(b)
	Financial report from CPA	Ex. S/IRU Section 12(a)
Ensure equitable access	Compliance with equitable access requirements and equity commitments	Ex. G, Section 5(a)

## **Exhibit S Annual Financial Report**

Section 1. The annual financial report must be prepared by a qualified CPA firm<sup>1</sup> based on audited financial statements. The report shall include at minimum the debt service coverage ratio (“DSCR”) of Operator. DSCR shall mean and refer to, as of any date of determination, Operator’s Net Operating Income divided by Mandatory Debt Service, in each case of the four fiscal quarters then ended. The term “Net Operating Income” shall mean and refer to, for any period, Operator's net income before interest expense, income taxes, and depreciation and amortization expense for such period. The term “Mandatory Debt Service Payments” shall mean and refer to the total of all principal and interest payments required to be made by Borrower during the accounting period reported on.

The CPA shall consider the following in addition to Operator’s audited financial statements (balance sheet, cash flow statement, and income statement):

- Ownership history, including any acquisitions, sales, or other transfers of ownership interests.
- The flow of funds between any and all affiliate, parent, sister, and subsidiary companies.
- The company’s current assets, liabilities, and net working capital.
  - Examine subsidiary and parent company.
- If applicable, any filings with the U.S. Securities and Exchange Commission for at least the prior two years.
- Any past, pending, or resolved litigation with the company in its current form.
- The obligations of Operator set forth in the IRU Agreement.

Section 2. The Parties understand that new lease accounting standards will be implemented by the Financial Accounting Standards Board during the term of this lease that will affect the calculation of DSCR. Upon written request from either party, the Parties agree to enter into good faith negotiations to revise and amend this Exhibit S to adjust the definition of DSCR to take into account such changes to the lease accounting standards, and more specifically to ensure that “cash-out” with respect to a lease is not double counted. The City of Tacoma Finance Director, or designee, is authorized to approve such an amendment to this Exhibit S on behalf of Tacoma Power.

---

<sup>1</sup> The CPA firm must be the same firm that completed Operator’s latest audit, or if not available, a firm that is:

- Licensed CPA in the State of Washington
- CPA firm experienced in the telecommunications/broadband industry, and
- CPA firm proposed by Operator to be approved by Tacoma Power.

**Exhibit T**  
**Form of Guarantee**

**PERFORMANCE GUARANTEE**

THIS GUARANTEE is made with reference to the following facts and circumstances:

- A. Mashell Inc. (“GUARANTOR”) is a corporation organized under the laws of the State of Washington.
- B. Rainier Connect North, LLC (“OPERATOR”) is a limited liability company organized under the laws of the State of Washington, whose Governing Entity is GUARANTOR.
- C. OPERATOR has negotiated that certain Indefeasible Right of Use Agreement with City of Tacoma, Department of Public Utilities, Light Division, a municipal corporation of the State of Washington (d/b/a and hereinafter referred to as “TACOMA POWER”) (such agreement, as it may be amended, modified or waived from time to time, the “IRU Agreement”). A copy of the IRU Agreement is incorporated herein by this reference.
- D. It is a requirement of the IRU Agreement, and a condition to TACOMA POWER’s entering into the IRU Agreement, that GUARANTOR guarantee OPERATOR’s performance of the IRU Agreement.
- E. GUARANTOR is providing this Guarantee to induce TACOMA POWER to enter into the IRU Agreement.

NOW, THEREFORE, in consideration of the foregoing, GUARANTOR agrees as follows:

- 1. Guarantee of the IRU Agreement. GUARANTOR hereby irrevocably and unconditionally guarantees to TACOMA POWER the complete and timely performance, satisfaction and observation by OPERATOR of each and every term and condition of the IRU Agreement which OPERATOR is required to perform, satisfy or observe. In the event that OPERATOR fails to perform, satisfy or observe any of the terms or conditions of the IRU Agreement, GUARANTOR will promptly and fully perform, satisfy or observe them in the place of the OPERATOR. Without limiting the generality of the foregoing, GUARANTOR hereby guarantees prompt payment to TACOMA POWER of each and every sum due from OPERATOR to TACOMA POWER under the IRU Agreement, as and when due from time to time, and the prompt performance of every other task and duty required to be performed by the OPERATOR under the IRU Agreement.
- 2. GUARANTOR’s Obligations Are Absolute. The obligations of the GUARANTOR hereunder are direct, immediate, absolute, continuing, unconditional and unlimited and, with respect to any payment obligation of OPERATOR under the IRU Agreement, shall constitute a guarantee of payment and not of collection, and are not conditioned upon the genuineness, validity, regularity or enforceability of the IRU Agreement.

3. Waivers and Subordination.

- (A) The GUARANTOR shall have no right to terminate this Guarantee or to be released, relieved, exonerated or discharged from its obligations under Section 1 hereof for any reason whatsoever, including, without limitation: (1) the insolvency, bankruptcy, reorganization or cessation of existence of the OPERATOR; (2) any amendment, modification or waiver of any provision of the IRU Agreement or the extension of its Term (as defined in the IRU Agreement); (3) the actual or purported rejection of the IRU Agreement by a trustee in bankruptcy, or any limitation on any claim in bankruptcy resulting from the actual or purported termination of the IRU Agreement; (4) any waiver, extension, release or modification with respect to any of the obligations of the IRU Agreement guaranteed hereunder or the impairment or suspension of any of TACOMA POWER's rights or remedies against OPERATOR; or (5) any merger or consolidation of the OPERATOR with any other organization, or any sale, lease or transfer of any or all the assets of the OPERATOR.
- (B) The GUARANTOR hereby waives any and all rights to require TACOMA POWER to (a) proceed against OPERATOR, (b) proceed against or exhaust any security or collateral TACOMA POWER may hold now or hereafter hold, or (c) pursue any other right or remedy for GUARANTOR's benefit, and agree that TACOMA POWER may proceed against GUARANTOR for the obligations guaranteed herein without taking any action against OPERATOR or any other guarantor or pledgor and without proceeding against or exhausting any security or collateral TACOMA POWER may hold now or hereafter hold. TACOMA POWER may unqualifiedly exercise in its sole discretion any or all rights and remedies available to it against OPERATOR or any other guarantor or pledgor without impairing TACOMA POWER's rights and remedies in enforcing this Guarantee.
- (C) The GUARANTOR hereby waives and agrees to waive at any future time at the request of TACOMA POWER, to the extent now or then permitted by applicable law, any and all rights which the GUARANTOR may have or which at any time hereafter may be conferred upon it, by statute, regulation or otherwise, to avoid any of its obligations under, or to terminate, cancel, quit or surrender this Guarantee.
- (D) Without limiting the generality of the foregoing, it is agreed that the occurrence of any one or more of the following shall not affect the liability of the GUARANTOR hereunder: (a) at any time or from time to time, without notice to the GUARANTOR, the time for OPERATOR's performance of or compliance with any of its obligations under the IRU Agreement is extended, or such performance or compliance is waived; (b) the IRU Agreement is modified or amended in any respect; (c) any other indemnification with respect to OPERATOR's obligations under the IRU Agreement or any security therefor is released or exchanged in whole or in part or otherwise dealt with; (d) any assignment of the IRU Agreement is effected which does not require TACOMA POWER's approval; or (e) any termination or suspension of the IRU Agreement arising by reason of a default by OPERATOR.
- (E) The GUARANTOR hereby expressly waives diligence, presentment, demand for payment or performance, protest and all notices whatsoever, including, but not limited to, notices of non-payment or non-performance, notices of protest, notices of any breach or default, and notices of acceptance of this Guarantee. If all or any portion of the obligations guaranteed hereunder are paid or performed, GUARANTOR's obligations

hereunder shall continue and remain in full force and effect in the event that all or any part of such payment or performance is avoided or recovered directly or indirectly from TACOMA POWER as a preference, fraudulent transfer or otherwise, irrespective of (a) any notice of revocation given by GUARANTOR or OPERATOR prior to such avoidance or recovery, or (b) payment in full of any obligations then outstanding. The GUARANTOR expressly subordinates and waives its rights to subrogation, reimbursement, contribution or indemnity with respect to performance by GUARANTOR of the obligations of OPERATOR guaranteed hereby, until such time as TACOMA POWER receives payment or performance in full of all such obligations.

4. Term. This Guarantee is not limited to any period of time, but shall continue in full force and effect until all of the terms and conditions of the IRU Agreement have been fully performed by OPERATOR, and GUARANTOR shall remain fully responsible under this Guarantee without regard to the acceptance by TACOMA POWER of any performance bond or other collateral to assure the performance of OPERATOR's obligations under the IRU Agreement. GUARANTOR shall not be released of its obligations hereunder unless and until all of the following conditions have been met: (i) the IRU Agreement is terminated; (ii) all obligations that survive termination of the IRU Agreement as set out in Section 21(f) have been fully performed by OPERATOR; and (iii) there are no claims by TACOMA POWER against OPERATOR arising out of the IRU Agreement based on OPERATOR's failure to perform which have not been settled or discharged.

5. No Waivers by TACOMA POWER. No delay on the part of TACOMA POWER in exercising any rights under this Guarantee or failure to exercise such rights shall operate as a waiver of such rights. No notice to or demand on GUARANTOR shall be a waiver of any obligation of GUARANTOR or right of TACOMA POWER to take other or further action without notice or demand. No modification or waiver by TACOMA POWER of any of the provisions of this Guarantee shall be effective unless it is in writing and signed by TACOMA POWER and by GUARANTOR, nor shall any waiver by TACOMA POWER be effective except in the specific instance or matter for which it is given.

6. Attorney's Fees. In addition to the amounts guaranteed under this Guarantee, GUARANTOR agrees to pay actual attorney's fees and all other costs and expenses incurred by TACOMA POWER in enforcing this Guarantee, or in any action or proceeding arising out of or relating to this Guarantee, including any action instituted to determine the respective rights and obligations of the parties hereunder.

7. Governing Law; Jurisdiction. This Guarantee is and shall be deemed to be a contract entered into in and pursuant to the laws of the State of Washington and shall be governed and construed in accordance with the laws of Washington without regard to its conflicts of laws rules for all purposes, including, but not limited to, matters of construction, validity and performance. As the IRU Agreement is made and performed in Pierce County, GUARANTOR agrees that any action brought by TACOMA POWER to enforce this Guarantee may be brought in any Pierce County Superior Court and GUARANTOR consents to personal jurisdiction over it by such courts.

8. Severability. If any portion of this Guarantee is held to be invalid or unenforceable, such invalidity shall have no effect upon the remaining portions of this Guarantee, which shall be severable and continue in full force and effect.

9. Binding on Successors. This Guarantee shall inure to the benefit of TACOMA POWER and its successors and shall be binding upon GUARANTOR and its successors, including a successor entity formed by a merger or consolidation, a transferee of substantially all of its assets, and its shareholders in the event of its dissolution or insolvency.

10. Authority. GUARANTOR represents and warrants that it has the corporate power to give this guarantee, that its execution of this Guarantee has been authorized by all necessary action under its Articles of Incorporation and by-laws, and that the person signing this Guarantee on its behalf has authority to do so.

11. Notices. Notice shall be given in writing, deposited in the U.S. mail, registered or certified, first class postage prepaid, addressed as follows:

# **EXHIBIT C**

3628 South 35th Street  
Tacoma, WA 98409

February 28, 2020

Dear Click! Cable TV Customer,

During 2019, we provided you with two separate notices of our intent to transfer operational control of Click! Cable TV ("Click!") to Rainier Connect North, LLC ("Rainier Connect"). This is to provide formal notice that Click! is transferring operational control to Rainier Connect effective April 1, 2020. As such, beginning April 1, 2020, Rainier Connect will be your cable television service provider.

Information you need to know about your service beginning April 1, 2020 is as follows:

Here is what will stay the same:

- Your service will continue to work just as it does today
- Channel line-up
- Billing date
- Bill amount
- Payment remittance address

Here is what will change, and a few things you will want to verify:

- Whom to contact for support:  
Rainier Connect  
www.rainierconnect.com  
253-683-4100
- Where to make in-person payments:  
2516 Holgate Street  
Tacoma WA, 98402  
Lobby Hours: Monday – Friday 8:30 a.m. - 5:00 p.m.
- All payments after March 31, 2020 should be sent to Rainier Connect
- Unless you discontinue cable service on or before March 31<sup>st</sup>, your cable service and cable account information will be transferred to Rainier Connect, with the exception of your credit card information
- Provide Rainier Connect your credit card information for recurring payments; credit card information provided to Click! Cable TV will not be transferred to Rainier Connect
- Visit Rainier Connect's website at [www.rainierconnect.com/welcome-click-customers](http://www.rainierconnect.com/welcome-click-customers) for additional details and link to their online payment feature
- If you are paying by check or using a bill pay service, you will need to change the payee to Rainier Connect; the remittance address need not be changed

To learn more about the selection of Rainier Connect as the successor to Click!, please visit our information portal at <http://www.mytpu.org/clickupdate>.

From the entire Click! team, thank you for being a Click! customer. We have enjoyed the privilege of serving you and the greater Tacoma area for the last twenty years. Rainier Connect is a long established, locally owned and operated company whom we trust will serve you well into the future.

Sincerely,

Tenzin Gyaltsen  
Click! General Manager

MITCHELL SHOOK,  
Plaintiff,

v.

CITY OF TACOMA,  
Defendant.

**NO. 19-2-07135-0**

**DECLARATION REGARDING RE-  
NOTING OF MOTION**

THOMAS McCARTHY and CHRISTOPHER  
T. ANDERSON,  
Plaintiffs,

v.

CITY OF TACOMA,  
Defendant.

I, James P. Grifo, counsel for Plaintiff, Christopher Anderson, hereby declare as follows:

On May 14, 2022, Plaintiff Anderson filed and served Plaintiff Anderson's Motion for Partial Summary Judgment and supporting documents, and set the matter for consideration on July 1, 2022, at 9:00 a.m. Defendant City of Tacoma subsequently requested the hearing date be set for August 26, 2022, at 9:00 a.m., and Plaintiff Anderson has agreed to re-note Anderson's pending Motion for Partial Summary Judgment for that date and time.

1 Plaintiff Anderson has re-noted Plaintiff Anderson's Motion for Partial Summary Judgment (including all  
2 documents filed in support thereof) as filed on May 14, 2022, for consideration on August 26, 2022 at  
3 9:00 a.m.  
4

5 I declare under the penalty of perjury under the laws of the State of Washington that the foregoing  
6 is true and correct to the best of my knowledge and belief.  
7

8 Signed this 7<sup>th</sup> day of June 2022 in Nantucket, Massachusetts.

Oral Argument Requested**

THOMAS MCCARTHY and CHRISTOPHER  
T. ANDERSON,

Plaintiffs,

v.

CITY OF TACOMA,

Defendant

**I. INTRODUCTION**

The identity of the plaintiffs in this lawsuit has changed over time. Mitchell Shook filed the original Complaint pro se. Messrs. McCarthy and Anderson joined in. Shook is now gone

DEFENDANT CITY OF TACOMA'S  
MOTION FOR SUMMARY JUDGMENT  
(19-2-07135-0) - 1

**CHRISTIE LAW GROUP, PLLC**  
2100 WESTLAKE AVENUE N., SUITE 206  
SEATTLE, WA 98109  
206-957-9669

1 from this case, leaving Mr. McCarthy and Mr. Anderson – with only Mr. Anderson now  
2 represented by counsel - standing alone.

3 Mr. McCarthy and Mr. Anderson are citizens of the City of Tacoma and have brought this  
4 suit seeking to compel a public vote to authorize a transaction that has already been approved and  
5 effectuated by the Tacoma City Council in a series of resolutions. The McCarthy/Anderson suit  
6 is identical in every way to a separate lawsuit that Mr. Shook filed pro se under cause number 19-  
7 2-11506-3, that was assigned to Judge Shelly Speir. Another Tacoma resident, Darrell Bowman,  
8 also filed an identical Complaint to the McCarthy/Anderson Complaint, which was consolidated  
9 before Judge Speir (referred to hereafter as the Shook/Bowman suit).

10 This Court is familiar with the substance of the McCarthy/Anderson suit. On July 19,  
11 2019, the Court entered an Order denying McCarthy's/Anderson's motion for a writ of prohibition  
12 or preliminary injunction. On August 14, 2019, this Court entered an Order denying  
13 McCarthy's/Anderson's motion for reconsideration.

14 Mr. Shook thereafter amended his allegations in the McCarthy/Anderson suit to assert  
15 federal claims, prompting the City to remove the case on September 4, 2019 to U.S. District Court,  
16 assigned to Judge Settle. Mr. Shook has since dismissed his claims, including his federal claims,  
17 and Judge Settle remanded the McCarthy/Anderson suit back to this Court on May 11, 2020.

18 Meanwhile, on February 7, 2020, Judge Speir, after full briefing and extensive oral  
19 argument, granted the City of Tacoma's Motion for Summary Judgment, dismissing the  
20 Shook/Bowman suit. Specifically, Judge Speir ruled:

21 The plaintiffs have failed to raise genuine issues of material facts on  
22 this issue of whether the City's decisions were arbitrary or

1 capricious. The Court has no basis to invalidate the City's decision,  
2 and as such, the City's resolutions must stand.

3 Because the City [has] determined that CLICK!'s assets and the  
4 excess capacity are surplus and not essential, the public vote  
5 requirements in RCW 35.94.040 and Tacoma City Charter Section  
6 4.6 are not triggered.

7 (Christie Decl., Ex. A, p. 77:12-20.)

8 Judge Speir entered an Order reflecting her ruling on February 28, 2020. (Christie Decl.,  
9 Ex. B.) Judge Speir's Order was appealed to Division II of the Court of Appeals under cause  
10 number 5493030-1. On June 6, 2020 the parties executed a stipulated order dismissing the appeal.  
11 The Court of Appeals terminated review of Judge Speir's Order on July 7, 2020. (*Id.*, Ex. C.)

12 Following remand, on June 1, 2020, the City filed a motion for summary judgment. This  
13 Court denied the motion citing concerns about the City's utility meters and its potential use of the  
14 Click! Network for these meters. (*Id.*, Ex. D, pp. 9:25-12:22.) The Court noted how it needed more  
15 information on whether the system supporting the Gateway Meter Project was retained by the City  
16 and stated that this information could be provided by an affidavit. (*Id.*; *see also* Ex. E.) The  
17 information previously sought by the Court has been provided. (Gyaltzen Decl.; Gyaltzen Supp.  
18 Decl.)

19 This Court should now dismiss this Complaint on the grounds that this Complaint is barred  
20 by the doctrine of res judicata. Judge Speir dismissed virtually identical Complaints. Mr.  
21 McCarthy and Mr. Anderson are acting in the same legal capacity as Mr. Shook and Mr. Bowman  
22 and have the same legal interest as the participants in the Shook/Bowman suit. Because of this  
concurrency of identity, this present suit should be dismissed as a matter of law. Further, this matter  
should also be dismissed in light of the facts presented by the City in response to this Court's

DEFENDANT CITY OF TACOMA'S  
MOTION FOR SUMMARY JUDGMENT  
(19-2-07135-0) - 3

**CHRISTIE LAW GROUP, PLLC**  
2100 WESTLAKE AVENUE N., SUITE 206  
SEATTLE, WA 98109  
206-957-9669

1 earlier questions concerning the metering projects and in light of the controlling decision issued  
2 by the Court of Appeals in *Coates v. City of Tacoma*, 11 Wn. App.2d 688, 457 P.3d 1160 (2019).

3 **II. RELIEF REQUESTED**

4 Defendant City of Tacoma (“the City”), pursuant to CR 56(c) respectfully requests this  
5 Court dismiss the plaintiffs’ Complaint on grounds of res judicata. In addition, the City requests  
6 this Court dismiss the plaintiffs’ Complaint on the basis of the undisputed facts presented through  
7 this motion, and the binding decision of the Court of Appeals in *Coates*.

8 **III. STATEMENT OF MATERIAL FACTS**

9 Mr. McCarthy and Mr. Anderson filed this Complaint on May 15, 2019. (Compl. for  
10 Declaratory J., and Inj., Relief and Pets. for Writs of Prohibition and Mandamus, *McCarthy, et ano.*  
11 *v. City of Tacoma*, 19-2-07873-7.) This Complaint was then consolidated with a substantially similar  
12 complaint filed by Mitchell Shook on June 10, 2019. (Order Granting Def. Mot. to Consolidate.) Mr.  
13 Shook amended his complaint on August 26, 2019. (Am. Compl. for Declaratory, Inj., Prohibition  
14 and Mandamus Relief.) In it, Mr. Shook asserted certain federal claims, and the City removed the  
15 case to Federal Court. (Notice to Adverse Party of Removal of Action to U.S. Dist.)

16 The City of Tacoma filed a motion for summary judgment to completely dismiss the  
17 Shook/Bowman suits. Shook/Bowman filed cross motions for partial summary judgment (Pl. Shook’s  
18 Mot. Partial Summ. J., Pl. Bowman’s Mot. Partial Summ. J., Def. City of Tacoma’s Mot. Partial  
19 Summ. J., *Bowman v. City of Tacoma*, 19-2-11506-3.) Due to the substantially similar issues in the  
20 Shook/Bowman suit and the instant case, the parties stipulated to staying the federal deadlines in  
21 McCarthy/Anderson until Judge Speir decided the cross-motions for summary judgment in the  
22 Shook/Bowman suit. (Dkt. #38, *Shook v. City of Tacoma*, W.D. Wash. No. 3:19-cv-05829-BHS.)

DEFENDANT CITY OF TACOMA’S  
MOTION FOR SUMMARY JUDGMENT  
(19-2-07135-0) - 4

**CHRISTIE LAW GROUP, PLLC**  
2100 WESTLAKE AVENUE N., SUITE 206  
SEATTLE, WA 98109  
206-957-9669

1 On February 7, 2020, after hours of oral argument, Judge Speir denied Mr. Shook’s and Mr.  
2 Bowman’s cross-motions, granted the City’s Motion for Summary Judgment, and dismissed both  
3 complaints with prejudice. (Ex. A to Decl. of Christie.) Judge Speir signed the Order on her ruling  
4 on February 28, 2020. (Ex. B to Decl. of Christie.)

5 The factual allegations in the McCarthy/Anderson suit, as well as the first cause of action, are  
6 near word-for-word identical to those in the Bowman suit.<sup>1</sup> Indeed, the same lawyer for Bowman  
7 drafted the McCarthy/Anderson suit. (*Compare* Compl. for Declaratory J., and Inj., Relief and Pets.  
8 for Writs of Prohibition and Mandamus, *McCarthy, et ano. v. City of Tacoma*, 19-2-07873-7 with  
9 Compl. for Declaratory J., and Inj., Relief and Pets. for Writs of Prohibition and Mandamus, *Bowman*  
10 *v. City of Tacoma*, 19-2-11506-3.)

11 On July 24, 2020, this Court denied the City’s previous motion for summary judgment without  
12 prejudice. (Christie Decl., Ex. D, p. 19:22-24.) The Court indicated that it was interested in the  
13 Gateway Metering Project and that it was unclear whether that program was part of the lease of the  
14 HFC network or if the system supporting the Gateway metering project was retained by the City. (*Id.*,  
15 p. 12:8-16.) The Court made clear that if the system supporting the Gateway project was “retained  
16 by the city” then there was no problem and the motion should be granted. (*Id.*) Specifically, the  
17 Court stated that:

18  
19 \_\_\_\_\_  
20 <sup>1</sup> In fact, every factual allegation is identical with the exception of Bowman paragraph 2.25 (below  
21 in bold). That paragraph is different because Bowman’s Complaint was filed on October 16, 2019,  
22 whereas the McCarthy Complaint was filed on May 15, 2019. Thus, the allegation could not have  
been made by McCarthy at the time. “**2.25 On or about October 15, 2019, the Council passed  
Resolution No. 40446, setting a public hearing on October 29, 2019 to determine whether the  
System is surplus to the City's needs and not required for providing continued public utility  
service, and to approve the lease and/or sale of the System to Rainier Connect.**”

1 I mean, maybe it can be done on summary judgment if we had the affidavits. I don't  
2 know what was in front of Judge Speir about that. I guess my concern is, if the  
3 Gateway Meter Project -- if the telecommunications aspect of the Gateway Meter  
Project was retained by the City, then at least -- it seems to me that the rest of the sale  
is fine, and then there's no problem.

4 *Id.*

5 Moreover, the Court stated that “[i]f [the Gateway meter project] has been phased out entirely,  
6 I suppose this is a moot point. If it is still in existence, I don't know to what extent it has been phased  
7 out or maybe they changed their mind and didn't phase it out.” (*Id.* at 19:5-10.) Lastly, during the  
8 hearing on the City's Motion for Summary Judgment, Mr. McCarthy made mention of an industrial  
9 meter program run by Tacoma Power Utility (TPU), which he called “Stark Meters.” (*Id.* at 14:10-  
10 11.) The Court indicated that it would like some clarifications about those meters as well. (*Id.* at  
11 19:24-20:3.)

12 1. On August 3, 2020, Tenzin Gyaltsen testified in a declaration regarding both metering  
13 programs.<sup>2</sup> (*See* Gyaltsen Decl.) Mr. Gyaltsen is the current Utility Technology Services Manager  
14 for TPU, and for nine years, including in July 2019, he held the position of Power Section Manager  
15 and General Manager for Click! Network. (Gyaltsen Decl. at ¶2.) Mr. Gyaltsen unequivocally  
16 testified that on August 31, 2019 the Gateway Metering program was formally ended, and no TPU  
17 customer is using the Gateway meters. (Gyaltsen Decl. at ¶3.) Thus, that metering system has been  
18 entirely phased out. He also testified that the Stark metering program was fully removed from the  
19 Click! Network. (Gyaltsen Decl. at ¶4.) Lastly, he testified that there is no TPU customer who is  
20

21 \_\_\_\_\_  
22 <sup>2</sup> Also attached to Mr. Gyaltsen's declaration as Exhibit A is the request to formally terminate the  
Gateway pilot metering program and the request to formally remove the commercial/industrial  
meters that utilized Stark software from the Click! HFC network.

1 relying on any part of the Click! HFC Network for any of their TPU utility service, and neither  
2 metering services were sold or transferred when Click! network was leased to Rainer Connect.  
3 (Gyaltsen Decl. at ¶5.) Mr. Gyaltsen also testified that, as of April 2020, no TPU customers are relying  
4 on any part of the Tacoma Power Commercial System for any TPU service, the City's meters,  
5 including the now phased out Gateway Metering Project, do not rely on the Tacoma Power  
6 Commercial System, and that Rainier Connect is not providing or supporting any TPU services, other  
7 than as an ordinary commercial customer of services that it pays Rainier Connect to receive and that  
8 it previously paid Click! to receive. (Supp. Gyaltsen Decl., ¶¶4-9)

9 **IV. ISSUES PRESENTED**

- 10 1. Whether this Complaint should be dismissed pursuant to the doctrine of res judicata  
11 when the same very same issues have already been fully litigated in another case?  
12 2. Whether this Complaint should be dismissed because the Gateway metering system  
13 was phased out and no metering system was leased to Rainer Connect?  
14 3. Whether this Complaint should be dismissed when Mr. McCarthy's and Mr.  
15 Anderson's arguments that Click! is a separate utility have already been rejected by the  
16 Court of Appeals.

17 **V. EVIDENCE RELIED UPON**

18 This motion is based on the pleadings already on record in this case, the filings pertaining to  
19 the motions for summary judgment pending in the Shook/Bowman case under cause number 19-2-  
20 11506-3, and on the following materials filed in conjunction with this motion:

- 21 1. Declaration of Robert L. Christie, with exhibits.  
22 2. Declaration of Tenzin Gyaltsen, with exhibits.

1 3. Supplemental Declaration of Tenzin Gyaltzen.

2 **VI. ARGUMENT AND AUTHORITIES**

3 **A. Summary Judgment Standard**

4 Summary judgment is appropriate if there are no genuine issues of material fact and the  
5 moving party is entitled to judgment as a matter of law. *Zonnebloem, LLC v. Blue Bay Holdings,*  
6 *LLC*, 200 Wn. App. 178, 182, 401 P.3d 468 (2017); CR 56(c). A genuine issue of material fact  
7 exists if reasonable minds could disagree on the conclusion of a factual issue. *Id.* at 182-83. Courts  
8 view all facts and reasonable inferences drawn from those facts in the light most favorable to the  
9 nonmoving party. *Id.* at 182.

10 **B. Res Judicata Prohibits Re-Litigation of These Claims.**

11 “The broad general rule of res judicata suggests that a party is always prohibited from  
12 litigating a claim or issue that could have been raised in any earlier suit.” *Eugster v. Washington*  
13 *State Bar Ass’n*, 198 Wn. App. 758, 786, 397 P.3d 131 (2017). “Under Washington law, for the  
14 doctrine of res judicata to apply, a prior judgment must have a concurrence of identity with a  
15 subsequent action in (1) subject matter, (2) cause of action, (3) persons and parties, and (4) the  
16 quality of the persons for or against whom the claim is made.” *Id.*; *See also Rains v. State*, 100  
17 Wn.2d 660, 663, 674 P.2d 165 (1983); *Berschauer Phillips Construction Co. v. Mutual of*  
18 *Enumclaw Insurance Co.*, 175 Wn. App. 222, 227-28, 308 P.3d 681 (2013). Res judicata also  
19 requires that the prior judgment be final. *Leija v. Materne Brothers, Inc.*, 34 Wn. App. 825, 827,  
20 664 P.2d 527 (1983). “A grant of summary judgment at a prior proceeding is considered a final  
21 judgment on the merits.” *Emeson v. Dep’t of Corrections*, 194 Wn. App. 617, 626, 376 P.3d 430  
22 (2016); *see also DeYoung v. Cenex Ltd.*, 100 Wn. App. 885, 891-92, 1 P.3d 587 (2000).

DEFENDANT CITY OF TACOMA’S  
MOTION FOR SUMMARY JUDGMENT  
(19-2-07135-0) - 8

**CHRISTIE LAW GROUP, PLLC**  
2100 WESTLAKE AVENUE N., SUITE 206  
SEATTLE, WA 98109  
206-957-9669

1 Mr. McCarthy and Mr. Anderson’s only argument on this issue can be that they are not Mr.  
2 Shook or Mr. Bowman. However, nominally different parties may have sufficiently identical  
3 interests to satisfy the “identity of parties” inquiry. That is particularly true where the plaintiffs in  
4 separate cases asserting identical claims are doing so in the same legal capacity as citizen voters.  
5 For example, in *Snyder v. Munro*, 106 Wn.2d 380, 383–84, 721 P.2d 962 (1986) the petitioners  
6 challenged the constitutionality of a statute establishing certain state legislative districts. Different  
7 named parties had challenged the same statute on the same constitutional grounds in federal court  
8 and lost. The court held that the petitioners were barred by res judicata from relitigating the  
9 constitutionality of the statute in state court. *Snyder*, 106 Wn.2d at 384. “The identity of the  
10 parties is not a mere matter of form, but is one of substance; the court will look to the legal effect  
11 of the identity of the parties even though they may be nominally different.” *Id.* at 383-84; *see also*  
12 *Rains*, 100 Wn.2d at 674. The court reasoned that the petitioners, though different persons, had  
13 the same legal interests as all citizens of the state. *Snyder*, 106 Wn.2d at 384. The court concluded,  
14 therefore, that there was sufficient identity of parties for purposes of res judicata. *Id.* at 384; *see*  
15 *also City of Tacoma v. Taxpayers of Tacoma*, 357 U.S. 320, 340–41, 78 S. Ct. 1209, 2 L. Ed. 2d  
16 1345 (1958) (holding final judgment against the State barred subsequent action by citizens because  
17 citizens' public rights were represented by the State in the earlier proceeding).

18 The Washington State Supreme Court addressed the doctrine of res judicata in the context  
19 of four citizen lawsuits filed to contest the outcome of the 2004 governor’s election. *In Re Coday*,  
20 156 Wn.2d 485, 130 P.3d 809 (2006), The Court explained that a prior judgment will bar litigation  
21 of a subsequent claim if the prior judgment has “a concurrence of identity with [the] subsequent  
22 action in (1) subject matter, (2) cause of action, (3) persons and parties, and (4) the quality of the

1 person for or against whom the claim is made.” *Id.* at 500-01 (quoting *Loveridge v. Fred Meyer,*  
2 *Inc.*, 125 Wn.2d 759, 763, 887 P.2d 898 (1995)), The voter challenge claims in the underlying  
3 claims in *Coday* were, as here, identical in subject matter. Focusing on the “concurrence of  
4 identity” element, the Court stated:

5 [W]here ‘nominally different parties’ pursue causes of action as voters, on behalf  
6 of the body politic generally, such parties have been found to “have sufficiently  
7 identical interests to satisfy the ‘identity of parties’ inquiry” because they possess  
8 “the same legal interests as all citizens of the state.” [citations omitted] While Karr  
[the plaintiff in one of the cases] was not a participant in the *Borders* case, she is  
acting in the same capacity, and has the same legal interest, as the participants in  
that case.”

9 *In Re Coday*, 156 Wn.2d 485, 501, 130 P.3d 809 (2006).

10 Here, Mr. McCarthy and Mr. Anderson assert an identical legal challenge to the same  
11 resolutions adopted by the Tacoma City Council. Indeed, the findings and conclusions in this  
12 Court’s Order of July 19, 2019, while at an earlier stage of the litigation, tracks precisely with  
13 Judge Speir’s oral ruling on summary judgment. There is no conceivable difference between the  
14 legal positions taken on the part of Mr. Shook and Mr. Bowman, citizens of Tacoma seeking a  
15 public vote, from that of Mr. McCarthy and Mr. Anderson seeking identical relief on identical  
16 legal grounds. Indeed, Mr. Bowman had the benefit of excellent written and oral advocacy of  
17 attorney Kent Van Alstyne, the same attorney that drafted the McCarthy/Anderson Complaint but  
18 has now withdrawn from this case. There is nothing that Mr. McCarthy and Mr. Anderson can  
19 now present by way of argument that has not been fully evaluated and rejected.

20 Accordingly, given the concurrence of identity between the plaintiffs in the Shook/Bowman  
21 suit and the plaintiffs in the McCarthy/Anderson suit, as well as the final judgment in the form of  
22 Judge Speir’s order granting the City’s motion for summary judgment, all of the requirements of

DEFENDANT CITY OF TACOMA’S  
MOTION FOR SUMMARY JUDGMENT  
(19-2-07135-0) - 10

**CHRISTIE LAW GROUP, PLLC**  
2100 WESTLAKE AVENUE N., SUITE 206  
SEATTLE, WA 98109  
206-957-9669

1 res judicata have been established and this Court should now dismiss this suit with prejudice.

2 **C. The Issues Related to the Metering Systems Are Moot.**

3 Upon ruling on the City’s earlier motion for summary judgment, the Court raised concerns  
4 about the metering projects and questioned whether the projects were a part of the lease of the HFC  
5 network or if the metering projects were retained by the City. If the metering projects were not a part  
6 of the lease, then the Court implied that it would grant the City’s motion. The Court also made clear  
7 that if the Gateway project had been phased out, the City’s motion should be granted.

8 As is made clear by Mr. Gyaltsen’s declarations, the Gateway project has ended and been  
9 phased out. Accordingly, that issue is now moot. Moreover, Mr. Gyaltsen testified that neither of the  
10 metering projects relied on systems that were a part of the lease with Rainer Connect. Therefore,  
11 Rainer Connect has no connection with or control of any of the metering projects, and Mr. McCarthy  
12 and Mr. Anderson’s assertions to the contrary are incorrect. Thus, the City has demonstrated that all  
13 of this Court’s concerns about the metering systems are moot. For this additional reason, and in  
14 conjunction with the City’s *res judicata* argument, this Court should dismiss Mr. McCarthy’s and Mr.  
15 Anderson’s Complaint with prejudice.

16 **D. The Court of Appeals Has Already Held that the Click! Network was not a Separate  
17 Utility from the City’s Electrical Grid and Does Not Violate the Tacoma City Charter.**

18 Mr. McCarthy and Mr. Anderson also argue the Click! Network is a separate utility from the  
19 City’s electrical grid. However, Plaintiff ignores controlling case law that is directly on-point. *Coates*  
20 *v. City of Tacoma*, 11 Wn. App.2d 688, 457 P.3d 1160 (2019). The Court of Appeals held that that  
21 “Click! and Tacoma Power’s electric utility are one undertaking for purposes of RCW 43.09.210(3).”  
22 *Id.* at 697. In determining that Click! Network is not a separate utility, the Court reasoned that “[a]

1 separate project carried out by an entity can constitute a separate undertaking but not a separate  
2 department, public improvement, institution, or public service industry. But here, Click! is simply  
3 using the excess capacity of the electric utility’s infrastructure. When reading the entire list in context,  
4 it is clear that providing an additional service using the utility’s existing infrastructure is not a separate  
5 undertaking.” *Id.*

6 Further, and even more directly on-point, the Court of Appeals noted “[t]he parties dispute  
7 whether Click! is a separate ‘utility’ from Tacoma Power’s electric utility or whether it is simply a  
8 “betterment” of the utility.” *Id.* at 698. The court concluded that “. . . Click! was merely intended  
9 as a betterment to Tacoma Power’s telecommunications system in an effort to maximize a resource  
10 and ‘reduc[e] . . . rates and charges.’ Tacoma City Charter art. IV, sec. 4.5. That structure has not  
11 changed.” *Id.* Thus, the Court held that “[b]ecause Click! is a betterment of Tacoma Power, . . . it  
12 does not violate the Tacoma City Charter.” *Id.* at 699. Accordingly, Plaintiff’s arguments that Click!  
13 is a separate utility under RCW 35.94.010 and that it violates the Tacoma City Charter were  
14 considered and rejected by the Court of Appeals in *Coates*. This Court should also reject Mr.  
15 McCarthy’s and Mr. Anderson’s arguments that were previously rejected by the Court of Appeals.

## 16 **VII. CONCLUSION**

17 Mr. McCarthy and Mr. Anderson have a concurrence of identity with Mr. Shook and Mr.  
18 Bowman. The subject matter and causes of action in the Complaints, drafted by the same lawyer,  
19 are identical in all key respects. The person – the City of Tacoma – against whom the claims are  
20 made is identical. Moreover, the metering projects either no longer exist and/or were not a part  
21 of the system leased to Rainer Connect. Further, Mr. McCarthy’s and Mr. Anderson’s arguments  
22

1 about the legality of Click! have already been rejected by the Court of Appeals in *Coates*. Thus,  
2 this Court should apply the doctrine of res judicata and dismiss this lawsuit with prejudice.

3 Respectfully submitted this 29<sup>th</sup> day of July, 2022.

# EXHIBIT A

1 BE IT REMEMBERED that on Friday, February 7, 2020,  
2 the above-captioned cause came on duly for hearing before  
3 the **HONORABLE SHELLY K. SPEIR**, Judge of the Superior Court  
4 in and for the County of Pierce, State of Washington; the  
5 following proceedings were had, to wit:

6  
7 <<<<<< >>>>>>

8  
9 THE COURT: Welcome to our members of the press.  
10 I just wanted to give a couple of notices to  
11 everyone. You've probably seen my visual aids that are  
12 posted throughout the courtroom. This is because I am now  
13 doing drug court. And so I would just ask that you be  
14 careful on your way through the courtroom that you try not  
15 to bump into them or erase them. They are part of ongoing  
16 proceedings.

17 And this display over here on the side is  
18 particularly important; those are names of people who have  
19 been lost to drug addiction. So try to take care of that  
20 one.

21 The other announcement I have is that I have  
22 another matter on my docket this afternoon involving an  
23 interpreter. He's out working in the hallway right now and  
24 so we may have to interrupt these proceedings to allow the  
25 interpreter to come take care of that case because they are

1 on the clock. And so I want to be efficient with that.

2 So I see you've got all set up. I hope that  
3 Mr. Shanstrom advised you of the time limits. Ten minutes  
4 per party per motion. So, any questions?

5 MR. SHOOK: I do have a question about how that  
6 works, Your Honor. Which motion would go first and will we  
7 be able to reserve time of our ten minutes?

8 THE COURT: You absolutely can reserve rebuttal.  
9 You just need to tell me how much you want. I thought we  
10 would start in the order that I had them filed. So  
11 Mr. Shook, you would go or you can defer to Bowman.

12 MR. VAN ALSTYNE: I'm happy to go first.

13 THE COURT: And then we could end with the City.

14 MR. SHOOK: And then I had just one other  
15 question, Your Honor. I don't know. Some of my  
16 certificates of authenticity continue to trickle in. If the  
17 Court wants those now, I have the Anacortes resolution  
18 created their broadband utility certified. I also have the  
19 Collins library for the Homer T. Bone papers certified. And  
20 then I've got the Pierce County certification for their  
21 broadband study talking about the broadband being  
22 essentially a utility.

23 So if the Court would like those, I can add those  
24 to the record, all my others are certified previously. But  
25 these trickled in after I filed my consolidated declaration.

1 THE COURT: Is there any objection from the City  
2 as to these?

3 MR. CHRISTIE: No objection to the timing of them  
4 being filed. And we would just stand by the written  
5 objection that we made to his first declaration. I didn't  
6 attempt to redo that based on his new filing. Authenticity  
7 may well not be appropriate. There were other objections  
8 beyond that, and so I didn't duplicate that effort, Your  
9 Honor.

10 THE COURT: Okay. I'm willing to accept those  
11 today, so if you want to hand those up to my judicial  
12 assistant.

13 MR. SHOOK: Thank you, Your Honor.

14 THE COURT: I'm just making sure I know which ones  
15 these go to.

16 MR. SHOOK: It should indicate the exhibit numbers  
17 on the --

18 THE COURT: You've got Exhibits 58, 67, 80.

19 MR. SHOOK: That's correct.

20 THE COURT: And then you've got another resolution  
21 here.

22 MR. SHOOK: That's the Anacortes resolution.

23 THE COURT: All right. Okay. All right. Thank  
24 you.

25 MR. VAN ALSTYNE: Your Honor, one more question,

1 which is in terms of the ten minutes, does that mean I'll  
2 have ten minutes to present first and then...

3 THE COURT: If you would like to reserve, for  
4 example, two minutes, you would have eight minutes to  
5 present and then two minutes for your rebuttal. So total of  
6 ten minutes.

7 MR. VAN ALSTYNE: I see. And then I will also get  
8 ten minutes to respond to Mr. Shook's motion?

9 THE COURT: Correct. The clock starts over on  
10 each motion.

11 MR. VAN ALSTYNE: Okay. Thank you.

12 THE COURT: Okay. So we're starting with  
13 Mr. Bowman's motion?

14 MR. VAN ALSTYNE: Yes, I believe I'll start, Your  
15 Honor.

16 THE COURT: And I guess I should probably formally  
17 call the case.

18 We're here on Bowman versus City of Tacoma, Cause  
19 No. 19-2-11506-3. There are, by my count, three motions  
20 pending plus a mandatory review hearing for this afternoon.

21 So with that, we're going to start with  
22 Mr. Bowman's motion for partial summary judgement.

23 MR. VAN ALSTYNE: Thank you, Your Honor.

24 My name's Ken Van Alstyne, for the record. I'm  
25 here for plaintiff Bowman. The Court is tasked here today

1 with determining whether the City's multimillion dollar  
2 state-of-the-art carrier-grade hybrid fiber coaxial  
3 telecommunications network, which has over 1,400 miles of  
4 cable over 20,000 customers, whether that system can be  
5 summarily disposed of by declaring it surplus and handing it  
6 over to a private entity without a vote of the people. We  
7 respectively submit that it cannot, Your Honor.

8 I think there are three -- two important questions  
9 that the Court has to answer here today to determine who  
10 will prevail on the summary judgement motions. The first  
11 question is whether CLICK! is itself a stand-alone utility  
12 system. And if it is, in fact, a stand-alone utility system  
13 under the city charter specifically, the analysis should end  
14 there because there is no surplus provision under the city  
15 charter and, therefore, if it is a stand-alone utility  
16 system under the city charter, that should end the analysis.

17 THE COURT: Isn't there a requirement that it be  
18 essential?

19 MR. VAN ALSTYNE: The charter is phrased in terms  
20 of an "or," Your Honor, and the first piece of that or is  
21 utility system. The second part is or essential part  
22 thereof -- part thereof essential to continue utility  
23 service.

24 So if it is, in fact, a utility system, the first  
25 part before the or, then Bowman should prevail. In

1 addition, if Your Honor thinks it satisfies the second  
2 portion after the or, then Bowman should also prevail on  
3 that basis alone and we don't have to get to the question of  
4 whether or not the public surplus statute.

5 On that first question, if it is a stand-alone  
6 utility system under the RCW, specifically RCW 35.94, then  
7 we need to proceed to the next question and determine  
8 whether or not the surplus provision was properly exercised  
9 by the City, which brings me to the second major question  
10 that the Court must answer, assuming that it's not finding  
11 for Mr. Bowman on the charter provision, which is that can  
12 CLICK! be legally surplus under .040 in the manner that  
13 the City has done. And we respectively submit to the Court  
14 that regardless of whether CLICK! is a stand-alone utility  
15 system or only a part of Tacoma Power, the surplus provision  
16 was not -- does not give the City of Tacoma the power that  
17 it attempts to exercise under the surplus provision, aka, to  
18 surplus an entirety of an operating utility system or a  
19 continually operating part of a utility system.

20 Moving on to those two points and starting with  
21 the question of whether CLICK! is a stand-alone public  
22 utility system. You're going to hear a lot of argument from  
23 the City today regarding why CLICK! is not a utility system.  
24 And you're going to hear references to a lot of different  
25 statutes. You'll probably hear references to 35.92 RCW.

1 You'll also hear references to federal law to Supreme Court  
2 cases in Washington that interpret other provisions of the  
3 RCWs in the provision that's in here and you'll also likely  
4 hear argument with regard to *Coates* which is a decision that  
5 interprets different provisions.

6           However, none of those arguments that the City has  
7 brought and none of the cases that the City has cited  
8 actually interpret RCW 35.94.010. The only party who has  
9 brought forth any authority specific to RCW 35.94.010 is  
10 Bowman, and specifically two arguments: Bowman has argued  
11 that the plain language of the term utility system in the  
12 current-day version of 35.94.010 encompasses CLICK! and  
13 Bowman has also argued that there's a statutory test  
14 embedded in .010 via the 1917 revised Remington Statute  
15 Section 9512, which provides the Court with an illustrative  
16 list of things that constitute public utilities under the  
17 statute including relevant analysis here of telegraph or  
18 telephone plant and lines or any similar or dissimilar  
19 utility system. So I want to make that upfront very clear.  
20 Bowman's the only one who's advanced the argument or cited  
21 cases that actually even interpret the provision at issue  
22 before the Court, and for that reason alone I believe  
23 Bowman's argument should carry the day.

24           Rather than go through every single argument  
25 presented in the brief, Your Honor, I'm going to stick to

1 what I think are the most important central arguments here  
2 that support Bowman's case, and specifically I'm going to  
3 start with the 1917 Remington Statute Section 9512. That  
4 provision controls the meaning of modern-day RCW 35.94.010.  
5 And I'm going to now lead the Court through the series of  
6 enactments and changes and revisions to the law which make  
7 that clear.

8 So I'll start off with the initial language of  
9 Remington Revised Code 9512. The initial language says, "It  
10 is and shall be lawful for any city or town in this state  
11 now or hereafter owning any water works, gasworks,  
12 electrical light and power plant, steam plant, street  
13 railway line, street railway plant, telephone or telegraph  
14 plant and lines, or any system embracing all or any one or  
15 more of such works or plants or any similar or dissimilar  
16 utility or system to lease under the provisions of the  
17 chapter," one of those provisions being the public vote  
18 provision. That's the original language and that was as it  
19 existed in 1917.

20 Now the code reviser's committee, as Your Honor's  
21 aware, is tasked with revising and rewriting the existing  
22 Remington Statutes and the other previously preexisting laws  
23 in the '40s. And in the process of revising specifically  
24 RRF 9512 the provision I read, they rewrote that section and  
25 they specifically rewrote it for brevity not to change the

1 content of that section. And that rewrite for brevity made  
2 RRF 9512 morphed it and changed it into the exact same  
3 language that is currently found under RCW 35.94.010. They  
4 rewrote it for brevity not to change the meaning.

5 And just as significantly, RCW 104.020, which was  
6 the original RCW that was enacted at the time that the code  
7 advisors committee did this, says that "Nothing in these new  
8 RCWs shall be construed as changing the meaning of any laws.  
9 And as a rule of construction in the case of any omissions  
10 or inconsistency between any of the provisions of the  
11 revised code and the laws existing immediately preceding the  
12 enactment, the previously existing laws shall control."

13 Therefore when the code committee rewrote it and  
14 when the provision was put into the RCWs in 1951, it still  
15 contained the illustrative list that was originally in 9512.

16 Now, much has been -- and I should mention one  
17 more thing before I go on, which is that, it was then  
18 revised and codified at RCW 80.48.010, which is key because  
19 this is a step the City is overlooking in its analysis of  
20 this provision. It was actually codified in 1951 into the  
21 RCWs as edited.

22 In 1965, the key thing happened which is relevant  
23 to both parties' arguments here. In 1965, every single law  
24 in the state of Washington that had to do with cities and  
25 towns was re-codified into Chapter 30 -- into Title 35

1 governing cities and towns.

2 At that point, in that re-codification, the  
3 provision that was then at 80.48.010 with the exact same  
4 language as the current statute was repealed and re-codified  
5 at its current-day location in 35.94.010. And there was a  
6 savings clause that was in the 1965 act which said the  
7 provisions of this title insofar as they are substantially  
8 the same as statutory provisions repealed by this chapter  
9 and relating to this same subject matter shall be construed  
10 as restatements and continuations and not as new enactments.  
11 And that's the key here because the language at the time the  
12 law in 1965 was passed, the language of the operable  
13 provision here was identical to its language after it was  
14 re-codified in 35.94.010.

15 THE COURT: You've got two minutes left if you  
16 want to save those for rebuttal.

17 MR. VAN ALSTYNE: Thank you, Your Honor. I will  
18 not save those for rebuttal. Thank you.

19 Now, now that we've established that the 1917 law  
20 carries forward into the present-day language, this case  
21 becomes relatively simple along those lines because it  
22 included a list -- this illustrative list includes telephone  
23 and telegraph plant or system and any similar or dissimilar  
24 utility. I think there's very -- there's little question  
25 that that includes a modern-day telecommunications network

1 for many of the reasons we've already put in the brief,  
2 brought by an Internet and telecommunications are the  
3 modern-day purple hub -- well, exactly the  
4 telecommunications network that were in that illustrative  
5 list in the first place, telephone and telegraph.

6 And then to remove any existing doubt, we also  
7 have the *Bremer* case, Your Honor, which is the supreme case  
8 the case that I referenced that actually interprets the  
9 provision at issue here. In *Bremer* the question was whether  
10 a municipal wharf was a public utility under that  
11 illustrative language. And a wharf, respectively, is not  
12 even close to any of the terms that is on that statutory  
13 list. It's much further away from any of the channels in  
14 the statutory list than a telecommunications network is and  
15 yet still *Bremer* determined that a public municipal wharf  
16 was, in fact, a public utility system under the statute.

17 And that really is the crux of our argument here,  
18 Your Honor. There are many other supporting arguments that  
19 we've brought in from other RCWs, Title 80, various  
20 positions the City has taken with respect to these laws in  
21 the past, but that should settle the question in our mind,  
22 Your Honor, is this illustrative list that came from 1917  
23 and was imported into the current-day statute.

24 THE COURT: That's your ten minutes.

25 MR. VAN ALSTYNE: Thank you.

1 THE COURT: Mr. Shook, would you like to reserve  
2 any -- actually --

3 MR. SHOOK: Yes, Your Honor.

4 THE COURT: You get your full ten.

5 MR. SHOOK: Two minutes. I'll reserve eight  
6 minutes.

7 THE COURT: When it's time for your motion I'll  
8 let you reserve. But right now since you're responding, you  
9 can have the whole ten minutes.

10 MR. SHOOK: I have a whole ten minutes and I don't  
11 break it up.

12 THE COURT: Nope. You can go all the way through.

13 MR. SHOOK: Okay. Well, let them do their turn  
14 then I'll follow after he goes with his ten minutes so I can  
15 focus on the things that need to be focused on.

16 THE COURT: When it's your turn for your motion  
17 you can do that, but right now you're responding to  
18 Mr. Bowman's motion.

19 MR. SHOOK: All right. So I'm going to use all my  
20 whole ten minutes.

21 THE COURT: You can use the whole ten minutes.

22 MR. SHOOK: Well, I wasn't planning on doing that.

23 THE COURT: You don't have to if you don't want  
24 to.

25 MR. SHOOK: I wanted to kick off with a minute or

1 two and then reserve eight minutes. But if I have to go,  
2 I'll just go, but it's going to require me switching my  
3 computer over. So let me give it a try, Your Honor.

4 Want to start that clock here.

5 THE COURT: All right. Here we go.

6 MR. SHOOK: Okay. Well, thank you, Your Honor.  
7 May I be seated while I present here today?

8 THE COURT: Yes.

9 MR. SHOOK: Thank you.

10 So, Your Honor, let me get my computer turned on  
11 here, if I could. This is Charter 4.86 and it does require,  
12 you know, that it either be a system, which it is a system.  
13 And you'll see that all the ordinances that created CLICK!  
14 the 25670 in 1996 and in '97 they created a separate system.  
15 They account for all their numbers separately with their  
16 operational summaries. They have an incredible  
17 organizational chart that, you know, that defines its  
18 operations as a system. Here's the organizational chart.  
19 And all these -- these are business units that we have, you  
20 know, sales and marketing and dispatch and installation of  
21 warehouses like any organization or any system would have.  
22 That is your system.

23 And so, you know, we have a system. Under the  
24 charter that's what the charter talks about is a system. We  
25 have that. But it's also a utility service.

1 Telecommunication being a named utility on the long list of  
2 utilities that was provided for us in 1917. And let's  
3 remember, that was the progressive era. These laws were not  
4 written idly. There was very specific intent in the  
5 creation of these laws, Your Honor, and the father of public  
6 power, Homer T. Bone, if you read the exhibits I've provided  
7 on the death of Homer T. Bone, Senator Magnuson provided a  
8 statement in the Congressional record there calling him the  
9 father of public power.

10 Judge Bone also provided a statement in 1944 when  
11 he left the senate and became a ninth circuit judge that  
12 talked about these power struggles and why these laws were  
13 written and the fact that he was appointed unanimously to be  
14 the chairman of this charter committee and why these laws  
15 needed to be written, because of the lobbyist and the money  
16 that flowed and it became a stench in the nostrils of the  
17 society is what he called it. It was incumbent upon the  
18 people to stop this.

19 And so it is the case, Your Honor, that these laws  
20 have a purpose. And here today, you know, the disposal of  
21 the telecommunication utility, it's essential to itself.  
22 You can't provide the essential -- you can't provide the  
23 utility service. Telecommunications obviously it's a named  
24 utility. It's the second utility ever regulated in our  
25 state beginning in 1907 under the Railroad Commission, Your

1 Honor, well before electricity was regulated in 1911. In  
2 1911 when they created the public service commission, Your  
3 Honor, the definition for telecommunication was right there  
4 as a utility. It exists today in our RCW. The identical  
5 language exists today. And I'd like to show that to you  
6 here.

7 When you see in this language, this is Title 80  
8 and this is what they talk about right here under 28, what  
9 is telecommunications. Well, that's CLICK! Obviously came  
10 with cable and wire and there's 10,000 volts and 2,000 miles  
11 of wire it telecommutes -- your phones here today are  
12 running over voiceover IP is more similar than dissimilar.  
13 It's an identical service. It's even funded by the FCC as  
14 a, you know, substitute to telephone. You can get the  
15 lifeline provisions from the FCC and they'll pay \$10 of your  
16 phone bill to help people get voiceover IP.

17 So it is a telecommunication system and, you know,  
18 and every City and town right here, and that goes back to  
19 1907, 1911 when they created the language -- I can show that  
20 to you if you want to see it, Your Honor -- CLICK!'s a  
21 telecommunications company. When you go to their own  
22 service -- and you go to their own service their own page,  
23 and this would be TPU talking about our services. Here they  
24 are. For these services to continue, you need the public  
25 ownership of this network. It is a multiservice broadband

1 telecommunication provider. These are our services. This  
2 is the TPU website, Your Honor, and it's just, you go right  
3 to it and you can see what the services are. They provide  
4 power, water, rail, and telecommunications. Nothing wrong  
5 with being a multiservice provider. It happens commonly  
6 across America. I presented to you a sample of 25 cities  
7 and municipalities that are now offering this essential  
8 utility. It's an information highway. And it's similar to  
9 the toll roads of the years gone by where we decided to  
10 build our own roads and make them public highways. We  
11 created an Internet state highway system in the 1950's  
12 that's a public highway. And the nation of Australia has  
13 established a national broadband network. I expect someday  
14 we'll see something similar in America.

15 But there it is. That's what CLICK! is. That's  
16 about CLICK! We are a telecommunications provider. That's  
17 a named utility. For you to find that this is not essential  
18 to be continuing its service, you'll have to find that  
19 telecommunications is not a utility. Anacortes would be  
20 interested in that finding and so would 14 public utility  
21 districts that provide telecommunication services to their  
22 citizens, Your Honor.

23 So this is what CLICK! is. It's from their own  
24 website. I've just put some tabs here on my browser to show  
25 you what they do. They operate an open-access network now.

1 That's an impartial operated. They set the rates. City  
2 council approves those rates under their utility code.  
3 That's under the City Charter Title 12. You can look that  
4 up. I have that here somewhere. But, you know, all through  
5 the RCWs telecommunications is provided as a utility.

6 Here is the actual section from the public utility  
7 districts where they provide this as a utility. That's what  
8 the public utility districts are. They were created out the  
9 of the Homer T. Bone era and they called them farmer  
10 utilities at first, but now they have this authority to  
11 provide utility service and it's defined. They even have  
12 direct retail authority now.

13 So, you know, I've said in the past I could sum  
14 this up in a minute or two. It's a named utility. It's a  
15 service that we provide as a city. It's a municipal  
16 utility. For that service to contend, you'll require the  
17 network and what is that network. Well, Your Honor,  
18 probably the easiest thing -- I talk about purring like a  
19 kitten, you know, purring like kittens, and that's just a  
20 reference to walking into the hub building, we have six hub  
21 buildings that were built to run this network. When you  
22 walk in, there's cages and racks of routers and servers that  
23 make this thing run. And the sound of those servers  
24 running, which they're running today. And I might point out  
25 that this network was surplusd in November of last year but

1 it's still running today, so I don't know how you could  
2 consider that surplus. It's delivering Internet to our  
3 customers and the citizens rely on that. Our rates are half  
4 the price here in Tacoma compared to Seattle, you know,  
5 thank goodness.

6 It's the case that, you know, there's very little  
7 to talk about. It's black letter law that this is the laws  
8 of 1917. They were clearly continued. They themselves now  
9 argue that they were continued. In the railroad case they  
10 sold a railroad without even a public hearing. We're before  
11 Judge Costello on that next Friday. And there wasn't even a  
12 public hearing on that railroad sale. But in that case they  
13 argued, and it's part of my amended reply to the motion for  
14 a preliminary injunction their own pleading in there,  
15 they've argued that the laws of 1917 were continued because  
16 they want to try to limit it to street railroads. Good  
17 luck.

18 But, yeah, the laws were continued. They were  
19 continued through the abbreviations into 1951's title.  
20 Title 80 they were continued in 1965. You know, we have --  
21 there's never been a legislative intent to change. The best  
22 legislative intent on surplus, Your Honor, is found in these  
23 public utility laws because they were both regulated under  
24 Remington 9512 in the beginning. In 1945 they said, okay,  
25 we're going to regulate the utility. You can sell your

1 utilities with a vote of the people, but under the standards  
2 of Remington 9512. And everything's the same as the City's.  
3 Your commissioners have the same authority as mayors and  
4 they tied the two together.

5 So what we have from 1973 with the surplus  
6 authority that we, you know, got here in the City, Director  
7 Benedetti went and wrote those letters to the legislators  
8 and the senators in the house and they went down and spoke  
9 on that. You know, they wanted the same authority that the  
10 public utility districts had and that was a convenient  
11 method of disposing of old generators and worn out and  
12 obsolete things. That's the only modification that's ever  
13 been done to this language. That's the legislative intent,  
14 Your Honor, for surplus.

15 So this is certainly not worn out or obsolete.  
16 This is absolutely a state-of-the-art system. You can see  
17 that in Pam Burgess's annual report that was just filed, the  
18 annual report of CLICK! and how many miles are underground  
19 and the conduit and the fact that they're installing fiber  
20 to the home right now. They just set up this building down  
21 here at 1515 Tacoma Avenue, the Napoleon Apartments. I mean  
22 they're going to have -- it's not related to the surplus  
23 smart meter program. That didn't happen until ten years  
24 after CLICK! was created and it only went for four years and  
25 they abandoned it over ten years ago. But they're still out

1       there wiring apartment buildings today with fiberoptic  
2       gigabit service today. They're turning on new buildings.  
3       We just finished the Frank Toby Jones building and the  
4       senior citizens there in the new buildings have, you know,  
5       gigabit fiberoptic service. It was never even to do with  
6       the failed smart meter program. Ratepayers are going to  
7       need this to communicate with their smart homes in the  
8       future to watch their thermostat. Oh, I forgot to turn off  
9       my heater. On the way to work, you can turn your heater  
10      off. You can participate in demand response in the future.  
11      But this two- way communication and having access to the  
12      Internet, it is an essential utility. Telecommunications is  
13      a utility, Your Honor. Thank you.

14               THE COURT: Thank you. Nice timing. Right on the  
15      dot.

16               MR. CHRISTIE: Good afternoon, Your Honor. Bob  
17      Christie on behalf of the City. The arguments that have  
18      been presented fundamentally miss the mark.

19               Division Two held in December that in the *Coates*  
20      case that CLICK! is not a separate utility. It held that  
21      what it is is it's a betterment. It's something that runs  
22      on and this is the language from *Coates* -- "The excess  
23      capacity of Tacoma Power's telecommunications system."  
24      Something that currently operates in a manner that the Court  
25      characterized as incidental. Everyone knows, everyone in

1 this room knows that Tacoma Power is an electric utility  
2 that provides power to the citizens of Tacoma.

3 The relevant statute is the one I'm showing here.  
4 It's RCW -- it's right -- I've got it on this lower screen  
5 so we didn't have to compete.

6 The relevant statute is RCW 35.94.040. And it  
7 contains the language that the Court called out to counsel.

8 If something is surplus to the City's needs and  
9 is not required for providing continued public utility  
10 service, then it can be surplus through the exact  
11 procedure that was followed by the City here. This statute  
12 dictates that the legislative body here, the Tacoma Public  
13 Utility Board and the City Council what they must do in  
14 order to follow the procedure for declaring surplus certain  
15 property that they no longer are using. And under this  
16 statute, and I've highlighted the section, the provisions of  
17 RCW 35.94.020, the public vote statute, does not apply if  
18 they're exercising authority under this statute. That much  
19 is clear. It's undisputed. It's straightforward in the  
20 language.

21 Now, there is a second legal authority that has  
22 been referenced and that's the charter. And what does the  
23 charter provide. It has the language that you highlighted,  
24 Your Honor. "The City shall never sell, lease, dispose of  
25 any utility system or a part thereof."

1 I respectively disagree with counsel's effort to  
2 strike the essential to continued effective utility service  
3 and limit that to some portion of this. It's any utility  
4 system or part thereof. It has to be essential to the  
5 continued effective utility service.

6 What is the utility service of Tacoma Power. It's  
7 providing power. It is not providing Internet. Here,  
8 Tacoma Power and the board went through a lengthy process  
9 that resulted in a presentation to the City Council of why  
10 this 12 strands contained in one tube -- this is the fiber  
11 map that I think is relevant for our discussion so we make  
12 sure we know what we're talking about -- there are nine  
13 tubes that have been never been used, that's called the dark  
14 -- the dark fiber. Never been used. There's one tube that  
15 has 12 strands and some switching gears associated which is  
16 the CLICK! Network. None of that is essential to Tacoma  
17 Power for continuing to provide power to its citizens.

18 There is a key document in this case that I would  
19 ask that the Court keep in mind as we're discussing that,  
20 and that is this resolution. This is Resolution RU-11116.  
21 It's Exhibit I to Mr. *Coates* -- excuse me, to Mr. Bacha's  
22 declaration. This is the October 30, 2019 resolution that  
23 went through a lengthy, lengthy recitation process, factual  
24 recitation based on information from Tacoma Power as to  
25 whether or not they have any need in their operations to

1 deliver power, any need for these 12 strands, and they  
2 concluded they do not. It is surplus. It is non-  
3 essential. We don't need it.

4 And so the factual findings in that declaration  
5 have never been challenged in this lawsuit. No one is  
6 challenging anything that the Public Utility Board  
7 determined and that the Council determined in this process.

8 There is a legal basis to challenge the decision  
9 made by the City Council. You can challenge that under the  
10 standard of arbitrary and capricious. And this Court's very  
11 familiar with that standard. The standard recognizes that  
12 the legislative body is vested with discretion. And that if  
13 that discretion is abused in a way that can be called  
14 arbitrary or capricious, that decision making process can be  
15 overturned.

16 Now, in their briefs, you will see mouthed the  
17 words arbitrary and capricious, but they never undertake an  
18 analysis of that, nowhere in any of the briefs. Instead  
19 they immediately jump to an argument, well, this is  
20 ultravirus. It's fundamentally illegal to do what the City  
21 Council has done. So they never go through an analysis of  
22 arbitrary and capricious.

23 Our summary judgement motion obviously overlaps  
24 this one, and so to some extent I'm overlapping in my  
25 response here.

1           The bottom line is simple and straightforward.  
2           The relevant statute is RCW 35.94.040. The same concept is  
3           presented in the Council Charter Section 4.6.

4           If this property this portion of a  
5           telecommunications network just what Division Two called it,  
6           if that is not essential to providing power, if it is  
7           surplused to the City's needs for providing continued public  
8           utility service, not Internet service, Tacoma Power is in  
9           the business of providing power, it is surplused and it is  
10          not needed.

11          That one statute and that language in Section 4.6  
12          dictate the outcome of this case unless it's challenged on  
13          an arbitrary and capricious standard, which they have not  
14          undertaken to do.

15          Now, there isn't any dispute about the process  
16          that the City went through in terms of it fulfilling the  
17          requirements of that statute. It ultimately selected one of  
18          the applicants for a contract to lease this CLICK! Network  
19          and to provide Internet services however it deems fit.  
20          Curiously and somewhat ironically, Advance Stream,  
21          Mr. Shook's company was one of the applicants for that  
22          process, a process they now claim is fundamentally flawed  
23          and it was not a successful bidder in that process.

24          In the time I have remaining in this presentation,  
25          I'd like to talk a little bit more about the *Coates* case and

1 show you a couple other provisions in that that I think are  
2 significant.

3 This is language out of *Coates* referencing a  
4 different section of the City Charter but the same argument  
5 as to whether or not CLICK! and Tacoma Power are separate  
6 utilities. They said they are not separate utilities and  
7 they are not separate utilities.

8 Another portion of that statute, which I think has  
9 been abused here, is the recitation of the rules of  
10 statutory construction. These are the rules, happen to be  
11 cited in *Coates* but they're repeated in many of these cases  
12 that you should apply here to the extent that you get into a  
13 statutory interpretation argument.

14 I struggled a bit to understand counsel's argument  
15 about the 1917 statute and how that currently comes into  
16 play. And I actually undertook to map it out, and so this  
17 is my map. The top portion of it is the 1917 statute  
18 highlighting the language that counsel relies upon. The  
19 language that says, "telephone or telegraph plant or lines."  
20 That's in the 1917 statute. Of course the relevant portion  
21 of the statute is the 1965 statute, "authority to sell or  
22 lease."

23 So counsel's argument, as I understand it, is that  
24 you take the 1917 statute, which has the words "telephone or  
25 telegraph," you modify that by the 1985 Telecommunications

1 Act, which substituted telecommunications for telephone and  
2 telegraph -- that's the statute passed 20 years after the  
3 1965 statute -- and then you add to that his proclamation  
4 and his proclamation is, well, telephone --  
5 telecommunications includes Internet. That's not in any  
6 statute. That's his proclamation. And once you have the  
7 language telecommunications and you add the proclamation,  
8 then you re-insert it into the 1965 statute and you read the  
9 language, "public utility works, plant, or system to include  
10 Internet."

11 The best definition of what is a utility, and then  
12 I'll close for this portion --

13 THE COURT: You've got about 15 seconds.

14 MR. CHRISTIE: Thank you -- is contained in a law  
15 review article. The classic that we cited. The classic  
16 public utility is a business engaged in providing goods or  
17 services so essential to communal and economic life that  
18 securing their adequate supply is ultimately a government  
19 responsibility.

20 No court in Washington anywhere has said that  
21 Internet provided publically by the government is a utility  
22 and is essential and can't be otherwise obtained from the  
23 five other services that I could connect to as a citizen of  
24 Tacoma today.

25 Their motion needs to be denied. And I'll speak

1 more to it, Your Honor, when I address our motion.

2 THE COURT: Thank you.

3 Because these motions are all very interrelated,  
4 what I'm going to do is not rule until the very end because  
5 I realize I'm putting these artificial time limits on you,  
6 but you may have additional arguments that could potentially  
7 apply to multiple motions. So I'm just going to go straight  
8 through and let everybody argue and then I'll rule at the  
9 end.

10 MR. CHRISTIE: Thank you, Your Honor. I'll get  
11 out of the way for Mr. Shook.

12 THE COURT: Actually, let's you guys take a rest  
13 for a moment. I'm going to call my other case.

14 (Proceedings at recess while Court takes another  
15 case.)

16 THE COURT: Are we ready back on the Shook matter?

17 MR. SHOOK: Yes, Honor.

18 THE COURT: Whenever you're ready and do you want  
19 to reserve rebuttal on this one?

20 MR. SHOOK: I would like, Your Honor, just use  
21 four minutes and then reserve six if I may.

22 THE COURT: Okay. All right. Ready.

23 MR. SHOOK: Well, thank you, Your Honor. So I  
24 think maybe the confusion here with the defendant's  
25 perception of this telecommunication utility is the fact

1 that they view themselves as an Internet provider, but  
2 they're not an Internet provider, Your Honor. They have  
3 ISPs that are the Internet provider. The ISPs own the  
4 modems. All broadband happens to be a telecommunication and  
5 that is the service that Tacoma Public Utilities provides,  
6 not Tacoma Power. It's Tacoma Public Utilities. And we  
7 need to remember that because it's a multiservice utility  
8 provider.

9           During the break I walked out the hallway here  
10 just to look out over that library, 'cause I always go to  
11 all the libraries, have these gigabit circuits and there's  
12 still years to go left on those contracts, but right here  
13 out the door, you see this little building here, that's  
14 Google Maps, but here's a picture I took on the break.  
15 That's the Alzheimer hub, Your Honor. That's one of the six  
16 hubs. We call that downtown north. You can see the green  
17 -- it's not a good picture there, but that green -- that  
18 concrete building. And the easier way to see it is, I have  
19 included it in my -- here it is, Your Honor, actually, one  
20 of the blueprints. Now, this is our exhibit, my master  
21 declaration, and it's the 11 of 1 exhibit. So that's the  
22 Alzheimer hub. You can look right out the window and see  
23 it. And that's where the equipment is purring like a  
24 kitten. And what equipment is there. Million dollar  
25 router, Your Honor. And I have the resolution that approved

1 the purchase by Pat Bacon making that speech that that CBRA  
2 is a million dollar router, and it's not surplus. It's  
3 running right now. Currently purchased for a utility  
4 purpose: To run our libraries, to allow the ISP partners to  
5 provide that Internet service. They're a telecommunications  
6 utility. That's what they are. It's what they established.  
7 It's what they show themselves as providing on their own  
8 website, our services. They define themselves on their own  
9 website as a telecommunication utility.

10 And when you look in these hubs, that hub across  
11 the street has ancillary systems. This is also their own  
12 exhibit. This is Bacha's exhibit from his December 30th,  
13 Exhibit H. There's air conditioning systems in here, and  
14 they're not minor expenses. These are significant expenses.  
15 There's fire suppression systems in there, Your Honor.  
16 There's generators with backup fuel supplies, battery  
17 streams that keep it all running. That's a Cummings  
18 generator right there. There's equipment here that keeps  
19 all this running. You can see it right out your window,  
20 Your Honor. None of it's surplus.

21 And the thing about it is, you read the IRU and  
22 the business transaction agreement, they've got exclusive  
23 possession and control. Right there you know it's a lease  
24 when you have the keys to lock your cage up. When you're  
25 responsible for taking out the trash and mopping the floors

1 and changing the light bulbs, all of which is in these  
2 agreements, and I can show those to you if you're interested  
3 in seeing them.

4 So, you know, there's your hubs, none of which was  
5 surplus, all of which was acquired for utility purpose,  
6 none of which is obsolete, worn out or by any means surplus,  
7 Your Honor. It's essential to the continuation of the  
8 telecommunication service that they provide.

9 It's essential to the libraries. It's essential  
10 to our hospitals, our students, our elderly, our phone  
11 services that are provided, heart monitoring devices. It's  
12 a communication system. And, you know, I would say to you,  
13 Your Honor, that it's a system to its own. They obviously  
14 account for it. That wasn't the standard in *Coates*. They  
15 weren't looking -- all they had to meet was the standard of  
16 a part of to avoid the --

17 THE COURT: Your time is up.

18 MR. SHOOK: My time's up. Thank you, Your Honor.

19 THE COURT: Thank you.

20 Let's see. Mr. Bowman, is there going to be a  
21 response for Mr. Bowman?

22 MR. VAN ALSTYNE: Yes, there is.

23 THE COURT: Okay. I'll just give you the ten  
24 minutes and you can take as much of it as you need.

25 MR. VAN ALSTYNE: I appreciate it. Thank you.

1 One second to plug in my...

2 THE COURT: Sure.

3 MR. VAN ALSTYNE: Thank you, Your Honor. I'm  
4 ready.

5 Opposing counsel would have us add or subtract a  
6 comma to Section 4.6 to achieve the reading that he desires,  
7 which is, the City shall never sell, lease, dispose of any  
8 utility system, comma, or parts thereof essential to  
9 continued effective utility service, comma. Opposing  
10 counsel wants to say that the utility system must be  
11 essential for continued effective utility service in  
12 addition to the part thereof that's essential to continue  
13 effective utility service.

14 With due respect, the plain language of the  
15 provision is clear. The words "essential to continued  
16 effective utility service" only modify the term parts  
17 thereof, they do not modify the term utility system. If you  
18 were to remove that, comma, then maybe the term essential to  
19 continued effective utility service would, in fact, modify  
20 utility system. Or if you added a comma after "parts  
21 thereof" again, you might achieve the reading opposing  
22 counsel wants to. But as written, it clearly only applies  
23 to the parts thereof being essential. The utility system if  
24 it's a stand-alone utility system, the charter applies.

25 Let's talk about the surplus provision, Your

1 Honor. Again, before we specifically parse the terms here,  
2 Your Honor, I want to make the point that if CLICK! is a  
3 utility system under the City Charter or it is a part of a  
4 utility system essential to providing continued utility  
5 service under the charter, we don't need to go here at all.  
6 That ends the case there. However, since we've argued  
7 significantly about 35.94.010 as well, it is important to  
8 parse the meaning of .040 here.

9 Now, to start with the standard of review  
10 applicable to surplus decisions and that Your Honor's  
11 applying here is important. There are two standards of  
12 review that are significant here that Mr. Bowman is arguing.  
13 One is the arbitrary and capricious standard, which opposing  
14 counsel has referenced. The arbitrary and capricious  
15 standard applies to the City's determination that it must  
16 make under this section. There are two determinations that  
17 the City must make under this section.

18 One, it must determine that it has surplus the  
19 City's needs; and two, it must determine that it is not  
20 required for providing continued public utility service. I  
21 agree with opposing counsel that the City's decisions in  
22 those two respects are subject to arbitrary and capricious  
23 review. I don't agree that we haven't argued the City's  
24 determinations in that respect for arbitrary and capricious.

25 But before you even get to those two specific

1 determinations by the City that are subject to arbitrary and  
2 capricious review, Bowman is arguing that the surplus  
3 provision as written and as intended by the legislature,  
4 this entire provision was not intended to give the City  
5 power to (one) surplus an entire utility system and (two) to  
6 surplus things that are not inadequate, obsolete and  
7 otherwise essentially unusable.

8 And Bowman's arguments in that respect are  
9 arguments of statutory construction. It's not a question of  
10 reviewing the City's determinations under the surplus  
11 provision. Those are questions of statutory construction  
12 and those questions are not subject to arbitrary and  
13 capricious review. That's why Bowman has argued that the  
14 City's actions here in how they've used the surplus statute  
15 in this case are ultravirus and contrary to law. And that's  
16 the other piece of the other standard that we're talking  
17 about. Now --

18 THE COURT: Would you agree -- sorry to interrupt.  
19 Would you agree, though, that assuming that the City's  
20 decisions were not ultravirus, were not arbitrary and  
21 capricious, that they determined equipment was surplus and  
22 not essential, that under subsection 2 the City would be  
23 relieved of the vote requirement?

24 MR. VAN ALSTYNE: Yes, Your Honor, I do agree with  
25 that. Again, the vote requirement in the statutory scheme,

1 not in the charter.

2 THE COURT: That was my hypothetical.

3 MR. VAN ALSTYNE: Correct. So why is the City's  
4 application of this provision ultravirus and contrary to  
5 law. It's ultravirus and contrary to law because as Bowman  
6 has already argued CLICK! is itself a stand-alone utility  
7 system. If the surplus provision here can be used to  
8 surplus an entire utility system and not require a public  
9 vote for surplus of an entire utility system, then there  
10 is no situation where a City would ever have to hold a  
11 public vote in any manner. It could surplus its water, the  
12 entire water utility, the entire electric utility, the  
13 entire telecommunications utility, and so long as it said  
14 they were surplus and determined those two things, then it  
15 could avoid the public vote requirement elsewhere in this  
16 statutory scheme in every instance. And that is why this  
17 section cannot be read to allow -- to give us any power to  
18 surplus the entire utility system. That's why we're saying  
19 it's ultravirus and contrary to law. That's reason one.

20 The second reason is the legislative history of  
21 this provision. The legislative history of this provision,  
22 uniquely and much to my surprise, consists of statements  
23 actually made by City of Tacoma officials in the first  
24 place, which is ironic if nothing else.

25 Specifically the portions that I'm talking about

1 here that are relevant to the Court's analysis of what power  
2 the surplus provision gives the City is the letter that was  
3 sent by Benedetti the director of the Department of Public  
4 Utilities of the City of Tacoma to the legislature, he was  
5 the sponsor of the bill. And the key line here, which backs  
6 up my previous argument about how you can't surplus an  
7 entire utility system is this line: "The procedure  
8 requiring a formalized procedure or confirming approval of  
9 the voters on a ballot proposition is, of course," quote,  
10 "desirable where, in fact, all or an integral part of an  
11 operating utility is to be so disposed of."

12 And respectively, Your Honor, that only further  
13 confirms what the statutory analysis we previously did does,  
14 which is that you can't surplus under this provision an  
15 entirety utility system.

16 The second provision that's key here is the  
17 statement that he made in the legislative history which is  
18 quote, "The flexibility here sought is reasonably consistent  
19 with that long enjoyed by public utility districts under RCW  
20 54.16.180." And I bring that up because 54.16.180 at the  
21 time that this provision was enacted said -- essentially had  
22 a surplus provision that allowed for surplus when of those  
23 pieces of utility which had become, quote, unserviceable  
24 inadequate, obsolete, worn out or unfit to be used in the  
25 operations of the system and which is no longer necessary

1 material to and useful in such operations.

2 That is what the legislature intended to grant  
3 cities the power to do with .040. And the City has not made  
4 any argument to date that CLICK! is unserviceable,  
5 inadequate, obsolete, worn out or unfit or that it's not at  
6 least useful in operations.

7 And so before we even get to the arbitrary and  
8 capricious standard and City's determinations in this case,  
9 there's a question as a matter of law of what power the  
10 surplus statute gave the City and did not give the City the  
11 power to surplus CLICK! in this instance.

12 Getting to the arbitrary and capricious standard  
13 and now the two findings that the City made here, Your Honor  
14 referenced in a previous hearing that she was interested in  
15 hearing what surplus meant. So I pulled the Blacks Law  
16 dictionary of surplus, which I've highlighted at the top  
17 here. And the definition is -- and I'll read it out loud  
18 because I apologize because it's not quite clear from there.  
19 "An amount of something that is more than what is required  
20 or used. The residue or excess." And the word I'm  
21 focussing in on here is used. An amount of something that  
22 is more than what is used.

23 In this case, CLICK! is still being used. It is  
24 being used now months after the surplus declaration  
25 occurred. It's going to continue to be used even after the

1 City's transferred operational control onward to Rainier  
2 Connect.

3 So the question of -- when I say the decision to  
4 surplus it was arbitrary and capricious, it was arbitrary  
5 and capricious because they are getting rid of something and  
6 surplus something that is currently in use and will  
7 continue to be in use. And that, to us, is what surplus  
8 means in that statute.

9 Additionally, going back to the second prong  
10 that's necessary for providing a public utility service,  
11 CLICK! is clearly necessary for providing continued public  
12 utility service if the Court agrees that telecommunications  
13 services are public utility services, which even I believe  
14 under the City's interpretation, CLICK! is at least a  
15 service of a public utility. It's a service provided by  
16 Tacoma Power. And, therefore, even under the City's  
17 understanding of what CLICK! is, which is a service provided  
18 by Tacoma Power, it's necessary for continuing to provide  
19 the public utility service it is now providing and always  
20 has provided.

21 And so for those reasons, we believe that the  
22 City's use of the surplus provision is not an ultravirus for  
23 the statutory construction reasons and the legislative  
24 history reasons but also the decisions within it that are  
25 subject to arbitrary and capricious review are also

1 arbitrary and capricious in this case.

2 Your Honor, may I ask how much time I have left.

3 THE COURT: Nine seconds.

4 MR. VAN ALSTYNE: Nine seconds. Perfect. Thank  
5 you, Your Honor.

6 THE COURT: Okay.

7 MR. CHRISTIE: Thank you, Your Honor.

8 THE COURT: You ready?

9 MR. CHRISTIE: Yes. It sounded like a response to  
10 my motion as opposed to anything supporting Mr. Shook's  
11 motion, but let me address the points that were raised.

12 First of all, with respect to the interplay  
13 between Section 4.6 -- and maybe we can put up my -- with  
14 respect to Section 4.6 and the RCW 35.94.040, the State  
15 Constitution authorizes first class cities to adopt a City  
16 charter that provides that no provisions of a charter can  
17 conflict with state law. So it's black letter law that  
18 Washington -- in Washington that a state law supersedes the  
19 provisions of a City charter if the City charter is in  
20 conflict with state law.

21 The relevant statute and the only statute that  
22 governs what we are here for today is 35.94.040. .020 is  
23 not subsumed in that. And the Court is correct. .020 does  
24 not apply if the City operates under .040. And it's not  
25 just a question of being surplus. It has to be surplus

1 and not necessary for the public utility.

2 So Mr. Shook accuses the City of being confused.  
3 We have no confusion nor does Division Two have confusion  
4 that CLICK! is simply using the excess capacity.

5 THE COURT: I don't know if Mr. Shook wanted to  
6 look at the screen. He's using the screen up here if you  
7 wanted to see it.

8 MR. SHOOK: Thank you, Your Honor.

9 MR. CHRISTIE: That CLICK! is simply using the  
10 excess capacity of the electric utility's existing  
11 infrastructure. That's Division Two.

12 We're talking about an electric utility that  
13 provides electric power and it has determined in Exhibit I  
14 the Resolution 11116 articulates at great length why it has  
15 determined that to deliver electric power, the utility's  
16 function, to its customers it does not need the 12 strands  
17 of CLICK! nor does it need the nine tubes that contain some  
18 108 additional strands in this fiber cable because they have  
19 never been used, ever been used for delivering electric  
20 utility services.

21 THE COURT: So you're saying when I do the  
22 essential analysis, that relates to the utility as a whole  
23 not the specific part.

24 MR. CHRISTIE: Absolutely. I mean, what -- we  
25 have an electric utility, electric utility that provides

1 powers to customers. The whole history of how they -- why  
2 they even had a fiberoptic network is articulated at great  
3 length and detail in that resolution. And so apparently  
4 there is an arbitrary and capricious standard, which you  
5 would expect, would have expert testimony where someone  
6 would come in and say there's no way you can effectively run  
7 an electric utility and deliver power without having the 12  
8 fibers contained in that one tube. You can't do it. That's  
9 not so and there is no such evidence in this record.  
10 There's no challenge to any of the factual recitations  
11 contained in that resolution, all of which were made through  
12 a process approved and presented to the City Council.

13 So, and by the way, none of the hubs that  
14 Mr. Shook referenced sitting on buildings, none of those  
15 have been surplus. They have nothing to do with the  
16 network or the issues presented here to you.

17 If we look at -- if we look beyond the language  
18 here, what the City has always said is that CLICK! is a  
19 business unit and it is absolutely a business unit of Tacoma  
20 Power, but it has determined that it is not essential. So  
21 let me bring us back to the language that really drives the  
22 outcome of this case in our opinion respectively.

23 It is a pure legal question as to whether or not  
24 the 12 fibers that provide the CLICK! network and the  
25 associated switches, which have been deemed surplus and

1 unnecessary, whether that infrastructure is a stand-alone  
2 public utility. No court in Washington has ever ruled on  
3 that. In fact, the court in Washington that has ruled to  
4 the direct contrary is sitting down the street from us.

5 So you would have to find based on what we submit  
6 is improper statutory construction, and this was addressed  
7 in detail in our briefing and I'm not going to recite it in  
8 the limited time we have here, you would have to find that  
9 CLICK! those 12 strands and the associated switching are a  
10 stand-alone -- a stand-alone public utility. And that's why  
11 I'm going to come back to this definition that I talked  
12 about earlier, this definition of what is a public utility.

13 The classic public utility is a business engaged  
14 in providing goods or services so essential to communal and  
15 economic life that securing their adequate supply is  
16 ultimately government responsibility.

17 We talked in our briefing about the monopolistic  
18 character of what have been called public utilities. And if  
19 you look at the statute, the statutory scheme that was  
20 adopted in 1965, the same year as the statute we're looking  
21 at, which is 35.92, it lists what our municipal utilities,  
22 power, sewer, solid waste removal, storm drain. These are  
23 things over which they have control. They are things that  
24 fit this definition of a business or -- a service or good  
25 that is so essential to community and economic life.

1           Right now you can probably order Internet from  
2 three different providers Internet service providers here in  
3 Tacoma, and that has always been the case. There is no  
4 monopolistic nature to the 12 strands that make up the  
5 CLICK! network. It is simply not a public utility.

6           But it is obvious why they have to argue that.  
7 They have to have you find as a matter of law that CLICK! is  
8 a stand-alone public utility, because if you don't, they  
9 know they lose because it has been properly surplused and  
10 can withstand the test of whether or not that decision-  
11 making process was arbitrary and capricious based on this  
12 record before you.

13           And so they have to have you, through a very  
14 circular argument, say, well, of course it's essential  
15 because it's still being used, therefore it's essential.  
16 Why? Because it's still being used. Everyone needs  
17 Internet. Everyone doesn't need CLICK! If CLICK! doesn't  
18 provide Internet service, there are options available to the  
19 citizens of Tacoma.

20           Fundamentally, and this is, again, in the  
21 resolution, which is really the factual core of all of this.  
22 Fundamentally CLICK! was created, as defined in that  
23 resolution, for a limited purpose: To facilitate meter  
24 reading and some things associated with the delivery of  
25 electric service to customers. Through the advancements in

1 technology, the hardwire meter system is not in use. Meters  
2 are read wirelessly. The City doesn't need this.

3 The City has gone through an extensive process and  
4 in the meantime, CLICK! employees have left, have been moved  
5 elsewhere. There isn't a second option here. This is  
6 surplus. And the City is not going to, no matter what  
7 eventually happens in the Court of Appeals on this case, the  
8 City is not going to be in the business of providing  
9 wholesale Internet. They simply are not going to do it. It  
10 is money-losing venture. And under this record they have  
11 determined to surplus it. They're not giving it away.  
12 They're leasing it. A multi-year lease that the City has  
13 determined to be in its best financial interest.

14 So there is great irony in the arguments that are  
15 being put forth here because ultimately if this is held up  
16 and prevented from going forward on the path that it's at,  
17 there is no second option. There is no force that can  
18 compel the City of Tacoma to become a public supplier of the  
19 utility of Internet. That is not going to happen and there  
20 is no legal support for making that happen.

21 By my count, I have 12 seconds.

22 THE COURT: I have a little more, but go ahead.

23 MR. CHRISTIE: That's all right.

24 So Mr. Shook's motion, which is consistent with  
25 the motion that's been put forth by Mr. Bowman, they're both

1 partial motions, they should be denied.

2 THE COURT: All right. Thank you.

3 MR. CHRISTIE: I think I still have the floor,  
4 because I now am prepared to argue my motion.

5 THE COURT: Well, he reserved time for rebuttal.

6 MR. CHRISTIE: You're right.

7 THE COURT: So we're going to go back to Mr. Shook  
8 as soon as I can reset my clock.

9 And, Mr. Shook, you wanted six minutes; is that  
10 correct.

11 MR. SHOOK: Yeah. Let me turn on my tablet here.

12 THE COURT: Yes. Go ahead.

13 MR. SHOOK: Okay. Your Honor, I'm ready.

14 THE COURT: Go ahead.

15 MR. SHOOK: Thank you. Okay. So I think the  
16 confusion still lays in that they think they're Internet  
17 providers but they're not. They are a telecommunication  
18 utility and it's going to continue because they have  
19 contracts to continue providing it to the library for years  
20 into the future. It's not going anywhere. The tube that's  
21 being used is not surplus. We're not here to talk about the  
22 dark fiber. I believe it'll be used within ten years by my  
23 estimation with the growth of the Internet of things and the  
24 project -- the continued explosions in the use of the  
25 internet. But regardless that's not what this motion's

1 about. It's about the one purple tube that we spent  
2 \$200 million building, Your Honor.

3 So, you know, we can talk about what was created  
4 and I think it's real important to remember what was  
5 created, and we do have Mayor Baarsma's declaration now  
6 authenticating his study, and he tells us what was included.  
7 But for purposes, let me go right back to the -- in this  
8 court in 1997, orders were sought. And this is the  
9 declaration of Jon Athrow. He worked with Steven Klein and  
10 they created the system and this is what they -- they talked  
11 about in all three of these declarations you'll hear about  
12 this business plan. And this business plan we now know is  
13 500 pages and they created a telecommunications system based  
14 on that plan and it was originally budgeted for \$15 million  
15 but then they thought, well, you know what, look at this.  
16 We could -- for a -- you know, additional 65 million was  
17 their first estimate, they went over budget and became 89  
18 million -- but you know, for this extra money we can create  
19 this additional capacity and give Internet broadband  
20 telecommunications and Internet service to the community  
21 where the incumbent provider wasn't going to do it.

22 They flew into town. They were very upset, Leo  
23 Henry, very upset and knocked over the mayor's chair that  
24 day on the day of the vote, please don't build this. We'll  
25 give you anything you want. But they weren't building it.

1 They were way in debt and the community needed this. With  
2 the telecommunication act of 1996, it became something that  
3 we could do and we did. And we spent the money for this  
4 additional capacity.

5 So when you look at the resolutions that created  
6 it, this is where they came back and funded it. You know  
7 they created a telecommunications system with 89 -- 65  
8 million dollars was the estimate right here. And so the  
9 City Council was supposed to stay involved and get rates and  
10 they did. But this business plan is really the one that  
11 tells the story because when you look at that business plan,  
12 it tells it's a 500-page study and it tells what they built  
13 and why: Wholesale data, telephone transport, fiberoptic  
14 sonic system, they needed to do it and that's what they paid  
15 for.

16 These are the benefits that brought to our  
17 community and there's the original note of plan part of that  
18 business plan. It represents the document you see before  
19 you today what they're surplusing except now it's going to  
20 be private company. These are the conclusions. One could  
21 hope that another -- you know, this was likened to the  
22 railroads of the previous century in that they needed this  
23 to promote their economic development. It wasn't about  
24 providing electricity, Your Honor. This has nothing to do  
25 with electricity. This is a telecommunication system. It

1 stands alone as a telecommunications system. It wasn't the  
2 issue before *Coates* and they didn't need to reach the  
3 standard to finding out if it was or not. They were able to  
4 determine there was no liability to the general government  
5 or abuse of ratepayer funds illegal use of a violation of  
6 the Accountancy Act by finding that it was a part of. That  
7 wasn't the standard that they needed to determine.

8 What we're telling you here today, Your Honor, is  
9 that this certainly is a system and it's certainly at least  
10 a part thereof, and that's all that the laws of 1917 require  
11 when it gives the broad emphatic language of similar or  
12 dissimilar. Those are the progressive era, you know, words  
13 that were brought -- left for us and it was intentional.  
14 That's what we see in *Bremer*. *Bremerton* talks about that.

15 And so, Your Honor, when you look at this  
16 additional capacity, this is so important the ordinance that  
17 created it, they actually did create a separate system. You  
18 can go right here and see yourself the Article 2 of that  
19 ordinance, 25930. It created what? A telecommunications  
20 project, a separate system adoption of the plan and the  
21 system were creating this system to be known as the  
22 telecommunications system.

23 Now, it's not been popular, the powers that be  
24 never wanted to let it stand up and be that telephone pole,  
25 you know, that we see in the cartoon of 1919 and there's

1 reasons for that. Steve Klein told us in his depositions  
2 you can see the language that he accused, you know, Leo  
3 Henry and Mayor Crowley and others of never allowing it to  
4 be stood up on its own where we could see how profitable it  
5 is. It makes \$600 million a year, Your Honor. And they've  
6 admitted in their own answer to my complaint, they admitted  
7 there's been no audit. They admit that there's been no  
8 financial determination on its profitability. They even  
9 admitted that at the Division Two argument when the judge  
10 asked them, are there any disputed issues. Well, of course,  
11 we dispute losses. So it's a money making business, but  
12 it's been disparaged as such and that's part of the scheme  
13 and I called it a conspiracy to privatize this network.

14 And so arbitrary and capricious, Your Honor, you  
15 know, when you violate a statute black letter law on a named  
16 utility to dispose of a system, that's -- it's an ultravirus  
17 act, Your Honor, and it's ultravirus because it's  
18 procedurally ultravirus. We've worked out the deal. Great.  
19 But now it has to go to the vote of the people. They needed  
20 to work out this deal so they can put it on the ballot.  
21 That's a necessary step. But procedurally it's ultravirus,  
22 Your Honor.

23 And is there a part of this that you would like  
24 help that I should focus on going forward in my last ten  
25 minutes?

1 THE COURT: Actually, you're out of time.

2 MR. SHOOK: Thank you. Thank you, Your Honor. Do  
3 I get ten more minutes later?

4 THE COURT: We're going to switch to the City's  
5 motion.

6 MR. SHOOK: Because if there's a part you want me  
7 to focus on, I don't know if I need to --

8 THE COURT: I'll just blurt it out.

9 MR. SHOOK: All right. Thank you.

10 THE COURT: So this is the final motion. So would  
11 you like to reserve any time?

12 MR. CHRISTIE: Yes, I would, Your Honor. I'd like  
13 to reserve three minutes if I may, please.

14 THE COURT: All right.

15 MR. CHRISTIE: May it please the Court, the City's  
16 motion for summary judgement seeks complete dismissal today  
17 of the entirety of these two lawsuits brought by Mr. Bowman  
18 and Mr. Shook. Our motion seeks dismissal of those  
19 complaints entirely with prejudice.

20 It clearly our motion overlaps with things that  
21 you've heard about and I want to be real fair with the  
22 Court's time today and not just unduly repetitious. This is  
23 the language in *Coates* that is certainly informative of the  
24 arguments that have been made to you by opposing counsel and  
25 by Mr. Shook. This is exactly what is set forward in the

1 resolution. "The City designed and implemented the  
2 telecommunication system to facilitate Tacoma Power's  
3 ability to distribute electricity effectively and  
4 efficiently. Tacoma Power is a utility, an electric utility  
5 that provides power. This, it could be said, the way it  
6 currently operates is incidental to maximizing the system's  
7 benefits."

8 The Public Utility District determined factually  
9 that because of changes in technology, that the ten fibers  
10 that are purple with black hatches and the one fiber that  
11 contains 12 strands over which CLICK! flows is absolutely  
12 not necessary. It is not essential. It is surplus. It is  
13 not necessary for them to continue to provide effective  
14 public utility service, specifically the delivery of  
15 electricity to the citizens of Tacoma.

16 The argument that was just made by Mr. Shook is  
17 clearly a factual argument to try to undercut the findings  
18 and the determinations by the Public Utility District and  
19 adopted and set forth in the resolution. The problem is,  
20 it's made improperly. It's not a persuasive argument to  
21 throw up documents that were created at the outset of the  
22 building of this hybrid fiber cable and argue now that  
23 somehow what the City determined was inappropriate. There  
24 is nothing in this record respectively that would permit you  
25 to find that the City Council in its adoption of that

1 resolution based upon the determination by the utility board  
2 has acted in a manner that is arbitrary and capricious.

3 And in that respect, we did cite the Court to a  
4 recent case decided in December, the *King County versus King*  
5 *County Water District* case, that is clearly parallel in  
6 terms of recognizing the breadth of authority by the  
7 legislative body to make determinations about what is in the  
8 best interest of the utility and specifically what is in the  
9 best interest of the City.

10 That determination was made. If I can show the  
11 Court a couple of different sections of the resolution.  
12 This is a portion of the findings in terms of what the  
13 director has certified. This is in Exhibit I for the  
14 record. It's on page 10. "The CLICK! assets and the excess  
15 capacity of the network are not required for and are not  
16 essential to continued public utility service or continued  
17 effective utility service and are surplus to the needs of  
18 Tacoma Power and the Tacoma Public Utilities."

19 They go on to conclude that it would be in the  
20 best interest of Tacoma Power and the City to surplus that.  
21 Surplus it not by giving it away; by entering into a  
22 long-term lease. A long-term lease that will give Rainier  
23 Connect as the selected company the operational control over  
24 not any portion of this fiber that feeds the library or that  
25 is used as part of the Pecon (phonetic) system. That's not

1 part of this at all. It's the excess capacity that has  
2 never been used and it is the 12 fibers that make up CLICK!  
3 That is not needed anymore.

4 Our motion can only respectively be denied by you  
5 determining -- and I will repeat this and then stop -- you  
6 determining that despite everything that is in the  
7 documents, the resolutions that have been put forward by  
8 you, despite the language in *Coates* that the City of Tacoma  
9 has undertaken to create a stand-alone utility and that it  
10 is essential to the public interest to gain access to  
11 Internet for the City to have that stand-alone utility.

12 And then you would have to further find, through  
13 interpretation of these statutes, that we're not under  
14 Section .040; that somehow we are under Section .020.

15 The phrase that counsel keeps repeating that is  
16 found nowhere in any statute is this phrase, entire utility  
17 system. He's repeated that multiple times. That CLICK! is  
18 an entire utility system. I don't know where that language  
19 comes from. It's from his own creation. CLICK! is not an  
20 entire utility system. It is exactly what Division Two  
21 described it as being. It is an add-on. It is a  
22 betterment. It was created as part of the original process  
23 of ensuring the efficient delivery of electricity.

24 And so quite simply, and then I'll sit down  
25 because I want to save my last three minutes, quite simply,

1 it is not a utility and a stand-alone basis. It is what  
2 Division Two said it is. And the way it has been disposed  
3 of by leasing it to Rainier Connect was done appropriately  
4 and certainly withstands the standard of arbitrary and  
5 capriciousness.

6 So we ask that both of these complaints and all of  
7 the claims including the Consumer Protection Act claim that  
8 was added in, and we'll stand on our briefing on that,  
9 should be dismissed with prejudice today.

10 THE COURT: Thank you.

11 MR. CHRISTIE: Thank you. I'll reserve the  
12 balance of my time.

13 THE COURT: Okay. All right. So who would like  
14 to go next?

15 MR. VAN ALSTYNE: I'll defer to Mr. Shook to go  
16 next.

17 MR. SHOOK: Thank you, Your Honor. I'll let my  
18 monitor come up here.

19 So where we left off, Your Honor, was the creation  
20 of the system as a separate system. It's a  
21 telecommunication system based on the 500-page study, based  
22 on the \$65 million that was spent by this resolution that  
23 created this system. It provides telecommunications  
24 services, Your Honor.

25 What I'm suggesting is for you to find that it's

1 not a utility system, you'll have to find that  
2 telecommunications is not a utility or a utility service.  
3 And given this right here, I'll call this out, Your Honor,  
4 given this additional capacity that was spent by the people  
5 for that utility service for this broadband  
6 telecommunication system, for this service, this utility  
7 service to continue, which is more and more commonly  
8 provided by municipalities across America, and I gave you  
9 the sample of 25 such utilities, but Chattanooga's now  
10 passed this, we're still the second largest in America.  
11 It's a common function for a municipal utility to provide  
12 broadband telecommunication access.

13 And so it is the case that we've created this  
14 additional capacity and I think the counsel misspoke.  
15 Libraries are part of that purple tube, Your Honor. That's  
16 transport. We have a hundred customers that rely on data  
17 transport services. It is a function of the library. Those  
18 checks from the library are going to be cashed by the  
19 private company that would acquire this system. Here's the  
20 library contract if you want to see it. It's in my  
21 documents under Exhibit 64 and you can see the contract  
22 right here. This is out across the street. That circuit  
23 goes out and it carries out to the internet. But all the  
24 libraries are served by CLICK! Network directly by CLICK!  
25 Network.

1 I would suggest, Your Honor, that all we're asking  
2 you to declare is what they themselves have declared in  
3 their own resolution. This is their resolution when they  
4 were prepared to go all in, their very controversial  
5 resolution, compelled an audit. Council member McCarthy  
6 called for an audit. They delayed it. Coates lawsuit came  
7 and they had to go all out. So this is where they  
8 themselves in their own resolution signed by the mayor and  
9 the Council. I mean, they all signed it. This is their own  
10 resolution, Your Honor, signed by the utility board here.  
11 And you can see that in 2015, that they themselves know  
12 this. It's been commonly known around the City. Mayor  
13 Baarsma was the one that told me they couldn't to this.  
14 This is why I'm here, Your Honor.

15 So basically what we're talking about is a system  
16 that was established as a system and is operated as a system  
17 with a separate set of books and a hundred contracts that  
18 comprise this system. It's a controversial issue in America  
19 today. It's illegal in 19 states. Your Honor, you can read  
20 my broadband exhibits. My book's full of the history of the  
21 struggle between municipal, MO, municipal ownership of  
22 services that compete with the private sector. And that's  
23 what this whole debate's about here today, Your Honor. And  
24 that's the struggle. The endless money that flows from  
25 lobbyists to influence these policymakers, that they don't

1 have unbridled authority to dispose of utility -- municipal  
2 utility assets, thanks to the laws of 1917 and what was the  
3 legacy left for us here today. So it's not the case that  
4 they have absolute discretion to just dispose of utility  
5 assets to the largest campaign contributors.

6 I mean, now, if you set a precedent here today,  
7 any one of the public utility districts three commissioners  
8 generally operate those. You buddy up to three of those  
9 guys somewhere, private party can acquire a  
10 telecommunications system elsewhere in our state. And  
11 that's what it's always been about.

12 THE COURT: Can I ask you question?

13 MR. SHOOK: Please.

14 THE COURT: You presented the Court with a lot of  
15 data.

16 MR. SHOOK: Yes.

17 THE COURT: At some point prior to today have you  
18 quote, unquote, made your case to the City? Have you  
19 participated in the process and let them know all of this?

20 MR. SHOOK: Well, you know, I go three minutes at  
21 a time to every council meeting and that's all I've ever  
22 been allowed to do, Your Honor. If you want I can show you  
23 some of those. That's all they ever let me do. Their  
24 mind's made up. The money's been paid. The fix is in, I  
25 would tell you, Your Honor. And, you know, that's what the

1 laws are here to protect and stop. But yes, I've made my  
2 case. They know it themselves already. That's why, that's  
3 probably why we're going to win today, I hope, because they  
4 know it themselves, you know.

5 And so, but I've made a case. They talked about  
6 me participating in that RFI, and I did, Your Honor, but we  
7 didn't know they were bidding on anything. They wanted the  
8 best solution. I called it stay the course. Look at your  
9 -- do your accounting. Look at your audit and see how much  
10 money this thing's making. I can show them every month it's  
11 making \$6 million a year and it's paying off all kinds of  
12 unrelated expenses and its a very profitable thing. But  
13 that's part of the conspiracy is to keep it as a self-funded  
14 power and allocate all sorts of costs onto it that are  
15 unrelated to telecommunications business and make it appear  
16 that it's a money losing venture and as a result, you know,  
17 they could privatize it. This has been going on for  
18 20 years. It's a small town. I think everybody knows about  
19 this.

20 Your Honor, I would also bring your attention to  
21 the lawsuit to the attorney general. I'm not sure what they  
22 were arguing about the limitation on the authority to  
23 provide utilities. I think they were talking about 35.92.  
24 That's not a limitation, Your Honor. We've had clear  
25 authority as a home rule city to provide these services and

1 we do so believe when it was confirmed by this court in '96  
2 and '97 with two court orders. So there's no question about  
3 our ability to provide this.

4 They talk about essential. Well, for millennia  
5 people have lived, I mean, since the dawn of mankind, since  
6 the stone age we've lived without water services. The  
7 Romans brought it successfully. But electricity, you know,  
8 we did without that. And then in the 1930's farmers were  
9 churning butter by hand.

10 You know, so the fact that they're trying to claim  
11 that telecommunications is not a utility, I don't know where  
12 that comes from because it is absolutely essential. There's  
13 only two wires going down my street and most of these homes  
14 and most of the cities in America there's one wire. They  
15 live under monopolies or a company's control of this  
16 telecommunication in our country.

17 So, you know, it is the case, Your Honor. If you  
18 have any questions, I can show you the studies that created  
19 it. I can talk to you about Director Benedetti's letter  
20 when he went down, he wrote this letter what they were  
21 seeking was the flexibility as enjoined by the public  
22 utility districts. And that's 1973 when they created the  
23 law. That's what they wanted. And they agreed that the  
24 formal procedures were proper, in proper situations that it  
25 was a good idea to have a vote of the people. And of course

1 that's not what they were -- they were going to, you know,  
2 what they were going to try and sell entire systems but, you  
3 know, the formal process is good. You got to have that.  
4 It's desirable when all or an integral part of an operating  
5 utility is to be disposed. Our telecommunication utility's  
6 on the ropes today, Your Honor.

7 And I will tell you that the proposed -- I'm still  
8 learning my iPad here, but I want to call this out for you.  
9 This was what they were looking for, procedural flexibility  
10 that was enjoined by the public utility districts. If you  
11 go to look at the public utility districts, you will  
12 understand that that authority is obsolete, outdated, of no  
13 use to anybody. There is the law that they were talking  
14 about at that time. This is the similar authority that they  
15 were seeking that they wanted to have that same authority.  
16 This is the PUD laws.

17 And so I mean, I may have to go to the next page,  
18 but convey or dispose of this property. And you then you  
19 can find here what is unserviceable, obsolete, inadequate,  
20 worn out. And you know what, that has only been modified  
21 twice. They gained that authority in 1955. Prior to that  
22 they shared Remington 9512. And it was modified one more  
23 time in 2008 and at that point it added even stronger  
24 emphatic language "of use to nobody."

25 So if you can declare this utility surplus, Your

1 Honor, nothing stops them from declaring a pipeline from  
2 Greenwater or an extra surplus pipeline we're going to need  
3 it in 50 years. They've got it now. They can declare a  
4 dam. Maybe we don't need cushion anymore because we're  
5 selling all that electric utility overnight into the  
6 California market. Is that surplus? It was acquired for a  
7 utility purpose. Telecommunications is exactly the same  
8 situation that we have here today, Your Honor.

9 So I would simply suggest that with my last minute  
10 if there's questions that you have, if there's anything that  
11 I could after offer. I wanted to try and bring up Mayor  
12 Baarsma's letter. Maybe begin with a little Homer T. Bone.  
13 But I don't know what you want to know about, Your Honor.  
14 I'm happy to answer any questions that you have with my  
15 final minute.

16 THE COURT: I think you answered my question.

17 MR. SHOOK: Thank you, Your Honor. It's been with  
18 pleasure finally having our day in court. I will tell you  
19 that, you know, their speculative concept of this services  
20 being discontinued, you know, is pure speculation. I know  
21 these services will continue and I know that this is  
22 engineered capacity not surplus capacity. I do know that  
23 this is a telecommunications service and I do know that they  
24 themselves are aware that the vote of the people is  
25 essential in the disposal of such municipal utility assets.

1 Thank you, Your Honor.

2 THE COURT: Thank you.

3 Okay. Response from Mr. Bowman.

4 MR. VAN ALSTYNE: Thank you, Your Honor. Again,  
5 to be respectful of the Court's time, I'm not going to go  
6 through our entire argument again, but rather pick on  
7 specific arguments that the City has brought up in either  
8 their motion here or in their other responses.

9 The City makes much of the fact that we are  
10 attempting to -- that the City will do what it's going to do  
11 no matter what. That argument falls flat though because we  
12 aren't arguing that the City can't lease this system to  
13 Rainier Connect. We're only arguing that it can't lease the  
14 system to Rainier Connect without getting an approving vote  
15 of the people. It's not that we're saying the City cannot  
16 lease or do what it wants to do with this system, it just  
17 has to have voter approval as required in both the charter  
18 and in their RCW.

19 There's another argument made that there was some  
20 sort of a conflict between the surplus provision in .040 and  
21 the city charter. I'm not quite sure what that argument is  
22 saying, but I don't see that -- there's nothing in .040  
23 which directly conflicts with anything in the City Charter.  
24 There's just additional provisions in state law that aren't  
25 in the charter. But there's no direct conflict. It'd be

1 one thing if the City Charter said you can't surplus this  
2 under the provisions of .040 under the City Charter. That
